(a) Complainant attacked demurrage charges at Purcellville, Va., on four cars of bran shipped from Kansas City in August and Sept., 1920 as unjust and unreasonable. First two shipments delivered to M. P., and others to Rock Island at Kansas City consigned to order complainant, notify Jonas E. Eby & Son, Purcellville. Complainant had a credit account with both of these carriers by virtue of which the shipments were forwarded prepaid. Shipments arrived at Purcellville one each on October 4 and 19 and two on Oct. 24, 1920. Notice of arrival were mailed to Eby & Son, one to Lancaster, Pa., and three in care of Wilsh Brown Co. Purcellville. Each of the cars upon arrival were placed on defendants public delivery tracks at Purcellville. Eby & Son maintained an office at Lancaster but not at Purcellville in so far as appears. The record fails to show that conditions at Purcellville were such as to warrant departure by defendant from the uniform scale of demurrage charges observed by other carriers. HELD, charges assessed unreasonable to extent they exceeded the uniform charges of $2 per car per day, reparation awarded. Southwestern Milling Co. v. Washington & Old Dominion Ry., 95 I. C. C. 719.

(b) The primary duty of a carrier is to afford carriage or transportation. As a part of such transportation, it is its duty to grant the shipper, after the actual movement has ceased, sufficient time to remove the lading from the car. But in respect of tidewater coal, the rate includes dumping the coal into the hold of the vessel, and the shipper does not perform the unloading. It is not the duty of a carrier to furnish storage beyond the reasonable time necessary to unload, and it is not within the power conferred upon the Commission by the act where the carrier has not held itself out as granting storage to order it furnished, but if it is furnished and charged for, storage becomes an incident in connection with transportation, and the legality of the rule becomes a proper matter for consideration by the Commission. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612, 622.

(c) The demurrage tariffs are uniformly interpreted to mean that when a car is held for forwarding directions demurrage accrues until the necessary data is supplied. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612, 623.

(d) Respondent M. P. R. R., proposed to exempt coke ovens on its line from the operation of its demurrage rules. The only coke ovens on the M. P., are the by product ovens of the Laclede Gas Light Co. By appropriate tariff provisions these ovens were exempt from the operation of demurrage rules until Sept. 30, 1924. On that date, a tariff, filed by an agent for the principal carriers of the country, became effective and canceled the M. P., tariff which exempted the Laclede ovens. The agency tariff exempts only coke ovens at or adjacent to coal mines where car distribution rules are in force. As the Laclede ovens are not adjacent to coal mines, they are subject to the demurrage rules that apply on traffic in general. By-product coke ovens in the southeast uniformly operate under demurrage rules, taking advantage of the average agreement plan, and it rarely occurs that any demurrage charges are collective. The evidence does establish that the proposed schedules would afford the Laclede Company an undue advantage in the use of M. P., equipment over other users of said equip-

ment with the exception of coal mines and coke ovens adjacent to mines and operating under car distribution rules. HELD, suspended schedules not justified. Demurrage rules on coke, 96 I. C. C. 731.

(e) Rule published in demurrage tariff HELD applicable merely to cars actually placed in plugging yard and bulletined there, not those held out because of congestion at plugging yard. Granger v. Davis, 2 Fed. (2d) 695.

(f) That rule of coal exchange pool member was credited with coal shipped as soon as it passed particular point enroute, and could then order withdrawal from exchange of equal amount, though his own coal would not be actually delivered to exchange for several days, enabled railroads to charge demurrage on cars not actually detained while cars of shipper were in transit, HELD not to render the tariff rule affecting demurrage unreasonable and invalid. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co., 3 Fed. (2d) 525.

(g) Demurrage charges against shipper of coal held in cars in yard of coal exchange until ordered out by the shipper HELD not invalid, as based on an illegal interpolation of tariff rules and rules of the exchange, though, as permitted by rules of exchange, coal was unloaded on order of another shipper of coal of same quality, and the cars released before ordered out by first shipper. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co., 3 Fed. (2d) 525.

(h) Unloading of coal of one shipper on order of another, as permitted by rules of coal exchange or pool, HELD not release of first shipper from liability for demurrage thereafter, under tariff rule that car should be considered as released on date shipment was transferred by "written order and acceptance" to another party, and that subsequent detention should be charged to such transferee. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co., 3 Fed. (2d) 525.

(i) Tariff rule, affecting demurrage, that coal car should be deemed released when vessel registered for cargo or fuel supply, "except that, when cars are unloaded before vessel registers, such cars shall be released when unloaded," HELD not to relieve shipper of car dumped on order of another shipper of same grade of coal, as permitted by rules of coal exchange, from liability for demurrage, when substituted car was held subject to his order. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co., 3 Fed. (2d) 525.

(j) Shipment moved to point at which consignee maintained no office. Carrier mailed notice of arrival on postcard which was not delivered, and later wrote letter to consignor requesting disposition orders. Had defendant complied with tariff requirement which provided that notice of unclaimed freight should be by telegram instead of by letter it would have been received by consignor the same day as sent. Defendant's letter, therefore, may not be regarded as a notice prior to date of its receipt. Shipment found overcharged to extent demurrage and penalty charges exceeded those which would have accrued had tariff provision been strictly complied with. Reparation awarded. Standard Lbr. Co. v. Director General, 93 I. C. C. 58.

(k) Storage and demurrage charges on lumber held in excess of free time on lighterage equipment at complainant's yard in New York Harbor found not unreasonable or otherwise unlawful. Complainant was unable to furnish berths for boats upon which demurrage accrued, could not receive all shipments consigned to it, did not stop those which were being made, and admittedly was unable to accept delivery. If demurrage was computed on car-demurrage basis it would greatly exceed that actually assessed on lighterage basis, and it is not shown that complainant or its traffic is treated any differently from any other dealer in lumber receiving lighterage-free delivery at private piers in New York Harbor. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288.

(l) Demurrage charges are not assessed primarily for revenue purposes and are not based upon a fair rental value of equipment, but are rather in nature of penalties to prevent wasteful and extravagant use of equipment. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288, 289.

(m) Applicable tariff provided that demurrage would not be assessed for detention where carrier's agent demanded payment of transportation charges in excess of tariff authority. Charges billed against car after its arrival at reconsigned destination included an admitted overcharge which shipper promptly questioned. HELD, billed charges must be

regarded as a demand for charges in excess of tariff authority and demurrage was not assessable against the car during period of detention pending controversy over legal charges. See Birmingham Commission Co., 74 I. C. C. 693, and Conf. Ruling 32. Milne Lbr. Co. v. C., C., C. & St. L., 93 I. C. C. 661.

(n) Consignees named in bills of lading were also consignors. Shipments were purchased by complainant f. o. b. its plant subject to inspection and rejection after placement thereat. Upon contention that complainant had no interest in shipments before their arrival at destination, and it was justified in ignoring notices of constructive placement because not a party to the transportation contracts. FOUND, to sustain such contention would necessitate giving no legal effect to fact that bills of lading were forwarded by consignors to complainant and that orders to carrier's station agent were given by shippers directing delivery to complainant's plant. These actions, coupled with past custom as to similar shipments, had effect of substituting complainant as consignee. Destination was its plant, cars were clearly and plainly intended for it, and carrier was justified in considering complainant as real consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 224.

(o) It is the "act or neglect of consignee" or "inability of consignee to receive" cars which warrants their constructive placement, and this is not confined to a disability of tracks or lack of trackage space, but may include other causes as well. Mere track capacity to receive more cars is not sufficient. However, where a shipper has established that additional trackage space was available for placement of cars, burden is on carrier to show that its failure to deliver more cars was because of condition of the private tracks, or because of other conditions attributable to consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 226.

(p) Adverse business conditions do not justify the cancellation of accrued demurrage. Tidewater Coal Exchange v. B. & O., 95 I. C. C. 612, 622.

(q) Notice of arrival covering shipment transferred en route failed to show initials and number of original car or that shipment was transferred in transit, as required by demurrage rules of applicable tariff. Demurrage charges assessed thereon found inapplicable prior to date on which free time following notice of transfer expired. Reparation awarded. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 720.

(r) Application of the modified demurrage plan prescribed in 61 I. C. C. 551 was restricted to industrial common carriers, and its purpose was to prevent undue favoritism to the proprietary industries through the payment of switching reclaims. Virginia Blue Ridge Ry. v. S. Ry. Co., 96 I. C. C. 591, 593.

(s) Applicable demurrage rules must be considered in their entirety, and due weight should be given to the provisions of one rule, which qualify the provisions of another. Tidewater Coal Exchange v. B. & O. R. R. Co., 96 I. C. C. 612, 623.

(t) To prescribe the special demurrage rules laid down in the co-called Birmingham Southern case, 61 I. C. C. 551, to short-line road-haul carriers would enable them to participate in a through movement without incurring any responsibilty for car hire, and it is a fundamental principle that a car owner is entitled to adequate compensation for the use of his car by another carrier. Morehead & North Fork Railroad Co. v. C. & O. Ry. Co., 100 I. C. C. 45, 48.

(u) Upon reconsideration, finding in original report, 91 I C. C. 3, that application of penalty charges for detention at originally billed destinations of shipments of lumber which were subsequently reforwarded to new destination were not illegal, affirmed. Cars were placed for delivery on defendants' team tracks, but they had not been unloaded or accepted by consignee or owner, and, under the terms of governing tariff rule, must be considered reconsignments, and not reshipments as contended by complainants. Stetson, Cutler & Co. v. N. Y., N. H. & H., 102 I. C. C. 471.

(v) Uniformity in dealing with car detention is desirable and on a number of occasions commission has declined to approve exceptions to the uniform demurrage rules in favor of particular traffic. Demurrage Coal and Coke, 102 I. C. C. 554, 558.

(w) General practice throughout the country is that demurrage rules will not apply on empty cars for coal loading or cars under load at mines where car-distribution rules are applied in lieu of demurrage. Car-distribution rules better conserve car supply at mines than do

demurrage rules, and matter can be supervised more efficiently and economically in that way. Demurrage on Coal and Coke, 102 I. C. C. 554, 558.

ALL OTHER CITATIONS

Marfield Grain Co. v. A. & W. Ry. Co., 88 I. C. C. 126.

§12½. Act of God.

(a) Due to a storm which drove a steamer through the wharf at Albion, Calif., destroying part of it, shipments could not be unloaded and remained in cars until the damages were repaired. Demurrage accruing under applicable tariffs found legally assessed and not unreasonable. Cars could have been unloaded on the wharf or elsewhere and demurrage obviated. Moreover, following Mount Hood R. R. Co., 60 I. C. C. 116, cars delivered for loading or unloading do not cease to be held for those purposes because of fact that time of holding is extended by an act of God. Albion Lbr. Co. v. Director General, 92 I. C. C. 297.

§13. Average Demurrage Plan.

See Infra §16 (s).

(a) Complainant attacked demurrage charges on coal, carloads, received between May 1, 1920 and Oct. 31, 1921 at tidewater coal piers of defendants at New York, Philadelphia and Baltimore as unjust and unreasonable and illegal. Shippers of coal consigned their cars to the exchange as a common consignee, the exchange executed the average demurrage agreement with most of the carriers interested, and demurrage on the average plan was assessed. All operating expenses of the Tidewater Coal Exchange were borne by the railroads. In this case no average agreements were signed, although demurrage was assessed under the tariff which provided for computation thereof on the average plan. While the average agreement was not actually executed, the interested parties gave effect to it by otherwise voluntarily complying with its provisions. When the rules and regulations were revised Aug. 1, 1921, the provisions which required the exchange to execute average agreements covering the assessment of demurrage were omitted. The Commission does not think that the failure of the exchange to sign the average agreement or the failure of defendants to give the exchanges members the option of having demurrage assessed on the straight plan constitutes any reason for finding the demurrage as actually assessed unreasonable or unlawful. The exchange received from its members thousands of carloads of soft coal which were later transshipped. It accepted the benefits and advantages of the pooling method of accumulating tonnage. Demurrage on such cars accrued on the average plan throughout the 18 months that it was in operation. During all of that period the exchange knew that demurrage was being assessed under this plan, and made no objection thereto, nor did it request the establishment of the straight or any other plan of assessing demurrage. One of the purposes of the exchanges existence was to extend into the future the advantages which it and the defendant carriers, at the time of its organizaion, believed would result to the shippers as well as to the carriers under a plan which had worked well, and, indeed, been made compulsory, in the past during a similar emergency. Having acquiesced in the plan and acted upon it, the exchange may not now demand that these charges be reassessed under the straight plan with 10 days free time, because it has discovered that it is so computed that total amount of demurrage for the 18 months covered by its complaint would have been less than the amount assessed. HELD, demurrage charges attacked not unreasonable or otherwise unlawful, complaint dismissed. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612.

(b) Substitution of detention has been amply provided for in every instance where the average agreement is in effect; indeed the very object of the average rule is to permit the handling of cars without regard to the exact order of arrival; and the rules provide for the application of the maximum free time to each car released. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612, 621.

(c) Complainant attacked failure of defendants demurrage tariff to provide a reasonable time for acceptance or nonacceptance of shippers applications for the assessment of demurrage charges on the average agreement plan in lieu of straight demurrage, unreasonable demurrage charges, during Dec. 1922 and Jan. and Feb. 1923 were assessed at Indianapolis, Ind., on six cars of coal. On Oct.

6, 1922 complainants addressed a letter to defendants requesting that they be placed on the average agreement plan as to demurrage charges on coal loaded or unloaded at Indianapolis. Written application as contemplated by the demurrage tariff was not made until some time in November 1922. Defendant testified that as the facts then in its possession did not justify its officials in approving the agreement, complainants were called upon to execute an indemnity bond with approved security with which request they have not complied. Apparently they are now operating on that plan. The tariff provisions attacked are the same as those of the uniform code. That code has been in effect for many years and apparently this is the first complain before the Commission in which these provisions have been attacked. There is no claim that in refusing to approve the average agreement plan with complaints, defendant acted arbitrarily or abused a discretion accorded it under the tariff. Record affords no basis for a finding that complainants were subjected to damage by reason of the tariff provisions. HELD, complaint dismissed. Acme Coal Co. v. C. C. C. & St. L. Ry., 101 I. C. C. 79.

(d) Whether demurrage covering "order notify" shipments was covered by average agreement between carrier and consignee HELD immaterial, carrier's duty to collect demurrage being imposed by law, and hence cannot be waived or limited either by contract or custom. Davis v. C. B. Gill & Co. (N. C. 1925) 127 S. E. 532.

(e) Exchange at tidewater piers to which coal was consigned as a common consignee, for transshipment to vessels at the ports, failed to sign average agreement although demurrage accruing was assessed under average agreement tariff, and interested parties gave effect to it by voluntarily complying with such provisions. This plan does not contemplate unloading of cars in the order of their arrival, and the coal was unloaded from the cars into the vessels regardless of identification of cargo or charter of vessel. Carriers construed tariff provisions to mean that settlement may not be made until a car is released, and the excess credits accumulated during a calendar month were not applied to cancel the debits accruing during that month on cars remaining under load at the end thereof. HELD, demurrage charges assessed on coal on storage tracks at tidewater piers under such circumstances were not unreasonable or otherwise unlawful. Tidewater Coal Exchange v. B. & O., 96 I. C. C. 612.

(f) Tariff provisions under which demurrage charges were assessed on shipments of coal at Indianapolis, found not unreasonable and complainants found not to be damaged by reason thereof. Provisions assailed are identical with those of uniform demurrage code and provide that a party entering into an average agreement may be required to give sufficient security to carrier for payment of balance against him at end of month. Complainant was called upon to execute an indemnity bond with approved security, with which request he failed to comply. Contention that failure of demurrage rule to provide for definite acceptance or nonacceptance, in writing within thirty days, of shipper's application for average agreement resulted in unreasonable demurrage charges on shipments, not sustained. It is clear that if such rule had been in effect it would merely have expedited rejection of the application and denied complainants further opportunity of establishing their rights to be placed on the average plan. Complaint dismissed. Acme Coal Co. v. C., C., C. & St. L., 101 I. C. C. 79.

ALL OTHER CITATIONS

Smokeless Fuel Co. v. N. & W. Ry Co., 85 I. C. C. 395.

§14. Bunching.

(a) Complainant attacked charges for the detention of lumber at New York harbor points, or at complainants yard, as unlawful, unreasonable, unjustly discriminatory and unduly prejudicial. Complainant contended that lumber must be delivered from the lighterage equipment of the defendant inside the stringpiece in a straight and orderly manner, while defendant contended that complete delivery of lumber from such equipment to private piers consists only in passing the lumber across the stringpiece to an assigned space on the dock and that no duty to perform any yard service, such as stacking piling or tiering, rests upon it. The consignee must provide a berth when the car float, lighter or barge reports at destination. If a berth is not provided or the property is not unloaded

within the free time, the property is removable to a warehouse at the cost of the owner, subject to a lien for lawful charges. Complainant admits it was not at all times able to furnish berths for the boats upon which demurrage accrued. Under a rule of the demurrage tariff unloading includes payment of lawful freight charges. The property is deliverable only upon payment of satisfactory guaranty of demurrage charges. Complainant was not upon defendants credit list until Nov. 8, 1921. The bulk of the demurrage accrued prior thereto. On account of failure promptly to pay freight charges, complainant was subsequently suspended from the credit list and has not since been restored. The defendant has always been willing to separate from other lumber a particular shipment immediately desired by the complainant if request therefor was received prior to loading on the Jersey shore. After the boat is loaded several carloads may be superimposed upon the one desired, and it is generally impracticable to deliver a particular carload without notice prior to loading unless perchance its position on the boat will permit. Complainants facilities were such that it could not receive all of the shipment consigned to it. It clearly appears that, no matter what course had been followed in respect of transference across the harbor, complainant could not have escaped storage or demurrage. It did not stop the numerous shipments which were being made to it and admittedly it was unable to accept delivery. It is manifest that if the defendant had put a single carload upon one canal boat and that carload had been the first which arrived on the Jersey shore and a similar course had been followed in regard to all of the other 92 carloads consigned to the complainant in January, it would have been absolutely impossible for the canal boats to have been berthed at complainants dock, and the same might be said if the 92 carloads had been loaded on 10 canal boats. There is nothing of record to indicate that complainant or its lumber traffic is treated any differently from any other dealer in lumber receiving lighterage free delivery at private piers in New York harbor or from any other traffic unless that difference of treatment arises from stringpiece delivery, which will now be considered. The present record is limited to consideration of the application of the rules to delivery of lumber from lighterage equipment. It is clear that the present rule of defendant limiting delivery of lumber "to" the stringpiece is not in accord with established custom and practice in connection with such delivery in New York harbor, and it should be amended to provide for such delivery "across" the stringpiece. HELD, storage and demurrage charges attacked not unlawful, unreasonable, unjustly discriminatory or unduly prejudicial. HELD, further, clause in defendants tariff providing for the delivery of lumber "to" the stringpiece should be amended to provide for such delivery "across" the stringpiece. Coastwise Lumber & Supply Co. v. Pennsylvania R. R., 93 I. C. C. 286.

§14¼. Constructive Placement.

(a) Complainant attacked demurrage charges on cars consigned to Thirty-seventh Street station, New York, at Greenville, N. J., under constructive placement and as unreasonable and inapplicable. The record is clear that complainant ordered no cars from the Jersey side and that there was an ample supply of cars at all times in the Thirty-seventh street yards. Complainant does not question the clerical accuracy of defendant's detention records, but bases its claim for reparation upon a standing order placed by it with defendant not to hold cars short of billed destination and upon an attempt to prove lack of sufficient switching power at the yards. The tariff rule was not subject to modification by a standing order from complainant not to hold its cars short of billed destination. Defendant shows that in April one car stood on complainant's trestle for 12 days. Where other cars were when detained by complainant after actual placement does not appear, but obviously they were either upon the trestle or were standing on complainant's lead track, thereby constructing the exchange of loads and empties. In view of the situation thus disclosed it would have been futile for defendant to bring additional cars for complainant. Such additional cars would have rendered the congestion there greater than it was and constructive placement at Jersey City or Harsimus Cove, short of the billed destinations, was defendant's duty under the tariff. HELD, detention attacked applicable and not unreasonable, complaint dismissed. Burns Bros. v. Pennsylvania R. R., 92 I. C. C. 615.

(b) In 61 I. C. C. 424, the Commission considered the lawfulness of certain demurrage charges collected on numerous cars of pulpwood, wood pulp and coal constructively placed by it in July, August, and September, 1918, at various points more or less adjacent to complainants plant at Fennimore, N. Y., across the Hudson river from Hudson Falls, N. Y. They were further considered in 69 I. C. C. 711. First: Shall the Commission adhere to the previous holding that mere physical capacity of tracts to receive cars is not sufficient, but that inability of the consignee to receive depends on physical capacity of tracks as modified by other facts? If track capacity alone governs, the inquiry need proceed no further, and a finding that demurrage charges subsequent to August 9 were unlawfully assessed would be proper. If the Commission adheres to the former decision, where any facts presented on further hearing to warrant it in changing its finding that defendant was justified in assuming that complainants unloading capacity was no greater than that demonstrated by its daily performance during the period in question? It will be noted that it is the act or neglect of the consignee or inability of the consignee to receive cars which warrant their constructive placement, and this is not confined to a disability if tracks or lack of trackage space, but may include other causes as well. HELD, mere track capacity to receive more cars is not sufficient. Original report affirmed. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222.

(c) Complainant attacked demurrage charges exacted on cars of copper and coal, delivered to its plant at Perth Amboy, N. J., and released during June and July, 1920 as inapplicable and unreasonable. On April 10, 1920 a yardmens strike commenced and continued at least until April 27. For slightly more than a year prior thereto an understanding had existed between complainant and defendant that all cars for complainant would be given constructive placement upon arrival and that no cars should be delivered except upon request for cars containing specific commodities. On May 5, 1920 complainant sent the following written order to defendant: "Kindly place all cars that arrive or are at present constructively placed in your yard, until further orders and conditions become normal." This order was disregarded by defendant. The agent of defendant at Perth Amboy continued to issue written notice of constructive placement and to deliver to complainant such cars as from his knowledge of its track layout he thought complainant could accept. On June 2, 1920 complainant again commenced to give orders for a specific number of cars containing certain commodities. The conductor of the crew then serving the locality embracing complainants plant determined from the number of the cars at the plant when a switching movement was made what cars could be accepted and should be delivered on the next movement. The effect of complainants notice of April 15 to defendant was to abrogate the prior understanding between them with respect to the holding, under constructive placement, of cars for complainant short of destination for orders, and to order actual placement of all cars then held for complainant. The notice of May 5 was a specific abrogation of the understanding. Demurrage on cars under constructive placement which accrued prior to receipt by defendant of the notice of April 15 was legal. Thereafter constructive placement could be made by defendant only if, because of some act, neglect or inability of complainant to receive, actual delivery could not be effected. HELD, demurrage accruing prior to April 16, 1920 applicable; those accruing on and after that date inapplicable; demurrage applicable between April 16, 1920 and June 1, 1920 were those accruing from dates of actual placement during that period to dates of release; demurrage on and after June 2 applicable, reparation awarded. Standard Underground Cable Co. v. L. V. Ry., 96 I. C. C. 503.

(d) Constructive placement HELD permissible only after physical tender of car or circumstances which excuse it, as inability to accept for causes attributed to consignee. Granger v. Davis, 2 Fed. (2d) 695.

(e) Where cars were not loaded or unloaded, but enough contents were removed to reveal character, and carload was then sold on sample, its contents replaced, and car reshipped to purchaser, the free time for which consignee was not liable for demurrage HELD governed by rule published in demurrage tariff providing for free time where cars "are held" for consignment or reshipment in

same car; the words "are held" meaning held either by consignor or consignees. Granger v. Davis, 2 Fed. (2d) 695.

(f) Upon further hearing demurrage charges on shipments held short of destination under constructive placement on account of a fire at complainant's plant found not unlawful and findings of former reports 61 I. C. C. 424 and 69 I. C. C. 711, affirmed. Actual unloading performance, notices of constructive placements which included a tender of cars, and daily demurrage statements, sustain burden of proof cast upon carrier to show that delivery was not made because of complainant's inability to receive and unload more cars. Complainant, having acquiesced in carrier's manner of making deliveries, can not claim that its unloading capacity was any greater than actual performance. Moreover, acts and statements of complainant's representatives who failed to inform carrier of their claimed ability to unload more cars constituted "act or neglect" of consignee within meaning of the demurrage rule. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222.

(g) Consignees named in bills of lading were also consignors. Shipments were purchased by complainant f. o. b. its plant subject to inspection and rejection after placement thereat. Upon contention that complainant had no interest in shipments before their arrival at destination, and that it was justified in ignoring notices of constructive placement because not a party to the transportation contract. FOUND, to sustain such contention would necessitate giving no legal effect to fact that bills of lading were forwarded by consignors to complainant and that orders to carrier's station agent were given by shippers directing delivery to complainant's plant. These actions, coupled with past customs as to similar shipments, had effect of substituting complainant as consignee. Destination was its plant, cars were clearly and plainly intended for it, and carrier was justified in considering complainant as real consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 224.

(h) Cars arrived at destination and were constructively placed because inbound shipments exceeded capacity of complainant's siding. A custom and understanding existed between carrier and complainant whereby oral in lieu of written notice of arrival was given and accepted. Tariff, however, provided that notice of arrival be sent or given consignee in writing or, in lieu thereof, as otherwise agreed to in writing. FOUND, even though complainant had actual notice and absence of written notice was not the proximate cause of delay in unloading, rule requiring written notice was part of the tariff and could not be waived. See Davis v. Henderson, 266 U. S. 92. Demurrage charges assessed found inapplicable, former decisions of the commission reversed, and reparation awarded. Campbell Construction Co. v. L. C. & S. E. Ry., 95 I. C. C. 603.

(i) Demurrage charges on cars constructively placed in conformity with an understanding between complainant and defendant that no cars should be actually placed except upon request, found applicable and not unreasonable. Standard Underground Cable Co. v. L. V. R. R. Co., 96 I. C. C. 503.

(j) Instructions of complainant, on June 2, 1920, for specific delivery of cars were equivalent to renewal of agreement between complainant and defendant with respect to holding cars short of destination for orders. Demurrage charges applicable on cars constructively placed prior to, or on June 2, were those accruing from dates of actual placement to dates of release, and on cars constructively placed after that date those accruing from dates of constructive placement. Charges found not unreasonable. Standard Underground Cable Co. v. L. V. R. R. Co., 96 I. C. C. 503, 507.

(k) After abrogation of understanding between complainant and defendant with respect to holding cars short of destination for orders, constructive placement could be made, under the tariffs, only if actual delivery could not be effected due to complainant's inability to receive. Such not being the fact, demurrage charges held not applicable prior to date of actual placement. Standard Underground Cable Co. v. L. V. R. R. Co., 96 I. C. C. 503, 508.

(l) Complainant contends defendants failed to serve written notices, as required, of constructive placement, of certain cars held by defendants at points beyond interchange track, while defendants assert such notices were duly mailed in each instance, but record thereof could not be located. In absence of an admission of receipt of written notice, proof that such notice was mailed or otherwise served on consignee must be established, which was not done in this

case. HELD: Demurrage charges collected prior to actual placement of such cars were without tariff authority. General Motors Corp. v. Director General, 100 I. C. C. 341, 344.

§14½. Congestion.

See Demurrage §16.

(a) Cars consigned to members of Hay and Grain Exchange, whose yards could not hold them, necessitating storage by railroad elsewhere, though not intended to be unloaded in plugging yard of consignee, HELD subject to demurrage, under demurrage tariff, as "cars held for or by consignors or consignees for loading, unloading, forwarding directions, or for any other purposes." Granger v. Davis, 2 Fed. (2d) 695.

(b) Complainant attacked icing and demurrage charges on one car of apples shipped Oct. 9, 1923 from Omak, Wash., to New York, N. Y. as unreasonable and illegal. Shipment consigned to Northwestern Fruit Exchange, advise Berkowitz and Schwartz, and was routed for delivery by the Erie, without any particular point in New York being specified. On Oct. 23, 1923 the car arrived to Croxton, N. J., the point at which defendant holds shipments destined to New York, without particular delivery being designated. On Oct. 24 consignees were notified of arrival and on the following day ordered the car to defendants Duane Street station in New York for sale at auction on Oct. 26. Because of congestion then existing at the station referred to, defendants agent, acting under proper tariff authority requested the consignees to eliminate this car from their order, which was done on Oct. 25. The car remained on hand awaiting further orders and on Nov. 1, 1923 defendants agent notified complainants New York office to that effect. On Nov. 8 an acceptable order for delivery at Duane St. was received by defendant and the car was then moved from Croxton by car float to the station designated, ice and demurrage accruing. HELD, charges applicable and not unreasonable, complaint dismissed. Northwestern Fruit Exchange v. Erie R. R., 112 I. C. C. 29.

§15. Free Time.

(a) Complainant attacked defendant's rule governing the free time allowed at Mobile, Ala., for the unloading of freight from cars for trans-shipment by coastwise vessels as unreasonable and unjustly discriminatory between December, 1919, and March, 1921. Between June, 1920, and April, 1921, certain carload shipments of cast iron pipe and pig iron were consigned from Tennessee and Alabama to complainant at Mobile for transshipment by coastwise vessels via the Panama canal to Pacific coast ports. At that time defendant's rule governing free time on export shipments allowed seven days for unloading, whereas on coastwise shipments allowed only two days. Effective March 5, 1921, the rule was amended to allow seven days free time on cars containing shipments destined for coastwise as well as for export movement. If, at ports of trans-shipment, there be any difference in the handling of heavy commodities for export and for coastwise movement it is not shown here. HELD, rule attacked unreasonable to extent it did not allow seven days free time, undercharges waived, complaint dismissed. Page & Jones v. Southern Ry., 91 I. C. C. 684.

(b) Rule governing free time for unloading freight consigned locally to Mobile, Ala., for transshipment by vessels for coastwise movement, found unreasonable in that it allows less free time than that allowed on similar freight for transshipment in export movement. Rule subsequently amended to allow same free time on shipments destined for coastwise as for export movement. Both export and coastwise shipments must be placed at dock in advance of arrival of steamers and therefore both need more free time for unloading than is allowed ordinary domestic shipments. Page & Jones v. S. Ry. Co., 91 I. C. C. 684.

§15½. Legal Rate.

See Legal Rates.

(a) Complainant attacked as unjust, unreasonable and illegal demurrage charges at Fort Worth, Tex., on a car of milo maize shipped to that point from Brawley, Calif., on June 27, 1919 and later reconsigned to St. Louis, Mo. Shipment delivered to the S. P., consigned to order of shipper, Globe Grain & Milling Co., notify Moffatt Grain Co., at Fort Worth and moved over that line to El Paso, Tex., and T. & P., beyond. It arrived at Fort Worth on July 8, 1919 and on the following day notice of its arrival was mailed to the Moffatt Grain Co at that point. That firm had no office at

Fort Worth. On July 16, 1919 the T. & P., wired the S. P., at Brawley for disposition orders, but the latter was unable to furnish them. Complainant purchased the shipment from the Moffatt Grain Co. of Kansas City, Mo., and on July 12, 1919 advised the H. & T. C., a part of the S. P., at Fort Worth that it held the S. P., bill of lading, requested that it be given notice of the arrival and that the shipment be held for inspection. On August 14, 1919 complainant found the shipment in the T. & P., yards at Fort Worth and on the same day ordered it reconsigned to St. Louis. The same rate applied via the T. & P., as via records of the commission developed the H. & T. C., and examination of the that the H. & T. C., acts as a corporate entity in filing its own annual reports and tariffs. HELD, demurrage charges applicable, complaint dismissed. Ralston Purina Co. of Texas v. Director General, 98 I. C. C. 456.

§16. Placement or Arrival Notices.

See Notice.

(a) Upon arrival at Nashville, Tenn., cars were placed for unloading. Some were reforwarded after being partly unloaded and reloaded with identical materials and ladings of others were changed by substitution of commodities from complainant's stock. Separate bills covering inbound and outbound movements were rendered and paid. HELD, penalty charges assessed on theory that shipments were reconsignments found illegally assessed since they plainly fell within definition of reshipments as defined in governing tariffs. Chestnut Lumber Co. v. Director General, as Agent, 89 I. C. C. 236.

(b) Upon arrival of cars they were rejected by consignee. Consignor notified and disposition orders requested but not furnished. As to certain shipments defendant again wrote consignor "that unless disposition orders were received on or before a certain date such shipments would be sold." As to others a telegram was forwarded stating "that shipments would be sold on a specified date." Demurrage charges collected up to time shipments were sold by defendant found illegal to extent they exceeded those which would have accrued up to and including date of telegram as to shipments covered by it, and up to and including date specified in defendant's letter as to shipments specified therein. Reparation awarded. Wallingford Coal Co. v. Director General, as Agent, 89 I. C. C. 353.

(c) Complainant's name did not appear in billing. Shipment was transferred en route and new car number and change noted on waybill. In accordance with customary practice, notice of arrival was given consignee by service of expense bills. Shipment was rejected by consignee who failed to so notify complainant until after receipt of second notice requesting disposition orders, similar notice having been sent by carrier to complainant. HELD, since notice given consignee contained all information available from bill of lading, and no obligation rested upon carrier under governing tariff to notify shipper of refusal of shipment, the consignee, rather than defendant, was responsible for any negligence which may have occurred in failing to notify complainant of the rejection. Demurrage found legally assessed. Toberman, Mackey & Co. v. Director General, as Agent, 89 I. C. C. 365.

(d) Complainant attacked demurrage charge at Chattanooga on a car of lumber shipped April 6, 1923, from Oconee, Ga., to itself at Chattanooga, Tenn., and reconsigned to Princeton, W. Va., as unreasonable and inapplicable. Car arrived at Chattanooga April 10, and notice of arrival was mailed by the C. of Ga., defendant, to consignee at that point on April 11. On April 12 complainant was notified over the telephone at Birmingham of the car's arrival and of it being held for disposition. On April 13, complainant instructed the general agent at Birmingham to reconsign the car to Princeton, which was done. On March 8, 1923, complainant wrote the defendant that in the past it had been billing shipments of lumber to Chattanooga on routing over the defendant for reconsignment; that the practice would be continued; that it purposed as far as possible to supply reconsigning instructions in advance of arrival of cars at Chattanooga. If the absence of a definite agreement, which embodied a mutual understanding, the written notice would be proper under the demurrage rules. HELD, one day's demurrage should have been assessed, overcharge $2.00, which should be refunded, complaint dismissed. American Lumber & Export Co. v. C. of Ga. Ry., 91 I. C. C. 65.

(e) Complainant attacked demurrage charges on 165 cars of sand, gravel, crushed stone and other commodities re-

ceived at Viroqua, Wis., in Sept., and Oct. 1922, as unlawful. Because of the failure of the highway commission to supply the necessary quantity of cement complainants operations were delayed, and the resulting accumulation of inbound cars of sand, gravel and crushed rock exceeded the capacity of complainants siding. Surplus cars were placed on defendants storage tracks and demurrage charges were assessed under the average agreement. Complainant relies upon the contention that defendant gave no written notice of arrival of the cars or of the fact that they were held ad could not be delivered by defendant, and that, therefore there was no constructive placement. The evidence shows that complainants representatives were notified orally by defendants agent of the daily arrival and accumulation of cars at Viroqua, that upon arrival of the cars expense bills covering freight charges thereon were taken to complainants office and verified by complainants representatives, and that written notice was given for cars placed on defendants storage tracks at Westby, Wis., a point about 7.5 miles north of Viroqua. The record clearly establishes that complainant had actual notice of arrival of the cars, and no objection was offered to the method of giving such notice prior to the filing of this complaint. HELD, demurrage charges inapplicable, reparation awarded. Campbell Construction Co. v. L. C. & S. E. Ry., 95 I. C. C. 603.

(f) Complainant attacked demurrage charges collected on a car of lumber May 17, 1923 from Falco, Ala., to Detroit, Mich., as unreasonable and illegal. Shipment was originally consigned to complainant at Nashville, Tenn., and arrived on May 21, 1923. On May 22, 1923 postcard notices of arrival were mailed at Nashville, and also at Falco, the point of origin, and a wire was sent to defendants agent at Birmingham requesting that complainant be notified that the car was in Nashville awaiting disposition. On June 1 the car was reconsigned to Detroit, Mich., and subsequently moved to that point. Demurrage charges were collected for detention at Nashville. None of the notices were received by complainant and the agent at Birmingham has no record of the receipt of the telegram referred to. The post card addressed to complainant at Nashville was returned for better address. An examination of the correspondence shows it was the intention of both parties to agree to notice by wire in lieu of the usual notice of arrival. In the face of this understanding it is not material that the tariff provision authorizing such an agreement was not mentioned. Clearly the correspondence of record constitutes an agreement in writing in conformity with the tariff provision. In neglecting to comply with this agreement as to notice by wire, defendant failed to meet the requirements provided by the demurrage rules, and consequently no demurrage accrued. HELD, demurrage charges inapplicable and should be refunded, complaint dismissed. Standard Lumber Co. v. L. & N. R. R., 96 I. C. C. 277.

(g) Where demurrage tariff provides that notice of arrival be "sent or given consignee or party entitled to receive same in writing or, in lieu thereof, as otherwise agreed to," and there is no definite agreement, embodying a mutual understanding, for furnishing of such notice to a party located at a point other than at billed destination, furnishing of written notice to consignee at billed destination is proper under demurrage rule. American Lbr. & Export Co. v. C. of G. Ry. Co., 91 I. C. C. 65.

(h) Where, under agreement between railroad and coal exchange, cars for purpose of demurrage charges were treated as having arrived upon exchange's receipt of notices of arrival sent by railroad, and exchange was not required to release cars in order received and was entitled to credit early release against tardy release of others, and where through mistake of railroad's employees no notices of arrival were sent out for some 880 cars, HELD, railroad seeking to recover from shipper, member of coal exchange, its share of demurrage charges, being unable to show what sum, if any, plaintiff owed, could not recover; nor was it entitled in adjustment of difficulty to assume that there had been neither free time nor demurrage on the cars no notice of arrival of which had been given. Virginian Ry. Co. v. Lake & Export Coal Corporation, 5 Fed. (2d) 496.

(i) In action involving liability of consignee for demurrage charges, question of whether railroad had knowledge of consignee's address, making mail notice to consignee of arrival of shipment

insufficient, under demurrage rule in tariff filed with Interstate Commerce Commission, HELD for jury. Boney v. Atlantic Coast Line R. Co., (S. C. 1925) 126 S. E. 46.

(j) Under demurrage rules in tariff filed with Interstate Commerce Commission, providing for notice to consignee within 24 hours after arrival of shipment as condition precedent to imposition of demurrage charges, and for deposit of notice in United States mail, "when address of consignee does not appear on billing and is not known," notice by mail is not sufficient, unless both conditions exist. Boney v. Atlantic Coast Line R. Co. (S. C. 1925) 126 S. E. 46.

(k) The evidence in the case at bar shows that the demurrage sued for was on shipments of coal from the defendant's mine and was based upon tariffs issued by the railroad company under the provisions of the Interstate Commerce Act (Comp. St. U. S. § 8563 et seq.). A clause in the tariff filed, providing for an exemption of coal cars subject to car distribution rules from demurrage charges is notice to a coal company, and the duty is cast upon said coal company to comply with the terms prescribed by the railroad company, if it desires to avail itself of the benefit of such exemption. A failure on the part of the coal company to take the action necessary on its part to bring itself within such exemption renders it liable to the railroad company for demurrage charges under said tariff. Baltimore & O. R. Co. v. Dellslow Coal Co., (W. Va. 1925) 127 S. E. 43.

(lm) Shipment moved to a point at which consignee maintained no office. Carrier mailed notice of arrival on postcard which was not delivered, and later wrote letter to consignor requesting disposition orders. Had defendant complied with tariff requirement which provided that notice of unclaimed freight should be by telegram instead of by letter it would have been received by consignor same day as sent. Defendant's letter, therefore, may not be regarded as a notice prior to date of its receipt. Shipment found overcharged to extent demurrage and penalty charges exceeded those which would have accrued had tariff provision been strictly complied with. Reparation awarded. Standard Lbr. Co. v. Director General, 93 I. C. C. 58.

(n) Consignees named in bills of lading were also consignors. Shipments were purchased by complainant f. o. b. its plant subject to inspection and rejection after placement thereat. Upon contention that complainant had no interest in shipments before their arrival at destination, and that it was justified in ignoring notices of constructive placement because not a party to the transportation contract. FOUND, to sustain such contention would necessitate giving no legal effect to fact that bills of lading were forwarded by consignors to complainant and that orders to carrier's station agent were given by shippers directing delivery to complainant's plant. These actions, coupled with past custom as to similar shipments, had effect of substituting complainant as consignee. Destination was its plant, cars were clearly and plainly intended for it, and carrier was justified in considering complainant as real consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 224.

(o) Cars arrived at destination and were constructively placed because inbound shipments exceeded capacity of complainant's siding. A custom and understanding existed between carrier and complainant whereby oral in lieu of written notice of arrival was given and accepted. Tariff, however, provided that notice of arrival be sent or given consignee in writing or in lieu thereof, as otherwise agreed to in writing. FOUND, even though complainant had actual notice and absence of written notice was not the proximate cause of delay in unloading, rule requiring written notice was part of the tariff and could not be waived. See Davis v. Henderson, 266 U. S. 92. Demurrage charges assessed found inapplicable, former decisions of the commission reserved, and reparation awarded. Campbell Construction Co. v. L. C. & S. E. Ry., 95 I. C. C. 603.

(p) Notice of arrival covering shipment transferred en route failed to show initials and number of original car or that shipment was transferred in transit, as required by demurrage rules of applicable tariff. Demurrage charges assessed thereon found inapplicable prior to date on which free time following notice of transfer expired. Reparation awarded. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 720.

(q) Due notice of arrival was mailed to "order notify" party who refused to take possession of shipments. Consignor

was so notified and disposition orders requested. Contention that demurrage accruing was not applicable because consignor was not promptly notified by delivering line that cars were held awaiting disposition not sustained. Delivering line's tariff carried no provision for such notification within any specified period, when consignor was actually advised that shipments were unclaimed it did not act promptly in effecting disposition, and failure to receive such advice sooner was not the proximate cause of detention. Delivering carrier fully discharged its duty under applicable tariff when it mailed notices to "order notify" party. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 722.

(r) Demurrage charges collected for detention of shipment of lumber at Nashville, Tenn., moving from Falco, Ala., to Detroit, Mich., found inapplicable. The correspondence of record constitutes an agreement in writing in conformity with the tariff provisions quoted and in neglecting to comply with this agreement as to notice by wire, defendant failed to meet the requirements provided by the demurrage rules, and consequently no demurrage accrued. Refund directed. Standard Lumber Co. v. L. & N. R. R. Co., 96 I. C. C. 277.

(s) Exchange at tidewater piers to which coal was consigned as a common consignee, for transshipment to vessels at the ports, failed to sign average agreement, although demurrage accruing was assessed under average agreement tariff, and interested parties gave effect to it by voluntarily complying with such provisions. This plan does not contemplate unloading of cars in the order of their arrival, and the coal was unloaded from the cars into the vessels regardless of identification of cargo or charter of vessel. Carriers construed tariff provisions to mean that settlement may not be made until a car is released, and the excess credits accumulated during a calendar month were not applied to cancel the debits accruing during that month on cars remaining under load at the end thereof. HELD, Demurrage charges assessed on coal on storage tracks at tidewater piers under such circumstances were not unreasonable or otherwise unlawful. Tidewater Coal Exchange v. B. & O., 96 I. C. C. 612.

(t) Complainant attacked demurrage and penalty charges for detention of four cars at Alliance, Neb., during June 1921 from Enumclaw, Wash., as unreasonable and unjustly discriminatory. On arrival at Alliance the usual postal card notices were mailed to complainant. Complainant had no office at Alliance, and the cards returned undelivered. Contemporaneously with the mailing of the cards telegrams were sent to the general agent of the Burlington at Seattle, Wash., advising him that the cars were on hand awaiting disposition orders. An employee in that agent office testified that, according to notations there made, he notified by telephone the employe of complainant to whom such information was customarily communicated that the cars were at Alliance awaiting disposition orders. Complainants employee has no recollection of having received such notice as to these particular cars. The tariffs laid upon defendants the duty of sending notice by wire either to the consignor or to the agent at point of shipment, failing in which no demurrage accrued after the lapse of five days from the first 7:00 a. m. after the date on which notice of arrival was sent or given to the consignee. The tariff provisions as to notice were not complied with. HELD, charges attacked were inapplicable, reparation awarded. Central West Coal & Lumber Co. v. C. B. & Q. R. R. 104 I. C. C. 452.

(u) Shipment of lumber from Picayune, Miss., to the Thirty-seventh Street station of the Pennsylvania, New York City, was diverted under authority of the commission's service order No. 1, to the Twenty-seventh Street station of the Lehigh Valley. Delivering carrier endeavored unsuccessfully to notify shipper, and finally shipment was sold to pay accrued charges. Under all the circumstances, the Twenty-seventh Street station was the practical point of delivery, and changes were made in routing rather than destination, the real difficulty arising from failure of shipper to receive notice, due primarily to the fact that he was shown as both consignor and consignee and could not be reached by mail at origin or destination. National Lumber Co. v. N. O. & N. E. R. R. Co., 100 I. C. C. 334, 336.

(v) Complainant contends defendants failed to serve written notices, as required of constructive placement of certain cars held by defendants at points beyond interchange track, while defendants assert such notices were duly mailed in each instance, but record thereof could not be located In absence of an admission of receipt of written notice,

proof that such notice was mailed or otherwise served on consignee must be established, which was not done in this case HELD: Demurrage charges collected prior to actual placement of such cars were without tariff authority. General Motors Corp. v. Director General, 100 I. C. C., 341, 344.

(w) Shipment was placed for unloading and notice of arrival immediately forwarded to consignee. Owing to consignee's inability to pay freight charges demurrage accrued. Consignor was notified of facts by mail and disposition orders requested, whereupon it paid accrued charges and shipment was released. FOUND: Demurrage charges were illegally assessed since tariff specifically provided for furnishing of notice to consignor that shipment was unclaimed at expiration of 5 days from the first 7 a. m. after the day on which notice of arrival was given consignee. Having failed in this duty carrier could not lawfully demand demurrage for detention thereafter. See 85 I. C. C. 331. In addition notice had to be by wire, no alternative method being authorized. Davis v. Henderson, 266 U. S. 92. Nat'l Fire Proofing Co. v. B. C. R. R., 102 I. C. C. 345.

§17. Railroad Errors or Omissions.

(a) Acts and statements of shipper's representatives and their failure to inform carriers of their claimed ability to unload more cars than they actually did found to constitute "act or neglect" of consignee within meaning of a demurrage rule governing constructive placement. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 233.

(b) Demurrage charges assessed on a reconsigned shipment at its first-billed destination, incurred as a result of negligence of carrier in transmitting reconsignment instructions, found illegal. Reparation awarded. American Lumber & Export Co. v. A., T. & N. R. R. Corp., 96 I. C. C. 576.

(c) Complainant alleged it shipped a car of Pocahontas egg coal in June 1923 from Springton, W. Va., to Tekonsha, Mich., that this coal was transferred in transit from the car in which it had been first loaded into another car, that as a result of such transfer the consignee at Tekonsha refused to accept the same, that when complainant had been advised of said refusal it notified defendant that it would be responsible in damages, and that, notwithstanding such notice, defendant assessed and complainant paid $48 demurrage charges alleged to have accrued on this shipment after notice to complainant. This car of coal was shipped to the consignee for domestic uses. While in transit the car in which the shipment was first loaded was damaged to such an extent that transfer to another car was necessary. Degradation of a commodity in transit due to its transfer from one car to another is not a railroad error. The demurrage charges were applicable. HELD, demurrage charges were applicable, and not unreasonable, complaint dismissed. Atwater & Co. v. M. C. R. R. 107 I. C. C. 491.

(d) Complainant attacked demurrage charges for detention of 10 cars containing grain or feed at Lexington, O., during Nov. and Dec. 1922 as unjust and unreasonable. The greater portion of complainants inbound traffic originates at points west of the Mississippi river and at the time of the receipt of the advice from defendants agent that no western lines cars could be used or would be reconsigned, he had ordered 61 cars of grain and feed. Some of these he sold at point of origin and shipped them direct to the purchaser. The only question is whether the assessment of this demurrage because of defendants failure to furnish cars for outbound loading and its refusal to permit the reconsignment of western line owned cars when under load consigned to complainant, was unjust and unreasonable. That defendants agents misconstrued the order of the association by basing their refusal to permit reconsignment or diversion of cars thereon is beyond question. A carrier may not arbitrarily set aside its tariff provisions without due notice in the proper form. It is pointed out that the practice of reconsignment and diversion was granted and authorized at Lexington under the tariffs of defendant, but complainant is unable to point out at this time any particular car or cars on which reconsignment was requested and refused by defendant and on which demurrage accrued. He simply states that he took the word of the agent and made no effort to have them reconsigned HELD, demurrage charges not unreasonable, complaint dismissed. Lexington Elevator & Mill Co. v. B. & O. R. R., 109 I. C. C. 542.

ALL OTHER CITATIONS

Gadsden Lumber Co. v. A. N. R. R. Co., 85 I. C. C. 626.

§18¼. Switching Reclaims.

See Per Diem Charges; Switch Tracks and Switching §9½.

(a) Payment of switching reclaims to industrial lines may result in preferences and advantages to the proprietary industries. The per diem plan with reclaims applies to carriers which perform a switching service as distinguished from a line haul. No reclaim is allowed where a short line, whether industrially owned or otherwise, performs a line haul service as distinguished from a switching service. Virginia Blue Ridge Ry. v. S. Ry., 96 I. C. C. 591, 593.

(b) The Commission condemned per diem with reclaims where payment of switching reclaims to industrial lines may result in preferences and advantages to the proprietary industries, and prescribed a modified demurrage plan in lieu thereof. Western Pine Lumber Co. v. Director General, 96 I. C. C. 625, 627.

(c) The per diem plan with reclaims applies to carriers which perform a switching service as distinguished from a line haul. No reclaim is allowed where a short line, whether industrially owned or otherwise, performs a line haul service as distinguished from a switching service. Western Pine Lumber Co. v. Director General, 96 I. C. C. 625, 628.

§18½. Uniform Demurrage Code.

(a) The Commission has frequently pointed out the desirability of uniformity in dealing with car detention, and have on a number of occasions declined to approve exceptions to the uniform demurrage rules, in favor of particular traffic. Demurrage rules on coke, 96 I. C. C. 731, 734.

§19. Weather Interference.

(a) Complainant attacked demurrage charges for the detention at Detroit, Mich., during Nov. and Dec. 1919 and Jan. 1920 of 175 cars of mixed sand and gravel tendered for delivery in a frozen condition as unreasonable. The demurrage rule provided for additional free time for unloading frozen shipments. Complainants did not serve upon the carriers agent a written statement of the frozen condition of each car within the prescribed free time, but it appears that their condition in general was promptly brought to the attention of the carriers. Quite as important as the requirement of written notice and a condition precedent to relief from the payment of demurrage was the provision of the rule that diligent effort should be made to unload. Complainant was well equipped to handle this commodity in large quantities under normal conditions. Complainant did not use the effort contemplated by the rule to release these cars, and that had due diligence been used the cars might have been unloaded within the free time allowed. Written notice to the consignee is required by the demurrage rule covering constructive placement. In the absence of an admission of receipt of written notice proof that such notice was mailed or otherwise served on the consignee must be established by the carrier. No competent evidence was submitted herein which showed that written notices of constructive placement of cars so claimed to have been placed was served upon or despatched through the mails properly addressed to the consignee of the shipments. Demurrage charges collected prior to actual placement of such cars were without tariff authority. HELD, charges collected not unreasonable, complaint dismissed. General Motors Corp. v. Director General, 100 I. C. C. 341.

(b) Carrier's demurrage rules, providing that when condition of weather made it impossible to unload cars without serious injury to freight free time should be extended, was inapplicable to delay in unloading car of oil for use on streets, because consignee, who had no storage facilities, could not, under his contract, place oil on streets while it was raining or while streets were not in fit condition due to rain. Davis, Director General of Railroads v. Steele (Ind., 1925) 146 N. E. 425.

(c) Demurrage rule providing additional time for unloading frozen shipments provided that consignee must make diligent effort to unload and give written notice to carrier of frozen condition. Consignee at Detroit, Mich., did not make the "diligent effort" contemplated by the rule and the commission therefore need not determine to what extent written notice was given or whether its decision in 61 I. C. C. 200, as to written notice, was overruled by the

Supreme Court in Davis v. Henderson, 266 U. S. 92. Charges collected found applicable and not unreasonable except on certain cars for which no notice of constructive placement was received. General Motors Corp. v. Director General, 100 I. C. C. 341.

ALL OTHER CITATIONS

Republic Coal Co. v. C. St. P. M. & O. Ry. Co., 85 I. C. C. 331; McGarry & Co. v. W. Ry. Co., 88 I. C. C. 301.

§20. Advance in Demurrage During Transit.

ALL CITATIONS

Getz Brothers & Co. v. Director General, as Agent, 85 I. C. C. 673.

V. REPARATION.

See Reparation.

§21. In General.

(a) The provisions in section 206 of the transportation act, 1920, respecting liability of director general in actions arising out of federal control were intended to cover charges collected for services performed, at least in part, by the director general during federal control, and that complaints regarding charges collected by the director general, as agent for the carriers, on account of services performed wholly prior to federal control, should be filed against the carriers themselves. Krauss Brothers Lumber Co. v. Director General, 92 I. C. C. 450, 451.

(b) In 66 I. C. C. 637, the Commission found that demurrage and reconsignment charges assessed on cars of lumber reconsigned at Meridian, Miss., and Jackson and Chattanooga, Tenn., as illegal. The real question for determination is: Should the Director General be required to refund charges illegally collected by the Director General after Jan. 1, 1918, for detention prior to federal control of cars containing shipments subsequently transported in part and delivered by him? The Director General performed no part of the service on the 29 cars for which the demurrage was collected and in the collection thereof he was acting solely as agent for the corporate carrier. HELD, director general not liable for the collection of illegal demurrage charges on the 29 shipments as to which the periods of detention were entirely prior to federal control, but that he is liable for the collection of illegal demurrage charges on the one remaining shipment. Krauss Brothers Lumber Co. v. Director General, 92 I. C. C. 450.

(c) Where shipments moved prior to Federal control and illegal demurrage charges were collected, and director general performed no part of the service for which the demurrage was collected but merely delivered shipments and collected such charges as agent for corporate carriers, he can not be held liable for such illegal charges. In such cases complaint should be directed against corporate carriers. See Terre Haute, Indianapolis & Eastern Traction Co. case, 77 I. C. C. 658. Krauss Bros. Lbr. Co. v. Director General, 92 I. C. C. 450.

(d) Consignees named in bills of lading were also consignors. Shipments were purchased by complainant f. o. b. its plant subject to inspection and rejection after placement thereat. Upon contention that complainant had no interest in shipments before their arrival at destination, and that it was justified in ignoring notices of constructive placement because not a party to the transportation contract. FOUND, to sustain such contention would necessitate giving no legal effect to fact that bills of lading were forwarded by consignors to complainant and that orders to carrier's station agent were given by shippers directing delivery to complainant's plant. These actions, coupled with past custom as to similar shipments, had effect of substituting complainant as consignee. Destination was its plant, cars were clearly and plainly intended for it, carrier was justified in considering complainant as real consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 224.

ALL OTHER CITATIONS

Murray v. Director General, as Agent, 85 I. C. C. 422.

§22. Actions at Law.

See Actions at Law.

(a) In carrier's action to recover demurrage rules authorizing carriers to charge for storage in absence of evidence to contrary would be presumed to have been filed with Interstate Commerce Commission and to have been published as required by law. Davis, Director General of Railroads v. Steele (Ind., 1925) 146 N. E. 425.

(b) In action involving liability of

consignee for demurrage charges, question of whether railroad had knowledge of consignee's address, making mail notice to consignee of arrival of shipment insufficient, under demurrage rule in tariff filed with Interstate Commerce Commission, HELD for jury. Boney v. Atlantic Coast Line R. Co. (S. C. 1925) 126 S. E. 46.

(c) Party relying on exception to make out cause of action or defense, such as fact that freight car was on private track and hence not subject to demurrage charges under carriers' rules, has burden of alleging and proving facts necessary to bring him within exception. Davis, Director General v. Steele (Ind. 1925) 147 N. E. 632.

(d) If by reason of commercial contracts, entered into under prior misrepresentation on the part of the carrier, complainant found itself in such a position that it could not abate the demurrage assessed, question of damage arising from such a situation is for the courts to consider. Krauss Bros. Lumber Co. v. I. C. R. R. Co., 96 I. C. C. 760, 761.

VI. LIABILITY TO PAY.

§23. In general.

(a) Claim for "demurrage," which is not a penalty, but earnings improperly lost in detention of carrier's cars longer than necessary to load or unload, is for carriers' "charges or any part thereof," within Transportation Act, Feb. 28, 1920, § 424 (Comp. St. Ann. Supp. U. S. 1923, §8585), requiring that action therefor be begun within three years from time cause of action accrues. Philadelphia, B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(b) Switching railroad serving Hay and Grain Exchange yard HELD not entitled to demurrage by reason of delay which could have been avoided by placing cars of different consignees in strict order of arrival, in view of rule published in demurrage tariff, providing for recovery of demurrage on basis of amount that would have accrued but for railroad's errors. Granger v. Davis, 2 Fed. (2d) 695.

(c) Shipper of coal to himself in care of coal exchange pool, who retained title to coal, or other coal of like quality in hands of the exchange, until ordered out, HELD liable, rather than exchange, for demurrage charges on cars so held, particularly in view of his assumption of such liability as a member of exchange. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co., 3 Fed. (2d) 525.

(d) In action by railroad for demurrage, defended on ground that shipment was through one, admitting evidence for defendant tending to show custom between parties to treat dealings with plaintiff, as thorough, and that defendant had nothing further to do with them after delivery to plaintiff, HELD proper. Norfolk & S. R. Co. v. Albermarle Fertilizer Co., (N. C. 1924), 124 S. E. 127.

(e) Under Hepburn Act June 29 1906, §2, par. 7 (U. S. Comp. St. §8569, par. 7), amending Interstate Commerce Act, §6, par. 7, Act Aug. 29, 1916, §1 (U. S. Comp. St. §1974a), and Federal Control Act March 21, 1918, §10 (U. S. Comp. St. Ann. Supp. 1919, §3115¾j), consignee is not exempt from liability for demurrage charges for detention of cars because detention was caused by strike, regardless of whether demurrage accrued on interstate or intrastate shipment. Davis v. Keystone Steel & Wire Co., (Ill., 1925) 148 N. E. 47.

(f) Action by carrier against member of coal exchange for demurrage charges HELD, not based on exchange form alone, but on such form together with stipulations in rules and regulations of exchange, which every member was required to sign, and privity between members and carrier is supplied by Code 1924, §5143 authorizing person for whose benefit agreement is made to sue thereon, though not a party thereto. Smokeless Fuel Co. v. Chesapeake & O. Ry. Co. (Va., 1925) 128 S. E. 624.

(g) Where carrier rendered to coal exchange the general consignee, an account of demurrage charges against it, and exchange made apportionment between members, and carrier rendered bills in accordance therewith, on failure of member to pay its proportion, a cause of action against it by carrier for demurrage charges arose, and could not be taken away by action of exchange in subsequently rescinding its apportionment. Smokeless Fuel Co. v. Chesapeake & O. Ry. Co. (Va., 1925) 128 S. E. 624.

(h) Where demurrage rates charged by carrier are same to shippers, whether or not members of coal exchange, and are in accordance with carrier's filed tariffs, fact that by reason of pooling agreement amount paid by member is different

than if he were nonmember, does not affect validity or correctness of carrier's demurrage charges, within Interstate Commerce Act, §6, cl. 7 (U. S. Comp. St. §8569). Smokeless Fuel Co. v. Chesapeake & O. Ry. Co. (Va., 1925) 128 S. E. 624.

§24. Actions to Recover.

(a) Where demurrage accrued during federal control under tariff established by Director General, the District Court had jurisdiction, under Judicial Code, § 24 (Comp. St. § 991), in Director General's action to recover demurrage, though on cars moved in intrastate traffic. Granger v. Davis, 2 Fed. (2d) 695.

I. ESTABLISHMENT AND CONTROL.

See Control and Regulation.

§½. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) The commission is not justified in denying the establishment of reasonable rates from a specific territory simply because to do so happens to increase the existing differences between the rates from that territory and the rates from another territory. Cancellation of Coal Rates to Minnesota, 89 I. C. C. 573, 586.

§1. In general.

(a) Differentials between competing coal mines to various markets of consumption can not be established upon distance alone; nor can one case be safely made the precedent for another. Much depends upon competitive conditions and each situation must be considered and disposed of by itself. In determining these differentials the Commission must consider the interest of the consumer as well as the producer. Rates should be so adjusted as to permit the widest possible competition. Coal rates are usually highly competitive. Lake cargo coal rates 1925, 101 I. C. C. 513, 546.

II. APPLICATION.

See Application of Rates; Classification §17.

§2½a. Between commodities.

(a) Rate on crude oil found unreasonable to extent it exceeded rate 5 cents less than on refined oil. Reparation awarded. Omaha Refining Co. v. Director General, 91 I. C. C. 575.

(b) Rates on crude, fuel, and gas oils from points in Kansas, Oklahoma, Texas, and Louisiana to Minneapolis, Minn., found unreasonable to extent they exceeded rates 5 cents less than on refined oils. Reparation awarded. Barber Co. v. A. & V. Ry. Co., 91 I. C. C. 621.

(c) Proposed readjustment of rates on grain and products from points in

southeastern Missouri, St. Louis, Mo., Cairo, Ill., and related points, to New Orleans, La. found not justified in so far as they exceed rates 10 per cent less than those on wheat. Grain and Products, 91 I. C. C. 666, 675.

(d) Crude and refined oils, viewed from standpoint of transportation, have certain characteristics that are different, and a differential of some amount is clearly justified. Risk in transporting gasoline is substantially greater than in the case of crude oil, and gasoline is much more valuable. There is no reason for believing, however, that, apart from special competitive conditions that affect one commodity and not the other, the rates on gasoline should exceed the corresponding rates on crude oil by more than 33 1-3 per cent. Utah State Automobile Asso. v. A., T. & S. F., 92 I. C. C. 376, 383.

(e) Any difference in rates resulting from differentiation in commodity-rate descriptions between rock salt and evaporated salt, between coarse salt and medium or fine salt, or between table salt and common salt, found unduly prejudicial and preferential and to result in an unreasonable practice. Salt Cases of 1923, 92 I. C. C. 388, 392.

(f) Differences in transportation conditions between salt in bulk and salt in containers found insufficient to justify differences in commodity rates, and such differences are unduly prejudicial and preferential. Salt Cases of 1923, 92 I. C. C. 388, 392.

(g) Rates on pipe, riveted steel, found not unreasonable, discriminatory, or unduly prejudicial, as compared with rates on iron conduits, iron and steel pier tubing, iron or steel radiators, iron stovepipe cut to shape, pipe fittings and connections, open-seam tubing, and iron or steel wire cable and rope. Duluth Boiler Works v. A. T. & S. F. 92 I. C. C. 692.

(h) Upon contention of complainant that rates on fuel oil from Pryse, Ky., to Newport News, Va., should be regarded as the refined-oil basis and that fuel oil should be less by the difference set in Midcontinent Oil Rates, 36 I. C. C. 109, and later cases, including Utah State Automobile Asso. 66 I. C. C. 8, and 92 I. C. C. 376. FOUND: The fuel-oil adjustment below refined oil is not in effect eastbound from point in this region, and the record is not sufficient for its initiation nor for a determination that under such an adjustment the present rates are on the corresponding refined oil basis. Newport News Shipbuilding & Dry Dock Co. v. L. & N. R. R. Co., 100 I. C. C. 1, 2.

(i) Rates on cottonseed oil, cake, meal, and hulls from Los Angeles, El Centro, and Calexico, Calif., and from Phoenix, Ariz., to El Paso, Texas, found unreasonable. Rates established upon the distance scales of rates on these commodities prescribed in Oklahoma Corporation Commission, 98 I. C. C. 183, plus differentials for hauls in this territory, would be reasonable. The differences between the levels of the rates under the prescribed standard scales for cottonseed oil on the one hand and cottonseed cake, meal, and hulls on the other indicate that the differentials on cottonseed oil for hauls in this territory should be higher than on the cake, meal and hulls. Reasonable rates prescribed for the future. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 23.

(j) Rates on gas and fuel oils found unreasonable and unduly prejudicial to extent they exceeded certain differentials lower than the rates contemporaneously maintained on refined oil. Reparation awarded. Marysville Elec. Light & Power Co. v. A., T. & S. F., 101 I. C. C. 229.

§6. To Equalize Consuming Points.

See Equalization of Rates §3.

(a) Complainant attacked commodity rates charged on anthracite coal from Pennsylvania to points on Staten Island as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates to points in northern New Jersey. Staten Island lies east of that portion of New Jersey extending substantially from Elizabethport to Perth Amboy, and south of Newark Bay and that part of New Jersey lying between Newark Bay and New York Bay. It is separated from New Jersey by the comparatively narrow bodies of water comprising the Kill von Kull, Arthur Kill and Staten Island sound. The southern half of Brooklyn lies east of the island across the Narrows and Lower New York Bay. Staten Island bears a close physical relation to the adjacent northern New Jersey and New York territory, and it follows that it should have rates on anthracite that are properly related to the rates on this commodity to that territory. Direct all rail service is afforded Staten Island by the Staten Island Rapid Transit Ry., which extends easterly from Cranford Jct., N. J., where it connects with the Central across a bridge over Staten Island sound and long the north shore of the island to Clifton, 13.7 miles, and southern from Clifton to Tottenville, at the southern end of the island, a total distance of 26.5 miles. Connection is made with the L. V., at Staten Island Jct., N. J., 0.5 miles east of Cranford Jct., and with the Pennsylvania at Linden Jct., N. J., 3.1 miles east of Cranford Jct. The stations on the Transit are divided into two groups, the stations along the north shore of the island, including South Beach branch, being designated as group 1, and the stations south of Clifton, Grasmere and Tottenville, being designated as group 2. The average distance from Cranford Jct. to points in group 1 is given as 10 miles, and to points in group 2 as 21 miles. The stations in group 1 are within New York Lighterage limits. The distances to northern New Jersey points via the respective routes are about the same as to Staten Island points. In all the circumstances of this case, any additional cost arising by reason of the two line or three line haul to Staten Island is not shown upon this record to be of such controlling importance that it should be reflected in the rate adjustment by imposing higher rates than contemporaneously apply to adjacent northern New Jersey points. Notwithstanding the actual geographical situation, the shippers and receivers of freight at Bayonne and that vicinity, the shippers and receivers of freight in Staten Island group 1, are practically in the same relation as though they were in different parts of the same city. HELD, rates attacked unreasonable, except via Pennsylvania, and unduly prejudicial to Staten Island to extent they exceed to group 1 the rates in effect to northern New Jersey and to group 2 rates based 14.5c per long ton prior to July 1, 1922 and 13c thereafter over group 1, and except that via the Pennsylvania the rates to group 2 are unreasonable to extent they exceed rates found reasonable to group 1 by more than 11c per long ton prior to July 1, 1922 and 10c thereafter, reparation awarded. Richmond County Coal Merchants Assn. v. B. & O. R. R. 101 I. C. C. 154.

(b) Complainants attacked commodity rates on bituminous coal, carloads, from Appalachian coal fields to lower Lake Erie ports for transshipment by vessel to destinations beyond. As thus transported lake cargo coal is distinguished from socalled commercial coal destined to the lake cities proper and not for transshipment by vessel. Most of it moves to those ports only during the season of open navigation on the Great Lakes, ordinarily from the latter part of April to the latter part of November. When transshipped it moves to various lake ports in the United States and in Canada, east, north or northwest from the port of transshipment. That part of it which reaches the upper lakes docks is distributed by rail throughout the year. Complainants operating mines in the Pittsburgh district of Pennsylvania, the Panhandle of West Virginia, and in No. 8 and Cambridge districts of Ohio

allege that the rates on lake cargo coal from those districts to the ports named are unjust and unreasonable per se, relatively unreasonable, and unduly prejudicial as compared with the rates in effect on this traffic from all other districts in the Appalachian region, and that the rates from these other districts are unduly preferential. Complainants operating mines in the Fairmont district of northern West Virginia alleged that the rate on lake cargo coal therefrom to those ports is unreasonable and unduly prejudicial as compared with rates from the Pittsburgh, Ohio No. 8, and Cambridge districts, the Crooksville and Shawnee districts of southern Ohio and the Connellsville district of southwestern Pennsylvania. The rates apply from the mines to the raised or hump tracks beyond the classification yards at the Lake Erie ports. From these tracks the loaded cars are dropped by gravity to dumping machines at the docks. A separate tariff charge for transferring the coal from cars to vessel are not in issue. The rates on lake cargo coal are treated by the carriers as in the nature of proportional rates to the ports for part of a through movement to cross lake destinations. They include no delivery terminal to consignees at those ports. The rates on socalled commercial coal to the ports proper cover such delivery. From these reasons rates on lake cargo coal have always been lower than the local rates on commercial coal. During the last 15 years the territory originating lake cargo coal considered as a whole, has shown a tendency to expand, with a corresponding increase of tonnage. From a few of the districts the rates differ over the lines of different carriers to the same port or to different ports. But in most instances the rates from a district to all the ports served are the same. It is not unusual for the most distant mines in one group to be somewhat farther from a common destination than the nearest mine in an adjacent and higher rated group. A considerable difference in distance might give rise to undue prejudice or preference. But there is nothing of record to base a consideration of the propriety of partitioning the Pittsburgh district, and all the districts will be dealt with as now constituted. Prompt and constant attention is accorded to large cargo coal, in order efficiently to coordinate rail and vessel movement and reduce car detention at the ports to the minimum. At the ports lake cargo coal is set out and classified as to consignees and then held until arrival of the vessels. When vessels do not arrive in the order expected switching must be done in order to facilitate the loading of those ready for cargoes. Care must also be exercised to have the coal ready for loading, so that vessels may not be delayed. For these and other reasons the demurrage rules applicable to this traffic are much more favorable to shippers than those governing the movement of commercial coal. As bearing upon the issue of undue prejudice it should be noted that the lines principally interested in the rates from the southern West Virginia and Kentucky districts are in nowise responsible for the rates maintained from the complaining districts. It is apparent that the carriers controlling the rate adjustment from the southern West Virginia and Kentucky districts are not the same as those which control the adjustment from the complaining districts. The basis for a finding of undue prejudice is thus lacking, even if the facts adduced to support such a finding would in other respects support it, as they do not. The differentials here are not only the result of years of experience but in fact are those prescribed by the Commission. They have not been shown to result in undue prejudice to the complainants. The rate level on lake cargo coal from complainants districts is already considerably below the rate level on commercial coal moving in the same territory. HELD, present rates on lake cargo coal from the Pittsburgh, Ohio No. 8 Cambridge and Fairmont districts do not exceed the maximum of reasonableness and are just and reasonable rates, and rates attacked on lake cargo coal from these and other districts are not unduly prejudicial, unduly preferential or otherwise unlawful, complaints dismissed. Lake Cargo Coal rates 1925, 101 I. C. C. 513.

§7. To Equalize Producing Points.

ALL CITATIONS

South Dakota R. R. Commrs. v. C. & N. W. Ry. Co., 85 I. C. C. 217; Western Coal Rates, 88 I. C. C. 13.

IV. REASONABLENESS AND DISCRIMINATION.

§8. In General.

See Advanced Rates §5 (2½) (c); Class Rates §2 (tt) (3k) (5p) (7s); Classification §17; Discrimination; Reasonableness of Rates.

(a) It was contended that cotton rates to New Orleans, La., from points in Mississippi do not reflect proper differences under the rates from Memphis, Tenn., based upon fact that the Memphis rate is applied from Greenwood, Miss., although distance from Memphis to New Orleans is greater. This situation, however, results from fact that rates from northern half of Mississippi are grouped to New Orleans, and in prescribing the rate from Memphis in 69 I. C. C. 318, consideration was given to average distance of points within this group. The prescribed rate was made to fit that situation and the rate for the average distance compares favorably with cotton rates generally in the South. Moreover, there are many advantages to the grouping, the producer within the group being given the benefit of several markets. No warrant found on the record for condemning this grouping. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 70.

(b) Rates on bituminous lump and slack coal from the Rich Hill and Appleton, Mo., Pittsburg, Kans., Arkansas-Oklahoma, and Sparda, Ark., groups to Leavenworth, Kans., found unreasonable for future to extent they exceed by more than 15 cents per ton the contemporaneous rates to Kansas City, Mo.-Kans. Southwestern Interstate Coal Operators' Asso. v. A. W. Ry. Co., 89 I. C. C. 73.

(c) Upon further consideration of the original report, 87 I. C. C. 740, adjustment of rates on naval stores from points in the Southeast and Mississippi Valley to various destination territories, modified to permit the application of rates to Milwaukee, Wis., which do not exceed rates found reasonable to Chicago, Ill., by more than 2 cents on rosin from both New Orleans and Jacksonville groups and 4 cents on turpentine from New Orleans group and 3 cents from Jacksonville group. Naval Stores from Southern Points 89 I. C. C. 634.

(d) In view of the fact that conditions of operation in the southern Wyoming district do not differ as greatly from those in Utah as the commission had been led to believe, and that difference between the average distances is somewhat less than was originally stated, differential of 50 cents, Castle Gate district in Utah over Rock Springs-Kemmerer district in Wyoming, to destinations in the Northwest heretofore prescribed found too high and to result in undue prejudice to the Castle Gate district. Former report, 80 I. C. C. 383, modified and differential of 40 cents for future prescribed, Western Coal Rates, 89 I. C. C. 666, 669, 675.

(e) It is well established that difference in transportation conditions in opposite directions may justify a difference in rates. Raritan Copper Work v. Director General, 92 I. C. C. 671, 672.

(f) Complainant attacked commodity rates charged on soft coal from the Fulton-Peoria, northern Illinois, Danville, Centralia, Du Quoin, southern Illinois, and Murphysboro districts in Illinois to Omaha and South Omaha, Neb., and to Council Bluffs, Iowa, as unreasonable, unjustly discriminatory and unduly prejudicial in comparison with rates from Belleville district. Springfield district is in central Illinois. South of the Springfield district and immediately east and southeast of East St. Louis is the Belleville district. East thereof is the small Centralia district. South of Centralia and southeast of the Belleville district is the Du Quoin district. East and southeast of the Du Quoin district lies the southern Illinois district. Southwest of the Du Quoin district are the mines in and around Murphysboro. There are 11 carriers serving mines in the Belleville district, 9 serve the southern Illinois district, 3 the Centralia district, 1 the Du Quoin district, and 4 the Danville district. From the Belleville, Centralia, Du Quoin, Murphysboro and southern Illinois districts the I. C. has its own line to Omaha. From the Centralia district to Omaha the Burlington has its own line. The carriers serving the southern Illinois district direct, in addition to the I. C., are the Burlington and the M. P. The Wabash has a line from the Danville district to Omaha. That carriers also have joint rates in connection with originating lines, including the I. C. Little coal from the southern Illinois district to Omaha moves through the southern gateways. This is because the initial lines which, to a large extent, dominate that district handle the traffic over their single line routes. Most of the traffic from the Belleville district moves via the

southern gateways. The commission is of the opinion that the rates to Omaha from the southern Illinois district should be made more with regard for the distance and other transportation conditions via the northern gateways than via the northern gateways. Although the greater from the Belleville district should be considered more with regard for the distance and other transportation conditions via the southern gateways than via the northern gateways. Although the greater distance from the southern Illinois district via the northern gateways than from the Belleville district via the southern gateways may to some extent be offset by the necessity of taking most of the traffic from the Belleville district through the East St. Louis and St. Louis terminals, the transportation conditions in general are in the view of the commission sufficiently more favorable from the Belleville district via the southern gateways than from the southern Illinois district via the northern gateways to warrant a higher differential than applies to destinations to which the volume of movement from both districts is primarily via the southern gateways. On the other hand, the differential over the Springfield district on traffic to Omaha should not be more than on traffic to points in Iowa. To Omaha the rates from the Belleville and the Springfield districts are the same. HELD, rates on large and fine coal attacked not unreasonable or unjustly discriminatory but that from the southern Illinois and Danville districts they are unduly prejudicial to extent they exceeded by more than 30c rates from Belleville district; that rates from Murphysboro unduly prejudicial to extent they exceed by more than 27.5c the rates from Belleville; that rates from Centralia and Du Quoin districts unduly prejudicial to extent they exceed by more than 15c rates from Belleville. Illinois Coal Traffic Bureau v. A. & S. R. R., 92 I. C. C. 759.

(g) Complainant attacked commodity rates charged on cotton seed, carloads, from northern Louisiana and southern Arkansas to Jackson, Miss., as unreasonable and unduly prejudicial as compared with competitors at Vicksburg, Miss., Pine Bluff, Ark., and Memphis, Tenn. Jackson is 45 miles east of Vicksburg on the A. & V., which, together with the V. S. & P., is referred to as Vicksburg. The points of origin are Delhi, Girard, Mound, and Delta Point, La., on the Vicksburg, Forest, Newellton, Gilbert, Foules, Winnsboro, Lake Providence, Epps, Darnell, Oak Ridge, Sicily Island, Wisner, Archibald and Mangham, La., and Eudora and Crosset Ark., on the M. P., and Tallulah and Rayville, La., on both lines. The distances from these points to Jackson range from about 50 to 170 miles. The usual route of movement from points on the M. P., is via Tallulah, Rayville, or Monroe, La., and thence over the Vicksburg, but from a few stations the short line route is in connection with the Y. & M. V., via Natchez, Miss. The record fails to show that the rates attacked which were in effect prior to Nov. 27, 1923 as unreasonable or prejudicial. HELD, rates attacked from points on the V. S. & P., to Jackson not unreasonable; that rates to Jackson from stations on the M. P., since Nov. 27, 1923 unjust and unreasonable and unduly prejudicial to extent they exceed rates to Vicksburg by more than 3.5c, reparation awarded. Southland Cotton Oil Co. v. A. & V. Ry., 96 I. C. C. 333.

(h) Complainant attacked commodity rates charged on newsprint paper, carloads, from New England and New York to Washington as unreasonable and unduly prejudicial to extent they exceeded rate to Baltimore by more than 1c. Traffic to Washington nearly all moves through Baltimore and the additional distance is 40 miles. There is no uniform relationship between the two destinations on traffic from the various points of origin. There are a number of origin territories, in most of which the points of origin either take a group rate or are differentially related. The sixth class rate of 26.5c applying on newsprint from Buffalo and Niagara Falls to New York, Philadelphia and Baltimore is the most influential single rate in the rate structure here considered. The distance from Buffalo to New York, Philadelphia and Baltimore are 406, 414 and 408 miles, respectively and this rate was established to the three destinations because of the like distances. The sixth class rate to Washington is 31.5c. The record contains much general criticism of the class rate structure in the trunk line territory, but there is no showing that the sixth class rates from these points of origin to Baltimore are too high as class rates. In general it may be said that against the sixth class rates within trunk line territory, and from New England and

Canada into trunk line territory, there is opposed an 80% basis from Central to trunk line territories and from New England and New York to Chicago and a 90% basis within a large part of New England. The rates to Washington are clearly indefensible, even on the basis of the rates to Baltimore. HELD, rates attacked in 15199 and sub. 1, not unreasonable, complaint dismissed. In 15199 and 15229 rates attacked unreasonable to extent they exceed rates to Baltimore by more than 3c from Philadelphia and by more than 2c from New York, Norwalk, Conn., and other points of origin. Washington Publishers Asso. v. B. & O. R. R., 98 I. C. C. 339.

(i) Rates on phosphate rock from Mount Pleasant, Columbia, and Siglo, Tenn., to New Albany, Ind., a north-bank Ohio River point found unreasonable and unduly prejudicial in favor of Louisville, Ky., a south-bank Ohio River point, to extent that they exceeded or exceed rates to Louisville by more than differential subsequently established by carriers, and which resulted in removal of undue prejudice herein found to exist. Reparation awarded. Calumet Fertilizer Co. v. L. & N. R. R. Co., 91 I. C. C. 31.

(j) Rate on watermelons from Atlanta, Ga., to Murphy, N. C., found unreasonable to extent it exceeded rate to Knoxville, Tenn., by more than 5 cents. While distance to Knoxville is farther than to Murphy, shipments to Knoxville move in through trains and under more favorable operating conditions, and rate to Murphy should be somewhat higher than to Knoxville. Reasonable maximum rate prescribed and reparation awarded. Fain Grocery Co. v. L. & N. R. R. Co., 91 I. C. C. 374.

(k) Complainant attacked commodity rates charged on coal, carloads, from mines in the southwestern producing districts in Kansas, Missouri, Arkansas, and Oklahoma to Lincoln and Havelock, Neb., as unjust, unreasonable and unduly prejudicial to extent they exceeded rates to Omaha by more than 20c per ton prior to July 1, 1922 and 18c per ton on and after that date. The origin groups are located generally south of Kansas City, Mo., and constitute what are commonly known as the southwestern coal fields. The Rich Hill group includes mines on both sides of the Kansas-Missouri state line. Further south are the Pittsburg, Kas., group, the Henryetta and McAlester groups in Oklahoma and the Greenwood and Spadra groups in Arkansas. The average distance over all routes from the Pittsburg group to Lincoln is computed by complainants as 358.5 miles and by the short line routes 332 miles. All routes named in the tariffs apply through Kansas City. From Kansas City the direct routes to Lincoln and Omaha are over the Burlington and M. P., the distance being about 200 miles by either road. Havelock is on the Rock Island and Burlington about 5 miles east of Lincoln. The mere departures from the terms of General Order No. 28 can not be regarded as proof that the resulting rates were unreasonable. The fact that the Commission approved a differential of 15c in 1908 is not conclusive that the same differential was proper during the changed conditions which brought about the subsequent general rate changes, nor can it be regarded as proof that any differential is warranted at the present time. Traffic and transportation conditions are not materially different to Omaha and to Lincoln. HELD, rates attacked not unreasonable but are unduly prejudicial to extent they exceed rates to Omaha, reparation denied. Lincoln Chamber of Commerce v. A. C. R. R, 101 I. C. C. 765.

(l) Rates on salt from Halite and Retsof, N. Y., to Chicago, found unduly prejudicial to extent they exceed by more than 8 cents the rates contemporaneously maintained from Detroit. Salt Cases of 1923, 92 I. C. C. 388, 405, 406.

(m) Considering character of the commodity, amount of the rates, and extra service performed, a differential of 20 cents per net ton for joint-line hauls on slag found reasonable. Duquesne Slag Products Co. v. P. R. R., 92 I. C. C. 554, 562.

(n) Rates on sulphuric, nitrating, and muriatic acids from Kansas City (Argentine), Kans., to Oklahoma found not unreasonable, but unduly prejudicial in favor of St. Louis, and Chicago, Peoria, East St. Louis, and related points in Illinois, and to extent they exceeded rates made lower than the contemporaneous rates on like traffic from St. Louis and said points in Illinois by differentials herein prescribed for future.

National Zinc Co. v. A., T. & S. F., 92 I. C. C. 587.

(o) Following Swift Lumber Co., 61 I. C. C. 485, rates on lumber, timber, and other forest products from Frost, Ala., a local point on the Garyville Northern R. R. Co., to destinations in official and western trunk-line territories, and in Oklahoma, Texas, Kentucky, and Tennessee, found unreasonable to extent they exceeded by more than certain differentials the corresponding blanket rates contemporaneously maintained from Livingston and Garyville, La. Reparation awarded. Fleming Bros. v. G. N. R. R., 92 I. C. C. 582.

(p) Rates on bituminous coal from mines in the southern Illinois, Danville, Murphysboro, Centralia, and DuQuoin districts in Illinois to Omaha and South Omaha, Nebr., found not unreasonable or discriminatory, but unduly prejudicial in comparison with rates from the Belleville district. Differentials for removal of undue prejudice prescribed. Illinois Coal Traffic Bureau v. A. & S. R. R., 92 I. C. C. 759.

(q) Rates on zinc ore from points in Oklahoma on Miami Mineral Belt and Northeast Oklahoma railroads, and from trunk-line and junction producing points in Missouri, Kansas, and Oklahoma, to South Fort Smith, Ark., found not unreasonable but unduly prejudicial in favor of competitors operating zinc-smelting plants at Collinsville, East St. Louis, La Salle, Peoria, and Chicago, Ill., and Grasselli, Ind., to extent that factors of above-named carriers exceeded by more than 0.5 cent, the contemporaneous factors on like traffic to the preferred plants. Nonprejudicial basis of rates prescribed. Athletic Mining & Smelting Co. v. K. C. S., 93 I. C. C. 119.

(r) Interstate rate on drugs and medicines from Norwich to New York City, found not unreasonable or discriminatory, but found unduly prejudicial to complainant in favor of competitors at Cleveland, Detroit, Kalamazoo, Holland, Indianapolis, and St. Louis, to extent it exceeds differentials under rates from such competing points herein prescribed. Norwich Pharmacal Co. v. B. & O., 93 I. C. C. 246.

(s) Rates on lumber from Group 12 points on Guyandotte branch of the C. & O. in West Virginia to destinations in c. f. a. territory and in Canada found not unreasonable or unduly prejudicial as compared with lower rates to same destinations from points in Groups 11 and 13 on the Coal River branch. While through distances from respective groups are substantially the same, differentials over junction point rates to Group 12 are higher than those to Groups 11 and 13, but it can not be found that rates assailed are unreasonable because of present variations. Peytona Lbr. Co. v. C. & O., 93 I. C. C. 363.

(t) Following Houston Cotton Exchange, 87 I. C. C. 392, the establishment of joint rail-and-water and rail-water-and-rail rates on cotton from Oklahoma points, via New Orleans, to points in New England found desirable in the public interest and existing combination rates found unreasonable to extent they exceed rates constructed by deducting 4 cents from the present all-rail rates. Similar rates to other points in the northeastern portion of the United States found not unreasonable. New Orleans Joint Traffic Bureau v. A. & A. R. R. Corp., 95 I. C. C. 77.

(u) Rates on roofing and building paper or felt and prepared roofing from Cincinnati, Lockland, and Carthage, Ohio, to Texas Gulf Ports and points taking same rates, found unreasonable to extent they exceed rates contemporaneously maintained from East St. Louis to same points by more than 11.5 cents. Carey Co. v. A., T. & S. F., 95 I. C. C. 296.

(v) Differential adjustment of rates applying through various Atlantic and Gulf ports found not to result in unreasonableness or undue prejudice to Boston and other New England ports. Ratemaking lines serving Canadian ports are beyond commission's jurisdiction, while those reaching other competing Atlantic and Gulf ports are served by lines which have no control over rates to the New England ports. While there is basis for finding undue prejudice to Boston in view of its advantage in distance and transportation conditions, in instances where carriers controlling rates to that point also reach the competing ports, complainants failed to show that Boston suffers injury from the present relationship or that a change therein would inure to its benefit. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539.

(w) Upon contention that theory of port differentials violates the provision of clause 6, section 9, Article I of the Constitution of the United States which

reads, "No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another." HELD, complaints are brought before the commission under the interstate commerce act and invoke exercise of powers thereby delegated by Congress under the commerce clause of the Constitution. Clause 3, section 8, Article I. As an agency of Congress the commission must assume that in laying statutory duties upon it the Congress has not transcended its powers. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 542.

(x) Rates from Middleton, Wis., to destinations in the Mississippi Valley found unreasonable to extent they exceed or may exceed by more than 2 cents the contemporaneous rates from Madison, Wis., rates from St. Paul and points basing thereon found unreasonable to extent they exceed or may exceed rates 5 cents lower than present rates; and throughout the balance of territory under consideration, rates found unreasonable only in instances where, and to extent, existing joint rates exceed those based upon the lowest combination, using St. Louis, Milwaukee, and Chicago, as basing points. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208.

(y) Upon complaint attacking c. l. commodity rates on canned goods from Wisconsin points and from St. Paul, Minn., to destinations in the Mississippi Valley, and proposing adjustment by the rezoning of the State of Wisconsin and adoption of basis of rates prescribed on commodities, c. l., from Chicago to Mississippi Valley in 64 I. C. C. 306, 335, FOUND, that rates from Middleton, Wis., are and for the future will be unreasonable to extent they exceed or may exceed by more than 2 cents the contemporaneous rates from Madison, Wis.; that rates from St. Paul and points basing thereon are and for the future will be unreasonable to extent they exceed or may exceed rates 5 cents lower than present rates; and that throughout the balance of territory under consideration, rates are unreasonable only in instances where, and to extent, existing joint rates exceed those based upon the lowest combination, using St. Louis, Milwaukee, and Chicago, as basing points. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208.

(z) Rates on cottonseed from certain points on Missouri Pacific in northern Louisiana and southern Arkansas to Jackson, Miss., found unreasonable and unduly prejudicial to manufacturers of cottonseed products at Jackson, and unduly preferential of their competitors at Vicksburg, Miss., to the extent they exceed rates contemporaneously maintained from same points to Vicksburg by more than 3.5 cents. Reparation awarded and reasonable rates prescribed for future. Southern Cotton Oil Co. v. A. & V. Ry. Co., 96 I. C. C. 333.

(aa) On further hearing, rates on naval stores from points on the Alabama, Tennessee & Northern to various destinations prescribed on basis of the junction-point rates, plus varying differentials on rosin and turpentine. Naval Stores from Southern Points, 96 I. C. C. 417.

(bb) Rates on fuel oil from points in Arkansas, Texas, and Oklahoma to Steelton (Duluth), Minn., found unreasonable due to failure of carriers to accord to low-grade oils the differential under high-grade oils, prescribed in Midcontinent Oil Rates, 36 I. C. C. 109. Reparation awarded on basis of rates in effect on June 24, 1918, minus the 5-cent differtial, as modified by subsequent general increases and reductions. Minnesota Steel Co. v. A. T. & S. F., 96 I. C. C. 483.

(cc) Coastwise rates on lumber from certain points in Texas and Louisiana on Kansas City Southern system lines and Gulf, Colorado & Santa Fe Ry. to Orange, Tex., found unduly prejudicial to Orange and unduly preferential of Beaumont, Tex., to extent they exceed, by more than a differential of 2 cents, contemporaneous rates on like traffic to Beaumont; and from all other points on lines of these carriers coastwise rates on lumber to Orange from points in Texas, and coastwise rates to Orange from points in Louisiana, found unduly prejudicial to Orange and unduly preferential of Beaumont to extent they exceed contemporaneous rates on like traffic to Beaumont. Undue prejudice ordered removed and reasonable and nonprejudicial rates prescribed for future. Orange Chamber of Commerce v. A. & W. Ry. Co 98 I. C. C. 101.

(dd) The commission has repeatedly held that joint-line arbitraries are inconsistent with group or blanket rates, and that even if a two-line haul were more expensive than a one-line haul, the additional expense, if slight, should not be

reflected in the rate in a general group adjustment. Orange Chamber of Commerce v. A. & W. Ry. 98 I. C. C. 101, 107.

(ee) Rates on newsprint paper, from points in New England, New York, and Canada, and from Philadelphia, Pa., to Washington, D. C., found unreasonable and unduly prejudicial to extent they exceeded, exceed, or may exceed corresponding rates to Baltimore, Md., by more than 3 cents per 100 pounds from Philadelphia and 2 cents from all the other points of origin. While the entire class-rate structure within and to trunkline territory is in issue in a pending general investigation, the rates to Washington are clearly indefensible and shippers should not suffer therefrom for the period necessary to complete the general investigation. Washington Publishers' Asso. v. B. & O. R. R. Co., 98 I. C. C. 339.

(ff) Rates on apples, cantaloupes, and vegetables from all points in the Yakima Valley, in Washington, to Portland, Ore., found unduly prejudicial to the extent that they exceed by more than 10 cents per 100 pounds the contemporaneous rates on the same traffic to Seattle, Wash. Nonprejudicial basis of rates prescribed. Portland Traffic & Transportation Asso. v. N. P. Ry. Co., 98 I. C. C. 345.

(gg) Following American Sand & Gravel Co., 88 I. C. C. 1, rates on sand, gravel, and crushed rock from certain points in Minnesota to certain destinations in North Dakota found unreasonable to extent they exceed rates based upon the scale set forth in the appendix to the report, which, except for a small increase for distances over 130 miles, is equal to the present Nebraska interstate and intrastate scale for the distances here considered, plus an arbitrary of 1 cent per 100 pounds for joint-line hauls. The transportation conditions in the territory under consideration in the cited case are not so materially different from those existing between the points here considered as to warrant any different level of rates for application to these low-grade commodities which are of such great necessity for the building and maintenance of roads and other public and private projects. Reasonable basis of rates prescribed and reparation awarded. Hopeman Material Co. v. N. P. Ry. Co. 98 I. C. C. 361.

(hh) Rates on lump coal from northern Colorado district to Missouri River territory found unreasonable to extent they exceed rates 75 cents less per net ton than the rates herein prescribed to Missouri River points, and to other points taking $5 rates from Walsenburg, Colo. Colo. & N. Mex. Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 390, 391.

(ii) Rates on lump coal from Trinidad, Raton-Dawson, Cameo-Palisade, Bowie-Somerset, Crested Butte, and Routt County (Oak Hills) districts, to various interstate destinations, found unreasonable to extent they exceed rates herein prescribed from Walsenburg, Colo., district by more than present differentials between existing rates. Colo. & N. Mex. Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 396.

(jj) Rates on cyanamid from Niagara Falls, Ontario, to Alexandria, Va., found unreasonable to extent they exceeded lower rate based on the commodity rate on like traffic to Baltimore, Md., plus the sixth-class differential to Alexandria. Reparation awarded. Bryant v. M. C. R. R. Co., 98 I. C. C. 526.

(kk) Rates on certain iron and steel articles from various points in Ohio, Kentucky, Indiana, Alabama, Illinois, Pennsylvania, New York, and Missouri to Dallas, Forth Worth, and Harrys, Tex., found unreasonable to extent that the factors from St. Louis, Mo., and points taking the same rates exceeded, prior to the effective dates of the general reductions in rates, a certain amount, and from and including that date to extent they exceeded rates for similar distances as prescribed in Memphis Southwestern Investigation, 77 I. C. C., 473. The rates from the other points of origin were and are unreasonable to extent they exceeded or may exceed the rates herein prescribed from St. Louis, plus the established differentials. Bases for award of reparation and reasonable rates for the future prescribed. Atlas Metal Works v. A., C. & Y. Ry. Co., 100 I. C. C. 173.

(ll) Rates on bituminous coal from Folks and Narva, Ohio, to Munhall, Pa., found to have been unreasonable to extent they exceeded lower rates subsequently established based on a differential over the rates to Pittsburgh, Pa. Carnegie Steel Co. v. P. R. R. Co., 100 I. C. C. 353.

(mm) Rates on coal from points on Indian Creek Valley Ry., to eastern and New England destinations, which are based on a differential over the Meyersdale group rates, found not unduly prejudicial as compared with the lower contemporaneous rates on like traffic from the Meyersdale region and rates from other mining regions to same and other destinations. Complaint dismissed. Indian Creek Coal & Coke Co. v. A. C. R. R. Co., 100 I. C. C. 375.

(nn) No sufficient reason has been shown for joint line differentials or arbitraries between points in southern territory, but the absence of such differentials is a factor which should be given some weight in determining the level of the distance scale. Southern Class Rate Investigation, 100 I. C. C. 513, 628.

(oo) Upon general investigation, on commission's own motion, of interstate class rates within southern territory, all rail and rail-water. FOUND: that reasonable maximum class rates on standard lines between points in Florida peninsula south of line of S. A. L. from Jacksonville to River Junction, on the one hand, and other points in southern territory, on the other, are and for future will be, rates determined by distance scale shown in Appendix K, plus certain specified differentials for that part of the distance lying south of aforesaid line. Southern Class rate Investigation, 100 I. C. C. 513, 646.

(pp) Commission is of opinion that, between official and southern territories on all rail traffic, the uniform and unmodified application of southern territory class-rate scale herein approved would result, in many instances, in rates neither reasonable nor free from preference or prejudice, particularly to and from border districts of southern territory. This situation should be corrected by means of a scale of differential rates. Southern Class Rate Investigation, 100 I. C. C. 653, 675.

(qq) To apply fixed differentials between the eastern ports to the large destination territory here involved would depart from the generally recognized principle that differentials should decrease with distance. Southern Class Rate Investigation, 100 I. C. C. 653, 701.

(rr) Interritorial all-rail class rates from or to points on other than standard lines, as defined herein, may be made by addition of arbitraries for that portion of the joint haul over a line not classed as standard. Southern Class Rate Investigation 100 I. C. C. 653, 704.

(ss) In constructing rates between points in southern territory and points in Michigan, Vermont, New Hampshire and Maine, arbitraries may be added equivalent to those contemporaneously applied in making class rates between points in States named and other points in central or New England territory as the case may be. Southern Class Rate Investigation, 100 I. C. C. 653, 704.

(tt) Rates on grain and grain products, hay and straw, and related articles taking same rates, or rates basing thereon, from Oklahoma to that portion of Texas not herein otherwise provided for, found unreasonable to extent they exceed rates made by adding to the distance scale of rates prescribed herein to common-point territory differentials set forth herein including a designated section of the Texas Panhandle, which differentials are prescribed as reasonable for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116.

(uu) Rates on grain and grain products from eastern New Mexico to Kansas City, Kans.-Mo., found unreasonable to extent they exceed rates constructed by adding to the distance scales herein found reasonable from the Panhandle of Texas to Kansas City, the scale of differentials set forth herein, to be applied only to the mileage within New Mexico. Reasonable maximum rates, with application of differentials, prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 130.

(vv) Rates on anthracite coal from Pennsylvania mine regions to Staten Island, N. Y., found unreasonable and, except via the Pennsylvania, unduly prejudicial to Staten Island, to the undue preference of northern New Jersey, to extent they exceeded and exceed, to Group 2, rates exceeding those herein, found reasonable to Group 1 by more than certain fixed differentials, including shipments via the Pennsylvania. Reasonable and nonprejudicial relationship of rates prescribed for future and reparation awarded. Richmond County Coal Merchants Asso. v. B. & O., 101 I. C. C. 154.

(ww) Rates on bananas and coconuts, in straight or mixed carloads, from Gulfport, Miss., to certain Kansas and

Oklahoma destinations, found unreasonable to extent they exceed lower rates here prescribed from New Orleans, La., to same destinations by more than a specified differential, which rates are prescribed as reasonable for future. Dawson Produce Co. v. A. & V., 101 I. C. C. 196.

(xx) Class rates from St. Paul, Minneapolis, and Chicago, and related points taking same rates, to Watertown, S. Dak., found not unreasonable, but unduly prejudicial to Watertown and unduly preferential of Sioux Falls, S. Dak., to extent they exceed the contemporaneous rates to Sioux Falls by specific differentials enumerated herein. Nonprejudicial bases of rates prescribed for future. Watertown Chamber of Commerce v. A. & W., 101 I. C. C. 427, 434.

(yy) Fact that the commission approved a differential on coal of 15 cents in 1908 is not conclusive that same differentials was proper during the period of changed conditions which brought about subsequent general rate changes, nor can it be regarded as proof that any differential is warranted at the present time. Lincoln Chamber of Commerce v. A. C. R. R., 101 I. C. C. 759, 762.

(zz) Rates on paving and roofing materials from New Orleans to points in Texas differential territory found unduly prejudicial and unreasonable to extent they exceeded lower contemporaneous class E rates applicable on roofing slate, paving slate, and hard asbestos shingles from New Orleans to Texas common-point group, and related points, plus class E differentials. Reasonable rates prescribed for future and reparation awarded. Cameron & Co. v. A. & S., 102 I. C. C. 31.

(3a) Upon further hearing, findings in original report, 73 I. C. C. 251, modified and rates on fuel and gas oils, in tank-car loads, found unreasonable, and unduly prejudicial for future to extent they exceeded rates 6 cents lower than rates contemporaneously maintained on refined oil. Davenport Commercial Club v. Director General, 102 I. C. C. 523.

(3b) Rates on iron and steel articles, c. l. and l. c. l., from Birmingham to Nashville found not unreasonable or unduly prejudicial, except that on c. l. lots, which is found unduly prejudicial to Nashville to the advantage of Chattanooga and Knoxville to extent it exceeds 3 cents more than Birmingham-Chattanooga rate and 4 cents less than Birmingham-Knoxville rate. Nonprejudicial basis of rates prescribed. Nashville Traffic Bureau v. L. & N., 102 I. C. C. 641.

(3c) Rates on wrought iron and steel pipe and fittings and on oil-well supplies from certain points in Texas to Haynesville, La., found unreasonable to extent they exceeded specific commodity rates fixed on basis of distance scale prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, with addition of a differential to compensate for an extra line haul. Reasonable rates prescribed and reparation awarded. Humble Oil & Refining Co. v. L. & N. W. R. R., 102 I. C. C. 761.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Construction of the Act.

See Act to Regulate Commerce II.

(a) The rights of every shipper to be protected against undue preference of others are preserved for him by section 3. Nowhere in the act, or in any decision construing the act, is any distinction made between old and new shippers, or between economical or efficient producers and the reverse. Rules governing ratings of coal mines, 95 I. C. C. 309, 331.

(b) Discrimination under the third section to be undue and unlawful must ordinarily be such that the prejudice arising out of it against one party is a source of advantage to the other alleged to be favored, and that generally a competitive relationship between the commodities must appear. York Mfrs. Asso. v. P. R. R. Co. 107 I. C. C. 219, 228.

(c) To bring the difference in rates within the prohibition of section 3, it must be shown that the discrimination practiced is unjust when measured by the transportation standard. In other words, the difference in rates cannot be held illegal, unless it is shown that it is not justified by the cost of the respective services, by their values, or by other transportation conditions. York Mfrs. Asso. v. P. R. R. Co. 107 I. C. C. 219, 229.

(d) The act requires that rules, as well as rates, shall not be unduly prejudicial or preferential. Wasmuth Endicott v. C. R. I. & P. Ry. 107 I. C. C. 588, 590.

(e) Undue prejudice to one locality connotes undue preference of another. Galveston Commercial Asso. v. A. & S. Ry., 109 I. C. C. 114, 122.

(f) The inhibition of section 3 of the act against undue prejudice applies to localities as well as shippers at those localities. Sioux Falls Livestock Exchange v. A. T. & S. F. Ry., 109 I. C. C. 501, 512.

(g) The right of carriers to meet competitive conditions and equalize lo-

calities is subject to the limitation that no undue prejudice will be caused thereby. Lincoln Gas Coal Co. v. B. & O. R. R. Co., 88 I. C. C. 379, 384.

§2. Jurisdiction of Commission.

See Canada (r); Interstate Commerce Commission I; Jurisdiction of Commission.

(a) It must be recognized that the commission can not require unduly low rates on some commodities for the benefit of one class of shippers any more than it can arbitrarily increase rates on other commodities because the shippers thereof may be enjoying excessive profits. Rates and Charges on Grain and Grain Products, 91 I. C. C. 105, 153.

(b) Discrimination may, of course, be practiced by a combination of connecting carriers as well as by an individual railroad; and the Commission has ample power under paragraph 3 to remove discrimination so practiced. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 573.

(c) The commission has jurisdiction over discriminations by carriers against their connections as well as against shippers. See 236 U. S. 351 and 26 I. C. C. 226. Peoria & Pekin Union Ry., 93 I. C. C. 3, 19.

(d) Prior to the amendments made in transportation act, 1920, orders of the Commission requiring the removal of unjust discrimination or undue prejudice have usually afforded to carriers the choice of three alternative modes of compliance. They could reduce the higher rate to the level of the lower, increase the lower to the level of the higher, or place both upon some other common level. The act now in force empowers the Commission to prescribe either the exact rate or the maximum or minimum or maximum and minimum, to be charged in such case, and to make an order that the carriers shall not hereafter publish, demand, or collect any rate other than the rates prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be. York Mfrs. Asso. v. P. R. R. Co. 107 I. C. C. 219, 231.

(e) While ordinarily the Commission in undue prejudice or discrimination cases enters an alternative order, leaving the carriers an option as to how such discrimination shall be removed, section 15 (1) of the act authorizes and empowers the Commission to prescribe the rate, charge, regulation or practice to be thereafter followed. York Mfrs. Asso. v. P. R. R. Co. 107 I. C. C. 219, 231.

§2½. State and Interstate Rates.

See Infra §4¾; State Rates and Regulations.

(a) Adjustment of rates on ordinary livestock from Nebraska points to Missouri River cities found unduly prejudicial to interstate shippers and localities unreasonably preferential of intrastate shippers and localities and unjustly discriminatory against interstate commerce; and in certain instances found unreasonably preferential of interstate shippers and localities, unduly prejudicial to intrastate shippers and localities, and unjustly discriminatory against intrastate commerce. Distance scales of rates suggested for correction of the situation. Nebraska Livestock Case, 89 I. C. C. 444.

(b) If intrastate rates are less than are necessary to bear a proper relation to interstate rates, a revenue burden is being cast upon interstate and foreign commerce, which amounts to an unjust discrimination against it. Nebraska Livestock, 89 I. C. C. 444, 453.

(c) Rates on fresh fruits and vegetables from Indiana points to Chicago, Ill., found unreasonable and unduly prejudicial as compared with rates on the same commodities from Illinois points to Chicago. No conditions affecting the transportation which would justify a different level of rates on this intrastate and interstate traffic was shown. Reasonable and non-prejudicial rates prescribed. Indiana Public Service Comm. v. B. & O. R. R. Co., 89 I. C. C. 651.

(d) Whether an intrastate rate established by a state commission creates an undue discrimination against interstate rates is a question of which the courts have not jurisdiction, but one which, under the Transportation Act, must be determined by the Interstate Commerce Commission. Illinois Cent. R. Co. v. Railroad Commission of Kentucky 1 Fed. (2d) 805.

(e) Interstate rates on sugar beets between points in Ohio and Michigan, higher than contemporaneous intrastate rates between points in same States, found unreasonable and unduly prejudic-

ial to interstate shippers, unduly preferential of intrastate shippers, and unjustly discriminatory against interstate commerce. Reasonable maximum distance scale of rates prescribed. Continental Sugar Co. v. N. Y. C. R. R. Co., 91 I. C. C. 677.

(f) The authority vested in the Interstate Commerce Commission by Transportation Act 1920 extends to the removal of undue, unreasonable, and unjust discrimination against interstate commerce by an order fixing intrastate rates for the purpose. Northern Pac. Ry. Co. v. St. Paul & Tacoma Lumber Co., 4 Fed. (2d) 359.

(g) The regulation of intrastate rates rests primarily with the States and the commission should interfere with such rates only upon a clear showing that they violate the provisions of the interstate commerce act pertaining to discrimination against interstate commerce. Certain-Teed Products Corp. v. A. & L. M. Ry., 95 I. C. C. 273, 279.

(h) Rates on clean rice from points in Arkansas, Louisiana, and Texas to points in Oklahoma found unreasonable. The rice adjustment presents many incongruities, rates from producing territories to Oklahoma points being higher than to more distant points in practically all directions, in violation of the fourth section. Jobbers located at points in Arkansas and Texas near the Oklahoma border are able to purchase rice in carloads and distribute in less than carloads to Oklahoma points at transportation charges substantially lower than rice can be similarly handled by Oklahoma jobbers. Reasonable scale of distance rates, which will give to each distributing point the benefit of its location, prescribed. Alton Mercantile Co. v. A. & W. Ry., 95 I. C. C. 645.

(i) Similar complaint having been filed with State public utilities commission, but attacking intrastate rates, joint hearing was held members of State commission sitting with this commission in oral argument and conferring on issues presented. Missouri Portland Cement Co. v. A., T. & S. F., 101 I. C. C. 454.

ALL OTHER CITATIONS

Ohio State Rates on Sand, Gravel, Stone, and Paving Brick, 85 I. C. C. 66.

II. DETERMINATION OF DISCRIMINATION.

§3. In General.

See Allowances §7.

(a) Class A rates on horses, mules, asses and burros, from Kansas City, Mo., to points in Texas and Louisiana, found unreasonable and unduly prejudicial as compared with rates within Texas or Louisiana or between those states, and to extent they exceed the distance rates based on the class C scale provided for in Memphis-Southwestern Investigation, 55 I. C. C. 515, herein prescribed for future. Kansas City Chamber of Commerce v. A. & W. Ry. Co., 89 I. C. C. 22.

(b) Relationship of rates on potatoes and lettuce from Divide, Canon City, Villa Grove and Antonito, Colo.; to destinations in Texas, Oklahoma, Kansas, and states east thereof, found unduly prejudicial to Divide and its traffic and unduly preferential of Canon City, Villa Grove, and Antonito, and their traffic. From standpoint of transportation conditions there is no reason why relationship of Divide to Colorado common-point group should be different from that of Canon City, Villa Grove and Antonito. Pikes Peak Co-operative Asso. v. M. T. Ry. Co., 89 I. C. C. 379.

(c) Rates on pipe from points in westbound transcontinental Group B to Taft, Calif., on the Sunset Ry., found not unreasonable or unduly prejudicial as compared with transcontinental rates from same origin points to other California destinations, including Bakersfield, Calif., which lower rates are applicable for considerable distances beyond that point, and also apply to points on other branch lines in California and Arizona. The usual basis for making rates from eastern origin points to California and Arizona points on branch or short lines is by combination over the junction points and instances cited of the extension of such lower rates to branch and short line points were shown to be invariably due to either carrier, water, or market competition. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 425.

(d) Upon further hearing and reargument previous report, 69 I. C. C. 282, charges on traffic from points west of the Hudson River to the J. L. Kelso Co. warehouse on the Union Freight R. R. in Boston, Mass., found unreasonable and unduly prejudicial to extent they exceeded rates on like traffic to deliveries

on the Boston & Albany, Boston & Maine, and New York, New Haven & Hartford railroads in the Boston district. Line-haul carriers refused to absorb charges of the Union while making deliveries at all other points in and about Boston at the flat Boston rates. Reparation awarded. Boston Wool Trade Asso. v. Director General, as Agent, 89 I. C. C. 589, 593.

(e) Inclusion of Rock Springs and Kemmerer mines in Wyoming in one group found not unduly prejudicial of operators of coal mines in Utah. The commission has on former occasions declined to separate the district into two rate groups on traffic to southern Idaho on ground that the grouping both as to shipments westbound and eastbound had existed for many years and should not be interfered with unless a service more acceptable to the public, and at the same time just to the carriers, could be established. Moreover, separation of the group on westbound traffic would naturally result in like action as to eastbound traffic, and would seriously disturb the relationship that has existed without complaint over a long period of years. Western Coal Rates, 89 I. C. C. 666, 668, 669.

(f) It is well settled that discrimination under the third section to be undue and unlawful must ordinarily be such that the prejudice arising out of it against one party is a source of advantage to the other alleged to be favored and that generally a competitive relationship between the commodities must appear. Utah State Automobile Asso. v. A. T. & S. F. Ry., 92 I. C. C. 376, 386.

(g) Complainant attacked commodity rates charged on grain and grain products, carloads, from Utah, Idaho, Montana, Wyoming and Oregon on the O. S. L., to Petaluma Calif., as unjust, unreasonable and unduly prejudicial as compared with rates to San Francisco, Oakland, San Jose, South Vallejo, Stockton, Woodland and Marysville, Calif. Petaluma is on the Northwestern Pacific, 38 miles north of San Francisco. Points of origin are in what is known as intermountain territory. Rates from and to these points are made on a combination basis, composed of commodity rates to San Francisco plus the local commodity rates beyond. The local rates from San Francisco to Petaluma were 7.5c on wheat and 7c on coarse grains. The rates from the various points of origin to San Francisco vary from 46c to 73c on wheat and from 41.5 to 65.5c on coarse grains. HELD, rates attacked not unreasonable but failure and refusal to accord Petaluma San Francisco rates unduly prejudicial. Golden Eagle Milling Co. v. Bamberger Electric R. R., 100 I. C. C. 41.

(h) Rates on wire and wire articles from Anderson, Kokomo, and Muncie, Ind., to points in Kentucky and Tennessee, higher than from Pittsburgh, to same destinations, found not unreasonable or discriminatory, but unduly prejudicial to shippers at Anderson, Kokomo, and Muncie, and preferential of competitors at Pittsburgh. Indiana Public Service Commission v. A. & V. Ry., 92 I. C. C. 497.

(i) Rates on sulphuric, nitrating, and muriatic acids from Kansas City (Argentine), Kans., to Oklahoma found not unreasonable, but unduly prejudicial in favor of St. Louis, Mo., and Chicago, Peoria, East St. Louis, and related points in Illinois, to extent they exceed rates made lower than contemporaneous rates on like traffic from St. Louis and said points in Illinois by differentials herein prescribed for future. National Zinc Co. v. A., T. & S. F. 92 I. C. C. 587.

(j) Through rates on interstate shipments of stone and products from South Amherst, a local point on the Lorain & Southern R. R., a common-carrier short line, found not unreasonable or otherwise unlawful. Nonabsorption by New York Central of all of the Lorain & Southern's local charges does not, in and of itself, establish unreasonableness or undue prejudice, and fact that tariffs of New York Central named rates on stone from various points on its line within a radius of 25 miles from Amherst, the junction point of the two carriers, equal to junction-point rate, does not establish unreasonableness or prejudice in rates from South Amherst, in absence of a showing with respect to operating situation at such other points. Ohio Quarries Co. v. N. Y. C., 92 I. C. C. 703.

(k) Rates on dried fruit, coffee, canned goods, preserves, vegetables (fresh or green), deciduous and citrus fruits, cantaloupes, and melons, from California to Virginia, Minn., found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously in effect to Duluth. Basis of rates prescribed for future. Virginia Chamber of Commerce v. A. T. & S. F. 92 I. C. C. 722.

(l) Unlawful preference and prejudice may arise from difference in service

as well as from difference in measure of rates. Interstate Cotton Oil Rfg. Co. v. A., T. & S. F., 95 I. C. C. 171, 176.

(m) Rates on clean rice and flour from points in Arkansas, interior Louisiana, and Texas to Salina, Kans., found unreasonable and unduly prejudicial, following 93 I. C. C. 517 and other cases cited. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Salina Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 290.

(n) Following 60 I. C. C. 579, rate on refined sulphur from Bryanmound and Freeport, Tex., to New Orleans, La., and points taking same rates found not unreasonable, unjustly discriminatory, or unduly prejudicial as compared with rates from Sulphur Mine and Mossville, La., via Texarkana, Ark.-Tex., to same destinations, with privileges of transit at Texarkana. Rate from same points of origin to certain points in Louisiana intermediate to New Orleans found unreasonable to extent it exceeded rate to that point. Reasonable basis prescribed for future. Stauffer Chemical Co. v. H. & B. V. Ry Co., 98 I. C. C. 326.

(o) Rates for interstate transportation of fresh meats and packing-house products from Duluth to St. Paul, Minn., found unduly prejudicial to extent they exceeded lower contemporaneous rates on like traffic from St. Paul to Duluth. Undue prejudice ordered removed. Duluth Chamber of Commerce v. C., St. P. M., & O. Ry. Co., 98 I. C. C. 352.

(p) Rates for interstate transportation of fresh meats and packing-house products from Duluth to St. Paul, Minn., found unreasonable and unduly prejudicial as compared with lower contemporaneous rates on like traffic from Mason City, Iowa, to St. Paul, and from St. Paul to Duluth. Reasonable rates prescribed for future. Duluth Chamber of Commerce v. C., St. P., M. & O. Ry. Co, 98 I. C. C. 352.

(q) Screening specifications governing rates on coal from northern Colorado district to destinations in northwestern Nebraska and Black Hills region of South Dakota on C. B. & Q. and North Western found unduly prejudicial to coal operators in that district, and unduly preferential of operators in the Sheridan and Kirby districts, to extent they permit the latter to ship coal of a size larger than may be shipped from northern Colorado district under corresponding rate. Reasonable and nonprejudicial specifications prescribed for future. Colo. & N. Mex. Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 394, 399.

(r) Rates on moss in machine-pressed bales from Plaquemine and other producing points in Louisiana west of Mississippi River to certain defined interstate destinations found not unreasonable, unjustly discriminatory, or unduly prejudicial as compared with lower contemporaneous rates on like traffic from competing points in Louisiana east of the river, such as New Orleans and Baton Rouge. National Asso. of Furniture Mfrs. v. A. A. R. R. Co., 98 I. C. C. 501.

(s) Disparity in rates does not necessarily result in undue prejudice. It must also appear that shipments are made under these rates or that shipments are hindered or prevented because of the rate relationship. The element of competition is usually potent. Pensacola Chamber of Commerce v. L. & N. R. R. Co., 98 I. C. C. 567, 570.

(t) Rate charged on shipments of mussel shells from Hobbs Island, Ala., to Oswego, Kans., found not unreasonable or unduly prejudicial. Ton-mile earnings yielded are less than earnings at rates applicable on like traffic from Louisiana points to destinations in Kansas, including Oswego, for comparable distances. Pioneer Pearl Button Co. v. N., C. & St. L. Ry., 98 I. C. C. 578.

(u) Class rates, and commodity rates bearing a direct relation thereto, between points in Lower Peninsula of Michigan north of main line of Michigan Central R. R. from Detroit, Mich., to Chicago, Ill., and points in central territory on and south of that line found unreasonable, unduly prejudicial to persons and localities in Lower Peninsula of Michigan north of said line, and unduly preferential of persons and localities in central territory on and south of said line. Reasonable and nonprejudicial bases of rates prescribed, and former report, 85 I. C. C. 47, modified accordingly. Michigan Traffic League v. A. A. R. R. Co., 98 I. C. C., 660.

(v) While the commission has said that a large volume of movement is not necessary in order to justify a finding

of undue prejudice, nevertheless in the case here involved there is practically no evidence of actual or potential competition on traffic between the points involved, and no undue prejudice is found. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 730.

(w) Investigation by commission, on its own motion, of interstate class rates and l. c. l. commodity rates within southern territory and between southern and official territories, all-rail and rail-water, and of l. c. l. ratings in exceptions to southern classification was instituted to determine whether such rates and ratings are "unreasonable, or are unduly prejudicial to or unduly preferential of particular localities, persons, or descriptions of traffic." Southern Class Rate Investigation, 100 I. C. C. 513.

(wa) Prejudice is rarely undue unless parties prejudiced and those preferred are upon a competitive basis. Detroit & Cleveland Nav. Co. v. M. C. R. R., 102 I. C. C. 607, 609.

(wb) Rates on rough rice from producing points in Arkansas to New Orleans found not unreasonable, and on clean rice from Arkansas milling points to New Orleans, for export, found not unduly prejudicial. Present rates were established for purpose of enabling Arkansas millers to compete with Memphis and various Louisiana and Texas milling points in the export market and the rough-rice rates are a development from distance scales several times approved by commission as reasonable. A material increase in the clean-rice rates, as sought by complainant, would virtually restore a discriminatory situation which present rates were designed to remove. New Orleans Joint Traffic Bureau v. B., S. L. & W., 102 I. C. C. 686.

(x) A mere showing of difference in ratings is insufficient to establish discrimination nor does it, of itself, prove the rating to be unduly high. Union Metal Mfg. Co. v. A. C. & Y. Ry., 109 I. C. C. 490, 491.

(y) The mere showing of differences in inbound rates to competing jobbing points does not establish the existence of undue prejudice. Burlington Shippers Asso. v. A. T. & S. F. Ry., 109 I. C. C. 694, 699.

(z) Prejudice to be undue under section 3 of the act must ordinarily be such that prejudice suffered by one person shall be a source of positive advantage to another and that a competitive relation shall exist between persons or commodities affected. Consumers Co., 36 I. C. C. 259; Schlicher case, 62 I. C. C. 181. Garrett-Callahan Co., v. A. C. L. R. R. Co., 88 I. C. C. 103, 106.

ALL OTHER CITATIONS

Elk Brand Shirt & Overall Co. v. D. & S. Ry. Co., 85 I. C. C. 320; Lehigh Lime Co. v. A. C. & Y. Ry. Co., 85 I. C. C. 341; Indiana Public Service Commission v. A. A. R. R. Co., 85 I. C. C. 533; Mayer & Co. v. C. & N. W. Ry. Co., 85 I. C. C. 549; Parkersburg Rig & Reel Co. v. Director General, as Agent, 85 I. C. C. 665; Western Coal Rates, 88 I. C. C. 13; Burlington Shippers' Asso. v. A. T. & S. F. Ry. Co., 88 I. C. C. 46; Interstate Milling Co. v. B. & O. R. R. Co., 88 I. C. C. 229; Phoenix Chamber of Commerce v. A. E. R. R. Co., 88 I. C. C. 379; Universal Paper Bag Co. v. M. C. R. R. Co., 88 I. C. C. 593; Indiana Public Service Commission v. A. T. & S. F. Ry. Co., 88 I. C. C. 721.

§3½. Previous decision of commission.

See Previous Decisions of Commission.

(a) Complainant attacked class rates from Watertown, S. D., to points in Minnesota on and west of the Omaha from Bigelow to Mankato, Minn., west of and including Morton, Olivia and Wilmar, Minn., and south of Herman, Minn., as unreasonable, unduly preferential of Sioux Falls, S. D., and Sioux City, Iowa and unjustly discriminatory against interstate commerce to extent they exceed, for like distances, the class rates from Twin Cities, Winona, Albert Lea, Mankato, Pipestone, Rochester and St. Cloud, Minn., to the said Minnesota destinations. Watertown is 30 miles west of the South Dakota-Minnesota state line. It is served by Northwestern, Rock Island, G. N., and M. & St. L. Minnesota destinations are in the southwestern part of Minnesota and are within a radius of 200 miles of Watertown. A scale of rates, referred to as the interstate scale, applies between Watertown and the Minnesota destinations, with certain exceptions. The G. N., maintains a scale somewhat lower

than the interstate scale up to 50 miles and beyond 110 miles, and somewhat higher for distances between 50 and 110 miles. An intrastate scale of class rates prescribed by the Minnesota Commission applies from the Minnesota jobbing points to the Minnesota destinations over the lines of all defendants, except some higher scale via the M. & St. L. The rates from Sioux City to the Minnesota destinations are materially lower than the interstate scale but somewhat higher than the Minnesota intrastate scale. The rates from Sioux Falls to the same destinations were originally made 2c higher than from Sioux City for the first four classes, and that relationship, changed only by the subsequent horizontal increases and reductions, still exists. There are no circumstances and conditions of transportation which warrant the existing disparities in the class rates from Watertown and from the competitive points alleged to be preferred. HELD, rates attacked from Watertown to Minnesota not unreasonable but unduly prejudicial to extent they exceed the rates maintained from the said preferred points by more than the differences that would exist between the rates from said preferred points, on the one hand, and from Watertown on the other, under the scale of class rates prescribed in 98 I. C. C. 691, less 12 per cent for the distances on and east of the Omaha from Sioux City through Worthington and Mankato. Watertown Chamber of Commerce v. C. & N. W. Ry., 101 I. C. C. 441.

(b) Complainant attacked commodity rates on grain and grain products and cottonseed meal and hulls, less carloads, from Natchez, Miss., to destinations on the M. P., L. & A., and T. & P., as unjust and unreasonable, unjustly discriminatory against interstate commerce. Present less carload rates on grain and grain products and cottonseed meal and hulls between Natchez and points in Louisiana west of the Mississippi river are class rates, governed by the western classification, prescribed in 52 I. C. C. 105. Present less carload rates on these articles between points in Louisiana west of the river are specific commodity rates prescribed by the Louisiana Commission and are based upon 150 per cent of the carload commodity rates fixed for application interstate and intrastate in 58 I. C. C. 610 and 77 I. C. C. 473. Both from Natchez and between points in Louisiana the joint rates are varying amounts higher than the single line rates for corresponding distances. The differences in less carload rates on the commodities under consideration east and west of the Mississippi river are due in part to difference between two divergent class rate structures, differences between western and southern classification ratings and rules, differences between transportation and traffic conditions, differences between relative financial strength of the principal carriers serving the two territories, and differences between rates prescribed in the Natchez cases and 60 I. C. C. 5. The record in this case justifies the conclusion that under the circumstances the present class rates from Natchez to points in Louisiana west of the Mississippi river and between points in Louisiana constitute a basis too high for application to the transportation of less carloads. The Commission will prescribe a lower basis for application between these points. HELD, rates attacked unreasonable to extent they exceed from west bank of the Mississippi river rates ranging from 14.5c single line for 5 miles to 68.5c single line for 450 miles, joint rates over lines not under a common management or control should be 5c higher than single line rates. Natchez Freight & Traffic Bureau v. M. P. R. R., 101 I. C. C. 476.

(c) Rates on coal from mines in Ohio and Inner and Outer Crescent districts to certain points in Indiana, found not unreasonable, unjustly discriminatory, or unduly prejudicial. Rates assailed have been passed upon and fixed by the commission in 80 I. C. C. 663, and 83 I. C. C. 591; no evidence has been offered justifying changes in the bases of rates prescribed in those cases; and no damage has been shown to have resulted from undue prejudice found in those cases to have existed during the periods covered herein. Bash & Co. v. B. & O., 96 I. C. C. 178.

(d) Rates on vegetable oils from Oklahoma points to Sherman, Tex., for distances of 325 miles or less, found unreasonable and unduly prejudicial to the extent they exceeded or exceed rates for like distances under the scale prescribed in Procter & Gamble, 64 I. C. C. 213, graded downward in manner indicated, which scale applies from origin points to Dallas and Fort Worth, competing points,

and is in effect from Arkansas and Louisiana points to Sherman. Reparation awarded. Determination of future rates left pending decisions in Corporation Commission of Oklahoma v. A. & S. Ry. Co., and Texas Cottonseed Crushers Asso. v. Same, now before commission. Texas Chamber of Commerce v. A., T. & S. F., 96 I. C. C. 283.

(e) Rates on paper and paper articles from points in Wisconsin, Minnesota, Michigan, and Canada, to Jackson, Miss., and New Orleans, La., established in accordance with findings in 88 I. C. C. 345, found unduly prejudicial to shippers at Jackson and unduly preferential of shippers at New Orleans, in that they are higher to Jackson than to New Orleans. Fourth-section order entered as result of previous finding accordingly modified so as to except rates to Jackson from the authority therein granted. Paper and Paper Articles to New Orleans, 96 I. C. C. 600.

(f) Upon further hearing, rates on sand and gravel from Terre Haute to St. Mary's of the Woods, Ind., and from pits of the Neal Gravel Co. and Carmichael Gravel Co. to Attica, Ind., found not on a level so much lower than the interstate rates on the same commodities in this territory as to create a disparity which operates as a real discrimination against and an obstruction to interstate commerce. Original report, 60 I. C. C. 337, modified by excepting such rates from its provisions. Indiana Rates, Fares, and Charges, 96 I. C. C. 644.

(g) Upon further hearing, modification of original order entered in this proceeding, 60 I. C. C. 337, as to rates on coal from points in Indiana to Crawfordsville, Sheridan, Logansport, Monticello, Anderson, and Fort Wayne, Ind., denied. The rates established were not relatively excessive, and it is apparent, because of competitive conditions, that the relation between the intrastate rates and the interstate rates between the same points and from Illinois and other States to these destinations was so close that the failure to increase the intrastate rates pursuant to Increased Rates, 1920, 58 I. C. C. 220, would have had a direct effect upon interstate rates and traffic. Indiana Rates, Fares and Charges, 96 I. C. C. 644.

(h) Rates on cement from points in the Kansas gas belt, including Dewey, Okla., to St. Joseph and intermediate points in Scale II territory in Missouri, found unreasonable and unduly prejudicial to Kansas gas-belt points and Dewey over interstate routes and to shippers therefrom, and unduly preferential of Kansas City and Sugar Creek over intrastate routes to St. Joseph and of shippers therefrom and of intrastate traffic in Missouri between said points, to the extent that the rates from points in the Kansas gas belt, including Dewey, exceed or may exceed the rates contemporaneously maintained for like distances from Kansas City and Sugar Creek and upon intrastate traffic from Kansas City and Sugar Creek to St. Joseph and intermediate points in Missouri. Rates prescribed in Western Cement Rates, 48 I. C. C. 201 and 52 I. C. C. 225, as modified in 69 I. C. C. 644, found to be just and reasonable for application on both interstate and intrastate traffic between said points in the future. Cement from Kansas City to St. Joseph, 96 I. C. C. 718.

(i) Upon further hearing rates on coal from Boonville, Chandler, Francisco, Oakland City, and Winslow, Ind. (Boonville district); to Tell City and Cannelton, Ind., in effect at time of hearing in original report, 60 I. C. C. 337, found not to result in undue or unreasonable advantage, preference, or prejudice as between persons or localities in intrastate commerce on the one hand, and interstate or foreign commerce on the other hand, or any undue, unreasonable, or unjust discrimination against interstate or foreign commerce. Original report modified to except from its provisions rates on coal from Boonville district to Tell City and Cannelton, Ind. Indiana Rates, Fares, and Charges, 100 I. C. C. 169.

(j) Rates on condensed and evaporated milk from Lupton and Johnstown, Colo., to Oklahoma points found not unreasonable but unduly prejudicial to extent they exceed contemporaneous rates on canned goods from and to the same points. The existing disparity between rates to Oklahoma on canned milk and on canned goods was created by readjustments following the Oklahoma case, 62 I. C. C. 433, and upon the record there is no more justification for condemning the rates to Oklahoma on this commodity as unreasonable than there was in the Oklahoma case. Indicia of undue prejudice may be found in the decided increase in the spread between the rates on condensed

milk to Oklahoma, on the one hand, and to Kansas, on the other, from an amount which existed when the Oklahoma case was considered to the present amount. The record discloses no circumstances warranting such a marked difference in treatment of similar traffic to different but adjacent destination regions. There is no proof of damage such as is required to support an award of reparation under a finding of undue prejudice. Undue prejudice ordered removed and reparation denied. Carnation Milk Products Co. v. A., T. & S. F., 100 I. C. C. 254.

(k) Upon further hearing, finding in original report, 83 I. C. C. 267, that fourth-class rating and rates on galvanized corrugated riveted sheet-iron and sheet-steel culverts or culvert pipe, from Pueblo, Colo., to points in certain other States were applicable and not unreasonable, but unduly prejudicial, affirmed. Rate alleged applicable was restricted in its application to pipe, n. o. i. b. n., and, since culverts were specifically indexed by name, was obviously inapplicable. Colorado Culvert & Flume Co. v. A., T. & S. F., 100 I. C. C. 311.

(l) Upon further hearing, finding in original report, 85 I. C. C. 373, that rates on lumber to New Orleans and Mobile, from Lyman, Miss., on the near edge of the blanket of the Gulf & Ship Island origin points, were not unreasonable or unduly prejudicial, affirmed. Evidence amply supports original conclusions that blanket method of making rates on lumber has long been satisfactorily employed in this territory and that it should not be here disturbed. Obviously some shippers will be farther from a given point than others in the same blanket, but the record shows that whereas Lyman is the nearest shipping point to Mobile and New Orleans, it is among the farthest points to destinations in other directions. A blanket rate structure in existence since inception of the sawmill industry in this territory should not be lightly set aside for a rate adjustment in which distance would be the sole factor determining the measure of the rates. Ingram Day Lbr. Co. v. G. & S. I., 101 I. C. C. 287.

(m) Upon further hearing finding in original report, 80 I. C. C. 269, that that interstate rates on all traffic except ex-lake iron ore, and except on local movements in connection with defendants trunk lines at switching rates to and from complainant's plant located on and served by the Pittsburgh & Ohio Valley Ry. Co. were unreasonable and unduly prejudicial to extent they exceeded the rates contemporaneously in effect on like traffic to and from Neville Island, affirmed. Reasonable and nonprejudicial rates prescribed and reparation awarded. Carnegie Steel Co. v. Director General, 101 I. C. C. 638.

(n) Class and commodity rates from, Jackson, Miss., to destinations in Louisiana west of Mississippi River and southern Arkansas, found unjust, unreasonable and unduly prejudicial to Jackson and its shippers and unduly preferential of shippers at New Orleans, Memphis, and Natchez, to extent they exceed rates for like distances between points west of Mississippi River herein prescribed, plus charges for Mississippi River crossings prescribed in 93 I. C. C. 463. Reasonable and nonprejudicial rates prescribed. Jackson Traffic Bureau v. A. & V., 102 I. C. C. 129.

(o) Rates on rice from certain points in Louisiana to Baton Rouge, destined to interstate and foreign points after cleaning in transit, found unreasonable and unduly prejudicial to extent they exceeded, in addition to the transit charge, rates under a distance scale prescribed in 69 I. C. C. 508. The claims are identical in character and principle with those on which reparation was awarded in cited case and the transportation conditions over route of movement are practically same as those from and to points between which prescribed scale applies. Reasonable rates prescribed and reparation awarded. Baton Rouge Rice Mill v. N. O., T. & M., 102 I. C. C. 507.

(p) Rates on salt from Anse La Butte, Avery, Salt Mine, Weeks Island, and Jefferson Island, La., to points in Mississippi and from Baldwin, La., to Jackson, Miss., found unreasonable and unduly prejudicial as compared with rates from Memphis and New Orleans, competing points. Distance scales were prescribed in 77 I. C. C. 473 and other cases where rates between points in southern territory were considered and a similar basis is appropriate here, since it would be less likely to create difficulties in subsequent readjustments. Distance rates with a 45,000 pound minimum prescribed for fu-

ture and reparation awarded. Miss. R. R. Comm. v. A & V., 102 I. C. C. 540.

ALL OTHER CITATIONS

Decker & Sons v. Director General, as Agent, 85 I. C. C. 389; Western Coal Rates, 88 I. C. C. 13; Arizona Egyptian Cotton Co. v. Director General, as Agent, 88 I. C. C. 263; Co-operative Oil & Paint Co. v. Director General, as Agent, 88 I. C. C. 747.

§3½a. Relation of Rates.

See Relative Rates.

(a) Complainant attacked interstate class rates between Oakland, Calif., and California and Nevada as unreasonable and unduly prejudicial. As a practical matter the rates which would be affected by a finding herein of undue prejudice are those applying between Oakland and points taking rates in excess of those produced by the minimum class rate scale. The sole question is whether or not Oakland is entitled to lower rates than San Francisco. Oakland and San Francisco are situated respectively on the east and west sides of San Francisco Bay. Together with the municipalities of Alameda, Berkeley, Richmond and several smaller towns adjacent to them, they form a great social and industrial community which in this report will be called the metropolitan district of San Francisco and Oakland. While it is true these cities are separated by the bay waters, a distance of about 4 miles, the efficient and almost continuous ferry service maintained between them for both passengers and freight makes practically one city, separated only by lines of political subdivision. Both San Francisco and Oakland have extensive harbor facilities. The S. P., is the only steam line involved with rail terminals in both San Francisco and Oakland. The W. P., handles all freight into and out of San Francisco by car ferry from and to Oakland. The Santa Fe handles such freight by car ferry between San Francisco and Richmond. The S. P., also operates a car ferry between these cities, but a large percentage of its freight business out of and into San Francisco is handled over the all rail route via what is known as the Dumbarton cutoff. Since it is acknowledged that Oaklands rates are based upon San Francisco rates and that the rates really have been made from San Francisco and not from Oakland, it follows that the latter has shared the low level of rates applying from San Francisco. HELD, rates attacked, where there is actual water competition, are depressed by competition, although it is shown that this competition is not so keen as to result in anything in the nature of rate wars between the rail and water lines. HELD, further, rates attacked between the metropolitan district and points here considered which are not on navigable waters reflect the result of water competition to related points and are likewise lower than normal rates. The record establishes that the water competition from Oakland has been nowhere near as great as that from San Francisco. It is true that the cost of ferriage between these two points, if transmuted to rail miles at average costs of rail haulage, would place them some miles apart. The group here considered is not unduly large. San Francisco have both grown and prospered, although the present rate adjustment has been in effect for many years. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Oakland Chamber of Commerce v. S. P. Com., 100 I. C. C. 55.

(b) Rates on sugar from California, Colorado, Idaho, Kansas, Nebraska, and Utah, to points in Indiana, found not unreasonable or unduly prejudicial as compared with rates to Chicago. Rates from western territory to Chicago are depressed and were made by western carriers for purpose of enabling western producers to meet competition of eastern and southern sugar refiners at that point. While transportation conditions in Indiana and Illinois are similar in character, circumstances surrounding maintenance of the depressed rates to Chicago indicate that there is no warrant for extending that basis to the Indiana points. Indiana Public Service Comm. v. A., T. & S. F., 92 I. C. C. 279.

(c) Rates on ores and concentrates from Engels, Calif., and other stations on Indian Valley Railroad, to Wabuska, Nev., found for future to be unduly prejudicial and unduly preferential to extent rates from Indian Valley stations to Wabuska may exceed rates from Paxton, Calif., to Wabuska by an amount greater than corresponding rates from Indian Valley stations to Garfield and International, Utah, exceed contemporaneous rates on like traffic from Paxton

to Garfield and International. Moreover, failure of defendants to provide and maintain from Engels and other Indian Valley stations to Wabuska, rates similar in all respects as to conditions under which such rates are applicable, to those contemporaneously maintained by them on like traffic to Garfield and International, subject to above restrictions, found unduly prejudicial to Wabuska and unduly preferential of Garfield and International. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 204.

(d) Rates on lumber, other than pine, from Jonesboro, Ark., to Des Moines, Iowa, found unduly prejudicial to extent they exceed rates contemporaneously maintained on like traffic from Glencoe and Wilson, Ark., competing points, to Des Moines. Jonesboro Freight Bureau v. St. L. S. F. Ry. Co., 100 I. C. C. 324.

(e) Class rates as applied to plow irons, parts, and castings, l. c. l., from Macon, Ga., to points in Alabama, found not unreasonable, but unduly prejudicial and in violation of long-and-short-haul clause of fourth section of act to extent they exceed or may exceed lower contemporaneous rates on plow irons, l. c. l., in effect from Atlanta, Ga., to same destinations. Undue prejudice ordered removed. Massey Gin & Machine Works v. C. of G. Ry. Co., 101 I. C. C. 45.

(f) Present relationship between interstate rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, from Oklahoma points to Texas, and intrastate rates applying within Texas on same commodities, found unduly prejudicial to Oklahoma and shippers therefrom and unduly preferential of Texas and shippers therein. Reasonable and nonprejudicial rates prescribed from Oklahoma to Texas. Oklahoma Corp. Comm. v. A. & S. Ry. Co., 101 I. C. C. 116.

(g) Relationship between interstate rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, between Oklahoma and Missouri and Kansas and interstate rates between Kansas and Missouri not shown to be unduly prejudicial to Oklahoma shippers. Oklahoma Corp. Comm. v. A. & S. Ry. Co., 101 I. C. C. 116, 128.

(h) Relationship between Kansas and Missouri intrastate rates on grain, grain products, hay and straw, and related articles, and interstate rates on same commodities from Oklahoma to Kansas and Missouri not shown to be unduly prejudicial to Oklahoma shippers. Oklahoma Corp. Comm. v. A. & S. Ry., Co., 101 I. C. C. 116, 128.

(i) Rates on anthracite coal from Pennsylvania mine regions to Staten Island, N. Y., found unreasonable and, except via the Pennsylvania, unduly prejudicial to Staten Island, to the undue preference of northern New Jersey, to extent they exceeded and exceeded to Group 1, lower rates contemporaneously maintained to northern New Jersey, and, to Group 2, rates exceeding those found reasonable to Group 1 by more than certain fixed differentials, including shipments via the Pennsylvania. Reasonable and nonprejudicial relationship of rates prescribed for future, and reparation awarded. Richmond County Coal Merchants Asso. v. B. & O., 101 I. C. C. 154.

(j) Rates on rock, phosphate from Dunnellon, Prairie, Bartow, and other points in Florida taking same rates, to Knoxville, Tenn., found unreasonable and unduly prejudicial to Knoxville, as compared with rates to the Carolina Group, to extent they exceeded and exceed lower contemporaneous rates on like traffic from points of origin involved to Carolina destinations. Reasonable and nonprejudicial rates prescribed for future, and reparation awarded. Knoxville Traffic Bureau v. A. C. L., 101 I. C. C. 165.

(k) Rates on fresh meat and packing house products from Ogden, Utah, to Denver, Missouri River crossings, Ottumwa, Mississippi River crossings, Chicago, points in southeastern territory, Atlantic seaboard points, and Montreal, Canada, except rates on fresh frozen meats from Ogden to New York, Brooklyn, and Boston, found not unreasonable, discriminatory, or unduly prejudicial in their relation to and in comparison with contemporaneous rates on like traffic from other points of origin to same destinations and from and to other points for comparable distances. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236.

(l) Rates on cereal beverage from Milwaukee to Emporia, Kans., found not unreasonable or unduly prejudicial as compared with contemporaneous rates on like traffic from same point of or-

igin to other destinations and from and to other points for comparable distances, or with lower rates established subsequent to movement. Emporia Wholesale Coffee Co. v. A., T. & S. F., 101 I. C. C. 391.

(m) Class rates from Watertown, S. Dak., to points in southwestern Minnesota found not unreasonable, but unduly prejudicial to Watertown, unjustly discriminatory against interstate commerce, and unduly preferential of Sioux Falls, Sioux City, the Twin Cities, and other Minnesota points. Nonpreferential basis of rates prescribed. Watertown Chamber of Commerce v. C. & N. W., 101 I. C. C. 441.

(n) Sixth-class rate on peanuts from Suffolk, Va., and Plymouth, N. C., to Tupelo, Miss., found not unreasonable, but unduly prejudicial to extent it exceeded lower rate contemporaneously applicable to Memphis, a farther distant point in the rate group in which Tupelo is located. Northeast Miss. Traffic Bureau v. M. & O., 101 I. C. C. 451.

(o) Fifth-class rates on condensed milk from Northfield, Minn., to eastern destinations found not unreasonable or unduly prejudicial as compared with lower commodity rates contemporaneously in effect from points in Wisconsin to same destinations. Canned Goods to Eastern Points, 101 I. C. C. 502, 511.

(p) Rates on bituminous coal from mining districts in Pennsylvania, Ohio, Maryland, the Virginias, Kentucky, and Tennessee to Lake Erie ports, for transshipment by vessel to destinations beyond found not in excess of the maximum of reasonableness. Such rates found to be just and reasonable and not unduly prejudicial as compared with rates from other districts in the Appalachian region. Lake Cargo Coal Rates, 1925, 101 I. C. C. 513.

(q) Rates on newsprint paper from Shawinigan Falls, Quebec, and Canadian points taking same or related rates, to Knoxville, Tenn., via Detroit gateway, found not unreasonable, but unduly prejudicial to Knoxville and unduly preferential of Nashville, to extent they exceed rates on like traffic contemporaneously maintained from same points of origin to Nashville. Nonprejudicial relationship prescribed. Knoxville Traffic Bureau v. C. P. Ry., 101 I. C. C. 605.

(r) Rates on coal from mines on the Strouds Creek & Muddlety R. R., a short line carrier located in the Gauley district of West Virginia, to interstate destinations, found not unreasonable, but unduly prejudicial to extent they exceed the rate contemporaneously maintained by the B. & O. from Allingdale, the junction point. Non-prejudicial rates prescribed. Tioga Coal Co. v. B. & O., 101 I. C. C. 611.

(s) Rates on crude sulphur, from Baltimore to Detroit, found not unreasonable or unduly prejudicial as compared with contemporaneous rates on like traffic from same and other points of origin to same and other destinations for comparable distances and with rates on analogous commodities from and to same points. Detroit Chemical Works v. C. R. R. Co., 101 I. C. C. 671.

(t) Rates on coal from mines in Kansas, Missouri, Arkansas, and Oklahoma to Lincoln and Havelock, Nebr., found unduly prejudicial to extent they exceed contemporaneous rates on like traffic to Omaha. Lincoln Chamber of Commerce v. A. C. R. R., 101 I. C. C. 759.

ALL OTHER CITATIONS

South Dakota R. R. Commrs. v. C. & N. W. Ry. Co., 85 I. C. C. 217; Wichita Motors Co. v. A. & V. Ry. Co., 88 I. C. C. 152.

§4. Similar Conditions.

See Class Rates §2 (tt); Equalization of Rates §3; Evidence §56; Through Routes and Joint Rates §8.

(a) Rates on salt from Ludington and Manistee, Mich., via car ferry and rail, to upper Mississippi River crossings, Dubuque to Keokuk, inclusive, found unduly prejudicial to extent they exceed rates contemporaneously maintained on like traffic from eastern Michigan and Ohio producing points to St. Louis. Salt Cases of 1923, 92 I. C. C. 388, 417, 419.

(b) Rates on salt from Michigan City, Ind., and producing points in Ohio and eastern Michigan to upper Mississippi River crossings, Keokuk to Dubuque, Iowa, found unduly prejudicial to such upper crossings to extent they exceed rates contemporaneously maintained on like traffic from same producing points to lower crossings, St. Louis, Hannibal, and Quincy. Salt Cases of 1923, 92 I. C. C. 388, 416, 417.

(c) Rates on fertilizer and fertilizer

compound from Little Rock, Ark., to points in Oklahoma found not unduly discriminatory or prejudicial as compared with rates on like traffic from Shreveport, but found unreasonable for future to extent they exceed distance scales of single-line and joint-line commodity rates prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473. Arkansas Fertilizer Co. v. A. & S. Ry., 92 I. C. C. 504.

(d) Sixth-class rate on sporadic shipment of coke from Portsmouth, Ohio, to Wingate, Ind., found not unreasonable, unduly prejudicial, or otherwise unlawful as compared with lower rates to Linden and Veedersburg, Ind. A comparison of class and commodity rates is of little value when the movement is occasional; class rates to Linden and Veedersburg are on same basis as rates to Wingate; and there is no showing that complainant competes in the sale of coke with dealers at those points. Crabbs, Reynolds, Taylor Co. v. B. & O., 92 I. C. C. 621.

(e) Rates on wire-bound box material found unduly prejudicial to extent they exceed rates contemporaneously applicable on box shooks. Lange & Crist Box & Lbr. Co. v. B. & O., 93 I. C. C. 207.

(f) Rates on cabbage, in bulk, found not unreasonable or unduly prejudicial as compared with rates on potatoes or on mixed carloads of potatoes and other class C vegetables, including cabbage. Rates on cabbage and other class C vegetables in territory here involved are uniformly higher than on potatoes; no instance is cited where rates from point here involved are as low on cabbage as on potatoes; cabbage is more valuable, loads lighter, and is more difficult to protect from freezing; and rates assailed compare favorably, distance considered, with rates heretofore found not unreasonable or prescribed by commission. Anderson Commission Co. v. C., R. I. & P., 93 I. C. C. 241.

(g) Mere fact that lower rates prevail in the East than in the Northwest is not proof of undue prejudice when difference in transportation conditions is borne in mind. Dickerson v. Director General, 93 I. C. C. 304, 307.

(h) Rates on clean rice from milling points in Arkansas to certain destinations in c. f. a., southern, and western territories, to western termini of trunkline territory, and to points in Oklahoma, found unreasonable and unduly prejudicial in some instances as compared with corresponding rates from New Orleans, Memphis, and interior Louisiana points. Carriers in making rates have largely ignored distances in an effort to somewhat equalize conditions. Right of complainants to natural advantages of their location can not be taken away by rate adjustments and wide differences in distance between the various fields to common destinations must be recognized. Reasonable and nonprejudicial rates and bases prescribed. Stuttgart Rice Mill Co. v. A. & V., 93 I. C. C. 517.

(i) Rate on pop-corn from Arthur, Iowa, to Chicago, found not unreasonable but unduly prejudicial in favor of competitors at Odebolt, Iowa, to extent it exceeded rate from the latter point. No damage shown as a direct result of undue prejudice found, and undue prejudice having been removed by reducing rates from Arthur and Odebolt to a common level, no order for future is necessary. Shotwell Mfg. Co. v. C. & N. W., 93 I. C. C. 587.

(j) Rates on wooden agricultural-implement, sleigh, and vehicle material from Fort Smith to points in Idaho, Oregon, and Montana found unreasonable and unduly prejudicial to extent they exceeded rates from St. Louis, a competing point, to same destinations. Reparation awarded and reasonable and non-prejudicial rates prescribed. Ft. Smith Rim & Bow Co. v. K. C. S., 95 I. C. C. 1.

(k) Distance rates and rates related thereto between the Chicago, Ill., district, on the one hand, and Michigan City, Valparaiso, La Porte and Crown Point, Ind., and intermediate points, on the other, based on an arbitrary distance of 70 miles, found unreasonable and unduly prejudicial as compared with distance rates between Chicago and competing points in c. f. a. territory based on actual direct-line distances. Reasonable and nonprejudicial distance rates based on distances via direct routes prescribed. Indiana Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 177.

(l) Rate on sugar from California points to Phoenix found not unjustly discriminatory or unduly prejudicial, but such rate found unreasonable as compared with rates from California to points in the Middle West and from Sugarland, Tex., New Orleans, La., and

Colorado points to El Paso and Phoenix. Reasonable rate prescribed for future and reparation awarded. Phoenix Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 244.

(m) Rates on fresh meat and packing-house products from Sioux Falls, S. Dak., to Lincoln, Nebr., found unreasonable and unduly prejudicial as compared with rates from Kansas City, Minneapolis, Duluth, and Chicago, competing points. Such rates on fresh meat as voluntarily reduced by carriers found not unreasonable or unduly prejudicial and reasonable rates for future on packing-house products prescribed. Reparation awarded. Morrell & Co. v. C., B. & Q., 95 I. C. C. 255.

(n) The law has never undertaken to permit, much less require, a common carrier to discriminate between persons when they tender freight for carriage, because of the efficiency of shipper or his lack of it, because he is extravagant and needs reforming or does not, or because the product is superior or inferior. With these qualities of shipper and article carried, the railroad as a common carrier may not rightfully concern itself. Whether Congress might do so the commission need not inquire, although the prohibition of personal attainders, which may well be considered as including the right to resort to the services of a common carrier possessed alike by all men is contained in the Constitution itself. Rules Governing Ratings on Coal Mines, 95 I. C. C. 309, 332.

(o) The commission can not prohibit carriers from meeting competition so long as they are not guilty of undue preference and prejudice and so long as they do not charge rates which are so unreasonably low that they burden other traffic. On the other hand, the commission can not require carriers to meet competition. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 565, 566.

(p) Rate on wine grapes from Madison located on the Rumsey branch of the Southern Pacific, to Portland and East Portland, Ore., found not unreasonable, but as compared with group rates contemporaneously maintained on like traffic to these destinations from South Vallejo, Napa, and points on the Southern Pacific company's San Ramon and Walnut Grove branches they are unduly prejudicial. New Italian Importing Co. v. S. P., 95 I. C. C. 611.

(q) Rates on cement from Cape Girardeau (Gulf Junction), Mo., to points in Illinois, found unreasonable and unduly prejudicial as compared with rates from competing Illinois mills to same destinations and to extent they exceed those which would result under the distance scale of rates prescribed in Atlas Portland Cement Co., 81 I. C. C. 1. Reasonable and nonprejudicial rates prescribed for the future. Cape Girardeau Portland Cement Co. v. B. & O., 95 I. C. C. 632.

(r) Rates on sugar from New Orleans to Omaha, Nebr., found unduly prejudicial in so far as they exceed rates contemporaneously in effect to Minneapolis and St. Paul, competing points. Omaha Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 713.

(s) Upon further hearing, original report, 83 I. C. C. 737, rates on coal from mines in the New River district, W. Va., on the Greenbrier & Eastern R. R., a short line, to interstate destinations, found unreasonable and unduly prejudicial to extent they exceed group rates contemporaneously maintained from C. & O. branch-line points in same district to same destinations. Reparation awarded and measure of reasonable and nonprejudicial rates prescribed. Nelson Fuel Co. v. C. & O., 96 I. C. C. 121.

(t) Rate on coal from Ohio mines to Huntington, Ind., moving over the Erie, found not to have been unreasonable, unjustly discriminatory, or unduly prejudicial as compared with lower rate contemporaneously in effect over the Wabash. Complainant received coal from Ohio over either road but when it arrived over the Wabash and was delivered to team track of Erie, a switching charge was assessed, therefore complainant could not profitably take advantage of the lower rate. During the period of movement the Wabash rate was increased to equal the Erie rate. Bash & Co. v. B. & O., 96 I. C. C. 178, 182.

(u) Rate on coal from mines in Kentucky to Wabash, Ind., via route of movement, found not to have been unreasonable, unjustly discriminatory, or unduly prejudicial as compared with lower rate via another route which was longer. The rates over the two routes have always been the same, except that during the period for which reparation is sought a lower rate over the longer route was erroneously published. This error was sub-

sequently corrected, raising the rate over the longer route to the level of the rate over the route of movement. Bash & Co. v. B. & O., 96 I. C. C. 178, 184.

(v) Further contention that undue prejudice is shown because complainant was not appraised of contemplated reduction in rates from Minnesota origins to Yakima district, made subsequent to expiration of temporary-reduction period, until too late to file a protest not sustained. Undue prejudice is not alleged in complaint nor are rates established subsequent to temporary-reduction period attacked as unreasonable. Northwest Potato Exchange v. G. N., 96 I. C. C. 187.

(w) Rates on cotton seed from certain points on Missouri Pacific in northern Louisiana and southern Arkansas to Jackson, Miss., found unreasonable and unduly prejudicial to manufacturers of cottonseed products at Jackson and unduly preferential of their competitors at Vicksburg, Miss., to the extent they exceed rates contemporaneously maintained from same points to Vicksburg by more than 3.5 cents. Reparation awarded and reasonable rates prescribed for future. Southern Cotton Oil Co. v. A. & V. Ry. Co., 96 I. C. C. 333.

(x) Relative adjustment of rates on prepared sizes of anthracite coal, in carloads, from the Pennsylvania field found unduly prejudicial to Newport News, Va., and unduly preferential of Norfolk and Richmond, Va. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425.

(y) The maintenance by defendants of a rate relationship between the Yakima Valley and southern Idaho, which subject some shippers in the former district to a rate disadvantage, as compared with shippers in the latter district, if not justified by transportation conditions, is undue prejudice within the meaning of the act and can not be justified by the fears as to the commercial effect upon the industry of its removal. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437, 440.

(z) Rates on bananas from New Orleans, La., and points taking the same rates, to Hannibal, Mo. and points in Iowa, found not unduly prejudicial, as the points alleged to be prejudiced, with a few exceptions, have aggregate rates as low as or lower than the points alleged to be preferred. Complaint dismissed. Lagomarcino-Grupe Co. v. A., T. & S. F. Ry. Co., 96 I. C. C. 465.

(aa) Operating methods and practices of the Uintah Ry. not found to prejudice complainant unduly or discriminate against it unjustly to the preference of its competitors. Utah Gilsonite Co. v. A., T. & S. F. Ry. Co., 96 I. C. C. 653, 654.

(bb) It is found that any greater disparity in rates on cement from points in the Kansas gas belt, including Dewey, Okla. on the one hand, and Kansas City and Sugar Creek, Mo., over intrastate routes on the other hand, results and would result in unjust discrimination against interstate commerce from points in the Kansas gas belt, including Dewey. Cement from Kansas City to St. Joseph, 96 I. C. C. 718, 726.

(cc) Rates on crude oil from Mexia, Tex., and near-by loading stations to Shreveport, La., since Nov. 6, 1921, found not unreasonable or unduly prejudicial as compared with lower rates contemporaneously in effect from Mexia to Beaumont and Port Arthur, Tex. Latter rates are depressed by pipe-line competition, and absence of such competition to Shreveport presents a situation which distinguishes the transportation conditions under the rates to Beaumont and Port Arthur from those under rates assailed and removes it from the purview of section 3 of the act. Caddo Central Oil & Refg. Corp. v. K. C. S. Ry. Co., 98 I. C. C. 39.

(dd) Rate on stoves and ranges in l. c. l. from Nashville, Tenn., to Lynchburg, Richmond, and Norfolk, Va., and points taking same rates, found not unreasonable but for future unduly prejudicial to Nashville to extent it may exceed the rate contemporaneously maintained on like traffic from Birmingham, Ala., to same destinations. Undue prejudice ordered removed. Allen Mfg. Co. v. N., C. & St. L. Ry., 98 I. C. C. 405.

(ee) Rates on tanning extract from Newport, Tenn. to Olean, N. Y., found not unreasonable or unduly prejudicial. Complainant submitted no evidence of undue prejudice and relied solely on the showing of lower rates from Knoxville, Tenn., a more distant point, to support its allegation of unreasonable. Rates charged found to compare favorably with rates from a number of other southern points shipping this commodity to northern destinations. Complaint

dismissed. England Walton & Co. v. Sou. Ry. Co., 98 I. C. C. 449.

(ff) Rates on coal from complainants' mines on the Virginian Railway in the New River district of West Virginia to interstate destinations found unreasonable and unduly prejudicial to extent they exceed the district rates on like traffic maintained by defendants to same destinations from mines in the New River districts of the C. & O. and Virginian and the Pocahontas and Tug River districts of the N. & W., these districts forming part of what is generally referred to as the Outer Crescent. Reasonable and non-prejudicial rates prescribed for future. Wyoming Coal Co. v. V. Ry. Co. 98 I. C. C. 488.

(gg) Rates on cement plaster from Plasterco, Plasterco Junction, and Hamlin, Tex., to Jacksonville and other Florida points, found unduly prejudicial to extent they exceeded contemporaneous rates on like traffic from Acme and Agatite, Tex., competing points, to same destinations. Undue prejudice ordered removed. Texas Cement-Plaster Co. v. A. & M. R. R. Co., 88 I. C. C. 519.

(hh) Rates on scrap iron from Rensselaer, Ind., to St. Joseph, Benton Harbor, and Bridgman, Mich., found unreasonable and unduly prejudicial to extent they exceed the rate applicable from Monticello, Ind., and Chicago, Ill., to Benton Harbor, to which Bridgman and St. Joseph are intermediate. Reparation awarded and reasonable rate prescribed for future. Karnowsky v. G., I. & L. Ry. Co. 98 I. C. C. 533.

(ii) Prejudice is rarely undue unless the parties prejudiced and those preferred are upon a competitive basis. Detroit & Cleveland Nav. Co. v. M. C. R. R. 102 I. C. C. 607, 609.

(jj) Complainant attacked commodity rates charged on crushed oyster shells and oyster shell dust, carloads, from Apalachicola, Fla. to many destinations on and beyond the Mississippi and Ohio rivers as unjust and unreasonable, unjustly discriminatory and unduly prejudicial as compared with the rates from New Orleans, Lake Shore, Gulfport and Biloxi, Miss., and from Mobile. Apalachicola is a small town located near the mouth of the Apalachicola river, and is a Gulf port. It is served by rail by the Apalachicola Northern, a short line extending from Port St. Joe, Fla., about 22 miles west of Apalachicola through the latter point to River Junction, Fla., about 80 miles north thereof. At River Junction it connects with the A. C. L., L. & N., and S. A. L. It is obvious that with rates on this commodity made generally the same from Gulf points intermediate to New Orleans and Mobile, with the L. & N., adding thereto Pensacola, Fla., as a point of origin to all Ohio and Mississippi river crossings, rates to more distant northern and western points would follow. Complainants location, 240 miles east of the most eastern point to which the carriers have voluntarily extended the New Orleans-Mobile group, would seem to preclude it from attempting to enter that group, even by the addition of a differential of rates, to Mississippi river crossings south of Cairo. According to the record, oyster shells do not move from Pensacola, and there is no showing of any such rail competition from that point as would excuse the publication of a rate of 21.5c to Cairo. Assuming, therefore, that the proper excess in rates from Apalachicola over rates from the New Orleans-Mobile group is shown in the rates to Louisville, Evansville, and Cairo as 4.5c, nothing contained in this record is persuasive that any greater excess should be maintained to points beyond those crossings. Apparently there is some disagreement among the defendants with respect to divisions; otherwise rates to points in central territory, east of the Illinois-Indiana line as well as west thereof, which are now published from the New Orleans-Mobile-Pensacola group, would have been made applicable on traffic from Apalachicola by the addition thereto of 4.5c. That this adjustment of rates on this commodity would not be unjust to the lines mainly interested is indicated by the present differences in rates from Apalachicola and from River Junction and Pensacola on more valuable commodities. HELD, rates attacked from Apalachicola, Fla., to St. Louis, Mo., Cairo, Ill., Evansville, Ind., Louisville, Ky., Cincinnati, O., and points beyond not unjust or unreasonable but unduly prejudicial to extent it exceeds rates from Pensacola and Mobile by more than 4.5c. Gulf City Mfg. Co. v. A. N. Ry. 107 I. C. C. 29.

(kk) Complainant attacked commodity rates on articles in the uniform brick list, in carloads, from Danville, Ill., to

interstate points, chiefly in Wisconsin, Michigan, Minnesota and North Dakota as unreasonable and unduly prejudicial. In 68 I. C. C. 213 the Commission specified articles that should compose the so-called uniform brick list, and also prescribed rates on such articles of $1.75 from Danville and from Attica, Ind., to Chicago and points taking the same rate, and of $2.15 from the same origins to Milwaukee, Wis., and fixed specific differentials over or under those rates from numerous other Indiana and Illinois brick producing points. The group as at present constituted is about 71 miles long between Attica and Center Point, Ind., and 48 miles wide between Danville and Crawfordsville. The average distance from the entire group to Chicago is about 158 miles. All of the socalled Wabash Valley points may well continue to take the same rates on long haul traffic eastbound and westbound, but for northbound movements they should be divided into two subgroups, one embracing all points north of the C. I. & W., and the other including all points on and south of that line. The average distance from these subgroups to Chicago are about 132 miles and 172 miles, respectively. Trey will be designated as northern and southern Wabash Valley groups. The rates alleged by complainants to be unduly preferential of their Illinois competitors are maintained principally by the Burlington and I. C., from such Illinois points as Decatur, Springfield, Peoria, Galesburg and Gilchrist, Ill. Complainants made little effort to prove that the rates from Danville are unreasonable per se. HELD, the attacked carload rates on articles in the uniform brick list as described in 68 I. C. C. 213, from Danville, Ill., to the territory defined are not unreasonable, but are unduly prejudicial to extent they exceed rates which will reflect the following relationships of Danville to such other points: To the eastern half of Wisconsin 35c over Chicago; Ottawa, LaSalle and Streater 15c over; Northern Wabash Valley group Peoria, Galesburg and Gilchrist same rate; Southern Wabash Valley group, Decatur and Springfield, Ill., 15c under; To destination territory west of eastern Wisconsin, from Danville 35c over Chicago, Ottawa, LaSalle, Streater, Peoria, Galesburg, Gilchrist; Decatur and Springfield, Ill., 15c over; Southern Wabash Valley group 15c under northern Wabash valley group. Reparation denied. Western Brick Co. v. N. Y. C. R. R. 107 I. C. C. 245.

(11) Complainant attacked the rates on grain and grain products carloads, from Iowa to Chicago and other points in the Chicago district as unreasonable and unduly prejudicial as compared with the rates from the same points of origin to East St. Louis and Granite City, Ill., St. Louis, Mo., Council Bluffs, Des Moines and Sioux City, Iowa, and Omaha, Neb. Complainant confines its attack to the local rates on grain from Iowa producing points to Chicago. Defendants, with the exception of the Wabash and Burlington, admitted that the relative adjustment as between Chicago and St. Louis was improper, and they agreed to correct the rates to the basis recommended by the railroad committee. Iowa is peculiarly situated with respect to grain traffic. It is surrounded by terminal markets drawing a large portion of their grain supply from Iowa for distribution to all parts of the country. Iowa course grain moves to Chicago and other Lake Michigan ports for reshipment to the east, to Missouri river markets for reshipment to the west, southwest and southeast, and to St. Louis and Ohio river crossings for reshipment to the southeast, Mississippi Valley, and southwest. It is also shipped to the markets of Des Moines and Peoria, and to various milling centers one of the largest of which is Cedar Rapids, Iowa. The chief wheat producing territory of Iowa is that portion of the state on the south of the main line of the Burlington from Burlington, Iowa, to Council Bluffs and up to the Des Moines river as far north as Des Moines. Very little wheat is grown in northern Iowa, but coarse grains are grown there in greater quantities than in any other part of the United States. Chicago is directly east of the center of Iowa, 138 miles from Clinton, Iowa, on the Mississippi river. St. Louis is south of the eastern boundary of the state, 269 miles from Clinton. The nearest Iowa point to St. Louis is Keokuk, 171 miles distant. Rates to Chicago are extensively grouped, the groups extending north and south across the state, most of them a rough crescent in shape. Prior to June 25, 1918 the Missouri river differential to Chicago was 3c over St. Louis, and the present differential is 4c. The application of this differential adjustment to

the rates from southern Iowa has resulted in an increase since 1918 of 1c greater to Chicago than to St. Louis. Iowa grain moves to Des Moines, Council Bluffs and Sioux City under the Iowa intrastate scale of rates, which for distances of 5,200 and 500 miles carries rates on wheat of 6.5c, 16 and 27.5c respectively. Considering the groups as a whole the rates to Chicago compare favorably with those under the Iowa scale except from points in the eastern part of the state, where the distances to Chicago are less than 200 miles. and from these points it has not been definitely shown that the intrastate rates to Des Moines, which is the only alleged preferred point less than 200 miles distant, result in undue prejudice to Chicago. From southern Iowa to St. Louis the rates are uniformly 4c under the rates to Chicago. This difference is maintained regardless of distance and is a continuation of the 4c differential from the Missouri river. It is the result of the equalization of gateways on traffic from Missouri river markets, and had its origin in the competition of outbound carriers for grain at those markets. Under this equalization plan the rates to and from the gateways are so constructed that the total transportation cost from the Missouri river to the Atlantic seaboard is the same, whether the grain moves via Chicago or St. Louis. The application of the Missouri river differential to the local rates from Iowa is not justified. The principal consuming territory for the St. Louis market is not the Atlantic seaboard but the south. The consumers at Chicago should not be deprived of an equitable adjustment on grain from Iowa in comparison with the rates paid by local consumers of St. Louis from the same Iowa points of origin. The situation in northern Iowa, does not bring into issue the question of equalization or the maintenance of Missouri river differentials. From this section the rates to Chicago are either the same as or lower than to St. Louis. From northern Iowa the movements to Chicago are direct single line hauls, whereas to St. Louis they require handling by two or three lines except from points on the I. C., which has a circuitous line to St. Louis, requiring 193 miles greater haul than to Chicago. The Burlington, with direct lines to St. Louis and Chicago, maintains the 4c spread from southern Iowa, where the difference in distance to Chicago and St. Louis is slight. The Rock Island participates in joint rates which also show a difference in favor of St. Louis not justified by the difference in distance. No dissimilarity of transportation conditions has been shown which would justify such a difference in rates for such slight difference in mileage, nor is such an adjustment of local rates warranted by the theory of equalization or by the extension of the Missouri river differential. The grain traffic from Iowa to Chicago, whether the grain is consumed there or reshipped beyond, moves on the same rates, and consequently consideration of the local rates cannot be divorced from equal consideration of the inbound proportionals applicable on traffic to the consuming territories beyond the markets. Any change in the local rates will necessarily affect the present through rates to consuming territory. A thorough examination of the rates from southern Iowa is convincing that the fault lies with the level of the rates to St. Louis. They are relatively lower than the general basis in this territory and have been the source of complaint from Kansas City, as well as from Chicago.

HELD, rates attacked not unreasonable or otherwise unlawful, except that the relationship between the rates from Iowa points to Chicago, Ill., and those from the same points of origin to St. Louis, Mo., is unduly prejudicial to Chicago shippers thereat, to the extent that the rates to Chicago exceed those which would result from the application of the rule set forth in the next succeeding paragraph; and that the relationship between the rates to Chicago and those to Kansas City, Mo., from Iowa points south of the main line of the Rock Island from Davenport to Des Moines, Iowa, and east of the main line of that road from Des Moines to Allerton, Iowa, is unduly prejudicial to Chicago to the extent that the rates to Chicago exceed those which would result from the application of the following rule: Find the short line distances, from a given point of origin to Chicago and the other market, either St. Louis or Kansas City, and where such distance to Chicago is the same as to St. Louis or Kansas City the rate on wheat should be made the same; where such distance is less to Chicago the rate on wheat should be lower than that to St. Louis or Kansas City by the amount

set forth in the following table corresponding with the difference in distance, and where the distance to Chicago is greater than to St. Louis or Kansas City the rate on wheat to Chicago should exceed that to St. Louis or Kansas City by the amount set forth:

Distance to nearer point-miles	Difference in distance-miles
200 and under	10 or under
300 and over 200	12 or under
400 and over 300	15 or under
500 and over 400	20 or under
Over 500	25 or under
Difference in rates-cents	0
	30 to 70
	0.5c
	50 to 115
	1c
	70 to 165
	1.5c

The rates on coarse grain should not exceed 90% of the wheat rates except from Mississippi river points where it is necessary to grade into the basis in effect in Illinois where both wheat and coarse grains take the same rates. The rates to Milwaukee should be continued on the basis of the present relationships to the Chicago rates. The distances used shall be computed over the shortest single line routes to the respective markets, where such routes are reasonably direct. A route shall be deemed reasonably direct when it is not more than 115% of the shortest route embracing not more than three line haul carriers. Where the distance to one market is computed over a single line and to the other market over the shortest available route joint line, an arbitrary of 1c per 100 pounds shall be added to the rate for the joint line haul in applying the rate difference. Chicago Board of Trade v. A. T. & S. F. Ry. 107 I. C. C. 319.

(mm) Complainant attacked level and relationship of the rates on brick and other clay products from producing points in Texas, Arkansas, Oklahoma and Kansas to all destinations in those states and in Louisiana and from Texas, Arkansas and Oklahoma to Missouri B territory. The intrastate rates in Texas, Arkansas, Oklahoma, Kansas and Missouri are attacked as violative of sections 3 and 13 of the act. The evidence regarding Missouri intrastate rates relates principally to B territory and the findings will be limited accordingly. Rates from Kansas and Okahoma to Memphis, Tenn., and from Texas and Arkansas to Memphis and Mississippi river crossings south thereof are attacked as unreasonable and unduly prejudicial. Texas complainants also attack rates from Texas and Arkansas to Kansas City, Kas., Kansas City and St. Louis, Mo., and East St. Louis, Cairo and Thebes, Ill., are unduly prejudicial of them. The production of brick in Texas is largely confined to the eastern half of the state. The principal production in Arkansas is at Perla, Malvern and Little Rock in the central part of the state and Fort Smith in the west. In Oklahoma the manufacture of brick is confined to the eastern half. In Kansas almost all the production is in the socalled gas belt in the southeastern corner. Particular stress is laid on the competition encountered at Memphis and Mississippi river crossings south thereof from producers east of the river. Brick loads heavily, average weight 70,000 pounds. The average haul from the Texas plants is about 170 miles. In a considerable portion of the territory the present interstate brick rates are based on the distance scale originally prescribed in 77 I. C. C. 473, the southwestern scale. The record indicates that there are many specific rates in effect lower than the scale, but the extent to which this is true does not fully appear. All parties agree that the varying levels of rates are the cause of much dissatisfaction and result in many discriminatory situations. They are also practically unanimous in advocating as a remedy the adoption of a single distance scale throughout the entire territory for both interstate and intrastate traffic. COMMON BRICK. It is the conclusion that the socalled common brick moving in interstate commerce in the southwest is not, generally speaking, of the character intended to be covered by the definition of common brick and that on such traffic there should be no difference in rates on common brick on the other commodities in the uniform brick list. The record now indicates that a very large majority of the brick traffic now moving from and to Texas differential territory is intrastate, upon which no differentials are applied. The evidence is not persuasive that this long standing exemption from differential rates enjoyed by the Texas intrastate traffic should be removed. In the interest of uniformity the relatively small volume of interstate traffic to and from differential territroy should also be ex-

empt. RATES TO MEMPHIS. Rates from points of production east of the Mississippi river to Memphis are lower, mile for mile, than rates from Texas, Arkansas and Oklahoma. A similar situation is shown to exist at the Mississippi river crossings south of Memphis. Carriers serving the southwestern producing point do not, except to a very limited extent, serve the points east of the river which are alleged to be preferred and do not control the rates from those points to the river crossings. Transportation conditions east and west of the river have not been shown to be substantially similar. In so far as the charges of undue prejudice at the river crossings are based on the lower rates from destinations east thereof, they have not been sustained. Nothing appears of record which would justify the relative adjustment of the rates to Memphis as between the gas belt on the one hand and producing points in Oklahoma, Arkansas, and Texas on the other. MEMPHIS BRIDGE TOLL. Rates prescribed herein should be applied on shipments from the southwest to Memphis without the addition of any bridge arbitrary at that point. HELD, rates attacked unreasonable to extent they exceed for single line hauls rate of 4.5c for 10 miles to 28.5c for 1,000 miles, same scale plus 1c for joint hauls of 500 miles and less. RATES FROM MISSOURI. There seems to be no good reason why the scale herein prescribed should not be applied from Missouri to destinations in Oklahoma, Arkansas, Texas and Louisiana and the Commission so recommends. Reparation denied. COMPUTING DISTANCES. The shortest routes for the interchange of carload traffic shall be used, embracing as a maximum the lines or parts of lines of not more than three carriers for distances up to 200 miles, four carriers for distances from 200 to 500 miles, and five carriers for greater distances, except that where shorter routes are now in use which embrace the lines of more than the specified number of carriers such shorter routes shall be used. Connecting lines under common ownership or control shall be considered as a single line, but disconnected portions of the same railroad system shall for the purposes of this finding be counted as separate line. Southwestern brick cases 107 I. C. C. 681.

(nn) Complainant attacked rates on brick from Iowa to Iowa, Nebraska, South Dakota, North Dakota and Minnesota as unreasonable and unduly prejudicial. Previous decisions 77 I. C. C. 22 and 77 I. C. C. 4. The rates prescribed in the former reports were determined at a time when brick and other clay products were selling at much higher prices than now obtain. The decline in prices from the period of inflation following the way and the return of normal competitive conditions has resulted in decreased margins of manufacturing profit. Transportation expense now constitutes an increased proportion of the market value of the goods. Under such circumstances, maladjustments in the freight rate structure are more keenly felt by producers thereby disadvantaged than was formerly the case. With the exception of the Burlington and the roads serving the Kansas gas belt points, practically all of the parties agree and urge that a uniform distance scale be prescribed. The record is inadequate to support findings as to rates from the points of origin here concerned to points in Kansas, North Dakota, northern Minnesota. The northern boundary of the Minnesota territory considered in the original report was fixed as the line of the Milwaukee from Ortonville eastward through Granite Falls, Glencoe Shakopee and Farmington to and including Hastings. HELD, attacked interstate carload rates on brick and related articles from Mason City, Sioux City, Sargents Bluffs, Iowa, to points in Nebraska, South Dakota, and Minnesota on and south of the line of the Milwaukee extending from Ortonville, Minn., eastward through Granite Falls, Glencoe and Shakopee, Minn., and west of the lines of the Omaha and Northwestern extending thence south through Mankato, Lake Crystal Blue Earth and Bricelyn; (2) from Rockford, Sheffield and Hampton, Iowa to Iowa, Nebraska, South Dakota and in Minnesota as above described; and (3) from Des Moines, Acme, Adel, Ottumwa, Carlisle, Fort Dodge, Kalo, Van Meter, Boone and Redfield, Iowa to destinations in South Dakota east of the Missouri river are unreasonable to extent they exceed distance scale following for both joint line and single line hauls; provided, that the rates from Sargents Bluffs, Acme and Kalo shall not exceed the rates from Sioux City, Des Moines and Fort Dodge, respectively, to the same destinations: rates ranging from 5c for

10 miles to 24.5c for 800 miles. To points in South Dakota west of the Missouri river following amounts should be added to the scale: .5c for 10 miles up to 4c for over 250 miles. Attacked interstate rates on draintile, carloads, from Rockford, Sheffield, and Hampton, Iowa to Iowa, Nebraska, South Dakota and Minnesota as described unreasonable to extent they exceed brick rates by more than 1c. HELD, further, attacked rates from Iowa points hereinafter named unduly prejudicial to extent rates from Mason City, Sioux City and Sargents Bluffs to Nebraska, South Dakota and in Minnesota as described exceed rates for like distances from St. Paul and Minneapolis, Minn., Chicago, Streator, Abingdon, and Danville, Ill., Terre Haute, Ind., St. Louis, Mo., and Chanute, Kas., and points taking same rates, to the same destination territory, and (2) that the rates from Des Moines, Acme, Adel, Ottumwa, Carlisle, Fort Dodge, Kalo, Van Meter, Boone and Redfield to points in South Dakota on and east of the Missouri river, exceed rates on same commodities for like distances from St. Paul and Minneapolis, Minn., to the same destination territory. In applying the scale hereinabove prescribed defendants shall compute the distances over the shortest possible routes, via existing connections for the interchange of carload traffic, that embrace lines or parts of lines of not more than three carriers not under common ownership and control. Mason City Brick & Tile Co. v. Director General 107 I. C. C. 702.

(oo) Rates on ores and concentrates from Engels, Calif., and other stations on Indian Valley Railroad, to Wabuska, Nev., found for future to be unduly prejudicial and unduly preferential to extent rates from Indian Valley stations to Wabuska may exceed rates from Paxton, Calif., to Wabuska by an amount greater than corresponding rates from Indian Valley stations to Garfield and International, Utah, exceed contemporaneous rates on like traffic from Paxton to Garfield and International. Moreover, failure of defendants to provide and maintain from Engels and other India Valley stations to Wabuska, rates similar in all respects as to conditions under which such rates are applicable, to those contemporaneously maintained by them on like traffic to Garfield and International, subject to above restrictions, found unduly prejudicial to Wabuska and unduly preferential of Garfield and International. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 204.

(pp) The existing disparity between rates to Oklahoma on canned milk and on canned goods was created by readjustments following the Oklahoma case, 62 I. C. C. 433, and upon the record there is no more justification for condemning the rates to Oklahoma on this commodity as unreasonable than there was in the Oklahoma case. Indicia of undue prejudice may be found in the decided increase in the spread between the rates on condensed milk to Oklahoma on the one hand and to Kansas on the other from the amount which existed when the Oklahoma case was considered to the present amount. The record discloses no circumstances warranting such a marked difference in treatment of similar traffic to different but adjacent destination regions. Carnation Milk Products Co. v. A., T. & S. F., 100 I. C. C. 254.

(qq) Rates on rolled oats from Buffalo, N. Y., to various destinations in California, Nevada, Oregon, and Washington found not unreasonable or unjustly discriminatory, based upon the contention that, although reductions had been made in rates from certain transcontinental groups west of Buffalo, rates from transcontinental Group B, within which Buffalo is situated, were not correspondingly reduced until after the shipments involved moved, and complainant is not shown to have been damaged by any undue prejudice which may have existed. H-O Cereal Co. v. A., T. & S. F., 100 I. C. C. 297.

(rr) Rates and carload minima on unfinished open-model passenger automobile bodies, from Dayton, Ohio, to Detroit, Mich., and Windsor, Ontario, Canada, found not unreasonable or unduly prejudicial as compared with relatively lower basis of charges governing the movement of like traffic from Philadelphia, Pa., to Detroit, with which complainant comes into competition. Complaint dismissed. Maxwell Motor Corp. v. B. & O., 100 I. C. C. 363.

(ss) Rates on coal from Indian Creek Valley Ry. points to eastern and New England destinations, which are based on a differential over the Meyersdale group rates, found not unduly prejudicial as compared with the lower contemporaneous rates on like traffic from the Meyersdale region and rates from other

mining regions to same and other destinations. Complaint dismissed. Indian Creek Coal & Coke Co. v. A. C. R. R. Co., 100 I. C. C. 375.

(tt) Investigation by commission, on its own motion, of interstate class rates within southern territory and between southern and official territories covers all-rail and rail-water rates with certain exceptions, l. c. l. ratings provided in exceptions to southern classification, and l. c. l. commodity rates. Intrastate rates not included, but it is proposed to link together, or harmonize, interstate and intrastate rates. Maximum reasonable and nonprejudicial interstate class rates based on distance scale prescribed for future. Southern Class Rate Investigation, 100 I. C. C. 513.

(uu) Rates on anthracite coal from Pennsylvania mine regions to Staten Island, N. Y., found unreasonable and, except via the Pennsylvania, unduly prejudicial to Staten Island, to the undue preference of northern New Jersey, to extent they exceeded and exceed, to Group 1, lower rates contemporaneously maintained to northern New Jersey, and, to Group 2, rates exceeding those found reasonable to Group 1 by more than certain fixed differentials, including shipments via the Pennsylvania. Reasonable and nonprejudicial relationship of rates prescribed for future, and reparation awarded. Richmond County Coal Merchants Asso v. B. & O., 101 I. C. C. 154.

(vv) Rates on fresh meat, fresh frozen meat, and packing-house products from Ogden, Utah, to Denver, Missouri River crossings, Ottumwa, Iowa, Mississippi River crossings, Chicago, points in southeastern territory, Atlantic seaboard points, and Montreal, Canada, except rates on fresh frozen meat to New York, Brooklyn, and Boston, found not unreasonable, discriminatory, or unduly prejudicial in their relation to and in comparison with contemporaneous rates and earnings on like traffic from other points of origin to same destinations and from and to other points for comparable distances and contemporaneous rates and earnings on the live animals. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236.

(ww) Upon further consideration finding in original report, 96 I. C. C. 81, that rates on wrought-iron or steel pipe from and to numerous points in Louisiana, except Shreveport, to and from certain points in Arkansas were unreasonable as compared with intrastate rates in Louisiana and from various points to Arkansas destinations, and rates on like traffic from Shreveport to certain Arkansas points were not unreasonable, affirmed. As a basis for reparation reasonable rates were those measured by the general level of comparable commodity rates shown of record as having been in effect during period of movement of the shipments, and such were the rates approved in the original report. Texas Co. v. K. C. S., 101 I. C. C. 345.

(xx) Class rates from Watertown, S. Dak., to points in southwestern Minnesota found not unreasonable, but unduly prejudicial to Watertown, unjustly discriminatory against interstate commerce, and unduly preferential of Sioux Falls, Sioux City, the Twin Cities, and other Minnesota points. Nonpreferential basis of rates prescribed. Watertown Chamber of Commerce v. C. & N. W., 101 I. C. C. 441.

(yy) Rates on grain and products and cottonseed meal and hulls, l. c. l., from Natchez to points in Louisiana west of the Mississippi River found unreasonable and unduly prejudicial to Natchez and shippers therefrom and unduly preferential of points in Louisiana west of the Mississippi River and shippers therefrom. Reasonable rates prescribed. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476.

(zz) Rates on newsprint paper from Shawinigan Falls, Quebec, and Canadian points taking same or related rates, to Knoxville, Tenn., via Detroit gateway, found not unreasonable, but unduly prejudicial to Knoxville and unduly preferential of Nashville, to extent they exceed rates on like traffic contemporaneously maintained from same points of origin to Nashville. Knoxville Traffic Bureau v. C. P. Ry., 101 I. C. C. 605.

(zza) Rates on sand from Roff, Okla., to Fort Smith, Ark., found unreasonable and unduly prejudicial to extent it exceeded and exceeds lower contemporaneous rates on like traffic from and to points in same general territory for comparable distances. Reasonable and nonprejudicial rate prescribed for future and reparation awarded. Harding Glass Co. v. St. L.-S. F., 102 I. C. C. 126.

(zzb) Rates on automobiles and automobile parts from eastern defined territories to all points on Northwestern Pacific R. R. north of Willits, Calif., found unjust, unreasonable, and unduly prejudicial to extent they exceed lower contemporaneous rates on like traffic from same territories to California coast-group points. Reasonable and nonprejudicial rates prescribed and reparation awarded. Eriksen v. A. A. R. R., 102 I. C. C. 374.

(zzc) Rates on bituminous coal from Pittsburgh-Youghiogheny, West Virginia, Meyersdale, and Cumberland-Piedmont coal regions to Union Bridge, found unduly prejudicial to extent that over Baltimore & Ohio and Western Maryland via Cherry Run, W. Va., and over the W. M. direct, they exceed contemporaneous rates maintained over those lines from same points of origin to Security, Md. Reparation denied. Tidewater Portland Cement Co. v. C. & P. R. R., 102 I. C. C. 391.

(zzd) Rates on agricultural lime from Virginia kilns to destinations in the Carolinas found not unreasonable or unduly prejudicial as compared with lower contemporaneous rates on ground limestone from Mascot, Tenn., to same or similar destinations. Riverton Lime Co. v. A. & R. R. R., 102 I. C. C. 415.

(3a) Complainant attacked as unreasonable and unduly prejudicial carload rates on moulding sand from Utica and Ottawa, Ill., to Keokuk, Iowa. Keokuk is on the west bank of the Mississippi river, served by the Burlington, Rock Island, T. P. & W., and Wabash. Utica is served by the Rock Island, Ottawa by the Rock Island and Burlington. Ottawa is 9.6 miles east of Utica on the Rock Island. The principal and short line route from both points to Keokuk is over the Rock Island to Peoria and T. P. & W., beyond. The Rock Island and Burlington, direct or through connections, also reach other Mississippi river crossings, north and south of Keokuk, and publish or participate in rates on sand from Ottawa and Utica to those crossings. HELD, since April 1, 1922, Keokuk has been subjected to undue prejudice and disadvantage and Burlington and Quincy have been given an undue preference and advantage to the extent that the rate to Keokuk has exceeded that to Burlington by more than 13c and to the extent that it has not been at least 12c lower than the rate to Quincy; also that for the future Keokuk will be subjected to undue prejudice and disadvantage, and Burlington and Quincy will be given an undue preference and advantage, to the extent that that relationship is not maintained. Reparation denied. Keokuk Shippers Asso. v. B. & O. R. R., 109 I. C. C. 346.

ALL OTHER CITATIONS

Phoenix Chamber of Commerce v. A. E. R. R. Co., 88 I. C. C. 250; Ridenour-Baker Mercantile Co. v. A. T. & S. F. Ry. Co., 88 I. C. C. 273; Swift & Co. v. T. & P. Ry. Co., 88 I. C. C. 610.

§4½. Section 2 and Analogous Commodities.

See Classification §17; Evidence §12.

(a) Rates on rolled oats, oat groats, oatmeal, and oat flour, in straight or mixed carloads, or in mixed carloads with corn meal and hominy found not unreasonable or unduly prejudicial as compared with rates on wheat flour. Volume of movement of wheat flour is much greater than that of oat products; rates on wheat flour are affected by competitive and market conditions not related in any way to oat products; and there is no evidence on this record to find that there should be any fixed relationship between wheat flour rates and oat products rates. Atlas Cereal Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 212.

(b) The purpose of the second section of the act is to enforce equality between shippers over the same line, and to prohibit any rebate or other device by which two shippers, shipping over the same line, the same distance, under the same circumstances of carriage, are compelled to pay different prices therefor; and the commission held that the phrase under substantially similar circumstances and conditions as used in the second section, refers to the matter of carriage, and does not include competition between rival routes. Bancroft & Sons Co. v. P. & R. Ry., 91 I. C. C. 186, 192.

(c) Rates on solder, found not unreasonable, discriminatory, or unduly prejudicial as compared with rates on tin, copper, lead, and spelter, which are all virgin metals. Solder is one step removed by manufacture from tin and lead, and, with exception of tin, is much more valuable than metals compared. Earn-

ings on shipments here involved are not unduly high as compared with earnings on same commodity between other points in same general territory, for comparable distances. Union Smelting & Refining Co. v. C. R. R. Co. of N. J., 92 I. C. C. 319.

(d) Where there are two particular descriptions of traffic, viz, crude oil and gasoline, and carriers deal differently with each, rates on gasoline being relatively high and on crude oil relatively low, there is, undoubtedly, a preference, but test as to whether that preference results in undue or unreasonable prejudice is whether complainant suffers injury by reason therof. Generally a competitive relationship between commodities must appear, for without such a relationship injury seldom results. In instant case, complainant failing to show that proximate cause of injury to it was due to the preference, or that it would be better off if crude-oil rates were made higher or brought nearer the gasoline level, allegation of undue prejudice under section 3 not sustained. Utah State Automobile Asso. v. A., T. & S. F. 92 I. C. C. 376, 386.

(e) Differences in transportation conditions between salt in bulk and salt in containers found insufficient to justify differences in commodity rates, and such differences are unduly prejudicial and preferential. Salt Cases of 1923, 92 I. C. C. 388, 392.

(f) Any difference in rates resulting from differentiation in commodity-rate descriptions between rock salt and evaporated salt, between coarse salt and medium or fine salt, or between table salt and common salt, found unduly prejudicial and preferential and to result in an unreasonable practice. Salt Cases of 1923, 92 I. C. C. 388, 392.

(g) Maintenance of same rates on crude and ground feldspar found to result in unreasonable rates and in undue prejudice to former and undue preference of latter. Reasonable rates and minima prescribed and reparation awarded. Ceramic Traffic Asso. v. M. C. R. R., 92 I. C. C. 675.

(h) Rates on slag, found unreasonable and unduly prejudicial to extent they exceed rates on crushed stone. These commodities compete, are among lowest grade of commodities known to commerce, load heavily, are indestructible, and move in cheapest kind of equipment. Reasonable and nonprejudicial rates prescribed. Duquesne Slag Products Co. v. P. R. R., 92 I. C. C. 554.

(i) Rates on pipe, riveted steel, found not unreasonable, discriminatory, or unduly prejudicial, as compared with rates on iron conduits, iron and steel pier tubing, iron or steel radiators, iron stovepipe cut to shape-pipe fittings and connections, open-seam tubing, and iron or steel wire cable and rope. Duluth Boiler Works v. A., T. & S. F., 92 I. C. C. 692.

(j) Rates on ground iron ore found not unjustly discriminatory as compared with lower rates on crude iron ore. They are not like kinds of traffic within the meaning of section 2 of the act, since circumstances and conditions surrounding their transportation are substantially dissimilar. Winters Metallic Paint Co. v. C., M. & St. P., 93 I. C. C. 427.

(k) Crude iron ore and ground iron ore are not like kinds of traffic within meaning of section 2 of the act, since circumstances and conditions surrounding their transportation are dissimilar. Winters Metallic Paint Co. v. C., M. & St. P., 93 I. C. C. 427, 431.

(l) Interstate rates on cottonseed, cottonseed and related vegetable oils, cakes, and meals, foots, and sediments, cottonseed hulls, and inedible tallow, c. l., between defined Texas common-point territory and the Southwest; between points in the Southwest, on the one hand, and Mississippi River crossings, Memphis to New Orleans, inclusive, on the other; and from points in the Southwest to Cairo and Thebes, Ill., and Kansas City, Mo., found unduly prejudicial and preferential to extent irrelationships differ from this prescribed in this proceeding. Undue prejudice and preference ordered removed by establishment of a fairly uniform basis throughout the territory involved. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 194, 198.

(m) Ratings and rates on stearine, coconut in c. l. and l. c. l., from Bayonne, N. J., to points in official territory, found unreasonable and unduly prejudicial to extent they exceed ratings and rates contemporaneously applicable on peanut, cottonseed, palm-kernel and mixed stearines. Reasonable and nonprejudicial ratings and rates prescribed for future and reparation awarded. Best Foods v. C. R. R. Co. of N. J., 98 I. C. C. 331.

(n) Rates on paper, wall, oatmeal

or ingrain, from North Hoosick and Walloomsac, N. Y., and Appleton and Neenah, Wis., to Jersey City, N. J., and Philadelphia, Pa., higher than those contemporaneously in effect on unfinished wall papers from and to same points, found unduly preferential of other wall papers and unduly prejudicial to oatmeal and ingrain wall papers. Undue prejudice ordered removed. Becker, Smith & Page, Inc. v. B. & M. R. R., 98 I. C. C. 337.

(o) Proposed increased proportional commodity rate on chinaware or earthenware plumbers' goods to Oklahoma City, Okla., from upper Mississippi River crossings, on traffic originating at Trenton, N. J., found not justified. Proposed proportional rate would exceed local rate on plumbers' earthenware and corresponding rate on similar articles of plumbers' enameled ironware, competitive commodities, resulting in undue prejudice to plumbers' earthenware. Plumbers' Goods from Mississippi River Crossings to Oklahoma City 98 I. C. C. 403.

(p) Rates on clam and mussel shells, valuable for button manufacture, from points in Illinois to points on Mississippi River in Illinois and Iowa, found not unreasonable or unduly prejudicial as compared with rates on fertilizer, and on crushed, ground or waste shells, valuable for fertilizer, stucco dash, and chicken grit, between points in same general territory for similar distances. Mississippi Pearl Button Co. v. A. T. & S. F. Ry. Co., 98 I. C. C. 560.

(q) Where it might happen that two shipments identically alike, from and to same points, over same route, carried in same car, would be assessed different rates, dependent upon the business of the consignees, the rates or ratings leading to such a result plainly are unjustly discriminatory, in violation of section 2 of the act. Classification of Rags, 98 I. C. C. 591, 592.

(r) A violation of section 2 of the act is involved only when there is a collection of different charges for doing a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions. Mississippi Valley Iron Co. v. C. & N. W. Ry. 104 I. C. C. 243, 245.

(s) Rates on gas and fuel oils, found unreasonable and unduly prejudicial to extent they exceeded certain differentials lower than the rates contemporaneously maintained on refined oil. Reparation awarded. Maryville Electric Light & Power Co. v. A., T. & S. F., 101 I. C. C. 229.

(t) Paving and roofing materials: Rates on, from New Orleans to Texas common-point group and all other points in that portion of Texas lying between these points and the port group and related points, found unduly prejudicial and unreasonable to extent they exceeded lower contemporaneous class E rates applicable on roofing slate, paving slate, and hard asbestos shingles from and to same points, and on similar articles from New Orleans to points in Texas differential territory to extent they exceeded above-mentioned rates. plus class E differentials. Reasonable rates prescribed for future and reparation awarded. Cameron & Co. v. A. & S., 102 I. C. C. 31.

(u) Bagging, cotton: Rates on, found not unreasonable, but unduly prejudicial and preferential to extent they exceeded lower contemporaneous rates on cotton bags. Reparation denied. Fulton Bag & Cotton Mills v. A. & V. Ry., 102 I. C. C. 335.

(v) Gypsum rock, crushed: Rates on, found unreasonable and unduly prejudicial as compared with lower contemporaneous rates on crushed stone. Transportation characteristics of gypsum in crushed form are identical with those of crushed stone, and, as an ingredient of a manufactured product, carriers enjoy both inbound and outbound hauls. Reasonable rates prescribed for future and reparation awarded. Nebraska Cement Co. v. M. P. R. R., 102 I. C. C. 411.

(w) Lime, agricultural: Rates on, from Virginia kilns to destinations in the Carolinas found not unreasonable or unduly prejudicial as compared with lower contemporaneous rates on ground limestone from Mascot, Tenn., to same or similar destinations. Riverton Lime Co. v. A. & R. R. R., 102 I. C. C. 415.

(x) Springs, helical: Class rates assessed on, found not unreasonable or unduly prejudicial as compared with rates on bed springs and various other commodities taking rates on iron and steel articles. Nor are present commodity rates, reflecting 78 per cent of class basis, unreasonable when applied to occasional shipments as here involved. Crescent Bed Co. v. A. & V. Ry., 102 I. C. C. 419.

(y) Rates on frozen pig or hog skins found not unreasonable or unduly prejudicial as compared with lower rates on green salted hides. Frozen hog skins require use of refrigerator equipment and must be given expedited service, whereas green salted hides may be transported in ordinary box cars, facts constituting a difference in transportation conditions which the commission can not overlook. Kiefer Tanning Co. v. E., J. & E., 102 I. C. C. 721.

(z) Rate on corn-syrup jelly and jelly and preserves in glass containers found unreasonable and unduly prejudicial to extent it exceeded lower contemporaneous rate on various kinds of canned goods in tin cans, including fruits, which lower rate was established on jelly and preserves, in both metal and glass containers, subsequent to movement here involved. Reparation awarded. Zaring & Co. v. C. S. Co., 102 I. C. C. 724.

(aa) Metal-cushion or seat-spring assemblies: Rate on, found not unreasonable, discriminatory, or unduly prejudicial in past but for future found unreasonable to extent it exceeds rate on davenport assemblies. Reasonable rate prescribed for future. Ft. Smith Couch & Bedding Co. v. B. & O., 102 I. C. C. 726.

(bb) A competitive relationship among shippers is not essential to a finding of unjust discrimination, and competition between carriers does not justify an otherwise unlawful discrimination under section 2 of the act. Barber Asphalt Co. v. L. & N. R. R. Co., 88 I. C. C. 307, 309.

(cc) Question of an improper relationship between rates on two commodities is not determined by a finding of the commission that rates on one of the commodities is not unreasonably high and on the other not unreasonably low. Undue prejudice may result from the relationship of two rates each of which lies within the zone of reasonableness. Lackawanna Steel Co. v. P. R. R. Co., 88 I. C. C. 759, 762.

ALL OTHER CITATIONS

O-So-Ezy Products Co. v. Director General, as Agent, 85 I. C. C. 187; Midwest Refining Co. v. Director General, as Agent, 85 I. C. C. 719; Hollingshead Co. v. A. & R. R. Co., 88 I. C. C. 191; National Poultry, Butter & Egg Asso. v. A. A. R. R. Co., 88 I. C. C. 673.

§4¾. State Rates.

See Supra §2½; State Rates and Regulations.

(a) Complainant attacked commodity rates on iron and steel articles and cast iron pipe carloads to Pensacola. Fla.. from Birmingham and points in the Birmingham district, Alabama City, Attalia, Gadsden, Anniston, Talladega, Montgomery and Selma, Ala., as unreasonable, unjustly discriminatory and unduly prejudicial. The rate situation complained of has existed only since July 1, 1923 and results from what was done by respondents pursuant to the fourth section order No. 7836 which denied them relief from the long and short haul clause of the act. In removing departures from this provision they increased the interstate rates so as to make them the same from those points of origin to both Pensacola and Mobile, except that on scrap iron and in some instances on cast iron pipe the rates to Pensacola were higher than those to Mobile, but did not similarly increase the intrastate rates to Mobile. These intrastate rates were the same as or less than, the interstate rates theretofore in effect. All parties agreed that Mobile and Pensacola should be on the same basis in respect to these rates. HELD, interstate rates to Pensacola not unreasonable, but unduly prejudicial in favor of Mobile but the Alabama Commission should be given an opportunity to revise the intrastate rates to Mobile before an undue prejudice order is entered. Pensacola Chamber of Commerce v. L. & N. R. R., 98 I. C. C. 567.

(b) Interstate rates on sugar beets between points in Ohio and Michigan, which are higher than contemporaneous intrastate rates between points in same States, found unreasonable and unduly prejudicial to interstate shippers, unduly preferential of intrastate shippers, and unjustly discriminatory against interstate commerce. Reasonable maximum distance scale of rates prescribed. Continental Sugar Co. v. N. Y. C. R. R. Co., 91 I. C. C. 677.

(c) Intrastate rates on salt from Jacksonville and other Florida basing points to interior points in Florida, lower than the corresponding interstate rates applicable on through shipments from Ohio and Michigan producing points, found to result in undue prejudice to shippers and localities in interstate com-

merce under preference on shippers and localities in intrastate commerce, and in unjust discrimination against interstate commerce. Salt Cases of 1923, 92 I. C. C. 388, 434, 438.

(d) In 77 I. C. C. 473, commodity rates from Memphis to western Louisiana points were found unduly prejudicial to Memphis and unduly preferential of New Orleans. Upon further hearing, former findings modified with respect to rates on sugar, which would not result in undue prejudice found. There is no present or probable movement of that commodity from Memphis to Louisiana points, and application of rates prescribed would materially increase present rates from New Orleans while other producing points would continue to enjoy lower intrastate rates, thus creating a discriminatory situation against New Orleans, and disrupting present origin groupings. Memphis Southwestern Investigation, 92 I. C. C. 447.

(e) Complainant formerly shipped intrastate shipments via joint-line interstate routes to obtain benefit of rates lower than those applying intrastate. Carriers subsequently limited application of interstate tariff to interstate traffic. Upon complaint assailing rates charged on shipments moving intrastate via intrastate routes, HELD: Limitation in interstate tariff precluded its application to complainant's shipments. Moreover, commission's jurisdiction over intrastate rates is prescribed by sections 3 and 13 of the act, and it has no authority under the law to pass upon the measure of such rates except as provided in those sections. Nebraska Cement Co. v C. & N. W., 92 I. C. C. 457.

(f) Upon further hearing, rates and charges on coal from mines in the Linton, Brazil, and Princeton districts in Indiana to Irvington, Ind., and from Linton district to Putnamville, Ind.; on coke from Indianapolis, Ind., to Irvington; and on straw from Veedersburg, Hillsboro, and Layton, Ind., to Marion, Ind., found not on a level so much lower than interstate rates on the same commodities in this territory as to create a disparity which operates as a real discrimination against and obstruction to interstate commerce. Original report, 60 I. C. C. 337, modified by excepting such rates from its provisions. Indiana Rates, Fares, and Charges, 92 I. C. C. 487.

(g) Rates on petroleum residuum, in tank-car loads, from Wichita, U. S. Yards, Kans., to Elbing and Peabody, Kans., during Federal control, found not unreasonable as compared with intrastate rates on like traffic in other neighboring states. Sterling Oil & Refining Co. v. Director General, 96 I. C. C. 586.

(h) Rates on cement from points in the Kansas gas belt, including Dewey, Okla., to St. Joseph and intermediate points in Scale II territory in Missouri, found unreasonable and unduly prejudicial to Kansas gas-belt points and Dewey over interstate routes and to shippers therefrom, and unduly preferential of Kansas City and Sugar Creek over intrastate routes to St. Joseph and of shippers therefrom and of intrastate traffic in Missouri between said points, to the extent that the rates from points in the Kansas gas belt, including Dewey, exceed or may exceed the rates contemporaneously maintained for like distances from Kansas City and Sugar Creek and upon intrastate traffic from Kansas City and Sugar Creek to St. Joseph and intermediate points in Missouri. Cement from Kansas City to St. Joseph, 96 I. C. C. 718, 725, 726.

(i) It is found that any greater disparity in rates on cement from points in the Kansas gas belt including Dewey, Okla., on the one hand, and Kansas City and Sugar Creek, Mo., over intrastate routes, on the other hand, results and would result in unjust discrimination against interstate commerce from points in the Kansas gas belt, including Dewey. Cement from Kansas City to St. Joseph, 96 I. C. C. 718, 726.

(j) Rates on crude oil from Mexia, Tex., and near-by loading stations, to Shreveport, La., since November 6, 1921, found not unreasonably or unduly prejudicial as compared with lower rates contemporaneously in effect from Mexia to Beaumont and Port Arthur, Tex. Latter rates are depressed by pipe-line competition, and absence of such competition to Shreveport presents a situation which distinguishes the transportation conditions under the rates to Beaumont and Port Arthur from those under rates assailed and removes it from the purview of section 3 of the act. Caddo Central Oil & Refg. Corp. v. K. C. S. Ry. Co., 98 I. C. C. 39.

(ja) Upon further hearing, rates in effect January 11, 1921, and those afterwards found reasonable as of that date by the Illinois Commerce Commission for

the intrastate transportation of lumber, railroad ties, mine props, mine collars, mine ties, and mine wedges from Ava to Sesser, Christopher, West Frankfort, Johnston City, and Buckner, Ill., did not and will not cause any undue or unreasonable advantage, preference, or prejudice as between persons or localities in intrastate commerce, on one hand, and interstate or foreign commerce, on other hand, or any undue, unreasonable, or unjust discrimination against interstate or foreign commerce. Prior order 60 I. C. C. 92 modified. Intrastate Rates within Illinois, 102 I. C. C. 232.

(k) Proposed rates exceed those intrastate in Iowa. Protestants contend they would result in undue prejudice and that for that reason they should be found not justified. However, to reject the proposal on that ground would be to hold that intrastate rates may control interstate rates. Combination rule on sand, gravel and stone 112 I. C. C. 231, 234.

ALL OTHER CITATIONS

Ohio State Rates on Sand, Gravel, Stone, and Paving Blocks, 85 I. C. C. 66; South Dakota R. R. Commrs. v. C. & N. W. Ry. Co., 85 I. C. C. 217.

§5. Test of Discrimination.

(a) Evidence of undue prejudice consisting merely of a general contention that markets of New Orleans, La., and Memphis, Tenn., are accorded a more favorable rate adjustment than many Mississippi points, found to be of too general a character to justify a finding of a violation of section 3 of the act. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 60.

(b) Upon reargument, prior report, 73 I. C. C. 161, rates on coal from various producing regions to Chicago switching district higher to some deliveries than to Chicago itself, found unduly prejudicial and preferential in favor of points to which lower rates apply. Differentiation is not supported by sound transportation considerations, since it is clear that no greater service is necessary in making deliveries within excepted areas than is rendered in reaching many points to which Chicago rates apply. Chicago Coal Merchants Asso. v. Director General, as Agent, 89 I. C. C. 137.

(c) Mere reference to a rate situation disclosing lower charges at points other than point alleged to be unduly prejudiced is not sufficient to establish undue preference and prejudice. El Dorado Chamber of Commerce v. C., R. I. & P. Ry. Co., 89 I. C. C. 743, 744.

(d) While it may be conceded that burden of proof is on carriers to show propriety of proposed charges under section 3 as well as under section 1 of the act, it does not follow that undue prejudice is to be presumed from mere fact that compensatory charges at one point will differ from charges in effect at other points, particularly as to protestant shippers who have not contended or made any effort to show that they will be handicappd by establishment of such charges in meeting competition from other points. Nashville Switching, 40 I. C. C. 474. Increased Switching Charges at Detroit, 91 I. C. C. 82, 96, 97.

(e) Fact that a shipping point has continued to compete with other producing points despite its disadvantages in rates does not make the undue prejudice any the less unlawful. Allen Mfg. Co. v. N., C. & St. L. Ry., 98 I. C. C. 405, 407.

(f) In view of the policy and provisions of the statute the commission may properly have concluded that the carriers desire to originate traffic on its own lines, or to take traffic from a competitor, should not be given as much weight in determining the justness of a discrimination against a locality as theretofore. Boulder Chamber of Commerce v. A. T. & S. F. Ry. 107 I. C. C. 49, 53.

(g) A case of undue prejudice is not made out by a mere showing of lower rates on a competitive commodity. American Clay Products Co. v. P. R. R. 107 I. C. C. 153, 154.

III. JUSTIFICATION.

§5½. In general.

(a) Rates on sugar from California, Colorado, Idaho, Kansas, Nebraska, and Utah, to points in Indiana, found not unreasonable or unduly prejudicial as compared with rates to Chicago. Rates from western territory to Chicago are depressed and were made by western carriers for purpose of enabling western producers to meet competition of eastern and southern sugar refiners at that point. While transportation conditions in Indiana and Illinois are similar in charact-

er, circumstances surrounding maintenance of depressed rates to Chicago indicate that there is no warrant for extending that basis to the Indiana points. Indiana Public Service Comm. v. A., T. & S. F., 92 I. C. C. 279.

(b) Testimony offered by a carrier to the effect that operating conditions on certain portions of its line are particularly hazardous due to washouts and other causes, and that certain portions of its line which are unadapted to agriculture will afford little traffic when the traffic here invoved is exhausted, as well as testimony respecting the large expense which it has incurred in building up terminal and port facilities, are no answer to the allegation of undue prejudice. Orange Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 101, 107.

ALL OTHER CITATIONS

Cheese from Wisconsin Points, 85 I. C. C. 18.

§7. Carrier not Serving Prejudiced Point.

See Evidence §23.

(a) Allegation of unjust discrimination and undue prejudice dismissed where it was shown that defendants do not participate in, and are not responsible for the measure of the rates from, any of the points alleged to be preferred. United Verde Extension Mining Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 95, 98.

(b) The commission has frequently found and ordered the removal of undue prejudice and preference where originating carriers were different but delivering carriers were the same. Indiana Steel & Wire Co., 16 I. C. C. 145, and other cited cases. Lake Dock Coal Cases, 89 I. C. C. 170, 185.

(c) Rates on bituminous slack or steam coal from various Illinois groups to Yankton, Mitchell, Huron, Watertown and Aberdeen, S. Dak., found unduly prejudicial to such points and unduly preferential of Sioux City, Iowa., to extent that rates on slack or steam coal to Yankton, Mitchell, Huron, Watertown, and Aberdeen, exceed or may exceed the contemporaneous rates on slack or steam coal to Sioux City by a greater percentage than the rates on lump coal to Sioux City and to the South Dakota points named exceed the contemporaneous rates on lump coal to Sioux City from same origin groups. Lake Dock Coal Cases, 89 I. C. C. 209.

(d) Interstate rates on bituminous coal from mines on L. & N. R. R. in eastern Kentucky, Tennessee, and southwest Virginia to Cincinnati, Ohio, switching district and to Andrews, Covington, Latonia, and Newport, Ky., found not unreasonable or unduly prejudicial. Comparisons submitted by defendant show clearly that rates assailed are no higher, distance considered, than rates to important cities in c. f. a. territory. Moreover, the commission has recognized that greater traffic density and more favorable operating conditions north of Ohio River than south thereof warrant lower rates north of the river, and rates assailed present a situation where rates south of the river are at least on as low a basis as those north thereof. Cincinnati Asso. of Purchasing Agents v. L. & N. R. R. Co., 89 I. C. C. 285.

(e) Joint rates on crude sulphur from New York, N. Y., and Baltimore, Md., to Hamilton, Ontario, Canada, found unreasonable and unduly prejudicial to complainant and unduly preferential, of its ompetitors at Buffalo, N. Y., and Detroit, Mich. The great disparity, distance considered, between the rates to Hamilton and the rates to Buffalo and Detroit is not warranted by any transportation consideration. Grasselli Chemical Co. v. B. & O. R. R. Co., 89 I. C. C. 383.

(f) Rates on pipe from points in westbound transcontinental Group B to Taft, on the Sunset Ry, found not unreasonable or unduly prejudicial as compared with transcontinental rates from same origin points to other California destinations, including Bakersfield, Calif., which lower rates are applicable for considerable distances beyond that point, and also apply to points on other branch lines in California and Arizona. The usual basis for making rates from eastern origin points to California and Arizona points on branch or short lines is by combination over the junction points, and instances cited of the extension of such lower rates to branch and short line points were shown to be invariably due to either carrier, water, or market competition. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 425.

(g) Respondents lines do not serve the millers of Kansas grain which moves all rail to Los Angeles and San Francisco and do not participate in such

transportation. Under the circumstances there could be no finding that respondents unduly prefer millers of Kansas grain. Transit rules on grain, 98 I. C. C. 679, 685.

(h) In original report, 88 I. C. C. 111, commission found that rates on coal from Slogo mine at Johnston City, Ill., to various interstate destinations were unduly prejudicial to extent they exceeded joint rates contemporaneously maintained by defendants on like traffic from mines "on the Southern Railway" in southern Illinois group to same destinations. Upon supplemental report, it appearing that Southern Ry. does not serve southern Illinois group, findings in original report corrected accordingly. Slogo Coal Corp. v. M. P. R. R. Co., 91 I. C. C. 217.

(i) No finding of undue prejudice made where lines serving points alleged to be prejudiced do not participate in the transportation from points alleged to be unduly preferred. Ashland Fire Brick Co., 22 I. C .C. 115, and other cited cases. Salt Cases of 1923, 92 I. C. C. 388, 409.

(ia) Rates, rules, and regulations for the transportation of grain, grain products, and feed from Jackson to certain destinations on lines of Gulf, Mobile & Northern south of Laurel, Miss., found not unreasonable, discriminatory, or unduly prejudicial. As the Gulf, Mobile & Northern does not serve Jackson it does not unduly prejudice shippers at that point by according transit at Laurel, and to establish joint rates via Laurel, with transit at Jackson, would short haul that carrier. Jackson Traffic Bureau v. G. & S. I., 102 I. C. C. 259.

(j) The maintenance of different rates by two different groups of carriers over their respective routes between the same points does not constitute unjust discrimination within the meaning of the act. Liquid Carbonic Co. v. C. & E. R. R. 104 I. C. C. 446, 447.

(k) It is a well established principle that undue prejudice or preference may not be said to exist as between shippers or communities unless the same carrier serves them or participate in their traffic and the transportation conditions are shown to be substantially similar. Southwestern brick cases 107 I. C. C. 681, 695.

(l) Testing undue prejudice by the ability of the lines, parties to the rates from both Philadelphia and Dayton, to put an end to the preference and prejudice, it is clear that withdrawal by such defendants would result in no benefit to complainant, as the rate would still be available over other lines. There is thus no adequate basis for a finding of undue prejudice. Ashland Fire Brick Co., 22 I. C. C. 115. Maxwell Motor Corp. v. B. & O., 100 I. C. C. 363, 368.

(m) The Commission has ordered removal of undue prejudice where the originating carriers are different but the delivering carriers are the same. Seneca Wire & Mfg. Co. v. B. & O. R. R., 112 I. C. C. 95, 97.

ALL OTHER CITATIONS

Wichita Motors Co. v. A. & V. Ry. Co., 88 I. C. C. 152; Valley Camp Coal Co. v. B. & O. R. R. Co., 88 I. C. C. 682.

§8. Competition.

(1) In General.

See Competition; Discrimination §4 (o).

(a) Complainant attacked commodity rates charged on bedroom furniture, carloads and less carloads, from Nashville, Tenn., to New Hampshire, Vermont, Massachusetts, New York, New Jersey, Pennsylvania, Delaware, Maryland and Virginia as unjust and unreasonable, unduly prejudicial and in violation of the fourth section. Complainant does not attack the reasonableness per se of the rates, but contended that they are relatively unreasonable and unduly prejudicial as compared with the rates from Chattanooga, Tenn., and points in North Carolina. From High Point, N. C., the rates apply only through the Virginia gateways. The rates from Nashville and Chattanooga apply both through Virginia gateways and Ohio River crossings. Less carload rates to New York are commodity rates of $1.24 on beds, $1.40 on dressers and chiffoniers, and $2.10 on dressing cases from Nashville, and 93c on these articles from Chattanooga and High Point, except that the rate on chiffoniers from Chattanooga is the second class rate of $1.47. Defendants admit present rates are unduly prejudicial to Nashville. HELD, rates attacked not unreasonable but unduly prejudicial to extent percentage of relationship of the rates on bedroom furniture, carloads, minimum 16,000 pounds, and less carloads, to the first class rates from Nashville exceeds the percentage relationship of contemporaneous rates on bedroom

furniture, minimum 16,000 pounds, and in less carloads, to the first class rates from Chattanooga. The N. C. & St. L., advised it proposed to restrict the rates from Chattanooga so as not to apply through Nashville. Standard Furniture Co. v. N. C. & St. L. Ry., 91 I. C. C. 27.

(b) Complainant attacked commodity rates charged on wire and wire articles carloads and less carloads from Anderson, Kokomo, and Muncie, Ind., to Kentucky and Tennessee, as unreasonable, unjustly discriminatory and unduly prejudicial. Kokomo is about 55 miles north and Muncie and Anderson are about 55 and 37 miles northeast of Indianapolis, Ind. Practically all rates on wire and wire articles are constructed on the basis of the lowest combination on the Ohio River. Louisville and Cincinnati are important Ohio river basing points. The components north of the Ohio river were class rates, fifth class. Subsequently commodity rates were established from producing points in central territory, including the three complaining cities, to Ohio river crossings on all of these articles in carloads, minimum 36,000 pounds, except on bale ties. These commodity rates are practically the equivalent of sixth class in central territory and are limited in their application to traffic destined beyond the Ohio river. No such commodity rates have been established on wire or wire articles in less carloads. Joint rates were in effect from the Buffalo-Pittsburgh territory based on southern classification special iron basis, somewhat lower than sixth class. Disregarding the element of distance, the rates from Indiana points are not on the whole as high as those from Pittsburgh, but giving due consideration to distance, an analysis of comparisons discloses that the level of rates on these wire articles from Pittsburgh to Kentucky and Tennessee points is lower than that from Indiana points to the same destinations. HELD, rates attacked not unreasonable or unjustly discriminatory but rates from Anderson, Kokomo and Muncie to Kentucky and Tennessee, distance considered, higher than from Pittsburgh to the same points results in undue preference of Pittsburgh. Indiana Public Service Commission v. A. & V. Ry., 92 I. C. C. 497.

(c) Disparity in rates does not necessarily result in undue prejudice. It must also appear that shipments are made under those rates or that shipments are made under those rates or that shipments are hindered or prevented because of the rate relationship. The element of competition is usually potent. Pensacola Chamber of Commerce v. L. & N. R. R., 98 I. C. C. 567, 570.

(d) Rates on crude oil from Mexia, Tex., and nearby loading stations, to Shreveport, La., since Nov. 6, 1921, found not unreasonable or unduly prejudicial as compared with lower rates contemporaneously in effect from Mexia to Beaumont and Port Arthur, Tex. Latter rates are depressed by pipe-line competition, and absence of such competition to Shreveport presents a situation which distinguishes the transportation conditions under the rates to Beaumont and Port Arthur from those under rates assailed and removes it from the purview of section 3 of the act. Caddo Central Oil & Rfg. Corp. v. K. C. S. Ry. Co., 98 I. C. C. 39.

ALL OTHER CITATIONS

Barber Asphalt Co. v. L. & N. R. R. Co., 88 I. C. C. 307.

§8. (5) Water Carriers.

See Water Carriers.

(a) In absence of undue prejudice carriers may decline to meet water competition. Cincinnati Asso. of Purchasing Agents v. L. & N. R. R. Co., 89 I. C. C. 285, 290.

ALL OTHER CITATIONS

North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270.

§8 (7). Market Competition.

ALL CITATIONS

Lackawanna Steel Co. v. P. R. R. Co., 88 I. C. C. 759.

§10. Encouragement of own territory.

See Evidence §40½; Through Routes and Joint Rates §9.

(a) Failure and refusal of the Rock Island and Missouri Pacific to join in establishment and maintenance of proportional rates on petroleum and products from El Dorado, Ark., to Vicksburg, Miss., no higher than those maintained to Memphis, Natchez, Baton Rouge, and New Orleans, found not unjustly discriminatory or unduly prejudicial. To require establishment of rates on basis sought would result in those carriers short hauling themselves. Jackson Traffic Bureau v. A. & V. Ry., 92 I. C. C. 89.

ALL OTHER CITATIONS

Simms Oil Co. v. H. & T. C. R. R. Co., 85 I. C. C. 537.

§10½. Failure to Agree on Divisions.

See Cars and Car Supply §32½ (b).

§11. Low Rate to Favored Point.

See Equalization of Rates; State Rates and Regulation.

(a) Carriers may for competitive or other reasons establish rates which the commission could not initiate for them; and equality of distance from competing markets is not an absolute test of whether an equality of rates results in undue prejudice and preference. Reduced Commodity Rates to Pacific Coast, 89 I. C. C. 512, 524.

IV. REMOVAL OF DISCRIMINATION.

§11½. In General.

See Distance Rates §3 (4s); Reparation §7½ (m).

(a) In view of the fact that conditions of operation in the southern Wyoming district do not differ as greatly from those in Utah as the commission had been led to believe, and that difference between average distances is somewhat less than was originally stated differential of 50 cents, Castle Gate district in Utah over Rock Springs-Kemmerer district in Wyoming, to destinations in the Northwest heretofore prescribed found too high and to result in undue prejudice to the Castle Gate district. Former report, 80 I. C. C. 383, modified and differential of 40 cents for future prescribed. Western Coal Rates, 89 I. C C. 666, 669, 675.

(b) Commission can not accede to a proposition that it is necessary or proper for carriers, in attempting to remove a discrimination complained of, to make a far-reaching readjustment of rates involving material increases not only to competitive points but also to noncompetitive points to which there is a heavy and constant movement. Especially is this true where the present rate adjustment has been voluntarily maintained for a period of years. Boots and Shoes from New York Points, 91 I. C. C. 591, 596.

§12½. State Rates.

See State Rates and Regulation.

(a) Action with regard to the adjustment of intrastate rates in Texas on grain and grain products and the interstate rates from the Panhandle of Texas to Shreveport, La., in order to remove the existing undue prejudice against Oklahoma and Kansas City, Kans.-Mo., by reason of present intrastate rates in Texas, withheld pending action by Railroad Commission of Texas relative to such intrastate rates. Oklahoma Corp. Comm. v. A. & S. Ry. Co., 101 I. C. C. 116, 131.

ALL OTHER CITATIONS

Ohio State Rates on Sand, Gravel, Stone, and Paving Blocks, 85 I. C. C. 66.

§13. Disturbance of settled adjustment.

See Evidence §66; Relative Rates.

(a) Inclusion of Rock Springs and Kemmerer mines in Wyoming in one group found not unduly prejudicial of operators of coal mines in Utah. The commission has on former occasions declined to separate the district into two rate groups on traffic to southern Idaho on ground that grouping both as to shipments westbound and eastbound had existed for many years and should not be interfered with unless a service more acceptable to the public, and at the same time, just to carriers, could be established. Moreover, separation of the group on westbound traffic would naturally result in like action as to eastbound traffic, and would seriously disturb the relationship that has existed without complaint over a long period of years. Western Coal Rates, 89 I. C. C. 666, 668, 669.

(b) Commission can not accede to a proposition that it is necessary or proper for carriers in attempting to remove a discrimination complained of, to make a far-reaching readjustment of rates involving material increases not only to competitive points but also to noncompetitive points to which there is a heavy and constant movement. Especially is this true when present rate adjustment has been voluntarily maintained for a period of years. Boots and Shoes from New York Points, 91 I. C. C. 591, 596.

(c) Commission declines to sanction and does not look with favor upon a general increase in rates made under pretext of satisfying a complaint of discrimination against one point when such discrimination can be otherwise removed and general increase is of far-reaching

effect, unless justification therefor is clear and convincing. Boots and Shoes from New York Points, 91 I. C. C. 591, 596, 597.

V. PROCEDURE AND EVIDENCE.

§13½. In general.

See Evidence; Procedure Before Commission.

(a) Upon reargument, prior report, 73 I. C. C. 161, rates on coal from various producing regions to Chicago switching district, higher to some deliveries than to Chicago itself, found unduly prejudicial and preferential in favor of points to which lower rates apply. This differentiation is not supported by sound transportation considerations, since it is clear that no greater service is necessary in making deliveries within excepted areas than is rendered in reaching many points to which Chicago rates apply. Chicago Coal Merchants Asso. v. Director General, as Agent, 89 I. C. C. 137.

(b) Upon further hearing and reargument, previous report, 69 I. C. C. 282, charges on traffic from points west of Hudson River to J. L. Kelso Co. warehouse on the Union Freight R. R. in Boston, Mass., found unreasonable and unduly prejudicial to extent they exceeded rates on like traffic to deliveries on the Boston & Albany, Boston & Maine, and New York, New Haven & Hartford railroads in the Boston district. Line-haul carriers refused to absorb charges of the Union while making deliveries at all other points in and about Boston at the flat Boston rates. Reparation awarded. Boston Wool Trade Asso. v. Director General, as Agent, 89 I. C. C. 589, 593.

(c) Mere reference to a rate situation disclosing lower charges at points other than point alleged to be unduly prejudiced is not sufficient to establish undue preference and prejudice. El Dorado Chamber of Commerce v. C., R. I. & P. Ry. Co., 89 I. C. C. 743, 744.

(d) Undue prejudice which causes injury to a smaller volume of traffic is just as unlawful as one which causes injury to a large volume. See 58 I. C. C. 610, 618. Duluth Chamber of Commerce v. C., St. P., M. & O. Ry. Co., 98 I. C. C. 352, 356.

(e) An issue of undue prejudice raised in an I. & S. proceeding need not be decided where it is admitted that the rates under suspension are unreasonable per se. Rates on Brick and Related Articles, 101 I. C. C. 297, 298.

ALL OTHER CITATIONS

Cities of Marshall and Jefferson v. T. & P. Ry. Co., 85 I. C. C. 115.

§14. Burden of proof.

See Burden of Proof; Evidence I.

(a) The burden of proof to establish the fact of amount of damage due to unjust discrimination, or undue prejudice, as the proximate cause is upon the complainant. Donner Steel Co. v. D. L. W. Ry., 92 I. C. C. 583.

ALL OTHER CITATIONS

Universal Paper Bag Co. v. M. C. R. R. Co., 88 I. C. C. 593.

§15. Showing of damage.

(a) Emergency rates on hay from Keenesburg and Hudson, Colo., to St. Louis, Mo., were excepted from reductions required in 64 I. C. C. 85, but similar rates from competing Colorado common points were not so excepted. HELD: Since there is no showing that competitors were enabled to control the St. Louis market, thereby compelling complainant to meet their price, and complainant benefited as much as did anyone else by the inadvertent reduction of the emergency rate from Colorado common points, neither fact of damage, nor amount thereof, established by reason of undue prejudice which may have existed. National Hay & Milling Co. v. G., B. & Q. R. R. Co., 89 I. C. C. 1.

(b) Where undue prejudice and preference is found to exist, and a complainant does not establish a pecuniary damage attributable thereto, reparation will be denied by commission. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 211.

(cd) Allegation of undue prejudice under section 3 of the act found not sustained where complainants were not shown to be in competition with party alleged to be unduly preferred. Utah State Automobile Asso. v. A., T. & S. F. 92 I. C. C. 376, 386.

(e) Under principles laid down in International Coal Co. case, 230 U. S. 184, measure of damages recoverable upon a finding of unjust discrimination or undue prejudice is pecuniary loss inflicted upon complainant as result of the

discrimination or prejudice alleged. Donner Steel Co. v. D., L. & W., 92 I. C. C. 595, 598.

(f) Damages denied for undue prejudice where complainant's evidence concerning competition was general in character, and where record indicated that competition in sale of major portion of complainant's output was not with plant at point alleged to be preferred but with plants located at other points which moved no shipments on the alleged preferential rates. Mason By-Products Co. v. Director General, 92 I. C. C. 646, 649, 650.

(g) Rate comparisons alone, which constitute all of complainant's evidence in this respect, are not sufficient to sustain the allegation that rates charged are unduly preferential or unduly prejudicial. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553, 559.

(h) As evidence of undue prejudice complainant merely showed that its products were sold in competition with products of manufacturers at near-by points which were accorded lower rates. No damage found to have resulted from any undue prejudice which may have existed. Glidden Co. v. E. R. R. Co., 100 I. C. C. 331.

(i) Damage because of unjust discrimination or undue prejudice is not proven merely by showing that a part of a rate was absorbed in the selling price. Memphis Freight Bureau v. C. & E. I., 101 I. C. C. 26, 28.

ALL OTHER CITATIONS

Chicago Bridge & Iron Works v. Director General, as Agent, 85 I. C. C. 99.

§17. Reparation.

See Supra §15; Refrigeration IV; Reparation.

(a) Where undue prejudice and preference are found to exist, and a complainant does not establish a pecuniary damage attributable thereto, reparation will be denied. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 211.

§18. Complaint.

I. ESTABLISHMENT.

§1. In general.

See Bridges and Tolls I (b).

(a) Rates on nitrate of soda from New Orleans, La., and subports taking same rates to destinations in Arkansas, found not unduly prejudicial, but found unreasonable as compared with rates on fertilizer between same points. Distance scale of rates prescribed for future. New Orleans Joint Traffic Bureau v. A. & V. Ry Co., 89 I. C. C. 223.

(b) Adjustment of rates on ordinary livestock from Nebraska points to Missouri River cities found unduly prejudicial to interstate shippers and localities, unreasonably preferential of intrastate shippers and localities, and unjustly discriminatory against interstate commerce; and in certain instances found unreasonably preferential of interstate ship-

pers and localities, unduly prejudicial to intrastate shippers and localities, and unjustly discriminatory against intrastate commerce. Distance scales of rates suggested for correction of the situation. Nebraska Livestock Case, 89 I. C. C. 444.

(c) In applying distance rates herein prescribed carriers operating under a common control or management should be treated as a single line. Nebraska Livestock Case, 89 I. C. C. 444, 459.

(d) Tariff contained provision that rates to intermediate points to which no rates were named would be the same as those to next more distant point to which rates are named. No specific rates were published on sand and gravel from Carpentersville, Ill., to Edison Park and Park Ridge, Ill. Distance rates assessed on certain shipments moving during Federal control, found illegal and lower rate via a route over which Edison Park and Park Ridge are intermediate to Mayfair, the next more distant point to which specific rates were published, found applicable. Reparation awarded. Richardson Sand Co. v. Director General, as Agent, 89 I. C. C. 555.

(e) Proposed schedules limiting to certain direct routes the application of distance rates on stocker or feeder cattle moving from points on the Texas-Mexican Ry. to Arkansas City, Wichita, and Wichita Union Stock Yards, Kans., the effect of which will be to eliminate admittedly circuitous routes through Coffeyville, Kans., and remove fourth section departures resulting from higher rates in effect over those routes to intermediate Kansas points, found justified. Livestock between Texas and Kansas Points, 89 I. C. C. 720.

(f) Respondents proposed to cancel interstate commodity rates on hay and straw, carloads, from Indiana, Illinois and Ohio to destinations in Indiana and Illinois, certain Ohio river crossings, and Massillon, O., and seek to apply the fifth class rates on such traffic. The general effect is to eliminate the existing commodity rates and to apply the fifth class basis, the changes being for the most part increases. The classification basis is applied generally in c. f. a. territory with the exception of the commodity rates herein involved and other rates to the Ohio river crossings. The present commodity rates are of long standing. Many of them were originally the same as the fifth class rates but are not now on that basis because at the time the class rates were revised no corresponding modification was made in the commodity rates. Ohio and Michigan produce a large tonnage of hay which moves on the classification basis to points in c. f. a. territory and there is also a large movement from Indiana points from which no commodity rates are in effect and the class rates are applied. The application of fifth class rates to traffic moving to points south of the Ohio river would result in increases as high as 60% and averaging 41% for hauls not exceeding 100 miles. Present rates are 0.5 to 12.5c and proposed rates from 11c to 20c. HELD, respondents have not justified suspended schedules. Hay and straw to Mississippi river crossings, 92 I. C. C. 128.

(g) Respondents proposed to change the basis for computing distance for the application of mileage commodity rates on brick and articles taking same rates, in carloads, between points in Oklahoma and Texas and between points in Arkansas and Oklahoma. The schedules now in effect provide that in computing rates, distances to be used shall be based on distances over direct lines, embracing as a maximum lines or parts of lines of not more than three carriers via existing connections for the interchange of carload traffic, except that in cases where four or more lines are necessary, rates are to be figured on basis of the minimum number of lines. The proposed schedules restrict the basis for computing rates to the distances over routes embracing as a maximum lines or parts of lines of not more than three carriers, without exception. Respondents have not attempted to show that any discrimination would result if the proposed rule is not allowed to become effective. If the proposed schedules should become effective increases would result which have not been justified. HELD, rates not justified. Brick between Oklahoma and Texas points, 93 I. C. C. 210.

(h) Complainant attacked as unreasonable rates on animal manure, carloads, from Perth and Havelock, Nev., to eastbound trans-continental groups A to F inclusive, and K to M, inclusive. In 89 I. C. C. 508, the Commission found rates to above destinations not unreasonable, but were unreasonable to group G H and J. In 73 I. C. C. 496, the Commission prescribed a scale of distance

rates on animal manure from Perth and Lovelock to destinations in California and awarded reparation. No reason appears upon this record why a scale which is reasonable for westbound traffic from these points of origin would not also be reasonable to determine rates to eastbound transcontinental groups. HELD, rates attacked to Group B to J and M and to Groups F, G, H, J, and M., are unreasonable to extent they exceed rates to Group B $17.10, C $15.90, F, $13.20, G, $11.70, H, $12.00, J, $9.00, M, $16.50, reparation awarded. Pacific Manure & Fertilizer Co. v. A. & R. R. R. Co., 95 I. C. C. 430.

(i) Complainant attacked commodity rates charged on rice carloads, from Arkansas, Louisiana and Texas and Memphis, Tenn., to Oklahoma as unreasonable and as compared with rates to Kansas City, Joplin, Springfield and St. Louis, Mo., Omaha, Neb., and Arkansas and Texas as unduly prejudicial and preferential of intrastate traffic in Arkansas and Texas. For the purpose of naming rates to Oklahoma the Arkansas miling points, of which Stuttgart is representative, are grouped, and the interior Louisiana and Texas points, of which Lake Charles, La., and Houston and Victoria, Tex., are representative are also grouped. The rates from Texas and interior Louisiana, which does not include New Orleans, are the same to Oklahoma jobbing points, and are 7.5c lower than from New Orleans. The rates to many points in Oklahoma from Arkansas are the same as from interior Louisiana and Texas points, but to points in east central Oklahoma the rates from the Arkansas points are 7.5c lower, except to McAlester, Muskogee, Krebs and Wilburton, where they are 15c lower, than the rates from interior Louisiana and Texas. The rates from Memphis are the same as from the Arkansas points to many points in Oklahoma. To all other points, except Muskogee, the rates from Memphis are 7.5c higher, and to Muskogee, 7c higher from Memphis than from the Arkansas territory. There is not now and never has been water competition from rice producing points in Texas or interior Louisiana to the Missouri river, or any of the other large consuming territory beyond Oklahoma to which rates are lower than to the latter state. Defendants offered no justification for continuing rates from Arkansas points and from Memphis to Oklahoma higher than to more distant points in Texas. It is clear that a reasonable and uniform basis of rates should be established from the rice producing territory to Oklahoma and surrounding states. It is believed that the most satisfactory solution of the situation presented is the establishment of a mileage scale of rates on clean rice in carloads that will give to each distributing point the benefit of its location. HELD, rates on clean rice for future unreasonable to extent they exceed distance rates ranging from 11c single line and 13c joint line for 5 miles and under to 71c single and joint line over 800 miles. Alton Mercantile Co. v. A. & W. Ry., 95 I. C. C. 645.

(j) Complainant attacked class combination rates charged on butter, eggs, and dressed poultry, straight or mixed carloads from Texas to New York, New Jersey, Pennsylvania, the New England states Ohio, Michigan, Maryland and Virginia as unreasonable and in violation of section four. Complainant attacked rates charged on live poultry carloads, from Texas common points to New York as unjust and unreasonable. Respondents proposed a general readjustment of the rates on butter, eggs, live and dressed poultry, and dressed rabbits, in straight or mixed carloads, from Arkansas, Oklahoma and Texas to the socalled defined territories in the east. **Butter and Dressed Poultry and Eggs.** These commodities are rated third class in the three classifications, except that in the southern fourth class applies on dressed poultry, but for many years commodity rates on each of these products, lower than third class, have been quite generally in effect from Texas, Arkansas and Oklahoma, particularly to St. Louis and Chicago territories and to the Mississippi river crossings on traffic destined east thereof. At present there is little uniformity in the rates on these products from the same points of origin to a given destination. It is proposed to make the rates uniform on these commodities from this wide territory of origin to all of the destination territory involved. No commodity rates have been or are in effect from the river crossings to eastern destinations and third class rates apply. The rates from southwestern territory to the large cities in central territory are generally arrived at by using the sum of the lowest commodity factor to the Mississippi or Ohio river

crossings, plus the third class beyond. There is no uniformity in manner of publication. Also the general result of the proposed adjustment will be to remove certain fourth section departures to bring about a closer relationship between the rates from Arkansas and Oklahoma to eastern destinations, and a gradation of these rates more in conformity with the revised adjustment from Texas, but on the other hand will place all the rates from southwestern territory on the basis of the lowest combination of local factors, although all the rates to points east of the Buffalo-Pittsburgh line and many to points on and west of that line are now on a basis lower than the lowest combination of local factors. With the idea of a nearer approach to uniformity and simplicity in the making of rates from the Southwest, which is one of the advantages of the proposed readjustment urged upon the Commission by the respondents, it is in entire accord. Any steps which may be taken by them to simplify the present system of publishing rates from this territory to the east the Commission inclines to view with favor, with the important qualification, however, that the resulting rates must be reasonable. **Live Poultry.** The proposed increase are very largely from Arkansas points. From the southwest to eastern destinations rates on this commodity are generally the combination of the separately published factors to and from the gateways, generally St. Louis, though many of the rates from Texas have been and are based on other gateways. In some instances single factor through rates are published and in others not. Live poultry is rated second class in western and third class in the others. There should be a more uniform adjustment of the rates on this commodity in and from the southwest. The problem is to find a reasonable basis for the entire territory. HELD, rates proposed have been justified to extent they do not exceed rates shown below, otherwise not justified: Distance scales prescribed on butter, eggs and dressed poultry, single line 20c and joint line 25c for 5 miles and under, live poultry 24c and 29c up to and including from 2000 miles 217c single line and joint line on butter, eggs and dressed poultry and 254c on live poultry. Butter, eggs, dairy products and poultry, 96 I. C. C. 19.

(k) Complainant attacked commodity rates charged on haydite substitute for sand, gravel and crushed stone in concrete construction from Kansas City, Mo., to Memphis, Tenn., and Iowa, Kansas, Nebraska, Oklahoma, Arkansas, Louisiana and Texas as unreasonable and unduly prejudicial to extent they exceed mileage scale of rates on sand, gravel, crushed stone, and chatts prescribed between southwestern states in 48 I. C. C. 351. Rates on fire clay were assessed. Haydite can be shipped in any kind of a car in which sand and gravel can be shipped, can be loaded to and beyond the marked capacity of the car and is not susceptible to damage. Neither in character, value nor use is haydite to be classed with sand and gravel for rate making purposes. It is a manufactured article, of considerably higher value than sand and gravel, and with a decided advantage over sand and gravel in certain lines of construction. It should take a higher rate than sand and gravel. HELD, reasonable maximum rates for haydite from Kansas City to destinations in question should be established on a distance basis for single line ranging from 4c for 10 miles and under to 20c for 800 miles, joint line differential 1c for each block up to and including 400 miles, for 520 mile block 9.5c and no differential beyond that distance. Haydite Co. v. A. T. & S. F. Ry., 96 I. C. C. 312.

(l) Complainant attacked rates on clean rice, carloads, from Memphis, Tenn., and points in Arkansas, Louisiana and Texas to Oklahoma as unreasonable. In 95 I. C. C. 645 the Commission prescribed a mileage scale to apply in the future. HELD, the original findings do not necessitate a general readjustment as that term is used in cases where it has formed the basis for a denial of reparation and even though this case were considered as involving a general readjustment, reparation still would be proper. HELD, reparation awarded. Alton Mercantile Co. v. A. & W. Ry., 98 I. C. C. 581.

(m) In 77 I. C. C. 473, 548, 549 the Commission prescribed a reasonable maximum scale of rates designated therein as Table 14 of Appendix 8 on fruits and vegetables, other than potatoes, carloads, between Memphis, Tenn,. and Arkansas points, subject to class rates as maxima. To remove undue prejudice, the Commission found that the rates between Memphis and Arkansas should not exceed for similar

distances intrastate rates on like traffic between points within Arkansas by more than a bridge toll of 2c per 100 pounds, and that the rates from Memphis to Arkansas points should be no higher for like distances than those from St. Louis, Mo., and certain other Mississippi river crossings to Arkansas, southern Missouri and western Louisiana. The carriers are not seriously opposed to rates lower than scale 14 on low rated fruits and vegetables. There is merit to the shippers contention that scale 14 is entirely too high for application on most fruits, vegetables and melons in the territory under consideration. Since practically all commodity rates in the southwest on fruits and vegetables, especially such articles as onions, cabbage, parsnips, beets, etc, are the same as or lower than the class C rates, it is obvious that scale 14, which, is higher than the class C scale, would effect substantial increases in rates on all such vegetables rated higher than class C when shipped with tops. HELD, the table 14 appendix 8 of original report, 77 I. C. C. 473 unreasonable in so far as it applies on fresh or green fruits, melons and vegetables, other than berries, peaches, pears, plums, and grapes and should be modified that scale is proper for articles last mentioned and that the scale of rates shown under table 13 of original report will be reasonable on apples (except cull apples) watermelons, muskmelons, cabbage, onions, onion sets, carrots, beets and other vegetables, with or without tops, fruits and melons. Memphis Southwestern Investigation, 98 I. C. C. 654.

(n) In public regulation, because of the desire to avoid unlawful discrimination, the tendency has been toward closer adherence to the distance principle. It is also a fact that this principle usually furnishes a basis in testing the reasonableness of rates, for both carriers and shippers resort to comparisons with other rates charged on similar traffic for similar distances under similar transportation conditions. Even in the case of group rates such comparisons ordinarily provide the test, average distances being used. Southern class rate Investigation, 100 I. C. C. 513, 611.

(o) In fixing maximum reasonable rates, competition is not a factor which the Commission may take into consideration. The carriers may, within limits, make low rates for the purpose of meeting competition, but the Commission is without power to compel them to meet it. Value and cost of service are recognized as factors which the Commission may properly take into consideration. In the case of class rates, value of service is chiefly of importance in determining the classification ratings. Distance scales are frequently criticized on the ground that cost of service is not dependent upon distance alone. This is true when service is viewed in detail, for other factors affect cost, such as grades, curves, cost of construction, weather conditions and density of traffic. A longer haul may actually be cheaper, because of the type of train used, than a shorter haul over the same line. Broadly speaking, however, cost of service undoubtedly does increase as distance increases, and in any adjustment of rates detailed consideration of cost is impracticable. Otherwise rates would vary with the line, the train, the day, and the state of the thermometer. Moreover, as some of the shippers have pointed out, distance at least measures the quantity of service rendered, and distance scales have the great practical advantage that they are based on a theory that is readily understood. The distance adjustments of class rates which the Commission has prescribed in other territories have proved stable and have given general satisfaction. On the other hand, group rates are often defensible. They are particularly appropriate in the case of commodities produced only at certain points or in restricted localities, where commercial conditions by common consent are improved by the equalization of the points or areas of production. Group or differential relationships may also be created, and lawfully within limits, by carrying so situated that they are able to bring traffic into competitive markets at relatively low rates without undue preference. Southern class rate investigation, 100 I. C. C. 513, 611.

(p) Complainant attacked combination rates charged on mine props, caps, ties and bars shipped between June 6, 1922 and Feb. 21, 1924 from Missouri to Illinois as unreasonable. Shipments originated at numerous points in Missouri on the M. P. ,and moved as routed over the lines of that and other defendants to certain coal mining points in Illinois. Charged through commodity rates from and to certain of the points reached by the M. P., and from and to other points

by combination rates made up of local or proportional commodity rates. In 87 I. C. C. 622 the Commission found rates attacked unreasonable to extent they exceeded a distance basis there prescribed. HELD, rates attacked unreasonable to extent they exceeded rates found reasonable in 87 I. C. C. 622, reparation awarded. Burkland v. M. P. R. R. 102 I. C. C. 343.

(q) Complainant attacked commodity carload rates and minimum weights on metal beds, carloads, from New Orleans to southern territory and to Arkansas as unreasonable and unduly prejudicial, and unduly preferential of Atlanta, Ga., Chicago, Ill., and Kenosha, Wis. that rates and minimum weights on helical springs, carloads, from Chicago and Waukegan, Ill., to New Orleans are unreasonable and unduly prejudicial and unduly preferential of shippers of metal beds from Chicago, Waukegan and Kenosha to New Orleans. Complainants evidence is directed against the rates to the Mississippi valley and the southeast. It does not appear that the rates and minimum weights on metal beds from New Orleans to the territory under consideration are unduly prejudicial. Complainant admits that metal beds can be easily loaded to 30,000 pounds; and it has not shown that it is injured by the maintenance of rates from Atlanta subject to a minimum of 20,000 pounds. The record does show that the rates generally from New Orleans to the Mississippi Valley and the Southeast are unreasonable. HELICAL SPRINGS. Helical springs are said to be used solely in the manufacture of fabric bed springs. The latter constitute about one half of complainants production of bed springs. Their average weight is about 38 pounds to which helical springs contribute 4 pounds. The rates on helical springs to New Orleans from Waukegan and Chicago are 84 and 80c, minimum 30,000 pounds. The present rates are 78% of the class basis, the basis of the rates set forth in the complaint. It does not appear that the applicable commodity rates are unreasonable when applied to these occasional shipments of one every two and onehalf months. HELD, rates on metal beds, carloads, from New Orleans not unduly prejudicial but are unreasonable to extent they exceeded a distance scale of 25c for 30 miles up to 123c for 1000 miles. Rates on helical springs not unreasonable or otherwise unlawful. Crescent Bed Co. v. A. & V. Ry. 102 I. C. C. 419.

(r) In prescribing scales of distance rates for single and joint-line hauls, commission has almost invariably required lines under a common management and control to apply the single-line rates. These decisions were based on fact that such management and control result in certain benefits in operation, and on commission's opinion that single-line rates would be reasonable for application over such lines. No reason is apparent for departing from those precedents. Livestock to, from, and between points in Southeast, 101 I. C. C. 105, 107.

(s) Proposed revision of distance commodity rates on commodities other than those treated in Memphis-Southwestern Investigation, 77 I. C. C. 473, for application between points in southwestern territory, between points in such territory, on the one hand, and defined territories in c. f. a., western trunk line, and southern territories and related points, on the other, designed for the purpose of complying with the commission's orders in the above cited case, found justified with respect to certain commodities and not justified with respect to others. Reasonable rates in specific instances prescribed for the future and fourth section relief granted. Commodity Rates in Southwestern Territory, 101 I. C. C. 308.

(sa) Proposed increased interstate rates on horses and mules to, from, and between points in the Southwest, more particularly from and to points in Texas differential territory and New Mexico to and from the markets of Fort Worth, Kansas City, St. Joseph, St. Louis, Wichita, and Oklahoma City, published in purported compliance with commission's order in Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479, found not justified based on comparisons of numerous bases of rates, including scales of distance rates, in effect on horses and mules to, from, or between points in Texas, New Mexico, and the territory west and north thereof. Maximum reasonable interstate rates, based differentially, prescribed for future. Rates on Horses and Mules in the Southwest, 102 I. C. C. 87.

(sb) Proposal to increase rates on potatoes from Michigan, Minnesota, and Wisconsin groups to Jellico, Knoxville, and Birmingham, by canceling joint through rates leaving in effect higher

Ohio River combinations, and designed to correct a maladjustment, escape widespread reductions, remove discriminations, and comply with the long-and-short-haul rule, found not justified. Joint commodity rates on heavy traffic moving long distances are usually less than combinations, and on potatoes joint rates are maintained from Texas and the northern groups here involved to other Mississippi Valley points. Joint rates have been carried in these tariffs and reissues thereof, for the past 15 years. Moreover, carriers were expected to revise commodity rates somewhat in line with distance class rates prescribed in 100 I. C. C. 513, 663, and neither the through rates nor combinations here in issue conform to any distance standard. Potatoes from Alabama and Tennessee, 102 I. C. C. 183.

(t) In 88 I. C. C. 543, the Commission found not justified a proposed revision of the interstate rates on brick and other clay products included in the uniform brick list, and on common brick from, to, and between points in southern territory, which purported to be in compliance with 68 I. C. C. 213, and prescribed reasonable single line and joint line scales for application. The proposed rates from Johnson City, Kingsport and Chattanooga were not made on the same basis as other rates considered in that case and are not regarded by the Norfolk & Western as a part of the general readjustment considered therein. The rates which the N. & W., now propose for application from these points are constructed in the same manner as those originally proposed from the two points first named, except that it is willing to reduce its factor on common brick to the extent of 1c per 100 pounds. As a temporary measure of relief to manufacturers at Piermont, Webster, and Richlands, on the N. & W., the rates on common brick have been made applicable on all kinds of brick. The N. & W., proposed to cancel this provision if and when the rates here proposed become effective. HELD, rates which respondents now propose have not been published and the record herein does not afford a sufficient basis upon which to express an opinion as to the reasonableness of those rates. Brick and clay products in the south, 109 I. C. C. 161.

§2. Effect.

See Differentials.

(a) Tariff contained provision that rates to intermediate points to which no rates were named would be the same as those to next more distant point to which rates are named. No specific rates were published on sand and gravel from Carpentersville, Ill., to Edison Park and Park Ridge, Ill. Distance rates assessed on certain shipments moving during Federal control, found illegal and lower rate via a route over which Edison Park and Park Ridge are intermediate to Mayfair, the next more distant point to which specific rates were published, found applicable. Reparation awarded. Richardson Sand Co. v. Director General, as Agent, 89 I. C. C. 555.

(b) In original report the commission prescribed distance rates on classes and commodities between Meridian, Miss., and points in Alabama equal to Alabama intrastate rates. Upon further hearing, rates on hay and gravel between Meridian and points in Alabama found not so related to intrastate rates on the same commodities within Alabama as to require continued operation of prior orders with respect to such rates. Prior reports, 60 I. C. C. 5 and 66 I. C. C. 179, modified. Meridian Traffic Bureau v. S. Ry., 92 I. C. C. 439, 442, 446.

(c) Complainant in 15906 attacked carload and less carload rates to Williamson, W. Va., on traffic from central territory and border territory, which includes points in western New York, western Pennsylvania and West Virginia as unreasonable and unduly prejudicial as compared with rates to Charleston, Gauley, Kenova, Huntington and other destinations in West Virginia. In 15943 complainant attacked rates on iron and steel articles, carloads, and less carloads, from Woodlawn and Pittsburgh, Pa., to Willliamson as unreasonable and unduly prejudicial as compared with rates on like traffic from more distant points of origin and as compared with rates to Ashland, Ky., Kenova, Huntington and Charleston, W. Va. Williamson is on the Norfolk & Western, 74 miles over the Big Sandy route and 98 miles over the so-called twelve pole route from Kenova, W. Va., a point on the south bank of the Ohio river served by the B. & O., C. & O., and N. & W. Class rates from central territory are generally the same to Williamson as to the Virginia cities, which include Norfolk, Newport News and Roanoke, Va. But in cases where the com-

binations of the local rates to Kenova with the local rates from Kenova to Williamson are lower than the Virginia cities the rates generally are applicable. From border territory the class rates to Williamson are generally the same as those applicable to Bluefield, W. Va. The local rates from Kenova to Williamson are distance rates and reflect the distance of 98 miles over the so-called twelve pole route of the N. & W., from Kenova to Williamson although a large percentage of the traffic to Williamson is transported over the Big Sandy route. Although it may be true that rates from central and border territories to some points on the N. & W., are lower than they might reasonably be, because of the low basis of rates to the Virginia cities, which are the result of carrier competition, the record does not show that the rates to Williamson are low. The transportation conditions to Williamson from points of origin in general in the affected territory are the same as those in central territory except for a distance of 74 miles from Kenova to Williamson. From most points of origin the largest portion of the haul to Williamson are in central territory. Williamson, 74 miles from Kenova and 8 miles more distant from Huntington can not successfully compete with those points in the jobbing of commodities in territory which, by reason of its location, it should be expected to serve. HELD, class rates, and commodity rates bearing a direct relation thereto, from central and border territories, to Williamson, W. Va., for future unreasonable to extent they exceed rates constructed upon the basis of distance scale of class rates applicable in c. f. a. territory for the short line distance to Williamson plus arbitraries of 10, 8, 6, 5, 4, and 3c for the six classes respectively. No. 15943. The shipments moved after June 5, 1922. Rates of 47.5c in carloads and 56.5c in less carloads on and after July 1, 1922 and 52.5c in carloads and 62.5c in less carloads prior to that date were applicable. The rates from Cleveland to Williamson are 40.5c in carloads and 48c in less carloads. Those rates applied over a route through Pittsburgh and caused at that point a fourth section departure which had been protected by application. There was another fourth section departure at Williamson, which is directly intermediate between Pittsburg and Roanoke, caused by the publication of a higher rate to Williamson than to Roanoke. Both departures have been removed by the publication effective Feb. 16, 1925 of 40.5c in carloads and 48c in less carload from Pittsburgh and Woodlawn to Williamson. HELD, rates on iron and steel articles unreasonable since June 5, 1922 to extent they exceeded 39c carloads and 55c less carloads, prior to July 1, 1922 and 35c in carloads and 49.5c less carloads after that date. HELD, present rate unreasonable to extent it exceeds 35c carloads, present rate on less carloads not unreasonable, reparation awarded. Williamson Chamber of Commerce v. A. C. & Y. Ry. 107 I. C. C. 639.

(d) It is believed that the new distance scale of class rates herein prescribed for application in southern territory, if applied both interstate and intrastate, will more than maintain present revenues, particularly if many of the l. c. l. exceptions and commodity rates are gradually eliminated. The possible increase in revenue, if the maximum rates are uniformly applied is believed to be justified by fact that class-rate traffic is in general of such a character that in revising the rates upon its revenue doubts may well be resolved in favor of carriers, or, in other words, in favor of commodity rates on traffic of a more basic character, the revision of which is pending. Southern Class Rate Investigation, 100 I. C. C. 513, 649.

II. REASONABLENESS OR DISCRIMINATION.

See Advanced Rates §5 (2) (r); Class Rates §2 (3k) (4l) (7a).

§3. In general.

(a) Class A rates on horses, mules, asses and burros, from Kansas City, Mo., to points in Texas and Louisiana, found unreasonable and unduly prejudicial as compared with rates within Texas or Louisiana or between those States, and to extent they exceed the distance rates based on the class C scale provided for in Memphis-Southwestern Investigation, 55 I. C. C. 515, herein prescribed for future. Kansas City Chamber of Commerce v. A. & W. Ry. Co., 89 I. C. C. 22.

(b) Rates on mixed carloads of cottonseed meal and hulls from Tallulah, La., to Vicksburg, Miss., found unreasonable as compared with rates on cottonseed meal in mixed carloads with cottonseed cake, meal flakes, hull ashes, cold-

pressed cottonseed, and cotton-burr ashes, and to extent they exceeded distance scale of rates prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, on mixed shipments of cottonseed meal and hulls between other points in same general territory. Reparation awarded. Tallulah Cotton Oil Co. v. V., S. & P. Ry. Co., 89 I. C. C. 151.

(c) Equality of distance from competing markets is not an absolute test of whether an equality of rates results in undue prejudice and preference. Reduced Commodity Rates to Pacific Coast, 89 I. C. C. 512, 524.

(d) Tariff contained provision that rates to intermediate points to which no rates were named would be the same as those to next more distant point to which rates are named. No specific rates were published on sand and gravel from Carpentersville, Ill., to Edison Park and Park Ridge, Ill. Distance rates assessed on certain shipments moving during Federal control, found illegal and lower rate via a route over which Edison Park and Park Ridge are intermediate to Mayfair, the next more distant point to which specific rates were published, found applicable. Reparation awarded. Richardson Sand Co. v. Director General, as Agent, 89 I. C. C. 555.

(e) Complainant attacked commodity rates charged on mixed feeds straight carloads and mixed with articles taking grain rates or the same rates as mixed feeds from Beaumont and Orange, Tex., to points in Louisiana as unreasonable to extent they exceeded rates for similar distances between Natchez, Miss., and points in Louisiana. In 87 I. C. C. 207, the Commission found the rates attacked unreasonable to that extent and awarded reparation. The tariff supplement issued by defendant in purported compliance with the order published the scale applicable from Natchez but provided that rates thereunder are to be computed on actual distance shipment moves plus twenty miles, apparently because in computing rates from Natchez a like addition is made as compensation for the expensive service across the Mississippi river at Natchez. But there is no corresponding service required on shipments from Beaumont and Orange. HELD, rates attacked unreasonable to extent they exceeded rates for similar distances between Natchez, Miss., and points in Louisiana but without including the computation of constructive mileage or other arbitrary, reparation awarded. Josey Miller Co. v. B. R. & C. Co., 91 I. C. C. 213.

(f) Complainant attacked commodity rates on manure from Perth and Lovelock, Nev., to points in California on the S. P., Santa Fe, L. A. & S. L., Northwestern Pacific, Pacific Electric, Visalia Electric and Peninsular Ry. as unreasonable. In 73 I. C. C. 496 the Commission prescribed a scale of rates applicable on manure from Perth, Lovelock, and other Nevada points to California, and awarded reparation. HELD, rate attacked unreasonable, except those to points on the Santa Fe involving distances of hauls of 500 miles or under, to extent they exceeded $3.73 for 230 miles and $7.04 for 750 miles, reparation awarded. Rates to points on the Santa Fe for distances of 500 miles or under unreasonable to extent they exceeded 38c per ton prior to July 1, 1922 and 34c thereafter, reparation awarded. Pacific Guano & Fertilizer Company v. S. P. Co., 91 I. C. C. 228.

(g) Complainant attacked commodity rates charged on barrels from St. Joseph, Mo., to Oklahoma as unjust, unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates from Dallas, Oak Cliff, Fort Worth and North Fort Worth, Tex., to the same destinations. On barrels to Oklahoma, St. Joseph is in a group which includes Kansas City and Springfield, Mo., and Atchison and Coffeyville, Kans. The commodity rate from this group to a large section of Oklahoma was 45.5c. This rate is applicable on barrels, kegs, and tierces, in straight or mixed carloads, minimum 20,000 pounds. Wooden slack barrels are rated third class in the western classification, minimum 10,000 pounds subject to rule 34 of the classification, and to a few of the less distant Oklahoma points the third class rates and a minimum of 10,000 pounds make lower charges than the commodity rates. The tariffs provide for application of whichever rate makes lower. With a few exceptions rates from Fort Worth and Dallas are based on the distance scale prescribed in 48 I. C. C. 312 and 53 I. C. C. 545 or the same as were applicable from Shreveport, La. HELD, there are no facts of record which would justify the extension of so low a scale as the Shreveport scale from St. Joseph and other points to Ok-

lahoma and the evidence is not convincing that the lower rates in effect from Fort Worth and Dallas result in any substantial damage to complainant. HELD, rates attacked not unreasonable, unduly prejudicial or otherwise unlawful, complaint dismissed. Hollingshead Co. v. M. K. & T. Ry., 91 I. C. C. 654.

(h) Complainant attacked as unreasonable rates on grain and grain products from South Dakota to various markets. Former decision in 85 I. C. C. 217 stated after prescribing the rates from South Dakota to Sioux City, Iowa, held that the rates on wheat and coarse grain to Omaha, Neb., were unreasonable to extent they exceeded the rates prescribed to Sioux City by more than 4c via the Northwestern and 6c via the Milwaukee the 2c greater differential via the Milwaukee being based on the fact that its route from Sioux City to Omaha was about 55 miles longer than that of the Northwestern. Some of the rates of the Milwaukee to Omaha were more and others less than 6c over those to Sioux City, and in connection with the reductions made in compliance with the order the Milwaukee increased many of its rates to Omaha, so as to reflect the 6c differential. HELD, that from South Dakota points on the lines of all defendants the present rates on wheat and corn to Omaha in connection with the Milwaukee as a delivering line are unreasonable where and to the extent that they exceed the rates that would obtain under the scale referred to subject to the rates in effect via the Northwestern as representing the lowest scale required. Rates may not be increased to the basis of this scale. In the original report, in prescribing rates to Minneapolis, Chicago and Milwaukee, the Commission named only certain points of origin, and defendants in publishing the rates quite generally applied them from intermediate points, except where the Commission had specifically fixed a lower rate. HELD, rates on wheat from South Dakota, to Minneapolis, Chicago and Milwaukee are unreasonable to extent they exceed rates ranging from 23c from Miller and 35c from Conata to Minneapolis, 30c from Plumb and 31c from Tabor to Chicago and Milwaukee. Rates on coarse grain and on grain products shall be made with respect to those on wheat. South Dakota Railroad Commission v. C. & N. W. Ry., 92 I. C. C. 174.

(i) Complainant attacked commodity rates charged on fertilizer and compounds in carloads and less carloads from Little Rock, Ark., to Texas and Oklahoma as unreasonable, unjustly discriminatory unduly prejudicial and to Texas in violation of the combination of locals. Fertilizer is rated fourth class in less carloads and class E in carloads. The rates attacked to Texas are grouped both as to points of origin and destination, and are a part of a general adjustment of rates from defined territories as described in 40 I. C. C. 619. Little Rock is in the so-called Little Rock-Fort Smith group. Texas is divided into Fort Smith group. Texas is divided into Texas common points and differential territories. Differential territory lies west and south of common point territory, and to all points within it rates are made by adding differentials to the common point rates. The group rate to Texas common points is 32.5c. Specific commodity rates apply from Little Rock to Oklahoma points. The destination points are grouped to some extent, but apparently with respect to individual carriers rather than territorial sections. A large part of the Frisco line in Oklahoma is grouped at 24.5c; rates on the Rock Island range from 18.5c at a group of points near the Oklahoma-Arkansas boundary to 29.5c at other groups in the western and northwestern, and to 35c in the southwestern, parts of the state; and rates on the K. O. & G., which traverses the eastern section, range from 27.5c to 35c. Thus there is a wide variation in the rates to points in the same vicinity but on different lines and to points of the same given distances from Little Rock, in many instances the rates being the same or less to the groups materially farther distant. Complainant sought the establishment of distance carload commodity scales of rates for single line and joint line hauls, the same from Little Rock to Texas as from Little Rock to Oklahoma points. It proposed no specific scales, but particularly emphasizes those prescribed on fertilizer, carloads, in the second decision in 77 I. C. C. 473, 9702 scales. Fourth class rate of $1.265 applies on less carload shipments of fertilizer from the Little Rock-Fort Smith group to Texas common points under the grouping previously explained in connection with carload traffic. By exceptions to the governing classification, specific rates apply from Little Rock to Oklahoma points based on 150% of the class E rates, which are the

single line and joint line distance scales prescribed in the first decision in 9702. The rates from Shreveport and Houston to Texas are 150% of the carload rates. HELD, rates attacked on fertilizer and fertilizer compounds, less carloads, from Little Rock to points in Oklahoma are not unreasonable or otherwise unlawful, but for future unreasonable to extent they exceed distance scales of single line and joint line commodity rates prescribed in 77 I. C. C. 473. HELD, further less carload rates from Little Rock to Texas points for future unreasonable to extent they exceeded for all distances to Texas common point territory the fourth class distance scales of single line and joint line rates prescribed in 55 I. C. C. 515 and to Texas differential territory to extent they exceed the same distance scales plus the present fourth class differentials on traffic from Little Rock to destinations in Texas differential territory and the undue prejudice should be removed by establishing from Shreveport to All Texas points a basis of rates no lower than the basis of rates from Little Rock to the same destinations. HELD, further, rates attacked on fertilizer carloads from Little Rock to Texas points are unreasonable to extent they exceed for all distances to Texas common points the distance scales prescribed in 77 I. C. C. 474 and to Texas differential territory to extent they exceed the same distance scales plus the present differentials from Little Rock to Texas differential territory, and are unduly prejudicial to extent that rates from Shreveport to all Texas points should be no lower than rates from Little Rock to the same destinations. Arkansas Fertilizer Co. v. A. & S. Ry., 92 I. C. C. 504.

(j) Complainant attacked commodity rates charged on crushed slag, in bulk in carloads from eastern Pennsylvania to New York, New Jersey, Delaware, Maryland, Virginia, Pennsylvania and the District of Columbia as unreasonable and unduly prejudicial. Slag, a product of iron furnaces, was formerly wasted. It is now crushed and used in competition with crushed stone and gravel not only in concrete work but also in roofing material and as railroad ballast. Subsequent to 1914 some commodity rates on slag were established by the Reading, Lehigh Valley and Jersey Central to point on their respective lines and to a few destinations on other lines. The Reading rates are in some instances lower, others higher, than the rates on crushed stone for similar distances, and the Jersey Central and L. V., rates are lower in practically all instances. In 49 I. C. C. 681 the Commission prescribed a distance scale of commodity rates on crushed stone from Birdsboro to destination on the Pennsylvania in New York, New Jersey, Delaware, Maryland, Virginia and District of Columbia. As a result of that decision the crushed stone rates became considerably lower than the slag rates from the same points. This scale has never been adopted by the other defendants here before the Commission. Crushed stone, sand, gravel and slag are among the commodities of lowest grade known to commerce; they load heavily, are indestructible and move in the cheapest kind of equipment; that crushed stone and slag compete. The movement of slag is short haul. The average haul being 89 miles. HELD, rates on slag in bulk, in carloads, from Swedeland, Pottstown and Birdsboro to destinations on the Pennsylvania and its subsidiaries in New Jersey, Maryland, Delaware, and Virginia unreasonable to extent they exceed rates on crushed stone. The application of sixth class rates on slag moving in competition with slag under commodity rates is indefensible. HELD, rates attacked on slag in bulk, carloads, from Lebanon, Emaus, Hokendauqua, and Bethlehem to destinations on the Pennsylvania and its subsidiaries in New Jersey, Maryland and Delaware and to New York, N. Y., and District of Columbia, for distances not in excess of 220 miles, unreasonable to extent they exceed rates of 80c single line and 100c joint line for 40 miles to and including 185c single line and 205 joint line for 220 miles. A differential of 20c per ton is reasonable for joint line hauls. Duquesne Slag Products Co. v. Pennsylvania R. R., 92 I. C. C. 554.

(k) Respondents proposed to increase the interstate rates on lignite coal from mines in North Dakota to destinations in North Dakota, South Dakota and Minnesota. Lignite is a low grade fuel. It may be considered as imperfectly developed coal which has a more or less woody structure. About 75.9% of North Dakota lignite moves in box cars, 12.9% in gondola cars, 0.3% in stock cars and 10.9% in other cars such as bunk, sand, and ballast cars. From the docks both box and open equip-

ment is used. In November 1918 the Director General prescribed a reduced scale of emergency rates on lignite coal which continued in effect until May 1921, advanced 35% under 61 I. C. C. 504, increased in August 26, 1920, and reduced 10% in July 1922, and are in effect today. The rates under suspension are those prescribed by the Commission in the Holmes & Hollowell scale, 60 I. C. C. 687 and 69 I. C. C. 11. While rates from the Lake Superior dockets to points in Minnesota, North Dakota and South Dakota east of the Missouri river are based on that scale, it is not strictly applied. Distances in connection with the application of that scale are computed from Duluth, a dock nearer to the destination territory than some of the other docks, by the shortest routes comprising not more than three lines, so that the rates over longer routes are lower than those shown in the scale for the actual distances traversed. The Holmes & Hollowell scale applies in a territory in which the population and traffic density decrease as the distances from points of origin increase, and this was taken into consideration in its construction. Here the opposite is true; as distances from the mines increase the population and the traffic density increase. HELD, proposed schedules not justified, but carriers will be left to confer and work out a reasonable scale. The Examiner recommended a scale for application ranging from 80c per ton for 30 miles and under to 279c per ton for 400 miles. Lignite coal from N. Dak. 89 I. C. C. 726.

(l) Complainant attacked distance rates charged on nine cars of fuelwood, shipped between August 26, 1920 and April 29, 1921 from Atlas, Ida., and from Garwood, Gibbons and Fox Spur, Ida., to Spokane, Wash., as unreasonable and unjust to extent they exceeded reasonable rates prescribed in 61 I. C. C. 159. Fuelwood is a low grade commodity and can be handled in equipment not suitable for other commodities. Claims for loss and damage are infrequent. Prior to April 20, 1921 three scales of rates were applicable to fuelwood and other kinds of wood. The Commission prescribed a distance scale of rates for interstate application on lines therein respondent, between Washington, Oregon and Idaho, effective April 20, 1921. HELD, rates attacked not unreasonable, complaint dismissed. Hawkeye Fuel Co. v. S. & E. Ry. & P. Co., 93 I. C. C. 157.

(m) Complainant attacked distance rates charged on wrought iron pipe, and other iron and steel articles and oil well supplies, carloads and less carloads, between Oklahoma points and Kansas points, as in violation of section 6. Covington, Okla., is not named in the tariff as a point from which the distance rates will apply, but it is directly intermediate between Enid and Virgil. The distance from Enid to Virgil is 223.1 miles, while from Covington the distance is 204.9 miles. The tariff in question allows the shipper to use a rate based on the actual traversed. HELD, shipments overcharged, refund ordered, complaint dismissed. Cosden Oil & Gas Co. v. A. T. & S. F. Ry., 95 I. C. C. 116.

(n) Complainant attacked class rates charged on two cars of charcoal shipped in May and June 1922 from Savannah, Ga., to Havanna, Fla., as unjust and unreasonable. Shipments moved over A. C. L., to Cairo, Ga., and P. & H., beyond, 238 miles, charged class O rate of $95 per car. It was stipulated that the rate charged was unreasonable to extent it exceeded a proposed Georgia scale of 28c. HELD, rate charged unreasonable to extent it exceeded 28c, reparation awarded. American Sumatra Tobacco Company v. A. C. L. Ry., 95 I. C. C. 463.

(o) Complainant attacked commodity rates charged on wrought iron and steel pipe, carloads, from Ranger, Tex., to Taylor, Louann and Smackover, Ark., as unreasonable. Ranger is on the T. & P., and W. F. R. & Ft. W., 95 miles west of Fort Worth, Tex., in common Texas territory. The three destinations are in Little Rock-Fort Smith territory. Shipments to Smackover and Louann moved over T. & P., to Texarkana, Ark., and M. P., beyond, 455 and 451 miles. Shipment to Taylor moved over T. & P., to Shreveport, La., L. & A., beyond, 387 miles, charged 67.5c prior to July 1, 1922 and 61c thereafter. Iron and steel pipe, old or new, carloads, is rated fifth class. Under the joint line scale prescribed on iron and steel pipe in 77 I. C. C. 473, the rate for 431 to 450 miles was 51c. HELD, rate attacked unreasonable to extent it exceeded 56.5c prior to July 1, 1922 and 51c thereafter, reparation awarded. Texas Pacific Coal & Oil Co. v. T. & P. Ry., 95 I. C. C. 625.

(p) Complainant attacked class rates charged on prepared roofing, carloads,

from Port Neches, Tex., to Couchwood, Cotton Valley and Haynesvile, La., and State Line and Emerson, Ark., between Feb. 3 and March 10, 1923 as unreasonable and in violation of fourth section. Port Neches is on the T. & F. S., 12 miles south of Beaumont, Tex. Couchwood and Cotton Valley are on the L. & A., 43 and 47 miles north of Shreveport, La. Haynesville, State Line and Emerson are on the L. & N. W., 77, 73, and 83 miles north of Shreveport. Distances are from Port Neches 265 miles to Couchwood, 270 miles to Cotton Valley, 295 miles to Haynesvile, 299 miles to State Line and 305 miles to Emerson. Charged class C rates of 79c, and complainant asked reparation to basis of rates prescribed in 77 I. C. C. 473, 562 for distances shown, they subsequently becoming effective. HELD, rates attacked unreasonable to extent they exceeded rates subsequently established, reparation awarded. Texas Pipe Line Co. v. L. & A. Ry., 95 I. C. C. 674.

(q) Complainant attacked commodity rates charged on wrought iron and steel pipe, carloads, from Texas common point territory to points in Little Rock-Fort Smith district as unreasonable. Shipments originated in vicinity of Cisco, a point on the T. & P., 115 miles west of Fort Worth and others at Beaumont, Houston and points in that vicinity. Most of them moved to Smackover and Eldorado, charged 67.5 and 61c prior and subsequent to July 1, 1922. Reparation is sought to basis of 50.5 and 45.5c. The scale applicable to pipe prescribed in 77 I. C. C. 473, 595 products a rate of 50c for a joint line haul of from 400 to 425 miles, and 51c for a similar haul of from 426 to 450 miles. HELD, rates attacked unreasonable to extent they exceeded 56.5 and 51c, reparation awarded. Humble Oil & Refining Co. v. M. P. R. R., 95 I. C. C. 709.

(r) Complainant attacked class and commodity rates charged on wrought iron or steel pipe and fittings, carloads, between Oct. 1, 1922 and Nov. 27, 1923 from and to numerous points in Louisiana to and from points in Arkansas as unreasonable. Rates charged commodity rates from Shreveport, Louann, Emerson, Smackover and Norphles and fifth class distance rates from other points. In 77 I. C. C. 743 the Commission prescribed maximum distance scales of single and joint line rates for application on iron pipe, in carloads between various points in southwestern territory, including traffic between points in Arkansas, on the one hand, and points in western Louisiana, on the other. The rates prescribed became effective Nov. 27, 1923 and are the basis to which reparation is asked. HELD, rates attacked unreasonable to extent they exceeded 11c from Emerson to Haynesville, 22.5c from Marion to Smackover, 26c from Smackover to Swartz, 27c from Louann to Haynesville, 38c from Ardis to Emerson, 29c from West Monroe to Griffin, 32.5c from Oil City to Camden, 33.5c from Oil City to Louann, from Lewis to Louann, and from Norphlet to Sarepta, 34c from Hosston to Louann, and from Vivian to Smackover, El Dorado and Norphlet, 35c from Morringsport to Louann, from Oil City to Griffin, Smackover and Norphlet, from Homer to Griffin and Smackover, from Lane to Smackover and from Gilliam to Smackover, 36c from Morringsport to Kenova and from Blanchard to Griffin, 39.5c from Mansfield to Louann, Griffin and Smackover, 40.5c from Harmon to Louann, Griffin and Smackover, from Crichton to Griffin and Smackover, and from Mansfield to Norphlet via the K. C. S. and M. P., 41.5c from Harmon to Norphlet and from Mansfield to Norphlet via M. Ry. & T. Co., T. & P., and M. P., and 42.5c from Pelican to Smackover, reparation awarded. Texas Company v. K. C. S. Ry., 96 I. C. C. 81.

(s) Complainant attacked class rates charged on wrought iron pipe and oil well supplies, carloads, between June 23 and Sept. 15, 1922, from Walden, Colo., to Casper, Wyo., as unreasonable. Walden is on the C. W. & E. Shipments moved over this line to Laramie, Wyo., thence U. P., to Cheyenne, Wyo., thence C. & S., to Wendover, Wyo., and C. B. & Q., beyond, distance 369 miles, charged 63.5c to Laramie, 35.5c to Cheyenne and 58.5c to Casper, on 11 cars of pipe, and on shipment subsequent to June 23, 1922, 70.5c to Laramie, 39.5c to Cheyenne and 65c to Casper. Oil well supplies charged class A of 63.5c to Laramie, 38.5c to Cheyenne and 63.5c to Casper. There was no movement of these commodities from Walden to Casper before or after these shipments, such movements to the different fields being largely from jobbing points. There is no doubt but that the transportation conditions over the route of movement are unfavorable and entirely different from

the traffic conditions in other sections of the country. Defendants admit the unreasonableness of the rates charged and suggest a basis of settlement the joint class rates prescribed in Wyoming by the Commission of that state which would make on the pipe $1.085 fifth class, and oil well supplies $1.165 class A. HELD, rates charged unreasonable to extent they exceeded $1.205 for pipe and $1.295 for oil well supplies, reparation awarded, and for future $1.085 on pipe and $1.165 on oil well supplies. Carter Oil Co. v. C. B. & Q. R. R., 96 I. C. C. 125.

(t) Complainant attacked commodity rates charged on vegetable oils, carloads from Oklahoma to Sherman, Tex., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. The rates for future are in issue in No. 14150 and 14970. Sherman is on five trunk lines close to the Oklahoma-Texas state line, 65 miles north of Dallas, Tex., at which point and also at Fort Worth, Tex., are located other refineries with which complainant at Sherman comes into competition. In 39 I. C. C. 497 the Commission prescribed a scale of reasonable maximum rates on cotton seed oil applying for distances of from 250 miles and less to 600 miles from Oklahoma to Kansas City, Mo. That scale, graded down for the shorter distances and as generally increased in 1918 and 1920 was prescribed in 64 I. C. C. 213 from Oklahoma, Arkansas and Louisiana to Dallas. HELD, rates attacked for 325 miles and less from Oklahoma to Sherman unreasonable and unduly prejudicial to extent they exceed rates prescribed in 64 I. C. C. 213, reparation awarded. Texas Chamber of Commerce v. A. T. & S. F. Ry., 96 I. C. C. 283.

(u) Complainant attacked third class rates charged on butter, carloads, from various points of origin to Fort Worth, Houston and San Antonio, Tex., as unreasonable prior to and subsequent to Feb. 16, 1923. Butter moves in refrigerator cars and requires expedited service. Loss and damage claims are few. Defendants have for many years maintained northbound commodity rates on butter upon a basis materially lower than third class. In 96 I. C. C. 19 the Commission prescribed distance rates from Texas to official classification territory. Under that distance scale the rates to Fort Worth would be 68c from Oklahoma City, $1.09 from Kansas City $1.26 from St. Louis and Omaha, $1.33 from Denver, $1.37 from Louisville, $1.44 from Chicago, $1.48 from Minneapolis and Cincinnati and $1.51 from Aberdeen, S. D. HELD, rates attacked since June 30, 1922 unreasonable to extent they exceeded rates shown above reparation awarded. Mistletoe Creameries v. A. T. & S. F. Ry., 96 I. C. C. 303.

(v) Complainant attacked commodity rates charged on crushed asphalt rock, carloads, from Dougherty, Okla., to Kansas City, Mo., since April 19, 1922 as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. Prior to July 1, 1922 the rate on asphalt rock, crushed, containing about 7% asphalt or crude oil was 15.5c subject to marked capacity of the car as the minimum weight. On that date the rate was reduced to 14c. This rate is published under a distance scale which is applicable not only from Dougherty to Kansas City but also from other points in Oklahoma to certain described territory in Kansas, Missouri and Superior, Neb. HELD, rate attacked unreasonable to extent it exceeded 14.5c prior to July 1, 1922 and 13c thereafter, reparation awarded. Roudebush v. A. T. & S. F. Ry., 96 I. C. C. 319.

(w) Complainant attacked commodity rates charged on apples carloads, shipped from Charles Town, W. Va., on kale, carloads, and less carloads, from Norfolk, Va., and on potatoes and cabbage from Norfolk and Suffolk, Va., to Williamson W. Va., between June 20 1922 and June. 15, 1924 as unreasonable, unduly prejudicial and in violation of section four. Williamson is a local point on the N. & W., 470 miles west of Norfolk. Rates for the future have been satisfied with reductions made on July 15 and Sept. 25, 1924. Rates charged were based on a distance scale which, with certain exceptions, applies generally between all points on the N. & W., south of the Ohio river. HELD, rates attacked unreasonable to extent they exceeded on apples, 43.5c, on potatoes and cabbage 40.5c on kale carloads, 48c and less carloads 106.5c, reparation awarded. Amicon Fruit Co. v. N. & W. Ry., 96 I. C. C. 477.

(x) So far as total transportation costs are concerned, where rates are graded according to distance, the jobbing

center which is nearer to the source of supply can reach forward a greater distance than the more distant jobbing center can reach back. Paper and paper articles to New Orleans, 96 I. C. C. 600, 603.

(y) Complainant attacked fifth class rates charged on iron and steel from Pittsburgh, Pa., to St. Louis, Mo., and points in Indiana and Illinois as unjust and unreasonable and unduly prejudicial as compared with rates from Chicago, Ill., to the same destinations. In western classification the rating on the iron and steel articles in question is fifth class, but commodity rates are quite general except in western trunk line territory where the class rates are relatively low. Commodity rates also apply from the producing points in Illinois and Indiana to the destinations involved. In view of the fact that the fifth class rates from the Illinois and Indiana points are on the c. f. a. scale, while those from Pittsburgh equal or exceed the rates under that scale, it is clear that the Illinois and Indiana rates, which are perhaps 35% below fifth class are relatively much lower than those from Pittsburgh. Competition between complainant and Illinois and Indiana producers is general through the destination territory. The policy of the central territory lines is to hold their rates to the fifth class basis, but partly because of competition between them and the Illinois lines they have from time to time established within Illinois, and to a considerable extent within Indiana, and between Illinois and Indiana points, and between these points and St. Louis, rates on substantially the same general level as those of the Illinois carriers. As between Illinois and the territory east thereof, there are in general no differences in transportation conditions which would warrant material differences in rates. HELD, rates attacked from Pittsburgh unreasonable to extent they exceed 6c for 5 miles and under to 42c for 640 miles. Jones & Laughlin Steel Corp. v. B. & O. R. R., 96 I. C. C. 682.

(z) Complainant attacked the structure of rates to Casper, Wyo., from Missouri river cities, and from Chicago and St. Louis as unjust, unreasonably discriminatory and unduly prejudicial and unduly preferential of Cheyenne, Wyo., Denver, Colo., Billings, Mont., Crawford, Neb., and cities in the Missouri river. Respondent, Burlington, proposed to restrict the application of certain distance class rates now in effect between all points in Nebraska, except Omaha, Neb., and points in Wyoming so as to make them inapplicable from and to points on respondents lines lying generally east of Lincoln, Crete, Beatrice, and Wymore, Neb. Casper is on the Northwestern and Burlington, 632 and 652 miles from Omaha. Defendants publish local class rates from Omaha to Casper, and the rates from Sioux City, Iowa, are the same. From St. Paul, Minn., Chicago and St. Louis class rates are generally made the lowest combination on the Missouri river points, or the Nebraska differential territory. Kansas City, Mo., has class rates to Casper somewhat higher than from Omaha to that city. Complainants principal grievance lies in the fact that Colorado common points are accorded a lower level of rates by defendants. That group extends, so far as class and most commodity rates are concerned, from Cheyenne on the north to Trinidad, Colo., on the south. It is apparent that the class rates attacked are unreasonable and unduly prejudicial to Casper and unduly preferential of competing jobbing points. While much of the evidence pertaining to difficult operating and traffic conditions applies to territory west of Casper, it is yet advisable that the rates to points on defendants lines in Wyoming should be on the same general level. Conditions are similar and a sudden break in the rates at Casper is not justifiable. The greater cost of transportation to Casper than to intermediate Nebraska territory and to Colorado common points should properly be reflected in higher rates but, after making allowance for such a difference, the rates to Casper and other points in Wyoming should be consistent with a general structure of rates for the territory west of the Missouri river. Likewise the percentage relationship between the class rates should be uniform. HELD, respondent has not justified proposed schedules. Further HELD, rates to Casper unreasonable to extent they exceed from Omaha and Sioux City 214c first class, from Kansas City 237c first class, from St. Paul 256c first class, from Burlington 266c first class, from St. Louis 285c first class, from Chicago 293c first class and proportional rates from Mississippi river 226 first class, commodity rates to be revised according-

ly. Casper Chamber of Commerce v. C. & N. W. Ry., 96 I. C. C. 736.

(aa) Complainant attacked distance rates on logs, carloads, from points in South Carolina on the Seaboard and Coast Line to destinations in North Carolina as unreasonable. In 62 I. C. C. 669 the Commission prescribed a distance scale and awarded reparation. HELD, the present record does not afford a reliable basis for determining the amount of reparation to which complainants may be entitled under the findings in the original report. Complainants will be given 60 days after service of this report within which to apply for further hearing to supplement the present record, failing which the complaint will stand subject to dismissal for failure of proof. Southern Veneer Asso. v. A. C. L. R. R., 98 I. C. C. 112.

(bb) Complainant attacked commodity rates on sand gravel and crushed rock, carloads, which moved over the N. P., and G. N., from certain points in Minnesota to destinations in North Dakota as unreasonable. Increases proposed by the G. N., in the rates on sand and gravel from three of its stations in Minnesota to Fargo, N. D., are suspended. No. 14068. Muskoda and Detroit are on the main line of the N. P., 19 and 49 miles east of Fargo, N. D. Melvin is on a branch line of the N. P., about 42 miles southeast of Grand Forks and about 80 miles from Fargo via Manitoba Junction, Minn., Downer is on the G. N., about 32.5 miles southeast of Fargo. Duluth, St. Cloud and Sauk Rapids are east of Fargo about 252, 176.5 and 176 miles, respectively, via the N. P., and about 307, 167.5 and 171 miles, respectively via the G. N. The rates charged on all of the shipments which moved during the statutory period, except to Fargo and a few other points, where on the basis of the so-called interstate distance scale applicable on sand, gravel and crushed rock from Minnesota to North Dakota points. The rates to Fargo were made on arbitrary of 1c over the rates to Moorhead, Minn., which takes the Minnesota intrastate scale from Minnesota points. Under the various rate levels from June 13, 1920 the period here considered, the Minnesota intrastate scale has been lower than the interstate scale applicable to the shipments here considered. The record supports the conclusion that the those portions of Minnesota and North Dakota under consideration there is no justification for the maintenance of any higher level of rates in the one than in the other, and complainants contention would be correct if the Minnesota intrastate scale of rates for application on these commodities is on a reasonable maximum basis. The Minnesota-Dakota distance scale has been in effect for more than 20 years. HELD, rates attacked unreasonable to extent they exceed distance rates ranging from 3.5c for 50 miles and under to 12c for 375 miles plus an arbitrary of 1c for joint line hauls, reparation awarded. Hopeman Material Co. v. N. P. Ry., 98 I. C. C. 361.

(cc) G. N., respondent proposed to increase from 3.5c to 4c rate on sand and gravel, carloads, from Barnesville, Downer, and Downer Pit, Minn., to Fargo, N. D. Downer and Downer Pit are practically one and the same pit, the pits being a short distance out of the city, are 33 miles east of Fargo. Barnesville is an intermediate point 25 miles east of Fargo. Respondents purpose in desiring to increase the rate from the Downer pits from 3.5c to 4c is to again place that rate on a parity with the N. P., rate from Muskoda. It is stated by respondent that whatever rate is established from the Downer pits to Fargo will also be applied from Barnesville, and intermediate point. HELD, rate found reasonable under the scale prescribed is 3.5c, schedules not justified. No. 14162. Complaint attacked rates charged on 515 cars of gravel shipped from Melvin, Minn., to Grand Forks, N. D., 42.3 miles over the N. P., between August 26, 1920 and Dec. 11, 1920 as unreasonable to extent it exceeded 4c subsequently established. The rate for this distance under the scale found reasonable in 14068 would be 3.5c for present application and 4c during the period here considered. HELD, rate attacked unreasonable to extent it exceeded 4c, reparation awarded. Hopeman Material Co. v. N. P. Ry., 98 I. C. C. 361.

(dd) In complying with commission's order in 87 I. C. C. 207, wherein rates on mixed feeds from Beaumont and Orange, Tex., to destinations in Louisiana were found unreasonable to extent they exceeded or might exceed contemporaneous rates for similar distances between Natchez, Miss., and points in Louisiana, carriers published a distance scale under

which rates were to be computed on actual distance plus 20 miles for service of crossing Mississippi River. FOUND: Since no corresponding crossing service is required on shipments from Beaumont and Orange, addition of this constructive mileage is contrary to spirit of the order. Original finding affirmed and clarified by excluding any constructive mileage in computing rates from Beaumont and Orange. Josey-Miller Co. v. B. R. R. & C. Co., 91 I. C. C. 213.

(ee) Upon further investigation line distance rates authorized to be established on livestock to, from, and between points in Southeast in original report, 74 I. C. C. 419, should be applied over two or more lines under same management and control. Term "carriers under same management and control" should be understood to refer to carriers generally controlled through ownership, lease, or otherwise, to extent of controlling traffic policy, even though separate corporate entity may be maintained. Blackshear Mfg. Co., 87 I. C. C. 654, 664. Livestock to, from, and between Points in the Southeast, 91 I. C. C. 292.

(ff) Southern Ry. system lines, Atlanta & West Point R. R. and Western Ry. of Alabama, and Illinois Central and Yazoo & Mississippi Valley Railroads, respectively, found to be under same management and control, for purpose of applying single-line distance rates required to be established in original report, 74 I. C. C. 419, on livestock to, from, and between points in Southeast. Livestock to, from, and between points in the Southeast, 91 I. C. C. 292, 293.

(gg) Interstate rates on fertilizer and fertilizer materials from Wilmington, N. C., to points in North Carolina found unreasonable and unduly prejudicial to extent they exceeded rates, distance considered, from Norfolk, Va., and Charleston, S. C., to points in North Carolina. Reasonable and nonprejudicial distance rates prescribed and reparation awarded. Goldsboro Chamber of Commerce v. A. C. L. R. R. Co., 91 I. C. C. 315.

(hh) Interstate rates on sugar beets between points in Ohio and Michigan, which are higher than contemporaneous intrastate rates between points in same States, found unreasonable and unduly prejudicial to interstate shippers, unduly preferential of intrastate shippers, and unjustly discriminatory against interstate commerce. Reasonable maximum distance scale of rates prescribed. Continental Sugar Co. v. N. Y. C. R. R. Co., 91 I. C. C. 677.

(ii) Complainant attacked commodity rates on cottonseed, carloads, from 55 points in Oklahoma to Dallas and Forth Worth, Tex., since Sept. 5, 1920 as unreasonable and in violation of the aggregate of the intermediates. In 80 I. C. C. 18 the Commission found unreasonable rates on cottonseed from Oklahoma, Arkansas and Louisiana to Fort Worth to extent they exceeded for like distances the rates contemporaneously in effect on cottonseed between Shreveport, La., and points in Texas up to 360 miles, plus certain charges for each additional 50 miles, distances to be computed in the same manner as in the application of the rates between Shreveport and points in Texas. For the future the Commission prescribed a distance scale of rates for single line and joint line application up to 550 miles, the same as the scale of rates prescribed in 77 I. C. C. 473. The rates prescribed for the future became effective August 15, 1923. They apply from certain of the points named in the instant case. The rates proposed by complainants in the instant case are constructed in the same manner as those proposed in case mentioned. HELD, rates attacked unreasonable prior to August 15, 1923 to extent they exceeded for like distances rates applied from Shreveport to Texas, reparation awarded. International Vegetable Oil Co. v. A. T. & S. F. Ry., 100 I. C. C. 240.

(jj) Respondents proposed a general revision of all class rates, both interstate and intrastate, between points in southern Missouri, described as B territory, and between points in B territory and points in northern Missouri, Kansas, Nebraska, Oklahoma, Arkansas defined territories and other sections. The proposed rates are based on a maximum distance scale which would cause substantially increased rates to and from most of B territory and southeastern Kansas points, but would result in reduced rates between certain southeastern Missouri points and St. Louis, Mo., East St. Louis, Ill., and other points where the socalled Memphis-Southwestern scale is now in effect. Missouri B territory described in

the suspended schedules as being that part of the state south of the M. P., from St. Louis to Labaddie, Mo., thence south of the Rock Island to a point just west of Holden, Mo., where the Rock Island crosses the Katy and thence south of that line to West Line, Mo., on the Kansas border. Under the schedules now in effect B territory is south of the M. P., from St. Louis to Kansas City but owing to the construction by the Rock Island of a line between those cities, respondents decided to include the latter line in the northern Missouri or A territory. Since about 1904 the carriers have divided the state of Missouri into these two class rate groups. This record indicates that there is practically no movement between points in A territory north of the boundary line and points in B territory. Both protestants and respondents appear to agree that the present class rate structure in southern Missouri is badly in need of revision and that a uniform scale of rates should be established to eliminate the existing discriminations and preferences. The facts as disclosed in this record indicate that conditions in B territory do justify a higher level of rates than are in effect in the northern part of the state. The competitive conditions, which in the past have been responsible for the interior adjustment in western trunk line territory find no counterpart in B territory. The greater density of traffic through A territory is an argument against a uniform scale of rates for the whole state. HELD, respondents have not justified the suspended schedules but rates based on the single line scale and joint line differentials set out in Appendix C would be reasonable maximum rates for application on interstate traffic, to, from, and between points in Missouri B territory. Recognized bridge arbitraries at Mississippi river crossings may be added wherever and to the extent they now apply, and the rates to and from defined territories should be based on the present differentials over the river crossings. The rates to and from points in western Missouri should be observed as minima to and from points in southeastern Kansas where necessary to comply with the fourth section. The rates from St. Louis to Pittsburgh should not be less than the rates to Joplin, these being competitive jobbing points about the same distance from St. Louis. Appendix C ranges from 33c first class for 10 miles to 157c for 500 miles single line, with first class arbitrary of 8c for joint line. Class rates between Missouri and interstate points, 100 I. C. C. 274.

(kk) Complainant attacked commodity rate charged on 46 cars of salt, shipped between August 16, 1921 and May 12, 1923 from Salduro, Utah, to Montana as unreasonable. Salduro is a station on the W. P., 113 miles west of Salt Lake City. Other salt producing points are Crystal Junction, and Saltair Junction, 11 and 14 miles from Salt Lake City; Burmester, on W. P., 31 miles west of that city, Kosmos, on S. P., 70 miles west of Ogden. In 78 I. C. C. 659 the Commission prescribed a distance scale on salt from Saltair Jct. and Crystal Jct. to main line points in Montana, Idaho and Washington; and from the same points to branch line points in those states the Commission prescribed arbitraries, and following this order, rates in accordance therewith were established from Salduro. HELD, between August 16, 1921 and May 12, 1923 rates attacked unreasonable to extent they exceeded rates required in 78 I. C. C. 659, reparation awarded. Capell Salt Co. v. C. M. & St. P. Ry., 101 I. C. C. 34.

(ll) In 74 I. C. C. 419 the Commission authorized the establishment of rates on livestock, in carloads, to, from, and between points in the southeast based on distance scales which had been agreed upon by the shippers and carriers, in lieu of the rates under suspension. Upon informal complaints that certain lines under common management and control had applied the joint line rather than the single line rates under the agreed scales, the Commission reopened the case. In prescribing scales of distance rates for single and joint line hauls, the Commission has almost invariably required lines under a common management and control to apply the single line rates. HELD, respondents have not justified the joint lines rates via the following lines: Southern, C. N. O. & T. P., A. G. S., N. O. N. E., G. S. & F., and N. A. Ry.; A. & W. P. R. R., W. Ry. of Ala.; and I. C., and Y. & M. V. Livestock to, from, and between points in the southeast 101 I. C. C. 103.

(mm) In 69 I. C. C. 207 the Commission found that the carload rates on grain, grain products, hay and straw,

and related articles from Oklahoma to Texas were unreasonable, unduly prejudicial to Oklahoma and prescribed new rates Oklahoma to Texas without disturbing the Texas intrastate rates. Complainant attacked carload rates on grain and grain products from Pan Handle of Texas and from eastern New Mexico to Kansas City, Mo., as unreasonable and unduly prejudicial. Complainant attacked rates on flour and grain products from Oklahoma, Kansas, Nebraska, Missouri and Colorado to Texas and Louisiana as unduly prejudicial. Complainant attacked rates and minima on hay, carloads, from northeastern Oklahoma to northern Texas taking Group A rates as unreasonable and unduly prejudicial. Complainant attacked rates on grain, grain products and hay between Oklahoma and Arkansas, Missouri and Kansas as unreasonable, and unduly prejudicial. Under the Texas intrastate scale the rates are graded up to 200 miles, but are blanketed at 32.5c on flour, 28c on wheat, and 25c on coarse grains for all hauls in common point territory in excess of 200 miles. Graduated differentials are added to the common point rates to and from differential territory. The Commission found that transportation conditions from Oklahoma to Texas were not substantially different from transportation conditions within Texas common point territory. Under the basis upon which grain is sold in this territory, the level of the rates, especially the rates to the Gulf ports, directly affects the prices which the farmers receive. HELD, rates on grain, grain products, hay and straw, and articles taking the same rates or rates related thereto, in carloads, from points in Oklahoma to points in Texas common point territory on and east of the line of the Santa Fe system extending from Higgins through Amarillo, Tex., to Lubbock, Tex., and to points on the Spearman branch of the Santa Fe as unreasonable to extent they exceeded rates set forth in section A between the respective points of origin to Texas except that rates from points on the Rock Island, Texhoma to Tyrone, Okla., should be made by adding 3c to rates ultimately established from Amarillo to Texas points. That rates on the same commodities, carloads, from Oklahoma to points in that section of the Texas Panhandle west of the above mentioned line, unreasonable to extent they exceed rates prescribed to Amarillo by more than 1c to points on the Ft. W. & D. C., west of Amarillo, and including Dalhart, Tex., on the Rock Island west of Amarillo, and on the Santa Fe west of Canyon, and 2c to points on the Ft. W. & D. C., west of Galhart, and on the Rock Island, Stevens, Tex., to Bravo, Tex., excepting Dalhart. The rates from Oklahoma to that portion of Texas differential territory not hereinbefore provided unreasonable to extent they exceed rates made by adding to the scales prescribed the scale of differentials set forth in section B of the appendix such differentials to be applied only to the mileage within differential territory. That the present relationship between the interstate rates from Oklahoma to Texas and the intrastate rates applying within Texas will be unduly prejudicial to Oklahoma. Mo. 13406. Rates on wheat and flour from the central and southern parts of Oklahoma to Kansas City are generally somewhat higher than the scales prescribed from Oklahoma to Texas but rates from the northern part, owing to the fact that they are graded into the lower rates from Kansas to Kansas City, are somewhat under that scale. HELD, rates on grain, grain products and straw and hay between Oklahoma and Kansas and Missouri unreasonable to extent they exceed rates shown in section A of the Appendix. Nothing here said should be construed as authority to increase any existing rates from Oklahoma to Kansas or Missouri where lower than the maximum scale here prescribed. It is not shown that the relationship between the interstate rates between Oklahoma and Missouri and Kansas and the interstate rates between Kansas and Missouri is unduly prejudicial to Oklahoma. No. 13518. The record establishes that the rates on grain and grain products from the Panhandle of Texas, and in certain points from eastern New Mexico, to Kansas are relatively higher than rates from the same points of origin to Texas, that dealers at Kansas City purchase grain, especially wheat and the sorghums, in those sections in competition with dealers located in Texas, and that there are no transportation conditions surrounding the movement to Kansas City, as compared with the movement to Texas, that justifies the higher level of rates to the former. HELD, rates attacked from Pan

Handle of Texas to Kansas City will be unreasonable to extent they exceed section A of Appendix, and from eastern New Mexico to extent they exceed the addition of the scale of differentials in section B of the appendix. The Commission will leave to the Texas Commission such action as may be necessary to remove the undue prejudice found to exist by reason of the present intrastate rates in Texas. No. 14321. The uncontroverted testimony of complainant is that cars under 36 ft. in length can not be loaded to the present minimum of 20,000 pounds, but it appears that 18,000 pounds can be loaded. HELD, minimum of 20,000 pounds unreasonable to extent it exceeds 18,000 pounds. Fourth section applications denied except defendants will be authorized to establish and maintain, via all routes between the points covered by this report, the lowest rates prescribed herein as maximum rates via any route between the said points, and to maintain higher rates from, to and between intermediate points; provided that the rates from, to or between said intermediate points shall not exceed the respective scales of rates prescribed herein, and shall in no case exceed the lowest combination and provide further than the relief herein authorized shall not apply, where the distance over the short line or route is 500 miles or less and the longer line or route is more than 70% circuitous; where the distance over the short line or route exceeds 500 miles but does not exceed 1,000 miles and the longer line or route is more than 50% circuitous, except that in instances where the short line or route exceeds 500 miles and the longer line or route does not exceed 850 miles, relief will apply to such longer line or route even though the latter is more than 50% circuitous. Where the distance over the short line or route exceeds 1,000 miles and the longer line or route is more than 33 1-3 per cent circuitous, except that in instances where the short line or route exceeds 1,000 miles. and the longer line or route does not exceed 1,500 miles, relief will apply to such longer line or route even though the latter is more than 33 1-3 per cent circuitous. Section A of Appendix prescribes 10 miles and under single line wheat and flour 7c, joint line 10c, single line coarse grain 6c joint line 9c and on hay single line 8c joint line 11c to over 800 miles, single line wheat and flour 41c, joint line the same, single line and joint line on coarse grains 37c, and on hay, single and joint line 44c. Section B prescribes differentials on wheat, flour, hay and articles taking same rates 25 miles and under 1c, coarse grains 1c, over 400 miles 9c and 8c respectively. Oklahoma Corporation Commission v. A. & S. Ry., 101 I. C. C. 116.

(nn) Complainant attacked commodity rates on beef and feeder cattle from Arizona to California as unreasonable, unjustly discriminatory and unduly prejudicial. Arizona feeder cattle are lighter and consequently less valuable than those produced in Texas, Oklahoma and the northwestern states. The facts presented on this record indicate that the single line rates on beef cattle from Arizona to California are, in general, reasonable, and that it would be improper to reduce them to the level of the 1716 scale. In recent cases involving livestock the Commission has not authorized the addition of joint line arbitraries for distances in excess of 500 miles, and that principle would be applied to the rates here attacked. The same is true of additional charges for shipments from and to branch points. Branch line operation is probably somewhat more expensive than that on main lines, but there appears to be no uniform recognition of this fact in construction of livestock rates. The level of rates herein approved would be remunerative if applied to the movement from Arizona to California as a whole, including those involving branch line service. Under present conditions it would seem that the rates on feeder cattle from Arizona to California should be not more than 80 per cent of the rates on beef cattle. HELD, rates attacked unreasonable to extent they exceed single line the rates shown in Santa Fe I. C. C. 9975, the branch lines to be on same basis as main lines, and rates on feeder cattle 80 per cent of beef cattle. Arizona Cattle Growers Asso. v. Apache Ry., 101 I. C. C. 181.

(oo) Rock Island, respondent, proposed to cancel present distance scale of rates on brick and related articles, carloads, from Carbon Cliff, Ill., to Iowa on Rock Island and to apply in lieu thereof distance scale of group rates in effect from Illinois points to destinations in

Iowa, whichever produces the lower rate. Davenport is on the west bank of the Mississippi river. Rock Island is directly opposite on the east bank. Carbon Cliff is 11 miles from Davenport and 10.2 miles from Rock Island. Gilchrist, Ill., 29 miles from Rock Island is served by the Burlington and Rock Island Southern, a shale plant being located there. Present rates from Carbon Cliff are the distance rates under the Iowa scale applied to the mileage from Davenport to destination, minimum haul 15 miles, and are materially lower than those in effect from Shale City to the same destinations. The issues of undue prejudice need not be decided in view of the admitted fact that rates here under suspension are unreasonable per se. The record is too meager to afford a basis for prescribing a rate from Shale City and Carbon Cliff to Iowa. HELD, schedules not justified. Rates on brick from Carbon Cliff, 101 I. C. C. 297.

(pp) Respondents proposed to increase the scale of distance rates applicable from and to points in Iowa on interstate shipments of butternut, cherry, holly, mahogany, and walnut lumber maximum increase 5c. From Des Moines to west bank Mississippi river crossings there are no specific commodity rates. The Iowa lumber scale produces rates of 12c to Burlington and 11.5c to other points. A specific proportional rate of 13.5c is in effect from Des Moines to the upper east bank Mississippi river crossings prescribed in 64 I. C. C. 673. Rates are made to points east of the Illinois Indiana state line based upon this proportional and specific proportionals in effect from the east bank points to destinations. The east bank combination is lower to most destinations in central territory and the west bank combinations to most destinations in trunk line territory. To destinations in the extreme east the spread between the rates produced by the two bases is only 2c. The fact that protestant has been favored with a basis of interstate rates on walnut lumber lower than that available to other shippers in western trunk line territory is no justification for the continuation of this lower basis. HELD, schedules justified. Lumber from and to Iowa points 101 I. C. C. 299.

(qq) Respondents proposed to establish revised commodity rates on 10 commodities in compliance with the order in 77 I. C. C. 473. Generally speaking the proposed rates are for application between points in Arkansas, Louisiana west of the Mississippi river, southern Missouri, and a few points in southeastern Kansas, eastern Oklahoma and eastern Texas; and between such points, on the one hand, and defined territories in central western trunk line, and southern territories, on the other, the rates to and from the defined territories being predicated upon differentials over Kansas City and St. Louis, Mo., or other river crossings. WOODEN BARRELS CASKS, KEGS. Western classification rates loose barrels, casks, kegs, etc., third class, minimum 10,000 pounds, and tight barrels, casks, kegs, etc., fourth class, minimum 12,000 pounds, subject to rule 34. Third class is 70 per cent and fourth class 60 per cent of the first class rates. HELD, proposed rates justified, but differentials on such traffic from defined territories in excess of existing differentials not justified. BAKERY GOODS INCLUDING BISCUITS BREAD CRACKERS CAKES CRACKER DUST AND RELATED ARTICLES. Bakery goods are rated fourth class minimum 20,000 pounds. The proposed scale for single line hauls is about 52 per cent of the first class scale. Proposed joint line scale is 5c higher than the single line scale for distances greater than 5 miles. HELD, respondents have not justified proposed rates and for future reasonable maximum rates on these points will be those shown under Table 15, Appendix 8, in 77 I. C. C. 473. CANS BOXES PAILS ETC. IRON STEEL OR TIN. Under exceptions many of these articles are rated fourth class in the southwest, although some, take third class ratings. The proposed scale for single line hauls is about 50 per cent. of the first class scale. Special rates, substantially less than 50 per cent of the first class rates, are proposed for application on tin cans from Chicago, Hoopeston and Maywood, Ill., to 12 points in this territory. The proposed scale for joint line hauls is from 5 to 2c higher than the proposed single line scale for distances to and including 500 miles, but for distances in excess of 500 miles the proposed scales for joint line and single line hauls are the same. HELD, proposed rates not justified, reasonable maximum rates are those shown in Table 15 Appendix 8, in 77 I. C. C. 473. WIRE

FENCING WIRE NAILS STAPLES ETC. Most of the articles included in this group are rated fifth class. These articles generally move on commodity rates in the southwest. The proposed scale for single line hauls is about 26 per cent of first class. The proposed joint line scale is from 2c to 1c higher than the proposed single line scale for distances to and including 500 miles; beyond 500 miles the proposed single line and joint line scales are the same. To make rates on these articles from defined territories to the territory under consideration respondents propose to add fifth class differentials to the rates proposed from St. Louis and other basing points. These differentials are now in force from defined territories to most of the territory under consideration. HELD, proposed rates justified, but respondents will be expected to amend the joint line scale so as to make the differential over the single line scale 1c, instead of 0.5c for distances of 381 to 400 miles. BUTTS HINGES DOOR HANGERS, ETC. Some of these articles are rated fourth class others fifth class in western classification. In many instances commodity rates apply from and to the territories under consideration. Proposed rates are 39 per cent of first class scale. No serious objection was interposed. HELD. proposed rates justified. FRESH MEATS AND PACKING HOUSE PRODUCTS. Respondents proposed the rate that would be applicable for the highest rated 1716 block wholly or partly included in the larger Memphis-Southwestern blocks. HELD, schedules not justified. Rates shown in distance scales in Appendix A will be reasonable rates. STOVES STOVE FURNITURE RANGES ETC. Most of these articles are rated fifth class, in western classification, although some stoves and certain stove furniture are given ratings higher than fifth class. Proposed single line scale is about 42 per cent of first class. HELD, schedules not justified, but reasonable maximum rates are those in Table 14, Appendix I, in 77 I. C. C. 473. PULL AND SUCKER RODS. Pull rods are rated class A and are grouped with oil well outfits or supplies in western classification. That classification rates sucker rods fifth class when made of iron and steel or combination of wood and iron. Proposed scale is the same as that appearing under Table 12, Appendix 8 in 77 I. C. C. 473. That scale, approximating 30 per cent of the first class scale, was prescribed for application on bags, soap and potatoes. The record discloses no heavy movement of these articles in the territory under consideration. HELD, schedules justified. WOODENWARE. Woodenware is rated fourth class, proposed scale for single line application is about 50 per cent of first class. It appears it was not respondents intention to cancel present rates on straight or mixed carloads of butter and lard tubs from Blytheville, Ark. They state it is not necessary to change the northbound rates from Blytheville to remove undue prejudice. The movement of butter tubs is heavier than that of ither varieties of woodenware. HELD: Proposed rates not justified, reasonable maximum rates being those under Table 15, Appendix 8, in 77 I. C. C. 473. The present rates on butter and lard tubs from Blytheville may be continued. GENERAL PROVISIONS. The scales of rates prescribed herein should be made applicable from and to points on class A railroads as designated in 77 I. C. C. 473, requiring that in determining the rates prescribed the direct routes, embracing as a maximum that lines or parts of lines of not more than three carriers not under common ownership and control, via existing connections for the interchange of carload traffic. An arbitrary of 2c may be added to the rates to and from Memphis for the river crossing at that point; and arbitraries of 2.5c for the crossings at Vicksburg, Baton Rouge and New Orleans. Distance rates on fresh meats and packing house products prescribed as per Appendix A., ranging single line 15c joint line 19c for 5 miles and under on fresh meats, and 12c single line 15c joint line on packing house products to 97c on fresh meats and 82c on packing house products over 800 miles, Memphis bridge toll 2c on each. Commodity Rates in Southwestern Territory, 101 I. C. C. 308.

(rr) Complainant attacked rates charged on wrought iron or steel pipe, carloads, between Oct. 1, 1922 and Nov. 27, 1923, from and to numerous points in Louisiana, except Shreveport, to and from points in Arkansas as unreasonable and unduly prejudicial. In 96 I. C. C. 81 the Commission found the rates to Arkansas unreasonable to extent they exceeded rates intrastate in Louisiana and awarded reparation, but found rates from

Shreveport to Arkansas not unreasonable. Upon reconsideration, HELD, previous finding affirmed. Texas Co. v. K. C. S. Ry., 101 I. C. C. 345.

(ss) Complainant attacked carload rates on soap, soap powders, and scouring and cleaning compounds from c. f. a. and western trunk line territory to Oklahoma, Arkansas, Texas, Louisiana west of Mississippi river, southern Missouri, southern Kansas and eastern New Mexico, as unjust and unreasonable; that the rates from South Omaha, Dallas, Fort Worth, Houston, Kansas City and Oklahoma City to Memphis, Vicksburg, Baton Rouge and New Orleans are unreasonable that rates on lard substitutes and vegetable cooking oils, carloads from Houston, Tex.to Arkansas and Louisiana are unreasonable; that rates on these commodities from Sherman, Tex., to the same territory are unjust and unreasonable and unduly prejudicial. Respondents proposed to increase rates and lard substitutes, carloads, from New Orleans to El Paso, Tex., and grouped points. The term "present rates" as used herein in connection with soap refers to the rates in force prior to Nov. 27, 1923, the date on which rates under the 9702 scale went into effect. **Soap.** The evidence relates almost exclusively to common or so-called laundry soap, which comprise about 95 per cent of complainants soap shipments. Soap is rates fifth class in official and western classification territories. It is packed in baxes or barrels, uniform and convenient in size, weight and form, to permit easy handling and economical stowage in the car. Claims for loss or damage are negligible. From a transportation standpoint soap is a desirable commodity. Commodity rates generally apply from St. Louis and Kansas City. **Rates to New Mexico.** Because of higher operating costs, rates to New Mexico are and should be on a higher level than rates to the more populous regions of the southwest. New Mexico is somewhat analogous to the sparsely settled Texas differential territory, to which rates are on a higher basis than to Texas common points. The record does not afford a basis for a conclusion respecting the adjustment to New Mexico. **Texas Adjustment.** In 40 I. C. C. 699 the Commission prescribed carload rates from St. Louis and Kansas City to Dallas, Fort Worth, Paris and Denison on numerous commodities, including soap which were lower than those applicable to the remaining portions of what is generally known as Texas common point territory. Rates on the basis then prescribed were established from Kansas City and St. Louis and a few other points in the vicinity of the latter, but not from other points in the Kansas City and St. Louis groups and rates from defined territories which usually base over St. Louis or Kansas City were not similarly adjusted. The rates then prescribed, modified by the subsequent general changes, are still in effect, On this record there is no reason to disrupt the adjustment established following the case cited. With certain exceptions, rates to Texas common point territory from St. Louis and other so-called defined territories, except Kansas City, have been upon a group basis for many years. **Rates from Points Beyond St. Louis and Kansas City.** From points east of the Mississippi river to Southwestern territory generally the rates are based on differentials over St. Louis. These differentials, added to the rates from St. Louis, locals or proportionals, compose the thru rates. The record with respect to rates from defined territories beyond Kansas City and St. Louis is comparatively meager. **Conclusions Soap and Related Articles.** HELD: Rates attacked unreasonable to extent: from Kansas City, Kans., and St. Louis, Mo., to Arkansas, Louisiana west of Missisippi river, to points in Missouri south of the Missouri river, in Kansas on and south of the Santa Fe through Dodge City, Great Bend McPherson, Emporia, and Ottawa Junction, and in Oklahoma, where and to extent they exceed rates under table 12 of Appendix 8 of 77 I. C. C. 473; from St. Louis, Mo., to points in Texas now subject to Texas common point rates on soap to extent they exceed 71c; from Kansas City, Kans., to points in western and north central Texas subject to Dallas-Fort Worth group rates to extent they exceed 64c to Dallas, Fort Worth, Paris, Denison and Greenville, Tex., to extent they exceed 66c from St. Louis and 57.5c from Kansas City; from Kansas City and St. Louis to Texas differential territory to extent they exceed 71c, plus the present arbitrary over Texas common points, where rates to such points are now constructed differentially over Texas common points, and to extent they exceed 64c plus present arbitrary over Dallas-Fort Worth group. where rates are now constructed differentially over the latter group. **Lard and Lard Substitutes.** They are used for the same purposes and are in active competition. They are practically

always listed in the packing house product list of the various tariffs, although there are instances where they move under specific commodity rates. They move in box cars, are put up in similar packages for shipping, and from a transportation standpoint are substantially alike. Lard is strictly a hog product, with no other ingredient added. Lard substitutes is, generally speaking, a vegetable product. It is made in solid, semi-solid and liquid form **1716 Scale.** In 22 I. C. C. 160 the Commission prescribed a scale of rates for application for distances up to 1,000 miles to the transportation of packing house products, carloads, between new Mexico, Texas, Oklahoma, Arkansas, Missouri south of the Missouri river, and Louisiana west of the Mississippi river, also from Wichita, Kans., to points in that territory. This is known as the 1716 scale. Defendants expressed willingness to establish the 1716 scale for application from Houston and Sherman to the territory covered by these complaints. **Rates from Dallas, St. Louis, New Orleans and Memphis.** The 1716 scale has not been prescribed for application between New Orleans or Memphis and the destination territory here involved. To Texas common points the rates are made differentially under St. Louis. From Memphis to Arkansas points they are substantially on the 1716 scale plus a bridge arbitrary, and to Louisiana, Oklahoma, southern Missouri and southern Kansas they are higher than the 1716 scale. From New Orleans to Louisiana and Arkansas the fifth class rates were originally used as a basis, but by reason of increases in the class rates the commodity rates are now below the class basis. To southern Missouri and southern Kansas points the rates from New Orleans are based on Memphis. To Arkansas destinations the Memphis combination is lower than the applicable rate. To Oklahoma and New Mexico the rates from New Orleans generally, are on the basis applying from St. Louis and Chicago, respectively. **Rates to Mississippi River Crossings.** The attacked rates rates in a majority of instances on lard substitutes to Memphis, Vicksburg, Baton Rouge and New Orleans are lower than rates which could be established under the 1716 scale. **Rates to New Mexico.** Present rate Kansas City to Albuquerque is $1.215 for a distance of 884 miles. Specific commodity rates, subject to the alternative application of the 1716 scale when it would make lower rates, are maintanied by the Santa Fe from Wichita, Oklahoma City, Fort Worth and Dallas to Albuquerque and northern New Mexico points. **Rates from Points Beyond St. Louis and Kansas City.** The record indicates that rates to Oklahoma, Arkansas, Texas and Louisiana from points north and east of St. Louis are generally constructed on differentials over the rates from St. Louis similar to those applied on soap. No reason appears why existing differentials should be changed. **Lard and Related Articles—Conclusions.** The 1716 scale was originally designed to cover movements between Fort Worth, Oklahoma City and Wichita, on the one hand, and comparatively sparsely settled regions in New Mexico, Texas, and Oklahoma. For that reason throughout the scale the increase in the rate kept fairly even pace with the increase in distance. This is in contrast with principles generally observed at the present time in the construction of distance scales of rates and of rates generally. Ordinarily, where the territory traversed is reasonably homogeneous from a transportation standpoint, as the distance increases the increase in rates become relatively less. Rates attacked from St. Louis, Kansas City, New Orleans, Memphis, Dallas, Fort Worth, Sherman, Greenville, Taft, San Antonio, and Houston, Oklahoma City to destination territory involved unreasonable to extent they exceed rates shown in appendix B plus 2c arbitrary for bridge from Memphis, and 2.5c arbitrary for crossings at Vicksburg, Baton Rouge and New Orleans, nothing to be construed to increase proportional rates or rates on packing house products where they are less than the 1716 scale. From S. Omaha, Omaha, Sioux City and St. Paul unreasonable to extent they exceed rates from Kansas City by more than 9c from Omaha and South Omaha, 14c from Sioux City and 23c from South St. Paul, and from South St. Joseph to Oklahoma and Texas unreasonable to extent they exceed rates from Kansas City. Rates from Houston to Louisiana and Arkansas unreasonable to extent they exceeded 1716 scale, subject to general advances and reductions, reparation awarded. **General Provisions.** The findings herein do not relate to rates over lines east of the Mississippi river and south of Cairo, Ill. In addition to lines other than class A in Arkansas and western Louisiana, similar lines in other parts of the territory covered by the findings now receiving arbitraries over the normal rates will be permitted to add to the maximum rates herein prescribed the present arbitraries received by them.

Joint line rates shall be applied only when the lines embraced in the route are not under a common ownership or control. Distances shall be determined by the shortest route, embracing the lines or parts of lines of not more than three lines not under common ownership or control, via existing connections for the interchange of carload traffic. I. & S. 2242. The suspended schedules proposed to increase the rates of $1.01 then in effect on lard substitutes, carloads, from New Orleans to El Paso to $1.39. The schedules should be canceled. Appendix B names rates ranging from 12c single line and 15c joint line for 5 miles and under to 94.5c single and joint line over 1,200 miles. Proctor & Gamble Distributing Co. v. St. L. S. F. Ry., 101 I. C. C. 563.

(tt) Complainant attacked commodity rates on petroleum oil, including gasoline, carloads, from Casper, Wyo., to Colorado points as unreasonable, but as complaint was withdrawn, it will be dismissed. Complainant attacked commodity rates on petroleum oil, including gasoline, from Casper, Wyo., to Montana as unreasonable, unjustly discriminatory, and unduly prejudicial as compared with the rates from Greybull and Cowley, Wyo., to Montana points. Casper is on the Burlington and Northwestern. Greybull and Cowley are on the former line about 202 and 245 miles northwest of Casper. A history of the rates from Casper and Greybull to 39 points in Montana said to be representative shows that on July 24, 1918, Greybull generally enjoyed a rate of 10c less than Casper. With the increases in 1920 this difference became 12.5c. Following the general reductions of 1922 the differences became 11 and 11.5c. On Sept. 15, 1922, the rates from Greybull were reduced but no corresponding reduction was made from Casper. The average difference, Casper over Greybull, to all points in Montana is about 22.5c. Rates from Greybull are generally based upon the so-called Montana distributing scale, which scale was prescribed by the Montana Commission for intrastate application and subsequently applied by defendants for interstate application. Defendants expressed a willingness to establish from Casper the same scale of rates as now applies from Greybull subject to the present rates of 95c to Spokane as maximum. The rates proposed would be practically the same as those from Greybull to points in Montana equally distant from Casper except where maximum rates are in effect. The record indicates that the proposed rates would compare favorably with the rates in effect from Miles City and Billings, Mont., and Seattle, Wash., to Montana, Idaho and Washington. The proposed rates would also compare favorably with the rates for equal distances from Casper to other points in Wyoming, as well as points in Utah and Idaho, and from Richmond, Calif., and Salt Lake City to California, Nevada, Oregon, Utah and Arizona. HELD: Rates attacked not unreasonable but unduly prejudicial to extent the rates from Casper exceed those from Greybull by more than the differences between the rates for the respective distances from each point to destination under the Montana distributing scale, subject to present rates from both points to Spokane as maxima. Montana distributing scale ranges from 11c for 5 miles to 97c for 700 miles. Texas Company v. C. B. & Q. R. R., 101 I. C. C. 734.

(uu) Rates on pulp wood from points in Idaho to Millwood, Wash., found unreasonable to extent that factor to Spokane exceeded by more than $4 the Northern Pacific's charge for the switching movement at Spokane, the corresponding factor subsequently established in conformity with the distance scale found reasonable by commission in Wood Rates between North Pacific Coast Points, 61 I. C. C. 159. Reparation awarded. Inland Empire Paper Co. v. C., M. & St. P., 92 I. C. C. 29.

(vv) Upon further consideration, original report 85 I. C. C. 217, rates on wheat and corn from South Dakota points to Omaha, in connection with the C., M. & St. P. Ry., as delivering line, found unreasonable to extent they exceed rates that would obtain under the distance scale of rates prescribed in 73 I. C. C. 347, 357, subject to rates in effect via the C. & N. W. as representing the lowest rates required. South Dakota R. R. Commrs. v. C. & N. W., 92 I. C. C. 174.

(ww) In original report, the commission prescribed distance rates on class and commodities between Meridian, Miss., and points in Alabama equal to Alabama intrastate rates. Upon further hearing, rates on hay and gravel between Meridian and points in Alabama found not so related to intrastate rates on the same commodities within Alabama as to require continued operation of prior orders with respect to such rates. Prior reports, 60 I. C. C. 5, and 66 I. C. C. 179, modified. Meridian Traffic Bureau v. S. Ry., 92 I. C. C. 439, 442, 446.

(xx) Upon reconsideration, rates assessed on sporadic shipments of pipe from Gahagan, South Mansfield, and Harmon, La., and on oil-well supplies from Gahagan and Mansfield, to El Dorado, Ark., found excessive as compared with numerous rates fixed by commission on these commodities for application in the Southwest, and unreasonable to extent those on the pipe exceeded rates prescribed in 77 I. C. C. 473, and on the oil-well supplies to extent they exceeded those prescribed in 58 I. C. C. 610, for similar distances. Reparation awarded and former report, 85 I. C. C. 753, reversed. Crawford & Sebastian v. C., R. I. & P., 92 I. C. C. 453.

(yy) Rates on fertilizer and fertilizer compounds, c. l. and l. c. l., from Little Rock to Texas points found unreasonable for future to extent they exceed for all distances to Texas common-point territory the distance scale of single-line and joint-line rates prescribed in Memphis-Southwestern Investigation, 55 I. C. C. 515, as modified by subsequent general increases and reductions, and to Texas differential territory to extent they exceed same distance scales plus present differentials on traffic from Little Rock to destinations in Texas differential territory. Arkansas Fertilizer Co. v. A. & S. Ry., 92 I. C. C. 504.

(zz) Rates on slag from producing points in eastern Pennsylvania to destinations in New York, New Jersey, Delaware, Maryland, Virginia, and District of Columbia, found unreasonable and unduly prejudicial to extent they exceed rates on crushed stone. Reasonable and nonprejudicial distance scale of rates prescribed for future. Duquesne Slag Products Co. v. P. R. R., 92 I. C. C. 554.

(3a) Proposal to restrict basis for computing distance for application of mileage rates on brick and articles taking same rates between points in Oklahoma and Texas and between points in Arkansas and Oklahoma, to distances over routes embracing as a maximum, lines, or parts of lines of not more than three carriers, without exception, found not justified. Increases in rates will result to certain destinations in Texas to which short line distances from Oklahoma are now figured over four or more lines: Texas intrastate rates are figured by use of routes embracing more than three lines; and schedules on other commodities are not similarly limited. Brick between Oklahoma and Texas Points, 93 I. C. C. 210.

(3b) Rates on iron and steel articles from Niles, Ohio, to Mexia, Tex., found not unreasonable because in excess of rates prescribed in Memphis-Southwestern Investigation, 55 I. C. C. 515; 77 I. C. C. 473, for like distances. Rates prescribed in case cited did not include Texas territory and question of propriety of its extension thereto is pending in another case upon a far more comprehensive record. Standard Boiler & Plate Iron Co. v. P. R. R., 93 I. C. C. 285.

(3c) Rates on clean rice from points in Arkansas, Louisiana, and Texas to points in Oklahoma found unreasonable. The rice adjustment presents many incongruities, rates from producing territories to Oklahoma points being higher than to more distant points in practically all directions, in violation of the fourth section. Jobbers located at points in Arkansas and Texas near the Oklahoma border are able to purchase rice in carloads and distribute in less than carloads to Oklahoma points at transportation charges substantially lower than rice can be similarly handled by Oklahoma jobbers. Reasonable scale of distance rates, which will give each distributing point the benefit of its location, prescribed. Alton Mercantile Co. v. A. & W. Ry., 95 I. C. C. 645.

(3d) Rates on horses and mules between Fort Worth and points in Arkansas, Kansas, Oklahoma, western Louisiana, southern Missouri, portions of Colorado and New Mexico, and in Texas other than differential territory found unreasonable and unduly prejudicial to Fort Worth and unduly preferential of Wichita, Kansas City, St. Joseph, St. Louis, and Oklahoma City. Reasonable and nonprejudicial distance rates prescribed. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479.

(3e) Rates on broken stone or chatts from Joplin, Webb City, and Oronogo, Mo., to destinations in Crawford County, Kans., over the Missouri Pacific, found unreasonable to extent they exceeded rates prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, for similar distances involving single-line hauls. Reasonable rates prescribed for the future. Crawford County Commrs. v. St. L.-S. F., 93 I. C. C. 502.

(3f) Use of other than actual distance in applying distance rates on shipments of wrought-iron pipe and other iron and steel articles and oil-well supplies between points in Oklahoma and

points in Kansas, as specifically provided in applicable tariffs, found to have resulted in overcharges. While it was intention of carriers to make rates from farther distant points applicable from unnamed intermediate stations, the tariff as published does not carry out that intent and must be construed against framers. Cosden Oil & Gas Co. v. A., T. & S. F., 95 I. C. C. 116.

(3g) Distance rates and rates related thereto between Chicago, Ill., district, on the one hand, and Michigan City, Valparaiso, LaPorte, and Crown Point, Ind., and intermediate points on the other, based on an arbitrary distance of 70 miles, found unreasonable and unduly prejudicial as compared with distance rates between Chicago and competing points in c. f. a. territory based on actual direct-line distances. Reasonable and nonprejudicial distance rates based on distances via direct routes prescribed. Indiana Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 177.

(3h) Rates on prepared roofing, asphalt shingles, building and roofing paper, roofing cement, and related articles from East St. Louis and Kansas City to points in Oklahoma found unreasonable. Reasonable scale of distance rates prescribed. Certain-Teed Products Corp. v. A. & L. M. Ry., 95 I. C. C. 273.

(3i) On further consideration, original report 89 I. C. C. 508, rates on animal manure from Perth and Lovelock, Nev., to certain eastbound transcontinental groups found unreasonable. Reasonable rates prescribed by taking average distance to representative points in the respective groups and applying thereto the Calivada scale approved in 73 I. C. C. 496, extended to distances in excess of 800 miles. Reparation awarded. Pacific Manure & Fertilizer Co. v. A. & R. R. R., 95 I. C. C. 430.

(3j) Fifth-class rates on wrought-iron pipe from Goose Creek and Docbrown, Tex., to Olivier, La., and from Goose Creek to Anse La Butte, La., found unreasonable as compared with lower commodity rates contemporaneously in effect in reverse direction, with lower commodity rates which have been in effect for many years in the same general territory for similar distances, and to extent they exceeded the normal rate on this traffic, based differentially under St. Louis. Reasonable distance rates based upon the scale approved in Memphis-Southwestern Investigation, 77 I. C. C. 473, prescribed and reparation awarded. Humble Oil & Rfg. Co. v. D.-G. C. Ry., 95 I. C. C. 435.

(3k) Upon a stipulation of record between the parties, rate on tobacco from Savannah, Ga., to Havana, Fla., found unreasonable to the extent it exceeded a lower rate equal to the Georgia scale for a distance similar to that here involved. Reparation awarded. American Sumatra Tobacco Co. v. A. C. L., 95 I. C. C. 463.

(3l) Rates on cement from Cape Girardeau (Gulf Junction), Mo., to points in Illinois found unreasonable and unduly prejudicial as compared with rates from competing Illinois mills to same destinations and to extent they exceed those which would result under the distance scale of rates prescribed in Atlas Portland Cement Co., 81 I. C. C. 1. Reasonable and nonprejudicial rates prescribed. Cape Girardeau Portland Cement Co. v. B. & O., 95 I. C. C. 632.

(3m) Class C rates on prepared roofing from Port Neches, Tex., to Couchwood, Cotton Valley, and Haynesville, La., and State Line and Emerson, Ark., found unreasonable as compared with rates from St. Louis and Kansas City to same destinations, from Port Neches to Shreveport, Monroe, New Orleans, Vicksburg, and Memphis, and to extent they exceeded lower commodity rates subsequently established equal to basis prescribed in Memphis Southwestern Investigation, 77 I. C. C. 473, 562, for distances the same as those between Port Neches and destinations here involved. Reparation awarded. Texas Pipe Line Co. v. L. & A., 95 I. C. C. 674.

(3n) Rates on wrought-iron and steel pipe from points in Texas common-point territory to points in Little Rock-Fort Smith territory found unreasonable. Reasonable rate prescribed based upon Memphis-Southwestern scale approved in 77 I. C. C. 473, 595, and reparation awarded. Humble Oil & Rfg. Co. v. M. P., 95 I. C. C. 709.

(3o) Proposed readjustment of rates on butter, eggs, and live and dressed poultry from points in Arkansas, Oklahoma, and Texas to certain defined territories and eastern destinations found not justified. Present rates on these commodities from points in Texas to certain eastern destinations found unreasonable and reasonable distance scale of rates

prescribed for the future. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19.

(3p) Rates from New Albany to other points in Indiana on bituminous coal originating in Kentucky and West Virginia and barged to New Albany down the Ohio River, found unreasonable as compared with rates from Cincinnati, a competing point shipping to the same destinations and to which traffic moves under similar transportation conditions. Moreover, rates for the short intrastate movement are on too high a level as compared with intrastate rates on bituminous coal prescribed by the commission in 66 I. C. C. 338, and numerous other cases. Reasonable distance scale of rates prescribed for the future. Slider v. B. & O., 96 I. C. C. 65.

(3q) Rates on cabbage from St. Francisville, to Monroe, La., via an interstate route through Vicksburg, found unreasonable as compared with rates from and to same points via another route, with distance rates for equal hauls in Arkansas, Texas, and Louisiana, with rate subsequently established via route of movement, and to extent they exceeded rate prescribed for like distances in Natchez Chamber of Commerce, 52 I. C. C. 105; 58 I. C. C. 610; and 63 I. C. C. 288. Reparation awarded. Sugar Bros. Co. v. Y. & M. V., 96 I. C. C. 97.

(3r) Joint fifth-class rates assessed on fabricated steel tank material, k. d., from Shreveport, La., to El Dorado, Ark., found unreasonable as compared with lower commodity rates subsequently established and to extent they exceeded rates based upon distance scale prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473. Earnings which these rates yield are sufficiently remunerative for a heavy loading commodity of the character under consideration. Reparation awarded. Parkersburg Rig & Reel Co. v. C., R. I. & P., 96 I. C. C. 99.

(3s) Distance scale prescribed by commission in Memphis-Southwestern Investigation, 77 I. C. C. 473, was made without reference to frequency of movement. Parkersburg Rig & Reel Co. v. C., R. I. & P., 96 I. C. C. 99, 101.

(3t) Rates on pulp wood, for joint-line hauls, to Covington, Va., from certain points in southern territory, found unreasonable and unduly prejudicial to complainant and preferential of wood pulp and paper manufacturers at Coleman, Big Island, and Hopewell, Va., Canton, N. C., Kingsport, Tenn., and Bristol, Va.-Tenn. Defendants oppose the establishment of joint mileage scales on this traffic, pointing out that there are no such scales in effect on any traffic between official and southern territories. Reasonable and nonpreferential and nonprejudicial rates based on joint distance scale prescribed for the future. West Virginia Pulp & Paper Co. v. S. Ry., 96 I. C. C. 244.

(3u) Rates on vegetable oils from Oklahoma points to Sherman, Texas, for distances of 325 miles or less, found unreasonable and unduly prejudicial to the extent they exceeded or exceed rates for like distances under the scale prescribed in Proctor & Gamble, 64 I. C. C. 213, graded downward in manner indicated, which scale applies from origin points to Dallas and Fort Worth, competing points, and is in effect from Arkansas and Louisiana points to Sherman. Reparation awarded. Determination of future rates left pending decisions in Corporation Commission of Oklahoma v. A. & S. Ry. Co., and Texas Cottonseed Crushers Asso. v. Same, now before the commission. Texas Chamber of Commerce v. A., T. & S. F., 96 I. C. C. 283.

(3v) Rates on straw from certain points in Illinois to Noblesville, Ind., found not to have been or to be unreasonable as compared with distance rates prescribed in the Straw case, 36 I. C. C. 30. In National Hay Asso., 19 I. C. C. 34, the commission said that the ultimate test from the carrier's standpoint of the reasonableness of a rate must be the return for the occupation and use of its facilities. American Strawboard Co. v. I. C. R. R., 96 I. C. C. 289.

(3w) Third-class rates on butter to Fort Worth, Houston, and San Antonio, Tex., from various points and territories found unreasonable as compared with distance rates in the same general territory on various commodities as prescribed in 77 I. C. C. 473, and 57 I. C. C. 231, and to the extent they exceeded rates based on the distance scale of reasonable maximum rates on butter, eggs, and dressed poultry prescribed in Butter, Eggs, and Dairy Products, 96 I. C. C. 19. Reasonable rates prescribed and reparation awarded. Mistletoe Creameries v. A., T. & S. F., 96 I. C. C. 303.

(3x) Mileage scale of reasonable maximum rates prescribed on shipments

of haydite from Kansas City, Mo., to Memphis, Tenn., and destinations in Iowa, Kansas, Nebraska, Oklahoma, Arkansas, Louisiana, and Texas. Haydite Co. v. A., T. & S. F., 96 I. C. C. 312.

(3y) Rate on crushed asphalt rock from Dougherty, Okla., to Kansas City, Mo.-Kans., assessed under distance scale, found unreasonable as compared with rates contemporaneously in effect on similar commodities for comparable distances in same general territory. Reparation awarded to basis found reasonable and reasonable rate prescribed for future. Roudebush v. A., T. & S. F., 96 I. C. C. 319.

(3z) Fifth-class rates for the transportation of manufactured iron and steel articles from points in the Pittsburgh, Pa., district to St. Louis, Mo., and points in Illinois and Indiana, found unjust and unreasonable to extent they exceed or may exceed, scale prescribed. In computing distances under this scale, the shortest routes by existing connections for the interchange of carload traffic shall be used, embracing as a maximum the lines of not more than three line-haul carriers. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682.

(4a) Proposed restriction of the application of distance class rates between points in Nebraska, except Omaha, and points in Wyoming, so as to make them inapplicable from and to points on the lines of the C., B. & Q. lying generally east of Lincoln, Crete, Beatrice, and Wymore, Nebr., resulting in higher specific class rates becoming applicable found not justified. Casper Chamber of Commerce v. C. & N. W. Ry. Co., 96 I. C. C. 736.

(4b) Interstate rates and minimum weights on cottonseed, c. l., between defined points in the Southwest; between such points, on the one hand, and Mississippi River crossings, Memphis to New Orleans, on the other, and from points in the Southwest to East St. Louis, Cairo, and Thebes, Ill., and Kansas City, Mo., found unreasonable to extent they exceed or may exceed rates under the distance scale shown in Appendix 7, subject to a minimum weight of 40,000 pounds, with certain exceptions. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 216.

(4c) Contention that addition of joint-line differentials would place defendant Fort Smith & Western at a disadvantage in competition with other trunk lines cannot be sustained. The commission has repeatedly approved the general practice in the Southwest of adding differentials for joint-line hauls, on intrastate as well as interstate traffic, where rates are constructed on a distance basis, and the record does not warrant a reversal of such general practice. Accordingly, joint-line differentials have been prescribed which diminish in proportion to length of haul and are allowed only for distances not exceeding 500 miles. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 248.

(4d) In computing distances under scales herein prescribed, shortest routes via existing connections to be used, embracing as a maximum the lines of not more than three line-haul carriers for distances not exceeding 500 miles, not more than four line-haul carriers for distances not exceeding 800 miles, and not more than five line-haul carriers for distances exceeding 800 miles. Lines under common ownership or control will be considered a single line, and each time a portion of the same railroad is used in computing distance it will be counted as a separate line. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 249.

(4e) Rates on cottonseed from Oklahoma points to Sherman, Tex., found unreasonable during period up to August 15, 1923, to extent they exceeded rates contemporaneously applied for like distances between Shreveport, La., and points in Texas; and on and subsequent to August 15, 1923, found unreasonable to extent they exceeded or may exceed rates under the distance scale shown in Appendix 7, applied in the manner hereinbefore indicated. Reparation awarded, the similarity of transportation conditions throughout this territory justifying a retroactive rate adjustment to Sherman. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 253.

(4f) Following American Sand & Gravel Co., 88 I. C. C. 1, rates on sand, gravel, and crushed rock from certain points in Minnesota to certain destinations in North Dakota found unreasonable to the extent they exceed rates based upon the scale set forth in the appendix to the report, which, except for a small increase for distances over 130 miles, is equal to the present Nebraska

interstate and intrastate scale for the distances here considered, plus an arbitrary of 1 cent per 100 pounds for joint-line hauls. Reasonable basis of rates prescribed and reparation awarded. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361.

(4g) Upon contention of complainants that the comparative operating conditions in the portions of Minnesota and North Dakota here considered the Minnesota intrastate scale of rates applicable on sand, gravel, and crushed rock should be held to be a reasonable level of rates for application on these commodities from Minnesota points to North Dakota destinations, FOUND: The record supports the conclusion that there is no justification for the maintenance of any higher level of rates in the one than in the other, and complainants' contention would be correct if the intrastate scale was on a reasonable maximum basis. The commission takes into consideration the level of intrastate rates in reaching a conclusion as to the reasonableness of interstate rates in the same general territory, but it is not bound to adopt the intrastate level of rates as proper for application to interstate traffic. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361, 366.

(4h) Proposed increase in rates on sand and gravel from Barnesville, Downer, and Downer Pit, Minn., to Fargo, N. Dak., in order to again place the rates of respondent on a parity with the Northern Pacific's rate from Muskoda, Minn., to Fargo, found not justified. The evidence offered in connection with the formal docket herein considered was also offered with the proposed increase, and it is found that under the scale found reasonable in the formal docket the rate for these distances would be the same as the rate now in effect. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361.

(4i) Rate on gravel from Melvin, Minn., to Grand Forks, N. Dak., found unreasonable to extent it exceeded the rate subsequently established between the same points. In another formal docket considered herewith the commission prescribed a distance scale and although a request for rates for the future is not made by complainant in this case, defendant should in the future apply the basis of rates found in that scale to be just and reasonable for this distance for application to movement in the territory in which these points are located, and avoid the filing of a further formal complaint to obtain the same result. Reparation awarded. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361, 373.

(4j) Upon further hearing, findings in 77 I. C. C. 473, with respect to rates on fruits and vegetables, other than potatoes, between St. Louis, Mo., Memphis, Tenn., and other Mississippi River crossings on one hand, and points in Arkansas, southern Missouri, and western Louisiana on other, modified so that the maximum scale of distance rates designated in Table 14, Appendix 8 of original report, will apply on berries, peaches, pears, plums, and grapes, and lower scale of rates designated in Table 13 of same appendix on all fruits, vegetables and melons, other than potatoes, berries, peaches, pears, plums, and grapes. Memphis-Southwestern Investigation, 98 I. C. C. 654.

(4k) Complainants attacked commodity rates to Haynesville, La., between July 18, 1921 and May 30, 1922 of wrought iron pipe, carloads, from Breckenridge, Jakehamon, Hall and Goose Creek, Tex., and of oil well supplies, carloads, from Goose Creek, as unreasonable. Complainant attacked rates charged to Haynesville in March and April 1923, of wrought iron or steel pipe, carloads, from Electra, Tex., and of wrought iron or steel pipe fittings, carloads, from Houston and Clinton, Tex., as unreasonable. Haynesville is a local point on the L. & N. W., 32.5 miles north of Gibbsland, La. Breckenridge is about 28 miles north of Cisco, Tex., on the C. & N. E., and the same distance north of Ranger, Tex., on the W. F. R. & Ft. W. Jakehamon is on the W. F. R. & Ft. W., 19 miles south of Ranger. Electra is on the Ft. W. & D. C., 26 miles north of Wichita Falls, Tex. Goose Creek is on the D. G. C. Ry. 23 miles south of Dayton, Tex. Hull is on the B. S. L. & W., 56 miles east of Houston. Clinton is on the T. & N. O., 8 miles south of Houston. The distances at Haynesville are 441 miles from Breckenridge, 482 miles from Jakehaman, 438 miles from Electra, 356 miles from Goose Creek, 313 miles from Hull, 304 miles from Houston and 312 miles from Clinton. Haynesville is located in the northwestern portion of what is

known as the New Orleans group, which takes in practically the entire state of Louisiana, and from Texas common points the same rates generally apply to points in this group. In 95 I. C. C. 709 the commission prescribed group rates on these commodities from Texas common point territory to points in the Little Rock-Fort Smith territory, using as a basis the average distance between points in these groups as applied to table 11, appendix 8 of the 9702 scale, 77 I. C. C. 473. Since the cases referred to the Commission prescribed distance rates on these commodities from Texas common point territory to Little Rock, Ark., and with the addition of a differential to compensate for the extra interchange service the Commission sees no reason why the basis fixed in that case should not be deemed reasonable for these movements. HELD, rates attacked unreasonable to extent they exceed from Breckenridge, Jakehamon Hull, and Goose Creek, 58.5, 61, 50 and 43c, prior to July 1, 1922, and 53, 55, 45, 48c on and after that date; From Electra 53c on and after July 1, 1922; from Houston and Clinton 45c on and after July 1, 1922 on wrought iron or steel pipe fittings, and on oil well supplies from Goose Creek, 73c prior to July 1, 1922 and 60c on and after that date. Also, in view of the shipments being transported via routes involving four lines, the addition of a reasonable differential to compensate for extra line haul was proper. Reparation awarded. Humble Oil & Refining Co. v. L. & N. W. R. R., 102 I. C. C. 761.

(4l) Complainant attacked commodity rate of $4.90 charged on a car of sand, shipped March 31, 1923 from Lipe, Tenn., to Sheffield, Ala., as unreasonable and to Florence, Sheffield and Tuscumbia, Ala., as unjust, unreasonable and unduly prejudicial. March 31, 1923 the car was delivered to N. C. & St. L., unrouted, moved via that line to Nashville, thence L. & N., charged $4.90, applicable rate $4.10 resulting in overcharge. Subsequent to the shipment defendants published rates of $1.67 to Florence and $1.76 to Sheffield and Tuscumbia, and are willing to refund charges collected in excess of $1.76. Distance is 220 miles and the $1.76 rate established by defendants is the rate for 220 miles under the distance scale proposed by the major lines in the south for application in Georgia and Alabama. HELD, rate at present not unreasonable, reparation awarded to basis of $1.76. Florence Chamber of Commerce v. N. C. & St. L. Ry., 104 I. C. C. 393.

(4m) In cases where the Commission prescribe distance scales, carriers are not required to establish over circuitous routes the rates found reasonable for application over rate making routes. They may do so if section four is observed or if relief therefrom is granted. Because of excessive transportation costs resulting from excessive circuity in the granting of relief from the long and short haul provision of section four of the act, circumstances in each case must govern. In 98 I. C. C. 183 and 101 I. C. C. 116 circuitous lines or routes longer than 1,500 miles and more than 33 1-3 per cent circuitous were denied fourth section relief which would have been required for the purpose of meeting the rates of the short lines or routes. Grain and grain products to Mississippi Valley 107 I. C. C. 167, 169.

(4n) In 87 I. C. C. 654 Commission found rates on fertilizer, carloads and less carloads, from Blackshear, Ga., to Florida as unreasonable and prescribed reasonable maximum rates based on distance scales. Maximum carload rates were prescribed to the destinations in northern Florida on a slightly higher level than to southern Florida. To the destinations on the short lines the maximum rates prescribed were differently higher than on the basis of the scales. The basis prescribed for less carload traffic was 120 per cent of the carload rates. To northern Florida the rates and the bases of rates prescribed as maxima were generally lower than the previously existing rates. To southern Florida they were higher in many instances than the previous rates. No revision of the Florida intrastate rates was made. HELD, undue prejudice to be removed so that the interstate rates from Jacksonville will not be higher than from Blackshear used as basing rates to the same destinations. Blackshear Mfg. Co. v. A. C. L. R. R., 107 I. C. C. 538.

(4o) Rates on peddler-car quantities of fresh meat and packing-house products from Fort Worth, Tex., Oklahoma City, Okla., and Wichita Kans., to points in Arizona, New Mexico, and Texas differential territory, found unduly preferential of packers at said points of or-

igin and unduly prejudicial of complainant packer at El Paso. Commission finds that the establishment of less-than-carload rates upon the basis prescribed in the Arizona Packing case, 81 I. C. C. 115, will result in reasonable maximum rates and remove the undue prejudice to El Paso. Reasonable rates prescribed for the future. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 20.

(4p) Rates on cottonseed oil, cake, meal, and hulls from Los Angeles, El Centro, and Calexico, Calif., and from Phoenix Ariz., to El Paso, Tex., found unreasonable. Rates established upon the distance scales of rates on these commodities prescribed in Oklahoma Corporation Commission, 98 I. C. C. 183, plus differentials for hauls in this territory, would be reasonable. The differences between the levels of the rates under the prescribed standard scales for cottonseed oil on the one hand and cottonseed cake, meal, and hulls on the other indicate that the differentials on cottonseed oil for hauls in this territory should be higher than on the cake, meal, and hulls. Reasonable rates prescribed for the future. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 23.

(4q) Combination baggage or baggage and express rates on interline shipments of milk and cream in 10-gallon cans, from points in Iowa and South Dakota, to Omaha, Nebr., found unreasonable and reasonable maximum rates constructed on basis of specific joint-line distance scales, with the addition of drayage charges where necessary, prescribed for future and reparation awarded to that basis. Kirschbraun & Sons, Inc. v. G. N. Rys, 100 I. C. C. 28, 40.

(4r) Charges assessed on milk and cream in 10-gallon cans, for single-line hauls in baggage service from points in Iowa, to Omaha, Nebr., via circuitous routes, found not unreasonable, but new and more direct interline routes and reasonable maximum rates, constructed upon basis of specific joint-line distance scales, with the addition of drayage charges where drayage is necessary in order to transfer shipments between separate passenger depots of connecting rail carriers, prescribed for future. Kirschbraun & Sons, Inc. v. G. N. Rys., 100 I. C. C. 28, 40.

(4s) Undue prejudice to Galveston should be removed by establishing the same rates to or from Galveston or New Orleans, as the case may be, in instances where the differences in distance from and to the two ports are not greater than 100 miles and by establishing rates to or from Galveston, as the case may be, certain specific differentials under New Orleans in instances where the differences in distance in favor of Galveston are greater than 100 miles. Defendants will be expected to grade up the differentials prescribed from or to Texas, so that for the shorter distances between Galveston and Texas points more appropriate recognition may be given to the greater differences in distance to or from the two ports. Galveston Commercial Asso. v. G. H. & S. A. Ry. Co., 100 I. C. C. 110, 123, 124.

(4t) Rates on cottonseed from points in Oklahoma to Dallas and Forth Worth, Tex., found unreasonable to extent indicated in 80 I. C. C. 18, involving same territory; after effective date of order therein, to extent they exceed or may exceed distance rates prescribed in 98 I. C. C. 183, and applied in manner indicated therein. Reparation awarded. International Vegetable Oil Co. v. A., T. & S. F., 100 I. C. C. 240.

(4u) Rates on fabricated steel tank material, knocked down, and steel pipe, from Houston, Orange, Iowa Park, and Kosse, Tex., to El Dorado and Smackover, Ark., found unreasonable to extent they exceeded distance rates prescribed in Texas-Pacific Coal & Oil Co. v. T. & P. Ry. Co., 95 I. C. C. 625, and Humble Oil & Refining Co. v. M. P. R. R., 95 I. C. C. 709. Reasonable rates prescribed for future and reparation awarded. Parkersburg Rig & Reel Co. v. G., C. & S. F. Ry. Co., 100 I. C. C. 245.

(4v) Schedules proposing readjustment of class rates, both interstate and intrastate, between points in Missouri, and between Missouri and other sections, based upon a maximum distance scale which would result in substantial increases to some points, and reductions between points where the so-called Memphis-Southwestern scale is now in effect, found not justified. Scale of maximum reasonable rates prescribed. Recognized bridge arbitraries at Mississippi River crossings may be added wherever and to extent they now apply, and rates to and from defined territories should be based on the differentials over the river crossings. Class Rates between Missouri and

Interstate Points, 100 I. C. C. 274.

(4w) Rate assessed on shipment of crushed stone from Port Deposit, Md., a producing point, consigned through error to Linden Hall, Pa., and reconsigned at Marysville, Pa., to Mendenhall, Pa., found unreasonable to extent it exceeded lower contemporaneous distance rate on like traffic prescribed as reasonable in the Birdsboro case, 49 I. C. C. 681. Reparation awarded. Budding Co. v. P. R. R. Co., 100 I. C. C. 411.

(4x) It is a generally recognized principle of rate making that the rate per ton mile should continually decrease as distance increases, and this theory is hereby confirmed. Southern Class Rate Investigation, 100 I. C. C. 513, 642, 644.

(4y) Maximum distance scale of interstate class rates on standard lines between points in southern territory and over routes lying wholly within such territory, except between points in Virginia and points in North Carolina and except to and from points in Florida peninsula, prescribed. Appendix K. Southern Class Rate Investigation, 100 I. C. C. 513, 646.

(4y) Maximum distance scale of interstate class rates prescribed on standard lines between points in Florida peninsula south of line of Seaboard Air Line from Jacksonville to River Junction, on one hand, and other points in southern territory, on other, plus certain specified arbitraries for that part of the distance lying south of aforesaid line. Southern Class Rate Investigation, 100 I. C. C. 513, 646.

(5a) Claim of carriers that the use of a rule such as that in Western Cement Rate case, 52 I. C. C. 225, with respect to determination of mileages where a distance scale of rates, as herein prescribed, has been employed in contrary to law upon the ground that it is, in effect, an infringement of the provision which protects them against being short hauled, not sustained. Southern Class Rate Investigation, 100 I. C. C. 513, 656.

(5b) Method of determining mileages in connection with application of scales of distance rates approved. Southern Class Rate Investigation, 100 I. C. C. 513, 655, 656.

(5c) There is nothing sacred about distance rates. They are recommended as, on the whole, a convenient, logical, and readily understood method of measuring the service afforded in the movement of class traffic, and a method which is further supported by averaging underlying costs. But distance rates should not be so rigidly observed as to violate considerations of convenience and simplicity in tariff construction without any substantial compensating gain. Southern Class Rate Investigation, 100 I. C. C. 513, 657.

(5d) Rates on salt from Salduro, Utah, to main-line points on lines of defendants in Montana found to have been unreasonable to extent they exceeded rates shown in distance scale appearing in the Crystal case, 78 I. C. C. 659, 665, for the actual distances from Salduro, and rates on same commodity from Salduro to branch-line points on defendants' lines in Montana found to have been unreasonable to extent they exceeded rates herein found reasonable to main-line points by more than the amounts by which rates from North Pacific ports to said branch-line points exceeded rates to said main-line points. Reparation awarded. Capell Salt Co. v. C., M. & St. P., 101 I. C. C. 34.

(5e) Upon further hearing, joint-line rates under agreed-distance scales on livestock to, from, and between points in the Southeast found not justified for interstate application over certain specified lines under common management and control, and wherever such rates have been applied over these lines since date of establishment under authority conveyed in original report, 74 I. C. C. 419, they have been, are, and for the future will be unreasonable to extent they exceeded, exceed or may exceed single-line rates under the agreed scales, as set out in appendixes to original report, on a joint or continuous mileage basis. Livestock, to from, and between Points in Southeast, 101 I. C. C. 105.

(5f) In prescribing scales of distance rates for single and joint-line hauls, commission has almost invariably required lines under a common management and control to apply the single-line rates. These decisions were based on fact that such management and control result in certain benefits in operation, and on commission's opinion that single-line rates would be reasonable for application over such lines. No reason is apparent for departing from those precedents. Livestock to, from, and between

Points in the Southeast, 101 I. C. C. 105, 107.

(5g) Rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, between Oklahoma, on one hand, and Kansas and Missouri, on other hand, found unreasonable to extent they exceed rates made by applying distance scales set forth herein to short-route distances. Reasonable maximum rates prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116.

(5h) Rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, from Oklahoma to specifically designated Texas territory, found unreasonable to extent they exceed distance scale of rates set forth herein, with the application of certain differentials to that portion of Texas not herein otherwise provided for, including a designated section of the Texas Panhandle. The distance scale of rates and differentials is prescribed as reasonable for future. Oklahoma Corp. Comm. v. A. S. Ry., 101 I. C. C. 116.

(5i) Rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, between Oklahoma, on one hand, and Kansas and Missouri, on other hand, found unreasonable to extent they exceed rates made by applying distance scales set forth herein to short-route distances. Reasonable maximum rates prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 128.

(5j) Rates on grain and grain products from points in the Panhandle of Texas to Kansas City, Kans.-Mo., found unreasonable to extent they exceed rates made by applying distance scales set forth herein, computed in manner herein provided. Reasonable maximum distance rates prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 130.

(5k) Rates on grain and grain products from eastern New Mexico to Kansas City, Kans.-Mo., found unreasonable to extent they exceed rates constructed by adding to the distance scales herein found reasonable from the Panhandle of Texas to Kansas City, the scale of differentials set forth herein, to be applied only to the mileage within New Mexico. Reasonable maximum rates, with application of differentials, prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 130.

(5l) In establishing rates on grain, grain products, and related articles from Oklahoma to Texas points, and from and to other points here involved, under the distance scale prescribed herein, grouping of points of origin not more than 50 miles apart, and a like grouping of points, of destination, will meet all requirements, provided that group rates be computed so as to produce substantially same average rates that would result from the application of the scale from and to each point in the group. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 134.

(5m) In establishing rates on grain, grain products and related articles from Oklahoma to Texas points and from, and to other points here involved, under the distance scale set forth herein, carriers should not content themselves with the filing of tariffs containing the distance scales, but specific rates computed on the bases prescribed should be published, and in doing so, grouping of points of origin and points of destination may be employed. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 134.

(5n) Contention that rates on strawboard between c. f. a. and trunk-line territories are unreasonable because they exceed rates based on scale prescribed in C. F. A. Class Scale case, 45 I. C. C. 254, not sustained. That scale was not intended as a measure of interterritorial rates, it being recognized that c. f. a. rates would not entirely harmonize with rates between central and trunk-line territories. Lafayette Box Board & Paper Co. v. A. C. & Y., 101 I. C. C. 273, 276.

(5o) Proposed cancellation of present distance rates on brick and related articles from Carbon Cliff, Ill., to destinations in Iowa, making applicable specific group rates in effect from certain Illinois points to Iowa, for purpose of removing alleged undue prejudice against Shale City, Ill., found not justified. Application of proposed rates would result in unreasonableness in certain of the rates from Carbon Cliff and present rate situation can be corrected by establishing rates in conformity with commission's forthcoming report in Mason City Brick & Tile Co., Docket No.

11672. Rates on Brick and Related Articles, 101 I. C. C. 297.

(5oa) Rates on iron and steel pipe from points in Texas to points in Oklahoma, and from points in Oklahoma to points in Texas found unreasonable to extent they exceeded rates for like distances computed under the scale prescribed on iron and steel pipe in Memphis Southwestern Investigation, 77 I. C. C. 473. Reparation awarded. Texas-Pacific Coal & Oil Co. v. C., R. I. & P., 102 I. C. C. 369.

(5ob) Rates on vegetable oils from points in Oklahoma to Houston found unreasonable to extent they exceed rates for like distances under the scale prescribed in Oklahoma Corp. Comm., 93 I. C. C. 183. Reparation awarded. Houston Packing Co. v. A., T. & S. F., 102 I. C. C. 385.

(5oc) Rates on mine timbers from points in Missouri to destinations in Illinois found unreasonable to extent they exceeded rates per net ton based on distance scale prescribed in Palmer case, 87 I. C. C. 622, on like traffic from and to points in same general territory. Reparation awarded. Collins Timber Co. v. B. & O., 102 I. C. C. 467.

(5od) Rates on salt from Anse La Butte, Avery, Salt Mine, Weeks Island, and Jefferson Island, La., to points in Mississippi and from Baldwin, La., to Jackson, Miss., found unreasonable and unduly prejudicial as compared with rates from Memphis and New Orleans, competing points. Distance scales were prescribed in 77 I. C. C. 473, and other cases where rates between points in southern territory were considered and a similar basis is appropriate here since it would be less likely to create difficulties in subsequent readjustments. Distance rates with a 45,000-pound minimum prescribed for future and reparation awarded. Miss R. R. Comm. v. A. & V., 102 I. C. C. 540.

(5oe) Rates on rough rice from producing points in Arkansas to New Orleans found not unreasonable, and on clean rice from Arkansas milling points to New Orleans, for export, found not unduly prejudicial. Present rates were established for purpose of enabling Arkansas millers to compete with Memphis and various Louisiana and Texas milling points in the export market and the rough-rice rates are a development from distance scales several times approved by commission as reasonable. A material increase in the clean-rice rates, as sought by complainant, would virtually restore a discriminatory situation which present rates were designed to remove. New Orleans Joint Traffic Bureau v. B., S. L. & W., 102 I. C. C. 686.

(5of) Rates on wrought iron and steel pipe and fittings and on oil-well supplies from certain points in Texas to Haynesville, La., found unreasonable to extent they exceeded specific commodity rates fixed on basis of distance scale prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, with addition of a differential to compensate for an extra line haul. Reasonable rates prescribed and reparation awarded. Humble Oil & Refining Co. v. L. & N. W. R. R., 102 I. C. C. 761.

(5p) Complainant attacked commodity rates on cottonseed, carloads, between Oklahoma and Texas as unjust and unreasonable. HELD, rates attacked unreasonable during the reparation period up to August 15, 1923 to extent they exceeded rates prescribed on cottonseed in the southwest in 98 I. C. C. 103, reparation awarded. Altus Cotton Oil Meal v. A. T. & S. F. Ry., 109 I. C. C. 92.

(5q) Undue prejudice can hardly be predicated upon observance of a properly graded distance scale. Galveston Commercial Asso. v. A. & S. Ry., 109 I. C. C. 114, 124.

(5r) Complainant attacked combination rates charged on mine timbers, including mine props, carloads, between April 28, 1920 and Feb. 21, 1924 from Missouri to Illinois as unreasonable. Shipments originated in southeastern Missouri on M. P., St. L. S. F., and Rock Island and moved to Illinois coal mining points. HELD, rates attacked unreasonable to extent they exceeded rates prescribed in 87 I. C. C. 622, reparation awarded. Egyptian Tie & Timber Co. v. M. P. R. R., 112 I. C. C. 101.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(ab) The commission can not order a readjustment of divisions prior to date of filing of complaint. New York Dock Ry Co. v. B. & O. R. R. Co., 89 I. C. C. 695, 707.

(c) In determining the divisions of joint rates the Commission is required under paragraph 6 section 15 to give due consideration among other things to the efficiency with which the carriers concerned are operated; the amount of revenue required to pay their respective operating expenses, taxes, and a fair return upon their railway property held for and used in the service of transportation; the importance to the public of the transportation service of such carriers; whether any particular participating carrier is the originating, intermediate or delivering line; and any other facts or circumstances which would ordinarily without regard to the mileage haul entitle one carrier to a greater or less proportion than another carrier of the joint rate, fare or charge. Salina Northern R. R. v. A. T. & S. F. Ry., 92 I. C. C. 475, 478.

(d) The Supreme Court has held that the divisions fixed by the Commission must be adequate to avoid a confiscatory result. Clearly the fixing of a minus quantity as a division would bring about such a result. U. S. War Department v. A. & S. Ry., 92 I. C. C. 528, 537.

(e) Interstate Commerce Commission's action in making the physical connection of one railroad with others the sole test for determining which carriers should have their division of joint rates reduced in favor of weaker road held not arbitrary. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(f) Interstate Commerce Commission's order relating to divisions of joint rates must be based on evidence as to the individual joint rates and divisions; data dealing with the traffic in the aggregate, though proper for consideration, being insufficient. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(g) Interstate Commerce Commission's order, under Interstate Commerce Act, §15 (6), as amended by Transportation Act 1920, §418 (Comp. St. Ann. Supp. 1923, § 8583), relating to divisions of interstate joint rates on traffic interchanged by certain railroad with railroads making direct connection with it, HELD, not void for failure to make all carriers participating in joint rates parties to proceedings before Commission,

where order affected only the railroads connecting directly with railroad favored by order, and all such carriers were parties to the proceedings. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(h) The Interstate Commerce Commission, in determining divisions of interstate joint rates on traffic interchanged by certain railroad with other railroads, must consider, in addition to the relative cost of service, whether a particular carrier is an originating, intermediate, or delivering line, the efficiency with which the several carriers are operated, the amount of revenue required to pay their respective operating expenses, taxes, and a fair return on their railway property, the importance to the public of the transportation service of such carriers, and other facts, if any, which ordinarily without regard to mileage haul, entitle one carrier to a greater or less proportion than another of the joint rate. United States v. Abilene & S. Ry. Co. 44 Sup. Ct. 565.

(i) In determining divisions of joint rates, the Interstate Commerce Commission may in the public interest consider the financial needs of a weaker road, and give a division larger than justice merely as between the parties would suggest, in order to maintain it in effective operation as part of an adequate transportation system, provided the share left to its connections is adequate to avoid a confiscatory result. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(j) It is settled that in determining what the divisions should be, the Commission may, in the public interest, take into consideration the financial needs of the weaker road; and that it may be given a division larger than justice merely as between the parties would suggest in order to maintain it in effective operation as part of an adequate transportation system, provided the share left to its connections is adequate to avoid a confiscatory result. Southern Class Rate Investigation, 100 I. C. C. 513, 653.

(k) While divisions, in first instance, are properly the concern of carriers, the commission has certain jurisdiction with regard to them, exercise of which requires the consideration of many factors. Peoria & Pekin Union, 93 I. C. C. 3, 19.

(l) In determining and prescribing divisions the commission is enjoined to give due consideration, among other matters, to efficiency with which carriers concerned are operated and importance to public of the transportation services of such carriers. Christie and Eastern Ry. v. K. C. S., 93 I. C. C. 675, 679.

(m) Upon contention that a suspension order of the commission prohibiting proposed increased rates from going into effect and requiring the maintenance of present rates, constituted establishment of present rates "pursuant to a finding or order of the commission," and that therefore the commission has authority to require readjustment of divisions of the present rates back at least to date of order of suspension. HELD, an order of suspension is not an order such as is contemplated by Congress when it refers to the "establishment" of a rate by the commission's order. Petroleum Oil from Arkansas to Louisiana, 95 I. C. C. 55, 64, 65.

(n) Rights of carriers in matter of divisions when fixed by the commission, must be decided in view of the amendment to the interstate commerce act of February 29, 1920, as embraced in section 15 (6). L. & N. v. C. & M., 95 I. C. C. 107, 113.

(o) The commission is empowered, under section 15 (6) of the interstate commerce act, to require a readjustment of divisions of joint rates for the period subsequent to the filing of a complaint in cases where such rates were established pursuant to a finding or order of the commission See 89 I. C. C. 695. Marion & Eastern R. R. Co. v. C. & E. I. Ry. Co., 96 I. C. C. 402.

(p) All carriers whose lines connect directly with the line of Missouri and North Arkansas having been joined as respondents, FOUND: That other carriers which unite in publishing interstate joint rates applying to, and which participate in transporting, certain of the traffic interchanged are not necessary parties in a proceeding to determine the divisions of such joint rates between carrier named and each of its immediate connections, following decision of U. S. Supreme Court in Orient Divisions case, 265 U. S. 274. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119.

(q) Contention of carriers which joined in petition for rehearing that commission was without jurisdiction to make the order entered for the reason

that not all of the carriers which participated in publishing the joint rates to which the order fixing divisions applied were joined as respondents in the proceeding, not sustained in view of the decision of U. S. Supreme Court in the Orient Divisions case, 265 U. S. 274. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119, 122, 123.

(r) If the carriers were correct in their contention that the commission is without power to compel any one of them to accept divisions which would prevent it from earning a fair return, result would be that the commission could never control divisions unless the portion remaining to each carrier was clearly adequate to avoid confiscation and the commission's power to prescribe just, reasonable, and equitable divisions of rates so low as to border on confiscation would be doubtful. Divisions of Joint Rates and Fares on M. & N. A. Ry. Co., 98 I. C. C. 119, 139, 140.

(s) All of the joint rates here considered were established pursuant to findings under Increased Rates, 1920, 58 I. C. C. 220. Rates so established come within the plain language of paragraph 6 of section 15 which gives the Commission power to require readjustment of divisions for the period subsequent to the date the investigation was instituted where the joint rates were established pursuant to a finding or order by the Commission. Divisions received by the Brimstone R. R. & Canal Co. 104 I. C. C. 415, 434.

(t) The Minnesota law prohibits the pooling of revenues by competing rail carriers, but the Federal commission has jurisdiction in the matter under section 5 of the act, paragraph 1 of which gives it authority to enter orders approving certain pooling arrangements, and paragraph 8 of which provides that the carriers affected by such orders shall be relieved of all restraints or prohibitions by law, state or federal, in so far as may be necessary to enable them to do anything authorized or required by such orders. Joint passenger train service, 107 I. C. C. 493, 495.

(u) The Commission is authorized to prescribe divisions only where joint rates are involved, or in a proceeding where joint rates are prescribed. Proportional rates on livestock, 109 I. C. C. 417, 424.

New England Divisions, 85 I. C. C. 482; Hampton & Branchville R. R. & Lumber Co. v. A. C. L. R. R. Co., 88 I. C. C. 77.

§1a. Orders of Commission.

(a) In the administration of that portion of the act dealing with divisions, it is necessary to proceed in a practical way. As was said by U. S. Supreme Court in the New England Divisions case, 261 U. S. 184; "Obviously, Congress intended that a method should be pursued by which the task, which it imposed upon the commission, could be performed." To insist that every adjustment of divisions between two connecting lines must be accompanied by a readjustment of divisions between all lines participating in the joint rates would often be tantamount to denying the possibility of granting needed relief. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119, 123.

ALL OTHER CITATIONS

New England Divisions, 85 I. C. C. 482; Carriers Division of Bituminous Coal Rates, 85 I. C. C. 617.

II. PUBLICATION AND TARIFFS.

See Tariffs.

§2. Obligation to file.

(a) Divisions are affected with a public interest and are not a mere matter of bargain and trade between carriers. One of the duties of a common carrier is to participate in such joint rates as the public interest requires. This is an incident of their public undertaking, and equity does not necessarily demand that they be compensated by larger divisions in the instances where it might be more advantageous to confine traffic to their own lines. U. S. War Department v. A. & S. Ry., 92 I. C. C. 528, 538.

III. AMOUNT OF DIVISIONS.

§2½. In General.

(a) Divisions accorded southern carriers out of joint transcontinental class and commodity rates found unreasonable and inequitable and measure of divisions prescribed for future. While divisions received prior to Federal control were to an extent dictated by the southern lines, present divisions were promulgated with-

out their consult or consent and in a sense may be said to have been forced on them. Moreover, they appear to be substantially on the mileage prorate basis and when consideration is given to the respective hauls west and east of the Mississippi, the southern carriers are entitled to receive more than a mileage prorate. Alabama & Mississippi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385.

(b) It is one of the duties of a common carrier to participate in joint rates if the public interest requires such participation. And equity does not demand that carriers be compensated by larger divisions because they are not in great need of certain joint rates, or because they would be financially bettered if they were not maintained. Pittsburgh & W. Va. Ry. Co., 61 I. C. C. 272, 282, 283, Alabama & Mississippi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385, 394.

§3. Computation.

See Advanced Rates §18 (10).

(a) In 66 I. C. C. 535 the Commission found the Fore River R. R. Corporation, was a common carrier and prescribed reasonable joint rates on oil, carloads, from complainants refinery on the Fore River to destinations in the New England states. The case was reopened for the purpose of prescribing divisions. The traffic of the refining company involved here consists wholly of outbound shipments loaded in privately owned cars. Distance of loaded movement is about 1.5 miles. The evidence shows that this service is extremely simple, no interference, congestion, or operating difficulties being encountered. HELD, between May 15, 1922 and July 1, 1922 just divisions of joint rates on oil would have been $8 per car to the Fore River and remainder to defendant carriers; that on and after that date $7.20 to Fore River. Massachusetts Oil Refining Co. v. B. & A. R. R., 93 I. C. C. 110.

(b) Complainant Christie & Eastern Ry., is a common carrier, and alleged that the divisions accorded it by defendants out of the joint interstate rates on lumber and forest products in which it participates are inadequate, unjust and inequitable. Christie & Eastern Ry., is controlled by the Peavy Wilson Lumber Co., operating 78.82 miles of main line, equipment consisting of two locomotives two freight cars, one caboose car and two gasoline motor cars. The trunk line connections are with the K. C. S., at Sandel, La., M. P., at Long Leaf, La., C. R. I. & P., T. & P., and M. L. & T., at LeCompte, La. Charges for divisions now are, for switching one mile or less from the junction $3 per car; over 1 mile and up to 3 miles, $4.05 per car; over 3 miles and not more than 10 miles, 2.5c; over 10 miles and not more than 20 miles, 3.5c; over 20 miles and not more than 40 miles, 4.5c and over 40 miles, 5.5c. The tap line scale is requested to be extended for distances from 40 miles to 70 miles. The lumber rates from Pearson to all points except New Orleans and points intermediate thereto are the same via all junctions. In view of the lower rate to New Orleans for export the C. & E., accepts a division of 3.5c on lumber hauled to Lecompte, a distance of 69 miles the same as it would receive if hauled to Candel, a distance of 10.17 miles and no change is sought in this division. This carrier is before the Commission seeking increased divisions with its trunk line connections at Long Leaf and Lecompte to compensate it for the additional costs which it has incurred in moving its traffic to those points instead of to Sandel. This record does not establish any benefit to the public from the extension of the service though it does show that this extension will be of benefit to the proprietary lumber company both in affording connection with other carriers and in better car supply. It is clearly established that the hauling of the traffic to Long Leaf or Lecompte, instead of to the less distant connection at Sandell, is an unnecessary and uneconomic service and not in the public interest. The traffic may now move from Pearson to all important consuming points, with few exceptions, via Sandel at rates as low as and over distances as short as by way of the routes through Long Leaf and Lecompte. HELD, complaint dismissed. Christie & Eastern Ry. v. K. C. S. Ry., 93 I. C. C. 675.

(c) A tap line is entitled only to just compensation for the actual and reasonable necessary services performed by it as a part of the transportation of the traffic from point of origin to destination, and orders relative to divisions out of the through rates are framed upon this principle. Christie & Eastern Ry. v. K. C. S. Ry., 93 I. C. C. 675, 677.

(d) In determining and prescribing divisions the Commission is enjoined to give due consideration, among other matters, to the efficiency with which the carriers concerned are operated and the importance to the public of the transportation services of such carriers. Christie & Eastern Ry. v. K. C. S. Ry., 93 I. C. C. 675, 679.

(e) Dansville & Mount Morris Ry., complained as to the divisions accorded it out of joint rates participated in by the several carriers on carload and less carload traffic moving between points on the D. & Mt. M., and interstate points as unjust, unreasonable, inequitable and unduly prejudicial and preferential. Complainant is a common carrier, extending from Dansville, N. Y., to Mount Morris, N. Y., 14.6 miles. Its only connection is with the Erie at Mount Morris and it has no track facilities there except those leased for the interchange of traffic. All freight cars for traffic of its line are furnished by the Erie. Since the complaint was filed the Erie has accorded the D. & Mt. M., increased divisions on particular traffic local to its own lines, and was and is willing to join with other carriers in according certain increased divisions on traffc to and from points on their lines in New England, trunk line and central territories. The Erie also increased complainants division on anthracite coal originating on its system lines from 61c to 80c per ton. The D. & Mt. M., is an originating and delivering operated efficiently and that the is negligible and its average haul is 14.6 miles, the length of its line. The record indicates that complainant is being operated efficiently and that the service rendered is satisfactory to its patrons. It does not appear that the D. & Mt. M., is put to any unusual expense in the joint service and, when consideration is given to the simplicity of the interchange, level grade, preponderance of inbound traffic, average haul, and other facts of record, such earnings can not be said to be unreasonable. HELD, present divisions not unjust, unreasonable, inequitable or otherwise unlawful, complaint dismissed. Murray, Receiver, v. E. R. R. Co., 95 I. C. C. 13.

(f) Financial need is but one of the elements which the Commission is directed to consider in determining divisions of joint rates, and the fact that a carrier is being operated at a loss is not of itself sufficient ground, on which to order an increase of divisions in its favor. Murray, Receiver, v. E. R. R. Co., 95 I. C. C. 13, 18.

(g) Complainant L. & N. R. R., alleged that the divisions accruing to the Cumberland & Manchester R. R., out of joint rates on coal originating at stations on that road and moving over complainants lines to Cincinnati, O., and other northern and western destinations and to Knoxville, Tenn., Atlanta, Ga., and other southern and southeastern destinations are unreasonable, excessive and inequitable. The Manchester owns and operates a short line railroad extending from a connection at Heidrick with complainants line at Manchester, 22.9 miles. Mines on the Southern were in operation when mines on complainants road were opened, and rates from the latter mines were made on a basis which would enable them to compete with mines on the Southern. The divisions received by lines north of the Ohio river on coal from the Kentucky mines are the same as those received by them on coal from the West Virginia mines on the C. & O. The carriers north and those south of the Ohio river have been accustomed to divide their coal rates in such wise that carriers south of the river take care of southern lateral line divisions out of the divisions accruing south of the river, and northern lines take care of northern lateral line divisions out of divisions accruing north of the river. HELD, present divisions of rates attacked not unjust, unreasonable, inequitable, or otherwise in violation of the act, complaint dismissed. L. & N. R. R., v. C. & M. R. R., 95 I. C. C. 107.

(h) Complainant, Prescott & Northwestern R. R. Co., alleged divisions allowed it to be unreasonable. Original report in 23 I. C. C. 549, 569. In 31 I. C. C. 490, the Commission fixed the maximum absorptions and divisions that might be paid by trunk lines to connecting tap lines, out of joint rates on lumber and forest products to interstate destinations. Evidence shows that all the lumber tributary to this line has been removed and none of the stockholders of either petition or the proprietary company owns or is interested in any timber or industry on or near petitioners line. HELD, petitioner dismissed from this proceeding and released from outstanding orders. Tap Line case, 95 I. C. C. 235.

(i) Carriers serving southern territory attacked as unjust, unreasonable, unduly prejudicial and inequitable divisions received by them out of joint eastbound transcontinental class and commodity rates from Pacific coast territory to points in southern territory, via Mississippi river gateways, East St. Louis, Ill., Memphis, Tenn., Natchez and Vicksburg, Miss., and Baton Rouge and New Orleans, La. Class and commodity rates between transcontinental and southern territories are made according to a group or blanket basis. For divisional purposes these rate groups are subdivided into nine further groups, and divisions to points in these several divisional groups are determined by certain fixed percentages, which vary in amount according to the distance of the group from the gateway. Prior to federal control there was no general line of joint class and commodity rates from transcontinental territory into the southeast. The blanket rate adjustment was established by the director general Feb. 20, 1918, and was in effect the extension of the same rate basis into the south on traffic to and from transcontinental territory that had long been in effect north of the Ohio river. It appears that a revenue prorate based on the commodity rates in effect prior to federal control is recommended as the principal guide that should aid the Commission in the determination of the issues presented. The transcontinental carriers originate the traffic and the southeastern lines deliver the same. In the transportation of this traffic some of the transcontinental and some of the southeastern lines are intermediate carriers. The evidence in this case justifies the statement that traffic density as a whole in the southern district exceeds that in the western district, but the general rate levels in the western district are higher than in the southern; also that the operating expenses of the carriers in the western district are proportionately higher than those of the carrier in the southern district and the latter have been for some time in the past, and are, yielding a higher return on their investment than the former. However, it is probable that comparisons between the southern and western districts as a whole do not in all respects accurately reflect the conditions under which the traffic under consideration is handled. The transcontinental lines have all rail hauls in excess of 2,000 miles to the Mississippi river crossings, largely over main lines of traffic density greater than the average in western territory, while the hauls of the southeastern lines are shorter and probably consist to a less degree of main line movements, being distributive to destinations throughout southern territory. The present transcontinental rates are blanketed throughout the southeastern territory and are lower than the southern lines prefer to have. The maintenance of this blanket system of rates is apparently to the interest of the transcontinental lines as well as of the public. The evidence justifies the continuance of the plan of grouping the southeast and fixing divisions on a percentage basis to the several groups. Under such a plan carriers are relieved of much computation and no difficulties are encountered when changes in rate levels are made. The boundaries as now maintained appear to be satisfactory to both complainants and defendants. They are substantially as agreed to during the negotiations of 1902. HELD, present divisions accorded complainants out of joint eastbound transcontinental class and commodity rates here involved are unjust, unreasonable and inequitable and for future divisions should be on the basis of allowing complainants the following percentages of such joint rates, subject, to the local rates from the respective gateways to destination points as maxima: Divisions group 1, east of East St. Louis, 14.5%; east of Memphis 17% east of New Orleans 21%; Divisions group No. 2, east of East St. Louis 19%, east of Memphis 14.5%, east of New Orleans 19%; Divisions group No. 3, east of East St. Louis 21%, east of Memphis 19%, east of New Orleans 14.5%; Divisions group No. 4, east of East St. Louis 19%, east of Memphis 19% east of New Orleans 24%; Divisions group No. 5, east of East St. Louis 21%, east of Memphis 18%, east of New Orleans 21%; Divisions group No. 6, east of East St. Louis 24%, east of Memphis 20%, east of New Orleans 20%; Division group No. 7, east of East St. Louis 29%, east of Mmephis 28%, east of New Orleans 29%; Divisions group No. 8, east of East St. Louis 28%, east of Memphis 25% east of New Orleans 27%; Divisional group No. 9, east of East St. Louis 29%, east of Memphis 27% east of New Orleans 25%.

Alabama & Mississippi Ry. v. A. T. & S. F. Ry., 95 I. C. C. 385.

(j) In 73 I. C. C. 319, the Commission found the divisions of joint rates on traffic interchanged between the K. C. M. & O., and its connections, as unjust, unreasonable and inequitable. The case was reopened and further hearing had. If it can be assumed that proper recognition was originally given to the lack of traffic density on the Orient, the gradual leveling of conditions east and west of the Missouri river, resulting from the more rapidly increasing population and production west of the river, would indicate that the advantage of the Orient in ton mile earnings should not be decreased rather than increased, but the history of the Orient abundantly proves that its divisions, whatever their basis, have not been sufficient to meet the cost of service. HELD, the general finding of the former report to the effect that the Orient is a necessary transportation agency, the efficient service of which should be continued in the public interest, should be affirmed. The Orient is operated with reasonable efficiency. Its report of railway operating income for the year 1923 does not fairly reflect the results of normal operation, the revenues having been increased by temporary measures and its expenses for maintenance understated. That its cost per unit, including use of capital, for the transportation of interstate joint freight traffic has been heretofore, is now, and for the immediate future, will be greater than that of its connections for handling the same joint traffic. That the divisions of interstate joint freight rates, except as noted, on traffic interchanged with its immediate connections, are since Sept. 15, 1922, unjust, unreasonable and inequitable. That just divisions accruing to the Orient since Sept. 15, 1922 will be not less than the divisions accruing on the present basis plus the following percentages A. S., 12%, A. T. & S. F., 20%, C. R. I. & P., 16%, Ft. W. & D. C., 24%, G. H. & S. A., 20%, G. C. & S. F., 24%, Midland Valley 16%, M. K. & T., 16% M. P., 16%, St. L. S. F., 16%, T. & P., 16%. K. C. M. & O. Ry. Divisions, 96 I. C. C. 378.

(k) While the division of a through rate should not exceed a local rate, the rule is not a proper one for universal application, nor has it been so applied by the Commission or by the carriers themselves. K. C. M. & O. Ry. divisions, 96 I. C. C. 378, 395.

(l) In 68 I. C. C. the Commission found the divisions accorded complainant out of joint rates on coal from mines on its line to interstate destinations on and over the lines of defendants not unjust, unreasonable, inequitable or unjustly discriminatory. Complainant, Marion & Eastern R. R. Co., extends from Paulton, Ill., 11.5 miles to a point about 1 mile from Marion, Ill. Its only connection are with the I. C. C. & E. I., and M. P., at or near Marion. All freight cars for through traffic off its line are furnished by defendants under the uniform demurrage rules. Complainant pays no per diem on such equipment. Complainant is primarily an originating carrier and coal mining is the principal industry on its line. Complainant is a party with defendants to joint rates on coal from mines on its line to numerous interstate destinations on and over their lines. The mines served by complainant are in the socalled southern Illinois district with respect to the rates on this traffic, and take the group rates to all destinations. Applying all of the elements required by the statute to be considered in prescribing divisions of joint rates to the facts disclosed upon the record in this case, the Commission is of the opinion that complainant is lawfully entitled to a larger share of the increases just mentioned than was accorded it. HELD, divisions received by complainant out of the joint rates on coal were on and after Jan. 1, 1922 unjust, unreasonable and inquitable. Reasonable divisions between Jan. 1, 1922 and June 30, 1922 would have been 24c per ton, subsequently 22c per ton. Marion & Eastern R. R. v. C. & E. I. R. R., 96 I. C. C. 402.

(m) In prescribing divisions of joint rates the Commission is directed by the statute to give due consideration, among other things, to the amount of revenue required to pay operating expenses, taxes and a fair return on the railway property held for and used in the service of transportation of the respective carriers parties thereto. Marion & Eastern R. R. v. C. & E. I. Ry., 96 I. C. C. 402, 405.

(n) In 68 I. C. C. 47 the Commission established the divisions of interstate joint freight rates which the Missouri & North Arkansas and each of its eight

immediate connections should receive on certain freight traffic interchanged between them, which divisions were established since March 1, 1922. Carriers petitioned for further hearing. HELD, divisions of interstate joint freight rates on traffic originating or terminating at stations on the M. & N. A., and interchanged prior to March 1, 1922 between the M. & N. A., and its immediate connections, as unjust unreasonable and inequitable. HELD, further, divisions prescribed in the original report are just, reasonable and equitable divisions to apply, excluding that traffic as to which the M. & N. A., serves solely as an intermediate carrier. Divisions of joint rates and fares of M. & N. A. Ry., 98 I. C. C. 119.

(o) Complainant, Erie R. R., alleged divisions accruing to it out of joint transcontinental rates on fresh fruits and vegetables from California, Oregon, Washington, Idaho, Utah and Colorado to New York and Newark, N. J., as unjust, unreasonable, inequitable and unduly prejudicial. Piers 20 and 21 on Manhattan Island, New York are leased from the city and constitute the Eries Duane St. station. Only Pier 20 can be heated; therefore, during the winter it, only, is used for fruits and vegetables. About 85% of the fruits and vegetables destined to New York city from the Pacific coast states moves over the Erie to its Duane street station. Prior to May 1, 1922 such joint rates were divided 75% to lines west of Chicago and 25% to lines east of Chicago. Effective on that date the western lines allowed and eastern lines accepted on all kinds of traffic moving between the points involved 72.5% and 27.5% west and east of Chicago, respectively. The distance from Chicago to New York is 987 miles over the Erie and 907 miles over the short line. Some of the services performed by the Erie on fruits and vegetables which it does not perform on other traffic are telegraphic advice of the eastbound movement of the cars; switching at Croxton yard to segregate the cars ordered each day and arranging them so as to arrive at the Jersey City slip in such order that the floats as they successively arrive alongside the Duane street piers will carry the cars of the particular consignee to whom nearby floor space has been allotted for that day; operating a close time schedule; coopering broken packages; and removing damaged fruits and vegetables. From this record the conclusion must be reached that the principal carriers parties to this proceeding are efficiently operated and that the transportation services performed by them are important to the public. While extra service performed by the Erie incident only to the marketing of fruit may not be charged to its connections, if that extra service is also necessary to secure maximum use of available transportation facilities, and indispensable to the handling of the traffic in order to avoid congestion and to prevent increased damage claims, then to that extent the extra service may and should be considered in the fixation of divisions between the carriers. HELD, present divisions of the joint eastbound transcontinental rates on fresh fruits and vegetables to the Duane street station of the Erie at New York have been and are unjust, unreasonable and inequitable; that for the future the just, reasonable, and equitable divisions thereof will be 3c per 100 pounds to the Erie and the remainder of the revenue 27.5% to the lines east of Chicago and 72.5% to the lines west of Chicago; that those divisions would have been the just, reasonable, and equitable divisions on and after Sept. 13, 1922 and adjustment in accordance therewith is required. Erie R. R. v. A. & V. Ry., 98 I. C. C. 268.

(p) Complainant attacked reasonableness of rates on ores and concentrates from Plumas County, Calif., to Wabushka, Nev., the relationship of those rates on like traffic from the same points of origin to Utah smelters, and the reasonableness and propriety of the interstate rates and divisions of interstate rates of of the Indian Valley R. R. and its connections on such traffic. Previous report in 64 I. C. C. 477. The Indian Valley R. R. was organized and has at all times been maintained and operated as a separate and distinct enterprise from the Engels Co. It has its own distinct organization, it pays its own office rent, and is conducted independently. It has undertaken to perform all the obligations resting upon a common carrier by railroad engaged in intrastate and interstate commerce. HELD: Rates on ores and concentrates in carloads, minimum 40,000 pounds, from Paxton, Spring Garden and Engels, Calif., to Wabushka, Nev., will for future be unreasonable to extent they exceed rates ranging from Paxton to Spring Garden from $2.40 for $20 value to $4.80 for $100 value and from Engels,

Calif., $4.40 for $20 to $6.80 for $100 value. HELD: Failure of defendants to maintain from Paxton and Spring Garden to Wabushka rates similar in all respects as to the conditions under which such rates are applicable to those maintained on like traffic from Spring Garden to Garfield and International, Utah, but not in excess of 60 per cent thereof, will be unduly prejudicial to Wabushka. HELD: Rates from Engels, carloads, and other local stations on the Indian Valley R. R. to Wabushka will be unduly prejudicial to Wabushka to extent they exceed the rates from Paxton, Calif., to Wabushka by more than the amount by which the rates maintained on like traffic from the same points of origin to Garfield and International exceed the rates from Paxton to Garfield and International. HELD, further, Divisions accruing to the Indian Valley out of the joint rates on ores and concentrates, carloads, from Engels, Calif., and other local stations on its line to Wabushka, Nev., will be unjust unreasonable, inequitable and unduly prejudicial as between the carriers parties thereto to the extent they are greater or less in amount than those out of the rates maintained on like traffic from the same points of origin to Garfield and International or either of them. Mason Valley Mines Co. v. W. P. R. R., 100 I. C. C. 180.

(q) A line participating in a joint rate does not prove that it is entitled to a division equal to its local rate by showing that the service which it performs in in connection with the point haul is not less expensive than its local service. That may be a reason why a joint rate lower than the combination of locals should not have been established, but it does not demonstrate that the carrier should have an amount equal to its local as its fair share of the joint rate which has been established. Nor does it prove, necessarily, that the joint rate should not have been established. It is a generally accepted principle of rate making which has frequently found expression in the Commission's decisions, that through rates should be less than the sum of the intermediate rates. This is a principle, which like other principles of rate making, is not wholly dependent upon immediate costs of service. It looks also to the future and recognizes that such joint rates stimulate commerce and business and induce a flow of traffic which in itself has a tendency to lessen the cost of service. Michigan R. R. v. P. M. R. R., 101 I. C. C. 146, 152.

(r) When considered in light of the ordinary rule of rate making that as distance increases the rate of earnings decreases, divisions received by a carrier whose earnings for a single year were 72.16 per cent of the revenue for 90.07 per cent of the haul can not be said to be unreasonable, unjust, and inequitable. L. & N. v. C. & N., 95 I. C. C. 107, 115.

(s) While, generally speaking, the division of a through rate should not exceed the local rate, the rule is not a proper one for universal application, nor has it been so applied by us or by the carriers themselves. Allowances on Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C. 371, 395.

(t) During the period of its operations in 1922 and 1923, the Missouri and North Arkansas was benefited in respect of its revenues by reason of fourth-section order No. 8128, which authorized the carrier to meet the rates of its competitors to and from common points on its line and to maintain higher rates at intermediate stations. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119, 126.

(u) In 68 I. C. C. 375 the Commission found the Brimstone Railroad & Canal Company was a common carrier subject to the act and prescribed divisions to apply between it and its trunk line connections, the Louisiana Western, Southern Pacific, and Kansas City Southern. Record was held open to permit respondents to make necessary cost studies for the purpose of arriving at lawful divisions. Second report found in 88 I. C. C. 62, and upon petition the entire subject was reopened. HELD, based upon the cost of the service and a fair return upon the value of the property held for and used in the service of transportation for the public generally, during the period from Aug. 1, 1921 to but not including July 1, 1922 just, reasonable, and equitable divisions to the Brimstone would have been: From the S. P., on all carload traffic $7.22 per car; on merchandise, less carload, 11.5c per 100 pounds. From the K. C. S., on all carload traffic $8.89 per car; on merchandise, less carload, 11.5c per 100 pounds. On and after July 1, 1922, from the S. P., on all carload traffic $6.50 per car; on merchandise, less car loads, 10.5c per 100 pounds. From the K. C. S., on all carload traffic $8 per car; on merchandise, less carload

14c per 100 pounds. Divisions received by Brimstone R. R. & Canal Co., 104 I. C. C. 415.

(v) Under the schedules now in effect, the Mississippi Central technically offers or concurs in transportation at stated charges from and to points east of Hattiesburg which it neither reaches nor serves by trackage agreements with its connecting lines. The B. & H. S. and G., M. & N. have been hauling carload freight between Hattiesburg and Mobile for the account of the Mississippi Central without any agreement with respect to compensation therefor. Adjustments of divisions on traffic thus handled should be based upon strict mileage prorates. Cancellation of Rates and Routes via Mississippi Central, 100 I. C. C. 71.

(w) Upon contention that disparity between the divisions allowed the Indian Valley Railroad out of the Utah rates and out of the joint rates to Wabuska, Nev., together with the proprietary interest of the Engels Copper Mining Company in that line, creates an incentive for proprietary company to ship its products to Utah, thereby creating undue prejudice to smelter at Wabuska. HELD: Divisions accorded Indian Valley Railroad out of joint freight rates on ores and concentrates from Engels, Calif., and other stations local on its line, to Wabuska, Nev., will for the future be unjust, unreasonable, inequitable and unduly prejudicial as between carriers parties thereto, to extent they are greater or less than divisions accorded out of corresponding rates contemporaneously maintained on like traffic from same points of origin to Garfield and International, Utah, like divisions to Utah smelters and to Wabuska being required. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 181, 182.

(x) In no instance should the minimum division of joint rates to either the Warrior River Barge Line or the L & N. be less than 25 per cent. U. S. War Dept. v. A. & S. Ry. Co., 100 I. C. C. 491, 510.

§4. Inability to agree.

See Advanced Rates §7 (6); Discrimination §10½; Through Routes and Joint Rates §5.

(a) A dispute among carriers over divisions is no justification for increased rates. Transit privileges on grain, 92 I. C. C. 161, 162.

§7. As evidence.

See Comparative Rates; Evidence §13 (2), §13 (3); Through Routes and Joint Rates §14.

(a) Unsatisfactory divisions is not recognized as a sufficient justification for increased rates. Transit on lumber at Buffalo, 92 I. C. C. 181, 182.

(b) Although divisions may be considered as evidence they are not conclusive and ordinarily do not afford a sound basis upon which to determine the reasonableness of rates. Schloss & Kahn Grocery Co. v. L. & N. R. R., 95 I. C. C. 618, 619.

(c) Divisions do not ordinarily afford a sound basis upon which to judge the unreasonableness of rates. Chicago Heights Mfrs. Asso. v. B. & C. C. T. R R., 101 I. C. C. 675, 679.

(de) Derived directly from a freight rate or a division thereof does not in all cases measure the benefit to the carrier of participating in a traffic. Kansas City, Mexico & Orient Divisions, 96 I. C. C. 378.

(f) The matter of divisions is no part of this case; nor is the fact that the carriers are in disagreement as to the proportions of the through revenue they should receive a sufficient justification for the increased rates. It is fundamental that disagreements or controversies between the carriers will not be permitted to work injury to the shipper. Switching at Hagerstown, Md., 102 I. C. C. 14, 18.

(g) Fact that divisions accruing to various carriers participating in a through movement are not satisfactory to all of them is insufficient justification for depriving a shipper of an existing rate basis. Grain and Products from Argo, 101 I. C. C. 303, 306.

IV. LEGALITY.

§8. In general.

See Allowances IV; Legality; Tap Lines §7.

(a) The Commission has repeatedly

condemned the attempts to make the application of rates dependent upon the existence of division arrangements Routing on paper from Michigan, 91 I. C. C. 452, 453.

V. REASONABLENESS.

§9. In general.

See Reasonableness of Rates.

(a) Divisions of joint rates on bituminous coal and joint class rates accorded Federal Valley R. R. Co., found unjust, unreasonable, and inequitable, and just, reasonable, and equitable divisions for future prescribed. The road has been efficiently operated, is important to the public at large, the territory served is dependent upon it for transportation, and it was shown that in the past it has failed to earn enough to cover operating expenses, taxes, and a fair return upon value. Ohio Farm Bureau Federation v. A. & W. Ry. Co., 89 I. C. C. 489.

(b) Where a short line's compensation has not kept pace with the general increases in rates of trunk lines, although its operating expenses have increased in common with theirs, such short line should be accorded the benefit of a proportionate share of the increase in rates. See Ohio & Kentucky Ry Co., 77 I. C. C. 636. New York Dock Ry. v. B. & O. R. R. Co., 89 I. C. C. 695, 706.

(c) Divisions of joint freight rates accorded the New York Dock Ry., found unjust, unreasonable and inequitable. Just, reasonable, and equitable divisions prescribed for future and readjustment required back to date of filing of complaint. Previous report, 73 I. C. C. 656. New York Dock Ry. v. B. & O. R. R. Co., 89 I. C. C. 695.

(d) Complainant, New York Dock Ry., operates certain freight terminals in borough of Brooklyn, New York City, N. Y. and attacked rates and divisions between points on its line and the lines of all common carriers in the United States as unreasonable, unjust, inequitable and prejudicial. On August 25, 1920 the rates of payment to the dock railway were 4.2c on carload freight and 6.2c on less carload freight to or from trunk line western termini or points east thereof and 5.4c to and from points west thereof; except that on coal the amount paid was 35c per long ton, on coke 60c per net ton, and on traffic to and from the New Haven the amounts were 4c on carload freight and 6c on less carload freight. During the period from August 26, 1920 to June 30, 1922, the dock railway retained amounts equivalent to 40% over those accepted on August 25, 1920 pursuant to 58 I. C. C. 220, Ex Parte 74, and on and after July 1, 1922, 26% over those accepted on August 25, 1920, following Reduced Rates, 1922 68 I. C. C. 676. About 90% of the gross revenue of the dock railway is from traffic interchanged with the trunk lines. The original allowances of 3 and 4.2c are deducted from the through freight rates before division is made among the other interested carriers, the excess of the present payment or retentions over those amounts being borne by the trunk lines connecting with the dock railway. The valuation claimed by the dock railway can not be accepted upon this record as a basis for prescribing divisions of joint rates. Its right of way is merely a right of user in common with the use made of the same property by the dock company and its lessees, which may be compared with trackage rights given by one railroad to another, the tracks being used jointly, or with the right of a railroad in a street used in common with the public. In either case the right is not valued the same as though the right of way were owned or used exclusively by the carrier being valued. HELD, the Commission would not be warranted in prescribing divisions to the dock railway sufficient to take care of its showing of revenue needs, and it is impracticable for the Commission to determine from that showing just how much additional revenue the dock railway really needs and is entitled to in the form of increased divisions. But the dock railways compensation has not kept pace with the general increases in the rates of the trunk lines, although its operating expenses have increased in common with theirs, and no reason has been shown why it should not be accorded the benefit of a proportionate share of the increase in the rates. HELD, divisions received by the dock railway on interstate traffic moving on legally established joint rates unjust, unreasonable and inequitable to the following extent: carload 6.3c, less carload, 9.3c coal 49c, coke 84c, between July 28, 1921 and June 30, 1922, from or to trunk line western termini and east thereof; carload 8.9c, less carload 12.3c, coal 49c coke 84c, from or to west of such western termini; carload 6c, less

carload 9c, from or to New Haven R. R. Subsequent to July 1, 1922, on traffic moving from or to trunk line western termini and east thereof, carload, 5.7c, 8.4c, less carload, coal 44c, coke 76c; west of such western termini, carload 8c, less carload 11c, coal 44c, coke 76c; from or to New Haven R. R., carload, 5.4c, less carload 8.1c. New York Dock Ry. v. B. & O. R. R., 89 I. C. C. 695.

(e) While divisions are properly the concern of the carriers, the Commission has certain jurisdiction with regard to them, the exercise of which requires the consideration of many factors not adequately covered by the present record. The Commission also has jurisdiction over discrimination by carriers against their connections as well as against shippers. Peoria & Pekin Union Ry. Co., 93 I. C. C. 3, 19.

(f) The fact that a carrier has been operating at a deficit does not of itself prove that it is fairly entitled to increased divisions, and still less when it is coupled with the fact that the coal tonnage from mines located on its line has been far below normal. Massachusetts Oil Refining Co. v. B. & A. R. R., 93 I. C. C. 110, 114.

(g) Equity does not demand that carriers be compensated by larger divisions because they are not in great need of certain joint rates, or because they would be financially bettered if they were not maintained. Alabama & Mississippi Ry. v. A. T. & S. F. Ry., 95 I. C. C. 385, 394.

(h) The revenue derived directly from a freight rate or a division thereof does not in all cases measure the benefit to the carrier of participating in a traffic. The propriety of a particular division, dissassociated from others, can be determined only by investigation of the circumstances and conditions surrounding the traffic. K. C. M. & O. Ry. divisions, 96 I. C. C. 378, 395.

(i) The Supreme Court has spoken of the provisions of the act concerning divisions as an integral part of the machinery for distributing the funds except to be raised by the new rate making sections. Marion & Eastern R. R. v. C. & E. I. R. R., 96 I. C. C. 402, 409.

(j) The Commission in making division of joint rates between groups of carriers might in the public interest consult the financial needs of a weaker group in order to maintain it in effective operation as part of an adequate transportation system, and give it a greater share of such rates if the share of the other group was adequate to avoid a confiscatory result. Divisions of joint rates and fares of M. & N. A. Ry., 98 I. C. C. 119, 122.

(k) The character of traffic interchange, the manner in which it is handled, the loading, and average length of haul, and other factors which determine the rates and the earnings on the ton mile and car mile basis may not be the same for the traffic interchanged as for the total freight traffic of the carrier. In fact, these elements differed widely in the instances of carriers which are parties in this proceeding. The factors which control rates and earnings on ton mile and car mile basis and many other facts affect costs of the service in such a way that in the absence of a satisfactory showing of approximate similarity in all things which have a bearing upon such costs no one can say that average system freight costs per unit are a proper measure of the same units of cost incident to traffic interchanged with a single connecting carrier. Divisions of joint rates and fares on M. & N. A. Ry., 98 I. C. C. 119, 129.

(l) The fact that the apportionment of revenue accruing to the various carriers in a through movement is not satisfactory to all of them is far from being a sufficient justification for depriving a shipper of an existing rate basis. Grain and Grain Products from Argo, 101 I. C. C. 303, 306.

(m) Divisions fixed by commission must be "adequate to avoid a confiscatory result." See U. S. v. Abilene & Southern Ry. Co., 265 U. S. 274. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528, 537.

(n) Upon further hearing original report 77 I. C. C. 317, basis of just, reasonable, and equitable divisions of joint rail-barge-rail rates on sugar from points in Louisiana to northern destinations prescribed. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528.

(o) Dividing rates largely in accordance with amount and cost of service rendered by each carrier does not mean that they must be divided on a mileage basis. Consideration must be given, as the statute requires, to whether a particular carrier is an originating, inter-

mediate, or delivering line, all of which has a bearing upon question of cost of service. Nor can it be determined with precision what is the cost of service rendered by a particular carrier. All that the commission can do is to use its best judgment in the light of evidence before it. U. S. War Dept. v. A. & S. Ry. 92 I. C. C. 528, 538.

(p) While divisions, in first instance, are properly the concern of carriers, commission has certain jurisdiction with regard to them, exercise of which requires the consideration of many factors. Peoria & Pekin Union, 93 I. C. C. 3, 19.

(q) Upon further hearing, just, reasonable, and equitable divisions to be received by Fore River R. R. Corp., out of joint rates on petroleum and products established pursuant to finding in original report, 66 I. C. C. 535, prescribed, and adjustment thereof required upon basis herein found just, reasonable, and equitable. Massachusetts Oil Rfg. Co. v. B. & A., 93 I. C. C. 110.

(r) Carrier, which operated at a deficit, contended that under section 15 (6) of the act it is entitled to such just, reasonable, and equitable divisions out of joint rates as will pay proportions of its operating expenses, taxes, rentals, and a fair return on value of property used in service of transportation, properly attributable to services performed. HELD, following Federal Valley R. R. Co., 68 I. C. C. 496, fact that carrier has been operating at a deficit does not of itself prove that it is fairly entitled to increased divisions. Massachusetts Oil Rfg. Co. v. B. & A., 93 I. C. C. 110, 114.

(s) In determining and prescribing divisions the commission is enjoined to give due consideration, among other matters, to efficiency with which carriers concerned are operated and importance to public of the transportation services of such carriers. Christie and Eastern Ry. v. K. C. S., 93 I. C. C. 675, 679.

(t) Divisions accorded the Dansville & Mt. Morris R. R., not shown unjust, unreasonable, inequitable, or otherwise unlawful. Claim for increased divisions is based upon carrier's poor financial condition and contention that the line should be sustained in the public interest by larger divisions measured by those accorded other comparable short lines in the same general locality. However, there is no uniformity of treatment in the matter of divisions to short lines throughout this territory, many of which received less favorable divisions than the D. & Mt. M. Moreover, complaining carrier is not put to any unusual expense in performing its joint service and, when consideration is given to simplicity of its interchange arrangement and operations, level grades, preponderance of inbound traffic, and average haul, earnings on its traffic can not be said to be unreasonable. Murray, Receiver v. E. R. R., 95 I. C. C. 13.

(u) Financial need is but one of the elements which the commission is directed to consider in determining divisions of joint rates, and fact that a carrier is being operated at a loss is not of itself sufficient ground on which to order an increase of divisions in its favor. Murray, Receiver v. E. R. R., 95 I. C. C. 13, 18.

(v) Just, reasonable, and equitable divisions to be received by Rock Island, Vicksburg, Shreveport & Pacific, and Yazoo & Mississippi Valley on crude and refined petroleum oil from points in the Smackover-El Dorado, Ark., field on the Rock Island to points in Louisiana on the Y. & M. V., prescribed for the future. Petroleum Oil from Arkansas to Louisiana, 95 I. C. C. 55.

(w) Divisions of joint rates applicable on coal moving from points on the Cumberland & Manchester R. R. over the L. & N. to destinations in the North, West, and South, as between the two carriers named, not shown unjust, unreasonable, inequitable, or otherwise unlawful. L. & N. v. C. & M., 95 I. C. C. 107.

(x) When considered in light of the ordinary rule of rate making that as distance increases the rate of earnings decreases, divisions received by a carrier whose earnings for a single year were 72.16 per cent of the revenue for 90.07 per cent of the haul can not be said to be unreasonable, unjust and inequitable. L. & N. v. C. & M., 95 I. C. C. 107, 115.

(y) Investigation instituted concerning the justness, reasonableness, and equitableness of the allowances or divisions received by the Texas Gulf Sulphur Company out of the rates applicable to the transportation of sulphur from Gulf Hill, Tex., to Texas Gulf ports, discontinued. Allowances or Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C. 371.

(z) Upon further hearing, in view of the opinion of the Supreme Court, in U.

S. v. Abilene & So. Ry. Co., 265 U. S. 274, findings in original report modified. Divisions on traffic interchanged between the Kansas City, Mexico, and Orient Lines and their immediate connections found unjust and unreasonable and just and reasonable divisions prescribed. Kansas City, Mexico & Orient Divisions, 96 I. C. C. 378.

(aa) Division accorded the Marion & Eastern Railroad Company out of joint rates on coal from mines on its line to interstate destinations found unjust, unreasonable and inequitable, but not unjustly discriminatory. Just, reasonable and equitable division prescribed. Former report, 68 I. C. C. 17, reversed. Marion & Eastern R. R. Co. v. C. & E. I. Ry. Co., 96 I. C. C. 402.

(bb) The commission is empowered, under section 15 (6) of the interstate commerce act, to require a readjustment of divisions of joint rates for the period subsequent to the filing of a complaint in cases where such rates were established pursuant to a finding or order of the commission. See 89 I. C. C. 695. Marion & Eastern R. R. Co. v. C. & E. I. Ry. Co., 96 I. C. C. 402, 409, 410.

(cc) Car-ownership cost is one of the transportation costs which should be considered in connection with the portion of the transportation performed by the independent line-haul carrier when fixing its division of the through rate. Virginia Blue Ridge Ry. v. S. Ry. Co., 96 I. C. C. 591, 594.

(dd) Upon further hearing, and consideration of reports of respondent carriers showing fully their experience in handling the interchanged traffic and in dividing the revenues in accordance with the divisions prescribed in original report, 68 I. C. C. 47; FOUND: That such divisions of the interstate joint freight rates applying to traffic interchanged between Missouri and North Arkansas and the eight other respondent carriers herein are, and for the future will be, just, reasonable, and equitable, excluding that traffic as to which the carrier named serves solely as an intermediate carrier. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119.

(ee) Divisions accorded Erie Railroad out of the joint eastbound transcontinental rates on fresh fruits and vegetables to Newark, N. J., found not unjust, unreasonable, inequitable, or unduly prejudicial. Erie R. R. Co. v. A. & V. Ry. Co., 98 I. C. C. 268.

(ff) Divisions accorded the Erie Railroad out of the joint eastbound transcontinental rates on fresh fruits and vegetables to the Duane Street Station, New York, N. Y., found unjust, unreasonable, and inequitable. The Erie performs special transportation services in connection with the delivery of this traffic and the record shows that the principal carriers parties to this proceeding are efficiently operated and that the transportation services performed by them are important to the public. Just, reasonable and equitable divisions prescribed for the future and retroactive adjustment required. Erie R. R. Co. v. A. & V. Ry. Co., 98 I. C. C. 268.

(gg) Upon contention that retroactive adjustment of divisions should not be made because there is no showing that the rates were established pursuant to a finding or order of the commission, FOUND: That the record shows that since the date and complaint was filed the rates have carried increases accorded in Increased Rates, 1920, 58 I. C. C. 220, and adjustment should be made from date of complaint and not from the date the increases were authorized, as sought by complainant, since the commission's authority to require adjustment extends only over the period subsequent to the filing of the complaint. Erie R. R. Co. v. A. & V. Ry. Co., 98 I. C. C. 268, 281.

(hh) The question is not whether defendants are legally separate entities, nor whether they are operated in all respects as they would be operated if ownership and management were concentrated in a single corporation. Rather the problem is to find a fair measure for the fixing of reasonable divisions. In determining the application of single line and joint line scales, the Commission has in numerous cases found that lines which are under common control and management, though owned by separate corporations, shall be deemed single units for rate making purposes. Raleigh Freight Traffic Bureau v. A. C. L. Ry., 107 I. C. C. 156, 158.

(ii) Under the schedules now in effect, the Mississippi Central technically offers or concurs in transportation at stated charges from and to points east of Hattiesburg which it neither reaches

nor serves by trackage agreements with its connecting lines. The B. & H. S., and G., M. & N. have been hauling carload freight between Hattiesburg and Mobile for the account of the Mississippi Central without any agreement with respect to compensation therefor. Adjustments of divisions on traffic thus handled should be based upon strict mileage prorates. Divisions prescribed for future. Cancellation of Rates and Routes via Mississippi Central, 100 I. C. C. 71, 72.

(jj) Upon investigation, divisions accruing to the Indian Valley Railroad out of joint rates on ores and concentrates, from local stations on its line to Wabuska, Nev., found unjust, unreasonable, inequitable, and unduly prejudicial as between carriers parties thereto to the extent that they are not the same as divisions of corresponding rates contemporaneously maintained on like traffic from same points of origin to Utah smelters. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180.

(kk) Upon contention that disparity between the divisions allowed the Indian Valley Railroad out of the Utah rates and out of the joint rates to Waubuska, Nev., together with the proprietary interest of the Engels Copper Mining Company in that line, creates an incentive for proprietary company to ship its products to Utah, thereby creating undue prejudice to smelter at Wabuska, HELD: Divisions accorded Indian Valley Railroad out of joint freight rates on ores and concentrates from Engels, Calif., and other stations local on its line, to Wabuska, Nev., will for the future be unjust, unreasonable, inequitable, and unduly prejudicial as between carriers parties thereto, to extent they are greater or less than divisions accorded out of corresponding rates contemporaneously maintained on like traffic from same points of origin to Garfield and International, Utah, like divisions to Utah smelters and to Wabuska being required. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 181, 182.

(ll) Contention of the Western Pacific that the quite general practice of blanketing long-haul rates on certain commodities from branch and independent lines on the junction-point basis of maintaining short-haul rates from such origins on an arbitrary over the junction point rate is a sufficient justification for divisions to respondent out of the rates to Garfield different from those out of the rates to Wabuska, not sustained. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 201.

(mm) Divisions of joint class and commodity rates between New Orleans, La., and Mobile, Ala., on one hand, and interior points on L. & N., on other, interchanged either at Mobile or Tuscaloosa, Ala., found just and reasonable both to Warrior River Service Barge Line and to L. & N., if divided upon a rate prorate basis, consisting of two prescribed factors, the percentages which such factors bear to the whole to be used in arriving at divisions of joint barge-and-rail rates which shall accrue to barge line and L. & N., respectively, with qualification that 25 per cent of joint barge-and-rail commodity rates between New Orleans and Mobile, on one hand, and points in Birmingham, Ala., district, on other, when the traffic is interchanged at Tuscaloosa, will result in just and reasonable divisions to L. & N. and in just and reasonable balance to barge line. U. S. War Dept. v. A. & S. Ry. Co., 100 I. C. C. 491.

(nn) In prescribing reasonable divisions of joint rates between Warrior River Barge Line and L. & N., proposal of barge line that the originating or delivering carrier shall assume its own terminal disabilities, and where a charge is made for terminal service in addition to the line-haul rate, such charge is to accrue to the carrier performing the service, found just and reasonable. U. S. War Dept. v. A. & S. Ry. Co., 100 I. C. C. 491.

(oo) Upon further hearing, basis of the rates, and equitable divisions thereof prescribed in connection with the through routes and joint rates required to be established between points on Michigan Railroad in Michigan and interstate points, by previous orders of the commission in original report, 74 I. C. C. 496. The affected stations should be accorded the same basis of rates as apply from or to stations on other lines in the immediate territory, to wit, as to class of traffic and commodity rates bearing a direct relation thereto, rates based on the so-called zone B, c. f. a. scale, and as to other commodities group rates where such apply, and relatively aligned rates where some other basis is used; and further that the equitable di-

visions thereof to be accorded the electric lines, on the one hand, and defendants, on the other, will be those computed on the percentage basis contemporaneously in effect between the Michigan's Allegan-Battle Creek line on the one hand and defendants on the other. Michigan Railroad Co. v. P. M. R. R. Co., 101 I. C. C. 146.

(ooa) Just, reasonable, and equitable division to be received by Chaffee R. R. out of joint rates on coal originating on that line prescribed in Hamill Coal & Coke Co. v. W. M. Ry. Co., 81 I. C. C. 72, determined and adjustment on that basis required. Chaffee R. R. v. W. M. Ry., 102 I. C. C. 53.

(oob) Fact that a carrier may show a deficit on one of its divisions can not be controlling in determining just divisions of joint rates. Chaffee R. R. v. W. M., 102 I. C. C. 53, 58.

(pp) Complainant, Minnesota Western Ry, alleged its divisions of the interstate joint freight rates applicable on classes and commodities delivered to, or received from, defendants were and are unreasonable and inequitable in violations of section 1 and 15 of the act. In 90 I. C. C. 637, the financial structure of the company was before the Commission. The Minnesota Western extends westerly from Luce Line Junction, Minn., a distance of 82.4 miles to Lake Lillian, Minn., its only connection is with the Electric Short Line Terminal Co., at Luce Line Junction, near Minneapolis. Minn. Interchange with the G. N. and C. B. & Q., is made through the terminal company. With roads other than those named interchange is made through the G. N. Per diem is paid on foreign equipment. The bulk of the traffic originating on the Minnesota Western is grain, hay and drain tile, while that moving inbound, other than less carloads consists of lumber, coal, cement, drain tile, stone, sand and oil. Complainant introduced little evidence as to the measure of the divisions received and did not attempt to show that they were unreasonable per se for the service performed. It asserts that because it is a delivering and originating road having no intermediate traffic its proportion of the revenue should be relatively greater than its portion of the haul. No comparisons were made to show that the divisions received were less favorable than those accorded by defendants to other short lines. From the figures given it is apparent that its average divisions are greater than those of its connections but this is necessarily so due to its short mileage and low traffic density. Taking into consideration the relative cost of service, the fact that complainant is wholly an originating and delivering line, the amounts of revenue required to pay respective operating expenses, taxes, and a fair return, and the importance to the public of the transportation services afforded by complainant, as well as by defendants, the Commission is of the opinion that the existing divisions since Feb. 29, 1924 are unreasonable and inequitable, and that reasonable and equitable divisions to which complainant will be entitled out of the joint interstate rates will be 20 per cent in excess of the present divisions, except that in no instance need the divisions be increased to exceed the local rates over complainants line. Minnesota Western Ry. v. A. T. & S. F. Ry., 109 I. C. C. 127.

ALL OTHER CITATIONS

Carriers Divisions of Bituminous Coal Rates, 85 I. C. C. 617; Divisions Received by Brimstone R. R. & Canal Co., 88 I. C. C. 62; Hampton & Branchville R. R. & Lbr. Co. v. A. C. L. R. R. Co., 88 I. C. C. 77; St. L. S. F. Ry. Co. v. N. A. Ry. Co., 88 I. C. C. 107.

§10. Evidence and Procedure.

See Evidence; Procedure Before Commission.

(a) A carrier's statements regarding its value and revenue needs, as submitted in Increased Rates, 1920, 58 I. C. C. 220, are not pertinent in another proceeding seeking increased divisions if not supported by the record. New York Dock Ry. v. B. & O. R. R. Co., 89 I. C. C. 695, 705.

(b) A prime factor in determining the fair and equitable share of joint revenue which each carrier shall receive is the relative amount and cost of the joint services rendered. Salina Northern R. R. v. A. T. & S. F. Ry., 92 I. C. C. 475, 480.

(cd) Fact that a carrier has been operating at a deficit does not of itself prove that it is fairly entitled to increased divisions. Federal Valley R. R. Case, 68 I. C. C. 499, 502. Salina Northern R. R. Co. v. A. T. & S. F., 92 I. C. C. 475, 481.

(e) Financial need is but one of the elements which the commission is directed to consider in determining divisions of joint rates, and fact that a carrier is being operated at a loss is not of itself sufficient ground on which to order an increase of divisions in its favor. Murrage, Receiver v. E. R. R., 95 I. C. C. 13, 18.

(f) All carriers whose lines connect directly with the line of Missouri and North Arkansas having been joined as respondents; FOUND: That other carriers which unite in publishing interstate joint rates applying to, and which participate in transporting, certain of the traffic interchanged are not necessary parties in a proceeding to determine the divisions of such joint rates between carrier named and each of its immediate connections, following decision of U. S. Supreme Court in Orient Divisions case, 265 U. S. 274. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co., 98 I. C. C. 119.

(g) Relative cost of service is not the only factor to be considered in determining just divisions. The fact that a carrier may show a deficit on one of its divisions can not be determining issues such as are here presented. Chaffee R. R. v. W. M. Ry., 102 I. C. C. 53, 58.

(h) Car ownership and car rental expenses are transportation costs which should be considered when divisions of the freight rate are fixed. Chaffee R. R. v. W. M. Ry., 102 I. C. C. 53, 59.

(i) In fixing divisions the Commission may take into consideration the financial needs of the weaker road and give it a division larger than justice merely as between the parties would suggest in order to maintain it in effective operation as part of an adequate transportation system. Similar considerations may properly govern the Commission in establishing through routes, and the Commission has frequently taken them into account in previous cases of this nature. 78 I. C. C. 328, 95 I. C. C. 237, 88 I. C. C. 312. Fort Smith S. & R. I. Ry. v. A. & V. Ry., 107 I. C. C. 523, 525.

IV. RATES, TRANSFERS AND DIVISIONS.
V. FACILITIES.
VI. OPERATION.
VII. REGULATIONS.
VIII. SWITCHING CONNECTIONS.

I. CONTROL AND REGULATION.

See Control and Regulation; Interstate Commerce II.

(a) A carrier operating electric passenger cars between Buffalo and Queenston, Ontario, held engaged in "interstate commerce," in operating another line wholly within the city of Buffalo, issuing transfers to the international line and accepting transfers from it, though the bulk of the traffic was intrastate. Barelli v. International Ry. Co., 203 N. Y. S. 704.

(b) Under Act to Regulate Commerce Feb. 4, 1887, §1, as amended (Comp. St. §8563) giving Interstate Commerce Commission jurisdiction over transportation of passengers or of property by "railroad," without distinction between steam and electric railroads, the Interstate Commerce Commission has jurisdiction to regulate interstate interurban passenger fares of electric railroad operating line between cities in different states, not constituting a part of a steam railroad system, or engaged in general transportation of freight in addition to passenger business, the only limitation on such jurisdiction being contained in Act June 18, 1910, §12 (Comp. St. §8583), and Transportation Act 1920 (Comp. St. Ann. Supp. 1923, §10071¼ et seq), in view of federal Employers' Liability Act (Comp. St. §§8657, 8665), Safety Appliance Act March 2, 1893, as amended by Act March 2, 1903 (Comp. St. §§8613, 8615), and Hours of Service Act (Comp. St. §§8677, 8680). United States v. Village of Hubbard, Ohio, 45 Sup. Ct., 160.

(c) The Commission is authorized to establish joint rates on traffic interchanged between steam roads and electric lines engaged in the general business of transporting freight, and there is no doubt that upon a proper record it can pass upon the justness, reasonableness, and equitableness of the divisions of the rates for such interchanged traffic. The exercise of this jurisdiction, however, must be attended by great difficulty due to the lack of proper elements of comparison. Spokane & Eastern Ry. & P. Co. v. S. P. & S. Ry., 109 I. C. C. 713, 716.

ALL OTHER CITATIONS

Depreciation Charges of W. Ry. & E. Co., 85 I. C. C. 126.

II. THROUGH RATES WITH STEAM ROADS.

See Through Routes and Joint Rates.

(a) Electric lines invoked the commission's power under section 15 "to establish the joint rates to be charged" in connection with through routes established pursuant to commission's previous orders. In view of the fact that these lines are willing to forego arbitraries in order that they may be offered an opportunity to develop traffic, joint rates to be charged on traffic under consideration may properly be on same basis as are the corresponding joint rates from and to points on the Michigan's Allegan-Battle Creek line and other points in the immediate territory, nor does there appear to be any persuasive reason why the divisions of such joint rates should not be on the percentage basis applying in connection with that line. Michigan R. R. Co. v. P. M. R. R. Co., 101 I. C. C. 146.

(b) Upon further hearing, basis of the rates, and the equitable divisions thereof prescribed in connection with the through routes and joint rates required to be established between points on Michigan Railroad in Michigan and interstate points by previous orders of the commission in original report, 74 I. C. C. 496. The affected stations should be accorded the same basis of rates as apply from or to stations on other lines in the immediate territory, to wit, as to class traffic and commodity rates bearing a direct relation thereto, rates based on the so-called zone B, c. f. a. scale, and as to other commodities, group rates where such apply, and relatively aligned rates where some other basis is used; and further that the equitable divisions thereof to be accorded the electric lines, on the one hand, and defendants, on the other, will be those computed on the percentage basis contemporaneously in effect between the Michigan's Allegan-Battle Creek line, on the one hand, and defendants, on the other. Michigan Railroad Co. v. P. M. R. R., 101 I. C. C. 146.

(c) Application for authority to establish class rates between points on the lines of the Interstate Public Service Co., in Indiana and Kentucky, and certain points on the lines of the Illinois Traction System in Missouri and Illinois, without observing the long-and-

short haul provision of section 4 of the act, denied. Routing of traffic over applicant's lines as proposed would result in wasteful transportation, and proposed rates would not be reasonably compensatory. Class Rates via I. P. S. Co., 101 I. C. C. 189.

IV. RATES, TRANSFERS AND DIVISIONS.

(a) Practice of the Peoria & Pekin Union Ry., in assessing charges at and in vicinity of Peoria, Ill., for interchange service between connections with its tenants and the rails of Minneapolis & St. Louis, and St. Louis, Springfield & Peoria, an electric line, while contemporaneously performing a like service between connections with its tenants and rails of C., B. & Q., and Rock Island without charge, found unjustly discriminatory and unduly prejudicial. Peoria & Pekin Union, 93 I. C. C. 3, 23.

(b) Electric lines invoke the commission's power under section 15 "to establish the joint rates to be charged" in connection with through routes established pursuant to our previous orders. In view of the fact that these lines are willing to forego arbitraries in order that they may be afforded an opportunity to develop traffic, joint rates to be charged on traffic under consideration may properly be on same basis as are the corresponding joint rates from and to points on the Michigan's Allegan-Battle Creek line and other points in the immediate territory, nor does there appear to be any persuasive reason why the divisions of such joint rates should not be on the percentage basis applying in connection with that line. Michigan R. R. Co. v. P. M. R. R., 101 I. C. C. 146.

(c) Complainants, Spokane & Eastern Ry. & Power Co. and Inland Empire R. R. Co., alleged their divisions of joint rates and charges on traffic interchanged between them and defendants are unjust, unreasonable, inequitable and unduly prejudicial. Complainants are electrically operated common carriers, independently owned and operated and transport both freight and passengers. Total trackage of Spokane line 94 miles, Inland Empire 149 miles. Joint rates are in effect between points on complainants lines and points on lines of defendants as well as points reached through their connections in practically all sections of the country. The allegation that the present divisions were determined by the defendants is denied by them, nor is it shown by the evidence that the lines of complainants were constructed with the view to equal support from passenger and freight business. The record as a whole, in its final form, compels the conclusion that the present plea for readjustment of divisions on freight traffic is based very largely, if not wholly, upon financial needs. The record in this case still fails to disclose evidence upon which the Commission can arrive at satisfactory conclusions regarding the relative expense of freight transportation on the lines of complainants and defendants, respectively, or as to the relative expense of the freight and passenger operations of complainants. HELD, complaint dismissed without prejudice. Spokane & Eastern Ry. & P. Co. v. S. P. Ry., 109 I. C. C. 713.

VIII. SWITCHING CONNECTIONS.

See Switch Tracks and Switching.

ELKINS ACT

See Crimes. I.

EMBARGOES

See Car Congestion; Demurrage §3½; Reconsignment §4½;

Routing and Misrouting §4¼; Through Routes and Joint Rates §22 (h).

(a) Desired route being embargoed, complainant notified consignor to forward shipments via unembargoed route. Subsequently permit obtained authorizing movement over embargoed route, which complainant forwarded to carrier together with letter setting forth name of consignor and requesting carrier to "be governed accordingly." Complainant, however, failed to change instructions previously given consignor and shipments were billed and moved via higher-rated route. HELD: Applicable tariff provided that "request for diversion or reconsignment must be made or confirmed in writing * * *," but no proper request in conformity therewith was made. Moreover, tender of permit or direction in letter to "be governed accordingly" laid no obligation on carrier to forward shipments via embargoed route in view of specific instructions designed in bills of lading. Weston Dodson & Co. v. N. Y., O. & W. Ry. Co., 91 I. C. C. 659.

(b) Due to strike of defendant's employees, certain destinations were embargoed, resulting in complainant being unable to make outbound or unload inbound shipments. Necessity for embargo was unquestioned and record failed to establish that defendant refused to furnish cars for shipments to unembargoed points. Complainant might have stopped cars from arriving at its plant before storage capacity became exhausted by diverting cars to other points. HELD: Under above circumstances demurrage charges assessed were not unreasonable or otherwise unlawful. Big Diamond Mills Co. v. C. G. W. R. R., 92 I. C. C. 709.

(c) Due to embargo, shipments of feldspar from Keene, N. H., to Manchester, Conn., were forwarded over an indirect route to Willimantic, Conn., thence reconsigned to destination. Combination rates assessed found unreasonable, the initial factor to extent it exceeded lower rate subsequently established and equivalent to 90 per cent of sixth class, the basis maintained by carriers in this territory, and the Willimantic-Manchester factor as compared with rates for entire distance via the direct route and with rates and earnings on numerous comparable commodities for like distances. Reasonable rate for the Willimantic-Manchester factor prescribed and reparation awarded. Orford Soap Co. v. B. & M., 95 I. C. C. 615.

(d) Even though embargoes are properly laid, shippers should not be debarred from reasonable rates via accessible routes where direct lines find it impossible to maintain adequate transportation facilities. Orford Soap Co. v. B. & M., 95 I. C. C. 615, 616.

(e) Embargo notice of delivering line specified in routing instructions provided that delivery at embargoed point would be accepted only on permits issued by its superintendent of car service. Shipper obtained permit from an operating committee from which delivering line had withdrawn, resulting in shipments being held at reconsignment point until proper permit obtained. FOUND, demurrage and penalty charges accruing during interim found not illegal or unreasonable since applicable reconsignment tariff provided that shipments would not be reconsigned to embargoed points except under authorized permits, and the detention here was due to failure of shipper to furnish proper permit. Laumer Lbr. Co. v. A. C. L., 96 I. C. C. 93.

(f) Demurrage and penalty charges on a shipment of lumber from Paden, Miss., to Cairo, Ill., and reconsigned to Cleveland, Ohio, which were assessed from the time of notification of the existence of an embargo over the route specified in the reconsignment order until the date on which the embargo was lifted found to have been applicable and not unreasonable, following decision of the court that such charges had been legally assessed. Complaint dismissed. Krauss Bros. Lumber Co. v. I. C. R. R. Co., 96 I. C. C. 760.

(fa) Shipment of lumber moved from Jasper, Tex., to St. Louis, and was ordered reconsigned to Harlem Transfer, N. Y., or if that point was embargoed, Long Island City, N. Y. Complainant was notified reconsignment could not be made due to an eastern embargo. Shipment was placed in storage and subsequently moved under permit to New York. While applicable tariff prohibited reconsignment to embargoed points not only was there no embargo on eastern lines against Long Island City, but one of such lines reaching St. Louis was willing to accept shipment for transportation. Carriers disability preventing immediate movement was theoretical disability based

upon supposed embargo and it follows that charges assessed as result of refusal to reconsign were illegal. Reparation awarded. Milne Lbr. Co. v. Director General, 102 I. C. C. 520.

(g) Complainant alleged that by reason of the refusal of the Apalachicola Northern to accept at Hosford, Fla., for movement via eastern gateways two cars of lumber consigned to the Pennsylvania, Jersey City, N. J. the cars were shipped to Montgomery, Ala., and reconsigned from that point to Jersey City. The refusal was on the grounds that the A. C. L., its connection had in effect an embargo on traffic routed by way of the eastern gateways. Charged 42c a rate of 33.5c would have been applicable had the cars moved over the more direct route. The embargo remained in effect from June 22, 1920 to July 8, 1920 and there appears to have been no valid reason for further refusal by the A. N., on that date to accept these shipments, as the route was open. The statement in the telegram of the A. N., superintendent was clearly erroneous. HELD, refusal unlawful reparation awarded at rate of 33.5c plus reconsignment of $10, reparation awarded. Haviland v. A. N. R. R., 109 I. C. C. 253.

ALL OTHER CITATIONS

Empire Lumber Co. v. Director General, as Agent, 88 I. C. C. 424.

EMERGENCY RATES

See Evidence §21½; Long and Short Hauls §4½ (a).

(a) Emergency rates on hay from Keenesburg and Hudson, Colo., to St. Louis, Mo., were excepted from reductions required in 64 I. C. C. 85, but similar rates from competing Colorado common points were not so excepted. Long-and-short-haul violation of fourth section thereby created was subsequently removed by restoration of rate parity. HELD: Higher rates assessed during interim from Keenesburg and Hudson found not unreasonable; in absence of proof of damage unauthorized departure from fourth section does not warrant an award of reparation; and since there is no showing that competitors were enabled to control the St. Louis market, compelling complainant to meet their price, no damage has been shown by reason of undue prejudice which may have existed. National Hay & Milling Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 1.

(b) Third-class rates on oleomargarine found not unreasonable as compared with rates on butter. Both before and after shipments here involved moved, same rates applied on oleomargarine, butter, cheese, dressed poultry and eggs, but during period of movement lower emergency rates on all these commodities, except oleomargarine, were in effect, having been established by carriers as a temporary relief for farmers. Oleomargarine was not included in the reductions as it was not considered a direct product of the farm or ranch, but purely a manufactured product. Moreover, in Kansas Car-Lot Egg Shippers' Asso., 53 I. C. C. 59, third-class rates were found by the commission to be just and reasonable maximum rates on butter, butterine, oleomargarine, dressed poultry, and eggs. Jelke Co. v. C. & N. W., 95 I. C. C. 643.

(a) It is not the commission's function to equalize milling costs. Stuttgart Rice Mill Co. v. A. & V. Ry., 93 I. C. C. 517, 528.

(b) The solution of questions of industrial and commercial policy has not been committed to the commission. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437, 440.

II. CIRCUMSTANCES AND CONDITIONS.

§2. In general.

See Differentials; Evidence §2, §56; Reasonableness of Rates §12½, §28.

(a) Complainant attacked commodity rates charged on fresh fruits and vegetables, carloads, from producing points in Indiana and Illinois to Chicago, Ill., as unreasonable, and unjustly discriminatory. With few exceptions fruits and vegetables shipped from Indiana to Chicago move under class rates, where as from Illinois to Chicago most of this traffic moves under commodity rates lower than class rates. There are no transportation conditions which justify a higher level of rates on fruits and vegetables from Indiana to Chicago than is maintained from Illinois to Chicago. Substantially the same fruits and vegetables are grown in Indiana and Illinois, and producers in the two states compete in the Chicago market in the sale of their products. HELD, rates attacked from Indiana to Chicago unreasonable to extent they exceeded third class rates on strawberries, fourth class on peaches, class C rates on other fresh fruits and vegetables. Indiana Public Service Commission v. B. & O. R. R. 89 I. C. C. 651.

(b) Complainant attacked class rates charged on six cars of monochlorobenzol from Kingsport, Tenn., to Carneys Point, N. J., in Nov. and Dec. 1918, as unreasonable, unjustly discriminatory and unduly prejudicial. Kingsport is on the C. C. & O., 26 miles north of Johnson City, Tenn. Carneys Point is on the W. J. & S., 30 miles southwest of Camden, N. J. Shipments moved C. C. & O., to St. Paul, Va., N. & W., to Hagerstown, Md., Cumberland Valley to Harrisburg, Pa., Pennsylvania to Camden, W. J. & S., beyond, distance 724 miles, charged fifth class rate of 69c. Commodity rates of 44c were contemporaneously in effect from Kingsport to New York, Philadelphia, and points taking same rates. HELD, rate attacked unreasonably to extent it exceeded 44c, reparation awarded. Du Pont de Nemours & Company v. Director General, 91 I. C. C. 15.

(c) Complainant attacked commodity rate charged on 50 cars of lumber and lumber products from Melrose, Oakland, Calif., to Cactus and Phoenix, Ariz., between Oct. 10, 1920 and May 4, 1921, as unjust and unreasonable. Cactus is 7 miles south of Phoenix on the A. E. R. R., distance from Oakland 902 miles, charged 71.5c. The rate to Tucson which is generally on the same basis as Cactus and Phoenix, was 65c. HELD, rate attacked unreasonable to extent it exceeded 65c, reparation awarded. Pacific Tank & Pipe Co. v. S. P. Co., 91 I. C. C. 24.

(d) Complainant attacked commodity rates on phosphate rock, carloads, from Mount Pleasant, Columbia and Sigle, Tenn., to New Albany, Ind., since March 1, 1920, as unreasonable, unjustly discriminatory and unduly prejudicial. New Albany is on the north bank of the Ohio river and complainants plant is 3.6 miles from Louisville served by the Pan Handle. Mount Pleasant group are on the L. & N., an average distance of 238 miles from Louisville. Phosphate rock

is desirable traffic because it can be transported in any kind of a box car and is practically immune from damage in transit. Defendant expressed willingness to establish a joint rate of $3.88 to New Albany, and a rate of $3.49 was established on Sept. 7, 1922, which reflected the 10% reduction of July 1, 1922. Rates charged proportional rates to Louisville and local rates beyond. During all of this period joint commodity rates applied to Evansville, Ind., Cairo, Ill., and Cincinnati, O., where competitors of complainant are located. To Evansville, 215 miles Cairo, 254 miles and Cincinnati 357 miles, rates from the Mount Pleasant group were the same. For many years it has been the tendency of carriers to equalize rates to the several crossings on long hauls but to charge differentials or local rates to north bank points on the short haul traffic. The services of two carriers beyond Louisville are required in order to make delivery at complainants plant, one over an expensive bridge, the other in switching the cars. Clearly the carriers are entitled to compensation for these services. HELD, there is no basis for a finding of undue prejudice to New Albany upon the sole premise that rates to north and south banks at the Cincinnati crossing are equalized. At Cincinnati and Evansville the situation is different. The Commission sees no reason why these points should have been accorded lower rates than those applicable to New Albany. HELD, rates attacked unduly prejudicial to extent they exceeded rates to Evansville and Cincinnati, and unduly prejudicial to extent they exceeded rates to Louisville by more than 30c from March 1, 1920 to August 25, 1920 38c from August 26, 1920 to June 30, 1922 and 34c thereafter, reparation awarded. Calumet Fertilizer Company v. L. & N. R. R., 91 I. C. C. 31.

(e) Complainant attacked fifth class rates charged on nine cars of sugar in bags, shipped from Seattle, Wash., to Chicago, Ill., Boston, Mass. and Landisville, N. Y., in October and Nov. 1919, and May 1920 and that rates on sugar from north Pacific coast points and interior Washington beet sugar producing points to the same destinations, as unreasonable to extent they exceeded commodity rates from California. Since the hearing defendants have satisfied the complaint against the rates from interior Washington points by establishing the California basis from Yakima, Toppenish and Sunnyside, Wash. Charged $2.19 from Seattle to Chicago and $2.375 to Boston and Landisville. Rates from California were 82c, minimum 60,000 pounds, 70c minimum 80,000 pounds to Chicago, and $1.30, minimum 60,000 pounds and $1.18, minimum 80,000 pounds to Boston and $1.315 minimum 60,000 pounds and $1.195 minimum 80,000 pounds to Landisville, being combinations on Chicago. These were the only shipments of sugar known to have been made from Seattle to Chicago and points beyond. There are no refineries at Seattle, and no future shipments are assured or reasonably to be anticipated. There is a considerable movement of sugar from California to the east. Under the circumstances affecting these shipments the class rates were proper. HELD, rates attacked not unreasonable, complaint dismissed. Armour & Company v. N. P. Ry., 91 I. C. C. 75.

(f) In 77 I. C. C. 473, the Commission found, inter alia, that rates on commodities from Memphis, Tenn., to points in western Louisiana were unduly prejudicial to Memphis and unduly preferential of New Orleans to the extent that the rates from Memphis, minus bridge tolls, exceed the rates, minus reasonable allowances for the Mississippi river crossings, maintained from New Orleans to said destinations for like distances. The application of the maximum rates prescribed in the original report on sugar on traffic from New Orleans to western Louisiana would materially increase the present rates while other producing points would still enjoy the lower intrastate rates, creating a discriminatory situation against New Orleans. The evidence on further hearing clearly shows that there is no present or probable movement of sugar in carloads from Memphis to Louisiana points. HELD, rates on sugar from Memphis should be the same as from New Orleans to western Louisiana. Memphis Southwestern Investigation, 92 I. C. C. 447.

(g) Complainant attacked combination rates charged on carloads of hogshead staves and headings, carloads, from Helena, Ark., to Adairville, Glencoe, Springfield, Carlisle, Pleasureville, Horse Cave, Eminence, Russellville, Campbellsburg, Hopkinsville, Madisonville and Cynthiana, Ky., and Springfield, Tenn., since Oct. 1, 1921 as unreasonable. Complainants mills are now dismantled and moved

from Helena on account of a shortage of timber in that vicinity. It does not expect to make further shipments from that point. Effective March 20, 1922 joint rates were made applicable over the L. & N., to Ohio river crossings, Louisville and west, and these rates were observed as maxima at intermediate points in Kentucky. Movement of the shipments was over the Y. & M. V., to Memphis and the L. & N., beyond. Hogshead staves and heading ordinarily take lumber rates, and the rates applied were lumber rates. Helena is 66 miles from Memphis. Complainants plant was on the M. P., which road crosses the river at Memphis by bridge. Charges of $4 per car for switching cars from the latter road to the Y. & M. V., were absorbed by defendants. There is no bridge at Helena. To reach the east bank of the river, inclines and a ferry are maintained by the Y. & M. V. HELD, rates attacked not unreasonable, complaint dismissed. Forbes Mfg. Co. v. Y. & M. V. Ry., 92 I. C. C. 465.

(h) Respondents proposed to revise their rates on fiberboard, pulpboard, and strawboard boxes, carloads, knocked down, from Nashville and Chattanooga, Tenn., Atlanta, Ga., and Birmingham, Ala., to southeastern and south Atlantic coast points. They are also manufactured at Cincinnati, O., Louisville, Ky., New Orleans, La., and at eastern points, which also compete. Paper boxes, carloads, are rated fifth class in southern classification, and move on this basis between all points in the south, except that commodity rates are published to the south Atlantic ports, and from Nashville to Chattanooga and Knoxville, Tenn., Atlanta, Macon, and Augusta, Ga., and Birmingham and Montgomery, Ala. Revised rates are proposed to practically all points in southeastern territory. It is intended only as a temporary measure to take care of the situation until such time as all rates on paper and paper articles between points in the southeast may be revised on a more comprehensive scale. The rates from Chattanooga and Atlanta to Nashville and the Ohio river crossings were established in order to permit manufacturers at those points to meet competition from central territory at the Ohio river and beyond. It was the custom to make Nashville rates a fixed differential under the rates to the Ohio river crossings which accounts for the comparatively low rate to that point at the present time. HELD, proposed rates justified except rate from Chattanooga to Anniston should not exceed 35c; Birmingham to Savannah and Brunswick should not exceed 50c; from Nashville should not exceed 54c to Savannah and Brunswick, 57c to Jacksonville and 56c to Charleston, Beaufort and Port Royal. The port rates should not be exceeded at intermediate points. Paper boxes between southeastern points, 93 I. C. C. 559.

(i) Complainant attacked commodity rates on cement, carloads from Cape Girardeau, Mo., to Illinois on and south of the B. & O., from East St. Louis, Ill., to Vincennes, Ind., as unreasonable, and as compared with the rates from La Salle, Odlesby, Dixon, Ill., unjustly discriminatory and unduly prejudicial. Cape Girardeau is served by the Frisco, 132 miles south of St. Louis, Mo., 6.2 miles north of Illmo, Mo., at the western end of the bridge over the Mississippi river at Thebes, Ill. Distance to Thebes over the route through Illmo is 6.5 miles. The rates from Cape Girardeau to southern Ilinois points except to points on the C. & E. I., range from 0.5 to 3c higher than Scale 11 for the short three line distance while the rates from La Salle are in practically all instances substantially lower than Scale 11 and somewhat lower than Scale 1. Defendants admit that the basis of rates from Cape Girardeau should not exceed the basis applicable from the Illinois mills, and particularly from Hannibal and St. Louis, traffic from which points, must cross the Mississippi river. Cement is a low grade commodity which loads heavily. The minimum generally is is 50,000 pounds but the average loading is much greater. It moves quite regularly throughout the year in large volume, and of all products transported is one of the least expensive to manufacture. It is recognized as a raw material and is one of the most important building materials in use. HELD, rates attacked unreasonable to extent they exceed rates in effect from the Illinois mills. Cape Girardeau Portland Cement Co. v. B. & O. R. R. 95 I. C. C. 632.

(j) Complainant attacked commodity rates on coal, including anthracite, bituminous and lignite coal, from Colorado and northern New Mexico coal producing districts to destinations in South Dakota west of the Missouri river, in Nebraska and Kansas, and to Sioux City, Council Bluffs and Pacific Junction, Iowa,

and Kansas City, Mo., as unreasonable, unduly prejudicial. The locations and general descriptions of the districts in which complainant operates mines, and of its Wyoming competitors, are given in 80 I. C. C. 383, 386, 389. The character and quality of the coals mined in all these districts, and sometimes in the same district, vary greatly. To these destinations complainant has available generally three sets of rates, namely on lump, nut and slack coals. Anthracite coal is mined by complainant only in the Crested Butte district. Effective in October, 1923 the carriers extended to these anthracite rates the basis prescribed in 80 I. C. C. 383, namely, 50c higher than the rates on bituminous soft coal. At the hearing complainants counsel expressed satisfaction with this basis and said that anthracite rates may be regarded as not in issue. Walsenburg, Canon City and Routt County produce high grade bituminous coals for domestic purposes; Trinidad bituminous coal suitable for coking; and Pikeview and the northern Colorado districts, lignite for domestic purposes. The fine coal or slack screened out in preparing domestic sizes is consumed generally by steam plants. **Rates to Missouri River Cities and Destinations in Nebraska and Kansas.** The lump coal rates from Walsenburg may be generally described as follows: to Missouri river points, Omaha, Neb., to Kansas City, $5.27. This rate is blanketed back over the direct lines to, but not including, such points as Grand Island, Hastings and Bloomington, Neb., and Smith Center and Abilene, Kansas. It also applies to points in southeastern Kansas sout of the U. P., line to Kansas City and east of a north and south line drawn just west of Emporia, Kans. To Sioux City and a few other points intermediate thereto the rate is $5.49. To southwestern Nebraska and northwestern Kansas a rate of $5.04 applies. To the rest of Kansas the rates are graded with some regard for distance until they reach the $5.27 rate. To Alliance, Neb., and points east thereof on the Burlington, and generally to branch line points on the Burlington and U. P., south of that line of the Burlington, the $5.27 rate applies. North of that line various rates higher than $5.27 apply, reaching $7.20 at Pierre, S. D. The rates on nut and slack do not seem to bear any definite relationship to those on lump. HELD, rates on lump coal from the Walsenburg district to destinations shown below unreasonable to extent they exceed the following: Barton, Neb. $4.15; Sanborn, Neb., $3.90, Kanarado, Kas., $3.30, Coolidge, Kas., $2.90, and Scott City, Kas., $3.30 other points being related thereto. HELD, further rates on lump coal from northern Colorado to Missouri river territory unreasonable to extent they exceed 75c less than the rates prescribed to Missouri river points, and to other points taking $5 rate from Walsenburg. **Rates to Destinations in Northwestern Nebraska and Western South Dakota.** In so far as destinations in this territory are concerned complainants principal interest is in rates from northern Colorado. The present rates on lump coal from Lafayette, a representative point in the northern Colorado district, is $3.60. This applies to a group of destinations including Northport, Neb., 226 miles, and Edgemont, S. D., 371 miles, a spread of 145 miles. From Kirby, Wyo., on the Budlington the same rate applies to these destinations from distances ranging from 217 miles at Scotts Bluff, Neb., to 492 miles at Edgemont. The distances to Edgemont and other points north of Northport are figured over the Burlington direct. But in connection with the Northwestern from Orin, Wyo., to Crawford, Neb., the hauls from Kirby to many destinations would be less, as, for instances to Edgemont, 367 miles. HELD, rates on lump coal, carloads, from northern Colorado to these grouped destinations are not and will not be unreasonable except that the rate to Northport on lump coal will be unreasonable for future to extent it may exceed $3.40 per ton. This will leave a destination group from northern Colorado ranging from 257 miles to 371 miles as against a destination group from Kirby ranging from 217 miles to 367 miles, the latter distance in connection with the Northwestern. HELD, rates on lump coal, carloads, from the Walsenburg and northern Colorado unreasonable to extent they exceed the following rates: Sidney, Neb., from Walsenburg $4.00; Rapid City $5.50, Northport, Neb., $4.30, Scottsbluff, $4.50, Alliance $4.80, Crawford $5.00, Edgemont, $5.25, Lead, $5.50, Buffalo Gap $5.50. **Screening Specifications Governing Rates from Northern Colorado to Northwestern Nebraska and Black Hill Regions.** HELD, the screening specifications on coal to these des-

tinations from northern colorado unduly prejudicial to extent they permit the Kirby and Sheridan mines to ship coal of a size larger than may be shipped from the northern Colorado district under the corresponding rate. **Rates from Routt County Oak Hills District.** HELD, taking into account the unusual transportation conditions on the Moffett road the Commission is constrained to find that rates on lump coal from this district are unreasonable to extent they exceed the hereinbefore prescribed rates from Walsenburg by more than the present differences between the existing rates. **Rates from Other Districts in Colorado and New Mexico.** HELD, rates on lump coal from the Canon City district are unreasonable to extent they exceed rates prescribed from Walsenburg. Rates on lump coal from Trinidad, Raton, Dawson, Cameo, Palisade, Bowie, Somerset and Crested Butte districts are unreasonable to extent they may exceed the prescribed rates from Walsenburg by more than the present differences between the existing rates. **Relationship of Nut and Slack Coal Rates to Lump Coal Rates.** The present rate on slack from Walsenburg to the Missouri river is $1.05 less than the rate the Commission has prescribed on lump coal. This rate is not unreasonable. Considering the rates on lump coal prescribed some readjustment of the rates on nut and slack will become necessary. Nut coal is used for practically the same purposes as lump coal and it would seem that the rates should be closely related. As slack moves to comparatively few points and is subject to special influences the Commission will not now undertake to prescribe for its specific rates. Colorado & New Mexico Coal Operators Asso. v. D. & R. G. W. R. R., 98 I. C. C. 377..

(k) Complainant attacked commodity rates charged on paper carloads from Hamilton, West Carrolton and Miamisburg, O., and Chicago to Dallas, Texas in Sept., Oct. and Nov. 1922, as unreasonable. The complaint is based upon the fact that the rates charged were out of line with the contemporaneous rates from Wisconsin territory, the rates from that territory having been revised in conformity with 66 I. C. C. 571, effective June 15, 1922, while the old rates from the related territory covered by this complaint remained in effect until Dec. 15, 1922. HELD, rates attacked unreasonable to extent they exceeded rates from and to points in question, effective Dec. 15, 1922, reparation awarded. Butler Paper Co. v. C. I. & W. Ry., 102 I. C. C. 311.

(l) Complainant attacked commodity rate charged on eight cars of sulphuric acid shipped in Sept. and Oct. 1922 from New Orleans—seven to Manchester, Tex., and one to Houston—as unreasonable. Manchester is about 8 miles west of Houston and generally takes the same rates. Shipments moved M. K. & T., to Lafayette, La., La. Western to Echo, Tex., and T. & N. O., beyond, charged 23c. On June 10, 1922 complainant requested the establishment of a rate of 15c, the rate then in effect from Port Arthur to Baton Rouge, this being reduced on July 1, 1922 to 13.5c The rate of 13.5c was established Nov. 23, 1922. HELD, rate attacked not unreasonable, complaint dismissed. Armour Fertilizer Works v. M. L. & T. Ry., 102 I. C. C. 350.

(m) Complainant attacked commodity rates on lime, in carloads, from Milltown, Ind., to Illinois, Indiana, Michigan, Iowa, Wisconsin, Missouri, Kentucky, West Virginia, Ohio, Pennsylvania and New York as unreasonable and unduly prejudicial as compared with the rates on lime, in carloads, from Mitchell, Bedford and Salem, Ind. to the same destinations. Milltown is a local point on the Southern. Mitchell, Salem and Bedford are on the Monon. Mitchell is also on the B. & O., and Bedford on the Milwaukee. The rates from Mitchell are based on the scale prescribed in 85 I. C. C. 341. To accord the same rates to Bedford as apply from Mitchell certainly is not unduly preferential, that point is nearer the destination than Mitchell; or can the Commission conclude that Milltown has been unduly prejudiced in having to pay rates from 0.5 to 2.5c over Mitchell and Bedford for additional distances from 20.7 miles to 63.3 miles. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Louisville Cement Co. v. Southern Ry., 104 I. C. C. 455.

(n) Complainant attacked commodity rates charged on 52 cars of prepared roofing and asphalt shingles, in straight and mixed carloads, moving between Jan. 28, 1922 and March 15, 1924 from Chicago, Ill., Cairo, Ill., St. Louis, Mo.,

Evansville, Ind., Louisville, Ky., and Cincinnati, O., to Florence, Ala., as unreasonable, unjustly discriminatory and unduly prejudicial. Florence, Sheffield and Tuscumbia are on the Tennessee river about 4 or 5 miles apart. They are reached from the north by the L. & N., and the Southern. On account of their close proximity the same rate applies to all of these cities and will be referred to as the Florence rate. The rate from Chicago prior to March 10, 1924 was based on 90 per cent. of the sixth class rate to the Ohio river, and the class A rate beyond, and after that date 90 per cent of the sixth class rate to the river and a commodity rate beyond. From St. Louis, the class A rate applied until March 10, 1924 when a commodity rate was established. From the other points named class A rates applied. Corinth, Miss., is on the Southern about 5 miles from the southern border of Tennessee and 93.5 miles east of Memphis. Florence, Sheffield and Tuscumbia are about 55 miles east of Corinth. Sheffield and Tuscumbia are on the main line of the Southern, Florence being on a branch line extending 4 miles from Sheffield. The rates to Corinth are considerably lower than the rates to destinations attacked. Rate from St. Louis to Atlanta 611 miles is 42c, to Florence 379 miles 36.5c. From Cincinnati to Birmingham 481 miles, and to Florence 422 miles is 34c. From Louisville to Memphis, 380 miles and to Corinth 363 miles is 27c while to Florence 312 miles it is 28.5c. The route over the L. & N. from Louisville and Cincinnati to Corinth is through Florence, Sheffield and Tuscumbia. Having in view the level of the rates in Mississippi valley territory and the circumstances under which they were established in comparison with the rates applicable in the southeast at points adjacent to that territory it is manifest that the spread between the rates that have for many years prevailed at Corinth and the rates at Florence, Sheffield and Tuscumbia is too great thereby subjecting the jobbing at that point to undue prejudice in competing with jobbers at Corinth for trade in the same common territory. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceed rates to Corinth by more than 2.5c; that rates from Louisville, Evansville and Cincinnati unduly prejudicial to extent they exceed 2c lower than rates to Corinth. Florence Chamber of Commerce v. L. & N. R. R. 104 I. C. C. 459.

(o) Complainant attacked commodity rates charged on tomatoes, carloads from Fruitland and Gibson, Tenn. to Hutchinson, Kans., as unreasonable, unjustly discriminatory and unduly prejudicial. Rate applicable $1.23 with routing via East St. Louis. Fruitland is a local station on the M. & O., 5 north of Humboldt, Tenn., a common point with the L. & N. Gibson is a local station on the L. & N., 6 miles east of Humboldt. Rate from Gibson was 98.5c prior to April 22, 1923 and $1.23 thereafter. Hutchinson is 219 miles west of Kansas City via the Rock Island and in active competition with jobbers located at Kansas City, Topeka and Salina, Kas. The rates to these points from both Fruitland and Gibson are 75, 83 and $1.155c respectively. Salina is 199 miles west of Kansas City via the Rock Island and 221 miles via the M. P. The rate on tomatoes from Fruitland to Hutchinson is 164 per cent of the rate to Kansas City while the mileage is 141 per cent of the distance to Kansas City. Salina is in the same general territory as Hutchinson, being but 63 miles north of the latter point via McPherson, Kas., and Santa Fe and about 123 miles via the Rock Island direct. On this record there appears to be no reason why the rates to Hutchinson should be higher than to Salina. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceed the rates to Salina and Kansas City by more than 40.5c. Grovier Starr Produce Co. v. C. R. I. & P. Ry., 104 I. C. C. 745.

(p) Complainant attacked class rates charged on three cars of empty steel sheils shipped from Penniman, Va., one on April 21, 1922 to Carnegie, Pa., and the others on April 28, 1922 to Canton, O., as unjust and unreasonable, unjustly discriminatory and unduly prejudicial. Penniman is located at the end of a short branch line of the C. & O., extending 4.68 miles from Penniman Junction, Va., a main line points between Richmond and Newport News, Va., and a short distance east of Williamsburg, Va. The shipments had value for remelting purposes only, charged sixth class rates of 36.5c to Carnegie and 37.5c to Canton. Class rates from Penniman to central territory were the same as from Richmond, Williamsburg Penniman

Junction New Port News and other so-called Virginia cities. A commodity rate of $6.86 per gross ton was contemporaneously maintained on scrap iron and steel, carloads, from these points to Canton and Carnegie. HELD, rates attacked unreasonable to extent they exceeded rates from Williamsburg, reparation awarded. Hyman Michaels Co. v. C. & O. Ry., 104 I. C. C. 749.

(q) Complainant attacked commodity rates charged of 38c on 16 cars of lumber from Cornwall, Va., to Boston, Mass., between Sept. 1, 1922 and April 30, 1923, 25c charged from Cornwall to Glen Rock, Pa., between August 1, 1922 and Jan. 31, 1924, and 31.5c charged from Cornwall to Coaldale, Lansford, Lock Haven, Montgomery, Muncy, Shenandoah Sunbury, Watsontown and Williamsport, Pa., between July 1, 1922 and Feb. 29, 1924 as unreasonable, unjustly discriminatory, and unduly prejudicial to extent they exceeded rates applicable from Hotchkiss, Va., to the same destinations. Subsequently rates from Cornwall the same as from Hotchkiss were established to all the destinations except Glen Rock. Cornwall is on the N. & W., about 40 miles south of Basic, W. Va., and Hotchkiss on the C. & O., 50 miles west of Basic. Although Basic is common to both carriers and a point through which shipments intended for the destinations named would move it is not a transfer point. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. South River Lumber Co. v. N. & W. Ry., 109 I. C. C. 173.

(r) Complainant attacked commodity rates charged on 11 cars of fire brick from Wellsville, Mo., to Bigheart, Bristow, Devol, Tulsa and Wilson, Okla., and Grand Prairie, Tex., between Oct. 18, 1919 and Feb. 20, 1920 as unreasonable, unduly prejudicial and in violation of the fourth section. Wellsville is on the Burlington, 91 miles west of St. Louis, and took St. Louis rates, higher than those applicable from the Mexico group. Mexico is 18 miles west of Wellsville. The Mexico basis was published from Wellsville Feb. 29, 1920 and June 21, 1920. In some instances the rates charged were higher than the combination on Mexico or St. Louis. HELD, rates attacked unreasonable to extent they exceed the rates from Mexico, reparation awarded. Wellsville Fire Brick Co. v. Director General, 112 I. C. 98.

§3. Commercial Advantages and Disabilities.

See Blanket Rates §7; Differentials §5, §6, §7; Discrimination §4, §5; Evidence §2; Express Companies §19; Interstate Commerce Commission; Reasonableness of Rates §12½.

(a) It is not the function of the Commission to equalize, by means of rates, natural or commercial advantages of location. Young v. C. I. & L. Ry., 89 I. C. C. 428, 436.

(b) It is not the function of the Commission to attempt to equalize milling costs even if it were possible to do so. Stuttgart Rice Mill Co. v. A. & V. Ry., 93 I. C. C. 517, 528.

(c) The right of complainants to the natural advantages of their geographical location can not be taken away from them by rate adjustments and the wide differences in distances between the various fields to common destinations must be recognized. Stuttgart Rice Mill Co. v. A. & V. Ry., 93 I. C. C. 517, 530.

(d) Complainant attacked commodity rates on sugar, carloads from New Orleans, La., to Omaha, Kansas City and Atchison, as unreasonable and unduly prejudicial as compared with rates to Chicago, St. Louis and the Twin Cities. Although the Missouri river cities are grouped as to rates on this commodity and although there is no suggestion on the part of complainants that the group be disrupted, the interest of Kansas City and Atchison is primarily in their relationship to St. Louis, while that of Omaha is in the relationship to Chicago and Twin Cities. The old spread between Kansas City and St. Louis was 15c. At the time of hearing it was 13.5c but under the proposed reduction in the St. Louis rate it would have become 19c. At the hearing southern carriers agreed to reduce the rates to Kansas City and other complaining points from 73 to 69c and as that action would have restored the old relationship, assuming that the proposed rate of 54c to St. Louis would also have been established, the Kansas City and Atchison complainants agreed that the impending undue prejudice would be obviated. The spread is now 15c as a result of the adjustment of Jan. 5, 1924. The spread in the rates to Omaha and Chicago was 9c in 1915, 13c at time of hearing and now 11c.

Prior to and at the time of hearing the rates to the Twin Cities were 3c under those at Omaha. Under the adjustment of Jan. 5, 1924 the spread was reduced to 2c. HELD, rates on sugar to Omaha unduly prejudicial to extent they exceed rates to Twin Cities, and rates to Missouri river cities not unreasonable. Omaha Chamber of Commerce v. A. T. & S. F. Ry., 95 I. C. C. 713.

(e) Complainant attacked commodity rates on prepared sizes of anthracite coal, carloads, from Pennsylvania to Newport News, Va. Newport News is near the southeastern point of the peninsula which lies between the James and York rivers. Norfolk is southeast of Newport News. Cape Charles is north of and opposite Norfolk at the southern end of the peninsula. Newport News is served only by the C. & O. This defendant, when able to control the situation, maintains a parity of inbound and outbound rates to Norfolk and Newport News and is desirous of applying the Norfolk basis on anthracite coal to Newport News by way of the Richmond route. To Norfolk the all rail movement is over the route through the Maryland-Delaware-Virginia peninsula to Cape Charles and thence by car float across the bay to Port Norfolk about 36 miles from Cape Charles. To Richmond the movement is through Potomac Yards, Va., in connection with the R. F. & P. beyond. To Newport News traffic may move by way of Richmond and the C. & O., beyond, or through Cape Charles and Port Norfolk. Over the latter route traffic to Newport News was formerly handled by the C. & O., with its car floats direct from Port Norfolk; presumably to shorten the floatage movement, it is now hauled by a belt line about 19 miles from Port Norfolk to Sewalls Point, north of Norfolk, and thence 7 miles by car float to destination. Joint group rates of $3.40 are published from the Pennsylvania mines to Norfolk and Richmond. Rates to Newport News are constructed on combination based on either Richmond or Norfolk. Over the Richmond route the rate is $4.30, a 90c proportional applying beyond the gateway. Over the route through Norfolk the combination is $4.96, composed of the $3.40 factor to that point, plus $1.39 per ton. Joint class rates are maintained from New York, Philadelphia, Baltimore, Md., and points grouped therewith to Norfolk, Newport News and Richmond. HELD, rates attacked not unreasonable except to extent that the rate by way of Cape Charles exceeds $4.30 per long on. HELD, relative adjustment unduly prejudicial to Newport News and this should be removed by publication of rates to Newport News applicable by way of the routes through Richmond and by way of routes through Cape Charles not more than 51c higher than to Richmond or Norfolk. Newport News v. B. & O. R. R., 96 I. C. C. 425.

(fg) A tariff schedule may not be framed to equalize conditions of private business by giving special privileges and advantages to a particular shipper or class of shippers. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co., 2 Fed. 291.

(h) Proposed increased proportional rates on canned goods and iron and steel articles from Gulf ports to points on and north of Ohio River, applicable on traffic from Pacific coast through Panama Canal, for purpose of equalizing such rates with local rates applicable from New York, N. Y., to Chicago, Ill., found not justified. No similar increases are proposed in rates from south Atlantic ports, and undue prejudice in favor of such ports would result. Canned Goods and Iron and Steel Articles, 91 I. C. C. 623.

(i) Rates on liquid asphalt, in tank-car loads, from Port Arthur and Port Neches, Tex., to West Monroe, La., found not unreasonable as compared with lower rate subsequently established for purpose of equalizing those rates with others applicable between points in same general territory. Moreover, rates charged were shown to reflect lower percentage relationship to class D rates than those prescribed on a number of low-grade commodities in Natchez Chamber of Commerce, 58 I. C. C. 610. Deas Co. v. K. C. S., 92 I. C. C. 256.

(j) Proposal to equalize rates on chloride of zinc, whether moving in fused or liquid form, from Chicago and St. Louis group points to Arkansas destinations, found justified. While value of the dry is twice that of the liquid, such differences are frequently disregarded in rate making where articles are essentially of same nature and highly competitive. These two commodities are rated the same throughout the country generally; service rendered in transporting the liquid is as great as in trans-

porting fused; and form in which commodity is shipped is a matter of convenience to shipper and preference to consumer. Moreover, evidence shows that rates proposed are not unduly high. Chloride of Zinc to Texarkana, 92 I. C. C. 569.

(k) Commission would not be justified in attempting to neutralize disadvantages of geographical location by requiring wasteful or additional service without adequate compensation, although shipper may be in dire need. Flory Milling Co. v. C. N. E. Ry., 93 I. C. C. 129, 134.

(l) It is not the commission's function to equalize milling costs. Stuttgart Rice Mill Co. v. A. & V. Ry., 93 I. C. C. 517, 528.

(m) The commission doubts if it would be in the public interest to give to the high-grade, favorably circumstanced coal fields and mines a monopoly of production, even if lower costs to consumers would follow. Such a course would result in first completely exhausting the best portion of a natural resource and weaken our national position by compelling utilization in even greater degree of the poorer, less economical raw products, until in the end the country would have nothing left but the lowest grade, most costly, bituminous coal, with none of the higher grades for any of the special purposes which are so dependent upon such fuel. Widest possible equable use of coal of all qualities, rather than forced use of most readily accessible highest grades, is that which is consonant with public good. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 334.

(n) Carriers should take steps, either by publication of joint through rates or by appropriate adjustment of present combinations, to equalize charges on grain and products moving to north Atlantic ports for export from points west of the Mississippi, where advantage of any one of the ports, as compared with Boston, in total length of haul is 10 per cent or less. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 569.

(o) Rates can not be fixed on the theory of equalizing the total transportation cost of the inbound raw material plus that of the outbound finished product. West Virginia Pulp & Paper Co. v. S. Ry. Co., 96 I. C. C. 244, 252.

(p) Carriers sometimes extend an equalization which the commission could not compel. Carrier and market competition would be more potent to compel an equalization of rate in rates on commodities produced or manufactured at numerous points in a wide territory served by many competing lines than on anthracite coal which has its origin in only one small field. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425.

(q) The maintenance by defendants of a rate relationship between the Yakima Valley and southern Idaho, which subject some shippers in the former district to a rate disadvantage, as compared with shippers in the latter district, if not justified by transportation conditions, is undue prejudice within the meaning of the act and can not be justified by the fears as to the commercial effect upon the industry of its removal. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437, 440.

(r) Rates on bituminous lump coal from Duluth and West Duluth, Minn., to Ladysmith, Wis., found not unreasonable or unjustly discriminatory. Coal rates in Wisconsin are not constructed primarily with regard to distance, but the controlling consideration is the equalization of ports and grouping of destinations. Original order vacated and complaint dismissed. Great Western Paper Co. v. M., St. P. & S. S. M. Ry. Co., 96 I. C. C. 444.

(s) The commission has frequently said, the act does not require that in-and-out charges be equalized through all jobbing points. Lagomarcino-Grupe Co. v. A., T. & S. F. Ry. Co., 96 I. C. C. 465, 467.

(t) Complainant attacked class and commodity rates from Jackson, Miss., to Louisiana and southern Arkansas as unjust, unreasonable and unduly preferential of Memphis, Tenn., Natchez, Miss. and New Orleans, La., and in excess of aggregate of intermediate rates. With respect to rates to Louisiana, the evidence relates only to points west of the Mississippi river. Memphis and New Orleans, like Jackson, are on the east side of the Mississippi river, the former cities being located on the bank of the river, while the latter is about 44 miles east thereof. It is contended by complainant that Jackson is deprived of its geographical advantages and denied its right to compete in territory adja-

cent to it by the present rate adjustment which permits Memphis, Natchez, and New Orleans to ship into Louisiana and southern Arkansas on rates based on scales prescribed in 77 I. C. C. 473 and denies Jackson the same privilege. The transportation conditions from Jackson to Vicksburg do not differ greatly from those for a similar distance from Vicksburg, on the west side. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceeded rates from Memphis, Natchez and New Orleans. Jackson Traffic Bureau v. A. & V. Ry., 102 I. C. C. 129.

(u) Complainant attacked commodity rates on green coffee, carloads, from New Orleans, La., and Galveston, Tex., to Oklahoma City and Enid, Okla., as unreasonable, subsequent to April 12, 1921. Oklahoma City and Enid are served directly or indirectly by the Frisco Rock Island and Santa Fe and MKT. These roads reach New Orleans and Galveston over their own rails or in connection with those of other carriers. HELD, between April 12, 1921 and April 23, 1922, rates attacked unreasonable to extent they exceed from New Orleans to Oklahoma City 72.5c, to Enid, 77c, from Galveston, to Oklahoma City 66.5c to Enid 71c, reparation awarded. Alton Mercantile Co. v. A. G. S. R. R., 102 I. C. C. 146.

(v) It is not the purpose of the act that the Commission should attempt to equalize fortunes, opportunities, or abilities and disregard transportation conditions but this principle does not foreclose the Commission from considering the probable effects which would follow the prescribing of relationships in rates proposed by certain shippers and opposed by their competitors. Morrell & Company v. N. Y. C. R. R., 104 I. C. C. 104, 124.

(w) Complainant attacked rates, rules and regulations applicable to the transportation of rosin, carloads, from points of origin in southern states of the United States to Burlington, Ont., Canada, as unreasonable unduly prejudicial. Burlington is at the west end of Lake Ontario on the C. P., and G. T., about 6 miles north of Hamilton, Ont., about 67 miles northwest of Buffalo, N. Y., and about 40 miles southwest of Toronto, Ont. The usual route of movement of this commodity is through Cincinnati, O., and Detroit, Mich. Burlington is about 200 miles northeast of Detroit. The haul beyond Detroit is over Canadian lines. Defendants offered no justification for a higher rate to Burlington than to Hamilton. The rates from south Atlantic ports were and are the same to Burlington as to Hamilton. The average distance from Jacksonville and from Savannah and Brunswick, Ga., to Buffalo is 1,146 miles and to Burlington 1,208 miles. This traffic is desirable. It is not injured by water and may be transported in inferior box car equipment. The loading is comparatively heavy and damage claims are rare. The present rates apply only on rosin packed in barrels. The facts of record do not warrant disturbing the long established packing requirements of the carriers. HELD, rules, regulations attacked not unreasonable or otherwise unlawful. HELD, rates to Burlington not unduly prejudicial; rates from Gulf ports not unreasonable; rates from south Atlantic ports for future unreasonable to extent they exceed 56.5c from April 15, to June 30, 1922, and 51c thereafter, reparation awarded. Vera Chemical Co. of Canada, Ltd. v. A. C. Ry. 104 I. C. C. 408.

(x) Complainant attacked commodity rates maintained on forest products, carloads, including lumber, timber and box and crate material from Los Angeles, Wilmington and San Pedro, Calif., to destinations on the S. P., A. E., G. H. & S. A., in Arizona and New Mexico and to El Paso, Tex., as unreasonable, unjustly discriminatory and, as compared with lower rates to the same destinations from competing producing points on defendants lines, unduly prejudicial. The principal Arizona lumber mills are at Flagstaff and Williams on the Santa Fe and at McNary on the Apache R. R. The latter road connects with the Sante Fe at Holbrook, 72 miles north of Cady. The complaint rested largely on the allegation that the rates applied from San Pedro to Arizona and New Mexico and El Paso applicable on lumber previously brought into San Pedro by water from British Columbia, Washington, Oregon and northern California are unduly high compared with the all rail rates from the same territory to the same destinations. Timbers for building purposes may be brought into Arizona under the timber rate rather than under the lumber rate.

There were two sources of supply for this timber, the north Pacific coast principally producing fir, and the long leaf pine belt in Texas and Louisiana. The rates on lumber from San Pedro to destination territory are grouped. The rate to Yuma is blanketed back from that group to Flowing Well, Calif., a distance of 61 miles. The next group east extends from Ivalon, Ariz., just east of Yuma to Tucson, a distance of 248 miles. The territory between Cochise and El Paso, a distance of 231 miles, likewise is blanketed, and there are smaller intermediate groups between Tucson and Cochise. Lumber rates from competitive producing points in northern California, Oregon, and Washington are grouped in much the same manner. On lumber from Seattle, Portland and common points a single destination blanket extends through Arizona and New Mexico to El Paso. The San Francisco and northern California group rates apply from substantially all producing points in California, San Francisco Bay and north, and from Klamath Falls in Oregon. The present system of grouping origin and destination points with respect to the rates on lumber from the extensive wooded areas on the Pacific coast has grown up from the practice of permitting all producing sections to as great an extent as possible to reach the chief consuming markets. This adjustment is one on which the industry has developed, and it should not be seriously disturbed for any but the strongest reasons. In the instant case the nature of the destination territory does not call for a minute graduation of rates according to distance such as might be appropriate through a more highly developed territory. This consideration is, of course, not a justification for group rates from San Pedro to Arizona which bear no relation to distance. In general, the 51c rate from San Pedro seems appropriate at El Paso and Deming, but the present rates to intermediate points are higher than a proper alignment would suggest. HELD, carload rates on lumber and lumber products taking same rates from San Pedro, Wilmington and Los Angeles Calif., to Yuma, Gila, Maricopa, Phoenix, Tucson and Benson, Ariz., Lordsburg and Deming, N. M., and El Paso, Tex., are unreasonable and unduly prejudicial to extent they exceed to Yuma 31c, to Gila 36c, to Maricopa, Phoenix and Tucson 41c, to Benson 44.5c, to Lordsburg 47.5c and to Deming and El Paso 51c. Lumbermen's Exchange v. S. P. Co., 104 I. C. C. 538.

(y) New Orleans, La., has certain natural advantages over Galveston, Tex., which have affected the relationship of rates to the two points. The fact in itself warrants careful scrutiny of a rate adjustment which is alleged to be unduly prejudicial to the port least favored by natural advantages. While those natural advantages are entitled to consideration in so far as they have been brought about by geographical location, they are not entitled to much respect in so far as they have been brought about by rate advantages such as those here complained of. Galveston Commercial Asso. v. G. H. & S. A. Ry. Co., 100 I. C. C. 110, 121.

(z) The policy of the southwestern carriers serving New Orleans, La., has been, generally speaking, to apply the Galveston, Tex., rates to New Orleans on traffic moving from or to all points west of the Mississippi River, except points in Texas south of a certain line. Such an adjustment necessarily disregards distance and commercial instead of natural advantages control. The commission has consistently refused to condemn such an adjustment where it is shown to serve the best interests of the public, but where, as here, it builds up one port at the expense of another equally favored by natural advantages from the origin territory here considered, a line must be found beyond which distance may not be disregarded. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 121, 122.

(aa) It is not the function of the commission arbitrarily to equalize rates in such manner as to deprive any industry of the legitimate advantage of its location. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 166.

(bb) Springfield jobbers contend that the proposed readjustment of class rates between points in Missouri, and between points in Missouri and other sections, will increase both their inbound and outbound rates while only outbound rates of St. Louis and Kansas City will be affected, thus causing a disruption in the parity of rates existing between these points. The fact that disparities may be created, lying outside the limits of the situation under consideration, can not be accepted as ground for not rem-

edying undue prejudice where it has been established. Class Rates between Missouri and Interstate Points, 100 I. C. C. 274, 284.

(cc) Rates on peanuts, shelled or unshelled, from Suffolk, Franklin, Norfolk, and Petersburg, Va., and other points in Group A, to McAlester, Shawnee, and Oklahoma City, Okla., found unreasonable to extent they exceeded lower contemporaneous rates on like traffic from same points of origin to farther distant points in Texas and lower rates on shelled peanuts from the Virginia points to Oklahoma City subsequently established. Maximum reasonable rates prescribed for future and reparation awarded. Oklahoma Traffic Asso. v. C., R. I. & P., 100 I. C. C. 307.

(cca) It is not the commission's province to equalize different natural or economic conditions. New Orleans Joint Traffic Bureau v. B., S. L. & W., 102 I. C. C. 686, 691.

(dd) Carriers may voluntarily equalize commercial or geographical disadvantages in many instances in which the Commission could not require such equalization. Galveston Commercial Asso v. A. & S. Ry., 109 I. C. C. 114, 121.

(ee) Right of carriers to meet competitive conditions and equalize localities is subject to the limitation that no undue prejudice will be caused thereby. Lincoln Gas Coal Co. v. B. & O. R. R. Co., 88 I. C. C. 379, 384.

ALL OTHER CITATIONS

North Carolina Pine Asso v. A. C. L. R. R. Co., 85 I C. C. 270; Wickwire Spencer Steel Corp. v. Director General, as Agent, 88 I. C. C. 54; Wichita Motors Co., v. A. & V. Ry. Co., 88 I. C. C. 152.

§4. Competition.

(1) In General.

See Competition.

(a) Complainant attacked commodity rate of $2.50 charged on 29 cars of slack coal shipped from Superior and Lion, Wyo., to Sugarton, Utah and 16 cars from Lion to Cornish, Utah between Oct. 15 and 27, 1921 as unreasonable to extent it exceeded rate of $2 subsequently established and unduly prejudicial as compared with rate of $2 contemporaneously in effect from the Castle Gate district in Utah to the same destinations. The points of destination are north of Ogden. Points of origin are in the Rock Springs district of Wyoming. Shipments moved U. P., to Ogden, thence Utah-Idaho Central to Sugarton and over O. S. L., to Cornish. For many years prior to the general increase of August 26, 1920 the rates from the Castle Gate district and from the Rock Springs district to the destinations here considered were the same, and these districts were keenly competitive. On the date named the $2 rate from the Rock Springs district was increased 25 per cent making the rate $2.50. The Utah Commission declined to permit any increase in the intrastate rates on coal. Effective Oct. 29, 1921 the rate from Rock Springs district was reduced to $2. HELD, rates attacked unreasonable to extent they exceeded $2 per ton, reparation awarded. Amalgamated Sugar Co. v. U. P. R. R., 107 I. C. C. 635.

§4 (4). Water Competition.

See Evidence §14 (5); Water Competition.

(a) Complainant attacked commodity rates on cement plaster, carloads, from Plasterco, Plasterco Junction and Hamlin, Tex., to Alabama, Florida, Georgia, Kentucky, Mississippi and Tennessee as unreasonable and in violation of the fourth section and in addition that rates to Jacksonville and other destinations in Florida were and are unduly prejudicial to extent they exceeded rates from Acme and Agatite, Tex. Complainants plant is reached by the K. C. M. & O., and M. K. T. 5.2 and 4.2 miles from Hamlin. Except to Jacksonville and to destinations in Florida basing thereon, the same rates have applied for several years to southeastern destinations from Plasterco, Acme and Agatite, Tex., and on Jan. 20, 1923 Plasterco Junction was added to this list of origins. The rate from Acme and Agatite was established to meet competition from the east, largely of water carriers, but no reason is stated for justifying more favorable treatment of Acme and Agatite than of Plasterco in meeting this competition. HELD, from and after July 1, 1922 such of the rates as exceeded by more than 20% the rates in effect on August 25, 1920 unreasonable in amount of such excess. HELD, further, rates attacked to Meridian and Middlesborough unreasonable to extent they exceeded 33 and 50c, between April 1 and June 30, 1922 and 29.5c and 45c thereafter until July

21, 1923. Rates to Jacksonville and other Florida points subjected complainant to undue prejudice to extent they exceeded rates from Acme and Agatite reparation awarded. Texas Cement Plaster Co. v. A. & M. R. R., 98 I. C. C. 519.

(b) For many years it has been tendency of carriers to equalize rates to the several Ohio river crossings on long hauls but to charge differentials or local rates to north-bank points on short-haul traffic. Calumet Fertilizer Co. v. L. N. R. R. Co., 91 I. C. C. 31, 34.

(c) Complainant attacked commodity rate of 11.5c charged on sand, carloads, from Roff, Okla., to Fort Smith, Ark., as unjust, unreasonable, unduly preferential and prejudicial in favor of shippers of sand from Guion, Ark., and Pacific and Grays Summit, Mo. Roff is on the Frisco southwest of Fort Smith. Distance direct over route of movement, 260 miles, short line distance over Frisco, Holdenville, Rock Island, Wister, Okla., and Frisco 190 miles. Pacific is on the Frisco and M. P., west of St. Louis, and Grays Summit is on the M. P., just west of Pacific. Guion is on the M. P., between Little Rock and Fort Smith. The transportation conditions from all producing points are similar. HELD, rate attacked unreasonable and unduly prejudicial to extent it exceeded 9c, reparation awarded. Harding Glass Co. v. St. L. S. F. Ry., 102 I. C. C. 126.

§4 (5). Market Competition.

See Market Competition.

(a) Respondents proposed a general revision, consisting of increases and reductions, but principally increases, in the socalled short haul rates on iron and steel articles, carloads and less carloads, in the Pittsburgh district and adjacent territory in Pennsylvania, New York, Ohio, West Virginia and Maryland. The adjustment proposed was promulgated primarily to bring the rates which were then in effect within the provisions of the fourth section. The volume of this short haul traffic is the largest of its kind in the country. Commodity rates lower than fifth class are maintained for these short hauls, while, according to respondents, the fifth class rates are, generally speaking, maintained for the longer hauls throughout central territory. The rates between Pittsburgh and the Mahoning and Shenango Valleys, of which Youngstown is the central point, and between the Valleys and Cleveland, are the key rates around which the entire short haul rate structure has been built. The distance between Pittsburgh and the Valleys is about the same as that between the Valleys and Cleveland, and a rate of 5c was established, which made the combination on the Valleys the same as the through rate from Pittsburgh to Cleveland. On July 1, 1922, the respective rates between Pittsburgh and the Valleys and between the Valleys and Cleveland became 9.5c, making the combination 19c as compared with the through fifth class rate from Pittsburgh to Cleveland of 21.5c, which rates are in force today. The fifth class rate from Pittsburgh to Cleveland is blanketed from all points in the Pittsburgh short haul group, as well as from additional surrounding territory, and the rates from all points in the short haul group to Cleveland and grouped points exceed the combination on the Valleys. Respondents propose, an increase of 15.8% in the rates which, in combination, are lower than the applicable through rates between so-called long haul points; a like percentage of increase in various rates directly related thereto, in order to maintain existing relationships; and in numerous other instances, varying percentages of increase above or below that figure, in order to establish what, in their opinion, will be proper relationships. The more noticeable increases above 15.8% are in the comparatively large number of instances in which class rates are proposed in lieu of present commodity rates for socalled long hauls. Material departures from the class basis already exist, and the removal of the existing fourth section departures by establishing through rates on the combination basis apparently would affect less actual traffic than would the present proposal. The proposal to cancel the through commodity rates is not of course, a part of the adjustment intended to remove fourth section violations. The heavy movement and the keen competition in this territory appear to have been largely responsible for the present comparatively low basis of short haul rates, but the Commission does not feel that they are sufficient to warrant it in requiring the continuance of that basis in all instances. While the Commission finds that the proposed short haul adjustment as a whole has not been justified, some changes in these rates are warranted; and the proposed rates may in general

be approved, provided that no increased rate is approved which exceeds the present rate by more than 15.8%, subject to a maximum resulting carload rate of 15.5c, and provided further, that no such rate shall be increased by a greater amount than is proposed in the suspended schedules. Exceptions are the proposed rates from the Johnstown and Latrobe groups to the Valleys and the Wheeling group. The present rate of 17.5c from the Johnstown group to the Valleys, and Wheeling group is already in excess of many rates for comparable hauls in Indiana and Illinois and compares favorably with rates in trunk line territory. This proposed rate has not been justified. If the present rates from the Johnstown group are to be continued, manifestly the proposed increase in those from the Latrobe group from 14.5c to 17c can not be approved. The proposed rate of 10.5c from Woodlawn, which is now in the Beaver group on short haul traffic, to the Valleys represents an increase of about 31% over the present rate of 8c. The rates from Woodlawn should not exceed those from other points in the Beaver group. This would also be true of increased short haul rates which are proposed in order to bring about proper relationships with the proposed rates from Woodlawn. At present Lorain and Cleveland take the same rate, 9.5c, to and from the Valleys. It is proposed to increase the Cleveland rate to 11c and the Lorain rate to 12.5c. Lorain and Cleveland have for a long time taken the same rates to and from the Valleys. The proposed increase is not warranted. The present less carload rates might properly be increased by the same percentages as the carload rates between the same points may be increased in pursuance of the views herein expressed, subject to fourth class rates as maxima. This approval can not be regarded as approving the application of class rates on iron and steel traffic either generally or between particular points. Iron and steel articles, 89 I. C. C. 606.

(b) While defendants evidence may not explain all equalized rates, it is obvious that carrier and market competition would be more potent to compel an equalization in rates on commodities produced or manufactured at numerous points in a wide territory served by many competing lines than an anthracite coal which has its origin in only one small field. The carriers sometimes extend an equalization which the Commission could not compel. Newport News v. B. & O. R. R., 96 I. C. C. 425, 430.

(c) Carriers sometimes extend an equalization which the commission could not compel. Carrier and market competition would be more potent to compel an equalization of rate in rates on commodities produced or manufactured at numerous points in a wide territory served by many competing lines than on anthracite coal which has its origin in only one small field. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425.

(d) Complainant attacked commodity rate of 26c carloads and 63.5c less carloads, class rate, on iron and steel articles from Birmingham, Ala., to Nashville, Tenn., as unjust, unreasonable and unduly prejudicial in that they exceed rates to Chattanooga and Knoxville, Tenn. Prior to July 1, 1923 thereafter and at the present time, the rates on certain iron articles, including bar, band and boiler iron, in both carloads and less carloads, were and are 18.5c from Birmingham to Knoxville, 254 miles, and 14c to Chattanooga, 143 miles. The increase to Nashville without a corresponding increase to Knoxville and Chattanooga is one of the principal causes of the complaint. The 26c rate from Birmingham to Nashville, 205 miles is the same as the rate from Louisville to Nashville, 187 miles. Commodity rates are usually published in the southeast on special iron and steel articles but in their absence sixth class rates usually apply. The sixth class rate from Birmingham to Nashville is 43c while the class C rate which nearest approximates the 26c rate attacked on iron and steel articles is 26.5c. There appears to be no justification whatever for the application of the same rate on bar iron, in less carloads as on carloads, between many of these points. HELD, rates attacked not unreasonable or unduly prejudicial, except carload rate of 26c unduly prejudicial to Nashville to advantage of Chattanooga and Knoxville to extent it exceeds 3c more than to Chattanooga and 4c less than to Knoxville. Nashville Traffic Bureau v. L. & N. R. R., 102 I. C. C. 641.

(e) Complainant attacked fifth class rate of 32c on wood flour, carloads, from North Tonawanda, N. Y., to New York, N. Y., and Philadelphia,

Pa., as unreasonable to extent it exceeded 23c. North Tonawanda is near Buffalo, N. Y., and is in the Buffalo rate group. The rate sought by complainant is the same as that now applying on wood pulp from Niagara Frontier points to these destinations. A commodity rate of 28.5c applies from Newhall, Me., to a majority of these destinations. The rate also applies on wood pulp. The fifth class rate from Newhall is 36.5c and sixth class 30.5c. Wood pulp is rated sixth class in official classification. HELD, rate attacked unreasonable to extent it exceeded 28.5c, reparation awarded. Becker Moore & Co. v. N. Y. C. R. R., 104 I. C. C. 11.

(f) Complainants attacked rates on fresh and cured meats and by products from Chicago, Ill., and other central territory packing points, including Mississippi river packing points, St. Louis, Mo., to Dubuque, Iowa, inclusive, to trunk line and New England territories as unjust and unreasonable; through rates on fresh and cured meats and by products from points west of the Mississippi river to destinations in trunk line and New England territories as unjust and unreasonable; relationships between the rates on live edible meats and the rates on fresh and cured meats and by products, from the Mississippi river crossings and points west thereof, and from Chicago and other points in central territory, to destinations in trunk line and New England territories as unduly prejudicial; rates on fresh and cured meats from Missouri river packing points to destinations in trunk line and New England territories as unduly prejudicial to the Missouri river cities and unduly preferential of interior packing points; that fourth class rates under the official classification on cured meats, loose, are unreasonable or unduly prejudicial to the extent that they exceed fifth class rates on cured meats, packed. GENERAL RATE STRUCTURE. The application of rates in the destination territory is simplified by the fact that New York, N. Y., is the basing point, and upon its rates the usual port differentials are generally applied to obtain the rates to Boston, Philadelphia, and Baltimore rate points, and by the further fact that interior points in trunk line territory take fixed percentages of the base rates to New York. PRESENT RATES. The present rates from Chicago to New York on packed cured meats and on cattle and hogs are 56.5c and on fresh meats 87c. The rate of 56.5c is fifth class and the equal rate on livestock is a commodity rate. The rate of 87c is a commodity rate less than the third class rate of 94.5c. The proportional rates from the Mississippi river crossings to New York are 63c on cattle, 64.5c on packed cured meats, or 1.5c higher than on cattle, and 93c on fresh meats, or 30c higher than on cattle. The proportional rates from the Mississippi river to New York on hogs originating in Iowa are 3c less than on cattle and hogs originating at any other point west of the river. The through rates from interior Iowa country points in the vicinity of Cedar Rapids to New York are 79.5c on hogs, 71c on packed cured meats, and 99.5c on fresh meats. It is apparent that the proportional rates from the interior Iowa packing points to the Mississippi river were made by the carriers with the idea of equalizing, either partially or wholly, the rates on hogs to Cedar Rapids and the products to the river with the rates on hogs from the interior Iowa producing points to the river. The reasonableness of the rates on livestock is not directly in issue in these cases, those rates having been brought into issue only to the extent of their relationship to the rates on fresh meats and packing house products. Except from St. Louis, most of the present local rates on packed cured meats to points in trunk line territory from points on and east of the Mississippi river are the full fifth class rates governed by the official classification. It is generally conceded that the lighter loading and other factors in connection with the transportation of fresh meats warrant higher rates than on packed cured meats from and to the same points where both commodities move in substantial volume, though most of the parties contend that the spreads of fresh meats over cured meats and livestock are excessive. The through rates from the Missouri river to New York on fresh meats are based upon the full combinations of the local rate of 28c to the river and 93c beyond. On bulk cured meats the factor east of the river is less than the fourth class rate and is pub-

lished as a commodity rate in order to equalize the full combination of locals on Chicago. The through rate on cured meats, packed, is based upon a commodity rate from the Missouri river to Chicago of 36c and full fifth class rate east, and this is equalized on the river combination by a proportional fifth class rate from the river east of 64.5 as compared with local rate of 66c. Armour & Company attack present local rates of 27.5c on fresh meats and 24.5c on cured meats and hides from South St. Paul, Minn., to Chicago which are used in combination with the local rates from Chicago in constructing through rates to eastern destinations, as unjust and unreasonable. The through rates from South St. Paul and Faribault are combinations of the full locals upon Chicago and are to New York on fresh meats 114.5c and on packed cured meats 81c. From Albert Lea, Minn., the through rates are combinations of proportionals upon the Mississippi river and are to New York 104.5c on fresh meats and 76c on cured packed meats. The distance from South St. Paul to New York is 1,320 miles and from Albert Lea 1,293 miles. The short line distances to Chicago are from South St. Paul 396 miles, from Faribault 401 miles, and from Albert Lea 375 miles. Faribault is intermediate between South St. Paul and Chicago via the Rock Island. Tested by several scales, the existing rates from South St. Paul to Chicago are relatively lower than the rates from Chicago to New York or other rates in central and trunk line territories. The western and southern classifications apply the same ratings to dried, dry salted, smoked and pickled meats, when loose as when in packages. The distinction which the official classification makes in ratings between packed and loose cured meats is the only exception of this kind under the general heading of meats in the consolidated classification. The distinction of a higher rating on an article when shipped loose that when shipped in packages, both subject to the same carload minimum, is unique in freight rate classification. The situation revealed by this record confirms the Commission in the view that fixed relationships are desirable and that until such relationships are made effective and maintained, complaints with respect to these rates will recur. But having in mind the varying conditions found to exist, the large amounts of capital invested under existing rates, the great disturbance which would result from prescribing fixed relationships, and the fact that it is not the province of the Commission to prescribe rates which appear desirable to it, but to ascertain whether existing rates are unlawful and, if so, to prescribe lawful rates in lieu thereof, the Commission is again led to the conclusion that no fixed rate relationships between the respective commodities can or should be prescribed in these proceedings. HELD, rates attacked on cured meats, packed, and green salted hides, carloads, from Chicago and other central packing points, including Mississippi river points, St. Louis to Dubuque, inclusive, to trunk line and New England territories not unreasonable or unduly prejudicial in relation to the rates on hogs and sheep in double deck cars or on cattle from and to the same points. HELD, that the base rate of 87c on fresh meats, carloads, from Chicago to New York unreasonable to extent it exceeds 79c; that rates on fresh meats to other points in central territory will be made with relation to established percentages of the rate to New York. HELD, rates attacked on cured meats and green salted hides, carloads, from points west of the Mississippi river to destinations in trunk line and New England territories not unreasonable, except that for the future the rate from Cedar Rapids to New York will be unreasonable to extent that it exceeds 69c; the rates from Missouri river points, Kansas City to Sioux City to New York unreasonable to extent it exceed 87c; and rates from Cedar Rapids and from Missouri river points to other destinations in trunk line and New England territory should be based upon differentials; That this unreasonableness exists only with respect to the factors east of the Mississippi river or Chicago and that for the future said rates from points west of the Mississippi river will not be unduly prejudicial in relation to the rates on cattle from and to the same points. Similar changes should be made in the rates from Wichita, Fort Worth, Oklahoma City and Denver. HELD, rates on fresh meats, carloads, from points west of the Mississippi river to trunk line and New England terri-

tories unreasonable to extent they exceed the lowest combination of the factors west of the river or Chicago plus the rates herein found reasonable east thereof. HELD, rates attacked on fresh meats, cured meats, and green salted hides, carloads, from South St. Paul to Chicago applicable on shipments destined to points in trunk line and New England territories not unreasonable. HELD, Rating in official classification of fourth class and the rates on dried, dry salted, smoked and pickled meats, loose, carloads, from and to territory involved unreasonable to extent it exceeds fifth class on like traffic in packages, and to extent they exceed rates on cured meats and packing house products, packed. Morrell & Company v. N. Y. C. R. R., 104 I. C. C. 104.

(g) Complainant attacked commodity rate of 19c charged on 56 cars of gasoline, kerosene, lubricating oil and gas oil shipped from Beverly, Mass., to Concord, N. H., between June 16 and Oct. 25, 1924 as unreasonable and unduly prejudicial to extent it exceeded 17c, and the 17c rate charged on 14 cars of like products from Beverly to Manchester, N. H., between Oct. 8, and Oct. 21, 1924 as unreasonable to extent it exceeded 16c. Beverly is located 18 miles north of Boston. East Boston and Everett are within the switching limits of Boston and at these stations competitors of complainant maintain storage facilities similar to those maintained by complainant at Beverly. The terminals at East Boston and Everett are served jointly by the B. & M., and B. & A. It is claimed therefore that the increase in the rates from those stations to Concord via the B. & M., direct on Sept. 29, 1924 did not in fact affect the charges therefrom, inasmuch as the route of the B. & A., in connection with the B. & M., remained open and available. It appears that the short line route from Beverly to Manchester and Concord is via the B. & M., through Lawrence, Mass., and Windham, N. H., 49 miles to Manchester and 67c miles to Concord. Complainant points out that the actual route of its shipments was the normal route via the B. & M. through Salem and Lowell, Mass., and Nashua, N. H., wholly over class A lines and that the distances over this route were 57 miles to Manchester and 75 miles to Concord or but 8 miles longer than the route through Windham. For these distances the class A scale is 16c and 17c, respectively, and it is to this basis that complainant sought reparation. It does not appear that freight from Beverly to Manchester and Concord actually moves over the route through Windham. HELD, rates attacked unreasonable to extent they exceeded 16c and 17c, reparation awarded. Gulf Refining Co. v. B. & A. R. R., 104 I. C. C. 165.

(h) Complainant attacked combination rates charged on zinc skimmings, zinc sal-ammoniac skimmings, zinc dross, and zinc ashes, carloads, between Jan. 18, 1923 and June 11, 1924 from Ohio, Illinois, Wisconsin and Missouri to Van Buren, Ark., as unreasonable, unjustly discriminatory and unduly prejudicial as compared with rates to Oklahoma points. The commodities shipped are waste material bought by smelters as a raw material for use in the production of zinc. Shipments are made in ordinary box cars and are not susceptible to damage. Charged 27.5c from Chicago and Sterling, Ill., and Milwaukee, Wis., and 20.5c from St. Louis, Mo. From points in Ohio a combination was charged of 20.5c from St. Louis, the factor up to St. Louis not being under attack. On March 27, 1925 a rate of 22.5c became applicable from Chicago and Sterling and 16.5c from St. Louis. The present rates to Van Buren are the same as the rates to competing points excepting Bartlesville, Okla., which takes a slightly lower rate. HELD, rate attacked not unreasonable and complainant has not been shown to have been damaged by reason of the alleged undue prejudice, complaint dismissed. Falcon Zinc Co. v. M. P. R. R., 104 I. C. C. 267.

(i) Complainant attacked rates on lumber and its products carloads, from Westwood, Calif., Grants Pass, Medford and Klamath Falls, Ore., and points taking the same rates to Sacramento and other points in California as unjustly and unreasonably low in violation of section 1 of the act, and as compared with rates from San Pedro, Calif., unjustly discriminatory and unduly prejudicial. PRODUCING AREAS AND CHARACTER OF PRODUCTION AND GENERAL DISTRIBUTION. Complainant controls some 89,000 acres of hemlock, spruce and cedar timber, an estimated

stand of 3,500,000,000 board feet, on Graham Island, one of the most northerly of the Queen Charlotte Islands in British Columbia. Under its method of operation the logs are cut on the island to an average size of 18 ft. in length by 2 ft. square and are carried by boats of a subsidiary company south to San Pedro, a distance of about 1,400 miles. The lumber producing regions with which complainant has chiefly to compete in the California markets extend almost continuously from the southern end of the Sierra Nevada north to the Canadian boundary. They include areas in the Sierra Nevada east of the San Joaquin valley, areas in the northern Sierra and southern Cascade range east and north of the Sacramento valley and extending into southern Oregon, the Coast Range section in northwestern California, and extensive areas in western Washington and in and adjacent to the Willamette valley in western Oregon. The lines of the Southern Pacific directly or indirectly serve almost all of the described lumber producing areas in Oregon and California. In Oregon the S. P., reaches a number of the mills along the Pacific coast served by water, and practically all of them in the Willamette valley and in interior southern Oregon. Except for the redwood mills along the lines of the Northwestern Pacific, in which road the S. P., has an interest, those east of Oroville served by the Western Pacific and those reached by independent short lines such as the McCloud River R. R., and the Yosemite Valley Ry., the S. P., serves directly practically all of the important California lumber producing sections. As to most of the traffic originating on independent short lines the S. P., is a necessary carrier. CALIFORNIA MARKETS AND SOURCES OF SUPPLY. California consumes more lumber per capita and uses a larger supply of the Oregon and Washington production of Douglas fir than any other one state of the United States. Water borne lumber largely supplies the two great markets around Los Angeles and San Francisco bay. It is important that the shook consuming sections of the state be able to draw their supplies from all producing points. To a considerable extent shooks are cut from scrap lumber, and to secure the best utilization thereof different kinds of shooks for different crops are currently manufactured instead of producing only one variety. Unusually large crops may require on short notice more shooks of a kind that near by mills can supply. Also packers with plants in widely separated parts of the state will frequently contract with one mill for the requirements of all their plants. For much the same reasons a reasonable basis of rates to all shook markets is essential to the producer. The practical necessity of cutting shooks suitable for the different crops raised in the different sections of the state, the fluctuation from year to year in the size of the crops, and the frequent inability of near by mills to meet the immediate demands of consumers all combine to make important a wide distributive market. ABILITY OF SAN PEDRO TO COMPETE IN INTERIOR MARKETS. The crux of the proceedings is the alleged undue disadvantage of complainant and San Pedro in distributing forest products in the interior markets of California in competition with the California and Oregon lumber producing sections. Practically all its rail shipments of lumber went to destinations within 50 or 60 miles of Los Angeles. Complainants shook shipments by rail went to a broader territory although one half of them went to destinations whose rates were not in excess of 8.5c. The balance of the rail shipments of shooks were distributed throughout the consuming markets of the state, partly on emergency orders and partly to introduce complainants spruce and hemlock products. RATE ADJUSTMENT. To California consuming territory the rates from the northern pine mills and from the fir mills of the Willamette valley are blanketed quite extensively as to points of origin and to some extent, particularly from the Willamette valley, as to points of destination. The rates from Westwood to California destinations are blanketed from all intermediate points to and including Newcastle, 293 miles less distant. To California destinations, Sacramento and south and Penryn and west, the rates from the Weed group are generally the same as from the Westwood-Newcastle group. The Weed group rates apply from stations south of the California-Oregon state to Red Bluff in the case of traffic to Sacramento, Oakland, and Merced, from stations south to Marysville on traffic destined to Fresno

and Bakersfield, and the southern boundary of the blanket is South Vallejo on traffic to Los Angeles. Southern Oregon origin points are blanketed into small groups. San Pedro has commodity rates on lumber and shooks on a graded basis to Imperial Valley points and to points north as far as Bakersfield on the Valley line, and Arguello, about 60 miles beyond Santa Barbara, on the Coast line of the S. P. To more northerly destinations the rates from San Pedro are based wholly or in part upon class rates. The rate to Bakersfield from San Pedro is nearly as great for a distance less than 200 miles as the rates from competing points about 400 miles more distant. The present adjustment of rates on lumber and box shooks to California destinations has been influenced by several factors. Chief among these were the necessity of making rates from interior mills to meet the competition of water borne lumber and lumber produced within the consuming territory, requirements of the California Railroad Commission and of the Interstate Commerce Commission, and actual and potential carrier competition. WATER COMPETITION AS AFFECTING OREGON RATES. The interior mills in Oregon, shipping by rail to California, meet their strongest competition with lumber moving by water to Los Angeles harbor and San Francisco bay points. The water borne lumber received at California ports moves in vessels that do not file rates with either the California or Interstate Commissions and are not subject to the jurisdiction of either body. From Portland Puget Sound points to San Francisco Bay and San Pedro the water rates on lumber at the time of the hearing were respectively $5 and $5.50 per thousand feet. These rates, especially that to San Pedro, are on a low basis. Normal compensatory rates, from the standpoint of owners who have vessels to charter, would be $6 and $7 per thousand feet. Probably 80 to 85 per cent of the lumber brought into these ports is handled by companies operating their own boats. The present rate adjustment does not permit the interior mills of either Oregon or California to ship their lower grades of lumber to the San Francisco or Los Angeles markets. Oregon mills having access to both rail and water facilities make practically all their shipments of lower grades and some of their shipments of higher grade lumber to San Francisco and Los Angeles by water. While the rates to the ports are not so adjusted as to permit the interior mills to compete at the water's edge, they are designed to permit the interior mills to serve the inland territory. In selling lumber throughout the interior of California, rail shippers have in the past encountered active competition from waterborne lumber. At the present time the mills shipping all rail appear to have an advantage at interior destinations over water bore lumber shipped from San Francisco by rail. REASONABLENESS. Of the rates from Portland to California destinations it is mainly with respect to those to the Sacramento-Stockton territory that complainant claims they are unduly low. Complainant expressly admits that as compared with the rates it suggests from San Pedro the rates from Portland are reasonable at Los Angeles and somewhat high in the lower San Joaquin Valley and in the Imperial Valley. The record also bears out that the rates to destinations Modesto and south are in general not too low. The record contains data indicating that the heavier loading of shipments from the Willamette valley into the Sacramento territory produce car earnings fairly comparable with those under the rates to the balance of California. The California market is highly important to the Oregon fir lumber industry. For many years it has been the chief outlet for the low grade lumber produced in the Willamette valley. Without this great market the industry would not have developed to its present state, as the low grades can not pay the transcontinental rates and compete in distant eastern markets. If the low grades could not be marketed to advantage, the industry could not succeed by marketing upper grades only. Any substantial increase in the rail rates to California would be reflected in a curtailment of output and would have a serious effect upon the Oregon mills, particularly the small mills whose output is largely or wholly lower grade lumber. At the time of the hearing the Willamette valley mills were operating on a part time basis. Further restriction would also seriously affect the revenues of defendant. The rates from Westwood and southern Oregon to California con-

suming territory do not fully represent the value of the traffic to the defendant. The marketing of the upper grades of lumber, which go in large volume to eastern destinations, could not be profitably carried on unless the low grade products could continue to move freely to the California markets. In addition there is a large incidental and consequential traffic to and from the mill points in the northern pine territory which is almost wholly dependent upon the lumber industry. Included in this incidental traffic is a considerable log movement to mills, notably to the mills at Susanville and Weed. PROPOSED RATE ADJUSTMENTS FROM SAN PEDRO. The record clearly indicates that San Pedro is entitled to a more favorable rate adjustment than that which now obtains to destinations in the interior of California. The excessive character of the rates from San Pedro, more especially in the instances where based in whole or in part upon class rates, appears from the comparisons with many other lumber rates between points in western states. The disparity between the San Pedro rates and those from other producing sections from the standpoint of distance alone has been noted. CONCLUSIONS. The rates from the Willamette valley to the Sacramento district are substantially those prescribed by the Commission as affected by the general increases and reductions. Considering the heavy loading of fir lumber and the limited number of items that may be shipped on the group C lumber rates it is clear that the Willamette valley rates are not unreasonably low. That the rates from southern Oregon and Westwood to Sacramento and vicinity are on a low basis there can be no doubt, but they do not appear to be unjustifiedly low, as they yield to the carrier something in excess of out of pocket cost, in addition to making possible a profitable traffic in transcontinental lumber and inbound supplies. These rates have been made voluntarily by the carriers and have been maintained for upwards of 10 years. The total cost of rail and water transportation through San Pedro would obviously be in excess of the cost of transportation from the northern pine mills, some of which are located adjacent to the destination territory. The record does not establish any undue prejudice to San Pedro or undue preference to interstate producing points with respect to the existing adjustment of rates on lumber to the Sacramento district. It is chiefly with respect to the rates on shooks from the northern pine mills that complainant stresses the claim of undue prejudice in the Sacramento territory. Complainant clearly should be accorded a reasonable and nonprejudicial basis of rates on shooks to the consuming territories in California. That the existing basis of rates from San Pedro does not meet this standard it not open to doubt. As concerns San Pedro only a proper relative adjustment might be made either by increasing the rates from competitive producing points or by reducing the San Pedro rates or both. The present proceeding brings before the Commission only producers whose interest is mainly in a relative adjustment of rates. The consumers of shooks are not before it. In the absence of a clear showing that, as a whole, the rates on shooks from producing sections competitive with San Pedro to the Sacramento district are unduly low, the readjustment necessary to accord San Pedro a proper relationship should not be so made on this record as to increase the price of all shooks to consumers in that district. The record contains no such showing. The record in the case indicates that such readjustment as complainant is entitled to should be accomplished by reducing certain of the rates from San Pedro. The decision of the California Commission in this joint case determines that the rates prescribed therein from San Pedro and San Joaquin mills are reasonable and are properly related to existing intrastate rates from the other producing sections of California. In this connection it may be observed that the distance of many of the fir mills of the Willamette valley and the pine mills of northern California and southern Oregon from the interior markets of California and the proximity of lumber producing regions to those markets, in connection with the movement of large quantities of lumber to the California ports, have resulted in the development of a group basis of rates under which the mills of all producing points have been able to dispose of an important share of their products in the California markets. To the extent that the reasonableness of the

San Pedro rates and their relation to existing intrastate rates may be incidentally involved in the disposition of these issues, the basis prescribed by the California body is lawful. HELD, complaint dismissed. Los Angeles Lumber Products Co. v. S. P. Co., 104 I. C. C. 297.

(j) Complainant attacked commodity and class rates on sewer pipe and wall coping, carloads, from Mecca and Brazil, Ind., to Illinois, Wisconsin, upper Michigan, Minnesota, Iowa, and Missouri, as unreasonable, unjustly discriminatory and unduly prejudicial to complainants and unduly preferential of competitors in Illinois, Iowa, Missouri and Minnesota. Mecca and Brazil are within about 20 miles of the Illinois-Indiana boundary line, the latter about 20 miles south of the former, both being served by the C. I. & W. Sewer pipe and wall coping are rated sixth class in official, class A in southern, and class E in western and Illinois classification territories. The present scale of class rates in the Illinois district was established in accordance with 55 I. C. C. 290, 56 I. C. C. 202 and 687. This scale is the same as the c. f. a. scale on the first five classes. Class E rates, applicable generally throughout the Illinois district on sewer pipe and wall coping, are based on 20 per cent of the first class rating. Joint commodity rates are maintained from Brazil and Mecca to Illinois, Wisconsin and upper Michigan and to St. Paul, Minneapolis and Duluth and other Minnesota points intermediate thereto. To points in Iowa and Missouri, other than those included in the Illinois district, combination rates apply, composed generally of commodity rates to Danville, Peoria, Ill., or St. Louis and class E rates beyond. Commodity rates have been in effect on this traffic from Mecca and Brazil to points in Illinois for over 25 years. When these rates were originally established they were based on the tenth class rates, governed by the Illinois classification, applicable from St. Louis and Illinois producing points. The present rates from Brazil and Mecca are on a materially higher basis than from competing points indicated. The rates from Brazil to points in the Illinois district are also materially higher than the rates, generally class E, from What Cheer, Des Moines, Fort Dodge, and Webster City, Iowa and Red Wing, Minn. The carriers should adjust their rates to points in Missouri which are intermediate to Kansas City in harmony with rates to Kansas City, distance considered. Although the distances from Brazil to the greater part of Wisconsin are less on an average than those from St. Louis, its rates are in no instance lower, and average considerably higher, than those from St. Louis. Giving due weight to the expensive Chicago terminals through which traffic from Brazil and Mecca moves, no such differences as the record discloses are justified by any conditions shown to exist in the territory involved. HELD, rates on sewer pipe and wall coping from Brazil and Mecca to points in Illinois classification territory were, are, and will be unreasonable and unduly prejudicial to extent they exceed rates from St. Louis to the same destinations. HELD, further to destinations in Wisconsin not included in the Illinois classification territory and to Minnesota except St. Paul and Duluth, unreasonable and unduly prejudicial to extent the rates to Duluth group exceeded rates from St. Louis to that group; that rates to St. Paul unreasonable to extent they exceed by more than 1c rates from St. Louis, and that rates to the remainder of the territory in question exceed rates from St. Louis, reparation denied. Chicago Fire Brick Co. v. A. W. Ry., 107 I. C. C. 399.

(k) Complainant attacked commodity rates on sugar, carloads from New Orleans, La., and points taking Louisiana rates to Texarkana, Ashdown, Hope and Nashville, Ark., as unreasonable, unjustly discriminatory and unduly prejudicial as compared with the rate to Shreveport, La. Texarkana is on the K. C. S., M. P., St. L. S. W., and T. & P. Ashdown is on the K. C. S., Hope on the L. & A., and M. P., and Nashville on the M. P. Shreveport is on all the lines above named except the M. P. Sugar is rated fifth class. The rate to Shreveport is about 38 per cent of the fifth class rate. To the other points, the rates are 63, 59, 60 and 60 per cent of the fifth class rates. The record shows that the New Orleans-Shreveport rate was originally established to meet the competition of boat lines operating on the Red River. No such competition exists now and it appears doubtful that boat line service will be restored in the immediate

future. The original rate established on a competitive basis has been maintained by orders of the Louisiana Commission. Effective Sept. 8, 1925 a rate of 21c was established from New Orleans to Shreveport by way of the Mississippi river Warrior barge line to Vicksburg, Miss., and rail lines beyond, which in effect created a new form of competition. Various comparisons of rates submitted by defendants fully demonstrate that the New Orleans-Shreveport rate of 26c is subnormal and should not be used as a measure in determining the reasonableness of rates to farther distant points in Arkansas. HELD, rates at present in effect just and reasonable, but unduly prejudicial to extent the rates to Texarkana and Hope exceed rates to Shreveport by more than 5c and to Ashdown and Nashville by more than 7c over Shreveport. Four States Grocery Co. v. K. C. S. Ry., 107 I. C. C. 485.

(l) Complainant attacked commodity rates charged on crate and box material, carloads, from Bainbridge, Ga., to destinations served by the East Coast Ry., as greatly in excess of and bear no reasonable relation to the intrastate rates applicable from points within Florida to the same destinations, and unjust, unreasonable, unduly prejudicial and unjustly discriminatory against complainant in favor of like traffic moving intrastate between points in Florida. Complainant attacked rates on crate and box material from Brunswick, Ga., to destinations on the East Coast as unreasonable, unduly prejudicial and unjustly discriminatory against complainant in favor of traffic to the same destinations from Savannah, Ga., and intrastate from points in Florida. Traffic from Bainbridge and Brunswick to East Coast destinations is delivered to that line at Jacksonville. Tallahassee, Fla., a competitive point, is 40 miles south of Bainbridge and traffic from Bainbridge may move to Jacksonville either over the G. F. & A., to Tallahassee, thence S. A. L., a total distance of 205 miles or entirely over the A. C. L., 215 miles. The latter is the rate making line. There are two available routes from Brunswick to Jacksonville, one over the A. B. A. to Thelman, Ga., and S. A. L., beyond, a total distance of 90 miles and the other over the A. C. L., 103 miles. The through rates from Bainbridge and Brunswick to East Coast destinations are made by combination on Jacksonville. From Bainbridge the full local rate to Jacksonville of $27.60 per car is used as a factor while the proportional factors from Brunswick to Jacksonville range from $20.50 to $21.50 per car, and were at the time of the hearing less than the local rate. Beyond Jacksonville the East Coast applies its interstate basing scale. The rates from Bruswick are published as joint rates. The situation complained of is brought about chiefly by the fact that the factors applied by the East Coast from Jacksonville in constructing the through rates from Bainbridge and Brunswick to East Coast destinations are on a higher basis than the intrastate rates prescribed by the Florida Commission. Class P rates apply on crate and box material within Florida. The present mileage scale applicable to Florida intrastate traffic became effective March 25, 1914. For two lines hauls the rates are 90 per cent of the sum of the locals and for three line hauls 80 per cent of such sum. Crate and box material whether moving intrastate or interstate to East Coast points is handled beyond Jacksonville under the same conditions, and it is admitted by defendants that the present adjustment works to the disadvantage of the interstate shipper. The record shows that complainants are in active competition with shippers of like material to destinations on the East Coast under the intrastate rates maintained in Florida; that the conditions affecting intrastate traffic in Florida are not more favorable than those affecting interstate traffic from Bainbridge and Brunswick to these destinations; and that the existing rate situation operates to the disadvantage of complainants and their traffic and the advantage of complainants competitors and their traffic moving intrastate in Florida. HELD, rates attacked from Bainbridge and Brunswick not unreasonable and not unduly prejudicial as compared with rates from Savannah; they are unduly prejudicial to extent they exceed Florida intrastate rates and that this should be removed by increasing the intrastate rates to the reasonable interstate basis. Elberta Crate Co. v. A. C. L. R. R., 107 I. C. C. 499.

(m) Complainant attacked rates charged on cabbage, car loads since March 1924 from San Benito and Donna.

Tex., to Columbus, Miss., as unreasonable, and, as compared with rates from the same points to Artesia, Corinth, Tupelo and Okolona, Miss., unduly prejudicial. For rate making purposes the railroads have drawn a dividing line between southeastern and Mississippi valley territories, and in publishing rates from Texas points to Columbus that destination has been treated as being in southeastern territory. It is, however, immediately east of the dividing line and short distances from West Point, Tupelo and Artesia, which for rate making purposes are in Mississippi valley territory. No joint rates are published from the points of origin to Columbus, the lowest combination of rates on the Mississippi river being applicable, which is the Memphis combination. The evidence indicates that Columbus may properly be included in Mississippi valley territory in case of the adjustment in question. HELD, rates attacked not unreasonable or unjustly discriminatory but unduly prejudicial to extent they exceed the rates to West Point, Corinth, Tupelo and Okolona, Miss. Northeast Miss. Traffic Bureau v. N. O. T. & M. Ry., 107 I. C. C. 673.

(n) Complainant attacked sixth class rates charged on sulphuric acid, carloads, from Evansville, Ind., and Louisville, Ky. to Lawrenceville, Ill., as unreasonable and unduly prejudicial as compared with the rates from East St. Louis, Danville, Hillsboro, La Salle and Peru and Depue, Ill. This commodity is rated fifth class but under exceptions takes sixth class in central territory. Rates are from Evansville 59 miles, $2.70, and from Louisville, 140 miles $3.70. Commodity rates materially lower than sixth class are maintained from the Illinois points to Lawrenceville. Sulphuric acid is a low grade commodity, average loading is about 100,000 pounds per car, and risk of damage is negligible. Rates which will permit by product sulphuric acid to move to markets are of great importance to producers thereof. Complainant seeks rates of $1.60 from Evansville and $2.30 from Louisville. The former is the same as and the latter 10c higher than rates which the southeastern sulphuric acid scale would produce for the same distances. These rates compare favorably with the rates maintained from Illinois points to Lawrenceville and other destinations. It is obvious that the present rates from Evansville and Louisville to Lawrenceville are so high as to preclude a movement. The desirability of the establishment of rates which will permit the movement and marketing of byproducts sulphuric acid has already been touched upon. HELD, rates attacked for future unreasonable and unduly prejudicial to extent they exceed $1.60 per ton from Evansville and $2.30 from Louisville. Southern Agricultural Chemical Corp. v. C. C. C. & St. L. Ry., 109 I. C. C. 227.

III. EFFECT OF EQUALIZATION.

§8. Adjustment of related rates.

See Relative Rates.

(a) Complainant attacked commodity rates charged from Cincinnati, O., and from points taking Cincinnati rates to Nashville, Tenn., between September 1917 and July 1922 as illegal in that they exceeded the contemporaneous rates from Jeffersonville, Ind., to Nashville. It was the intention of the southeastern carriers to restrict the equalization note to shipments originating beyond Cincinnati for the purpose of equalizing rates to southeastern territory on through traffic from the territory north of the Ohio river and west via the various Ohio river crossings. The fair and reasonable conclusion to be drawn, when all the pertinent tariff provisions are considered together, is that the equalization notes did not make the Jeffersonville rates applicable from Cincinnati on traffic originating at Cincinnati or at Cleveland rate points. The Commission is confirmed in this conclusion by the fact that for about five years while these notes were in effect, although as the record indicates thousands of shipments moved from and to these points, none of the shippers or carriers considered the tariffs as authorizing the application of the Jeffersonville rates on this traffic. No shipper, therefore, was misled, or relied upon the lower rates to his damage. HELD, rates charged not illegal, complaint dismissed. Nashville Traffic Bureau v. Director General 92 I. C. C. 211.

(b) Complainant attacked commodity rates charged on grapefruit in straight carloads and in mixed carloads with oranges, from producing points south of Jacksonville, Fla., to Billings, Helena, and Great Falls, Mont., as unreasonable. The basis of rates prayed for the future is that applicable on oranges in straight carloads from and to the same points.

The rate on grapefruit attacked is $1.625 prescribed by the Commission and voluntarily reduced by the carriers to a basis 40.5c lower than it would be if only the general increases and reductions approved by the Commission had been applied thereto. The shipments all moved subsequent to the disruption of the equalization of the rates on grapefruit and oranges. There is no justification for charging higher rates on grapefruit than on oranges. Both move in refrigerator cars under substantially the same conditions of transportation. The grapefruit rate from Florida to Montana actually moves traffic in substantial and continuous volume. The orange rate does not. The director general gave no special thought to the reasonableness of the rate on oranges when he established the group A basis on oranges from Florida. That rate from New York to Montana was essentially an import rate. It, rather than the grapefruit prescribed by the Commission can not be accepted as the reasonable basis for grapefruit and oranges from Jacksonville. HELD, complaint dismissed. Devine & Asselstine v. A. C. L. R. R., 93 I. C. C. 174.

(c) Complainant attacked commodity rates on newsprint paper, carloads, from Shawinigan Falls, Quebec, and from other points taking same rates or related thereto, in Canada and in Maine to Knoxville, Tenn., as unjust, unreasonable, unjustly discriminatory, unduly preferential of Nashville and Memphis, Tenn., Cincinnati, O., and Lexington, Ky. Commodity rate charged on 66.5c prior to July 1, 1922 and 60c thereafter. Shawinigan Falls is typical of the points of origin. In 78 I. C. C. 258 the Commission found that the reasonableness of a proposed rate of 57c on newsprint paper from the Northeast, including Canada and certain main points, to Nashville had been established but that it would result in undue preference of Memphis. The rate from Shawinigan Falls to Knoxville, 1,197 miles, is the same as the rate from the north Wisconsin group to the same destination for a distance of 913 miles. The rates from Millinocket, Me., to many of the principal points in the southeast are higher, distance considered, than the rate attacked. Moreover, the rates on newsprint paper from Shawinigan Falls to every point situated in the south except Nashville, Memphis and Lexington are substantially the same as or relatively higher than the rate attacked. It is obvious that the rates from Fort Frances and the Fox River group to points in the Mississippi Valley are on a lower basis than those prevailing from Shawinigan Falls. It is not disclosed that this more disparity of rates is inimical to the interests of complainant, nor is there any undue prejudice alleged with respect to the origin points; the same rate applies to Knoxville from both Shawinigan Falls and Fort Frances. The record is insufficient to justify a finding of unreasonableness. HELD, rates attacked not unreasonable but are unduly prejudicial to Knoxville and unduly preferential of Nashville to extent they exceed rates to Nashville via the Detroit, Mich., gateway. Knoxville Traffic Bureau v. C. P. Ry., 101 I. C. C. 605.

I. BURDEN OF PROOF.

§1. In General.

See Advanced Rates §3; Blanket Rates §16; Burden of Proof; Crimes §25; Discrimination §14; Long and Short Hauls §12 (1); Loss and Damage §15; Routing and Misrouting §8; Through Routes and Joint Rates §15; Undercharges §5; Weights and Weighing IV.

(a) The law places the burden on respondents to prove that their proposed adjustment is just and reasonable, and this the record does not show. The mere fact that they are attempting to make the readjustment because some of the participating carriers desire that they do so, or that it may help remove a complaint of discrimination pending before the Commission, is not sufficient evidence or proof of the reasonableness of the proposed rates, or that the present rates are unremunerative. Boots and shoes from New York points, 91 I. C. C. 591, 596.

(b) In proceedings before Interstate Commerce Commission, nothing can be treated as evidence, which is not introduced as such. United States v. Abilene & S. Ry. Co., 44 Sup Ct. 565.

(c) Lack of recollection does not constitute a denial of positive affirmative evidence. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 232.

(d) Protestants' conclusions with regard to proposed revision of all-rail and rail-and-water rates, c. l. and l. c. l., on furniture from southern district to eastern points, are based upon premises open to serious criticism. The assumption that capital cost and operating expense may be charged entirely to freight, for purpose of this case, disregards the immensely greater expense of passenger terminals in the eastern than in the southern district. Furniture from Southern Points, 100 I. C. C. 127, 144.

(e) Since there was no evidence to show that tolerance rules of the carrier had been changed since 1910, defendants rested when complainants failed to introduce adequate proof of their contentions. Complaint dismissed. Smith & Duckworth v. C., C., C. & St. L. R. R. Co., 100 I. C. C. 300, 302.

(f) Doubt as to nature of commodity shipped must be resolved in favor of complainant, since defendant's only evidence consisted of a statement of its witness that an inspector of the Transcontinental Inspection Bureau changed the rate basis. Hercules Powder Co. v. Director General, 100 I. C. C. 393, 394.

(g) Prayer for rates from nonproducing points in Maryland and Pennsylvania to points on lines of Pennsylvania R. R. Co. applicable on shipments of crushed stone reconsigned out of route or return hauled, denied, in view of fact

that the record is inadequate to afford a basis for the prescription of such rates. Budding Co. v. P. R. R. Co., 100 I. C. C. 411, 413, 414.

(h) Defendant having sustained the burden of proof, it is unnecessary to decide whether there is a distinction between the director general and the corporate carriers in so far as the provision of the act which places the burden of proof on the carriers is concerned. International Harvester Co. v. N. Y. C., 101 I. C. C. 89.

ALL OTHER CITATIONS

Cohen v. A. T. & S. F. Ry. Co., 88 I. C. C. 143; Gottlieb-Bertsch Co. v. Director General, as Agent, 88 I. C. C. 177.

II. CIRCUMSTANCES AND CONDITIONS OF PROBATIVE VALUE.

§1½. In General.

See Advanced Rates §18; Blanket Rates §18; Divisions §7; Equalization of Rates II; Long and Short Hauls §12; Procedure Before Commission VII, VIII; Reasonableness of Rates II; Reparation III.

(a) The commission has recognized that greater traffic density and more favorable operating conditions north of the Ohio River than south thereof warrant lower rates north of the river. Commercial Club of Carrollton, 55 I. C. C. 697. Cincinnati Asso. of Purchasing Agents v. L. & N. R. R. Co., 89 I. C. C. 285, 294.

(b) Fact that, because of a falling off in business, among other things, rates determined by the commission under section 15a of the act, did not yield carriers generally the contemplated return prescribed, confirms the soundness of the commission's statement, viz., that its duty in such cases includes an appropriate consideration of all evident circumstances and conditions which, in its judgment, will affect the final result. Express Rates 1922, 89 I. C. C. 297, 311.

(c) Proportional rates both from Missouri River and from St. Louis, Mo., to Memphis, Tenn., are among the lowest rates in the country on high-grade traffic. Helena Traffic Bureau v. M. P. R. R. Co., 89 I. C. C. 405, 411.

(d) It is neither necessary nor practicable to reflect in a general rate structure all the differences in transportation conditions that affect particular movements. Nebraska Livestock 89 I. C. C. 445, 457.

(e) Proper rate making secures to every shipper the performance of the transportation service for no more than a reasonable charge for every service rendered. Wool rates investigation, 1923, 91 I. C. C. 235, 280.

(f) Laches is purely a personal matter, and has no application in a suit of a public or quasi public nature. Lancaster v. Gulf C. & S. F. Ry. Co., (Tex. 1924) 298 F. 488.

(g) The Commission has repeatedly condemned the action of carriers in adjusting rates so as to impede or stifle the movement of commodities in any given direction. Wyoming Coal Co. v. V. Ry., 96 I. C. C. 359, 362.

(h) If all the factors which influence a given traffic situation are known and the effect of each of the factors has been measured, and its influence in the past determined, and if, further, these factors are known not to change but probably to remain the same in the future, it is relatively easy to determine the future effect of contemporary action. However, in rate, traffic, and operating matters this is rarely if ever the case. Not only do the factors themselves change, but their relationship to one another change, with the result that future effects and probable outcomes are necessarily in this sense guesses and speculations. The most that any one can do is to express a guess or a speculation, informed, restricted, and regulated by the facts of record. Interchangeable mileage ticket investigation, 98 I. C. C. 298, 310.

(i) Upon an extensive investigation as to what rates, as applied to a particular class of traffic to be offered, will be likely to produce a fair return hereafter, past or present statistics of operation and earnings are serviceable only as they illuminate the future. Rates and Charges on Grain and Products, 91 I. C. C. 105, 122.

(j) The farmer's dollar has depreciated, not only with general decline in purchasing power of money, but to a greater extent than in case of most other industries. This is particularly so of the dollar of the grain farmer in the West. Rates and Charges on Grain and Products, 91 I. C. C. 105, 134.

(k) Persons engaged chiefly in farming or tillage of soil, in fact insolvent, may not be adjudged involuntary bankrupts under Federal law. Rates and Charges on Grain and Products, 91 I. C. C. 105, 138.

(l) The country's permanent prosperity depends largely upon flourishing condition of agriculture and transportation industries. To assist one unduly at expense of the other at a time when neither is in an ideally prosperous condition, merely because one may be in a worse condition economically than the other, would be of doubtful value to assisted industry or to the country, assuming that it is within commission's power arbitrarily to render this assistance. It must be recognized that commission can not require unduly low rates on some commodities for benefit of one class of shippers any more than it can arbitrarily increase rates on other commodities because shippers thereof may be enjoying excessive profits. Rates and Charges on Grain and Products, 91 I. C. C. 105, 153.

(m) Differences in transportation conditions and density of traffic justify relatively higher rates in western territory than in the East. Wool Rates Investigation, 91 I. C. C. 235, 272.

(n) Considering difference in transportation conditions in western territory as compared with the East, the volume of movement, distance traversed, and density of traffic, rates on wool and mohair in the grease from intermountain territory to Pacific coast terminals, for application on shipments moving locally or when destined beyond, found unjust and unreasonable. Reasonable basis of maximum percentage rates prescribed for future. Wool Rates Investigation, 91 I. C. C. 235, 272, 273.

(o) Shippers are governed by applicable tariffs and have no direct concern with fact of a change in ownership or control of particular carrier. General Petroleum Corp. v. C. B. & Q. R. R. Co., 91 I. C. C. 388, 392.

(p) The reasonableness of charges is to be tested not by the way in which they are arrived at but by their aggregate amount. Dunn v. American Railway Association, 100 I. C. C. 229, 232.

(q) The record will not support the conclusion that the earnings would be noncompensatory but that fact of itself does not establish that the substantial out of line hauls proposed do not constitute wasteful transportation. Transit at Kansas City, 101 I. C. C. 696, 701.

(r) Generally, testimony that a transaction took place is to be accorded more weight than testimony to the contrary. Especially is this so where negative testimony is merely that witness does not remember the alleged occurrence. Larabee Flour Mills Corp. v. Director General, 92 I. C. C. 745, 747.

(s) Congestion existing at piers on Manhattan Island has been referred to by the commission in various cases, and reasonable rules and regulations designed for its relief and to facilitate handling of increasing tonnage of merchandise freight at the piers will not be condemned. Somerville Iron Works v. C. R. R. Co. of N. J., 93 I. C. C. 39, 42.

(t) Basic price of spelter, irrespective of point of production, is fixed by the East St. Louis market. Athletic Mining & Smelting Co. v. K. C. S., 93 I. C. C. 119, 120.

(u) Commission would not be justified in attempting to neutralize disadvantages of geographical location by requiring wasteful or additional service without adequate compensation, although shipper may be in dire need. Flory Milling Co. v. C. N. E. Ry., 93 I. C. C. 129, 134.

(v) Reasonableness of rates charged, and not strict conformity with prescribed method of making percentage reductions in their predecessors, is the controlling consideration. Anaconda Copper Mining Co., 57 I. C. C. 723, and other cited cases. N. Y. Stable Manure Co. v. Director General, 93 I. C. C. 349, 351.

(w) Quite generally the rate levels in the Southwest are somewhat higher than in the Southeast. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479, 489.

(x) Chemical and building lime found not sufficiently dissimilar from a transportation standpoint to warrant maintenance of different rates thereon. Lime from Eastern Trunk Line Points, 93 I. C. C. 617, 631.

(y) Line-haul rates and switching charges are two methods of securing compensation for freight service which differ radically in principle. Both have developed naturally as the outgrowth of

particular conditions. In case of line-haul rates, cost and value of service are factors which are, in theory at least, taken into consideration in fixing the rates for each and every commodity and for each and every haul. Switching charges, on other hand, are largely based on average conditions. Rochester Switching Case, 95 I. C. C. 30, 45.

(z) It is the commission's view that the Southwest should be served by the Gulf port lines, that they should maintain through rates to that territory in general, and that rates to a great part of the Southwest via their lines, rather than those via the south Atlantic port lines, should set the standard. Rates to Southwestern Destinations, 95 I. C. C. 188, 199.

(aa) Monopolies are odious, alike by common law and under Federal statute. The commission can not consider with favor a proposition to create of an unregulated favored class of already favorably circumstanced producers a complete monopoly by compelling carriers to violate principle of equality of treatment which it is the right of every citizen to demand. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 333.

(bb) The general rate levels in the western district are higher than in the southern district. Alabama & Mississippi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385, 402.

(cc) Traffic density as a whole in the Southern district exceeds that in the western district. Alabama & Mississippi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385, 402.

(dd) Differences in transportation conditions in the Southwest, including Texas common-point territory and Louisiana west of the Mississippi, are not sufficiently marked to warrant different levels of rates. Humble Oil & Rfg. Co. v. D.-G. C. Ry., 95 I. C. C. 435, 438.

(ee) Railroads are monopolies in many respects, and because of that fact are subject to public regulation. In this public regulation cost of service and hence distance are factors which must be taken into consideration. But railroads are also subject to competition with respect to much of their traffic, and it has been and is the policy of public regulation to allow them considerable latitude in meeting this competition. This accounts for many inconsistencies in the rate structure and also for many instances where distances are disregarded. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 566, 567.

(ff) It is a recognized principle of rate making that the effect of differences in distance diminishes as the total length of haul increases; in other words, as the percentage of difference decreases. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 568.

(gg) A carrier can not dictate sources from which shippers shall purchase their materials; and fact that a lower rate is available from one point does not justify an unreasonable rate from another. Kelly & Jones Co. v. P. R. R., 95 I. C. C. 640, 642.

(hh) Shipper claimed that relationship between dressed and live poultry is analogous to that which exists between a manufactured product and its raw material, and directed attention to rates on livestock which in many instances are lower than those on fresh meat and packing-house products. Considered from this standpoint it contended that live poultry should be entitled to rates at least as low as those on dressed poultry. FOUND, even if dressed poultry should be regarded as a manufactured product of the live fowl as raw material, the latter need not necessarily take as low a rate; moreover, live and dressed poultry are not analogous from a transportation standpoint nor are the conditions surrounding their shipment substantially similar. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 35.

(ii) Fact that shipments were isolated or sporadic is a circumstance to be given weight in determining whether lower rates should be established for the future or reparation awarded, but it is not the sole determinative factor. See 78 I. C. C. 473 and 92 I. C. C. 453. Carter Oil Co. v. C., B. & Q., 96 I. C. C. 215, 216.

(jj) What would be a reasonable rate for a haul in a territory with no adverse transportation conditions would not be adequate to compensate carriers operating in another section of the country under adverse conditions. Carter Oil Co. v. C., B. & Q., 96 I. C. C. 217, 218.

(kk) Complainants are entitled to move their coal to any market at reasonable and nonprejudicial rates. The commission has repeatedly condemned the action of carriers in adjusting rates so

as to impede or stifle the movement of commodities in any direction. Wyoming Coal Co. v. V. Ry. Co., 96 I. C. C. 359, 363.

(ll) Tripoli and silica are trade names only in the sense that they are commonly used by the trade to distinguish between different grades of siliceous rock, mined in different territories; they are not trade names in the sense referred to in Andrews Soap Co. v. P., C. & St. L. Ry. Co., 41 I. C. C. 41. St. Louis Traffic Bureau v. A., T. & S. F. Ry. Co., 96 I. C. C. 421.

(mm) Differences in transportation conditions are so varied and interwoven that it is impracticable to make rates reflect all such differences that may be discovered. Moreover, it is important that simplicity and uniformity be considered in adjusting rates. As between Illinois and the territory east thereof, there are in general no differences in transportation conditions which would warrant material differences in rates. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682, 691.

(nn) Circumstances and conditions surrounding the transportation of cement over interstate and intrastate routes from Kansas City and Sugar Creek to St. Joseph, Mo., and intermediate points, also from points in the Kansas gas belt, including Dewey, Okla., to same destinations, and from Kansas City, Sugar Creek, and Bonner Springs, Kans., to St. Joseph, Atchison and Leavenworth and intermediate points in Kansas and Missouri, found to be substantially similar. Cement from Kansas City to St. Joseph, 96 I. C. C. 718, 725.

(oo) The commission has heretofore found, 46 I. C. C. 451, that if cotton is transported flat (uncompressed) in order to meet trade requirements and convenience, the resulting use of additional car space should be paid for by the shipper. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749, 753.

(pp) In finding interstate rates on iron and steel articles and cast-iron pipe from points in Alabama to Pensacola, Fla., not unreasonable, it is further found that the transportation services under the rates in issue from Birmingham, Ala., and points grouped therewith taking same rates to Pensacola and Mobile, Ala., are performed by defendant carriers under substantially similar circumstances and conditions. Pensacola Chamber of Commerce v. L. & N. R. R. Co., 98 I. C. C. 567, 572.

(qq) The record reveals no reason for applying a different level of rates between Valley City and Jamestown, N. Dak., eastbound to Twin Cities than is applied westbound. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 713.

(rr) It cannot be said that a rate is unlawful because under a different state of facts a lower rate would have applied. Refiners Oil Co. v. P. R. R. 102 I. C. C. 249, 250.

(ss) In passing upon the reasonableness of any particular rates or charges, it is necessary always to consider the special circumstances and conditions surrounding the situation under review. Continental Oil Co. v. Director General 102 I. C. C. 338, 342.

(tt) Generally speaking, transportation conditions are more favorable in the Mississippi Valley than in the southwest. Mississippi Railroad Commission v. A. & V. Ry. 102 I. C. C. 540, 545.

(uu) The Commission has frequently commented upon the more favorable transportation conditions in central territory than in the southern territory. Nashville Traffic Bureau v L. & N. R. R., 102 I. C. C. 641, 647.

(vv) A discouraging aspect of the commission's work has been the fact that rate complaints tend to increase rather than diminish in number. Once a controversy is apparently set at rest, new and unexpected complaints often crop out in other quarters. It is possible that the broader consideration which an investigation like the one here involved permits may result in a rate structure that will have more elements of permanence. Southern Class Rate Investigation, 100 I. C. C. 513, 602.

(ww) The carriers may accord rates which the Commission may not require, and their doing so not of necessity afford a criterion for testing the propriety of the refusal of carriers to accord similar treatment to other commodities, under other conditions, or in other territories. Western Paper Makers Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 137.

(xx) The Commission has repeatedly condemned carriers for adjusting their rates and practices so as to impede or stifle the movement of commodities in

any given direction. Montgomery Cotton Exchange v. S. A. L. Ry., 109 I. C. C. 579, 586.

ALL OTHER CITATIONS

Arizona Corporation Commission v. A. E. R. R. Co., 85 I. C. C. 76; Mathieson Alkali Works v. B. & O. R. R. Co., 85 I. C. C. 728.

§2. Advantage of Location.

See Advanced Rates §5 (2) (o); Blanket Rates §7; Discrimination §9; Equalization of Rates §3; Reasonableness of Rates §19.

(a) Natural disadvantages under which the growers in one district may operate in getting his products to market are not such matters as the Commission may consider in determining the propriety of rail rates from competitive producing territories. Potatoes and onions to California, 100 I. C. C. 49, 53.

(b) While origin points nearer to destination points must not be unduly deprived of the benefit of their locations, and more distant origin points unduly favored, distance alone frequently is not controlling and must not be given undue weight, particularly where considerations which are largely determinative of the rates from the farther distant point exist in a markedly less degree from the nearer point. Distance is not and has not been a controlling factor in the rate adjustment. Galloway Coal Co., 40 I. C. C. 311. Oakland Chamber of Commerce v. S. P. Co., 100 I. C. C. 55, 62.

(c) The commission has repeatedly found that it is not its providence to prescribe rates less than reasonable maximum for the purpose of overcoming disadvantages of location or cost of manufacture, and unless the proposed rates are in themselves unreasonable or otherwise in violation of law, the commission may not require respondents to maintain lower rates, although it has recognized that carriers in order to meet competition may voluntarily establish rates lower than the commission is in position to prescribe, provided always that no undue prejudice, unjust discrimination, or other violation of law results. Glass and Glassware to Interstate Points, 98 I. C. C. 83, 86, 87.

(def) Where a point in a destination territory may have advantage over competitive jobbing points due to its location, it is not proper to draw the conclusion that because of such advantage the existing rates to such point are on a proper level. Salina Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 290, 293.

(g) New Orleans, La., has certain natural advantages over Galveston, Tex., which have affected the relationship of rates to the two points. The fact in itself warrants careful scrutiny of a rate adjustment which is alleged to be unduly prejudicial to the port least favored by natural advantages. While those natural advantages are entitled to consideration in so far as they have been brought about by geographical location, they are not entitled to much respect in so far as they have been brought about by rate advantages such as those here complained of. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 121.

(h) Complainant is clearly entitled to a reasonable and nonprejudicial basis of rates, such basis being an inherent right of the localities served. If, however, with such rates, successful competition with other smelters can not be sustained, and Nevada mining industry languishes, the disability is one beyond the power of the commission to remove. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 202.

(i) Rates on fresh meat, fresh frozen meat, and packing-house products from Ogden, Utah, to various interstate destinations, except rates on fresh frozen meat to New York, Brooklyn, and Boston, found not unreasonable, discriminatory or unduly prejudicial. While it is clear complainant is at a disadvantage in marketing its products at some, if not all, of the destinations involved, its disadvantage arises not from the rate adjustment assailed but from its geographical location and commercial conditions. Ogden Packing and Provision Co. v. A., T. & S. F., 101 I. C. C. 236, 252, 253.

(j) Rates on fresh meats and packing-house products from Ogden, Utah, and rates on the same commodities and on by-products of livestock from Reno, Nev., to destinations in California, found not unreasonable, discriminatory, or unduly prejudicial as compared with rates on the live animals from and to the same and other points in the same general territory. Complainants' disadvant-

age here is due to their location with respect to this business and not to an improper relationship between the rates on their products and the rates on livestock. Ogden Packing and Provision Co. v. A. T. & S. F., 101 I. C. C. 236, 258.

(k) While shippers are entitled to the benefits of their location, shippers at other points may not be denied the right of access to markets at rates that are reasonable and free from undue prejudice and preference. Western Indiana Gravel Co. v. N. Y. C. & St. L. Ry., 109 I. C. C. 727, 730.

ALL OTHER CITATIONS

Acid from Moundsville, 85 I. C. C. 149.

§3. Agreed Facts, Admissions and Agreements.

See Absorption of Charges §2 (a); Allowances §8 (5) (m); Class Rates §2 (3i); Reparation §17.

(a) An agreement by a manufacturer of lumber to ship a certain proportion of its product over the lines of a railroad company implies an agreement by the company to furnish cars for such shipments, whether or not it furnishes cars to other shippers, which, being illegal, as preferential, leaves the contract lacking in mutuality. St. Paul & Tacoma Lumber Co. v. Northern Pac. Ry. Co., 296 F. 749.

(b) Correspondence leading up to the reduction of a rate can not be taken as an admission that the previous rate was unlawful. Memphis Freight Bureau v. C. & E. I., 101 I. C. C. 26, 27.

(c) The reasonableness or unreasonableness of a rate is a question to be determined upon the governing facts, and no admission on the part of the trunk lines is conclusive, especially as to the Director General of railroads, as agent, against whom a reparation order is here sought. Pressed Steel Car Co. v. Director General, 109 I. C. C. 75, 79.

§4. Averages.

(a) A comparison of earnings on a specified commodity with average earnings on all traffic is generally a little if any value in measuring the reasonableness of rates, for reasons, among others, that averages are based on class as well as commodity rates, divisions of joint rates as well as local rates, and c. l. and l. c. l. traffic; and because of differences between average and actual hauls. Iron and Steel Articles, 89 I. C. C. 606, 622.

(b) The reasonableness of any rate, can not be measured solely by comparing its earnings with average earnings on all traffic. If it could be, the inevitable result would be to bring all rates to a common level. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194, 196.

(c) The Commission has frequently commented on the impropriety of using the average revenue on all freight to measure the reasonableness of rates on any particular commodity, even though it be of low grade. Consistently applied, such a yardstick would ultimately reduce all rates to a common level. Union Sulphur Co. v. T. & N. O. R. R., 98 I. C. C. 76, 79.

(d) That a rate established by a railroad company on sand and gravel between two points gives it a higher rate per ton mile than its average earnings on all commodities is not evidence that such rate is unreasonable or excessive, without taking into consideration the length of the haul, as compared with the average haul, and other essential factors which may affect the question. Illinois Cent. R. Co. v. Railroad Commission of Kentucky, 1 Fed. (2d) 805.

(e) Average cost of handling traffic per revenue ton-mile is not a very satisfactory unit of comparison, as ton-miles are the measure of line-haul or movement expenses, being the product of tons by distance, while terminal or nonmovement expenses are measurable in terms of tons and not ton-miles. Obviously ton-mile cost for the movement expenses varies with load per car and terminal proportion of ton-mile cost is not same for different lengths of haul. Wool Rates Investigation, 1923, 91 I. C. C. 235, 262.

(f) If the reasonableness of any rate could be gauged solely by comparing it with the average earnings of the carriers on all traffic, the inevitable result would be to bring all rates to a common level. Procter & Gamble Distributing Co. v. St. L. S. F. Ry., 101 I. C. C. 563, 587.

(g) Comparisons of the average earnings an all revenue freight with the earnings on individual commodities, though frequently offered, throw little, if any light on the reasonableness of

rates on the individual commodities. Lafayette Box Board & Paper Co. v. A., C. & Y. Ry., 101 I. C. C. 273, 276, 277.

§5½. Back Haul.

ALL CITATIONS

Transit Privileges on Transcontinental Grain, 85 I. C. C. 43.

§8. Car-mile or Train-mile Revenue.

See Reasonableness of Rates §6.

(a) The probative force of car mile earnings in considering the rate level to be applied to a heavy loading commodity of the character of scrap iron is well recognized. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194, 195.

(b) For a somewhat longer average haul, earnings per car-mile on grain and products are slightly greater than average of all c. l. traffic, or on all c. l. traffic excluding grain and products. They are materially greater than earnings on products of forest, and animals and products, or average of all products of agricultural. Rates and Charges on Grain and Products, 91 I. C. C. 105, 124.

(cd) The earnings per car and per car-mile for iron and steel are nearly three times as great as on all traffic. The figures for all traffic, of course, reflect the loadings and earnings on coal, sand, gravel, and other heavy-loading commodities that move in greater volume on commodity rates. It is apparent, however, that if these commodities were eliminated from consideration the average loading per car on iron and steel would far exceed those on the remaining traffic. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682.

(e) The showing that double-deck loading by reducing the number of car-miles increases the car-mile revenue does not change the equally apparent fact that respondent would be compelled to accept double-deck rates for that portion of the movement made in single-deck cars. Under the proposed rules car-mile revenues would be further enhanced. Transit on Hogs, 98 I. C. C. 153, 155, 156.

(f) Although it is true that the revenue per car-mile on low-grade commodities such as sand exceeds that on higher-grade commodities, nevertheless it must not be overlooked that the revenue per ton-mile on the latter commodities is greater. Boldt Glass Co. v. C., B. & Q. R. R. Co., 98 I. C. C. 481, 485.

(fa) Earnings of 18.16 mills per ton-mile and 54.49 cents per car-mile on a commodity loading as heavily as canned goods do not appear excessive, especially in a territory where hauls over high mountain ranges are required. Canned Goods from Colorado, New Mexico, Texas & Wyoming, 102 I. C. C. 156, 160.

(g) Determination of the reasonableness or unreasonableness of rates is not a matter of mathematical computation but involves the exercise of informed judgment. It can scarcely be said with any degree of accuracy that comparison of car mile earnings under rates on one commodity computed on the same weight is lacking in probative value. There is no fixed scale of progression or regression with changing distance for earnings per mile. Furniture from southern points, 112 I. C. C. 302, 309.

ALL OTHER CITATIONS

Boldt Glass Co. v. C. B. & Q. R. R. Co., 85 I. C. C. 412.

§8½. Categorical Answers.

See Advanced Rates §3 (v).

§9. Change in Conditions or Service.

See Advanced Rates §7; Reasonableness of Rates §7; Through Routes and Joint Rates §20.

(a) A change in rates which is detrimental to the interests of a particular community is not necessarily inconsistent with the general public interest which the statutes which the Commission administers were designed to protect, although those who fear injury may be more vocal than those who expect benefit. Certainly this largely voiceless public interest is one which the Commission should not overlook. The concentration of population in large centers is a greater public menace now than it was sometime ago. Southern class rate investigation, 100 I. C. C. 513, 604.

§10. Combinations to Fix Rates.

See Class Rates §2 (4c).

§11. Comparison of Classification Territories.

See Comparative Rates.

(a) Differences in transportation con-

ditions and density of traffic justify relatively higher rates in western territory than in the East. Wool Rates Investigation, 1923, 91 I. C. C. 235, 272.

(b) Transportation conditions generally throughout southern Missouri, Arkansas, western Louisiana, Texas common-point territory, and Oklahoma are so similar as to warrant a fairly uniform basis of rates. Oklahoma Corp. Commission v. A. & S. Ry Co., 98 I. C. C. 183, 196.

(c) The transportation conditions in the territory under consideration in American Sand & Gravel Co., 88 I. C. C. 1, are not so materially different from those existing between the points in Minnesota and North Dakota as to warrant any different level of rates for application to these low-grade commodities which are of such great necessity for the building and maintenance of roads and other public and private projects. Reasonable basis of rates prescribed and reparation awarded. Hopeman Material Co., v. N. P. Ry. Co., 98 I. C. C. 361, 370.

(d) Transportation conditions are more favorable in Mississippi Valley than in the Southwest. Miss. R. R. Comm. v. A. & V., 102 I. C. C. 540, 545.

§12. Comparison or Character of Commodity.

(1) In General.

See Advanced Rates §5 (3); Class Rates §2 (tt); Classification §3½, §17, §18; Comparative Rates; Reasonableness of Rates §7½.

(a) Complainants sought to demonstrate intrinsic unreasonableness by comparing rates and revenues derived from cotton with rates and revenues derived from other commodities, but the well-settled rule is that most helpful evidence in determining reasonableness of rates is to compare them with rates on like traffic, moving under like circumstances, in the same general territory. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 61.

(b) In dealing with the rates on vegetable meals and oils the commission has made the relationship of the commodities paramount to the inherent reasonableness of any particular rate. Midland Linseed Products Co. v. Director General, as Agent, 89 I. C. C. 260, 265.

(c) While the commission has condemned application of the same rate on both refined and crude oils, it does not follow that because the same rate is carried on crude oil as on refined oil that the rate on crude oil is thereby unreasonable, for it may be that the rate as applied to refined oil is low. Lubrite Refining Co., 80 I. C. C. 515. Atlantic Refining Co. v. A., B. & A. Ry. Co. 89 I. C. C. 279, 280.

(d) The commission has prescribed the same rates on crude, fuel, and gas oils in many cases; likewise it has prescribed rates on these oils a certain amount less than the rates on refined oils. This is sound when rates for the future are being prescribed, but in determining what would have been a reasonable rate on shipments of gas oil which moved during 1922 when various general rate changes become effective, other considerations must be taken into account. Relationship in the rates on these various oils moving at that time can be given little weight and the commission must resort to the ordinary tests of reasonableness. Standard Oil Co. v. M.-K.-T. R. R. Co., 89 I. C. C. 463, 468.

(e) Mere reference to a lower charge at other points is not sufficient to establish undue preference and prejudice. El Dorado Chamber of Commerce v. C. R. I. & P. Ry., 89 I. C. C. 743, 744.

(f) The rate level necessary to move a commodity is an element to be considered together with other elements in determining a reasonable rate on the commodity. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194, 198.

(g) Cereal food rates on Cream of Wheat found applicable and not unreasonable or unduly prejudicial as compared with rate on flour. Complainant failed to establish that there is substantial competition between Cream of Wheat and flour, notwithstanding that in some of its secondary uses, such as making of pancakes and waffles, Cream of Wheat displaces and to that extent competes with flour. Cream of Wheat Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 45.

(h) Following Midland Linseed Products Co., 88 I. C. C. 329, rates on oil, linseed, found unreasonable to extent they exceeded rates contemporaneously in effect on copra, peanut, and soya-bean oils. Reparation awarded. Bisbeen Linseed Co. v. P. R. R. Co., 91 I. C. C. 55.

(i) Rate on soda ash found unreasonable to extent it exceeded rate on caustic soda. The two commodities are similar in density and weight of load and there is but little difference in value. Both are soda products and generally move at the same rates. Reparation awarded. Grasselli Chemical Co. v. Director General, 91 I. C. C. 61.

(j) Fifth-class rate charged on dump cars found applicable and not unreasonable as compared with lower sixth-class rate on contractors' outfits in mixed carloads. Sixth-class item covering mixed carloads of miscellaneous equipment was provided as an approximation for convenience of shipper and carrier, in order to avoid separate weighing and rating of various articles of equipment shipped, and mixing requirement is a convenient and reasonable test for application of the item and to prevent its abuse. Complainant is not a contractor moving equipment from job to job, and no reason appears why straight carloads of designated articles under mixing provisions should take sixth-class rates. Johnson-Porter Clay Co. v. C., B. & Q. R. R. Co., 91 I. C. C. 71.

(k) Circumstances incident to transportation of coal which make it less expensive to handle than other freight are that it loads heavily, moves in great volume, and does not require expeditious service or expensive equipment. Coal from Crescent Districts, 91 I. C. C. 194, 199.

(l) Wool is a commodity of high value and can bear a higher rate than many commodities. Wool Rates Investigation, 1923, 91 I. C. C. 235, 263.

(m) Wool is a commodity of high value, generally loads much in excess of c. l. minimum, does not require special service, and claims for loss and damage are negligible. Wool Rates Investigation, 1923, 91 I. C. C. 235, 263.

(n) Ratings and rates on machines, adding, in boxes, l. c. l., in western classification, found unreasonable for the future as compared with ratings and rates on speedometers, in boxes, l. c. l. Functions of the two commodities are similar as are their transportation characteristics in many respects. Second class c. l. ratings and rates in official, southern, and western classifications found not unreasonable. Burroughs Adding Machine Co. v. M. C. R. R. Co., 91 I. C. C. 378.

(o) Rates on bichromate of potash, found not unreasonable as compared with rates on bichromate of soda. Value of bichromate of potash is greater than that of bichromate of soda and movement of former is much greater in volume than that of latter. Griess-Pfleger Tanning Co. v. C. R. R. Co. of N. J., 91 I. C. C. 566.

(p) Second-class rating in official classification territory on tinners' snips or shears found not unreasonable or unduly prejudicial as compared with third-class rating on mechanics' tools. Tinners' snips or shears are more closely related to cutlery and hand tree pruners and plant-cutting shears, which are accorded second-class ratings. Moreover, tinners' snips or shears are rated second class in southern and western classifications and such rating was recommended for them by commission's examiners in Consolidated Classification case, 54 I. C. C. 1. Peck Stow & Wilcox v. N. Y., N. H. & H. R. R. Co., 91 I. C. C. 747.

(q) "Naphtha" is a product of crude oil which is blended with casing-head gasoline to obtain ordinary commercial gasoline. Transcontinental Oil Co. v. M., K. & T., 92 I. C. C. 39.

(r) "Wax distillate" is a crude petroleum having a paraffine base, and has but little commercial value prior to separation of the wax from the oil, after which it is used in the manufacture of lubricating oils. Transcontinental Oil Co. v. M., K. & T., 92 I. C. C. 39.

(s) "Spelter" is a commercial term applied to metal commonly known as zinc. Spelter from Arkansas, 92 I. C. C. 136.

(t) In the trade usage stems of beets, carrots, and parsnips, are not considered as "tops." These commodities "with tops" are those with leaves unremoved, while term "clipped tops" signifies their removal, from 3 to 6 inches of the stem being retained to permit tying in bundles. Beets and Carrots from Texas, 92 I. C. C. 141, 142.

(u) "Munition linters" consist of practically all fiber taken from the seed after cotton has been removed, reasonably free from hull particles and other impurities. Cotton By-Products Co. v. S. Ry., 92 I. C. C. 201, 202, 203.

(v) When cotton linters are removed at a single cutting, the product is known

as mill-run linters, and when two cuttings are taken off, the first, consisting of from 10 to 35 pounds of the longer strands, is called first-cut linters, and the second, consisting of shorter strands, and hence of an inferior quality, is called second-cut linters. Cotton By-Products Co. v. S. Ry., 92 I. C. C. 201, 202.

(w) "Reilly carbon coke" is the residuum or tank bottom remaining after creosote oil and other chemical products have been extracted from coal-tar pitch. It is produced by a patented process and in general appearance resembles other kinds of coke, except that the individual units are generally smaller, although there are occasional chunks about a foot in diameter. Acheson Graphite Co. v. Director General, 92 I. C. C. 215, 217.

(x) Dead coal is coal which has been placed on the ground and which has lost its fuel properties because of exposure. It has no value as domestic or commercial fuel and is sold to smelters for fluxing purposes. Athletic Mining & Smelting Co. v. A. C. R. R., 92 I. C. C. 233, 234.

(y) Simple sirup is a mixture of sugar and water in approximately equal proportions. Concentrated sirups generally are fruit juices or extracts, usually with a preservative, to which a limited amount of simple sirup is added. Finished sirups are concentrated sirups diluted and sweetened by further addition of simple sirup, equivalent to about three times their volume. Coca-Cola Co. v. B. & O. 92 I. C. C. 340, 341.

(z) "Coco-Cola" is a finished sirup containing approximately 94 per cent simple sirup, which is a mixture of sugar and water in approximately equal portions, and 6 per cent other ingredients. It is prepared for consumption by addition of carbonated water, five ounces of the latter being mixed with one ounce of sirup. Coca-Cola Co. v. B. & O. 92 I. C. C. 340, 341.

(aa) Tin plate consists of an iron or steel base coated to various thicknesses with practically pure tin, and is used for manufacturing tin cans. Terne plate consists of the same base, with a coating 40 per cent tin and 60 per cent lead, and is used for roofing and other purposes necessitating exposure to weather. Black plate is the iron or steel base for the finished plate, and is used by manufacturers of tin and terne plate. Tin, Terne, and Black Plate, 92 I. C. C. 356.

(bb) "Rock salt:" Refers to condition of salt as it is mined and not to condition in which it is shipped. Salt Cases of 1923, 92 I. C. C. 388, 391.

(cc) "Evaporated salt:" The term is used to designate dry salt produced by solar and steam methods from brine pumped from the ground, as distinguished from rock salt that is blasted from a solid, crystalline state. Salt Cases of 1923, 92 I. C. C. 388, 391.

(dd) "Cottonseed bran" is made from residue of the cottonseed hull after both linters and shavings have been removed. East St. Louis Cotton Oil Co. v. B. & O., 92 I. C. C. 633, 634.

(ee) "Cottonseed-hull shavings pulp" is a product obtained by submitting cottonseed-hull shavings to a cleaning process by which all foreign matter, such as particles of hull, is removed, then running them through a pulping machine. East St. Louis Cotton Oil Co. v. B. & O., 92 I. C. C. 633, 634.

(ff) When cotton linters are removed at a single cutting, the product is known as mill-run linters, and when two cuttings are taken off, the first consisting of from 10 to 35 pounds of the longer strands, is called first-cut linters, and the second, consisting of shorter strands, and hence of an inferior quality, is called second-cut linters. Cotton By-Products Co. v. S. Ry., 92 I. C. C. 201, 202; East St. Louis Cotton Oil Co. v. B. & O., 92 I. C. C. 633.

(gg) "Feldspar" is a potassium-aluminum silicate mined in New England. It is used in the manufacture of white pottery, such as porcelain or china tableware, tiling, and sanitary plumbing fixtures. Ceramic Traffic Asso. v. M. C. R. R., 92 I. C. C. 675, 676.

(hh) Mere rate comparisons without a showing of conditions under which rates were established, volume of movement, or that transportation circumstances and conditions are substantially similar, are not helpful in determining reasonableness of rates on particular commodities. Salt Lake Potash Co., 87 I. C. C. 695. Chevrolet Motor Co. v. Director General, 93 I. C. C. 544, 546.

(ii) To show unreasonableness complainant compared transportation charges by freight with those by express. FOUND, express rates not being made with relation to freight rates, such comparisons are not convincing. Frost v. A. & G. Ry., 96 I. C. C. 15, 17.

(jj) Shippers stressed fact that fresh meat, fruits and vegetables, and dairy products, all move in refrigerator cars and have like transportation characteristics, except as to volume of movement, and urged the establishment of rates on dairy products on basis of either the fruit and vegetables or the fresh meat rates, preferably the latter. FOUND, same contentions have been urged in other cases wherein rates on dairy products have been in issue, but the commission has never been impressed with the cogency of this reasoning. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 29.

(kk) Rates on fresh meats and perishable products such as fruit and vegetables offer no proper criterion for rates on dairy products. Commercial Club of Omaha, 19 I. C. C. 397. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 35.

(ll) There is no fixed relationship between the rates on cotton-seed hulls, cake, and meal, but hulls generally take lower rates than cake and meal. Oklahoma Corp. Commission v. A. &. S. Ry. Co., 98 I. C. C. 183, 192.

(mm) The principal differences in the transportation characteristics of corn and cottonseed cake and meal are in the average loading and volume of movement. These differences are important, but a number of stock foods, with which cottonseed cake and meal are directly competitive, have long taken corn rates in this general territory. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 205, 208.

(nn) Rates on ground limestone, in sacks, or barrels, in water-tight cars, from Omaha and Ralston, Nebr., to Chicago, Ill., Minneapolis, Minn., St. Louis, Mo., Toledo, Ohio, and Detroit, Mich., during Federal control, found not unreasonable or otherwise unlawful as compared with rates on whiting, to which ground limestone is analogous in its transportation characteristics, from and to same points. Reparation awarded on certain shipments found to have been overcharged. Barker-Evans Paint Co. v. Director General, 98 I. C. C. 414.

(oo) Steel articles having a recognized commercial value other than that of the elementary metal from which they are manufactured do not properly come within the description scrap steel. Alaska Junk Co. v S., P. & S. Ry. Co., 98 I. C. C. 551, 552.

(pp) The transportation conditions surrounding the movement of petroleum products are in general less favorable than those surrounding the movement of other commodities. Texas Company v T. & P. Ry. 107 I. C. C. 147, 149.

(qq) Upon contention of complainant that rates on fuel oil from Pryse, Ky., to Newport News, Va., should be regarded as the refined-oil basis and that fuel oil should be less by the difference set in Midcontinent Oil Rates, 36 I. C. C. 109, and later cases, including Utah State Automobile Asso., 66 I. C. C. 8, and 92 I. C. C. 376, FOUND: The fuel-oil adjustment below refined oil is not in effect eastbound from points in this region, and the record is not sufficient for its initiation nor for a determination that under such an adjustment the present rates are on the corresponding refined-oil basis. Newport News Shipbuilding & Dry Dock Co. v. L. & N. R. R. Co., 100 I. C. C. 1, 2.

(rr) Rates on fresh deciduous fruits, other than apples, from California points to eastern transcontinental groups, found not unreasonable as compared with rates on grapes, peaches, and strawberries, for shorter hauls from points in the East and South. Differences in length of haul and other conditions surrounding the transportation weaken the force of comparisons made. Moreover, rates from California are blanketed to a destination territory extending more than half across the country, while other rates are more or less graded with respect to distance. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79, 87.

(ss) Rates on fresh deciduous fruits, other than apples, from California points to eastern transcontinental groups, found not unreasonable or unduly prejudicial as compared with rates on apples from and to same points, or with level of rates on other commodities in general. Apples load more heavily than the average of other deciduous fruits, which is a matter of considerable importance, and are subject to water competition which affects the all-rail rate, another feature which distinguishes them from the other deciduous fruits. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79, 80, 105.

(tt) Canned goods and canned milk, although by reason of analogy generally

given the same rates and ratings, are nevertheless distinct commodities not competing with each other. Carnation Milk Products Co., 55 I. C. C. 665. Carnation Milk Products Co. v. A., T. & S. F., 100 I. C. C. 254, 257.

(uu) The commission has frequently found that canned milk and canned goods are similar in character, so far as transportation is concerned, and that ordinarily the rates should be the same. Carnation Milk Products Co. v. A., T. & S. F. Ry. Co., 100 I. C. C. 254, 257.

(vv) Rates on pecans from points in Texas, Oklahoma and Louisiana, and from Natchez and Vicksburg, Miss., to St. Louis, Mo., and Chicago, Ill., found not unreasonable or otherwise unlawful as compared with the relationship between the pecan and peanut rates in the Southwest with the relationship between same rates in the Southeast. Funsten Co. v. A. & V. Ry. Co., 100 I. C. C. 357.

(ww) Rates on wood pulp found not applicable also on shipments of wood flour from Hercules, Calif, to Bacchus, Utah, at time shipments moved, and applicable rate on such shipments found unreasonable to extent it exceeded rate applicable on wood pulp, which was subsequently established on wood flour. Reparation awarded. Hercules Powder Co. v. Director General, 100 I. C. C. 393.

(xx) Following 78 I. C. C. 273 and 87 I. C. C. 51, rates for rail portions of hauls on wood pulp, shipped all-rail or water-and-rail route from points in Oregon and Washington to Los Angeles, Calif., found not unreasonable as compared with lower contemporaneous rates on paper. Crown Williamette Paper Co. v. Director General, 100 I. C. C. 397.

(yy) Rates applicable on shipments of blackstrap molasses, in tank-car loads, from certain points in Louisiana to Fort Calhoun, Nebr., found not unreasonable or unduly prejudicial as compared with rates on other commodities in tank cars between points for comparable distances. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471.

(zz) Unless, contrary to decision in the Midland case, 68 I. C. C. 522, there is no substantial competition between the oils classed by the carriers as paint oils and those classed as soap oils, respondents' proposal to establish different rates on the soap oils between points in trunk-line territory and from such points to destinations in central territory is necessarily within the prohibition of section 3 of the act. Vegetable Oils from Trunk Line Points, 100 I. C. C., 736.

(3a) Proposal for a different basis of rates on so-called paint oils and soap oils between points in trunk-line territory and from such points to destinations in central territory, found not justified. No reason is suggested, other than the difference in value, why maximum reasonable rates on soap oils are, or should be, lower than on paint oils, and the record does not establish that any difference in the rates is warranted by this factor alone. Vegetable Oils from Trunk Line Points, 100 I. C. C. 736.

(3b) Applicable rates on bran, wheat from points in Western and Southwestern States to points in Louisiana, Texas, and New Mexico, found not unreasonable in the past and complainants found not to have been damaged by reason of any undue prejudice which may have existed, but for future such rates found unreasonable and unduly prejudicial to extent they may exceed contemporaneous rates applicable on wheat middlings or shorts, coarse grain and coarse grain products, from and to same points. Abilene Flour Mills Co. v. A. & S. Ry., 101 I. C. C., 14.

(3c) So-called normal or commercial rate on coal from East Birmingham to Jasper, Ala., found not unreasonable or unjustly discriminatory as compared with lower so-called special or industrial rates contemporaneously in effect on coal consigned to pig-iron furnaces and steel plants in Alabama. Sheffield Iron Corp. v. Director General, 101 I. C. C. 31.

(3d) Rates on wrapping paper, in straight and mixed carloads with toilet paper and paper towels, from Wisconsin and Michigan points to Wichita, Kans., found unreasonable to extent they exceed lower rate on newsprint paper plus certain percentages prescribed in the Paper case, 66 I. C. C. 571. Reparation awarded. Wichita Chamber of Commerce v. A., T. & S. F., 101 I. C. C. 55.

(3e) Following 80 I. C. C. 119, rates on bull-wheel material from Tulsa, Okla., to Breckenridge, Tex., found not to have been unreasonable or unduly prejudicial as compared with rates on like traffic from Parkersburg, W. Va., to Texas common points and rates on

lumber from Tulsa to San Antonio, Tex., except that rates charged on shipments which moved over a specified route between July 1, 1922, and Jan. 29, 1923, were unreasonable and unduly prejudicial to extent they exceeded contemporaneous rates on lumber from and to same points. Reparation awarded. Marion Machine, Foundry & Supply Co. v. C. & N. E., 101 I. C. C. 71.

(3f) While peanut oil is derived from peanuts its transportation characteristics are dissimilar from those surrounding the movement of peanuts, and there is no sufficient showing in this record to justify the prescription of rates on peanuts that bear any fixed relationship to rates on peanut oil, nor are rate comparisons between commodities of such diverse transportation characteristics particularly helpful. United Fig & Date Co. v. A. C. L., 101 I. C. C. 138.

(3g) Bananas are not necessarily entitled to same rates as fruits and vegetables due to differences in transportation of these commodities. Nevertheless comparison of rates on bananas with rates on fruits and fresh vegetables are not valueless, as the differences in transportation conditions may be taken into consideration when weighing the comparisons. Dawson Produce Co. v. A. & V., 101 I. C. C. 196, 205.

(3h) Rates on fresh meat and packing-house products found not unreasonable, discriminatory, or unduly prejudicial in their relation to and in comparison with contemporaneous rates on the live animals. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236.

(3i) Rates on fresh meats and packing house products from Ogden, Utah, and rates on the same commodities and on by-products of livestock from Reno, Nev., to destinations in California, found not unreasonable, discriminatory, or unduly prejudicial as compared with rates on the live animals from and to the same and other points in the same general territory. Complainants' disadvantage here is due to their location with respect to this business and not to an improper relationship between the rates on their products and the rates on livestock. Ogden Packing & Provision Co. v. D. & R. G., 101 I. C. C. 258.

(3j) Rival packing houses are entitled to reasonable rates, which should be fairly related, the one to the other, upon the live animals from various points of production and each is also entitled to a reasonable rate, which again should be so related, upon the products to various markets of consumption. Any locality which remains at a disadvantage after this has been done must sustain that burden, which is due to its location with respect to this business. See 22 I. C. C. 160. Ogden Packing and Provision Co. v. A. T. & S. F., 101 I. C. C. 236, 268, 269.

(3k) Rates on green salted hides found unreasonable as compared with rates on lard, lard compounds, and livestock. Shipping of latter named commodities is more hazardous than green salted hides, special equipment being necessary for their transportation, whereas ordinary box cars are used in transporting green salted hides. McElwain Co. v. S. & A. Ry., 101 I. C. C. 359, 360.

(3l) Commodity rate on grapefruit found unreasonable to extent it exceeded lower class C rate contemporaneously in effect on fresh fruits and vegetables. Reparation awarded. Levy & Zentner Co. v. A., T. & S. F., 101 I. C. C. 361.

(3m) Cement is shipped direct from manufacturer to point of consumption, in this respect differing from most other commodities. Competition is keen, and cement is sold on a delivered basis. The freight rate affects the ability of a manufacturer to compete at a given point, a difference of 1 cent per barrel in the freight rate, equivalent to about 4 cents per barrel, being sufficient to influence a sale. Missouri Portland Cement Co. v. A., T. & S. F., 101 I. C. C. 454, 457.

(3n) Rate on solid asphaltum found unreasonable to extent it exceeded rate on refined oil. Reparation awarded. Lone Star Gas Co. v. C., C., C. & St. L., 101 I. C. C. 465.

(3o) Pork-hide trimmings are always shipped in iced refrigerator cars and receive expedited service, whereas calfskin trimmings, sinews, and horn piths move in ordinary box cars without protective service, are not accorded expedited movement, load more heavily, and are of much less value. Glue Stock in Official Classification Territory, 101 I. C. C. 601, 603.

(3p) Combination rates assessed on common unglazed doors in straight or

mixed carloads, from points in Oregon and Washington, to destinations in trunk line and New England territories, found unreasonable to the extent they exceeded 115 per cent of rates on lumber, prescribed in Anson, Gilkey & Hurd Co., 78 I. C. C. 495. Reparation awarded. Pacific Mutual Door Co. v. A. A. R. R., 101 I. C. C. 633.

(3q) Rates on crude sulphur found not unreasonable or unduly prejudicial as compared with contemporaneous rates on analogous commodities. Detroit Chemical Works v. C. R. R. Co., 101 I. C. C., 671, 674.

(3r) Rates on handle material, not further finished than shaved or cut to shape, in straight carloads, or in mixed carloads with handle material not further finished than sawed square, rived or split from bolts, found unreasonable to extent they exceeded rates contemporaneously in effect on lumber manufactured from the same kind of wood. Reasonable basis of rates prescribed and reparation awarded. Chicago Heights Mfrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675.

(3s) Shippers contended that cheese throughout its transportation history has been improperly associated with butter, eggs, and dressed poultry, and that rates on cheese should not exceed 80 per cent of the rates on those commodities. FOUND: Record as a whole does not warrant a lower level of rates on cheese than would result under the scale prescribed on butter in the Dairy Products case, 96 I. C. C. 19. Cheese from Wisconsin, 101 I. C. C. 744, 754.

(3sa) Paving and roofing materials: Rates on, found unduly prejudicial and unreasonable to extent they exceeded lower contemporaneous class E rates applicable on roofing slate, paving slate and hard asbestos shingles. Reasonable rates prescribed for future and reparation awarded. Cameron & Co. v. A. & S., 102 I. C. C. 31.

(3sb) Rate on wire rope found unreasonable to extent it exceeded lower rate contemporaneously applicable on oil-well supplies or mining machinery, including steel cable. Reparation awarded. Black Steel & Wire Co. v. U. P., 102 I. C. C. 163.

(3sc) Mere rate comparisons without a showing of similarity of transportation conditions are not helpful in determining the reasonableness of rates on a particular commodity. Milne Chair Co. v. A. C. L., 102 I. C. C. 165, 166.

(3sd) Mirrors: Rate on, found not unreasonable as compared with rates on various kinds of furniture. Barker Bros. v. C., B. & Q., 102 I. C. C. 241.

(3se) Cowpeas: Rate on, found unreasonable to extent it exceeded lower rate on Mexican peas (garbanzo). Reparation awarded. Lewis-Simas-Jones Co. v. S. P., 102 I. C. C. 245.

(3sf) Rates on cylindrical cheese boxes found not unreasonable or otherwise unlawful as compared with rates on wooden drums, other wooden containers, and numerous other commodities. Considering the light loading of cylindrical cheese boxes the rates assessed do not produce earnings which may be regarded as excessive. Wisconsin Cheese Box Mfrs. v. A., T. & S. F., 102 I. C. C. 279.

(3sg) Petroleum gas, liquified: Rates on, found unreasonable as compared with lower rates on refined and crude oils. Reparation awarded. Tidal-Western Oil Corp. v. M., K. & T., 102 I. C. C. 322.

(3sh) Bagging, cotton: Rates on, found not unreasonable, but unduly prejudicial and preferential to extent they exceeded lower contemporaneous rates on cotton bags. Reparation denied. Fulton Bag & Cotton Mills v. A. & V. Ry., 102 I. C. C. 335.

(3si) Lime, agricultural: Rates on, found not unreasonable or unduly prejudicial as compared with rates on ground limestone. Riverton Lime Co. v. A. & R. R. R., 102 I. C. C. 415.

(3sj) Springs, helical: Rates on, found not unreasonable or unduly prejudicial as compared with rates on bed springs and various other commodities taking rates on iron and steel articles. Crescent Bed Co. v. A. & V. Ry., 102 I. C. C. 419.

(3sk) Coal, anthracite bird's eye: Upon further hearing, rates on, found unreasonable as compared with rates on bituminous coal and various other commodities transported under similar transportation and traffic conditions. Original report, 83 I. C. C. 712, affirmed. United Paperboard Co. v. G. & J. Ry., 102 I. C. C. 502.

(3sl) Gasoline and kerosene: Rates on, found not unreasonable as compared with rates on refined oils. Piedmont Oil Co. v. A. & V. Ry., 102 I. C. C. 583, 587.

(3sm) Coconut oil coagulates at certain temperature and then can not be unloaded from tank cars without being heated. Cudahy Packing Co. v. Director General, 102 I. C. C. 598, 599.

(3sn) Coke dust or breeze coke: Rate on, found unreasonable to extent it exceeded lower rate contemporaneously applicable on refined zinc and zinc-smelter products, which lower rate was established on coke dust or breeze coke subsequent to movement here involved. Reparation awarded. United Zinc Smelting Corp. v. P. R. R., 102 I. C. C. 601.

(3so) Built-up wood: Following 81 I. C. C. 227 and other cases cited, rates on, faced with veneer made from foreign woods, found not unreasonable as compared with rates on lumber, chair stock, and furniture. King-Haase Furniture Co. v. B. & O., 102 I. C. C. 629.

(3sp) Magnesite: Rate on ground calcined magnesite found not unreasonable as compared with lower rates on stucco and numerous other commodities. Mineralite Stucco Corp. v. C., R. I. & P., 102 I. C. C. 654.

(3sq) It can not be fairly assumed that rates on a particular commodity from competing points to a common destination should necessarily bear the same relationship to each other as the class rates from same points. Washington Publishers' Asso. v. B. & O., 102 I. C. C. 662, 663.

(3sr) Rates on frozen pig or hog skins found not unreasonable or unduly prejudicial as compared with lower rates on green salted hides. Frozen hog skins require use of refrigerator equipment and must be given expedited service whereas green salted hides may be transported in ordinary box cars, facts constituting a difference in transportation conditions which the commission can not overlook. Kiefer Tanning Co. v. E., J. & E., 102 I. C. C. 721.

(3ss) Rate on corn-sirup jelly and jelly and preserves in glass containers found unreasonable and unduly prejudicial to extent it exceeded lower contemporaneous rate on various kinds of canned goods in tin cans, including fruits, which lower rate was established on jelly and preserves, in both metal and glass containers, subsequent to movement here involved. Reparation awarded. Zaring & Co. v. C. S. Co., 102 I. C. C. 724.

(3st) Metal-cushion or seat-spring assemblies: Rate on, found not unreasonable, discriminatory, or unduly prejudicial in past but for future found unreasonable to extent it exceeds rate on davenport assemblies. Reasonable rate prescribed for future. Ft. Smith Couch & Bedding Co. v. B. & O., 102 I. C. C. 726.

(3t) The Commission has repeatedly found that rates upon the same commodity, varying according to the use to which it is put, are unlawful, but it has consistently found that there is nothing unlawful in the establishment of different rates on different commodities after taking into consideration, along with other factors, the general uses to which the commodities are respectively put. Eastern Lime Mfrs. Traffic Bureau v. A. & B. B. R. R. Co., 112 I. C. C. 7, 15.

(3u) The commodities selected for comparison are not analogous and such comparisons are of little probative value. Graham Paper Co. v. C. R. I. & P. Ry., 112 I. C. C. 51, 53.

(3v) While the offer to reduce the rates does not of itself establish the fact that the rates attacked were unreasonable, no dissimilarity in the service rendered for the transportation of camp outfits and of contractors outfits has been shown which warranted or warrants higher rates on the former. Standard Pipe Line Co. v. T. & P. Ry., 112 I. C. C. 186, 187.

(3w) The mere fact that two rates reflect varying general changes does not conclusively establish that each is on a proper level. And the fact that rates on one commodity may not be on a proper level does not prove that rates on other commodities which reflect the same general changes also are not on a proper level. Furniture from southern points, 112 I. C. C. 302, 309.

ALL OTHER CITATIONS

Michigan Traffic League v. A. A. R. R. Co., 85 I. C. C. 47; O-So-Ezy Products Co. v. Director General, as Agent, 85 I. C. C. 187; North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Strawboard and other Paper Articles, 85 I. C. C. 470; Eshelman & Sons v. Director General, as Agent, 85 I. C. C. 578; Lackawanna Steel Co. v. P. R. R. Co., 88 I. C. C. 759.

§13. Comparison of Rates.

(1) In General.

See Infra §47; Advanced Rates §5 (3), §8½; Blanket Rates §18; Branch Lines §2; Classification IV; §17, §20; Comparative Rates; Discrimination §4; Rail and Water Rates; Reasonableness of Rates §7½, §28; Relative Rates; Tank Car Shipments (p); Through Routes and Joint Rates §13½, §15.

(a) Mere comparisons of rates without a showing of conditions under which such rates were established or volume of movement thereunder, are of slight probative value in determining the reasonableness of rates. Buxton-Smith Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 373, 376.

(b) In judging rates to or from points in the percentage groups the Commission has considered earnings and transportation conditions and not the mere relationship to sixth class. Washington Publishers Asso. v. B. & O. R. R., 98 I. C. C. 339, 344.

(c) Rates comparisons not accompanied by evidence as to volume of movement or average loading are of little probative force. Calumet Fertilizer Co. v. L. & N. R. R. Co., 91 I. C. C. 31, 33, 34.

(d) The mere showing that lower rates apply between other points without any other evidence is of little value. Rudolph & Co. v. P. R. R., 101 I. C. C. 111, 112.

(e) Traffic and transportation conditions are not radically different in eastern South Dakota from what they are in adjoining portions of Minnesota, Iowa and Nebraska. Watertown Chamber of Commerce v. A. & W. R. R., 101 I. C. C. 427, 439.

(f) The mere reference to rates without showing a similarity of traffic or transportation conditions is not sufficient to warrant a finding unreasonableness. Somerville Iron Works v. C. R. R. of N. J., 101 I. C. C. 683, 684.

(g) Little weight can be attached to rate comparisons of one commodity with other commodities in absence of a showing of their analogy from a transportation standpoint. Chapel v. P. R. R., 92 I. C. C. 662, 664.

(h) In absence of differentiating transportation conditions competitive articles should be accorded a parity in rates and ratings. Edlund Broom Corp. v. B. & M. R. R., 92 I. C. C. 749, 752.

(i) To show unreasonableness complainant compared transportation charges by freight with those by express. FOUND, express rates not being made with relation to freight rates, such comparisons are not convincing. Frost v. A. & G. Ry., 96 I. C. C. 15, 17.

(j) Levels of rates in Illinois and certain portions of western trunk-line territory are as a rule somewhat lower than in the southwest, and particularly on short-haul traffic, the differences being justified by varying degrees of traffic density; but, where the traffic density of all Class I carriers is comparatively heavy and the hauls are as long as those to these destinations, there is ample ground for disregarding such differences in rate levels. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 235.

(k) Rates on tanning extract from Newport, Tenn., to Olean, N. Y., found not unreasonable or unduly prejudicial. Complainant submitted no evidence of undue prejudice and relied solely on the showing of lower rates from Knoxville, Tenn., a more distant point, to support its allegation of unreasonableness. Rates charged found to compare favorably with rates from a number of other southern points shipping this commodity to northern destinations. Complaint dismissed. England Walton & Co. v. S. Ry. Co., 98 I. C. C. 449.

(l) A mere variation in some aspects of a comparative movement does not necessarily destroy its value as a measure of reasonableness if the operations are essentially similar. Comparisons of precisely similar situations would be difficult, if not impossible, to find. Utah Fuel Co. v. Director General 102 I. C. C. 493, 495.

(m) Many of the means commonly employed to prove that rates are reasonable, such as comparisons of ton mile and car mile revenue, comparisons with other rates, evidence relative to traffic density, volume of movement, cost of service, etc., are also adapted to show that depressed rates are reasonably compensatory. Statistics showing average revenue and average operating expense per ton mile and per car mile, average haul, and average car loading are also helpful. Mere statements of opinion that certain rates are believed to be compensatory are as insufficient

able, are regarded as reasonable. Class and commodity rates between western points 104 I. C. C. 578, 584.

(n) The rates instanced by complainant were simply selected from various tariffs examined and no showing is made of any of the circumstances and conditions under which they were established or have been maintained, without which they have little, if any, probative value. Greenwall Vinegar Co. v. B. & O. R. R. 104 I. C. C. 637, 639.

(o) Owing chiefly to difference in traffic density, a higher rate level prevails generally in the southwest than in central territory. West Coast Lumbermens Asso. v. A. & S. Ry. 104 I. C. C. 695, 699.

(p) Central territory is generally regarded as a whole for rate making purposes. The density of traffic in this limited territory is greater than in any other part of the country. Penn. Sand & Gravel Prod. Asso. v B. & O. R. R. 104 I. C. C. 717, 728.

(q) The level of rates is, and properly should be somewhat lower east than west of the Twin Cities. Rates from Upper Mississippi crossings 107 I. C. C. 256, 263.

(r) Contention that rates on deciduous fruits which exceed rates in effect prior to June 25, 1918, by greater percentage than in the case of the corresponding rates on other transcontinental traffic and certain traffic within Mountain-Pacific territory results in undue prejudice to shippers of deciduous fruits, not sustained. Defendant's witness testified that while rates used in complainant's comparisons were fairly representative, these rates were established because of competition with water lines operating through the Panama Canal, which competition has rapidly increased during the past few years, or to preserve carriers' tonnage, whereas deciduous fruits do not meet water competition, one experimental shipment by water having proved a failure, and conditions affecting rates used in complainant's comparisons are substantially different from those surrounding rates in issue. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C., 79, 88, 90, 105.

(s) So-called normal or commercial rate on coal from East Birmingham to Jasper, Ala., found not unreasonable or unjustly discriminatory as compared with lower so-called special or industrial rates contemporaneously in effect on coal consigned to pig-iron furnaces and steel plants in Alabama. Sheffield Iron Corp. v. Director General, 101 I. C. C., 31.

(t) Mere rate comparisons without showing a similarity of traffic or transportation conditions is not sufficient to warrant a finding of unreasonableness. Somerville Iron Works v. C. R. R. Co. of N. J., 101 I. C. C., 683, 684.

(u) No attempt was made to show any movements under the contrasted rates, nor is the value, competition, similarity of transportation conditions, or other pertinent traffic information given. The comparisons are of little probative value. Dolese Bros. Co. v. C. R. I. & P. Ry., 109 I. C. C. 562, 563.

(v) The comparisons were not accompanied by a showing of similarity of transportation conditions and are of little probative value. Plaster board to Utah common points, 112 I. C. C. 3, 4.

ALL OTHER CITATIONS

Jackson Traffic Bureau v. St. L. S. F. Ry. Co., 88 I. C. C. 188; Universal Paper Bag Co. v. M. C. R. R. Co., 88 I. C. C. 593.

§13 (1½). Commodity and Class Rates.

See Class Rates; Commodity Rates.

(a) In the absence of other evidence that it is unreasonable or discriminatory the fact that a commodity rate is greater or less proportion of the corresponding class rate is not a sufficient ground for condemning the commodity rate as unreasonable. Proctor & Gamble Distributing Co. v. St. Louis S. F. Ry., 101 I. C. C. 563, 587.

(b) A comparison of class and commodity rates is of little value when the movement is occasional. Crabbs, Reynolds, Taylor Co. v. B. & O., 92 I. C. C. 621, 622.

(c) Various lines serving same points of origin and destination maintained different rates on coal. Complainant attempted to prove unreasonableness by showing that class rates of all lines on miscellaneous commodities from and to these points are identical. HELD: Competitive and transportation elements are vastly different as between coal and com-

modities moving on class rates, the former being made without regard to class-rate structure. Chapel v. P. R. R., 92 I. C. C. 662, 664.

(d) It is the general rule that where commodity rates are maintained they are lower than the contemporaneous class rates, and the fact that many such commodity rates may be found on various kinds of traffic does not prove that class rates are unreasonable for application on a particular class of traffic. Washington Publishers Asso. v. B. & O. R. R. 102 I. C. C. 662, 663.

(e) It cannot be fairly assumed that rates on a particular commodity from competing points to a common destination should necessarily bear the same relationship to each other as the class rates from the same points. Washington Publishers Asso. v. B. & O. R. R. 102 I. C. C. 662, 663.

§13 (2). Divisions and Joint Rates.

See Divisions; Local Rates and Combinations; Through Routes and Joint Rates.

(a) A comparison of class rates with divisions of through commodity rates is of little value. Best Foods, Inc. v. C. R. R. of N. J., 98 I. C. C. 331, 334.

§13 (5). Proportional and Local Rates.

See Local Rates and Combinations; Proportional Rates I (f).

§13. (6) State and Interstate Rates.

See Advanced Rates §5 (7¼); Discrimination §8 (6); Equalization of Rates §5; Routing and Misrouting §4¼; State Rates and Regulation.

(a) Differences in transportation and traffic conditions must be taken into account in considering comparisons of interstate rates in different states. Nebraska Livestock Case, 89 I. C. C. 444, 451.

(b) Upon contention of complainants that from the comparative operating conditions in the portions of Minnesota and North Dakota here considered the Minnesota intrastate scale of rates applicable on sand, gravel and crushed rock should be held to be a reasonable level of rates for application on these commodities from Minnesota points to North Dakota destinations, FOUND: The record supports the conclusion that there is no justification for the maintenance of any higher level of rates in the one than in the other, and complainants' contention would be correct if the intrastate scale was on a reasonable maximum basis. The commission takes into consideration the level of intrastate rates in reaching a conclusion as to the reasonableness of interstate rates in the same general territory, but it is not bound to adopt the intrastate level of rates as proper for application to interstate traffic. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361, 366.

(c) The Commission accords to the views of the state authorities weight and respect, but it does not regard the decisions of the state commission in the proceedings before it as controlling or persuasive in respect of the issues in the case before it. Pacific Portland Cement Co. v. Director General 102 I. C. C. 515, 517.

(d) Although in determining the reasonableness of an interstate rate the Commission may give consideration to comparisons with intrastate rates, the mere fact that the carriers comprising the longer interstate route do not see fit to meet the rate of the direct intrastate line does not establish the unreasonableness of the interstate rate. Florence Chamber of Commerce v C. of Ga. Ry. 104 I. C. C. 373, 375.

§13. (7) Rail and Water Rates.

See Rail and Water Rates.

(a) In a comparison of water transportation with rail transportation, where a ratio is used for the water haul, the ratio used can not be supposed to be the exact equivalent of the water haul expressed in terms of rail mileage. A comparison of such dissimilar services can not be made with mathematical accuracy. Reduced Commodity Rates to Pacific Coast, 89 I. C. C. 512, 524, 525.

§14. Competition.

(1) In General.

See Advanced Rates §5 (7); Competition; Discrimination §8 (3).

(a) The commission can not prohibit carriers from meeting competition so long as they are not guilty of undue preference and prejudice and so long as they do not charge rates which are so unreasonably low that they burden other traffic. On the other hand, the commission can not require carriers to meet

competition. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 565, 566.

(b) The presence of competition at certain points and its absence at others has caused most of the confusion in the rate structure of the country. It is often said that present railroad competition is in service rather than rates, but there is only a degree of truth in this aphorism. Rate wars are less common than formerly, but present rate structure is full of low rates made for competitive reason and still defended on that ground. Carriers may, within limits, make low rates for the purpose of meeting competition, but commission is powerless to compel them to meet it. Competition, therefore, is not a factor which the commission may take into consideration in fixing maximum reasonable rates. Southern Class Rate Investigation, 100 I. C. C., 513, 611.

(c) Competition with other carriers has not influenced the level of the rates attacked. Its absence, however, does not warrant the maintenance of rates upon a level which is unduly high. Was-Cott Corp. v. K. G. J. & E. R. R., 109 I. C. C. 468, 470.

§14 (3). Railroad Competition.

See Discrimination §8 (3); Equalization of Rates §4 (2); Long and Short Hauls §9; Railroad Competition; Reasonableness of Rates §8 (2).

(a) It is not the commission's province to require carriers to maintain rates to meet carrier competition. The commission prescribes what it regards as reasonable maximum rates, based upon conditions usually considered by regulating authorities, and if carriers for their own reasons desire to maintain lower rates in certain instances they may do so subject to limitations of the law. Rates to Southwestern Destinations, 95 I. C. C. 188, 199.

§14 (5). Water Competition.

See Advanced Rates §17 (3d); Discrimination §8 (5); Equalization of Rates §4 (4); Long and Short Hauls §10; Reasonableness of Rates §8 (4).

(a) Water competition asserts a materially greater influence in depressing the rate on anthracite coal to Norfolk than to either Richmond or Newport News, Va. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425, 432.

(b) Finding in 88 I. C. C. 709, that rates from Chicago, Ill., to St. Paul and Minneapolis, Minn., are depressed; that this depression was brought by water competition at those points when the bases of rates were originally established; and that since then the few changes which have been made have not materially modified the relative level of those rates, affirmed. Fargo Commercial Club v. A. & W. Ry Co., 98 I. C. C. 691, 723.

(c) Interstate class rates between Oakland, Calif., and various destinations in California and Nevada found not unreasonable or unduly prejudicial as compared with class rates between San Francisco and said points. The rates applying between the metropolitan district and points here considered, where there is actual water competition, are depressed by such competition, although it is shown that this competition is not so keen as to result in anything in the nature of rate wars between the rail and water lines, and further that the rates between the metropolitan district and points here considered which are not on navigable waters reflect the result of water competition to related points and are likewise lower than normal rates. The water competition from Oakland has been nowhere near as great as that from San Francisco. Oakland Chamber of Commerce v. S. P. Ry. Co., 100 I. C. C. 55, 59, 62.

(d) Relationship of general level of rates on other traffic to the level prior to June 25, 1918, which was affected by water competition or other conditions different from those relating to rates on deciduous fruits, here assailed, are not controlling in the determination of reasonable rates on traffic under consideration. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79, 107.

(e) Consolidation of railroad lines in the South probably accelerated elimination of water competition on navigable rivers. Prior to era of consolidation the drastic rate cutting of paralleling rail lines made it difficult for steamboats to operate, though they were aided in some instances by noncompetitive railroads that acted as feeders. Absorption of these feeders into larger systems deprived the boats of even this support

and they gradually disappeared from the scene. Southern Class Rate Investigation, 100 I. C. C. 513, 526.

ALL OTHER CITATIONS

Chapin Co. v C. M. & St. P. Ry. Co., 85 I. C. C. 263; North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270.

§14 (6). Wagon and Motor Truck Competition.

See Motor Truck Competition.

(a) Question of meeting motor-truck competition is more a matter for the carriers than the commission to settle. Nebraska Livestock Case, 89 I. C. C. 444, 457.

§15½. Cost Computations.

See Infra §17; Weights and Weighing II.

(a) The figures of cost study by respondent's officials, and well-qualified cost experts can not be disregarded even if they do include some details not possible of mathematical proof and are based in part upon estimates founded on their best judgment. Switching at Kansas City, Mo., 96 I. C. C. 538, 555.

ALL OTHER CITATIONS

Oklahoma S. W. Ry. Co. v. St. L. S. F. Ry. Co., 88 I. C. C. 235.

§16. Cost of Production.

See Infra §17; Classification §17 (4).

ALL CITATIONS

Lackawanna Steel Co. v. P. R. R. Co., 88 I. C. C. 759.

§17. Cost of Operation.

See Infra §18; Supra §16; Advanced Rates §7 (2), §10, §11; Branch Lines §2 (c); Divisions §3; Reasonableness of Rates §9; Transportation §14.

(a) Extraordinary past expenditures, particularly for maintenance of way structures, and equipment, necessary to rehabilitate a line, can not be accepted as indicative of normal future operating expenditures. Ohio Farm Bureau Federation v. A. & W. Ry. Co., 89 I. C. C. 489, 495.

(b) Any reliable method for determining normal maintenance of equipment must give consideration to various conditions affecting cost. Differences in amount of use, amount of property to be maintained, tractive power of locomotives, capacity and loading of cars, cost of labor and materials, as well as in other things, can not be ignored. Commission can not confidently estimate normal maintenance expenses for a given traffic in any period, because it lacks means for equating all relevant factors involved, but it is able to take into account most of the principal things which bring about a different cost in different years, such as variation in use of property due to traffic, relative tractive power of locomotives, and relative cost of labor and materials. Rates and Charges on Grain and Products, 91 I. C. C. 105, 121, 122.

(c) Upon an extensive investigation as to what rates, as applied to a particular class of traffic to be offered, will be likely to produce a fair return hereafter, past or present statistics of operation and earnings are serviceable only as they illuminate the future. Rates and Charges on Grain and Products, 91 I. C. C. 105, 122.

(d) Cost of materials and amount of wages largely determine cost of railroad operation. Rates and Charges on Grain and Grain Products, 91 I. C. C. 105, 122, 146.

(e) Ordinarily service of making up and breaking up trains is an operating incident compensation for which is included in the transportation rate. Where, however, such service is rendered in some instances and not in others, and in still others is the only service performed by a common carrier, the charge for that service should be separately stated. Peoria & Pekin Union, 93 I. C. C. 3, 22.

(f) Operating expenses of carriers in the western district are proportionately higher than those of carriers in the southern district and the latter yield a higher return on investment than the former. Alabama & Mississipppi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385, 402, 403.

(g) Protestants' conclusions with regard to proposed revision of all-rail and rail-and-water rates, c. l. and l. c. l., on furniture from southern district to eastern points, are based upon premises open to serious criticism. The assumption that capital cost and operating expense may be charged entirely to freight for purpose of this case, disregards the

immensely greater expense of passenger terminals in the eastern than in the southern district, and entirely omits consideration of the fact that interterritorial traffic moving largely in eastern district and not furniture rates within southern district is under consideration. Whatever weight might be given to such evidence with regard to portions of the hauls in southern district is largely neutralized when considering hauls beyond. Ton-mile earnings should ordinarily decrease with increasing distance, but it must be borne in mind that the average number of miles hauled in the southern district is approximately one-third greater than in eastern district. Furniture from Southern Points, 100 I. C. C. 127, 144.

(h) There are some items of operating expenses which properly would be chargeable in a cost study of a common carrier but not in the cost of operating a plant facility. The difference ordinarily would be slight, as the general character of the service performed for the proprietary industry is the same whether it be performed by a plant facility or a common carrier. Carnegie Steel Co. v. Director General, 101 I. C. C. 638, 643.

ALL OTHER CITATIONS

Mutual Products Trading Co. v. O. W. R. R. & N. Co., 85 I. C. C. 1; Cotton and Cotton Linters to Louisiana and Texas Ports, 85 I. C. C. 5; Arizona Corporation Commission v. A. E. R. R. Co., 85 I. C. C. 76; Utah Gilsonite Co. v. A. T. & S. F. Ry. Co., 85 I. C. C. 557.

§18. Cost of Service.

See Advanced Rates §7 (2); Reasonableness of Rates §9, §19.

(a) In passing upon the reasonableness of rates or in determining upon whether or not undue prejudice and preference exists, it is well settled that cost of service is a factor which must be taken into consideration. There are other factors which have weight, but cost of service is one of the most important. Certainly the Commission is not warranted, in its determination of these matters, in disregarding differences in distances which are substantial and material when compared with the total hauls involved. It is true that there are many instances in the rate structure where distance seems to have been given little or no consideration and that rates are often blanketed over great areas. But these situations are either the product of common consent, so that they are not subjected to the tests of the law, or they result from competitive influences. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 565.

(b) Relative cost of service is not the only factor to be considered in determining just divisions. The Commission must consider, also, whether a particular carrier is an originating, intermediate or delivering line; the efficiency with which the several carriers are operated; the amount of revenue required to pay their respective operating expenses, taxes, and a fair return on their railway property; the importance to the public of the transportation service of such carriers; and other facts, if any, which would, ordinarily, without regard to mileage haul, entitle one carrier to a greater or less proportion than another of the joint rate. It is settled that in determining what the divisions should be, the Commission, may in the public interest, take into consideration the financial needs of a weaker road; and that it may be given a division larger than justice merely as between the parties would suggest in order to maintain it in effective operation as part of an adequate transportation system provided the share left to its connections is adequate to avoid a confiscatory result. Divisions of joint rates and fares of M. & A. Ry., 98 I. C. C. 119, 121.

(c) Cost of the service is one of the elements in rate making. It may be just to give the prosperous carrier a smaller proportion of the increased rate than of the original rate. Whether the rate is reasonable may depend largely upon the disposition which is to be made of the revenues derived therefrom. Divisions of joint rates and fares of M. & N. A. Ry., 98 I. C. C. 119, 140.

(d) Upon an extensive investigation as to what rates, as applied to a particular class of traffic to be offered, will be likely to produce a fair return hereafter, past or present statistics of operation and earnings are serviceable only as they illuminate future. Rates and Charges on Grain and Products, 91 I. C. C. 105, 122.

(e) Cost of service is never out of mind in rate making, if not always in

sight. Lake Cargo Coal rates, 1925, 101 I. C. C. 513, 531.

(f) Factor of cost of service, unless the difference is great, should not be controlling. In view of extent to which that factor has been disregarded by defendants in maintaining rates from competitive mines, the fact of a slight difference in operating costs can not be accepted as justification for withholding from a few additional mines the rate-making policy and the competitive advantages that have been accorded their competitors in the same field. Nelson Fuel Co. v. C. & O., 96 I. C. C. 124, 130.

(g) Defendants' evidence regarding cost of service in connection with transportation of deciduous fruits can not be accepted as showing actual cost of through transportation with any degree of certainty, but this evidence does show the service to be more expensive than on all traffic or on apples or citrus fruit. Calif. Growers' & Shippers, Protective League v. S. P. Co., 100 I. C. C. 95, 102.

(h) Making the allocation between passenger and freight services on a car-mile basis, the latter should bear 65.77 per cent of the total cost. Ore and concentrates constituted 76.27 per cent of the total freight tonnage in 1922. Assigning the freight costs on this basis, the costs attributable to ore traffic amounted to $65,569, which amount, divided by number of tons carried, produces a cost per ton of $2.40. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 193.

(i) Even though a shipper is at a disadvantage in marketing its packing-house products at some, if not all, destinations, it does not follow that rates on live animals and on the products thereof must be measured by the cost of service without consideration of other elements of rate making, or that shipper's disadvantage arises from the fact that the adjustment assailed is not so measured. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236 252.

(j) Cost of service is one of the recognized factors which the commission may properly take into consideration in fixing maximum reasonable rates. Distance scales are frequently criticized, as in this proceeding, on the ground that cost of service is not dependent on distance alone. This is true when service is viewed in detail, for other factors affect cost. Southern Class Rate Investigation, 100 I. C. C. 513, 611.

(k) There are some items of operating expenses which properly would be chargeable in a cost study of a common carrier but not in the cost of operating a plant facility. The difference ordinarily would be slight, as the general character of the service performed for the proprietary industry is the same whether it be performed by a plant facility or a common carrier. Carnegie Steel Co. v. Director General, 101 I. C. C. 638, 643.

§20. Distance of Haul.

See Supra §18 (9); Blanket Rates §9; Bridges and Tolls; Car Ferry; Class Rates §2 (3k) (7s); Differentials; Distance Rates; Evidence §58: Reasonableness of Rates §10, §36; Through Routes and Joint Rates §6, §13 (v).

(a) When distances of over 500 miles are involved fact that service is by two lines is largely negligible. Pacific Guano & Fertilizer Co. v. S. P. Co., 91 I. C. C. 228, 230.

(b) Sugar-beet traffic is peculiarly a short-haul traffic, and seldom moves for distances in excess of 100 miles. Average haul probably does not exceed 40 miles. Continental Sugar Co. v. N. Y. C. R. R. Co., 91 I. C. C. 677, 680.

(c) Rates to sections served by several lines of railroads should not necessarily be based upon the short line distance nor established with regard to either the weakest or strongest line, but should be established with reference to all reasonably direct lines. Southern class rate investigation, 100 I. C. C. 513, 696.

(d) When distance principle governs the making of rates the rate per ton-mile should decrease as distance increases. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 552.

(e) Rates on bituminous lump coal from Duluth and West Duluth, Minn., to Ladysmith, Wis., found not unreasonable or unjustly discriminatory. Coal rates in Wisconsin are not constructed primarily with regard to distance, but the controlling consideration is the equalization of ports and grouping of destinations. Original order vacated and complaint dismissed. Great Western Paper Co. v. M., St. P. & S. S. M. Ry. Co., 96 I. C. C. 444.

(f) Just and reasonable rates for the transportation of manufactured iron and steel articles from points in the Pittsburgh, Pa., district to St. Louis, Mo., and points in Illinois and Indiana prescribed for the future, which are fixed according to distances via the shortest routes by existing connections for the interchange of carload traffic. Jones & Laughlin Steel Corp. v. B. & O. R. R. Co., 96 I. C. C. 682.

(g) Except where differences in transportation conditions or other dissimilar circumstances exist, rates should not increase in exact proportion with the distance. Class rates between Memphis, Tenn., Cairo, Ill., and W. T. L. points, 102 I. C. C. 207, 216.

(h) Distance is not a controlling element in fixing group rates. Alexander Grocery Co. v. B. S. L. & W. Ry., 104 I. C. C. 155, 159.

(i) In determining distances in compliance with the rates herein prescribed to or from Galveston, Tex., or New Orleans, La., the respective ports, the shortest routes via existing connections for the interchange of carload traffic shall be used, embracing as a maximum the lines or parts of lines of not more than three line-haul carriers, lines under common ownership or control to be considered as a single line. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 123.

(j) Constructive distance of 50 miles for car-float transfer on the Tennessee River between Hobbs Island and Gunter Landing approved. Southern Class Rate Investigation, 100 I. C. C. 513, 626.

(k) Rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, between Oklahoma, on one hand, and Kansas and Missouri, on other hand, found unreasonable to extent they exceed rates made by applying distance scales set forth herein to short-route distances between respective points of origin and destination, as herein defined. Reasonable maximum rates prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 128.

(l) A spread of 26 cents in rates for an approximate average increase in distance of only 11 miles is out of all proportion to increased expense of transporting commodities, such as anthracite coal this slight additional distance and violates the principle that as distance increases ton-mile earnings, except under unusual circumstances, should decrease. No such unusual circumstances as would require a departure from this rule are here shown. Richmond County Coal Merchants Asso. v. B. & O., 101 I. C. C. 154, 163.

(m) Main-line rates on beef cattle from points on defendants' lines in Arizona to points on their lines in California found not unreasonable or otherwise unlawful, except that single-line rates in effect on Southern Pacific and its subsidiary lines for distance between 5 and 230 miles and between 1,000 and 1,200 miles are unjust and unreasonable to extent they exceed for corresponding distances rates contemporaneously maintained by Santa Fe. Reasonable basis of rates prescribed. Arizona Cattle Growers Asso. v. A. Ry. Co., 101 I. C. C. 181.

(n) Carriers are left free to ignore differences in distance for competitive or other reasons so long as they do not unduly prefer one port or locality or maintain rates so low as to burden other traffic. But an order requiring them to ignore such differences is quite a different thing. In situations where the rates standing by themselves are lawful and the Commission is called upon to impose rate equalization, the facts developed of record should leave no doubt that the exercise of such a power would be not only warranted by the law but necessary or appropriate in the public interest. Galveston Commercial Asso. v. A. & S. Ry., 109 I. C. C. 114, 125.

ALL OTHER CITATIONS

Jeremy Fuel & Grain Co. v. Director General, as Agent, 88 I. C. C. 397.

§21. Dividends.

(a) Evidence that for a series of years an annual dividend was paid on capital stock of a carrier, and in addition a substantial surplus accumulated, can have no direct bearing upon the reasonableness of rates on a single commodity to a few destinations, even though volume of movement of that commodity is admittedly larger. Cincinnati Asso. of Purchasing Agents v. L. & N. R. R. Co., 89 I. C. C. 285, 289, 290.

§22. Equipment Furnished.

See Infra §48½; Cars and Car Supply; Classification §12⅞; Minimums; Reasonableness of Rates §13; Refrigeration §4¼.

(a) Car ownership cost is one of the transportation costs which should be considered in connection with the portion of the transportation performed by the independent line haul carrier when fixing its division of the through rate. In any event, it is not entitled to both free time allowance on foreign cars it uses and divisions covering compensation for the hire of such cars. Virginia Blue Ridge Ry. v. S. Ry., 96 I. C. C. 591, 594.

(b) Commercial conditions have their place in the consideration of rates. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183, 197.

(c) While the total mileage may be about twice that of the loaded mileage, this fact is to a large extent offset by the further fact that the maintenance expense to the owners of these tank cars is considerably more than twice the mileage allowance by the carriers. It is, of course, a convenience to intervenors who use these tank cars to have their own equipment, but the fact remains that if this equipment, or other equipment of like serviceability, were not purchased and maintained by the shippers the carriers would be put to a great deal of additional expense which is now borne by the shippers. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183, 225.

(d) Hauling of an empty car is merely an incidental service in connection with load. Increased Switching Charges at Detroit, 91 I. C. C. 82, 96.

(e) In accordance with usual railroad practice, the matter of making and receiving deliveries of cars is the subject of mutual agreement, each line having the right within reasonable limits to designate the point where cars will be received. Peoria & Pekin Union Ry., 93 I. C. C. 3, 16.

(f) The transportation of black powder requires the best class of box car, which must be specially prepared and placed a certain number of car lengths back of the engine and forward of the caboose in order to insure safety in transportation. Grasselli Powder Co. v. A., C. & Y. Ry. Co., 96 I. C. C. 271, 275.

§22a. Equalization of Costs.

See Equalization of Rates.

(a) Rates can not be fixed on the theory of equalizing the total transportation cost of the inbound raw material plus that of the outbound finished product. West Virginia Pulp & Paper Co. v. S. Ry., 96 I. C. C. 244, 252.

§22¼. Erroneous Rate.

See Advanced Rates §5 (2) (p), §5 (6); Blanket Rates §10½ (ii); Erroneous Rates.

(a) The publication of a tariff provision through error does not justify a carrier's failure to comply with its requirements. Miles Lumber Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 761, 763.

(b) Shipment of sugar from San Francisco to Leadville, Colo., moved as routed by shipper over a so-called "uneconomical and circuitous" route at a rate higher than that contemporaneously in effect over other more direct routes available, which lower rate was subsequently made applicable over route of movement. Complainant admits its own error in specifying higher-rated route but charges initial carrier with negligence for failure to point out at time of shipment that higher rate applied over specified route. HELD: Alleged error was apparently attributable to complainant's own carelessness rather than to negligence of initial carrier and rates can not be condemned upon the mere fact that a lower rate was subsequently established over route of movement. Rate assailed found not unreasonable, unduly prejudicial or otherwise unlawful. Western Sugar Refinery v. S. P. Co., 101 I. C. C. 113.

(c) A practice based on an error, however long continued, raises no presumption whatever. Berninghaus Co. v. C. & N. W. Ry., 109 I. C. C. 104, 106.

§22½. Expert Evidence.

See Supra §40; Undercharges §4.

(a) When well-qualified cost experts have made painstaking efforts to arrive at just and reasonable results, their figures are not to be disregarded because they may not be correct in every detail and are based in part on estimates. Increased Switching Charges at Detroit, 91 I. C. C. 82, 96.

§25½. Hearsay Evidence.

(a) Testimony by complainant's witness with reference to payment of freight charges will not be reviewed by the com-

mission, where such evidence is hearsay and is objected to by defendant on that ground. Southern Cotton Oil Co. v. Director General, as Agent, 89 I. C. C. 154, 155.

§29. Long Continuance of Voluntary Rate.

See Infra §43; Advanced Rates §5 (4); Evidence §68; Express Companies §22; Reasonableness of Rates §16, §16½, §25.

(a) The Commission has often recognized the principle that the long maintenance of rates is evidence that the same are reasonably high. Boots and shoes from New York points, 91 I. C. C. 591, 595.

§30. Low Rate in Opposite Direction.

See Class Rates §2 (v); Comparative Rates; Differentials §8 (e); Discrimination §11; Reasonableness of Rates §27¾.

(a) The Commission has frequently given weight to the existing voluntary rates in the opposite direction when no material difference in transportation conditions exists. Hayward Bros. Shoe Co. v. C. M. & St. P. Ry., 93 I. C. C. 243.

(b) The fact that a rate is in excess of the rate between the same points in the opposite direction is entitled to consideration, but alone does not demonstrate the unreasonableness of the higher rate. Proctor & Gamble Distributing Co. v. St. L. S. F. Ry., 101 I. C. C. 563, 584.

(c) Difference in transportation conditions in opposite directions may justify a difference in rates, provided the higher rate is not intrinsically unreasonable. Puritan Copper Works v. Director General, 92 I. C. C. 671, 672.

(d) Upon further consideration, original report, 83 I. C. C. 525, reversed, and rate on rubber articles from Seattle to Omaha found unreasonable to extent it exceeded rate in opposite direction. Rates on various other commodities between Seattle and Omaha are the same in both directions, and commission has frequently given weight to existing voluntary rates in opposite directions when no material difference in transportation conditions exist. Portland Traffic & Transportation Asso., 56 I. C. C. 410, and other cases cited. Reparation awarded. Hayward Bros. Shoe Co. v. C., M. & St. P., 93 I. C. C. 243.

(e) First-class rate on cotton shirt forms, l. c. l., from Baltimore to Washington, N. C., found not unreasonable as compared with lower commodity rate formerly in effect, or with rate on finished shirts in opposite direction. Commodity rate was canceled because other manufacturers of shirt forms in North Carolina requested establishment of similar rates lower than first class and defendants urged that it would be unduly prejudicial to charge first-class rates from other points while maintaining lower commodity rates from Washington. The finished shirt rate in the opposite direction was also subsequently canceled because considered subnormal, and first-class rates now apply in both directions. Moreover, defendants instanced first-class rates for similar and greater distances which are higher than rates charged. Flowers & Stell v. N. S. R. R., 93 I. C. C. 388.

(f) Rate applicable on shipments of wrought-iron pipe from Leeray, Tex., to Bristow, Okla., reconsigned to Okemah, Okla., via M-K-T, found unreasonable and unduly prejudicial to extent it exceeded lower rate contemporaneously in effect between origin and destination in opposite direction, which rate was subsequently established in both directions. Reparation awarded. Sinclair Oil & Gas Co. v. C. & N. E. Ry., 96 I. C. C. 286.

(g) Rates for interstate transportation of fresh meats and packing-house products from Duluth to St. Paul, Minn., found unduly prejudicial to extent they exceed lower contemporaneous rates on like traffic in the reverse direction. Reasonable rates prescribed and undue prejudice ordered removed. Duluth Chamber of Commerce v. C., St. P., M. & O. Ry. Co., 98 I. C. C. 352.

(h) Contention that the volume of a particular traffic moving northbound as compared with that moving southbound between same points warrants a difference in the southbound and northbound rates, not sustained. It is no answer to a prayer for a reasonable rate adjustment that the volume of traffic affected is light. Duluth Chamber of Commerce v. C., St. P., M. & O. Ry. Co., 98 I. C. C. 352, 356.

(i) Commodity rate charged on shipments of tomatoes from St. Louis, Mo., to New Orleans, La., during 1922 and 1923 and the present rate, which equals the rate on this commodity between same points in the reverse direc-

tion, found not unreasonable or unduly preferential, as compared with the adjustment of northbound rates on same commodity established pursuant to Fruits and Vegetables, 43 I. C. C. 291, and with rates on like traffic between other points for similar distances. Complaint dismissed. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553.

(j) The record reveals no reason for applying a different level of rates between Valley City and Jamestown, N. Dak., eastbound to Twin Cities than is applied westbound. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 713.

(k) Rate on solid asphaltum from Franklin, Pa., to Ranger, Tex., found unreasonable to extent it exceeded rate on refined oil in reverse direction. Reparation awarded and reasonable rate prescribed for the future. Lone Star Gas Co. v. C., C., C. & St. L., 101 I. C. C. 465.

(l) Complainant attacked commodity rate charged of $1.58 on washing powder, carloads, since June 1, 1923 from San Diego, Calif., to Cleveland, O., as unjust, unreasonable and as compared with rate of $1.40 maintained in the opposite direction, unjustly discriminatory and unduly prejudicial. Since the filing of this complaint defendants have reduced the eastbound rate to $1.40. Prior to June 1, 1923 the rate was the same eastbound as westbound. It can hardly be considered that a reduction in the rate in one direction would necessarily require similar treatment in the reverse direction and failure to make such a change immediately would not constitute ground for awarding reparation without specific proof of damage, complaint dismissed. Citrus Soap Co. v. B. & O. R. R., 109 I. C. C. 63.

§31. Manufactured Product.

See Classification §10, §11, IV; Evidence §31, §44; Reasonableness of Rates §17.

(a) The spread in rates between manufactured products and the raw material from which made is not governed by the percentage of waste between the raw material and the finished product, but by comparative transportation characteristics, such as average loading, value, liability to loss and damage in transit, terminal expenses, etc. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 428, 436.

(b) Although commission has condemned rates on raw materials higher than on products manufactured therefrom, that fact, in and of itself, does not demonstrate that higher rates on the raw materials are unreasonable. Crown Willamette Paper Company, 78 I. C. C. 273. Minnesota & Ontario Paper Co. v. Director General, 93 I. C. C. 105, 108.

(c) Haydite is a manufactured article not to be classed with sand and gravel for rate-making purposes in either character, value, or use, being of considerably higher value than sand and gravel and with decided advantages over these commodities in certain lines of construction. It should take a higher rate than sand and gravel. Haydite Co. v. A., T. & S. F., 96 I. C. C. 312, 315, 316.

§32. Market Competition.

See Equalization of Rates §4 (5) §6; Express Companies §19; Long and Short Hauls §8; Market Competition.

(a) Evidence of undue prejudice consisting merely of a general contention that markets of New Orleans, La., and Memphis, Tenn., are accorded a more favorable rate adjustment than many Mississippi points, found to be of too general a character to justify a finding of a violation of section 3 of the act. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 60.

(b) Complainants laid emphasis in fact that unless there is a great reduction in expenses incident to production and marketing of cotton, there will be a decrease in production with its concomitant economic evils. However, evidence failed to show that freight rates are contributing to lack of success of the cotton grower in any appreciable degree, or that a reduction in rates will stimulate production. The production of 1922 was about the same as in previous years, and the price since September of that year has increased, no changes in rates having been made during this period. If there is any item of expense entering into cost of producing and marketing this commodity that is disproportionally increasing, it is not the transportation charges, which have remained reasonably constant since 1920 and were reduced 1 per cent during 1922. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 68, 69.

(c) Desire of a carrier to get the long hauls on traffic does not warrant it in maintaining rates that are unreasonable or otherwise unlawful to particular consuming territories. A shipper is entitled to forward its products to any market over any route it selects at reasonable rates. United Verde Extension Mining Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 95, 100.

(d) Upon complaint attacking rates on rough limestone from Bedford district in Indiana to St. Louis and Minneapolis, Minn., as unreasonable and urging that spread between rates on rough and dressed stone is too small and gives Bedford dealers an undue advantage over complainants. HELD: Competitive conditions between complainants in St. Paul and Minneapolis on the one hand, and Bedford stone dressers on the other, are not so unfavorable to former as would appear from allegations. Bedford stone dressers not only have to bear cost of careful packing of dressed stone but also primarily cost of getting the rough stone from quarries to their plants, whereas line-haul rates on rough stone apply from quarry ledges to final destinations. Young v. C., I. & L. Ry. Co., 89 I. C. C. 428.

(e) Carriers may for competitive or other reasons establish rates which the Commission could not initiate for them; and equality of distance from competing markets is not an absolute test of whether an equality of rates results in undue prejudice and preference. Reduced commodity rates to Pacific coast, 89 I. C. C. 512, 524.

(f) Consumers may properly have the widest possible markets consistent with justice to the carriers, and to that end and also in their own interests carriers may, within reasonable limits, as a matter of traffic policy, accord competing producing centers located at different distances from common centers of consumption identical rates. Lake cargo coal rates, 1925, 101 I. C. C. 513, 546.

(g) There is a commercial necessity for permitting grain produced in Group G to move eastward to the Missouri River cities for transit before being shipped to California. Indeed, this necessity appears to extend to points more than 150 miles west of the Missouri River cities. Provided reasonable charges are assessed for the total transportation, the commission is of the opinion that grain should be permitted to move from all of Group G via the Missouri River cities to California, and that carriers should not be permitted to increase their charges to an unreasonable basis which will prohibit, or nearly prohibit, that movement. Grain to Pacific Coast 98 I. C. C. 158.

(h) If competition from the Mississippi Valley is to influence the level of rates in the eastern section, consistency demands that consideration be given also to the commercial competition from the eastern section which the mills in the western section have to meet. The difference in the force of the competition in the two sections is only in degree and is brought about primarily by the lower level of rates east than west of the Mississippi River. Oklahoma Corp. Commission v. A. & S. Ry Co., 98 I. C. C. 183, 197.

(i) Cottonseed meal and hulls compete with corn and other coarse grains, linseed cake and meal, alfafa meals, grain feeds and hay throughout a substantial portion of western classification territory, but particularly in the intermountain states. The principal differences in the transportation characteristics of corn and cottonseed cake and meal are in the average loading and volume of movement. These differences are important, but a number of stock foods with which cottonseed cake and meal are directly competitive have long taken corn rates in this general territory. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 205, 208.

(j) In finding rates on coal from mines on the Virginian Railway in the New River district of West Virginia to interstate destinations unreasonable and unduly prejudicial, much evidence was introduced to show the advantages or disadvantages which would result to complainants, to interveners, and to defendants from opening the western markets to complainants' mines, and as to whether such action would be in the public interest. Irrespective of these considerations, complainants are entitled to move their coal to any market at reasonable and nonprejudicial rates. The commission has repeatedly condemned the action of carriers in adjusting rates so as to impede or stifle the movement of commodities in any given direction. Wyoming Coal Co. v. V. Ry. Co. 98 I. C. C. 488, 491.

(k) Disparity in rates does not necessarily result in undue prejudice. It must also appear that shipments are made under those rates or that shipments are hindered or prevented because of the rate relationship. The element of competition is usually potent. Pensacola Chamber of Commerce v. L. & N., 98 I. C. C. 567, 570.

(l) Mills at Petaluma, Calif., come into competition with mills located at San Francisco and points taking the San Francisco rate, and failure of carriers to accord Petaluma same basis of rates has prevented the mills at Petaluma from purchasing wheat and mill feed in territory of origin under consideration and has resulted in undue prejudice to Petaluma and undue preference of San Francisco and points taking same rate. Golden Eagle Milling Co. v. B. E. R. R. Co., 100 I. C. C. 41.

(m) Cement is shipped direct from manufacturer to point of consumption, in this respect differing from most other commodities. Competition is keen, and cement is sold on a delivered basis. The freight rate affects the ability of a manufacturer to compete at a given point. a difference of 1 cent per barrel in the freight rate, equivalent to about 4 cents per barrel, being sufficient to influence a sale. Missouri Portland Cement Co. v. A., T. & S. F., 101 I. C. C. 454, 457.

(n) Prejudice is rarely undue unless parties prejudiced and those preferred are upon a competitive basis. Detroit & Cleveland Nav. Co. v. M. C. R. R., 102 I. C. C. 607, 609.

(o) New Orleans is now, and has long been, the largest market and milling center for rice in this country, and is the principal port through which clean rice and rice products are exported to foreign countries and to Porto Rico from Arkansas and Louisiana points of production. New Orleans Joint Traffic Bureau v. B., S. L. & W., 102 I. C. C. 686, 689.

ALL OTHER CITATIONS

Elimination of Routes on Transcontinental Traffic, 85 I. C. C. 108; Lehigh Lime Co. v. A. C. & Y. Ry. Co., 85 I. C. C. 341.

§36. Need for Revenue.

See Infra §50, §51, §58; Advanced Rates §5 (4), §7 (6) (i); Reasonableness of Rates §20, §30, §36.

(a) It does not follow that any and every method advanced by the carrier to increase its revenues must receive the stamp of approval merely because of its financial needs. Fort Smith S. & R. I. R. R. v. A. & V. Ry. 102 I. C. C. 708, 712

§40½. Origin of Traffic.

See Advanced Rates §5 (8); Through Routes and Joint Rates §9.

(a) Carriers may ordinarily insist upon the long haul for traffic which they originate provided the routes afforded by them are not unreasonably long. Grain from western trunk line points, 91 I. C. C. 632, 647.

(b) A carrier can not dictate the sources from which shippers shall purchase their materials; and the fact that a lower rate is available from one point does not justify an unreasonable rate from another. Kelly & Jones v. Pennsylvania R. R., 95 I. C. C. 640, 642.

(c) Intent of section 15 of the act is that if a railroad has traffic in its possession it shall be allowed to handle it by its own line as far as it can unless the public interest will suffer thereby. Waverly Oil Works Co., 28 I. C. C. 621, 630. Jackson Traffic Bureau v. A. & V. Ry., 92 I. C. C. 89, 92.

(d) Carriers may reserve to themselves the long haul on traffic they originate or obtain from connections, but may not, in so doing, restrict markets in which shippers may dispose of their products. Such restriction may be as effectually accomplished through imposition of higher rates over competitive routes as by closing them entirely. Lumber from Alabama and Mississippi Points, 92 I. C. C. 156, 160.

(da) A carrier can not insist upon its long haul if undue prejudice results. Jackson Traffic Bureau v. G., & S. I., 102 I. C. C. 259, 260.

(e) The purpose of Congress is plain. If a railroad has traffic in its possession, it shall be allowed to handle it by its own line as far as it can unless the public interest will suffer thereby. Fort Smith S. & R. I. Ry. v. A. & V. Ry. 107 I. C. C. 523, 524.

ALL OTHER CITATIONS

Simms Oil Co. v. H. & T. C. R. R. Co., 85 I. C. C. 537.

§42¼. Paper Rates.

See Supra §25¾; Advanced Rates §5 (4), §5 (7½); Reasonableness of Rates §24.

(a) Sixth-class rate on epsom salts moving from Atlanta, Ga., to Greensboro, N. C., found not unreasonable as compared with lower paper rates contemporaneously in effect from Atlanta to various southeastern destinations for greater distances. Proximity Mfg. Co. v. Director General, 91 I. C. C. 612.

(b) Fact that there had been few, if any, shipments of a specific commodity between specific points prior to a certain year, does not justify the assessing of rates that were excessive. Parkersburg Rig & Reel Co. v. C., R. I. & P., 96 I. C. C. 99, 101.

(c) Fact that but few shipments of a commodity have moved between specified points can not operate to deprive shippers of a reasonable rate on such shipments. Harder Mfg. Corp. v. D. & H. Co., 102 I. C. C. 167, 168.

§13. Past Rates.

See Supra §29; Advanced Rates §5 (4); Reasonableness of Rates §25.

(a) Fact that a rate has been voluntarily maintained by a carrier for a period of years is evidence tending to show that it is reasonably high. See also 32 I. C. C. 361. Boots and Shoes from New York Points, 91 I. C. C. 591, 595, 596.

(b) While no prescriptive right arises by reason of the continuance of a rate, nevertheless, where rates are established voluntarily by carriers for purpose of building up industries, any readjustments of such rates should be accomplished with as few sharp breaks as possible. Canned Goods to Eastern Points, 101 I. C. C. 502, 505, 506.

§13¼. Percentage Contracts.

See Percentage Rates.

(a) The percentage of increase is not controlling if the resulting rates are not unreasonable. Virginia Can Co. v. A. & V. Ry., 89 I. C. C. 558, 562.

§43½a. Physical Valuation.

See Physical Valuation.

(a) Upon investigation by commission on its own motion into rates on grain, grain products, and hay; FOUND: (1) Record necessitates no change in basis of approximate value for rate-making purposes in western district adopted by commission in 1920 and reviewed in 1922; (2) whether or not expenditures for maintenance of equipment in 1923 were to some extent abnormal, conclusion is not warranted that earnings of carriers in western district were in excess of a fair return; and (3) upon applying usual tests, general basis of rates does not appear unreasonable or otherwise in violation of the act. Rates and Charges on Grain and Products, 91 I. C. C. 105.

(b) Upon investigation into rates and charges on grain, grain products, and hay; FOUND: That evidence submitted on question of value fails to lead commission to conclude that basis of approximate value for carriers in western district adopted in Increased Rates, 1920, 58 I. C. C. 220, and reviewed in Reduced Rates, 1922, 68 I. C. C. 676, should be changed. If value contended for by complainants were adopted, it would result in still less than present existing short fair return. Rates and Charges on Grain and Products, 91 I. C. C. 105, 110, 119.

ALL OTHER CITATIONS

Arizona Corporation Commission v. A. E. R. R. Co., 85 I. C. C. 76.

§43½b. Pittsburgh Plus.

(a) Shipments of tin plate were sold on the Pittsburgh-plus basis, which means that the sale price was determined by the market price at Pittsburgh, Pa., plus an amount equal to the freight charges which would accrue under the freight rate from Pittsburgh to destination regardless of the freight rate from actual point of origin. Borden Co. v. A. A. R. R. Co., 100 I. C. C., 153, 156; Atlas Metal Works v. A., C. & Y. Ry. Co., 100 I. C. C. 173, 177.

§44. Previous Haul on Raw Material.

(a) Ordinarily, manufactured products take a higher rate than the raw material from which made. Young v. C. I. & L. Ry. Co., 89 I. C. C. 428, 436.

§44¼. Prior Decision of Commission.

See Advanced Rates §14¾; Blanket Rates §4; Panama Canal Act; Previous Decisions of Commission; Through Routes and Joint Rates.

(a) Parties agreeing to abide by

decision in another case involving similar issues, such case followed in deciding instant case. Fairmont Creamery Co. v. Director General, as Agent, 89 I. C. C. 359.

(b) Rates prescribed in Mississippi Valley case, 64 I. C. C. 306, were not prescribed as standards of reasonable maximum rates, but primarily to bring about an adjustment in harmony with requirements of section 4 of the act and at same time conserve revenues of carriers. Nor may such rates be used as a measure of rates between points in the southeast. Paper Boxes between Southeastern Points, 93 I. C. C. 559, 563.

(c) Where traffic conditions and rate situation have materially changed, rates predicated upon findings of the commission in a prior decision are not controlling. Certain-Teed Products Corp. v. A. & L. M. Ry., 95 I. C. C. 273, 276.

(d) Upon contention by carriers that commission's findings in Minnesota & Ontario Paper case. 66 I. C. C. 571, required a widespread and comprehensive readjustment in rates and that it would be inequitable to require them to pay reparation; furthermore, that shippers can better afford to bear higher rates charged than carriers can afford further reductions in their earnings. FOUND, latter contention is obviously untenable; and as to former, the circumstances here are substantially the same as in a number of cases where reparation has been awarded to basis found reasonable in the cited case. Oklahoma Publishing Co. v. A., T. & S. F., 95 I. C. C. 448, 449.

(e) Rates on coal from mines in Ohio and Inner and Outer Crescent district to certain points in Indiana, found not unreasonable, unjustly discriminatory, or unduly prejudicial. Rates assailed have been passed upon and fixed by the commission in 80 I. C. C. 663, and 83 I. C. C. 591; no evidence has been offered justifying changes in the bases of rates prescribed in those cases. Bash & Co. v. B. & O., 96 I. C. C. 178.

(f) Rates on straw from certain points in Illinois to Noblesville, Ind., found not to have been or to be unreasonable as compared with distance rates prescribed in the Straw case, 36 I. C. C. 30. In National Hay Asso., 19 I. C. C. 34, the commission said that the ultimate test from the carrier's standpoint of the reasonableness of a rate must be the return for the occupation and use of its facilities. American Strawboard Co. v. I. C. R. R., 96 I. C. C. 289.

(g) Reversal in 69 I. C. C. 345 of finding in 63 I. C. C. 74, as to propriety of proposed reduction, was not tantamount to a finding that previous rate was unreasonable. Union Sulphur Co. v. T. & N. O. R. R. Co. 98 I. C. C. 76, 81.

(h) Upon further consideration, rates on clean rice from Memphis, Tenn., and points in Arkansas, Louisiana, and Texas, to Oklahoma points found unreasonable during period subsequent to June 30, 1922, to extent they exceeded rates based on a mileage scale prescribed in original report, 95 I. C. C. 645, and during period August 26, 1920, to June 30, 1922, inclusive, to extent they exceeded rates made by adding to such rates the percentages of reduction required in Reduced Rates, 1922, 68 I. C. C. 676. Reparation awarded. Alton Mercantile Co. v. A. & W. Ry. Co., 98 I. C. C. 581.

(i) Proposed general revision of all-rail and rail-and-water rates on furniture including chairs and mattresses, c. l. and l. c. l., from southern manufacturing points to eastern territory, which would result in both increases and reductions, found justified. Proposed schedules purport to comply with findings in original report, 91 I. C. C. 27; are designed to restore rates from southern manufacturing points to the East to a basis comparable with central-territory basis; and to bring about a greater uniformity in rates and carload minima. Findings in original report affirmed and order of suspension vacated. Furniture from Southern Points 100 I. C. C. 127.

(j) Contention that in C. F. A. Class Scale case, 45 I. C. C. 254, 272, the commission fixed the c. l. class rates high enough to cover cost of loading and unloading found untenable. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 401.

(k) Upon contention that commission is not bound by former decision and that present case should be decided on its merits, HELD: When a given situation has been fully considered and deliberately passed upon, that decision should not be disregarded and the question kept

open indefinitely unless good cause is shown for adoption of a different course. Pacific Mutual Door Co. v. A. A. R. R. 101 I. C. C. 633.

(l) Following Phoenix Chamber of Commerce, 95 I. C. C. 244, wherein rates on sugar were found unreasonable from California points to Phoenix, Ariz., rate herein assessed on same commodity from San Francisco and other California points to Bowie, Ariz., found unreasonable. Bowie is more distant than Phoenix, but the latter is on a branch line of the Southern Pacific while Bowie is on the main line of the same road. Reasonable rate prescribed and reparation awarded. Solomon-Wickersham Co. v. S. M. V. R. R., 101 I. C. C. 667.

(la) Rates on newsprint paper from producing points in Minnesota, Wisconsin, and Ontario, in defined territories, in eastern seaboard territory and Canada, and in Oregon and Washington, to Dallas and Fort Worth, Tex., found unreasonable to extent they exceeded rates conforming to those prescribed in Minnesota & Ontario Paper Co., 66 I. C. C. 571. Reparation awarded. Wortham-Carter Publishing Co. v. Director General, 102 I. C. C. 729.

(m) A finding by the Commission of unreasonableness in the past inures to the benefit of every person who has been obliged to pay the unjust rate and who initiates his claim within the statutory period. Bell & Zoller Mining Co. v. I. C. R. R. 109 I. C. C. 484, 485.

(n) When, upon a given state of facts, the Commission reaches a conclusion regarding a certain rate, it will adhere to that conclusion in subsequent proceedings regarding the same rate, unless some new facts are brought to its attention, conditions are shown to have undergone a material change, or it proceeded on a misconception or misapprehension. Bell & Zoller Mining Co. v. I. C. R. R. 109 I. C. C. 484, 485.

§44½. Public Interest.

See Advanced Rates §14; Blanket Rates §4; Panama Canal Act; Through Routes and Joint Rates II.

(a) The interests of the individual carrier must yield in many respects to the public need. Salt cases of 1923, 92 I. C. C. 388, 412.

(b) Carriers as a whole in western group have yet to make a fair return on value of their properties over any considerable consecutive period of time, and it is evident that, if further substantial revenue losses are to be sustained, the public interest would be directly affected through a further weakening of railroad credit and a lowering of standard of railway service. Rates and Charges on Grain and Products, 91 I. C. C. 105, 153.

ALL OTHER CITATIONS

C. M. & St. P. Ry. Co. v. U. P. R. R. Co., 88 I. C. C. 312.

§45. Profit to Shipper.

See Infra §62; Advanced Rates §6 (6), §13; Express Companies §24; Reasonableness of Rates §27.

(a) The test of the reasonableness of a rate is not the amount of the profit in the business of a shipper or manufacturer, but whether the rate yields a reasonable compensation for the services rendered. If the prosperity of the manufacturer is to have a controlling influence, this would justify a higher rate on the traffic of the prosperous manufacturer than on that of one less prosperous. The right to participate in the prosperity of a shipper in raising rates is simply a license to the carrier to appropriate that prosperity, or, in other words to transfer the shippers legitimate profit in this business from the shipper to the carrier. Rates and charges on grain and grain products, 91 I. C. C. 105, 143.

(b) The country's permanent prosperity depends largely upon flourishing conditions of the agriculture and transportation industries. To assist one unduly at expense of the other at a time when neither is in an ideally prosperous condition, merely because one may be in a worse condition economically than the other, would be of doubtful value either to the assisted industry or to the country, assuming that it is within commission's power arbitrarily to render this assistance. It must be recognized that commission can not require unduly low rates on some commodities for benefit of one class of shippers any more than it can arbitrarily increase rates on other commodities because shipper thereof may be enjoying excessive profits. Rates and Charges on Grain & Products, 91 I. C. C. 105, 143, 153.

(c) It is well settled that rates may not be adjusted with the single view of enabling shippers to do business at a profit. Ogden Packing & Provision Co. v. D. & R. G. W. Ry., 101 I. C. C. 258, 264.

(d) Evidence as to profits realized by shippers on a particular commodity is of little value in determining reasonableness of the classification rating applied to that commodity. Coca-Cola Co. v. B. & O., 92 I. C. C. 340, 343.

(e) Present unfavorable financial conditions of the deciduous fruit industry may be chargeable to overproduction, the inability of eastern markets to absorb the supply. If this is so, economic laws, not rate adjustment, must remedy conditions. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79, 93, 95, 107.

(f) Even though a shipper is at a disadvantage in marketing its packing-house products at some, if not all, destinations, it does not follow that rates on live animals and on the products thereof must be measured by the cost of service without consideration of other elements of rate making, or that shipper's disadvantage arises from the fact that the adjustment assailed is not so measured. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236, 252.

(g) Rates may not be adjusted with the single view to enabling shippers to do business at a profit. Ogden Packing & Provision Co. v. D. & R. G., 101 I. C. C. 258, 264.

§47. Rate via Competing Route.

See Equalization of Rates §4 (2); Reasonableness of Rates §27½, §27¾; Reparation §11; Routing and Misrouting §4½, §5, §5½; Through Routes and Joint Rates §15½.

(a) The maintenance of a lower rate by a route other than the route of movement does not warrant a finding of unreasonableness. Midland Coal Company v. St. L. S. F. Ry., 92 I. C. C. 283, 284.

(b) The existence of a lower rate over a competing route does not of itself establish the unreasonableness of the rate actually charged. Rudolph & Co. v. P. R. R. 101 I. C. C. 111, 112.

(ba) Rates on bituminous coal over interstate routes from mines in the Linton and Clinton groups in Indiana to Marion, Kokomo, Elwood, Michigantown, and Warren, Ind.; found not unreasonable as compared with lower rates over intrastate routes, which rates were subsequently increased to basis of the interstate rates, or as compared with rates from Illinois mines to Indiana destinations. Wright & Wimmer v. C., T. H. & S. E., 93 I. C. C. 183.

(c) Shipment of lumber from Lonoke, Ark., was originally consigned to Deer Creek, Okla. Diversion requested to Nowata, Okla., could not be effected until after shipment passed point through which the short line route made. Combination rates based on Winfield, Kans., assessed found not unreasonable as compared with rates contemporaneously in effect via the direct route; nor were individual factors comprising the combination unreasonable as compared with rates between other points instanced by complainant. Shipment here involved was unusual and moved over the circuitous route at instance and for convenience of complainant. While ton-mile earnings thereunder are somewhat higher than those instanced, they can not be said to have been excessive for service performed. Nebraska Bridge Supply Co. v. A., T. & S. F., 93 I. C. C. 301.

(d) Existence of a lower rate over other routes does not of itself warrant a condemnation of the rate applicable via route of movement. Goodrich Bros. Hay & Grain Co. v. C., C., C. & St. L., 95 I. C. C. 5.

(e) Rate on coal from mines in Kentucky to Wabash, Ind., via route of movement, found not to have been unreasonable, unjustly discriminatory, or unduly prejudicial as compared with lower rate via another route, which was longer. The rates over the two routes have always been the same, except that during the period for which reparation is sought a lower rate over the longer route was erroneously published. This error was subsequently corrected, raising the rate over the longer route to the level of the rate over the route of movement. Bash & Co. v. B. & O., 96 I. C. C. 178, 184.

(f) Upon contention that commission ruled in 58 I. C. C. 205, 59 I. C. C. 119, and other cases, that during Federal control all lines were operated as a single system and that a rate applying over one

route of federally-controlled lines should apply over another route, if distances and operating conditions were favorably comparable, and that this ruling applicable via a route other than that of movement entitled shipper to lower rate. HELD, this contention goes beyond the scope of cited cases, and fact that two rates applied between same points over different routes, both routes under Federal control, does not establish unreasonableness of higher rate and defendant can not be called upon to protect the lower rate. Moreover, such action would subject the director general as operator of route over which higher rate applied to liability as operator of route over which lower rate applied. In Davis v. Donovan, 265 U. S. 257, his liability "was carefully limited to such as would have been incurred by some particular carrier if there had been no Federal control." California Packing Corp. v. Director General, 96 I. C. C. 239, 242, 243.

(g) It may not necessarily follow that the rates of the short line between two points would not be reasonably compensatory if applied via a route more than twice as long between the same points. There would, however, be a strong presumption that if the rates for the shorter distance via the direct line or route are reasonable they would not be reasonably compensatory for a haul of more than twice that distance, and such rates cannot be approved unless it is shown that they would be reasonably compensatory for application via the longer route. Class and commodity rates between western points 104 I. C. C. 578, 585.

(h) The existence of a lower rate over other routes and the subsequent reduction to that basis of the rate over a particular route of movement are not sufficient to establish the unreasonableness of the previous rate. Williams & Co. v. L. V. R. R., 112 I. C. C. 171, 173.

ALL OTHER CITATIONS

Staley Mfg. Co. v. Director General, as Agent, 85 I. C. C. 418; Jeremy Fuel & Grain Co. v. Director General, as Agent, 88 I. C. C. 397; Bender Streibig & Co. v. I. C. R. R. Co., 88 I. C. C. 474.

§47a. Rate Wars.

(a) Present rates on salt from Louisiana mines to Chicago were designed for purpose of promoting financial success of salt mines in disregard of measure of revenue which carriers are entitled to receive for services rendered. Retaliatory reductions have been established from other fields resulting in a salt-rate war and rates from all fields to highly competitive points have reached so low a level that many shippers are asking that it be raised in order that revenue may be sufficient to make the tonnage attractive to carriers, and in order that service may be improved. Salt Cases of 1923, 92 I. C. C. 388, 411.

§47b. Rate Territories.

(a) To show that operating conditions in Arizona and New Mexico are similar to, or no more difficult than those prevailing in Texas differential territory, complainants introduced comparisons of certain selected statistics of revenues and operations of carriers operating west of El Paso with like statistics of several south-western lines operating east thereof in Texas differential and common-point territory. Such statistics can not be accepted as establishing complainants' contention, because they are not predicated wholly upon operations within, or to and from, Arizona, New Mexico, and Texas differential territory. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 7.

(b) So far as operating conditions are concerned, it appears that the only distinction which can be drawn with any degree of validity between interterritorial service between central and southern territories and intraterritorial service within southern territory to the disadvantage of the former is the fact that at the boundary line there is ordinarily a change of carriers. Southern Class Rate Investigation, 100 I. C. C. 513, 662.

(c) Transportation conditions are sufficiently homogeneous in southern territory, leaving the Florida peninsula out of consideration, so that if no distinction is made between standard lines or between main lines and branch lines of standard roads, an attempt to draw a distinction between border territory and the more southerly territory would be without sufficient justification. Southern Class Rate Investigation 100 I. C. C. 513 623.

(d) Both class and commodity rates in southeastern territory are on a higher plane than in Mississippi valley territory. Hay to Mississippi points 109 I. C. C. 36, 38.

(e) Traffic and transportation conditions are not radically different in eastern South Dakota from what they are in the adjoining portions of Minnesota, Iowa and Nebraska. Sioux Falls Livestock Exchange v. A. T. & S. F. Ry., 109 I. C. C. 501, 506.

(f) Transportation conditions are more favorable in central territory than those in the southwest where the Memphis Southwestern rates apply. Parkersburg Rig & Reel Co. v. B. & O. R. R., 109 I. C. C. 569, 573.

(g) The Indiana Illinois line does not divide diverse transportation conditions. Burlington Shippers Asso. v. A. T. & S. F. Ry., 109 I. C. C. 694, 698.

§48½. Repair of Equipment.

See Cars and Car Supply §32⅛.

(a) Upon investigation into classified repairs made to 115 locomotives of the Central R. R. Co. of N. J., in 1920-1921, under contracts negotiated with the Baldwin Locomotive Works and American Locomotive Co.; FOUND: That cost of such repairs was greatly in excess of cost of similar work in respondent's own shops; that even though at end of Federal control some assistance in respondent's shops may have been necessary or expedient as an emergency, the contract work was carried beyond reasonable necessities and a large part of the excess expenditures could have been avoided; also that those expenditures would at least have gone far to provide respondent with much needed additional shop facilities. Construction and Repair of Ry. Equipment: C. R. R. of N. J., 89 I. C. C. 751.

§49. Reproduction Value of Road.

See Cars and Car Supply §32⅛; Reasonableness of Rates §26.

(a) An advantageous contract for the furnishing of electric power is a thing of value to be considered in the fixing of rates. Duluth St. Ry. Co. v. Railroad and Warehouse Commission, 4 Fed. (2d) 543.

ALL OTHER CITATIONS

Utah Gilsonite Co. v. A. T. & S. F. Ry. Co., 85 I. C. C. 557.

§50. Return on Investment.

See Supra §36; Infra §51; Advanced Rates §6.

(a) Upon an extensive investigation as to what rates, as applied to a particular class of traffic to be offered, will be likely to produce a fair return hereafter, past or present statistics of operation and earnings are serviceable only as they illuminate the future. Rates and Charges on Grain and Products, 91 I. C. C. 105, 122.

(b) Carriers as a whole in western group have yet to make a fair return on value of their properties over and considerable consecutive period of time, and it is evident that, if further substantial revenue losses are to be sustained, the public interest would be directly affected through a further weakening of railroad credit and a lowering of standard of railway service. Rates and Charges on Grain and Products, 91 I. C. C. 105, 153.

(c) Language of Supreme Court in Dayton Goose Creek Case, 263 U. S. 456, 480, to effect that statute does not require use of net return of carriers from all rates as evidence to fix a particular rate or class of rates, does not forbid commission to consider net return but merely says that it need not when considering a particular rate or class of rates. Nor does it limit or qualify commission's duty under section 15a. If a reduction in a particular rate or class of rates has no substantial effect upon aggregate revenue there may be no occasion for considering latter duty. If, on the other hand, it has a substantial effect upon aggregate revenue, such occasion arises. Rates and Charges on Grain and Products, 91 I. C. C. 105, 154, 155.

(d) Common carriers, being public utilities, are entitled as individual entities to receive from all their rates revenues sufficient to pay expenses and a reasonable return upon value of their properties, economically and efficiently managed, if obtainable through rate schedules not inherently unjust. Carriers' right to a fair return is based on fact that theirs is private property devoted to a public use, and, as such, certain rights are safeguarded by Constitution. Rates and Charges on Grain and Products, 91 I. C. C. 105, 155.

(e) Commission does not consider that when rates assailed are shown to be unreasonable its hands are bound so

tightly by provisions of section 15a of the act that it can not grant a general reduction unless and until interested carriers as a whole in their respective groups make a fair return. Rates and Charges on Grain and Products, 91 I. C. C. 105, 164.

(f) Class 1 carriers in the Southwest, excluding the Texas roads, came much closer to making the fair return of 5.75 per cent than did the Class I Texas carriers, separately considered. Oklahoma Corp. Commission v. A. & S. Ry Co., 98 I. C. C. 183, 211.

(g) Evidence concerning carriers' financial condition and reduction in operating costs since 1920, introduced and attempt made to show that operating returns to carriers handling deciduous fruit have increased in a marked degree during the last few years. Found Record fails to indicate that carriers involved are earning in excess of, or even as much as, a fair return of 5.75 per cent and reductions would seriously affect revenues of independent short lines on which a substantial portion of this traffic originates. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79. 93, 95, 107.

§51. Revenue of Road.

See Supra §36; Advanced Rates §5 (4), §6 (6), §7 (7), §15; Classification §5 (yy); Express Companies §24; Reasonableness of Rates §11, §30, §36.

(a) The measure of rates on a specific commodity such as salt from and to particular points or within narrowly defined areas can not fairly be determined by fluctuations in the aggregate earnings of the carriers as a whole. Salt cases of 1923, 92 I. C. C. 388, 437.

(ab) During the period of its operations in 1922 and 1923, the Missouri and North Arkansas was benefited in respect of its revenues by reason of fourth-section order No. 8128, which authorizes the carrier to meet the rates of its competitors to and from common points on its line and to maintain higher rates at intermediate stations. Divisions of Joint Rates and Fares of M. & N. A. Ry. Co, 98 I. C. C. 119, 126.

(b) The fact that a carriers net railway operating income is not as high as that which carriers as a group may earn under section 15a of the act does not prohibit the Commission from fixing a just and reasonable rate on a particular commodity between particular points on its line. Furthermore, in the establishment of rates on a single commodity the fact that the carriers are operating at a loss or on a narrow margin of profit should not be given too much weight, unless it appears clearly that the particular commodity constitutes the bulk of the traffic transported. United Paperboard Co. v. G. & J. Ry. 102 I. C. C. 502, 506.

(ba) Where a carrier is not earning a fair return on value of property used in service it does not follow that any and every method advanced by it to increase its revenues must receive stamp of commission's approval merely because of its financial needs. Fort Smith S. & R. I. R. R. v. A. & V. Ry., 102 I. C. C. 708. 712.

(c) Evidence as prosperity of carriers generally, is of little or no force in determining the propriety of the rate level on an individual commodity. Bananas from Gulf ports, 109 I. C. C. 211, 219.

(d) For many years prior to 1918 the Commission regarded 5 mills per ton mile as approaching the minimum limit of revenue for carload freight traffic. Tamms Silica Co. v. C. & N. W. Ry., 109 I. C. C. 618, 620.

§52. Risk of Loss or Damage.

See Infra §6, §61; Classification §9, §11¾ (a), §16; Reasonableness of Rates §32.

(a) In establishing reasonable rates the value of the commodity to be rated and its liability to damage incident to transportation must be considered. Jackson Traffic Bureau v. B. & O. R. R., 93 I. C. C. 342, 343.

(b) As to all freight generally, conditions affecting safety in transportation are different in carload traffic from those in less carload traffic, and loss and damage claims are relatively more frequent and serious in the latter. Rope Paper Sack Bureau v. A. & V. Ry., 98 I. C. C. 511, 514.

(c) It sometimes happens that the loss and damage claim paid on a shipment of furniture amounts to more than the freight revenue thereon, and this is especially true of shipments in less carloads. Furniture from southern points, 100 I. C. C. 127, 133.

(d) Fact that, as to all freight generally, conditions affecting safety in transportation are different in c. l. traffic from those in l. c. l. traffic, and that loss and damage claims are relatively more frequent and serious in latter, not overlooked, but record here involved is not convincing that the relative risk to carrier in handling l. c. l. shipments of flour in paper bags would be greater than that incurred in handling l. c. l. shipments of same commodity in cloth bags. Real justification, if any exists, for higher rates on shipments in paper than in cloth bags must be found in the relative greater shrinkage of carrier's revenues, through payments of claims for loss or damage, on shipments in paper bags. Rope Paper Sack Bureau v. A. & V. Ry. Co., 98 I. C. C. 511, 513, 514.

(e) Claim hazard is but one of many elements to be considered in determining the reasonableness of a rate. See 87 I. C. C. 711. Wortham Carter Publishing Co. v. Director General, 102 I. C. C. 729, 743.

§52½. River Crossings.

See River Crossings.

(a) The river combination method of making rates from the southwest to the southeast is general and is of long standing. Piedmont Oil Co. v. A. & V. Ry. 102 I. C. C. 583, 584.

(b) The Commission has had occasion to comment upon operating conditions east and west of the Mississippi river and have referred to the fact that the rates in the southeast are as a whole on a lower level than those in the southwest. Nashville Traffic Bureau v. L. & N. R. R. 102 I. C. C. 641, 647.

§55. Standard of Lines.

See Advanced Rates §15; Reasonableness of Rates.

(a) Upon general investigation on commission's own motion, of interstate class rates and l. c. l. commodity rates within southern territory and between southern and official territories, all-rail and rail-water, and of l. c. l. ratings in exceptions to southern classification, FOUND: That reasonable interstate rates between, from, or to points on specified weak lines are and for future will be, rates determined by scale shown in Appendix K plus differentials determined by a distance scale similar, but not necessarily the same as, scale shown in Appendix L applied to the haul over the weak line. Southern Class Rate Investigation, 100 I. C. C. 513, 653.

§56. Standard of Rates.

See Supra §55; Advanced Rates §15; Branch Lines §4; Discrimination §5, II; Reasonableness of Rates §32.

(a) A uniform scale of rates could with propriety be applied throughout southern Missouri, Oklahoma, Arkansas, Louisiana and common point territory in Texas. Atlas Metal Works v. A. C. & Y. Ry., 100 I. C. C. 173, 177.

(b) A uniform scale of rates could with propriety be applied throughout southern Missouri, Oklahoma, Arkansas, Louisiana, and common point territory in Texas. Proctor & Gamble Distributing Co. v. St. L. S. F. Ry., 101 I. C. C. 563 574.

(c) Upon general investigation, on commission's own motion, of interstate class rates, all-rail and rail-water, within southern territory, FOUND: That all such rates between points in southern territory should be not higher than a normal level based upon a distance scale or scales of such extent as to cover hauls of all lengths. Southern Class Rate Investigation, 100 I. C. C. 513, 615.

§57½. System line haul.

See Branch Lines §2, §3.

(a) Southern Ry. system lines, Atlanta & West Point R. R., and Western Ry. of Alabama, and Illinois Central and Yazoo & Mississippi Valley Railroads, respectively, found to be under same management and control, for purpose of applying single-line distance rates required to be established in original report, 74 I. C. C. 419, on livestock to, from, and between points in the Southeast. Livestock to, from, and between Points in the Southeast, 91 I. C. C. 292 293.

(b) Separately incorporated railroads under the same management and control, the stock of which is held in common ownership, should be considered as a unit for rate-making purposes. Transit Privilege on Lumber, 95 I. C. C. 154, 158.

(c) Although operated separately, the Greenwich & Johnsonville is owned entirely by the Delaware & Hudson and is

part of that system. United Paperboard Co. v. C. R. R. Co. of N. J., 95 I. C. C. 680, 683.

(d) Upon contention that commission's ruling that during Federal control all lines were operated as a single system and that a rate applying over one route of Federally controlled lines should apply over another route, if distances and operating conditions were favorably comparable, entitled shipper to lower rate citing 58 I. C. C. 205, 59 I. C. C. 119, and other cases. HELD, this contention goes beyond scope of cited decisions, and fact that two rates applied between same points over different routes, both routes being under Federal control, does not establish unreasonableness of higher rate and defendant can not be called upon to protect the lower rate. Moreover, such action would subject the director general as operator of route over which higher rate applied to liability as operator of route over which lower rate applied. In Davis v. Donovan, 265 U. S. 257, his liability "was carefully limited to such as would have been incurred by some particular carrier if there had been no Federal control." California Packing Corp. v. Director General, 96 I. C. C. 239, 242, 243.

(e) It should be understood that where the term "carriers under the same management and control" is used, it refers to carriers generally controlled through ownership, lease, or otherwise to the extent of controlling traffic policy, even though separate corporate entity may be maintained. Raleigh Freight Traffic Bureau v. A. C. L. Ry. 107 I. C. C. 156, 159.

(f) For rate-making purposes the Arizona Eastern and Southern Pacific should be treated as one line. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 9.

(g) In determining distances in compliance with the rates herein prescribed to or from Galveston, Tex, or New Orleans, La., the respective ports, the shortest routes via existing connections for the interchange of carload traffic shall be used, embracing as a maximum the lines or parts of lines of not more than three line-haul carriers, lines under common ownership or control to be considered as a single line. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 123.

(h) In reality, there are now only four great railroad systems in the South in addition to numerous so-called short lines and certain independent railroads of greater importance In a broad way competition is still very active between the four great systems. The process of consolidation, however, has minimized the influence formerly exerted upon the rate structure by railroads whose interests were concentrated in certain communities. Southern Class Rate Investigation, 100 I. C. C. 513, 525.

(i) For purposes of rate making, movements over two or more carriers under common ownership or control are treated generally as single line rather than joint line hauls. Raleigh Chamber of Commerce v. N. S. R. R. 109 I. C. C. 52, 54.

ALL OTHER CITATIONS

Cotton Mfrs. Association of S. C. v. C. & O. Ry., 85 I. C. C. 131; Brick and Drain-tile from St. Louis, 85 I. C. C. 353; Routing of Lumber from A. T. & N. R. T. Stations, 85 I. C. C. 527.

§57¾. Terminal Facilities.

See Terminal Facilities.

(a) It is by no means unusual to recognize the additional cost of specific terminal services in constructing rates for short hauls. Chase & Norton v. A. A. R. R., 92 I. C. C. 322, 324.

(b) Fact that terminal costs at Chicago should be somewhat higher than the average in c. f. a. territory, does not justify imposition of a disproportionate share of those costs upon short-haul traffic. Indiana Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 177, 179.

(c) Cost of handling all freight through freight houses is not an accurate measure of the cost of handling straight c. l. shipments of package freight. Loading and Unloading of C. L. Freight, 101 I. C. C. 394, 412.

§58. Ton-mile Revenue.

See Supra §20, §36; Advanced Rates §18 (1); Blanket Rates §10½ (oo); Comparative Rates; Distance Rates §3 (4x); Evidence §20; Reasonableness of Rates §36.

(a) The ton-mile yield returned by rates between points in other territories is not persuasive as to what should be considered reasonable for a haul over

a route between two points through an area of low productivity, largely swamp lands, where there are no settlements of any size at which traffic does or could originate. Atlantic Refining Co. v. A., B. & A. Ry. Co., 89 I. C. C. 279, 280.

(b) Earnings per mile for short hauls ordinarily are and should be higher than for longer hauls. Boston Wool Trade Association v. Director General, 89 I. C. C. 589, 629.

(c) Ordinarily ton-mile earnings should increase as distance decreases. Knoxville Traffic Bureau v. S. Ry. Co., 89 I. C. C. 708, 714.

(d) The rule is well recognized that ordinarily the per ton mile should decrease with distance. But this rule should find full application only where the conditions of haul are substantially similar, and where a prairie haul is compared with a mountain haul, the general rule may be qualified. Utah State Automobile Asso. v. A. T. & S. F. Ry., 92 I. C. C. 376, 381.

(e) Earnings per ton-mile on grain and products are greater than on products of mines and forests, but are substantially less than all c. l. traffic and on all c. l. traffic excluding grain, grain products, and hay. Rates and Charges on Grain and Products, 91 I. C. C. 105, 124.

(f) Ton mile earnings should ordinarily decrease with increasing distance, but it must be borne in mind that the average number of miles hauled in the southern district is about one third greater than in the eastern district. Furniture from southern points, 100 I. C. C. 127, 144.

(g) It is a generally recognized principle of rate making that the rate per ton per mile should continually decrease as distance increases. The freight rate combines two factors of cost, (1) terminal cost and (2) line haul cost. Since terminal cost remains constant, whatever the length of haul, it follows that even if line haul cost increases uniformly, the rate per ton mile, which combines the two factors of cost, will continually decrease with distance. This result will, of course, be much more marked in the shorter hauls. Stated in another way, the curve of the scale will gradually approach a straight line as distance increases, if we start with the assumptions that terminal cost is constant and that line haul cost increases uniformly. A second reason for a decreasing rate per ton mile, however, is the fact that line haul cost is relatively greater for short haul than for long hauls, particularly in the case of less carload service. Southern class rate investigation, 100 I. C. C. 513, 642.

(h) It is a well established principle that ton mile and car mile earnings should decrease as distance increases. St. Joseph Lead Co. v. L. & N. R. R., 101 I. C. C. 352, 354.

(i) Earnings of 17.53 mills per ton-mile, 59.84 cents per car-mile, and $587.04 per car on caustic soda are comparatively high for such low-grade traffic. Refinite Co. v. C. & N. W., 92 I. C. C. 266, 269.

(j) Considering rates in connection with recognized principle that ton-mile earnings decrease as distance increases, rates on green coffee from New Orleans to Montgomery found not unreasonable as compared with rates from same point of origin to Nashville, Louisville, St. Louis, and other farther distant points. Fletcher-Wilson Coffee Co. v. L. & N., 93 I. C. C. 555.

(k) The principle that ton-mile earnings should decrease as distance increases may be offset by the principle that a higher level of rates is justified in a territory of relatively low traffic density. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208, 211.

(l) The principle that ton-mile earnings should decrease as distance increases may be offset by the principle that a higher level of rates is justified in a territory of relatively low traffic density. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208, 213.

(m) The use of system average costs on a ton-mile might lead to erroneous conclusions in all of those instances where the average haul of the traffic interchange differs from the average on all freight operations of the system, and where the freight traffic interchanged differs materially in character from the system average, or the relative proportions of interchanged freight traffic or different kinds vary substantially from such proportions of freight handled in system operations. In the absence of better estimates of cost, the system averages have been used for purposes

of certain comparisons herein. Divisions of Joint Rates and Fares of M. & N. A. Ry Co., 98 I. C. C. 119, 129, 135.

(n) Although it is true that the revenue per car-mile on low-grade commodities such as sand exceeds that on higher grade commodities, nevertheless it must not be overlooked that the revenue per ton-mile on the latter commodities is greater. Boldt Glass Co. v. C., B. & Q. R. R. Co., 98 I. C. C. 481, 485.

(o) Rates on coal from mines on the Virginian Railway in the New River district of West Virginia to interstate destinations found unreasonable and unduly prejudicial. Under the circumstances of the case relative reasonableness, rather than intrinsic reasonableness, becomes the important thing to be considered, and other criteria, such as ton-mile earnings, fall into the background. Wyoming Coal Co. v. V. Ry. Co. 98 I. C. C. 488, 497.

(p) Rates charged on shipments of mussel shells from Hobbs Island, Ala., to Oswego, Kans., found not unreasonable or unduly prejudicial. Ton-mile earnings yielded are less than earnings at rates applicable on like traffic from Louisiana points to destinations in Kansas, including Oswego, for comparable distances. Pioneer Pearl Button Co. v. N., C. & St. L. Ry., 98 I. C. C. 578.

(q) For many years prior to 1918 the Commission regarded 5 mills per ton mile as approaching the minimum limit of revenue per carload of freight traffic. Florence Chamber of Commerce v. A. & V. Ry 107 I. C .C. 84 93.

(r) For many years prior to 1918 the Commission regarded 5 mills per ton mile as approaching the minimum limit of revenue for carload freight traffic. Grain and grain products to Mississippi valley 107 I. C. C. 167, 169.

(st) A spread of 26 cents in rates for an approximate average increase in distance of only 11 miles is out of all proportion to increased expense of transporting commodities, such as anthracite coal, this slight additional distance, and violates the principle that as distance increases ton-mile earnings, except under unusual circumstances, should decrease. No such unusual circumstances as would require a departure from this rule are here shown. Richmond County Coal Merchants Asso. v. B. & O., 101 I. C. C. 154, 163.

(ta) Earnings of 18.16 mills per ton-mile, and 54.49 cents per car-mile on a commodity loading as heavily as canned goods, do not appear excessive, especially in a territory where hauls over high mountain ranges are required. Canned Goods from Colorado, New Mexico, Texas & Wyoming, 102 I. C. C. 156, 160.

(u) Ton mile and car mile earnings yielded by present rates are in accord with the general rule that earnings per car and per ton mile should decrease with increases in distances. Gulf States Portland Cement Co. v. N. & W. Ry., 109 I. C. C. 231, 234.

(v) For many years prior to 1918 the Commission regarded 5 mills per ton mile as approaching the minimum limit of revenue for carload freight traffic. Leach v. C. N. O. & T. P. Ry., 112 I. C. C. 38, 40.

§59. Two or Three Line Haul.

See Advanced Rates §15½; Comparative Rates; Discrimination §11¼; Reasonableness of Rates §37.

(a) While, generally speaking, rates for a two line haul may be somewhat higher than for a one line haul, this is not necessarily true where the rates are part of a group adjustment. Orange Chamber of Commerce v. A. & W. Ry., 98 I. C. C. 101, 104.

(b) Joint line arbitraries are inconsistent with group or blanket rates, and even if a two line haul were more expensive than a one line haul, the additional expense, if slight, should not be reflected in the rate in a general group adjustment. Orange Chamber of Commerce v. A. & W. Ry., 98 I. C. C. 101, 107.

(c) When distance of over 500 miles are involved fact that service is by two lines is largely negligible. Pacific Guano & Fertlizer Co. v. S. P. Co., 91 I. C. C. 228, 230.

(d) The mere fact that one haul is two line and another one line does not in and of itself justify a higher charge for the two line haul. The Commission recognizes no principle that as a matter of law a higher charge may be made for a two line than for a one line haul. The reasonableness of a higher charge for the former than for the latter is a question of fact, and whether or not it shall be allowed in a particular case depends

solely upon a showing of increased cost or some other fact or circumstances which would warrant a higher charge. And even if a two line haul is more expensive, the additional expense, if slight, is not necessarily to be reflected in the rate adjustment. Richmond County Coal Merchants Asso. v. B. & O. R. R. 101 I. C. C. 154, 159.

(e) For many years prior to 1918 the Commission regarded 5 mills per ton mile as approaching the minimum limit of revenue for carload freight traffic. Thompson Weinman & Co. v. Southern Ry. 102 I. C. C. 247, 248.

§60½. Use of Commodity.

See Classification §10.

(a) Although rates may not be based upon use, use is a factor which may be considered in determining the proper description of a commodity. Crushed Stone from Maryland and Pennsylvania, 89 I. C. C. 681, 684.

(b) Value is undoubtedly an element which should be considered in the fixing of rates. It is often a most important element, but plainly can not be made an arbitrary standard independent of all other considerations. Rates and charges on grain and grain products, 91 I. C. C. 105, 145.

ALL OTHER CITATIONS

Van Dyke Smelting & Refining Works v. P. R. R. Co., 88 I. C. C. 743.

§61. Value of Commodity.

See Supra §31; Advanced Rates §18 (4), §18 (5); Classification §9, §10, §11, §17; Discrimination §5; Reasonableness of Rates §30; Released Rates.

(a) Complainant attacked combination class and commodity rates charged on 46 cars of wet wood pulp from International Falls, Minn., to destinations in central territory between Nov. 17, 1917 and Jan. 23, 1919 as unreasonable. No through rates were in effect charged at a combination rate made either over Chicago, Ill., or Manitowac, Wis., and consisted of commodity rates to those points plus 90% of sixth class rates beyond. In fall of 1917 complainants requested the carriers to establish joint ternational Falls. Commodity rates were established on August 29, 1919 to most of the destinations here considered. These joint commodity rates were made 6.5c higher than rates contemporaneously in effect to the same destinations from the Fox River district in Wisconsin. Complainant made no effort to prove that the earnings under the rates attacked were unreasonable. Although the Commission has condemned rates on raw materials higher than on the products manufactured therefrom, it does not necessarily follow from a showing that rates on wood pulp are higher than those on certain kinds of paper that the former rates are unreasonable in and of themselves. Kraft pulp admittedly is a greater value than ordinary wood pulp. HELD, rates attacked not unreasonable, complaint dismissed. Minnesota & Ontario Paper Co. v. Director General, 93 I. C. C. 105.

(b) The growth of an industry and the increase in value of a commodity which it produces do not necessarily warrant an increase in the rates for that commodity, particularly if the percentage increase in volume of movement keeps pace with the percentage increase in value. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183, 207.

(c) Wool is a commodity of high value and can bear a higher rate than many commodities. Wool Rates Investigation, 1923, 91 I. C. C. 235, 263.

(ca) Value of commodity transported is an element in rate making aside from risk of loss or damage, because it serves to measure value of service rendered shipper. Released Rates on Stone in Southeast, 93 I. C. C. 90, 94.

(d) In establishing reasonable rates value of commodity to be rated must be considered. Jackson Traffic Bureau v. B. & O., 93 I. C. C. 342, 343.

(e) Haydite is a manufactured article not to be classed with sand and gravel for rate-making purposes in either character, value, or use, being of considerably higher value than sand and gravel and with decided advantages over these commodities in certain lines of construction. It should take a higher rate than sand and gravel. Haydite Co. v. A., T. & S. F., 96 I. C. C. 312, 315, 316.

(f) Artificial silk is a high-grade article and the freight charges bear a small ratio to its value. Viscose Co. v.

(g) It is impractical to grade furniture rates from a given point according to value. Furniture from Southern Points, 100 I. C. C. 127, 133.

(h) Ore of low value is usually produced in the course of mine development and the possibility of marketing it at a profit may, in some instances, be determinative of ability to develop. It may therefore be that the rates on the lower values need not in all instances be fully compensatory, if the average rate on the total movement yields a proper return. Mason Valley Mines Co. v. W. P. R. R. Co., 100 I. C. C. 180, 193.

(i) Upon further hearing original report, 80 I. C. C. 335, reversed, and rates on rig irons from Iola, Kans., to Tulsa, Okla., found not unreasonable. The present record does not substantiate the original finding that "there is a regular and substantial movement" there was little or no movement. Bradford Rig & Reel Co. v. Director General, 100 I. C. C. 261, 264.

(j) Rates on clothing, n. o. s., applied on l. c. l. shipments of overalls from Cincinnati, Ohio, to Pacific coast terminals and certain other western territory, found applicable since overalls were not of a value entitling them to the application of the commodity rates on overalls. Applicable rates found unreasonable to extent they exceeded lower contemporaneous rates on clothing restricted as to value. Reparation awarded. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471.

(k) A great volume of traffic moves between official and southern territories. Railroad lines in States near the border have the benefit not only of such traffic as has its origin or destination within their boundaries but also the overhead traffic moving to or from points farther south. It is a reasonable assumption, which evidence here tends to confirm, that traffic densities in these border States are on the whole higher than in more southerly States. Southern Class Rate Investigation, 100 I. C. C. 513, 616, 617.

(l) The value of a commodity is a matter which may properly receive consideration in fixing the rates thereon. Dixon Crucible Co. v. P. R. R., 101 I. C. C. 415, 417.

(m) Tariff carried rates on newsprint and wrapping paper based on value, together with higher rates on same commodities without reference to value. Shipper made no reference to value in billing. FOUND: Higher rates charged found legally assessed, and, following 100 I. C. C. 471, the rates graded according to value were not released rates but actual-value rates, and the restrictions in connection therewith were not void. San Antonio Paper Co. v. Director General, 102 I. C. C. 243.

(n) Newsprint paper is a comparatively low-grade commodity, is desirable traffic for carriers, loads about 26 tons to car, and moves regularly and in substantial volume throughout year. Worthham-Carter Publishing Co. v. Director General, 102 I. C. C. 729, 743.

ALL OTHER CITATIONS

Armour & Co. v. Director General, as Agent, 88 I. C. C. 569.

§62. Value of Service.

See Supra §45; Advanced Rates §6 (6); Reasonableness of Rates §39.

(a) In considering the reasonableness of rates the economic condition of an industry may be relevant as it bears on the value of the service to the industry, and as it may permanently or for a long period of time affect the ability of that industry to pay the rates assessed, but taken by itself it can not be accepted as controlling. Rates and charges on grain and grain products, 91 I. C. C. 105, 143.

(b) The value of through service to the shipper is the same whether such service is rendered entirely by one express company or jointly, viz, by an express company and a rail carrier or by two rail carriers, although the two classes of service are not strictly comparable from a transportation standpoint. Kirschbraun & Sons, Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 35.

(c) Contention that transportation charges constitute an undue proportion of market value of deciduous fruits and comparison made with relationship of such charges to average market price on livestock and grain. FOUND: Average hauls of livestock and grain are very much less than of traffic under consideration and no refrigeration is required, It is, therefore, natural that relationship of total charges to market price should be higher on extremely long-haul traffic

moving under refrigeration. Calif. Growers' & Shippers' Protective League v. S. P. Co., 100 I. C. C. 79, 90, 91.

(d) In fixing maximum reasonable rates, value of service is one of the recognized factors which the commission may properly take into consideration. In the case of class rates, value of service is chiefly of importance in determining the classification ratings. Southern Class Rate Investigation, 100 I. C. C. 513, 611.

(e) It is not necessary to show that rates are prohibitive in order to prove unreasonableness. Cheese from Wisconsin, 101 I. C. C. 744, 749.

§63. Volume of Traffic.

See Advanced Rates §5 (1½), §18 (3); Classification §4, §5; Reasonableness of Rates §40.

(a) The Commission has never favored rates per trainload. Kingan & Co. v. Director General, as Agent, 89 I. C. C. 550, 553.

(b) It probably is true that higher rates in one territory than those in another serve to place the shippers located in such higher rated territory at some disadvantage in competition with shippers of like commodities at points in the lower rated territory, but transportation conditions must be given consideration in fixing rates, and commercial conditions alone can not properly be held to justify the same rates in territories of light population and density of traffic as in territories where more favorable conditions exist. It may also be remarked that to make density of traffic alone a controlling factor in fixing the level of rates might lead to lower rates in territories of light population and local traffic, than where the amount of traffic and population received or delivered per mile of line is materially greater. In fixing rates many factories in addition to financial condition of the carriers and traffic density must be given consideration. Important weight should be given to the general conditions in the territory traversed. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183, 230.

(cd) Flour is a prime necessity that moves in volume everywhere, and every consideration dictates that flour should move at comparatively low rates in all sections. Cream of Wheat Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 45, 48.

(e) Higher unit cost of transportation and generally higher level of rates on all commodities in western territory as compared with c. f. a. territory is due to comparative traffic density of the two territories. Rates and Charges on Grain and Products, 91 I. C. C. 105, 131.

(fg) The history of railway construction illustrates that prospective tonnage depending for its development upon transportation facilities, rather than tonnage immediately in view, has been the main justification for railway construction. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(h) It is not the traffic in one commodity, but the aggregate of all traffic within a territory, which determines traffic density. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208, 212.

(i) Transportation conditions must be given consideration in establishing rates, and commercial conditions alone cannot properly be held to justify the same rates in territories of light population and traffic density as in territories where more favorable conditions exist. On the other hand, to make traffic density alone a controlling factor might lead to lower rates in territories of light population and local traffic than in territories where the population and amount of traffic received or delivered per mile of line is materially greater. Many factors in addition to financial condition of carriers and traffic density must be given consideration in fixing rates, important weight being given to general conditions in territory traversed. Oklahoma Corp. Commission v. A. & S. Ry. Co. 98 I. C. C. 183, 230, 231.

(j) Levels of rates in Illinois and certain portions of western trunk-line territory are as a rule somewhat lower than in the Southwest, and particularly on short-haul traffic, the differences being justified by varying degrees of traffic density; but, where the traffic density of all Class I carriers is comparatively heavy and the hauls are as long as those to these destinations, there is ample ground for disregarding such differences in rate levels. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 235.

(k) Contention that the volume of a particular traffic moving northound as compared with that moving southbound between same points warrants a

difference in the southbound and northbound rates, not sustained. It is no answer to a prayer for a reasonable rate adjustment that the volume of traffic affected is light, and undue prejudice which causes injury to a smaller volume of traffic is just as unlawful as one which causes injury to a large volume. Duluth Chamber of Commerce v. C., St. P., M. & O. Ry. Co., 98 I. C. C. 352, 356.

(l) Charges resulting from rates on sheep and lambs, in double-deck cars, from Montreal, Canada, to New York, N. Y., and Somerville, Mass., and minima provided in connection therewith, found not unreasonable, based, among other things, upon the fact that this traffic between the points involved is very light in volume. Swift & Co. v. G. T. Ry Co. of Canada, 98 I. C. C. 649.

(m) Traffic density alone is by no means a reliable index to the net returns and revenue requirements of the carriers in this territory, and while the net earnings of the principal cariers operating in the higher-rated zones have in recent years generally fallen below 5.75 per cent this is also true of the central carriers as a whole. Michigan Traffic League v. A. A. R. R. Co., 98 I. C. C. 660, 666.

(n) While the commission has said that a large volume of movement is not necessary in order to justify a finding of undue prejudice, nevertheless in the case here involved there is practicallly no evidence of actual or potential competition on traffic between the points involved. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 730.

(o) Volume of movement is an important and not infrequently a determinative element in the establishment of a commodity rate, and when a request for such a rate from a particular point is predicted upon the existence of a commodity rate from another point the volume of movement from both points should be made known. Greiss Pfleger Tanning Co. v. E. J. & E. Ry. 104 I. C. C. 464, 466.

(p) While volume of movement is an important element to be considered in arriving at a reasonable rate, an excessive rate cannot be justified merely on account of the fact that movements thereunder are infrequent. Orford Soap C. v B. & M. R. R. 107 I. C. C. 338, 339.

(q) It is a safe conclusion from the evidence here that traffic densities and earnings combined in the southern territory are, on the whole, somewhat more favorable in the border States than in the more southerly States and that they are, on the whole, least favorable in Florida. Southern Class Rate Investigation, 100 I. C. C. 513, 622.

(r) An isolated movement during a comparatively short period is not a proper basis for requiring the establishment of rates for the future or for an award of reparation, and inasmuch as shippers are entitled to reasonable rates, the fact of shipments having been isolated is not the sole determinative factor. See 78 I. C. C. 473; 92 I. C. C. 453. Municipal Elec. & Water Depts. v. C. C. C. & St. L., 101 I. C. C. 618, 619.

(s) While volume of movement is an important element to be considered in arriving at a reasonable rate, an excessive rate can not be justified merely on account of the fact that movements thereunder are infrequent. Hilb & Bauer v. N. Y. C., 101 I. C. C. 621, 622.

(t) The Commission upheld the right of complainant to have the reasonableness of the rate in issue passed upon, although there was no existing movement thereunder. Southern Agricultural Chemical Corp. v. C. C. C. & St. L. Ry. 109 I. C. C. 227, 229.

(u) While volume of movement is an important element to be considered in arriving at a reasonable rate, the Commission has repeatedly said that an excessive rate can not be justified merely on account of the fact that movements thereunder are infrequent. Barr & Dougherty v. G. N. Ry. 109 I. C. C. 487, 489.

(v) Volume of movement is an important and not infrequently a determinative element in the establishment of a commodity rate. Chicago Heights Mfrs Asso. v. B. & O. R. R. 109 I. C. C. 545, 547.

ALL OTHER CITATIONS

South Dakota R. R. Commissioners v. C. & N. W. Ry. Co., 85 I. C. C. 217; North Carolina Pine Association v. A. C. L. R. R. Co., 85 I. C. C. 270.

§64. Voluntary or Subsequent Reduction of Rate.

See Absorption of Charges §2; Advanced Rates §8 (2); Class Rates §2 (3c); Commodity Rates §4; Reasonableness of Rates §32½; Reparation §12, §16.

(a) Undoubtedly the fact that a rate has been voluntarily maintained by a carrier for a period of years is evidence tending to show that it is reasonably remunerative, and when such a rate is sought to be increased the burden on the carrier would seem to require stronger proof of justification than in a case where the proposed increase relates to a rate that has been in effect but a short time. Boots and shoes from New York points, 91 I. C. C. 591, 596.

(b) Complainant attacked commodity rates charged on petroleum and its products from Bayonne, N. J., to New York harbor points between Jan. 1921 and April 1922, as unreasonable. Charged on bulk oil 6.5c prior to Jan. 31, 1922 and 5c from that date to April 9, 1922. A rate of 4c was established April 10, 1922. Charged on package oil 9c, subsequently reduced to 7c. HELD, rate attacked on bulk oil of 6.5c unreasonable to extent it exceeded 5.5c, rate of 9c on package oil unreasonable to extent it exceeded 7c, reparation awarded. Tide Water Oil Co. v. E. J. R. R. & T. Co., 91 I. C. C. 725.

(c) The fact that the rate was voluntarily reduced does not of itself prove that the rate previously in effect was unreasonable. Macbeth Evans Glass Co. v. B. & O. R. R., 91 I. C. C. 758, 760.

(d) The Commission has frequently found that the existence of a lower rate to nearby points and the subsequent establishment of that rate to the point under consideration do not, of themselves, warrant a condemnation of the rate charged. Diamond Match Company v. Director General, 92 I. C. C. 373, 374.

(e) Neither the assurance that a rate will be reduced nor its actual reduction is proof that the applicable rate was unreasonable. Bush v. Director General, 95 I. C. C. 661, 663.

(f) The voluntary reduction of a rate does not of itself establish that the previous higher rate was unreasonable. Moore Lawless Grain Co. v. M. P. R. R. 100 I. C. C. 303, 306.

(g) The existence of a lower rate to nearby points and the subsequent establishment of that rate to Cleveland do not of themselves establish the unreasonableness of the rate charged. Glidden Co. v. E. R. R., 100 I. C. C. 331, 332.

(h) The subsequent establishment of a rate is insufficient to sustain a finding of unreasonableness. Armstrong Cork & Insulation Co. v. Reading R. R., 100 I. C. C. 468, 470.

(i) Voluntary reductions do not prove that rates are unreasonable. Memphis Freight Bureau v. C. & E. I. Ry., 101 I. C. C. 26, 27.

(j) The subsequent reduction in the rate charged does not necessarily demonstrate unreasonableness. Sheffield Iron Corp. v. Director General, 101 I. C. C. 31, 32.

(k) The subsequent establishment of a lower charge can not be taken as an admission that the previous charge was unreasonable. Consolidated Lumber Co. v. Director General, 101 I. C. C. 284, 286.

(l) Relatively low rates move more traffic than relatively high rates, and there is ordinarily no point in voluntary reducing a freight rate except for purpose of attracting traffic. Utah State Automobile Asso. v. A. T. & S. F. 92 I. C. C. 376, 385.

(m) Rates on cucumbers in brine, in bulk in barrels, and in tank cars, from Blytheville, Ark., to Omaha found unreasonable to extent they exceeded lower rate subsequently established which lower rate was the same as that applicable from Colorado common points to Missouri River points. Reasonable rate for future prescribed and reparation awarded. Haarmann Vinegar & Pickle Co. v. C. B. & Q., 93 I. C. C. 251.

(n) Rates charged on live poultry from points west of the Mississippi River and south of the Ohio River to eastern destinations found not unreasonable. Voluntary reduction by carriers of rates on agricultural products was authorized by special permission order, but eastern carriers did not avail themselves of the permission with respect to live poultry rates. Resulting disruption of former rate relationship not a sufficient basis for finding of unreasonableness. Risser v. A., T. & S. F. Ry. Co., 96 I. C. C. 513.

(o) Upon contention that rates, during the period defendants were not permitted to establish reduced rates, were

unreasonable to the extent they exceeded the subsequently established reduced rates, HELD: Reversal in 69 I. C. C. 345 of finding in 63 I. C. C. 74, as to propriety of proposed reduction was not tantamount to a finding that previous rate was unreasonable. What the commission may permit carriers to do and what it may require them to do are entirely different matters. Union Sulphur Co. v. T. & N. O. R. R. Co., 98 I. C. C. 76, 81.

(p) Rate on fire brick from Vandalia, Mo., to Pearson, Ark., between February 3 and July 24, 1923, found unreasonable to extent it exceeded lower rate established on latter date from and to same points and from Vandalia to El Dorado, Ark., within the switching limits of which Pearson is located. Reparation awarded. Walsh Fire Clay Products Co. v. C. & A. R. R. Co., 98 I. C. C. 458.

(q) The commission has repeatedly found that the existence of a lower rate over other routes and the subsequent reduction to that basis of the rate over a particular route of movement are not sufficient in themselves to establish the unreasonableness of the previous rate. Mauk Lumber Co. v. Director General 98 I. C. C. 599, 600.

(r) Rates on uncompressed cotton to Galveston, Tex., from Fouke, Womble, Amity, and Gurdon, Ark., following 88 I. C. C. 492, found unreasonable to extent they exceeded lower commodity rate subsequently established in the case of shipments from Fouke and contemporaneous rates from the other points of origin to New Orleans, La. Reparation awarded. Moody Cotton Co. v. Director General 98 I. C. C. 643.

(s) The fact that the rate attacked was voluntarily reduced does not of itself demonstrate unreasonableness and the other evidence of record does not warrant such a finding. Armour Fertilizer Works v. M. L. & T. Ry. 102 I. C. C. 350, 352.

(sa) Rates on paper and paper articles, in mixed carloads from New Orleans to Dallas, found unreasonable to extent they exceeded lower rates subsequently established. An analysis of revenues per car-mile under rates assailed shows such rates to be excessive. Reparation awarded. Palmer & Co. v. H. & T. C. R. R., 102 I. C. C. 372.

(t) The Commission has frequently found that voluntary reductions in rates afford no basis for condemning a previously existing adjustment. Wilson & Co. v. C. & O. Ry. 104 I. C. C. 641, 643.

(u) Voluntary reductions do not prove that rates are unreasonable. Adams & Kelly Co. v. A. T. & S. F. Ry. 109 I. C. C. 241, 244.

(v) It is true that the voluntary reduction of a rate by a carrier is not of itself sufficient to justify an award of reparation on shipments moving prior to the reduction, and the mere fact that a rate under attack appears to be out of line with a few other related rates does not necessarily prove the rate attacked unreasonable. Louisville Cooperage Co. v. L. & N. R. R. 112 I. C. C. 228, 229.

ALL OTHER CITATIONS

Germain Co. v. L. & N. R. R. Co., 85 I. C. C. 449; Crown Willamette Paper Co. v. Director General, as Agent, 85 I. C. C. 657; Gottlieb-Bertsch Co. v. Director General, as Agent, 88 I. C. C. 177.

§64½. Wages.

See Labor Board; Newlands Act; Reasonableness of Rates §40½; Wage Awards.

(a) Amount of wages largely determines cost of railroad operation. Rates and Charges on Grain and Products, 91 I. C. C. 105, 146.

(b) Director general submitted evidence to show that, due primarily to retroactive application to January 1, 1918, of increase in wages of railway employees under General Order No. 27, operating costs were as great during first six months as during second six months of 1918, and contended that no lower basis of rates should be found reasonable on shipments made prior to June 25, 1918, than on shipments made on and after that date. HELD: While operating conditions prior to June 25, 1918, including retroactive application of wage award, are important factors, they are not necessarily controlling in determining reasonableness of rates after January 1 of that year. Macbeth-Evans Glass Co. v. B. & O. R. R. Co., 91 I. C. C. 758, 762.

§65. Weight or Bulk of Shipment.

See Classification §4, §11½, §13 (c); Reasonableness of Rates §41; Weights and Weighing.

(a) Having regard for difference in structure of freight and express classifications the commission can not predicate a condemnation of the freight rate for a light and bulky article like furniture frames solely upon a showing that express rates are lower between many points. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 509.

(b) It is apparent that the boxed apple is the only traffic which can load with reasonable safety to a minimum of 35,000 pounds, the evidence indicating that shipments of soft fruits in bulk or in basket will not load with safety to that minimum. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437, 442.

(c) Heavy loading naturally increases car mile earnings. Canned Goods from Colo., N. M., Tex., and Wyo. 102 I. C. C. 156, 160.

(d) Gross weight comparisons completely ignore differences in value of the articles compared. Differences in value and in value of the services, are important elements in determining rates on finished or manufactured articles in relation to those on the raw material or product from which they are derived. Morrell & Company v. N. Y. C. R. R. 104 I. C. C. 104, 116.

(e) The chief transportation characteristics of tin cans are the light loading, a value of about $1,500 per carload, practically complete freedom from loss and damage claims except in case of wreck, and the regularity of movement in the canning season. Tin Cans from C. F. A. Points to Michigan, Minnesota, and Wisconsin, 100 I. C. C. 208.

(f) Commission has consistently adhered to rule that car loading of a commodity is of importance in determining the rate, absolutely and relatively. North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270, 281.

ALL OTHER CITATIONS

Cotton and Cotton Linters to Louisiana and Texas Ports, 85 I. C. C. 5.

§66. Widespread Rate Adjustment.

See Advanced Rates §5 (2), §5 (7¼), §19 (a); Blanket Rates VIII, §20; Canada (f); Differentials; Discrimination §13; Equalization of Rates §8; Reasonableness of Rates §2 (op), §16, §28; Relative Rates; Reparation §12.

(a) Where it is proposed radically to change within a limited area the system of rates which has been long in effect and generally recognized as essential, the evidence should be convincing of the justification for such a change. It is the commission's duty to consider, among other things, not only such benefits as might be realized by those who urgently request the change, but also what the probable effect would be upon a large body of producers who would not be in a position to avail themselves of the benefits of the change requested. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 59.

(b) A rate structure of long standing should not be hastily condemned. Lake Dock Coal Cases, 89 I. C. C. 170, 201, 202.

(c) Fact that a general readjustment of rates may become necessary as a result of a decision pending in another proceeding before the commission, which may carry with it a further revision of rates considered in instant proceeding, is not sufficient reason for withholding from shippers the relief to which instant proceeding entitles them. Knoxville Traffic Bureau v. S. Ry. Co. 89 I. C. C. 708, 717.

(d) Complainant is entitled to a reasonable rate on its traffic, even though the maintenance of such a rate would lead to other readjustments. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194, 197.

(ef) That a somewhat lower rate than the rate charged was prescribed for the future does not necessarily show that the former rate was unreasonable. Especially is this so where the new rate is part of an extensive readjustment. One of the tests of the reasonableness of a rate is its relation to the whole rate structure of which it is a part. News Corporation v. M. P. R. R., 93 I. C. C. 381, 383.

(g) That the correction of rates that are unreasonable or otherwise unlawful will or may require changes in other rates would not afford justification for continuing a rate adjustment if it were found unreasonable or unduly prejudicial. Peerless White Lime Co. v. C. & E. I. Ry., 95 I. C. C. 260, 266.

(h) If the suspended schedules are proper the Commission can not withhold sanction merely because of the possibility that the readjustment may eventually extend to other commodities, or to the same commodities in other classifications. Classification of canned goods, 98 I. C. C. 166, 174.

(i) Upon complaint attacking rates on cypress lumber and lumber articles from Waycross, Hebardville, and Hopkins, Ga., to southeastern, eastern trunkline, New England, and c. f. a. territories, HELD: As widespread and far-reaching rate readjustment necessitated by decision in North Carolina Pine Asso., 85 I. C. C. 270, will materially affect measure and relationships of a large proportion of rates here attacked, no order will be entered in instant case, but carriers will be permitted to undertake to work out an adjustment which will correct inconsistencies and maladjustments. Hebard Cypress Co. v. A. & R. R. R. Co., 91 I. C. C. 343.

(jk) Proposed revision of rates involving both increases and reductions on lumber and forest products from Baltimore, Philadelphia, Jersey City, New York, and Poughkeepsie to destinations in Pennsylvania, New York, and New Jersey, for purpose of establishing a relationship between rates from the ports on the one hand and from Poughkeepsie on the other, found not justified, except as to the reductions. Proposed revision appears to be primarily an attempt of the New York Central to obtain a share of the traffic from Poughkeepsie by basing rates from that point on its own circuitous mileage through congested and expensive New York terminal district instead of on short-line mileage over the New Haven. Lumber between Points in Trunk Line Territory, 92 I. C. C. 144.

(l) Contention by carriers that establishment of a specific rate on manganese-steel scrap would disrupt entire rate structure on other scrap iron or steel, HELD: A shipper is entitled to a reasonable rate on his traffic, even though maintenance thereof would lead to other readjustments. Arizona Corp. Comm., 87 I. C. C. 271, 274. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194, 195.

(mn) Fact that rates prescribed by commission will result in reductions in other rates, and thus bring about a material loss of revenue to carriers, is not in itself proof that rates prescribed are unreasonably low. Utah State Automobile Asso. v. A., T. & S. F., 92 I. C. C. 376, 383.

(o) Contention that establishment of a basis of rates on canned goods from Wisconsin to Mississippi Valley territory different from that now existing would necessitate a general revision of rates on other commodities moving from and to the same points, which commodities at present enjoy rates made on same basis of the lowest combinations. HELD, the possible effect of commission's findings upon other rates should not deprive complainants of a reasonable basis for the transportation of their particular products. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208, 211.

(p) Considering the rates on lump coal which the commission has prescribed, some readjustment of the rates on nut and slack will become necessary. Nut coal is used for practically the same purposes as lump and it would seem that the rates should be closely related. Colo. & N. Mex. Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C C. 377.

(q) The Commission has repeatedly said that the fact that additional adjustments may be necessary is no ground for denying relief shown by the record as proper. Chicago Fire Brick Co. v. A. & W. Ry. 107 I. C. C. 399, 403.

(r) While the fact that a certain adjustment of rates has been in effect for a great many years should not stand in the way of a just and reasonable readjustment, it is a fact to be given weight in determining what is just and reasonable. In other words the readjustment may properly be tempered somewhat by the need for avoiding too sudden and serious a disturbance in carrier revenues or in commercial conditions, a disturbance which, in the final analysis, would react upon both shippers and carriers, Southern Class Rate Investigation, 100 I. C. C. 513, 671.

(s) Upon investigation by commission on its own motion, all rates on anthracite coal now in force found not excessive, unreasonable, or otherwise unlawful, and a horizontal or percentage reduction of all such rates, to an extent which could be reflected in an appreciable reduction of the retail selling prices of domestic sizes of anthracite, would reduce the income of several of

the carriers of anthracite to an extent which would impair their credit and, consequently, their ability to perform sufficient and satisfactory transportation service for the public. However, in specific instances rates on prepared pea, and smaller sizes found unreasonable and reductions ordered. Anthracite Coal Investigation 101 I. C. C. 363, 373.

(t) Upon contention by carriers that a reduction in rates would result in disrupting entire adjustment, HELD: Fact that additional readjustments may be necessary is not ground for denying relief shown by record to be proper. Northeast Miss. Traffic Bureau v. M. & O., 101 I. C. C. 451, 453.

(ta) Proposal to readjust rates on petroleum and products from St. Louis and Wood River district points to southern destinations over or in connection with B. & O. or C., C,. C. & St. L., comprising some increases but more and greater reductions, found justified. Proposed schedules will result in rates same as those now in effect over routes other than B. & O. and C., C., C. & St. L. Petroleum to Southern Points, 102 I. C. C. 756.

(u) The fact that additional readjustments may be necessary is no ground for denying relief shown by the record as proper. French Battery & Carbon Co. v. C. & N. W. Ry., 112 I. C. C. 128, 131.

(v) That the correction of rates that are unreasonable or otherwise unlawful will or may require changes in other rates would not afford justification for continuing an unlawful rate adjustment. Fifth & Ninth Districts v. C. R. I. & P. Ry., 112 I. C. C. 139, 146.

ALL OTHER CITATIONS

Decker & Sons v. Director General, as Agent, 85 I. C. C. 389; Indiana Public Service Commission v. A. T. & S. F. Ry. Co., 88 I. C. C. 720.

III. JUDICIAL NOTICE.

§67. In General.

See Loss and Damage §16; Procedure Before Commission §16.

(a) Interstate Commerce Commission, rule No. 13, requiring the Commission to take notice of items in tariffs and annual or other periodical reports of carriers properly on file, does not require the Commission to take judicial notice of all the facts contained in such documents, nor relieve Commission from introducing by specific reference such parts of the reports as it wishes to treat as evidence, but merely makes it necessary for the parties to serve copies. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(b) Papers in the files of the Interstate Commerce Commission are not always evidence in a case. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

V. STARE DECISIS.

§69. In General.

See Cars and Car Supply §35; Previous Decisions of Commission; Procedure Before Commission §17; Reasonableness of Rates §26½; Reparation §13.

(a) The Commission is not governed by the doctrine of stare decisis. Rates and charges on grain and grain products. 91 I. C. C. 105, 131.

(b) Commission is not governed in its decisions by doctrine of stare decisis. Unless previous decisions were found upon error or upon conditions which have since undergone material change, commission may confine itself to new circumstances which have arisen and to new evidence presented. Rates and Charges on Grain and Products, 91 I. C. C. 105, 131, 132.

(c) When a given situation has been fully considered and deliberately passed upon, that decision ought not to be disregarded and the question kept open indefinitely unless good cause is shown for the adoption of a different course. Pacific Mutual Door Co. v. A. A. R. R. 101 I. C. C. 633, 634.

(d) Upon contention that commission is not bound by former decision and that present case should be decided on its merits, HELD: When a given situation has been fully considered and deliberately passed upon, that decision should not be disregarded and the question kept open indefinitely unless good cause is shown for adoption of a different course. Pacific Mutual Door Co. v. A. A. R. R., 101 I. C. C. 633.

EXCLUSIVE CONTRACTS

See Special Contracts; Stock Yard Companies.

EXPEDITED SERVICE

See Class Rates §2 (6a); Distance Rates §3 (4q) (4r); Evidence §12 (1) (3o); Live Stock Shipments; Special Rates and Services.

(a) Charges assessed on milk and cream in 10-gallon cans, for single-line hauls in baggage service from points in Iowa, to Omaha, Nebr., via circuitous routes, found not unreasonable, but new and more direct interline routes and reasonable maximum rates constructed upon basis of specific joint-line distance scales, with the addition of drayage charges where drayage is necessary in order to transfer shipments between separate passenger depots of connecting rail carriers, prescribed for future. Kirschbraun & Sons, Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 40.

(b) Expedited service is an important consideration at times in the sale of cement and stone. Switching at Hagerstown, 102 I. C. C. 14, 18.

ALL OTHER CITATIONS

Beatrice Creamery Co. v. L. & N. R. R., Co., 85 I. C. C. 377.

EXPLOSIVES AND DANGEROUS ARTICLES

See Class Rates §2 (6f); Demurrage §2½.

(a) Practices looking toward the safe transportation of explosives and other dangerous articles should not be discouraged by rate penalties. Western Petroleum Refiners Asso. v. C. R. I. & P. Ry. Co., 89 I. C. C. 241, 243.

(b) Rate on uncompressed cotton, damaged by fire and water, from Pine Bluff, Ark., to Galveston, Tex., found not unreasonable as compared with rate on cotton to be compressed in transit. Because of the danger of spontaneous combustion the shipment could not be tiered and upon request of consignor it was handled in a manifest train. The evidence is general to the effect that if uncompressed cotton were given the same rates to Galveston as those now in effect on cotton to be compressed in transit there would be a substantial movement of uncompressed cotton. Complainants, however, do not state that they have any real need for a rate from any point on uncompressed cotton, unless they desire to ship cotton which could not be compressed in transit because of damage by fire and water. M'Fadden & Bro.'s Agency v. St. L. S. W., 96 I. C. C. 267.

(c) Refusal of defendant carrier, under appropriate tariff provisions, to accept shipments of rags (except in compressed covered bales) and waste paper at Piers 41 and 68, North River, Manhattan Borough, New York, N. Y., because of the fire hazard, endangering other and more valuable property, and even life itself, found not unreasonable, but unreasonable as to Pier 13 North River, and Pier 26, East River, to extent the restrictions preclude receipt at and shipment from such piers of carload shipments of dry rags and dry waste paper so baled as to prevent loss of pieces (sifting), from the bales, and reasonably free from loose edges, strips, pieces, fibers, or other parts protruding from the bales or surrounding them. National Asso. Waste Material Dealers v. D., L. & W. R. R. Co., 98 I. C. C. 606.

(d) The prohibition of the regulations against the transportation of wet or oily rags or wet paper, and the restrictions upon shipments which are probable sources of fires, are in effect mandatory requirements that only shipments free from such objectionable features shall be accepted by carriers for transportation. The desirability of segregating commodities which involve an exceptional fire hazard is apparent, especially at congested points. Defendant has a right and duty in which cases to prescribe such reasonable regulations as will protect it and the general public. National Asso. Waste Material Dealers v. D., L. & W. R. R. Co., 98 I. C. C. 606, 609.

(e) The protection of the public against fire requires that the receipt as freight of rags and waste paper should be limited to dry materials, so baled as to prevent loss of pieces (siftings) from the bales, and reasonably free from loose edges, strips, pieces, fibres, or other parts protruding from the bales or surrounding them. National Asso. Waste Material Dealers v. D. L. & W. R. R. Co., 98 I. C. C. 606, 612.

(f) Switching charges assessed during Federal control on carload movements of sulphuric acid, sulphur, salt, and fuel oil between various divisions of complainant's plant at Newark, N. J., found applicable and not unreason-

able, considering, among other things, the dangerous character of the commodity of which most of the shipments consisted. Reparation awarded for certain overcharges. Butterworth-Judson Corp. v. Director General, 100 I. C. C. 337.

See Control and Regulation.

§2. Establishment and Construction.

(a) Export shipments originally moved on domestic bills of lading, sailing date and space on steamer having been previously reserved. Domestic bills were exchanged for export bills, latter bearing notation "order notify" consignees at foreign ports. Due to refusal of shipments by vessel on which space reserved they were stored and subsequently exported on other vessels. HELD, following U. S. Steel Products Co., 88 I. C. C. 57, demurrage and storage charges assessed, but not paid, found illegal. Applicable tariff provided in such cases for giving of advance notice to notify party at port of exit that carrier is ready to make delivery, but there were no parties at port to be notified and no demurrage or storage could therefore accrue. American Steel Export Co. v. Director General, 93 I. C. C. 235.

(b) In 96 I. C. C. 195, the Commission found the relationship of export rates on wheat and flour from points in central, north central and southern Oklahoma to Galveston, Tex., New Orleans, La., and other Gulf ports, was not unduly prejudicial or unjustly discriminatory, and dismissed the complaint. In supplemental report in 101 I. C. C. 116 the Commission prescribed for the future a distance scale of commodity rates for application on domestic traffic from Oklahoma to Texas, under which wheat and flour are again placed on a rate parity. Export rates were not there in issue, but the Commission expressed the anticipation that realignment would follow in instances where the domestic rates prescribed were lower than the corresponding export rates. HELD, complaint dismissed, but if the carriers should fail to so re-align their export rates on wheat and flour from affected territory complainant may bring that situation to the attention of the Commission. Oklahoma Millers Asso. v. A. & V. Ry. 102 I. C. C. 1.

(c) Complainant attacked commodity rates charged on two cars of turpentine, in cases, shipped May 2 and 4, 1918 from New Orleans, La., to San Francisco, Calif., for export to Australia as unreasonable and unjustly discriminatory. Shipments were forwarded from New Orleans on domestic bills of lading bearing the notation "for export" and indicating Sydney as the final destination. At the time of movement the initial lines would accept traffic for export only upon presentation of permits issued by the terminal lines, a prerequisite to the issuance of such permits being the reservation of vessel space for the movement from the ports. These shipments were covered by the necessary permits. The tariff in effect at that time published an export rate of 55c under specified conditions. It was provided that export rates to San Francisco would apply only on freight originally

consigned through with rail, port, and ocean charges fully prepaid or guaranteed from point of origin to a specified destination beyond the port of exit, such destination being shown in the bill of lading at the time of shipment and for which throught export bills of lading was issued prior to arrival of freight at port of exit. For some reason complainant failed to exchange the original bill of lading for an export rail bill of lading, and it is not entirely clear that the ocean charges were fully prepaid or guaranteed. The domestic rate of $1.35 was assessed. The shipments were handled in the same manner as other export shipments and moved from San Francisco on the steamer in which space had been originally reserved. Complainant does not attack the reasonableness of the domestic rate and the record does not warrant that the rule relating to export shipments was unreasonable. HELD, rates attacked applicable and not unreasonable or otherwise unlawful, complaint dismissed. Dill Crossett, Inc. v. Director General 104 I. C. C. 48.

III. DISCRIMINATION.

See Discrimination.

§4. In General.

(a) Complainant attacked export rates charged on self propelling freight vehicles, carloads from Wichita Falls, Tex., and Oklahoma City, Okla., to Galveston, Tex., and New Orleans, La., for export, as unreasonable. In 88 I. C. C. 152, rates attacked found not unreasonable but unduly prejudicial to extent they exceeded the rates from Chicago and St. Louis to Galveston and New Orleans, for export, in so far as these defendants participate in the latter rates. HELD, upon rehearing, original report affirmed. Wichita Motors Co. v. A. & V. Ry., 93 I. C. C. 635.

(b) Complainant attacked present relationship between rates on wheat and flour from points in central, north central, and southern Oklahoma to Galveston, Tex., New Orleans, La., and other Gulf ports, for export, as compared with the relationship between rates on wheat and on flour for export from points in the remainder of Oklahoma and in other southwestern and western states, as unjustly discriminatory and unduly prejudicial; that the maintenance of higher rates on export wheat than on export flour from points within the affected territory to the Gulf ports is unjustly discriminatory and unduly prejudicial. For many years the export rates to Gulf ports were the same on wheat as on flour both from affected territory and from outside territory, and were lower than the domestic rates on wheat and on flour to the same destinations. In 69 I. C. C. 207, the Commission found prevailing from producing points in Oklahoma and Texas to destinations in Texas domestic rates higher on flour than on wheat. On shipments from Oklahoma the Commission reduced that spread in prescribing a maxima, distance scales of domestic commodity rates, lower on wheat than on flour, from Oklahoma to Texas. Effective August 5, 1922 the domestic rates on wheat from affected territory to Galveston became lower than the export rates. Shortly thereafter, August 23, 1922, most of the carriers voluntarily reduced to the level of the new domestic rates their export rates on wheat from the affected territory to Galveston and other Gulf ports. In most instances the reduced domestic rates on flour were not lower than the then existing export rates on the same commodity, and no reductions were made in the latter. Thus the long existing parity in export rates on wheat and flour to Gulf ports was disrupted in so far as the affected territory is concerned, but was still maintained from outside territory, and this complaint followed a few months later. Complainant has failed to show a similarity of transportation conditions as between export flour and export wheat which would sustain its contention that its competitors in foreign countries are unduly preferred by the maintenance of export rates on flour from the affected territory higher than those on wheat from the same points. The relationship of export rates on flour from the affected territory to those from the outside territory is not in issue. HELD, rates attacked not unduly prejudicial or unjustly discriminatory, complaint dismissed. Oklahoma Millers Asso. v. A. & V. Ry., 96 I. C. C. 195.

(c) For a number of years the export rates on cotton from Arkansas, Louisiana, Oklahoma and Texas to the Gulf ports have been higher than the domestic

rates, the difference representing the approximate average cost of transferring cotton from the back from the water warehouses or compressed at the ports. Connecting in 1921 disturbing influences were injected into the situation through the placing of high density compressed on the piers of the Galveston Wharf Company at Galveston, followed by the erection of large warehouses with compressed on the water front at Houston. The compression which takes place at the ports is high density compression. The ocean rates on cotton compressed t o high density are lower than on standard compressed cotton by an amount slightly greater than the cost of the high density compression. The tariffs vary somewhat as to the form in which the rates applicable to export shipments are published, but in one way or another the carriers hold themselves out to effect ship side deliveries under those rates. Although a rate published as applicable to export shipments should be applied to such shipments in preference to an interstate domestic rate if the service which the carrier holds itself out to perform under the export rate is actually rendered, where, as here, that completed service is not rendered, but rather a delivery of the character would be effected on a domestic shipment is made, the Commission is of the opinion that it is not illegal to apply the interstate domestic rate even though the shipment at some time subsequent to delivery may be exported. Therefore, except where shippers avail themselves of transit provisions at the ports, under which the carriers are obligated to place the cotton at ship side, the collection of the interstate domestic cotton rates delivered to the waterfront warehouses or compresses at Houston and Galveston is not illegal. Under the present adjustment the uptown facilities can secure what in substance is a second merchandising or compression in transit service free of charge. This is secured through the shipper paying the domestic rates and then having his shipments drayed from the warehouse to ship side without declaring them for export. Shipments stopped at other points for second merchandising or compressing must pay a transfer charge and the Commission sees no reason why an exception should be made in the case of the uptown warehouses or compresses at the ports. Cotton passing through these uptown facilities is, however, entitled to one free transit privilege. HELD, present adjustment unduly prejudicial to uptown and interior warehouses and rates should be so adjusted that one rate will apply for all deliveries within the usual switching limits of the ports, except that the export rates should be made higher than the domestic rates by an amount equal to the wharfage charge, reparation denied. Rates on cotton to Gulf ports, 100 I. C. C. 159.

(d) Complainant alleged if it is required to pay the additional charges which defendants are endeavoring to collect, on certain shipments of wheat from Minneapolis, Minn., to Kansas City, thence to Galveston, Tex., for exonable charges as well as undue preference of its competitors at New Orleans, La., to which point lower rates applied from Minneapolis. Shipments moved between June 14 and Dec. 8, 1921, and covered only such shipments as originated beyond Minneapolis. Joint through rates did not apply from the original points of origin to Galveston. Wheat moved from Minneapolis to Kansas City via the Milwaukee and charged local rate of 27.5c. Tariffs of the K. C. S., permitted reshipment from Kansas City at balance of the through rate applicable from points of origin when the shipments originated. All proportional rates on grain from Minneapolis to Galveston and other Gulf ports for export were canceled on June 25, 1918 by the director general. On Dec. 31, 1919 a proportional rate of 35c on grain from Minneapolis to New Orleans and Mobile was established. This rate was reduced to 34c on Feb. 28, 1920 and made applicable, except in connection with the Milwaukee, from Minneapolis to Galveston when for export, with the privilege of reshipment from Kansas City at the balance of the rate applying from the points of origin. It was in effect when the shipments here involved originated. Although the Milwaukee tariff, until Nov. 26, 1920 carried specific routing over its line to Kansas City and the K. C. S., and other lines beyond, to Galveston, the rate covering such movement had previously been canceled. The Milwaukee did not re-establish a proportional rate from Minneapolis to Galveston until Dec. 30, 1920. Present proportional rate to all three points in 35.5c. HELD, applicable rate unreasonable to extent it

exceeded 34c, undercharge waived, complaint dismissed. Fuller Grain Co. v. B. S. L. & W. Ry., 101 I. C. C. 82.

(e) Rate on wood box material from Crystal Springs, Miss., to Key West, Fla., for export, found not unreasonable, but unduly prejudicial to extent it exceeded the rate contemporaneously applicable from Memphis, New Orleans, Vicksburg, and Natchez, competing manufacturing points. Jackson Traffic Bureau v. A. & V., 95 I. C. C. 251.

(f) Maintenance of higher rates on export wheat than on export flour from certain points in Oklahoma to Gulf ports found not unjustly discriminatory or unduly prejudicial. Complainant failed to show similarity of transportation conditions as between export flour and export wheat which would sustain its contention that its competitors in foreign countries are unduly preferred. Oklahoma Millers' Asso. v. A. & V., 96 I. C. C. 195, 197, 198.

(g) Export and coastwise rates on lumber from certain points in Texas and Louisiana on Kansas City Southern system lines and Gulf, Colorado & Santa Fe Ry., to Orange, Tex., also domestic rates from points in Louisiana on Kansas City Southern to Orange, found unduly prejudicial to Orange and unduly preferential of Beaumont, Tex., to extent they exceed, by more than a differential of 2 cents, contemporaneous rates on like traffic to Beaumont; and from all other points on lines of these carriers export and coastwise rates on lumber to Orange from points in Texas, and export, coastwise, and domestic rates to Orange from points in Louisiana found unduly prejudicial to Orange and unduly preferential of Beaumont to extent they exceed contemporaneous rates on like traffic to Beaumont. Undue prejudice ordered removed and reasonable and nonprejudicial rates prescribed for future. Orange Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 101.

(h) Complainant attacked the reasonableness of the rates on rough rice in carloads from Arkansas producing points to New Orleans, and the propriety of the rates on clean rice from Arkansas milling points to New Orleans and Texas ports for export, the claim being made that the existing rates on clean rice from Arkansas unduly prefer the Arkansas millers to the undue prejudice and disadvantage of rice millers at New Orleans. Rice, after being threshed and while still in the hull, is known as rough rice, and in this state it is sold to the rice mills. There are mills located at Carlisle, Dewitt Indiana, Lonoke, Stuttgart, and Wheatley in the Arkansas producing district, at Memphis, at New Orleans and other points in Louisiana and at points in Texas. The Arkansas mills and the mill at Memphis draw their supply of rough rice practically entirely from the Arkansas district. The territory from which the New Orleans mills obtain their supply is much more extensive, and includes the Louisiana and Texas producing districts as well as the Arkansas district. Since July 10, 1922 a rate of 33.5c has been in effect from virtually all of the Arkansas points to New Orleans, following 63 I. C. C. 18. Owing to the long distance from all of the Arkansas points to New Orleans, and the extent of the mileage groups, the rates from practically all of the producing points are the same, whether measured by the shortest possible distance or the distance via not exceeding three lines. In most instances the resulting rate is 29.5 if a 3c reduction be made for the river crossing; when not so made the rates are generally 32.5c which is only 1c less than the rate attacked. What really prejudices the New Orleans miller is the fact that the Arkansas miller has a comparatively short haul for what may be termed its raw material, which, after milling, he transports as a finished product to the seaboard without having to pay freight on a large percentage of waste. HELD, rates attacked not unreasonable or unduly prejudicial or otherwise unlawful, complaint dismissed. New Orleans Joint Traffic Bureau v. B. S. L. & W. Ry. 102 I. C. C. 686.

ALL OTHER CITATIONS

Wichita Motors Co. v. A. & V. Ry. Co., 88 I. C. C. 152; Lincoln Oil Refining Co. v. C. C. C. & St. L. Ry., 88 I. C. C. 270.

§4a. Port Differentials.

See Port Differentials.

(a) Complainant attacked all rail, lake and rail, and rail lake and rail class and commodity rates on export and import traffic between Boston and differential territory, as unjust, unreasonable, unduly prejudicial and unduly preferential as compared with similar rates to and from the following ports: Montreal, St. John, and Halifax, Canada, Philadelphia, Pa., Baltimore, Md., Norfolk and New-

port News, Va., Wilmington, N. C., Charleston, S. C., Savannah, Ga., Jacksonville and Pensacola, Fla., Mobile, Ala., and New Orleans, La. The issue is one of relationship. Although they ask for Boston and the other New England ports rates not exceeding those applicable between differential territory and the various ports named what they in reality desire is that all differences in the import and export rates shall be abolished. They want equalization of rates, and it is immaterial to them how that equalization is accomplished. Boston and New York are on a parity with respect to export and import rates from and to differential territory. The Commission is of the opinion that for many years prior to the World War there was a generally prevailing policy, except with respect to full cargo rates on grain, which were of minor importance, to offset the inland rail differentials in whole or in part by differences in the ocean rates to and from the north Atlantic ports. On the other hand it appears that, since the World War at least, it has been and is now the generally prevailing policy to equalize these ocean rates. Apparently the change in policy was gradual rather than abrupt, and it is not possible on this record to fix the date when the change took place. The present policy is not uniformly or consistently followed, and at the time of the hearing conditions in the ocean freight business were so chaotic, owing to the surplus of tonnage and depression in business, that fluctuations in ocean rates were more than normally pronounced. Theoretically, it is the policy of the so-called conference lines to maintain minimum uniform rates on many commodities between the north Atlantic ports and foreign destinations; but upon application of a particular line or steamer to the conference such minimum rates may be further reduced when cargo is available and can only be secured by such reduction. There is nothing to indicate, however, that in the fluctuations of the ocean rates the inland rail differentials are now taken into consideration. It does not appear that Boston now gains any advantage whatever by reason of its shorter ocean route, or that Philadelphia or Baltimore suffers any disadvantage by reason of its longer route. The evidence warrants the conclusion that within the past few years Boston has not held its own in competition with the other north Atlantic ports. This is especially true of export grain and grain products, which offer Boston its chief hope of supplying bulk cargo for the outward voyages. Inbound this bulk is supplied by the wool, cotton, hides and other similar commodities which move in large quantities to New England industries, but for outbound movement New England produces little bulk freight and unless grain and grain products can be induced to move from the west to the port of Boston it will be difficult to make good the deficiency. In default of bulk cargo for export, the danger is real that shipping between Boston and foreign ports will continue to decline. The Commission has no arbitrary power to do what may seem to be in the public interest, but only such powers as conferred by statute, and here is only duty is to determine whether the rates under attack are unreasonably high or low and whether they unduly prejudice the New England ports and unduly prefer the other ports named. The railroads are monopolistic in many respects, and because of that fact are subject to public regulation. In this public regulation cost of service and hence distance are factors which must be taken into consideration. But the railroads are also subject to competition with respect to much of their traffic, and it has been and is the policy of public regulation to allow them considerable latitude in meeting this competition. This accounts for many of the apparent inconsistencies in the rate structure and also for many of the instances where distances are disregarded. The port differentials are arbitrary. They are fixed and uniform. Except on the first two classes westbound, they are not graded to correspond with the different class and commodity rates and have not fluctuated with fluctuations in those rates. It may be conceded that they are the result of compromise, arbitration, and agreement resorted to as the only means so far found of averting rate wars. They do not accurately reflect transportation conditions, first, because they are uniform, and second, because the lesser distances from differential territory to Philadelphia and Baltimore as compared with New York and Boston are reflected only in part. There is no evidence that the rates under attack are either unreasonably high or unreasonably low. The real issue is whether undue preference and prejudice exist. In view of the very

substantial advantages in distance from differential territory which Philadelphia and Baltimore enjoy, as compared with New York and Boston, and as compared with the total hauls, the Commission is unable to find that there is anything unlawful about the port differenials in favor of Philadelphia and Baltimore. Compared with the advantages in distance the present differentials in many cases are relatively small. The opinion is that no adequate reason exists for port differentials in favor of Philadelphia and Baltimore in the case of the exlake rates on grain in bulk from Buffalo for export. It does not appear that St. John and Halifax attract any substantial amount of import and export traffic to and from differential territory. In default of such evidence, the Commission is unable to make a finding that the present adjustment of rates to these Canadian ports results in undue prejudice to Boston, or that there is undue preference and prejudice with respect to the rates to the south Atlantic Gulf ports. HELD, rates attacked not unjust, unreasonable or unduly prejudicial, complaint dismissed. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539.

(b) Carriers should take steps, either by publication of joint through rates or by appropriate adjustment of present combination rates, to equalize charges on grain and products moving to north Atlantic ports for export from points west of the Mississippi River, where advantage of any one of the ports, as compared with Boston, in total length of haul is 10 per cent or less. Maritime Asso. Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 569.

(c) Complainant attacked export rate charged on 882 cars of petroleum oil between July 28 and October 11, 1924 from Smackover, Algulf and El Dorado, Ark., to Texas City, Tex., as unreasonable and, as compared with lower rates to certain other Gulf ports, unduly prejudicial. These shipments moved for export, or for coastwise transportation. Rate charged 15.5c, haul via M. P., to Lake Charles, La., thence S. P., to Texas City Jct., Tex., thence Texas City Terminal Ry., average total haul of about 490 miles. Effective October 14, 1924 after these shipments had moved, the 14c rate was made applicable to Texas City and Galveston. Texas City and Galveston are south of Houston; the additional haul to Texas City being between 40 and 50 miles. That the rate charged was not unreasonable is shown by the fact that it was in substance an emergency rate established to enable an overproduction of crude oil to be used, and by the car mile revenues. The subsequent reduction of the rate to equal that to other Gulf ports does not establish that it was unreasonable prior to such reductions. HELD, complaint dismissed. Swiftsure Petroleum Co. v. M. P. R. R. 107 I. C. C. 637.

IV. PUBLICATION AND TARIFFS.

§5. In general.

See Facilities and Privileges §16¾ (a); Tariffs.

(a) Tariff provided that export rates would not apply if freight was not exported on vessel upon which space was reserved because of request of owner or other party in interest. No such request was made by complainant and due to seizure of vessels by the government, which created a scarcity of ocean space, exportation was delayed. Upon arrival at port of export, carrier unloaded shipments and placed them in open, and subsequently in private storage, in order to release equipment. Complainant exercised no control over shipments while privately stored and they were ultimately exported to destinations named in original bills of lading as soon as ocean space could be obtained. Domestic rates assessed found illegal and export rates applicable. Refund of overcharges ordered. Lindeteves-Stokvis v. Director General, as Agent, 89 I. C. C. 3.

(b) As to prepaid shipment of coal shipped to coal exchange for export, the carrier could not agree with original shipper to repay the freight, as in the event carrier could not collect freight from transshipper, it would have furnished free transportation in violation of Interstate Commerce Act (U. S. Comp. St. § 8563 et seq.) Pennsylvania R. Co. v. S. M. Hamilton Coal Co. (Md. 1923) 125 A. 405.

(c) Complainant attacked export rate charged on cypress shingles, carloads, from Garden City, Patterson and Harvey, La., to Eagle Pass, Tex., for export to Mexico as unjust, unreasonable, unjustly discriminatory, unduly prejudicial and inapplicable. Rate charged domestic basis 38.5c, export rate in ef-

fect at same time 32.5c to Eagle Pass when for export to Mexico. All of the shipments were consigned to the Eagle Pass Lumber Co, at Eagle Pass, Tex., but the bills of lading specified "for export to Mexico". The export rate are clearly applicable to the shipments in question provided the shipment moved to points in Mexico, and provided the shipment from Harvey did not move to a point coming within the excepted destinations. If they did move to Mexican points, not excepted by the tariff, they were overcharged. HELD, complaint dismissed. Louisiana Red Cypress Co. v. M. L. & T. R. R., 95 I. C. C. 159.

(d) Complainant attacked commodity rate charged on steel plates, carloads, shipped in 1922 from Gary, Ind., to Tulsa, Okla., there fabricated into knocked down steel tanks and reshipped to New Orleans, La., for export, as unreasonable, unjustly discriminatory and unduly prejudicial. All shipments moved prior to July 1, 1922. Movement to Tulsa was via I. H. B., C. & E. I., and Frisco, movement from Tulsa was Frisco L. & A., and T. & P., distance Chicago to Tulsa 715 miles, beyond 765 miles. A joint commodity rate of 46.5c was applicable to steel plates and to knocked down steel tanks from the Chicago district to New Orleans for export. The tariff permitted fabrication at any point in line of transit, which included Tulsa but provided for assessment on the weight outbound from the transit point of the highest of three rates on the finished commodity, namely, from point of origin to final destination, from point of origin to transit point, or from the transit point to final destination. From Gary to Tulsa the rate on steel plates or knocked down steel tanks was 81c and from Tulsa fifth class rate of $1.085 was applicable. Direct line route from Chicago to New Orleans is 920 miles, the 46.5c rate being established to permit the direct Chicago-New Orleans lines to compete in the handling of export traffic with the Chicago-New York lines, HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Maloney Tank Mfg. Co. v. C. & E. I. R. R., 95 I. C. C. 671.

(e) Complainant attacked commodity rates on lumber, carloads, to Orange, Tex., from Louisiana intended for domestic, export or coastwise movement, and on shipments from Texas for export and coastwise movement as unreasonable, unjustly discriminatory and unduly prejudicial. The undue prejudice is based on the relatively lower rates which apply from the origin territory to Beaumont, Port Arthur, Houston and Galveston, Tex. Orange and Beaumont are competing ports on the Sabine-Neches Canal. Orange is about 21 miles east of Beaumont, and, by water, about 9 miles nearer the Gulf of Mexico than is Beaumont. Orange is served by the T. & N. O., and O. & N. W., At Mauriceville, Tex., 13 miles northwest of Orange, the O. & N. W., connects with the G. C. L.; also with the T. & Ft. S., and at Bessmay, Tex., about 32 miles northwest of Orange, it connects with the Santa Fe. Beaumont is served by the S. P., and K. C. S., by the B. S. L. & W., and the Santa Fe. Port Arthur, about 20 miles southeast of Beaumont is served by the K. C. S., and S. P. The traffic side line or tap line connections. As to originates on numerous roads and their this traffic, Orange and Beaumont are grouped for rate making purposes by the S. P., G. C. L., and by most of the other lines that serve this territory. The lines that serve Port Arthur also accord the Beaumont rates to that port. Santa Fe and K. C. S., which serve Beaumont directly, participate in the maintenance of joint rates to Orange on this traffic which are from 1 to 4c higher than to Beaumont, despite the fact that the distances to Orange from many Santa Fe producing points, and all K. C. S., points in Louisiana are slightly less than to Beaumont. The traffic to both ports from all K. C. S., points, and from a large portion of the territory served by the Santa Fe moves over the same routes as far as Bessmay and Mauriceville. The export rates under consideration are unusually lower than the corresponding domestic rates. Lumber rates in this territory are, and for many years have been generally grouped as to points of origin and, in a limited way, as to points of origin and, in a limited way, as to points of destination. Thus, in addition to the grouping generally observed in the rates to the southern ports, the rates are largely grouped from and to various points in Texas; from extensive origin territory; and to an extent on traffic destined to northern and central territory; and to an extent on traffic to western trunk line territory. More extensive grouping is observed on long

haul traffic. But the grouping has not been confined to that traffic, and has largely ignored distance and frequently the number of participating carriers. As to the general adjustment to various southern ports, regardless of the differences in distance, Houston and Galveston are almost invariably grouped by all the lines. From many points the rates to Orange are higher than the rates to those ports, despite the material differences in distance in favor of Orange. The additional haul to Port Arthur is ignored by the K. C. S., in extending the Beau Mont rates to that port. At least to a large extent, the higher rates to Orange than to Beaumont and Port Arthur appear to be prompted by the desire of these carriers to foster the ports service by them and to secure the entire revenue on the traffic. HELD, the export and coastwise rates on lumber to Orange from points on the K. C. S., southwest of De Quincy, La., and from points Kirbyville, Tex., and south on the Santa Fe extending between that point and Port Bolivar, Tex., and from Milvid, Tex., and points east on the Santa Fe extending between Somersville and Silsbee, Tex., also domestic rates to Orange from Louisiana on the K. C. S., southwest of De Quincy, La., unduly prejudicial to Orange to extent they exceed by more than 2c rates to Beaumont; from all other points on these lines export and coastwise rates to Orange from Texas and export coastwise and domestic rates to Orange from Louisiana unduly prejudicial of Orange to extent they exceed rates to Beaumont; that export rates from points on the I. & G. N., to Orange unreasonable to extent they exceed domestic rates on lumber to Orange. Orange Chamber of Commerce v. A. & W. Ry., 98 I. C. C. 101.

(f) Complainant attacked combination class and commodity rates charged on steam lard from rendering points in Illinois, Missouri, Nebraska and Iowa to Cleveland, O., and on refined lard from Cleveland to Atlantic seaboard, for export, as unreasonable and unduly prejudicial. No distinction is made in the classifications between steam and refined lard. Commodity rates apply generally west of Chicago and fifth class rates east thereof. Complainant pays a combination of commodity rates to Chicago and fifth class rates from Chicago to Cleveland on the steam lard, and fifth class rates on the refined lard from Cleveland to the ports. There is no tariff provisions for refining in transit of lard at Chicago, but the fact that Chicago is a rate breaking point enables refiners there to buy steam lard in the west, refine it, and ship it to the seaboard at the same rates as those available to the western packers. Complainant concern is with the refusal of defendants to establish refining in transit arrangements at Cleveland. The fact that the aggregates of the rates into and out of Cleveland are higher than the rates paid by competitors at Chicago and western points does not establish that the rates charged complainant are unreasonable; neither does the fact that another form of transit on lard obtains at Cleveland indicate that it is unreasonable to decline to extend the transit to refining. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Cleveland Provision Co. v. A. T. & S. F. Ry., 98 I. C. C. 421.

(g) Although a rate published as applicable to export shipments should be applied to such shipments in preference to an interstate domestic rate of the service which the carrier holds itself out to reform under the export rate is actually rendered, where, as here, that completed service is not rendered, but rather a delivery of the character which would be effected on a domestic shipment is made, the commission holds that it is not illegal to apply the interstate domestic rate even though the shipment at some time subsequent to delivery may be exported. Therefore, except where shippers avail themselves of transit provisions at the ports, under which the carriers are obligated to place the cotton at ship side, the collection of the interstate domestic rates on cotton delivered to the water-front warehouses or compresses at Houston and Galveston, Tex., is not illegal. Application of Rates on Cotton to Gulf Ports 100 I. C. C. 159, 163.

V. REASONABLENESS.

§6. In General.

See Advanced Rates §8½a (u); Import Traffic §2 (pp); Proportional Rates II (ll).

(a) Complainant attacked commodity rates charged on two shipments of plug tobacco, carloads, and on seven less carloads of premium articles, in one of the cars, shipped in May and June 1918 from

St. Louis, Mo., to San Francisco, Calif., for export to Manila, P. I., as unreasonable. Shipments moved on domestic bills of lading consigned to the collector of customs at San Francisco, Manila being shown as the final destination. The bills of lading also contained a notation that the tobacco was to be held in bond by the collector of customs for export. One car moved via M. P., and other over the Wabash to Denver, Colo., thence U. P., and S. P. At that time the initial lines would accept traffic from export only upon presentation of permits issued by the Pacific coast terminal lines, and the terminal lines would not issue permits unless reservation of vessel space was first obtained for the movement beyond the Pacific ports. Vessel space was procured and the terminal lines issued the necessary permits for the shipments. The movement from San Francisco to Manila was on ocean bills of lading executed by complainant in accordance with reservations previously made as to one carload. The other carload moved from the port on a vessel that sailed 16 days prior to the sailing of the vessel upon which space had been reserved. The rates sought are the lower contemporaneous export rates. After the movement took place, and effective July 1, 1918 that portion of the rule requiring that export bills of lading be issued prior to arrival of freight at port of exit was eliminated from the tariff. HELD, application of the tariff provision to these shipments resulted in unreasonable charges to extent they exceeded export rates, reparation awarded. Liggett & Meyers Tobacco Co. v. Director General, 93 I. C. C. 61.

(b) Complainant attacked charge on grain for export in carloads for switching from connections with the road haul carriers to the export elevators at Galveston, Tex., between March 1, 1920 and June 30, 1923 and for trackage at Texas City, Tex., between Oct. 25, 1920 and Sept. 6, 1923 in addition to the line haul rates from points in Missouri, Iowa, Minnesota, Nebraska, Kansas, Colorado and Oklahoma, as unjust and unreasonable. In 78 I. C. C. 539, the Commission found that the aggregate charges for the through transportation service, composed of the line haul rates plus the switching charges at Galveston on wheat and other grains taking the same rates, in carloads, from this territory of origin to Galveston had been since Jan. 1, 1917, and for future would be unjust and unreasonable to the extent they exceeded the line haul rates exclusive of such switching charges, and awarded reparation. HELD, following this case, rates attacked unreasonable to extent they exceeded the line haul rates exclusive of the switching charges at Galveston, reparation awarded. Armour Grain Co. v. A. T. & S. F. Ry., 93 I. C. C. 124.

(c) Complainant attacked commodity rates charged on box material from Crystal Springs, Miss., to Tampa, Miami and Key West, Fla., as unjust, unreasonable, unduly prejudicial and discriminatory. They were billed to Havana, Cuba, via Key West, Fla., at through rate of 66.5c to Havana, composed of 46.5c to Key West and 20c beyond. Crystal Springs is on the I. C., 25 miles south of Jackson, Miss., 158 miles north of New Orleans and 319 miles southwest of Birmingham over route of movement. The short line is 1,094 miles via Jackson and Meridian, Miss., Montgomery, Ala., and Palatka, Fla. Prior to July 1, 1922 there was a through export rate of 34c from Birmingham, Montgomery, Memphis, Knoxville, Chattanooga and Nashville, reduced to 30.5c on July 1, 1922. The rate of 46.5c attacked is combination of rate to Birmingham and export rate from that point to Key West. Prior to July 1, 1922 the rate from Crystal Springs to Key West via New Orleans was 45.5c, and when subsequent shipments moved the combination was 41c. The shipments were subject to the lowest combination of rates over any available route at the time they moved, which was via New Orleans. The shipments which moved via Birmingham were therefore misrouted and there was an overcharge on those that moved via New Orleans. HELD, rates charged not unreasonable but rate from Crystal Springs to Key West for export unduly prejudicial to extent it exceeded rates from Memphis, New Orleans, La. HELD, further shipments via Birmingham misrouted and those via New Orleans overcharged, reparation awarded. Jackson Traffic Bureau v. A. & V. Ry., 95 I. C. C. 251.

(d) Complainant attacked commodity rates charged on grain carloads, shipped since May 1, 1921 from various states to Galveston, for export, as unreasonable to extent of the switching charges exacted for delivery to the ex-

port elevators. In 78 I. C. C. 539, the Commission found rates attacked unreasonable to extent they exceeded the line haul rates exclusive of switching charges. HELD, following 78 I. C. C. 539, reparation awarded. Juckusch v. G. C. & S. F. Ry., 96 I. C. C. 500.

(e) Complainant attacked export rates charged on cotton, in bales, between Sept. 18, 1918 and March 10, 1919 from Keota, Stigler, Porum, Leflore, and Cameron, Okla., and Hackett, Ark., to Ft. Smith, Ark., there concentrated and reshipped to Tacoma, Wash., for export as unreasonable. HELD, in 88 I. C. C. 407, rates attacked not unreasonable but certain shipments were overcharged. HELD, reparation awarded. Japan Cotton Trading Co. v. Director General, 98 I. C. C. 409.

(f) Complainant attacked rates on export, import, and coastwise traffic, carloads, between all points in western classification territory and Illinois, on the one hand, and Galveston on the other, as unreasonable and that the relationship of the rates from this origin territory to Galveston, on the one hand, and to Texas City, Houston, Beaumont, Port Arthur and Orange, Tex., New Orleans, La., and Mobile, Ala., on the other, is unduly prejudicial to Galveston. All of the ports mentioned are on the Gulf of Mexico. Houston is 48 miles north of Galveston, Texas City is 10 miles, Beaumont 76 miles, Port Arthur 96 miles, Orange 98 miles, New Orleans 355 miles and Mobile 496 miles east of Galveston. The steamship rates from and to foreign ports are usually the same to and from all the ports mentioned. Specifically, the complaint names cottonseed and peanut cake, meal and oil, and lumber and forest products from Texas, Oklahoma, Arkansas and Louisiana west of the Mississippi river and other commodities. Galveston is served by the G. C. & S. F., Santa Fe; the M. K. & T., the I. & G. N., the G. H. & H., G. H. & S. A. With the exception of the S. P., none of these carriers reaches New Orleans. No carrier reaches Galveston with its own rails from Arkansas. New Orleans is served by the S. P., the T. & P., M. P., St. L. S. W., and Rock Island. The general basis of the complaint is relative distances to Galveston and New Orleans. There is no evidence upon this record tending to show that any of the present rates to New Orleans are so low as to throw a burden upon other traffic. New Orleans has certain natural advantages over Galveston which have affected the relationship of rates to the two ports. It is situated on the Mississippi river, at a natural division between, and terminus of, lines operating both east and west thereof. It therefore draws freight from both east and west of the river and by barge line down the river, which insures it not only a greater volume but a wider variety of freight than goes to Galveston, which is dependent upon the southwestern lines. This fact in itself warrants careful scrutiny of a rate adjustment which is alleged to be unduly prejudicial to the port least favored by natural advantages. While those natural advantages are entitled to consideration, in so far as they have been brought about by geographical location they are not entitled to much respect in so far as they have been brought about by rate advantages such as those there complained of. So far as the territory west of the Mississippi river, is concerned, the differences between the natural advantages of New Orleans and Galveston is small. Both ports are natural objectives for export and coastwise freight originating in that territory. HELD, present relationships of the attacked rates on export, import, and coastwise traffic, carloads, from or to points in Louisiana west of the Mississippi river, Arkansas, Texas, Oklahoma and Kansas south of the main line of the U. P., from Kansas City to the western boundary of the state, are unduly prejudicial to Galveston. This should be removed by establishing the same rates to or from New Orleans or Galveston, in instances where the differences in distance from and to the two ports are not greater than 100 miles and by establishing rates to or from Galveston differentials under New Orleans in instances where the differences in distance in favor of Galveston are greater than 100 miles. Galveston Commercial Asso. v. G. H. & S. A. Ry., 100 I. C. C. 110.

(g) Complainant attacked combination rates charged on 8 cars of barrel material shipped during February and January, 1920 from Lake Village, West Memphis, Helena and McGehee, Ark., and Pascola, Mo., to Key West, Fla., for export as unreasonable and unduly prejudicial. Shipments moved via Memphis,

Tenn. Applicable rates being those to Jacksonville plus a rate of 19c beyond. Except from Helena the rates to Jacksonville were arrived at under the so-called combination rule, based upon a rate of 26c from Memphis to Jacksonville. To Key West for export, a rate of 27c was in effect from certain points of origin in Alabama, Georgia and Tennessee, the nearest point to Key West being Brunswick, Ga., 613 miles, and the farthest distant point Nashville, Tenn., 1,165 miles, and rates were also in effect of 24.5c from Columbus, Ga., and Pelika, Ala., 797 and 838 miles, respectively, and 30.5c from Knoxville, Tenn., 1,050 miles. On Feb. 29, 1920 an export rate of 27c was established from Memphis. The earnings under the rates applicable to complainants shipments can not be said to have been excessive. The fact that relatively lower export rates to Key West were in effect from certain origins in the Southeast when the shipments moved and from Memphis thereafter and prior thereto, does not warrant a finding of unreasonableness. HELD, rates attacked not unreasonable, complaint dismissed. Bolz Co-operage Corp. v. Director General, 100 I. C. C. 251.

(h) In 80 I. C. C. 323 the Commission found rates on cotton, carloads, for export, from Groups E and D points in Oklahoma, Arkansas and Louisiana to Seattle and Tacoma, Wash., between June 25, 1918 and June 11, 1919 as unreasonable. The record embraced rates that included cost of compression in route and also rates that did not include such expense. When shipping under the latter rates, the cost of compression was borne by the shipper as a separate item. The findings, through an oversight, were confined to the rates in which the carriers assumed the cost of compression. HELD, rates attacked unreasonable to extent they exceeded $1.15 from Group E and $1.25 from Group D, reparation awarded. Anderson Clayton & Co. v. Director General, 101 I. C. C. 25.

(i) Complainant attacked combination rate on one car of wheat shipped Oct. 6, 1920 from Nebraska City, Neb., to Kansas City, Mo., reconsigned to New Orleans, La., for export, as unjust, unreasonable, inapplicable and in violation of the fourth section. Shipment, moved over Burlington to Kansas City and M. P., beyond. Applicable rate was 45.5c, composed of 11.5c to Nemaha City, Neb., and 34c beyond. At that time defendants maintained a joint commodity rate of 36.5c from Elberon and Dunbar, Neb., stations beyond Nebraska City and also from Minersville Neb., 6 miles south, to the same destination over the route of movement. On Nov. 10, 1920 rates were increased from these points. Complainant has failed to show that it was damaged by reason of the fact that a lower rate was in effect from more distant points. HELD, applicable rate not unreasonable, complaint dismissed. Moore Lawless Grain Co. v. C. B. & Q. R. R., 101 I. C. C. 52.

(j) Complainant attacked commodity rate charged on 73 cars of box shooks from Chattanooga, Tenn., to Laredo, Tex., for export as unreasonable. Shipments made between April 9 and Sept. 26, 1921 and applicable rate of 68.5c charged, distance moved 1,192 miles. Contemporaneous lumber rate was 59c. A check of the tariffs shows that in most instances where there is an actual lumber movement, box shooks either take the lumber rates or rates under that basis. Box shooks should be accorded rates no higher than the lumber rates. HELD, rate attacked unreasonable to extent it exceeded 59c, reparation awarded. Chattanooga Mfg. Co. v. A. G. S. Ry., 101 I. C. C. 66.

(k) In applying increases under Increased Rates, 1920, 58 I. C. C. 220, to rates on cotton from points in Texas and Oklahoma to Galveston, for export, carriers applied such increases to through shipside rates, which include charges for wharfage as separately published by Galveston Wharf Co. HELD: No increase having been authorized in the wharfage charge under decision cited, charges assessed were improper and unreasonable to extent they exceeded those based on rates reflecting proper increase without inclusion of wharfage charges. Reparation awarded. Houston Cotton Exchange v. A. & S. Ry. Co., 92 I. C. C. 363.

(l) There is nothing inherent in export traffic which entitles it, as such, to take rates lower than domestic traffic. The converse is likewise true. Riverside Portland Cement Co. v. Director General, 92 I. C. C. 667, 670.

(m) Domestic rate assessed on cement from Crestmore, Calif., to San Pedro, Calif., for export, found unreas-

onable and unjustly discriminatory to extent it exceeded lower rate applicable on domestic traffic from and to same points, destined for beyond to points in United States and Alaska, which lower rate was subsequently made applicable on export traffic. Interior movement in each case is over same rails, involves identical train switching, and handling services, and no persuasive reason appears for differentiating between these identical transportation movements of the same commodity. Reparation awarded. Riverside Portland Cement Co. v. Director General, 92 I. C. C. 667.

(n) Export shipments moved during Federal control under permits and on domestic bills of lading to San Francisco. On account of congestion, tariff publishing export rates provided for their application only on freight for which through export bills of lading were issued prior to arrival at port of exit. Complainant was unable to procure export bills at point of origin because defendant's offices had been closed without notice as to means by which, and places where, they could be procured. HELD, nonobservance of export tariff provision imposed no additional burden upon director general in handling traffic here involved; nor did this traffic contribute to congestion, which it was the purpose of the rule to relieve. Following Anderson & Co., 61 I. C. C. 64, domestic rates assessed found unreasonable to extent they exceeded lower export rates. Reparation awarded. Liggett & Myers Tobacco Co. v. Director General, 93 I. C. C. 61.

(o) Export shipments originally moved on domestic bills of lading, sailing date and space on steamer having been previously reserved. Domestic bills were exchanged for export bills, the latter bearing notation "order notify" consignees at foreign ports. Due to refusal of shipments by vessel on which space reserved they were stored and subsequently exported on other vessels. HELD, following U. S. Steel Products Co., 88 I. C. C. 57, demurrage and storage charges assessed, but not paid, found illegal. Applicable tariff provided in such cases for the giving of advance notice to notify party at port of exit that carrier is ready to make delivery, but there were no parties at the port to be notified and no demurrage or storage could therefore accrue. American Steel Export Co. v. Director General, 93 I. C. C. 235.

(p) Upon reconsideration, former report, 88 I. C. C. 152, wherein it was found that rates on self-propelling freight vehicles from Wichita Falls and Oklahoma City to Galveston and New Orleans, for export, were not unreasonable, but that they were unduly prejudicial in favor of shippers at Chicago and St. Louis, affirmed. Wichita Motors Co. v. A. & V., 93 I. C. C. 635.

(q) Domestic rate assessed on cypress shingles from Garden City and Patterson, La., to Eagle Pass, Tex., destined "for export to Mexico" found inapplicable in that carriers concurrently maintained a lower export rate on lumber and forest products. Item carrying lower rate provided that rates shown would apply on "Lumber and articles shown in Item No. 1 or reissues" and cypress shingles are shown in both. Irrespective of intentions of framers, tariffs will be construed according to their language, and if it was carrier's intention to limit export rates so as to exclude cypress shingles it should have done so in clear and unequivocal language. Moreover, any ambiguity or uncertainty in a tariff will be resolved against its makers. If shipments moved to Mexican points not accepted by the tariff, they were overcharged, and prompt refund should be made. Louisiana Red Cypress Co. v. M. L. & T. R. R. & S. S. Co., 95 I. C. C. 159.

(r) Rate on wood box material from Crystal Springs, Miss., to Key West, Fla., for export, found not unreasonable but unduly prejudicial to extent it exceeded the rate contemporaneously applicable from Memphis, New Orleans, Vicksburg and Natchez, competing manufacturing points. Jackson Traffic Bureau v. A. & V., 95 I. C. C. 251.

(s) Rates assessed on wheat moving from points in Oklahoma to Wichita, there stored in transit and later shipped to Galveston, for export, found not unreasonable as compared with rates from and to same points with privilege of storage in transit at Kansas City, or with rates from Kansas points to Galveston with privilege of storage in transit at Wichita. Shipments here involved moved via a circuitous route involving an out-of-line haul to and from transit point. Rates assessed, however, found illegal, the applicable rates being combinations based on Cherryvale, Kans. Adjustment of charges directed. Craig Grain Co. v. G., H. & S. A., 95 I. C. C. 464.

(t) Rate on steel plates from Gary, Ind., to Tulsa, Okla., there fabricated into knocked-down steel tanks and reshipped

to New Orleans for export, found not unreasonable because the Tulsa-New Orleans factor exceeded lower rate subsequently established and contemporaneously in effect from Aurora, Mo., Independence and Iola, Kans., and Okmulgee, Okla., competing fabricating points. Maloney Tank Mfg. Co. v. C. & E. I., 95 I. C. C. 671.

(u) Relationship between rates on wheat and on flour from certain points in Oklahoma to Galveston, Tex., New Orleans, La., and other Gulf ports, for export, found not unduly prejudicial or unjustly discriminatory as compared with relationship of rates on same commodities for export from other points in Oklahoma and other States. A commercial practice over which defendants have no control is source of the alleged advantage to competitors. Defendants, however, concede that the adjustment is exceptional, is different from that in contiguous territory, in which competitors are located, and apparently results in disadvantage to complainant, therefore, they should endeavor to so adjust the rates in issue as to bring them more into harmony with the general adjustment maintained on similar traffic. Oklahoma Millers' Asso. v. A. & V., 96 I. C. C. 195.

(v) Maintenance of higher rates on export wheat than on export flour from certain points in Oklahoma to Gulf ports found not unjustly discriminatory or unduly prejudicial. Complainant failed to show similarity of transportation conditions as between export flour and export wheat which would sustain its contention that its competitors in foreign countries are unduly preferred. Oklahoma Millers' Asso. v. A. & V., 96 I. C. C. 195, 197, 198.

(w) Following 78 I. C. C. 539, aggregate of line-haul rates and switching charges at Galveston, Tex., on export grain, in carloads, from central and western States found unreasonable to the extent they exceeded the respective line-haul rates exclusive of such switching charges. Reparation awarded. Jockusch v. G., C. & S. F. Ry. Co., 96 I. C. C. 500.

(x) Proposed cancellation of commodity rates on wet phosphate rock, from interior Florida points to Jacksonville, Fla., for export or to be dried and reshipped by rail or water, necessitating the movement of such traffic to the port of Fernandina, Fla., and the disruption of the business of the drying terminals at Jacksonville, found not justified. Neither is this action justified by contention that continuance of such rates is not warranted by volume of movement. Wet Phosphate Rock to Jacksonville, 96 I. C. C. 711.

(y) Objection of complainant to defendant's future to bear the cost of compression of cotton reaching Savannah, Ga., uncompressed and thence exported is without merit. See 32 I. C. C. 146. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749, 757.

(z) Export rates on lumber from points on International-Great Northern to Orange, Tex., found unreasonable to extent they exceed rates from and to same points contemporaneously applicable to the movement of domestic lumber. Reasonable rates prescribed for future. Orange Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 101.

(aa) Rates on shipments of cottonseed and related vegetable oils, cakes, meals, foots, sediments, and inedible tallow, c. l., from Oklahoma, Arkansas, western Louisiana, and Texas, and from Loving, N. Mex., to Gulf ports, Houston and Galveston to New Orleans, inclusive, for export, found unreasonable and reasonable maximum rates and minimum weights prescribed, without prejudice to the continuance of the present equalization of rates on these commodities in revised rates pending such conclusions as may be reached in Galveston Commercial Asso. v. G., C. & S. F. Ry. Co., and Same v. A. & S. Ry. Co., now pending. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 247, 248.

(bb) Shipments of compressed cotton from Brownsville, Tenn., to Seattle and Tacoma, Wash., for export, found to have been overcharged to extent that rate charged exceeded that constructed on combination basis in effect on June 24, 1918, plus the authorized increase on this commodity. Tariff naming the combination from Humboldt, Tenn., via which shipments moved, carried the rule providing for application of but a single increase to through rates made on combination, while tariff naming the factor from Brownsville to Humboldt contained no similar rule nor reference to a tariff which did. See 73 I. C. C. 551. Reparation awarded. Southern Products Co. v. Director General 98 I. C. C. 462.

(bba) Upon further consideration, original report, 96 I. C. C. 195, wherein

relationship between rates on wheat and flour from certain points in Oklahoma to Galveston, New Orleans, and other Gulf ports, for export, was found not unduly prejudicial or discriminatory as compared with relationship of rates on same commodities for export from other points in Oklahoma and other States, affirmed and complaint dismissed. No reason is seen why relationship between rates on wheat and flour for export should be different from that prescribed in respect of domestic traffic, and if carriers should fail to so realign their export rates on these commodities from affected territory complainant may bring that situation to commission's attention. Oklahoma Millers' Asso. v. A. & V., 102 I. C. C. 1.

(cc) Respondents proposed an increase of 5c per 100 pounds in the rates from Georgia, Alabama, Tennessee, the Carolinas, and Virginia to Newport News and Morrison, Va., on export and coastwise tobacco received for storage or warehousing at Newport News and Morrison. As a result of the advantages of storing unmanufactured tobacco near the water front, the warehousing of this commodity at Norfolk and Newport News has developed into a large industry and there is keen competition between the warehouses located in the two cities. Newport News is served by one railroad, the C. & O. Norfolk is served by the A. C. L., S. A. L., Southern, N. & W., Norfolk Southern, Pennsylvania, Virginia. The A. C. L., Norfolk Southern, Southern and S. A. L., serve practically all of the territory from which it is proposed to increase the rates to Newport News. Branch lines of the N. & W., also serve part of the origin territory. The C. & O., does not reach Carolina territory with its own rails but participates with the lines serving Norfolk in joint rates to Newport News on tobacco. In 23 I. C. C. 345 the Commission found that Newport News was entitled to the same rates as Norfolk to and from points in Carolina territory, more than 150 miles distant from Norfolk. Since that case was decided, the rates on unmanufactured tobacco from the origin territory have been the same to Norfolk and Newport News and the proposed increase of 5c in the rate is the first attempt to change this relationship. Respondents justification of the proposed increase is based on the contention that it is necessary in order to place Norfolk on the same basis as Newport News. The conditions existing at Newport News, the granting of storage in transit, the allowance of the 25c handling charge to warehousemen, and free lighterage from Newport News to shipside at Norfolk, of tobacco in any quantity, induced respondents to proposed the suspended rate. There is no storage in transit arrangement at Norfolk and all of the handling charges assessed by the Norfolk carriers are collected and retained by them, except those applicable at the municipally owned terminals, which are paid by the Norfolk-Portsmouth Belt Line to the city of Norfolk for the service of handling from storage to piers performed by employes of the city. As the C. & O., does not participate in joint rates on tobacco from the origin territory to Norfolk that company cannot be held to discriminate against the warehousemen at Norfolk in favor of the warehousemen at Newport News. At Newport News, the shipper does not pay any charge for loading from storage to cars, but he does pay for the unloading from cars to piers, and the C. & O., elects to pay the charge so collected to the warehousemen for handling from storage to cars. That is not an unlawful practice. While it may be true that a considerable portion of the tobacco traffic has been diverted frrom Norfolk to Newport News since the establishment of transit and the allowance of the 25c handling charge by the C. & O., the evidence as a whole shows that the location of the warehousemen at Newport News away from the water front, the ability to concentrate the tobacco in one general location at Newport News and the excellent service given by the warehousemen at that point, have all been contributing causes to the diversion of part of the tobacco traffic from Norfolk to Newport News. It was generally admitted that the proposed increases to Newport News were not made because the line haul rates from the origin territory are too low, but for the purpose of attempting to equalize the warehousemen at Norfolk with the warehousemen at Newport News. Respondents proposal to increase the rates to Newport News appears to be inspired by their desire to obtain a larger share of the tobacco traffic than they now receive and by pressure of owners of interior warehouses at Norfolk, who have lost to the warehousemen at Newport News a considerable amount of the business they formerly enjoyed. The car-

riers could have met the competition of the C. & O., at Newport News by the publication of a storage in transit arrangement at Norfolk, and could, if they desired to go further, have made the same allowances to the warehousemen at Norfolk as the C. & O., makes at Newport News. HELD, proposed schedules not justified. Increased rates on tobacco 102 I. C. C. 665.

(cca) While shippers are entitled to properly adjusted rates on clean rice to New Orleans for export, such adjustment need not be based primarily on the domestic rates on rough rice with which clean rice is not in competition. New Orleans Joint Traffic Bureau v. B., S. L. & W., 102 I. C. C. 686, 691.

(dd) Complainant attacked combination rate of 48c charged on eight cars of petroleum lubricating oil, in barrels, shipped in March and April, 1921 from Coroapolis, Pa., to New York, for export as unjust and unreasonable to extent it exceeded 34.5c. Coroapolis is a local station on the P. & L. E., 11 miles west of Pittsburgh, shipments moving as routed by complainant, Pennsylvania delivery at Manhattan Piers, N. J., for export, 465 miles, the shortest route. Charged fifth class 13.5c to Homestead Transfer, Pa., commodity rate of 34.5c beyond. There was contemporaneously in effect over the route of movement a combination rate of 46.5c made up of 12c to McKees Rock, Pa., and 34.5c beyond. Overcharges exist. On Jan. 1, 1922 the through rate was reduced to 39.5c and on April 10, 1923 a joint through rate of 31c was established, this latter rate being equivalent to the 34.5c less a 20% reduction. At the time of movement the 34.5c rate was in effect over the route of movement from Coroapolis to Trenton, New Brunswick, and Rahway, N. J., points 407, 433 and 444 miles distant. The defendants made no attempt to justify the applicable rate. HELD, rate attacked inapplicable and unreasonable to extent it exceeded 34.5c, reparation awarded. Transcontinental Oil Co. v. P. R. R. Co. 104 I. C. C. 259.

(ee) Complainant attacked export commodity rate charged on gasoline and kerosene, carloads, from Gates, Tex., to Port Arthur, Tex., for export between July 17 and October 26, 1923 as unreasonable and unduly prejudicial. Gates is on the T. & P., 4.7 miles west of Dallas, Tex. Shipments moved, as routed over T. & P., to Shreveport, La., and K. C. S., beyond, charged 24.5c rate claimed 20.5c. The 24.5c rate was established on Jan. 5, 1922 over one or more routes to all the Gulf ports from all points in a large blanket extending from St. Louis, Mo., on the north, to Somerset, Tex., on the south, and embracing the oilfields of central Missouri, southeastern Kansas, Oklahoma and Texas common point territory. On Oct. 27, 1923 the rate over one or more routes from Texas points to Port Arthur, including Gates, was reduced to 20.5c. HELD, rate attacked not unreasonable, complaint dismissed. Texas Co. v. T. & P. Ry. 107 I. C. C. 147.

(ff) Respondents proposed to cancel export rates on grain and grain products, carloads, from points in western Montana to Seattle and Tacoma, Wash., and Portland and Astoria, Ore., leaving higher domestic rates to apply. Complainant sought to have reduced the domestic rates on grain from Montana to California, Oregon, Washington, Nebraska, Missouri, Iowa, Minnesota, Wisconsin and Illinois as unreasonable and discriminatory to extent they exceeded, for equal distances, westbound export rates from Montana to Pacific north coast ports. The export rates now apply from Havre, Mont., and west on the G. N., from Billings, Mont., and west on the N. P., and from Burgoyne, Mont., and west on the Milwaukee. DOMESTIC RATES. Montana wheat originates largely on the Milwaukee, N. P., and G. N., which traverse Montana in their respective routes between Minneapolis, St. Paul and Duluth on the east and Seattle and other north Pacific coast terminals on the west. The rates to Minneapolis from Main line stations grade upward from eastern to western Montana from 31.5c at Ismay to 58.5c at Bryson on the Milwaukee; from 31c at Glendive to 53.5c at Thompson Falls on the N. P., and from 30c at Snowden to 56c at Yakt on the G. N. To Seattle they grade upward from western to eastern Montana from 34c at Bryson to 52c at Ismay, from 32c at Thompson Falls to 55c at Glendive, and from 35c at Yakt to 48.5c at Snowden. This record reveals no persuasive reason for maintaining generally a different level of domestic rates, distance considered, in one direction than in the other, or for maintaining a different relationship, distance considered, in one

direction than in another. HELD, attacked domestic rates as a whole are not unreasonable or otherwise unlawful. EXPORT RATES. Respondents generally submitted little evidence in support of the cancellation of these rates. The western millers, no less than millers in other sections of the country where export rates are maintained, are required to conform to the inhibitions of the law against obtaining or attempting to obtain transportation of property at less than the regularly established rates, and upon proof are subject to prosecution for infringements of the act in that respect. From the record it is clear that the maintenance of export rates has been of great benefit to the Montana producer and that it has supplied him with an additional market and competition for his grain which has enabled him to secure a higher price for his grain. The export basis is open to the miller in western Montana as well as to the miller on the Pacific coast, so that if the transit provisions of the tariff are properly applied there can be no undue prejudice as between them. The conditions affecting the eastern miller are not similar, and the commercial and transportation reasons which actuated respondents in establishing the export rates originally have no application to a movement eastbound. They apply only from the western part of Montana which is naturally tributary to the Pacific coast, leaving to the eastern millers the remainder of the state as well as the large grain producing areas to the east thereof. HELD, proposed schedules not justified. Export rates on wheat and its products. 107 I. C. C. 276.

(gg) Equalization of wheat and flour prices in foreign markets can not be accepted as a guide for determining a proper rate adjustment for rail movements in this county, or whether the Pacific coast interests are given an unfair advantage by the maintenance of the export rates. Export rates on wheat and its products 107 I. C. C. 276, 285.

(hh) Reasonable domestic rates do not necessarily afford the exact measure for reasonable maximum export rates. Export rates on wheat and its products 107 I. C. C. 276, 289.

(ii) In 88 I. C. C. 152 the Commission found that the rates on self propelling vehicles carloads from Wichita Falls, Tex., and Oklahoma City, Okla., to Galveston, Tex., and New Orleans, La., for export, as not unreasonable but unduly prejudicial to extent they exceeded rates maintained from Chicago and St. Louis to Galveston and New Orleans for export, in so far as these defendants participate in the latter rates. Finding affirmed 93 I. C. C. 635. The order was complied with by defendants reducing the rates from Wichita Falls and Oklahoma City. Petitioners request that the order be modified so as to eliminate the requirement for maintenance of rates from Oklahoma City, as complainant has dismantled his plant at that point. HELD, orders herein modified to eliminate the requirement for maintenance of rates from Oklahoma City. Wichita Motors Co. v. A. & V. Ry. 107 I. C. C. 585.

(jj) Relationship of rates on certain commodities for export, import, or coast-wise movement via Galveston, Tex., from or to points in Texas, Oklahoma; western Louisiana, Arkansas, and Kansas found unduly prejudicial to Galveston and unduly preferential of New Orleans, La. Such undue prejudice should be removed by establishing the same rate to or from New Orleans or Galveston, as the case may be, in instances where the differences in distance from and to the two ports are not greater than 100 miles, and by establishing rates to or from Galveston, as the case may be, certain prescribed differentials, under New Orleans in intances where the differences in distance in favor of Galveston are greater than 100 miles. The record is not sufficiently complete to warrant the commission in prescribing relatonships between the rates to or from Galveston and New Orleans on other commodities or from or to points other than those embraced in the foregoing findings. Relationships herein prescribed will serve as a guide to defendants in readjusting the rate on other export, import, and coastwise traffic. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co. 100 I. C. C. 110.

(kk) General investigation concerning the lawfulness and propriety of the practices of carriers of applying interstate domestic rates and export rates on cotton from Oklahoma, Arkansas, Texas, and Louisiana, to Gulf ports did not cover the reasonableness of the rates and the findings herein are not to be construed as authorizing the carriers to increase their present revenues; rather, the rates should be so readjusted as to

preserve existing revenues. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159.

(ll) Present adjustment of rates on cotton from Oklahoma, Arkansas, Texas, and Louisiana to Texas Gulf ports found unduly prejudicial to the uptown and interior warehouses and compresses and unduly preferential of the water-front warehouses and compresses; that rates should be so adjusted that one rate will apply for all deliveries within the usual switching limits of the ports, except that the export rates should be made higher than the domestic rates by amount equal to the wharfage charge. This finding is not to be construed as condemning the practice of the carriers of absorbing drayage charges in lieu of switching. Reasonableness of the rates was not in issue and the findings herein are not to be construed as authorizing the carriers to increase their present revenues, rather, the rates should be so readjusted as to preserve existing revenues. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159.

(mm) Although a rate published as applicable to export shipments should be applied to such shipments in preference to an interstate domestic rate if the service which the carrier holds itself out to perform under the export rate is actually rendered, where, as here, that completed service is not rendered, but rather a delivery of the character which would be effected on a domestic shipment is made, the commission holds that it is not illegal to apply the interstate domestic rate even though the shipment at some time subsequent to delivery may be exported. Therefore, except where shippers avail themselves of transit provisions at the ports, under which the carriers are obligated to place the cotton at ship side, the collection of the interstate domestic rates on cotton delivered to the water-front warehouses or compresses at Houston and Galveston, Tex., is not illegal. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 163.

(nn) Rates on barrel material from Lake Village, West Memphis, Helena, and McGehee, Ark., and Pascola, Mo., to Key West, Fla., for export, found not to have been unreasonable. Earnings under applicable rates can not be said to have been excessive, and fact that relatively lower export rates to Key West were in effect from certain origins in Southeast when shipments moved and from Memphis, Tenn., thereafter and prior thereto, does not warrant a finding of unreasonableness. Prompt settlement of undercharges directed. Bolz Cooperage Corp. v. Director General, 100 I. C. C. 251.

(oo) Rates assessed on one carload of wheat from Nebraska City, Nebr., to Kansas City, Mo., reconsigned to New Orleans, La., for export, and delivered to Westwego, a New Orleans rate point, found inapplicable. Governing tariff provided for applicaton of rates from original point of shipment to final destination. No joint rates were in effect over route of movement and combination rates basing on Nemaha City, Nebr., found applicable. Moore-Lawless Grain Co. v. C., B. & Q., 101 I. C. C. 52.

(pp) Rate on box shooks from Chattanooga, Tenn., to Laredo, Tex., for export, found unreasonable to extent it exceeded contemporaneously applicable rate on lumber from and to same points. Reasonable rate prescribed for future and reparation awarded. Chattanooga Mfg. Co. v. A. G. S. R. R. 101 I. C. C. 66.

(qq) Rate applicable on wheat shipped from Minneapolis, Minn., to Kansas City, Mo., thence to Galveston, Tex., for export, found unreasonable to extent it exceeded lower proportional rate contemporaneously in effect over routes other than route of movement. Waiver of undercharges authorized. Fuller Grain Co. v. B., S. L. & W. Ry., 101 I. C. C. 82.

(rr) Domestic rates assessed on shipments of fresh frozen meat from Ogden, Utah, to New York, Brooklyn, and Boston, a majority of which were for export, found unreasonable to extent they exceeded lower contemporaneous export rate from and to same points. Reparation awarded. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236.

(ss) Complainant attacked commodity rates on cottonseed and vegetable cake and meal, carloads. from Texas to Galveston for export as unreasonable, unduly prejudicial and unduly preferential of Houston, Tex., and other Gulf ports, for the reason that to the extent that the rates to Galveston were from 0.5 to 3.5c higher than the

rates to Houston. All of the railroads which serve Galveston also serve Houston, but everal of those serving Houston do not reach Galveston. At the time of the hearing Houston paid the full distance scale on all shipments to that port, Galveston paid the full distance scale except in those instances, about 13 in number, where strict application of the scale would have amounted to more than 3.5c over Houston, and Port Arthur paid the full rates under the scale up to 200 miles from Galveston, beyond which it was equalized with Galveston. There is no longer any zone of equalization to Galveston and Houston. The provision which limited to 3.5c the spread of Galveston over Houston was canceled on Sept. 15, 1925. The provision equalizing Port Arthur with Galveston has been continued in effect. It is but natural that increase in the volume of exports through Houston should be accompanied and reflected to some extent by decrease in the volume which would otherwise be exported through Galveston and other ports. The Commission has not been referred to any section of the act which makes it a part of its duty to put a stop, by a leveling of the freight rates to such increases in business as they occur. HELD, rates attacked not unduly prejudicial, complaint dismissed. Galveston Commercial Asso. v. A. & S. Ry. 109 I. C. C. 114.

C. & St. L. Ry. Co., 88 I. C. C. 269; American Maize-Products Co. v. Director General, as Agent, 88 I. C. C. 354; Gillican-Chipley Co. v. Director General, as Agent, 88 I. C. C. 441.

VI. STORAGE, DEMURRAGE, AND SPECIAL CHARGES.

§7. In General.

See Demurrage; Facilities and Privileges §10 (b) (o), §18 (p); Special Rates and Services; Storage.

(a) Complainant attacked demurrage and storage charge of $3 per car per day on 11 cars of iron and steel articles shipped from Alabama City, Ala., Lebanon, Pa., and Warren, O., to Java on through export bills of lading and held in storage at San Francisco, Calif., between Feb. 1 and July 20, 1918, as inapplicable and unreasonable. The initial bills of lading consigned the shipments to order of complaint at San Francisco with complainant or its agent at San Francisco as the notify party, and designated the shipments for export, steamer Arakan. Space for these shipments had been reserved on that steamer, which was scheduled to sail on Feb. 20. Within the tariff period these bills of lading were exchanged for trans-Pacific export bills of lading with consignment to Java. Six cars arrived at San Francisco during the latter half of February, two on March 7, two on March 8 and one on March 25. The Arakon began loading on March 5 and finished on March 15. It refused to accept these and other shipments for Java. On March 18 the Government commandeered the vessel and unloaded and stored the cargo on Mission Rock in San Francisco Harbor. Complainants shipments were not included in this cargo and were held by the rail carriers. Complainant endeavored to obtain space on other vessels and in the latter part of July the shipments were taken by the Rembrandt and Bingtang. There were no parties to be notified at the port. No demurrage or storage therefor could accrue. HELD, demurrage and storage charges inapplicable. American Steel Export Co. v. Director General, 93 I. C. C. 235.

(b) Rule governing free time for unloading freight consigned locally to Mobile, Ala., for transshipment by vessels for coastwise movement found unreasonable in that it allows less free time than that allowed on similar freight for transshipment in export movement. Rule subsequently amended to allow same free time on shipments destined for coastwise as for export movement. Both export and coastwise shipments must be placed at dock in advance of arrival of steamers and therefore, both need more free time for unloading than is allowed ordinary domestic shipments Page & Jones v. S. Ry. Co., 91 I. C. C. 684.

(c) Complainant attacked charges of 6.5c per 100 pounds plus $6.50 per car exacted from Sept. 15, 1920 to Sept. 12, 1922 of lard, carloads from Jersey City, N. J., to ship side at points within the

free lighterage limits of New York harbor, for export, which had been shipped into Jersey City by complainant over defendants lines from points of origin west of Buffalo and Black Rock, N. Y., in tank cars, and unloaded at complainants plant at Jersey City, and put into barrels, tierces, and other containers, as in violation of section 6. Defendant now has in force rates and transit arrangements that are satisfactory to complainant. Complainant does not question the reasonableness of the rate charged on the outbound movement from its plant when applied to local shipments, but insists that as applied to through shipments handled in transit, same is unreasonable. The inbound and outbound movements to and from the transit point here involved must be regarded as separate shipments to which the separately established rates are applicable except to extent that there is explicit tariff provisions which connects the inbound with the outbound movement and establishes the fiction of a continuous through movement. HELD, charges exacted from Sept. 15, 1920 to Sept. 12, 1922 on lard, carloads, from complainants plant at Jersey City to ship side at points within the free lighterage limits of New York harbor for export that was the same identical lard that moved into said plant over defendants rails from points west of Buffalo or Black Rock were illegal to extent they exceeded 3c per 100 pounds for the weights of the barrels or drums in which the lard was transported on shipments that moved prior to July 27, 1921 and to extent they exceeded 4c per 100 pounds for weights of barrels and drums subsequently. HELD, further charges exacted on lard, not the same identical lard, not illegal prior to Oct. 5, 1921 but illegal to extent they exceeded 2.5c on net weight of outbound material plus 5c for weight of barrels and drums, reparation awarded. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337.

(ca) Shipments intended for export, but vessel in which space was reserved canceled its sailing. Diversion requested could not be effected on cars which had passed point of interception, whereupon diversion order was canceled and request made that car be allowed to proceed to destination as originally billed. Rediversion resulted and charges were collected based on combination of locals. Upon contention that charges should have been assessed on basis of lower export rate. FOUND, governing tariff permitted no diversion under export rate and only one diversion under domestic rate. The combination rate was, therefore, the only rate available. Moreover, there was no showing that diversion rules were unreasonable, or that they were not applied according to their terms. United Commercial Co. v. S. P. Co., 93 I. C. C. 417.

(cb) Proposed change in rule defining service of handling at south Atlantic and certain Gulf ports, found justified. No increases or decreases will result from the proposed new section which does not change substance of the existing rule but merely clarifies its application in so far as handling between ship side and box cars is concerned, and also makes clear that no charge will be assessed in connection with shipments transferred by ship's tackle to or from open-top cars standing on marginal tracks at ship side. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 645.

(d) Charges for handling export cottonseed cake over docks at New Orleans, La., found applicable under tariffs containing ship-side handling charge. Tariff item containing applicable storage charges assessed included cost of handling "incidental to storage," but handling performed found not "incidental to storage" and applicable charges for ship-sde handling found not unreasonable, having been approved in 61 I. C. C. 379. New Orleans Export Co. v. I. C. R. R. Co., 96 I. C. C. 509.

(e) Refusal of defendants to establish, at Cleveland, Ohio, refining-in-transit on lard found not to result in unreasonable or prejudicial rates on steam lard from western rendering points to Cleveland and on refined lard from Cleveland to the Atlantic seaboard for export. Fact that the aggregate of the inbound and outbound rates through Cleveland are higher than rates paid by competitors at Chicago does not establish that rates charged complainant are unreasonable, and neither does the fact that another form of transit on lard obtained at Cleveland indicate that it is unreasonable to decline to extend the transit to refining. Cleveland Provision Co. v. A., T. & S. F. Ry. Co., 98 I. C. C. 421

(f) Complainant attacked commodity rates charged on nine cars of steel tank materials shipped in April and May 1920 from South Chicago, Ill., Indiana Har-

bor, Ind., and Youngstown, O., to Galveston, Tex., for export to Mexico fabricated at Iola, Kas., as unreasonable and as compared with the rates from and to the same points on the same commodity fabricated at Kansas City, Mo., Omaha, Neb., Chicago, Ill., and St. Louis, Mo., unduly prejudicial. Iola is about 110 miles south of Kansas City on the Santa Fe to Galveston. Charged 48c from Indiana Harbor and South Chicago and 70c from Youngstown, plus a transit charge of 1.5c. When the shipments moved defendants maintained export rates to Galveston of 35c from Indiana Harbor and South Chicago and 38.5c from Youngstown on steel tank material, and on steel tanks, knocked down, with fabrication at Kansas City at additional charge of 1.5c. Effective June 12, 1920 the transit circular of the Santa Fe was amended to authorize fabrication at Iola at the same through export rates, plus a transit charge of 1.5c. Prior to these shipments complainant did not have any export business and, therefore, no reason existed for fabrication in transit at Iola under the export rates. HELD, applicable rates not unreasonable and damage as result of alleged undue prejudice not shown, complaint dismissed. United Iron Works v. Director General 104 I. C. C. 449.

(g) The present adjustment of rates from Oklahoma, Arkansas, Texas and Louisiana to the Texas Gulf ports is unduly prejudicial to the uptown and interior warehouses and compresses and unduly preferential of the water-front warehouses and compresses; the rates should be so adjusted that one rate will apply for all deliveries within the usual switching limits of the ports, except that the export rates should be made higher than the domestic rates by amount equal to the wharfage charge. This finding is not to be construed as condemning the practice of the carriers of absorbing drayage charges in lieu of switching. Application of Rates on Cotton to Gulf Ports 100 I. C. C. 159.

(h) Upon contention of the uptown warehouses and compresses at the ports that under any readjustment that is made in the domestic and export rates on cotton to the Gulf ports they should continue to receive a free second merchandising or compression in transit on cotton purchased by them which has already been concentrated at the through rate. FOUND: That such a request is not reasonable, for shipments stopped at other points for second merchandising or compressing must pay a transit charge and the commission sees no reason why an exception should be made in the case of the uptown warehouses or compresses at the ports. Cotton, passing through these uptown facilities is, however, entitled to one free transit privilege. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 166.

(i) Rates on cotton, for export, from points in Oklahoma, Arkansas and Louisiana to Seattle and Tacoma, Wash., under which expense of compression was not absorbed by carriers, found unreasonable. Reparation awarded. Anderson Clayton & Co. v. Director General, 101 I. C. C. 25.

ALL OTHER CITATIONS

Mutual Products Trading Co. v. O. W. R. R. & N. Co., 85 I. C. C. 1; U. S. Steel Products Co. v. Director General, as Agent, 88 I. C. C. 57.

VII. PAYMENT OF CHARGES.

§8. In general.

(a) Where freight was prepaid as carrier's tariff required, on a shipment of coal consigned to a coal exchange for account of plaintiff shipper, with a view of reshipment for export, the carrier was bound to deliver the coal without further exaction, and the return of the freight to it by the transhipper was entirely voluntary and could not have been enforced. Pennsylvania R. Co. v. S. M. Hamilton Coal Co. (Md. 1923) 125 A. 405.

(b) Proposed waiver of out-of-line charges at Kansas City on grain and products from points in Kansas and Colorado through Kansas City for reshipment under domestic and export rates to interior destinations in Texas and Louisiana and to Texas Gulf ports for export, designed to meet carrier competition, and which will result in an excessive amount of extra transportation without additional charge, found not justified, even temporarily. Transit at Kansas City, 101 I. C. C. 696.

IX. LONG AND SHORT HAULS.

See Long and Short Hauls.

§10. In General.

(a) Complainant attacked combination rate charged of $1.64 on 23 cars of cotton shipped between Nov. 11, 1918

and Feb. 1, 1919 from Brownsville, Tenn., to Seattle and Tacoma, Wash., for export to Japan, as unjust and unreasonable in that it exceeded $1.35 applicable from Humboldt, Tenn., a more distant point over the route of movement. Brownsville is a local point on the L. & N., from Memphis to Louisville. It is intermediate between Humboldt and Memphis, about 59 miles northeast of Memphis and 25 miles southwest of Humboldt. Charged 39c to Memphis and $1.25 beyond. Tariffs named a combination on Humboldt of $1.61 subject to the combination rule. HELD, shipments overcharged to extent it exceeded $1.11c, reparation awarded. Southern Products Co. v. Director General, 98 I. C. C. 462.

(b) Complainant attacked commodity rates for export on lumber, carloads, since Mar. 1, 1920 from Lyman, Miss., to Gulfport, Miss., and to Mobile and New Orleans, as unreasonable and unduly prejudicial. In 85 I. C. C. 373 the Commission found the rates attacked not unreasonable or unduly prejudicial. After July 1, 1922 rate was 4.5c to Gulfport for export, and 10.5c to Mobile and New Orleans, reparation desired on 5c and 8.5c. Lyman is on the G. & S. I., 9 miles from Gulfport, 82 miles from Mobile and 76 miles to New Orleans. All of the yellow pine producing territory in Mississippi south of the A. & V., is generally accorded the same rate treatment by the carriers. No lumber mill in this blanket territory enjoys a lower ship side freight charge to any port than does Lyman on traffic to Gulfport. The blanket method of making rates on lumber has long been satisfactorily employed in this territory. Obviously some shippers will be farther from a given point than others in the same blanket, but the record shows that whereas Lyman is the nearest shipping point to Mobile and New Orleans it is among the farthest points to destinations in other directions. A blanket rate structure in existence since the inception of the saw mill industry in this territory should not be lightly set aside for a rate adjustment in which distance would be the sole factor determining the measure of the rates. Fourth Section Application. G. & S. I., sought authority to continue rates on lumber from stations on the G. & S. I., to Gulfport, Mobile and New Orleans without observing the long and short haul provisions of the act. The G. & S. I., has maintained rates from local stations on its lines on a basis higher than from junction points with other lines since the road began operations. Distances over the routes embracing the G. & S. I., range from the same distance as those over the direct lines to 279% thereof. HELD, rates attacked not unreasonable, fourth section relief granted to extent the long line is not more than 70% over the direct line provided that this shall not include intermediate local stations on the G. & S. I., from which the distance is not greater than that over the direct lines from the junction points, and not to exceed the lowest combination. Ingram Day Lumber Co. v. G. & S. I. R. R., 101 I. C. C. 287.

(c) Following Clay Grain Co., 78 I. C. C. 539, aggregate of line-haul rates and charges for switching from connections with road-haul carriers to export elevators at Galveston, on export grain from points in Missouri, Iowa, Minnesota, Nebraska, Kansas, Colorado, and Oklahoma found unreasonable to extent they exceeded such line-haul rates exclusive of switching charges. Reparation awarded. Armour Grain Co. v. A., T. & S. F., 93 I. C. C. 124.

(d) Aggregate of line-haul rates and trackage charge for use of tracks during period cars remain in hold yards awaiting delivery to elevators at Texas City, Tex., on export grain from points in Missouri, Iowa, Minnesota, Nebraska, Kansas, Colorado, and Oklahoma found unreasonable to extent they exceeded such line-haul rates exclusive of trackage charge. Reparation awarded. Armour Grain Co. v. A. T. & S. F., 93 I. C. C. 124.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) American Railway Express Company held not a "carrier by railroad," within Interstate Commerce Act, § 15, par. 3, as amended by Transportation Act 1920, § 418 (Comp. St. Ann. Supp. 1923, § 8583), prohibiting Commission from requiring carrier by railroad to embrace in a route substantially less than entire length of railroad. United States v. American Ry. Express Co., 44 Sup. Ct. 560. Southeastern Express Co. v. Same, 44 Supp. Ct. 560. Southern Traffic League v. Same, 44 Sup. Ct. 560.

(b) In cases where rail carriers under provisions of their contracts with express companies have availed themselves of their exclusive right to handle milk or cream moving over their own lines, the commission can not require express company to establish rates for the future except by voluntary agreement with rail carriers, see Express Rates on Milk and Cream, 74 I. C. C. 427. However, this does not preclude shippers from obtaining similar service at reasonable rates direct from carriers on interline shipments or jointly from rail carriers and express companies where latter are not by contract precluded from participation in joint rates. Kirschbraun & Sons, Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 39.

§1½. Courts and State Regulations.

See Courts; Interstate Commerce Commission §4; State Rates and Regulation.

(a) Laws Miss. 1920, c, 104, §21 (Hemingway's Code Supp. 1921, § 6512), imposing a privilege tax on express companies, dependent on the classification of railroads over which the express is moved, fixed by the Railroad Commission for purpose of levying privilege tax on railroads under section 45 of such chapter 104, HELD not violative of due process clause, because express companies were not accorded a hearing in the matter of the classification of the railroads, since the state could require the payment of the tax as a condition to the privilege of doing business within the state, and could fix its amount directly or by reference to a standard. Southeastern Express Co. v. Miller, State Revenue Agent 44 Sup. Ct. 421.

(b) Laws Miss. 1920, c. 104, §21 (Hemingway's Code Supp. 1921, § 6512), imposing a privilege tax on express companies, dependent on the classification of railroads over which the express is moved, fixed by the Railroad Commission for purpose of levying privilege tax on railroads under section 45 of said chapter 104, held not violative of the Constitution as to due process, because indefinite and uncertain, in view of state Supreme Court's construction of statute making its meaning certain and definite. Southeastern Express Co. v. Miller, State Revenue Agent 44 Sup. Ct. 421.

(c) Assessment of double amount of tax against express company, which failed to pay privilege tax before it commenced business May 1st, under Laws Miss. 1920, c. 104, §§ 21, 73 (Heminway's Code Supp. 1921, §§ 6512, 6630), imposing a privilege tax on express companies, though other companies previously in business were allowed 30 days after taxes accrued within which to pay them, HELD not violative of equal protection clause of Const. Amend. 14. Southeastern Express Co. v. Miller State Revenue Agent, 44 Sup. Ct. 421.

(d) Laws Miss. 1920, c. 104, §21 (Hemingway's Code Supp. 1921, § 6512), imposing a privilege tax on express companies, dependent on the classification of railroads over which the express is moved, fixed by the Railroad Commission for purpose of levying privilege tax on railroads under section 45, of such chapter 104, HELD not violative of equal protection clause, because railroads and not express companies are entitled to a hearing on the classification of the railroads. Southeastern Express Co. v. Miller, State Revenue Agent, 44 Sup. Ct. 421.

II. FACILITIES.

See Facilities and Privileges.

§1¾. In General.

(a) The value of through service to the shipper is the same whether such service is rendered entirely by one express company or jointly, viz., by an express company and a rail carrier or by two rail carriers, although the two classes of service are not strictly comparable from a transportation standpoint. Kirschbraun & Sons Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 35.

§2. Delivery and Receipt.

See Transportation §5, §8.

(a) Express company is not liable for mistake of its agent in violating rules of Interstate Commerce Commission, regarding special instructions concerning delivery of shipments, where to so hold would nullify rules and regulations on file, for that would work discrimination among shippers. Wall v. American Ry. Express Co. (Mo., 1925) 272 S. W. 76.

ALL OTHER CITATIONS

Section 28 of Merchant Marine Act, 88 I. C. C. 671.

§2a. C. L. and L. C. L. Rates.

See Classification §5.

(a) Complainant attacked second class rates by express on oysters, clams and scallops, in carloads, from Virginia, Maryland, New Jersey, New York and Connecticut to Cincinnati, O., Louisville, Ky., Indianapolis, Ind., Chicago, Ill., St. Louis, Mo., Duluth, Minneapolis and St. Paul, Minn., Sioux City, Iowa, Omaha, Neb., Kansas City, Mo., and Denver, Colo., as unreasonable, unjustly discriminatory and unduly prejudicial and preferential of shippers in less carload lots. At the current express rate of $2.70 from Crisfield to Chicago on 1,330 gallons carload shippers bear charges of $324 and less carload shippers $432, a difference of $108, equivalent to 8c per gallon. Carload shipments are initially iced under the supervision of experienced

oyster shippers and the cars are sealed through to destination, except at times when reicing of shipments destined beyond Chicago becomes necessary. The less carload packages must be cared for in cars that may contain other perishable commodities, and opening of the cars enroute causes increased melting of the ice and possible temperature fluctuations. They may at times also lie over at transfer points or terminals and not be promptly iced when necessary. It is urged that lower rates on carload quantities reflecting the difference in cost of service to the carrier, would result in greater economy in distribution and reduced prices to consumers. Any quantity rates probably have boarded application to express traffic, essentially a parcel business, than to freight traffic, where the shipping unit to a very large extent is the car load. It does not appear that the public is now being inadequately served or that complainants are suffering unjust discrimination or undue prejudice. In terms of carloads, very few markets consume large quantities of oysters at prevailing price levels. HELD, rates attacked not unreasonable or otherwise unlawful, complaints dismissed. Booth Fisheries Co. v. American Ry. Express Co., 92 I. C. C. 653.

(b) The offering of a carload quantity entitles the shipper to a carload rating only in case that the public interest or other valid considerations do not require the contrary. Booth Fisheries Co. v. Amer. Ry. Express, 92 I. C. C. 653, 660.

§4. Export Service.

See Export Rates and Facilities.

(a) American Railway Express Company, respondent filed schedules proposing a charge for opening, recoopering and rewrapping packages for customs examination at the border points. On practically all express shipments imported from Canada respondent or its predecessors formerly acted as broker for the importer, the brokerage service including the clerical work incident to clearing the goods through the customs and the physical work of opening, recoopering, and rewrapping packages designated by the proper officials for inspection under the United States customs regulations. In recent years, in an increasing number of instances, other concerns or individuals have acted in this capacity. They are generally referred to as outside brokers. They have performed only the clerical work incident to clearing the shipments, leaving the physical work to be performed by respondent. The latter has accorded to outside brokers and their employees access to its premises and permission to do the work themselves, but the outside brokers have not chosen to take advantage thereof. Where goods are cleared at bonded or public warehouses at interior points the work of opening, recoopering, and rewrapping of packages for customs examination is performed by employees of the Bureau of Customs. The parties are agreed that it would not be advisable to have this work done by such employees on express shipments moving directly through the border ports of entry. Such an arrangement would not result in congestion because respondent has ample storage space at the border ports, but it would derive the importer of the desired expedited service in connection with this traffic, as the work would necessarily be subordinated to the primary function of the bureau, namely, to prevent and detect violations of the law and of the customs regulations. HELD, proposed schedules not justified but respondent may make a labor charge of 12c per shipment for physical work performed. Customs Examinations, 98 I. C. C. 284.

§4a. Import Service.

See Import Traffic.

(a) Proposed charge of 25 cents per shipment for opening, recoopering, and re-wrapping packages for customs examination at the order ports on import shipments by express from Canada to points in the United States found not justified. This charge would not apply on shipments where the American Express Co. acts as the broker and attends clearance details, nor on shipments of milk or cream. The suspended schedules ordered canceled without prejudice to the filing of new schedules which will provide that a charge of 12 cents per shipment be assessed on shipments when one or more packages are actually opened by order of the Customs and will not apply on any shipments where the American Express Co. or other concern or individual acts as broker for the importer and in that capacity attends to the physical work above described. Charge for Opening, Recoopering, and Rewrapping Packages for Customs Examination 98 I. C. C. 284.

§5. Free transportation.

See Crimes III; Free Transportation.

(a) Proposal to restrict free transportation of attendants with race horses moving by express to two attendants, and to require any in excess of that number to pay full passenger fares. found not justified. Service accorded race horse attendants is not comparable with that accorded passengers transported under published passenger fares, restrictions and duties require that such attendants remain continuously with the horses; resulting in rail carriers not being called upon to provide accommodations in their passenger coaches, and such attendants assume, by contract, all risks of accident or damage to themselves. Attendants with Race Horses, 89 I. C. C. 689.

(b) American Railway Express Company and Southeastern Express Company, respondents, proposed to restrict free transportation to two attendants in charge of race horses, carloads, moving by express. If the proposed schedules should become effective attendants in excess of that number would be required to pay full passenger fares. The number now allowed varies from two to six dependent upon the section of the country in which the movement occurs. While in transit the horses ordinarily receive no feed other than hay. Except as some shippers carry a water supply in barrels, water must be procured at stations during train stops. It is unnecessary here to set forth the special duties of the attendants and the difficulties of caring for such animals with an inadequate force of men. The testimony establishes that the presence of two men in each aisle of the car is necessary for the proper care of a carload of race horses in transit; that severe risks are entailed in shipping with a less number; and that ordinarily at least six attendants are sent with a carload, even in two attendant territory, where fares for attendants in excess of that number are paid. While the present rule provides for transportation of these attendants, and under specified conditions they are permitted to ride in a second class or smoking car of the train, the service clearly is not comparable with the service accorded passengers transported under the published passenger fares. Not only the restrictions of the rule but the duties of the attendants require that they remain continuously in the car with the horses. As a result, the rail carriers are not called upon to provide accommodations for such attendants in their passenger coaches. HELD, suspended schedules not justified. Attendants with race horses, 89 I. C. C. 689.

§7½. Free Collection and Delivery.

(a) The second-class express rates cover the ordinary express service, including pick-up and delivery. This terminal service is not included in either the baggage or commodity express rates. The commission assumes that the Illinois Central will not refuse to permit defendant to establish reasonable interline milk rates, at least until adequate baggage service at reasonable rates has been provided. Kentwood Ice Mfg. & Bottling Works v. Amer. Ry. Ex. Co. 101 I. C. C. 93, 98.

III. DISCRIMINATION.

See Discrimination.

§9. In General.

(a) Interstate express rates on ice-cream mix, sold and shipped under trade name of "Kim" from Kentwood, La., to points in Mississippi, Louisiana, Alabama, Tennessee, Florida, Georgia, and Texas with exception of points located on the Illinois Central Railroad, found unjustly discriminatory to extent they exceed contemporaneous rates maintained by defendant on condensed milk from and to same points. Nondiscriminatory rates prescribed for future. Kentwood Ice Mfg. & Bottling Works v. Amer. Ry. Ex. Co. 101 I. C. C. 93.

IV. RATES.

§10. Reasonableness in general.

See Any Quantity Rates I (y); Reasonableness of Rates.

(a) Complainant attacked class express rates charged on less carloads of wooden automobile bows, unfinished between May and September 1923 from Lancaster, Pa., and Metropolis, Ill., to Lansing, Mich., as unreasonable. Charged double first class of $5.94 from Lancaster and $5.40 from Metropolis. Specific rating was not provided on wooden bows. Subsequently defendant provided specific rating of first class. HELD, rates attacked unreasonable to extent they exceeded first class, reparation awarded.

Durant Motor Co. v. A. Ry. Express, 91 I. C. C. 695.

(b) Complainant attacked express rate charged of $4.28 on three cars of cantaloupes shipped August 22, 1922 from Turlock, Calif., to New York, N. Y., and Boston, Mass., as unjust, unreasonable, unjustly discriminatory, unduly prejudicial and in violation of long and short haul clause to extent it exceeded rates of $3.59 and $3.93 on cantaloupes and melons from southern California to New York and Boston. At time of movement joint rates on cantaloupes and melons from Brawley, Calif., and practically all other points in the Imperial Valley, in southern California, to New York and Boston were $3.59 and $3.93. Shipments from this section move over S. P., to El Paso thence E. P. S. W., and Rock Island lines. Turlock is in central California, 93 miles south of Sacramento, allegation of violation of fourth section not sustained. The present rate adjustment has been in effect since cantaloupes were first shipped by express from California. The original rates established were from Imperial Valley $2.50 and from Turlock $3 to New York. A blanket rate on fruits and vegetables applies from all California producing points to certain eastern cities and Turlock and Brawley enjoy the same rates on these commodities. The parity of rates was departed from by the establishment of rates on cantaloupes and melons from the Imperial Valley lower than those from Turlock. HELD, rates attacked unreasonable and unduly prejudicial to the extent they exceed rates on cantaloupes and melons from Brawley, reparation awarded. Gentile Company v. American Railway Express Co., 93 I. C. C. 76.

(c) Complainant attacked express first class rating and rates on trees, n. o. s., and shrubs and branches thereof, for interstate transportation by express as unreasonable and unduly prejudicial. This nursery stock are known as dormant in contradistinction to growing trees or shrubs, the latter being rated first class in pots or tubs; plant and receptacle created, and double first class in pots or tubs, not crated. In 24 I. C. C. 380 and 28 I. C. C. 131 nursery stock was rated second class. Believing that the second class rating on this traffic was not in accord with the findings in that case, defendant after some delay sought to increase the rating to first class. This proposal was approved in 59 I. C. C. 265. Nursery stock is subject to elaborate and complicated quarantine regulations, compliance with which requires of defendant time and expense. HELD, classification rating and rates attacked not unreasonable or unduly prejudicial, complaint dismissed. American Asso. of Nurserymen v. American Ry. Express Co., 93 I. C. C. 166.

(d) Complainant attacked express rates and refrigeration charges on strawberries carloads, from Louisiana to Oklahoma, Kansas and Missouri as unreasonable. The basic express rates throughout the entire country resulted from 24 I. C. C. 380, 28 I. C. C. 131 and 35 I. C. C. 3. The rates attacked are specific commodity rates. Rates under attack range from 42.6 to 50.9% of the first class express rates from and to the same points. The general basis for specific commodity rates is 60% of the first class rates. HELD, rates and refrigeration charges attacked not unreasonable, complaint dismissed. Dawson Produce Co. v. American Ry. Express, 93 I. C. C. 300.

(e) Complainant attacked second class express rates on cream, in 10 gallon cans, shipped during August and Sept. 1921 from Albion and Dallas Center, Iowa, to Omaha, Neb., as unreasonable. Dallas Center is on the M. & St. L., between Grand Junction and Des Moines, Iowa, and Albion on that carrier north of Marshalltown. They moved by express over the M. & St. L., to Grand Junction and Marshalltown and thence C. & N. W., 157 and 204 miles. Effective Jan. 1, 1922 defendant established commodity distance rates plus a transfer charge of 6c on cream to Omaha of 59c from Dallas Center and 65c from Albion. The commodity rates established are based on the scale prescribed in 15 I. C. C. 109. HELD, rates charged unreasonable to extent they exceeded rates subsequently established, reparation awarded. Fairmont Creamery Co. v. American Ry. Exp. Co., 93 I. C. C. 684.

(ea) Double first-class express rates assessed on wooden automobile bows, in bundles, l. c. l., found unreasonable to extent they exceeded first-class rate contemporaneously applicable on bows for horse-drawn vehicles, which lower rate carriers subsequently established on wooden bows for automobiles. While subsequent reduction is not by itself a

basis for an award of reparation, higher rate was applicable solely because of use to which commodity was put. Reparation awarded. Durant Motor Co. of Mich. v. Am. Ry. Exp. Co., 91 I. C. C. 695.

(f) Complainant attacked combination rates from April 1, 1921 to Omaha on cream or milk and cream in cans from points on the G. N., and I. C., in Iowa and South Dakota and express rates, second class, on cream from Michigan to Green Bay, Wis., as unreasonable. In 14552 rates attacked are combination baggage or baggage and express rates charged on interline shipments of milk and cream to Omaha from Alvord, Iowa, and Nunda, Davis, Virbog, Rutland and Sinai, S. D., points of origin on the G. N. At present this traffic moves in that lines baggage service to Sioux Falls, Sioux City or Yankton, S. D., and thence to Omaha, either in the connecting lines baggage service or by express. The route generally used is that of the G. N., to Sioux Falls, and thence express via the Northwestern. Points of origin in No. 14689 are on I. C., in northwestern Iowa, shipments moving via that line and Northwestern. The bulk of the milk and cream movement in this territory is single line, generally handled in baggage service. As a general rule the interline traffic is handled by the express company. Prior to July 1, 1918, date on which express company commenced operations, milk and cream traffic over the G. N., was handled by the Great Northern Express Co., whose operations were confined to that line. It continued to move by express until April 1, 1921 when the express company canceled its local commodity rates concurrently with the establishment of baggage rates by the G. N. Since Dec. 23, 1922 the date on which the suspended proposal became effective, complainants traffic has again moved in the G. N., baggage service to the transfer point and thence by express, at combination rates. Any traffic which might be delivered to the express company for through movement by it would be subject to second class, as was true also prior to Jan. 1, 1922. The same situation is true of the I. C. A scale of rates for joint line application higher than the single line Beatrice scale by an amount sufficient to cover the terminal services at the interchange point, with provision for an additional charge for drayage where drayage is necessary in order to transfer shipments between separate passenger depots of connecting lines, would effect a reasonable adjustment of the situation having due regard for the rights both of shippers and carriers. Undoubtedly defendants are entitled to compensation for drayage, where drayage is necessary, as well as for the other terminal services rendered by them at the transfer point. In 14479 the express company is the sole defendant. In this case one point of origin is on the D. S. S. & A., and the other two on the Soo Line. Green Bay, destination, is on the Milwaukee. The shipments moved by express between July 1, 1922 and August 25, 1922 charged at second class rates. The rates now used are the subsequently established combination baggage rates of the rail carriers, each factor being based upon the Beatrice scale, plus a transfer charge. Rail carriers are not party to this case and no order can be made against them. HELD, charges paid to Green Bay in 14479 unreasonable to extent they exceeded those based upon the continuous mileage under express commodity distance scales for 10, 8, and 5 gallons in effect for that territory for single line hauls, plus the express companys published charges for car to car transfer at the junction points of the rail carriers. HELD, rates from points of origin in 14552 and 14689 not unreasonable but for future reasonable maximum rates on interline shipments of milk and cream in joint baggage service or in joint baggage and express service will be those constructed upon the basis of rates ranging from 45c for 10 gallon can, 40c for 8 gallon can, and 31c for 5 gallon can for 25 miles and under to 75c for 10 gallon can, 67c for 8 gallon can and 52c for 5 gallon can, for 250 miles, with addition of drayage charges between connecting carriers of 6c per can, minimum charge 15c, for distances of 0.5 miles and under and 8c per can, minimum charge 20c for distances over 0.5 miles, reparation awarded in 14552 and 14479. Kirschbraun & Sons, Inc. v. G. N. Ry., 100 I. C. C. 28.

(g) Complainant attacked express rates charged on corpses throughout the United States as unjust and unreasonable. Corpses are usually shipped in baggage cars, checked, at regular one way adult passenger fare, minimum $1.20, provided the remains are accompanied by an adult escort holding separ-

ate ticket, regular or commutation. On weight over 500 pounds charges are assessed at excess baggage rates. The escort may accompany one or more corpses. If an escort is not available for baggage service is inconvenient, shipment may be made by express. About 12% of the movement now is by express. Present charge by express for corpses of adults or children, is an amount equal to double the regular one way adult passenger fare, minimum $3.30 for adults and $2.20 for children under 12 years of age, if the weight does not exceed 500 pounds. Excess weight is assessed first class rates. This basis has been in effect since some time prior to 1887, when classifications were first published except for the following changes. On April 1, 1913 a provision was added which permits personal effects of the deceased up to 150 pounds in weight to be included in the shipment without additional charge. On Feb. 1, 1914 the minimum charges on the corpses of an adult were reduced by the Commission from $5 single express line, or $3 per company for joint line service, to $3 for any number of lines, and on the corpse of a child from $2.50 to $2 for single and joint line service, respectively, to $2 for hauls of either character. On May 1, 1916 the first class express rates on weight in excess of 500 pounds were made effective. All the rates were increased 10% on June 17, 1918. The situation is not free from difficulty because analogy can not be drawn between the transportation of corpses and that of ordinary commodity. Considerations apart from the elements of transportation, and respect for the dead, make it impossible to handle the traffic as ordinary merchandise is handled whether on station platforms, in express cars, or through the public streets. Certainly complainants can not expect the traffic to be treated with special consideration in the way of loading, unloading, and handling en route, and to be treated as ordinary merchandise for rate purposes. The present basis of charges is of long standing. Under it 88% of the movement is by baggage where the parties are agreed it should properly move. The proposed disruption of the present rate adjustment would not only tend to change the preponderance of movement but would also increase the charges on short haul traffic. The reasonableness of charges is to be tested not by the way in which they are arrived at but by their aggregate amount. An adjustment of this character should not be disturbed except upon clear and convincing showing that readjustment is necessary or desirable in the public interest. This record contains no such showing. HELD, charges attacked not unreasonable, complaint dismissed . Dunn v. American Railway Express, 100 I. C. C. 229.

(h) Complainant attacked express rates on ice cream mixing cans from Kentwood, La., to Mississippi, Louisiana, Alabama, Tennessee, Florida, Georgia and Texas as unreasonable, unjustly discriminatory and unduly prejudicial. Kentwood is on the I. C., 5.5. miles from the Mississippi state line, 100 miles south of Jackson, Miss., and 82 miles north of New Orleans, La. Ice cream mix is produced from milk and cream by condensation and the addition of sugar and a small quantity of gelatin. It is sold only in wholesale quantities and is shipped direct to the ice cream trade in 10 gallon cans, the same as those used for shipping milk or cream. The wholesale price per gallon is considerably less than that of cream or of most forms of condensed milk. It is handled in exactly the same manner as milk and cream. There is no greater transportation hazard. Defendants admit that the handling of ice cream mix is no more burdensome upon it than the handling of milk, cream or condensed milk. At present practically all interstate shipments move in baggage service. The I. C., maintains between points on its lines baggage rates on milk, cream, condensed milk, buttermilk, pot cheese, curd, and similar milk products. These rates are based on the so called Beatrice scale of commodity rates originally prescribed by the Commission to apply from certain territory to Chicago in 15 I. C. C. 109. The tariff does not specify ice cream mix, but the I. C., considers it the same as condensed milk, and applies the same rates. There are no commodity express rates on ice cream mix from Kentwood and second class rates apply. The second class express rates cover the ordinary express service, including pick-up and delivery. This terminal service is not included in either the baggage or commodity express rates. The record indicates that there are many varieties of ice cream mix manufactured throughout the country, some of which differ materially from complainants product.

The findings herein should be understood as relating only to ice cream mix consisting of sweetened condensed milk or cream with the addition of not more than 1% of gelatin or other stabilizer. HELD, rate attacked unreasonable to extent they exceeded rates on condensed milk and unreasonable to extent they exceeded for like distances rates on condensed milk under the socalled c. f. a. scale. Kentwood Ice Mfg. & Bottling Works v. Amer. Ry. Exp. Co., 101 I. C. C. 93.

(i) Any-quantity express rates on oysters, in cans, in iced boxes or barrels, c. l., from Atlantic seaboard points to western destinations, found not unreasonable, discriminatory, or unduly preferential of shippers in l. c. l. quantities. Under present rates small and large shippers alike have same privileges. No compensating advantages would result from lower c. l. rates, under which boxing would be done at origin instead of distributing points on traffic intended for reshipment, thus imposing an additional burden and expense on both c. l. shipper and carrier due to necessity of hauling containers for entire carloads from source of supply to distribution points, where none are now hauled in c. l. movements. Moreover, such lower rates would restrict markets of l. c. l. shippers, without apparent benefit to any one. Booth Fisheries Co. v. Am. Ry. Exp. Co., 92 I. C. C. 653.

(j) Express rate on cantaloupes from Turlock, Calif., to New York and Boston found unreasonable and unduly prejudicial to extent it exceeded rates contemporaneously applicable from Brawley, Calif., and other Imperial Valley points. A blanket rate on fruits and vegetables applies from all California producing points to certain eastern cities and no justification appears for higher rates from Turlock on cantaloupes, when Brawley and Turlock take same rates on other commodities, especially in view of slight differences in distance for long hauls here considered. Moreover, transcontinental rail carriers provide same rates from both points on cantaloupes, melons, and other commodities to New York and Boston. Reasonable rates prescribed and reparation awarded. Gentile Co. v. Am. Ry. Exp. Co., 93 I. C. C. 76.

(k) First-class express rating and rates on trees, n. o. s., and shrubs and branches thereof, found not unreasonable or unduly prejudicial as compared with second-class rating and rates on berry or vegetable plants, boxed or crated, or with materially lower l. c. l. freight rates on trees, shrubs, and vines under certain conditions of packing. No competition exists between trees and shrubs on the one hand and vegetable or berry plants on the other; no movement is shown under freight rates, nor is service rendered by express comparable with that by freight. Asso. of Nurserymen v. Am. Ry. Exp., 93 I. C. C. 166.

(l) Specific commodity express rates and refrigeration charges on strawberries from points in Louisiana to destinations in Oklahoma, Kansas, and Missouri, found not unreasonable as compared with lower rates and charges to selected destinations in different sections of the country, including large consuming centers such as Chicago, St. Louis, Kansas City, Cleveland and Philadelphia, or with rates and refrigeration charges from Alabama and Texas points to destinations here considered. Volume of movement to large markets is greatly in excess of that to points here considered and record discloses no movement of strawberries from Alabama and Texas points. Moreover, single rates selected from large groups or average of a few rates taken from groups embracing many points do not afford a fair comparison in measuring reasonableness of rates attacked. Dawson Produce Co. v. Am. Ry. Exp., 93 I. C. C. 390.

(m) There should be a higher return to railroads for carriage of express matter than they receive upon freight traffic, and while the two services are not directly comparable, it is proper to contrast charges exacted for lesser freight service with charges for transportation of same articles in superior express service. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 508.

(n) Having regard for difference in the structure of freight and express classifications the commission can not predicate a condemnation of the freight rate for a light and bulky article like furniture frames solely upon a showing that express rates are lower between many points. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 509.

(o) Second-class express rates on cream, in 10-gallon cans, from Albion and Dallas Center, Iowa, to Omaha, found unreasonable to extent they exceeded commodity distance rates subsequently established. Reparation awarded. Fairmont

Creamery Co. v. Am. Ry. Exp. Co., 93 I. C. C. 684.

(p) Complainant attacked first class rating in official express classification and rates and charges resulting therefrom on laundry in baskets or hampers as unreasonable, unjustly discriminatory and unduly preferential of other commodities rated second class in said classification. Laundry shipped in express is packed in hampers or baskets made of heavy canvas over iron frames with either wooden or canvas tops. An empty hamper weighs from 20 to 70 pounds and holds from 2 to 16 bushels of laundry. There is a regular weekly movement in uniform quantity. Loss and damage claims are comparatively few, and in proportion to the amount of business negligible. If the Commission were to prescribe second class rates, pound basis, it would be difficult to deny like classification and rates to the various articles comprised in the laundry package or hamper when shipped by express from the manufacturer to the retailer, for, ratings and rates cannot be made to depend upon the use to which an article is put. Thus the simple grouping of commodities moving by express into two general divisions, merchandise and articles of food and drink, would be disrupted. HELD, rating attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Laundry Owners National Asso. v. Am. Ry. Ex. Co. 102 I. C. C. 36.

(q) Complainant attacked express rates on fresh fruits and vegetables from the Farmington, N. M., district to Colorado as unreasonable, unjustly discriminatory and unduly prejudicial as compared with rates intrastate in Colorado from points in the Western Slope district to the same destinations in violation of sections 1, 3 and 13 of the act. The only rail line serving the Farmington district is a narrow gauge branch of the Rio Grande, extending about 50 miles south from Durango, Colo., to Farmington, N. M. The only outlet by rail for the products of this district is into Colorado, where they compete with similar products of the Western Slope, California, eastern Colorado and to a lesser extent other states. The Western Slope embraces a large number of points in the western part of Colorado, Grand Junction being representative in the northwest and Durango in the southwest. The principal markets are the Colorado common points, including Denver, Colorado Springs. Pueblo, Trinidad, and Walsenburg, Colo. The record shows that the express commodity rate on fresh fruits and vegetables, any quantity, from the Farmington district to the destination territory in question was reduced from $1.40 to $1.39 on Feb. 1, 1914 in order to conform to 24 I. C. C. 380 and 28 I. C. C. 131. On July 5, 1914 the rate to most of the destinations on shipments of 1,500 pounds or over was reduced to $1.15, leaving the rate of $1.39 to apply on smaller shipments. Under subsequently authorized increases these rates became on Oct. 13, 1920, $1.71 and $2.05 respectively, which are the present rates. Defendant publishes a rate of $1.25 from the Western Slope under order of the Colorado Commission. The rates from the Farmington district compare favorably with express commodity rates on like traffic for corresponding distances between various interstate points in the same general territory. The average distances from producing points in the Farmington and Western Slope districts, respectively, to Denver, Colorado Springs and Pueblo over operating routes are shown to be about 419 and 348 miles respectively, a difference of 71 miles in favor of the Western Slope. Before the Commission can require a change in the intrastate rate established by the Colorado Commission it must appear that the intrastate rate injuriously affects interstate commerce in violation of the act. In some cases intrastate rates affect interstate commerce in ways so manifestly injurious as to make them subject to the control of the Commission. In other cases the relation of an intrastate rate to movement of interstate commerce is so remote and insignificant that it may properly be disregarded. The decisive factor is whether or not the intrastate rate affects interstate commerce injuriously to a material extent. Under present train schedule the running time from Farmington to Denver is about 33 hours. The traffic moves about 250 miles over a narrow gauge line from Farmington to Alamosa, Colo., where transfer to standard gauge cars is necessary, which involves an additional expense. From an operating standpoint the bulk of the fruit shipped by express from the Western Slope is easily handled. During the shipping season it moves in great volume in through trains from that terri-

tory to Pueblo, Colorado Springs, and Denver, and no transfer is required. The time of transit from Grand Junction to Denver is about 18 hours. The Western Slope has practically no outlet for its fruit other than the Colorado common points and the intermediate territory in Colorado. There is no evidence of record which would warrant a finding that interstate traffic from Farmington to the Colorado common points moves under substantially similar circumstances and conditions as does intrastate traffic from the Western Slope to the same destinations. HELD, rates attacked not unreasonable, intrastate rate not unduly preferential, complaint dismissed. Hunter Bros. Mercantile Co. v. American Ry. Express Co., 107 I. C. C. 313.

(r) In cases where rail carriers under provisions of their contracts with express companies have availed themselves of their exclusive right to handle milk or cream moving over their own lines, the commission can not require express company to establish rates for the future except by voluntary agreement with rail carriers, see Express Rates on Milk and Cream, 74 I. C. C. 427. However, this does not preclude shippers from obtaining similar service at reasonable rates direct from carriers on interline shipments or jointly from rail carriers and express companies where latter are not by contract precluded from participation in joint rates. Kirschbraun & Sons, Inc. v. G. N. Ry. Co. 100 I. C. C. 28, 39.

(s) Following 80 I. C. C. 29, and 88 I. C. C. 670, second-class express rates on cream, in 10, 8 or 5 gallon cans, from Humboldt, Cooks, and Trenary, Mich., to Green Bay, Wis., found unreasonable to extent they exceeded rates based upon continuous mileage under the express commodity distance scales contemporaneously in effect for single-line hauls in same territory, plus express company's published charges for car-to-car transfer at junction points of rail carriers. Reparation awarded. Kirschbraun & Sons, Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 39.

(t) Combination baggage or baggage and express rates on interline shipments of milk and cream in 10-gallon cans, from points in Iowa and South Dakota, to Omaha, Nebr., found unreasonable and reasonable maximum rates constructed on basis of specific joint-line distance scales, with the addition of drayage charges where necessary, prescribed for future and reparation awarded to that basis. Kirschbraun & Sons, Inc. v. G. N. Ry. Co., 100 I. C. C. 28, 40.

(u) Rates on shipments of corpses, by express, between points in United States, found not unreasonable. Among other things, the traffic is given special and expedited treatment in loading, unloading, and in transit, and considerations apart from the elements of transportation and respect for the dead, make it impossible to handle it as ordinary merchandise. Furthermore, present basis of charges is of long standing, the proposed disruption of present rate adjustment would not only tend to change the preponderance of movement but would also increase the charges on short-haul traffic. An adjustment of this character should not be disturbed except upon clear and convincing showing that readjustment is necessary or desirable in public interest, and record here contains no such showing. Dunn v. American Ry. Express Co., 100 I. C. C. 229.

(v) Rates on shipment of corpses, by express, between points in United States; found not unreasonable. Among other things, present basis of charges is of long standing, and an adjustment of this character should not be disturbed except upon clear and convincing showing that readjustment is necessary or desirable in public interest, which record here does not contain. Dunn v. American Ry. Express Co. 100 I. C. C. 229.

(w) Interstate express rates on ice-cream mix sold and shipped under trade name of Kim from Kentwood, La., to points in Mississippi, Louisiana, Alabama, Tennessee, Florida, Georgia and Texas, with exception of points located on the Illinois Central Railroad, found unjustly discriminatory to extent they exceed contemporaneous rates maintained by defendant on condensed milk from and to same points and unreasonable to extent they exceed rates on condensed milk for like distances under so-called c. f. a. scale as published by defendant following C. F. A. Milk and Cream Rates, 46 I. C. C. 601. Non-discriminatory and reasonable rates prescribed for future. Kentwood Ice Mfg. & Bottling Works v. Amer. Ry. Ex. Co., 101 I. C. C. 93.

(x) Complainant attacked distance scale express rate of 61c per 10 gallon

can charged on less carloads of cream from Essex, N. Y., to Fair Haven, Vt., a distance of 68 miles, and the like rate of 97c charged on shipments from Essex to Springfield, Mass., distance 239 miles, as unreasonable. Complainant alleged that defendant railroads do not publish rates on milk or cream in baggage car or milk train service from Essex to Springfield and refuse to perform such service. The haul to Fair Haven is all in D. & H. trains, but there is a transfer between express cars at Whitehall, N. Y. The haul to Springfield is in a D. & H., train to Albany, N. Y., where there is a transfer between express cars at the union station, and thence in a B. & A., train. HELD, rates attacked unreasonable to extent they exceed 55c to Fair Haven and 87c to Springfield, reparation denied. The D. & H. has no baggage car rates. If its milk car rate from Essex to Albany be added to the baggage car rate of the B. &. A., it appears the through rate would be in excess of the through express rate. Baggage car rates as a rule do not apply jointly when shipments move over more than one railroad. HELD, there is no reason for the establishment of baggage car service beyond the desire of reduced rates. Complaint dismissed. State of New York v. American Ry. Express Co. 109 I. C. C. 20.

(y) Complaint attacked commodity rate of $4.28 charged on one car of cantaloupes shipped August 22, 1922 by express from Turlock, Calif., to Philadelphia, Pa., as unreasonable, unjustly discriminatory, and unduly prejudicial. The complaint was not filed within the statutory period of two years, and is barred. Shipment moved via Sacramento, Calif., Ogden, Utah, Omaha and Chicago the same lines as would be used in moving shipments from Brawley. Distance from Turlock 3,078 miles and from Brawley, 2,903 miles, a difference of 175 miles. Rate from Brawley was $3.59, and subsequently the same rates from Brawley were established from Turlock. HELD, present rate not unreasonable or otherwise unlawful, and reparation claim is barred by the statute, complaint dismissed. Gentile Co. v. Amer. Ry Exp. Co. 109 I. C. C. 171.

(z) Complainant attacked commodity rates charged since June 21, 1924 on dressed poultry and dead rabbits, in straight or mixed carloads, and/or dressed poultry, and/or dead rabbits in mixed carloads with butter and/or eggs, by express as unreasonable. Under 83 I. C. C. 606 the express companies were directed to establish and apply to the interstate transportation of articles of food to which commodity rates were applicable, within and between the several express rate zones, commodity rates which would not exceed those in effect on Oct. 12, 1920, from and to the same points. Supplemental report in 89 I. C. C. 297, required reductions in the rates to the basis stated above only upon fruits, berries, vegetables, butter and eggs carloads. Prior to the effective date of this order butter, eggs, and dressed poultry by express took the same commodity rates in practically all instances. Present record contains no evidence that express rates on dressed poultry should be higher than those on butter and eggs. Fruits, vegetables, fish, butter, eggs and dressed poultry are all shipped in refrigerator cars and dressed poultry is at least as desirable traffic from the carriers point of view as any of the other commodities. The dressed poultry movement in November and December is very desirable traffic because it provides a return movement in refrigerator cars which during those months are used as baggage cars and sent westward loaded. HELD, rates attacked unreasonable to extent they exceed rates in effect on Oct. 12, 1920. National Poultry, Butter & Egg Asso. v. Amer. Ry. Exp. 109 I. C. C. 565.

Kirschbraun & Sons v. Am. Ry. Co., 88 I. C. C. 670; Express Rates on Milk and Cream in Virginia, 88 I. C. C. 687.

§11. Specific Rates.

(2) Rates Based on Value.

See Comparative Rates; Released Rates.

(a) Complainant attacked defendants rates, rules, regulations and practices with respect to the transportation by express of money, coin, bullion, currency, bank notes, bills of exchange, and securities from, to, and between interstate points as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section 20 (11) of the act. The rules of the express classification here considered require that the shipper indicate the actual value. This indication by the shipper determines the applicable rate. There is no provision for a

declaration or agreement of value limiting liability. The shipper does not have the privilege of declaring a lesser value in consideration of a lower rate. In 100 I. C. C. 471, the Commission found that released rates and actual value rates could be fairly and effectively differentiated and that actual value rates are not within the prohibition of the Cummins amendment. It follows, therefore, that the rates here attacked are not violative of that amendment. The transportation of money is for the most part to or from the Federal reserve banks and their branches and within the respective Federal reserve districts. The methods of handling shipments of money and merchandise are entirely dissimilar. It is difficult to conceive that the transportation charges on packages of the same weight, in view of the precautions taken should be the same. It can not be said that the charges for handling money shipments over and above those for handling a package of merchandise of the same weight represent insurance exclusively. The express companies do not regard money, bullion, and securities as desirable traffic, and they prefer that these articles be handled by other agencies. However, such traffic as is offered, defendants with to handle according to the present methods. Defendants are strongly opposed to the establishment of released rates on these articles. They urge that if such rates were established it would still be necessary to render the same service for the protection of this traffic that is now provided, because some shipments would be made on the basis of full valuation; that taking into account the shipments that would be made at released rates, the revenue would be far less than the cost of maintaining the service; and the handling of money in this manner would tend to lessen the care now given by employees to prevent loss of the packages through negligence or robbery. HELD, express rates, rules and practices, not unlawful, complaint dismissed. New York Federal Reserve Bank v. Amer. Ry. Ex. Co. 107 I. C. C. 4.

§11. (3) Rates Based on Weight.

See Weights and Weighing.

(a) American Railway Express Company, respondent, proposed to cancel the estimated weights on asparagus by express from Arizona and California. Present estimated weight 28 lbs. per crate, containing twelve 2.5 pound bunches, and 34 pounds per crate, containing twelve 2.5 pound bunches. In the absence of estimated weights, the charges would be based upon the actual gross weight of each shipment at the time it was received for transportation, or if many shipments were made, a number of packages of the same size and containing the same commodity would be weighed and the average weight adopted as the weight of each package in the shipment. The weight of the socalled 2 pound pack has increased so that now it ranges from 32 to 39 pounds. Protestant conceded that the actual weights today are in excess of the present estimated weights. The evidence justifies the conclusion that 34 pounds on the so-called 2 pound bunch and 40 pounds on the so-called 2.5 pound bunch as estimated weights per crate more nearly approximate the average weights of present day shipments. HELD, proposed schedules not justified, but respondents have justified estimated weights of 34 pounds per crate containing twelve 2 pound bunches and 40 pounds per crate containing twelve 2.5 pound bunches of asparagus. Express weights on asparagus from Arizona and California, 92 I. C. C. 254.

(b) First-class rating on laundry in official express classification found not unreasonable, discriminatory, or unduly prejudicial. If second-class rates, pound basis, as sought by complainant, were prescribed, it would be difficult to deny like classification and rates to various articles comprised in the laundry package or hamper when shipped by express from manufacturer to retailer, for ratings and rates can not be made to depend upon use to which an article is put. Thus the simple grouping of commodities moving by express into two general divisions would be disrupted. Moreover, no similarity in transportation conditions is shown with respect to commodities used for comparisons with rates on laundry, and none of them is shown to compete with laundry. Laundry Owners' Nat'l Asso. v. Am. Ry. Ex. Co., 102 I. C. C. 36.

§11(4). Block System.

(a) Respondent, American Railway Express Company, proposed to cancel certain commodity rates on fruits and vegetables, carloads, between Mountain-Pacific and eastern and central territories. In the express tariffs now in

effect commodity rates on fruits and vegetables between the territories considered are named by block numbers which include all points of origin or destination within the blocks specified. In the reissues of these tariffs, now under suspension, respondent has published rates from those blocks in which carload shipments originated during the years 1923 and 1924 to specific points to which carload shipments moved during the same period, thus materially restricting the application of the rates, especially as to destinations. Respondent says that this change was made solely in the interest of economy in publishing and distributing the tariffs and with no desire to increase rates actually used. It expresses willingness, if the suspended tariffs should be allowed to become effective, to restore commodity rates from or to any omitted point from or to which there has been or is likely to be a carload movement, to restore any rate contained in the present tariffs on one day's notice upon the request of any shipper, and to establish carload rates where such rates are justified. The tariffs now in effect are comparatively small, one comprising 18 pages another 9 pages and the third 8 pages, as compared with 16 pages in the two tariffs which would supersede them. If it should become necessary to publish many supplements establishing additional rates on one day's notice the aggregate printing would soon exceed the present tariffs entailing even greater cost in printing and distribution than the present arrangements. HELD, proposed schedules not justified. Express rates on fruits and vegetables 104 I. C. C. 739.

§17. In general.

(a) Run of stack straw contains from 5 to 30 per cent moisture and is not as valuable as so-called merchantable straw. American Box Board Co. v. Director General, as Agent, 89 I. C. C. 271, 272.

(b) Cost study submitted by Class I railroads of United States in support of petition for increased interstate express rates and charges filed by American Ry. Express Co., based upon certain expense ratios for this service developed in the Mail Pay Case, 56 I. C. C. 1, and reviewed in the prior report in this case, 83 I. C. C. 606, again reviewed and found not to have established cost of the express service. Express Rates, 1922, 89 I. C. C. 297.

(c) There should be a higher return to railroads for the carriage of express matter than they receive upon freight traffic, and while the two services are not directly comparable, it is proper to contrast charges exacted for lesser freight service with charges for transportation of the same articles in superior express service. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 508.

(d) To show unreasonableness complainant compared transportation charges by freight with those by express. FOUND, express rates not being made with relation to freight rates, such comparisons are not convincing. Frost v. A. & G. Ry., 96 I. C. C. 15, 17.

§20. Comparisons.

See Comparative Rates.

(a) There should be a higher return to railroads for the carriage of express matter than they receive upon freight traffic, and while the two services are not directly comparable, it is proper to contrast charges exacted for lesser freight service with charges for transportation of the same articles in superior express service. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 508.

(b) Comparisons made of combination baggage and express rates with various freight rates can not be regarded as of material value for the reason

that the two classes of service are not comparable. Kirschbraun & Sons, Inc. v. G. N. Ry Co., 100 I. C. C. 28, 35.

(c) Analogy can not be drawn between the transportation of corpses and that of ordinary commodities. Dunn v. American Ry. Express Co., 100 I. C. C. 229, 232.

§23. Percentage of Freight Rate.

(a) If railroads do not receive sufficient compensation out of a reasonable express rate, that is a matter to be corrected in contracts between them and the express companies, and not by establishing unreasonable express rates. Express rates on Milk and Cream in Va. 88 I. C. C. 689.

tric Lines V; Evidence §22; Express Companies II; Lease; Penalty Charges; Perishable Freight; Reconsignment; Refrigeration §4¼; Special Contracts; Special Rates and Services; Stock Yard Companies; Stoppage in Transit; Tap Lines; Telephone and Telegraph Companies II; Terminal Facilities §6; Through Routes and Joint Rates; Transportation; Water Carriers §4½; Weights and Weighing.

I. JURISDICTION OF COMMISSION.

See Interstate Commerce Commission; Jurisdiction of Commission.

§1. In General.

(a) The commission has power under section 1 of the act to determine whether in a particular case a transit privilege should be granted or withdrawn. See 257 U. S. 247, 257. Limestone Into and Cement Out of Ada, Okla., 102 I. C. C. 407, 410.

(b) By section 15 the commission is authorized and required, upon a complaint to inquire and determine what would be a just and reasonable rate or rates, charge or charges. This, of course includes all charges, and the carrier is entitled to have a finding that any particular charge is unreasonable and unjust before it is required to change such charge. For services that it may render or procure to be rendered off its own line, or outside the mere matter of transportation over its line, it may charge and receive compensation. If the terminal charge be in and of itself just and reasonable it can not be condemned or the carrier required to charge it on the ground that it, taken with prior charges of tansportation over the lines of the carrier or of connecting carriers, makes the total charge to the shipper unreasonable. That which must be corrected and condemned is not the just and reasonable terminal charge, but those prior charges which must of themselves be unreasonable in order to make the aggregate of the charge from the point of shipment to that of delivery unreasonable and unjust. In order to avail itself of the benefit of this rule the carrier must separately state its terminal or other special charge complained of, for if many matters are lumped in a single charge it is impossible for either shipper or commission to determine how much of the lump charge is for the terminal or special services. National Livestock Exchange v. A. T. & S. F. Ry 107 I. C. C. 512, 520.

(c) Service of docking and undocking, running lines, and furnishing fresh water to ships in connection with the dumping and trimming of coal into vessels found not to be "transportation" within the meaning of section 1 (3) of the act, and beyond the commission's jurisdiction. Southern Transp. Co. v. N. & W. Ry., 101 I. C. C. 211, 221, 223.

(d) The Commission has power under section I f of the act to require the establishment of transit, but the Commission has exercised that power rarely, it having been its policy generally not to require the establishment of transit arrangements unless to remove unjust discrimination or undue prejudice. Montgomery Cotton Exchange v. L. & N. R. R. 112 I. C. C. 325, 332.

II. CARRIER'S DUTY TO FURNISH OR PERMIT.

See Allowances §10; Bills of Lading II; Branch Lines IV; Cars and Car Supply IV, V; Express Companies §1¾; Lighterage V; Reconsignment §3½; Refrigeration II; Terminal Facilities II, §3; Through Routes and Joint Rates VII; Transportation II.

§2. In General.

(a) The additional service involved in transporting commodities out of the direct line of movement to and from transit points is one for which carriers may properly require reasonable compensation. Grain to Pacific coast, 98 I. C. C. 158, 162.

(b) Under statutes requiring unloading of cattle for rest, and feeding while so unloading at owner's "reasonable expense," carrier, in absence of agreement, cannot recover from owner for feed placed in cars after cattle were reloaded. Pennsylvania R. Co. v. Swift & Co., 4 Fed. (2d) 61.

(c) It does not follow from fact that the commission has approved increases in handling charges at certain ports that a lower basis of charges would have been unlawful. Carriers may, subject to certain restrictions, initiate rates lower than commission may prescribe. The question is as to whether or not they are propos-

ing to go to such lengths in attempting to meet competition and attract business that resulting charges will be so low as to create a burden upon other traffic. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 644.

(d) Proposed change in rule defining service of handling at south Atlantic and certain Gulf ports, found justified. No increases or decreases will result from the proposed new section which does not change substance of the existing rule but merely clarifies its application in so far as handling between ship side and box car is concerned, and also makes clear that no charge will be assessed in connection with shipments transferred by ship's tackle to or from open-top cars standing on marginal tracks at ship side. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 645.

(e) The public interest is not conserved by shutting out, through denial of a necessary transportation service an important agricultural product from markets which it can reach over routes requiring less service than that over other routes primarily because one of the carriers on whose lines the traffic originates does not reach those markets over routes which would give to it a long haul. Montgomery Cotton Exchange v. S. A. L. Ry. 109 I. C. C. 579, 587.

ALL OTHER CITATIONS

Mutual Products Trading Co. v. O. W. R. R. & N. Co., 85 I. C. C. 1; Rules for Storing and Sacking Cement, 88 I. C. C. 662.

§3. Compression.

See Compress Companies and Charges.

(a) Failure of carrier to absorb out of applicable rates entire compress charges on cotton forwarded from points in Texas, Louisiana, Arkansas, and Oklahoma to interstate destinations found unreasonable. Reparation awarded. Houston Cotton Exchange v. A. & R. R. R., 92 I. C. C. 220.

(b) Rates on cotton from certain points on C. of G., S. A. L., and L. & N., concentrated at Savannah, Ga., and thence reshipped to cotton mills in North and South Carolina, and defendants' rules, regulations and practices governing transit at Savannah on cotton from points in the Southeast, Mississippi Valley, and territory west thereof, when destined to such cotton mills or for export, found not unreasonable or unduly prejudicial. Contention that combination rates on this traffic are substantially higher via Savannah than those for corresponding services from and to same points via Augusta and Atlanta, and that they exceed materially through rates, both local and joint, in effect via Savannah from other points in same general territory to same destinations, not sustained, there being combination rates materially lower in most instances than those questioned by complainant applicable on this traffic, which are in the main substantially equal via Savannah, Augusta, and Atlanta. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749.

(c) Upon contention of the uptown warehouses and compresses at the ports that under any readjustment that is made in the domestic and export rates on cotton to the Gulf ports, they should continue to receive a free second merchandising or compression in transit on cotton purchased by them which has already been concentrated at the through rate, FOUND: That such a request is not reasonable, for shipments stopped at other points for second merchandising or compressing must pay a transit charge and the commission sees no reason why a exception should be made in the case of the uptown warehouses or compresses at the ports. Cotton, passing through these uptown facilities is, however, entitled to one free transit privilege. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 166.

ALL OTHER CITATIONS

Locke & Co. v. Director General, as Agent, 88 I. C. C. 487.

§4. Concentration.

See Concentrating Rates and Privileges.

(a) Rates on cotton from certain points on Central of Georgia, Seaboard Air Line, and L. & N. concentrated at Savannah, Ga., and thence reshipped to cotton mills in North and South Carolina and defendants' rules, regulations, and practices governing transit at Savannah on cotton from points in the Southeast, Mississippi Valley, and territory west thereof, when destined to such cotton mills or for export, found not unreasonable or unduly prejudicial, except that the charge of Central of Georgia for concentration at Savannah of cotton which

has moved from or through compress points without compression at carriers' privilege rates and which is subsequently reshipped to Carolina mills is found unreasonable. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749.

(b) Complainant attacked maintenance by defendants or participation in transit, concentration, warehousing and reshipping arrangements under which cotton originating at points in Alabama and Mississippi on and west of the L. & N., from Decatur to Mobile, Ala., may be concentrated and stored at Atlanta, Ga., and thence reshipped to south Atlantic ports and to southeastern and Carolina points and, via south Atlantic ports, to New England mill points at through rates, and refuse to establish the same arrangements on this traffic when concentrated and stored at Montgomery, thereby subjecting complainant to undue prejudice; that the sums of the rates to and from Montgomery charged on this traffic when concentrated at that point are unreasonable as compared with the through rates from initial point of shipment to final destination applicable through Montgomery and in violation of the fourth section. L. & N. and M. & O. serve Montgomery directly. Transit rules of defendants in this territory are not uniform. The L. & N. permits cotton from points on its line south of Montgomery to be concentrated at that point and reshipped at the balance of the through rate, point of origin to destination, through Ohio river gateways to the east when the movement to and from Montgomery is via the L. & N., but denies transit from the same origins on cotton destined to southeastern and Carolina mill points or south Atlantic ports, regardless of whether the cotton moves into and out of Montgomery over its line. Montgomery is the first compress point en route to the south Atlantic ports and Georgia and Carolina mill points over the lines of defendants through Montgomery from the points of origin other than those on the L. & N., north of Birmingham and those on the Southern west of Selma and the Western Ry. of Ala. The record indicates that uncompressed cotton originating west of Selma and north of Birmingham would not ordinarily be compressed at those points at the direction and expense of the carriers when destined to Montgomery and that practically all of the cotton concentrated at the latter point from the origin territory would be in the uncompressed state. The short line route from this territory to Savannah, a south Atlantic port, is through Montgomery in connection with the Seaboard. The lines of defendants from the origin territory to Montgomery and of the Western Ry. of Ala. or Seaboard and connections beyond also provide reasonably direct, and in some instances, the short line routes to the other south Atlantic ports and to Georgia and Carolina mill points. The through rates from and to these points apply over these routes. The Seaboard serves Atlanta over its line which extends through that point from Birmingham to Wilmington, N. C. Under a tariff of this defendant compressed cotton from the points of origin here considered may be concentrated at Atlanta when destined to southeastern Carolina or eastern mill points. The mere fact that these defendants participate as originating carriers in joint rates in connection with which transit is allowed at Atlanta by the Seaboard does not make them guilty of undue prejudice against Montgomery. The evidence clearly shows that direct routes, often the short routes, from the origin territory involved to the southeast and the Carolinas are through Montgomery and that in most instances joint through rates are now in effect over such routes. The record in this case, indicates clearly that it is extremely difficult and often impossible to market cotton direct from producing points to mills or other markets where it is consumed, owing to the fact that the cotton originates in small quantities of various grades at numerous points and requires assembling and grading before it is marketable. The net effect of refusing transit at Montgomery or other points similarly situated on the through routes from the origin to the destination territory here involved appears to be to requite the cotton to move through from point of origin to destination uncompressed and ungraded, or not at all. Such arrangements clearly operate to the disadvantage to the growers in that they are largely deprived of the competition of buyers at the important mill points in the southeast and Carolinas. It is the general practice throughout the cotton belt to permit or require concentration and compression at the first convenient com-

pressing point enroute to destination in the line of movement for the traffic. HELD, concentration arrangements should be provided at Montgomery similar to those applicable at Atlanta. Montgomery Cotton Exchange v. S. A. L. Ry. 109 I. C. C. 579.

(c) Concentration points are also compression points and under the so-called carriers privilege rates, on which most of the cotton traffic moves, the cotton is as a rule there compressed at the direction and expense of the carrier. Concentration and compression are of benefit to the carrier in the saving of equipment which they effect, the movement into the concentration point being largely in less carloads and from the concentration point in carloads, compressed cotton occupying substantially less space than uncompressed cotton. Montgomery Cotton Exchange v. S. A. L. Ry. 109 I. C. C. 579, 582.

(d) Concentration of cotton at the joint rates in effect to ultimate destination over reasonably direct routes, has become so common, due to the voluntary act of the carriers in recognition of the peculiar circumstances surrounding the marketing and handling of the traffic, that any shipper not accorded joint rates is at a substantial disadvantage which will confine his opportunities of sale to limited areas. Montgomery Cotton Exchange v. S. A. L. Ry. 109 I. C. C. 579, 587.

§5. Cooperage and Bailing.

See Express Companies §4 (a); Import Traffic §2 (cc).

(a) Complainant attacked defendants failure to furnish lumber for the doors of grain cars used in shipping wet spent grains between Jan. 3, 1918 and Feb. 28, 1920 as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. The applicable tariff provided that boards for doors or for coopering of cars would be furnished by the carrier except over lines performing only a switch service, and defendant admits this obligation. It appears that the lumber purchased by complainant for grain doors was kept separate from that used for other purposes and was used entirely for the coopering of cars, but there is no showing that the doors received on inbound shipments were used solely on those outbound. An award of damages must be definite. The record does not afford a basis for the calculation of a definite amount of damage. There is an absolute failure to show the cars, or even the number of cars, for which boards were applied, and also a failure to show the number or disposal of boards received on incoming cars and from defendant. HELD, complaint failed to show damage, complaint dismissed. Milwaukee Vinegar Co. v. Director General, 98 I. C. C. 53.

(b) Applicable tariff provided for cooperage of cars except over lines performing switching service only, but record is inadequate to show that failure of defendant to furnish lumber for grain-car doors on shipments of wet spent grain from Cudahy, Wis., during Federal control, resulted in any damage to complainant which can be definitely fixed. Milwaukee Vinegar Co. v. Director General, 98 I. C. C. 53.

§6. Dumping and Trimming.

See Transportation §1 (c).

(a) Complainants question the legality of publishing dumping charges separately from line-haul rates on coal, but carrier's right to do so is perfectly clear. See New England Coal & Coke Co., 33 I. C. C. 276, and Lake Cargo Coal Rates, 46 I. C. C. 159. Southern Trans. Co. v. N. & W. Ry., 101 I. C. C. 211, 213.

(b) As a matter of law carriers are entitled to charges for the separate and additional service of dumping coal into vessels that will yield reasonable profit. See Southern R. Co. v. St. Louis Hay & Grain Co., 214 U. S. 297. Southern Trans. Co. v. N. & W. Ry., 101 I. C. C. 211, 215.

(c) In dumping coal it is necessary that the chutes be manipulated vertically and horizontally in order to properly load the coal in the vessel's hold. Complainants and defendants agree that the vertical manipulation is part of the dumping service, but are at odds as to whether the horizontal manipulation is dumping or trimming. From all indications it is of little importance to anyone, but, as a fair and reasonable proposition, defendants should provide in their tariffs that dumping includes the horizontal manipulation of the chutes. Southern Trans. Co. v. N. & W. Ry., 101 I. C. C. 211, 216, 217.

(d) In the interest of accuracy and

simplicity a separate charge for trimming as well as for dumping coal into vessels at Hampton Roads piers, required. Southern Trans. Co. v. N. & W. Ry., 101 I. C. C. 211, 218.

(e) Service of docking and undocking, running lines, and furnishing fresh water to ships in connection with the dumping and trimming of coal into vessels found not to be "transportation" within the meaning of section 1 (3) of the act, and beyond the commission's jurisdiction. Southern Transp. Co. v. N. & W. Ry., 101 I. C. C. 211, 221, 223.

§7. Back Haul.

See Supra §2¼.

(a) The Commission has repeatedly found that although the carriers may under certain conditions voluntarily establish a free back haul in connection with transit, it will not under ordinary circumstances require them to do so, unless to remove undue prejudice. Furthermore, a back haul is contrary to the purpose of transit and generally should be permitted only to meet unusual situations. Lake Charles Rice Milling Co. v. L. W. R. R. 109 I. C. C. 195, 196.

§7½. False Floors, Insulation and Bedding.

See Live Stock Shipments (x).

(a) Respondents proposed new rules governing the bedding of cars for livestock at points in central territory which would increase the charges therefor and limit the amount and kind of bedding to be furnished. The present rules were published as a result of 80 I. C. C. 747, and 87 I. C. C. 157. Carriers sought to retain in full the present charge but to lessen the service thereunder, to eliminate their common carrier obligation to furnish suitable bedding but substituting therefor an obligation to place in the car specified amounts of materials, and, when this is not sufficient, to force shippers to finish out the bedding themselves or secure through the carrier the completion of the bedding from private concerns under no obligation to furnish it and at charges not subject to regulation. Respondents purpose in this proceeding apparently has been to nullify, if that could be done by tariff provision, the requirement that they must furnish cars suitably bedded. They sought to do this by a provision that they will place in the car only a stated amount of material and that the shipper must determine how much more is needed and secure it where he can. HELD, schedules not justified. Bedding livestock, 98 I. C. C. 323.

(b) Proposed changes in rules governing the bedding of cars used for the transportation of livestock in central territory, resulting in increased charges and the limitation of services performed, found not justified. Proposed schedules would eliminate present common-carrier obligation, as set forth in 80 I. C. C. 747, and 87 I. C. C. 157, to furnish suitable bedding and would substitute therefor an obligation to place in cars a specific amount of material, and when that amount is insufficient, to force shippers to furnish themselves, or to secure through carriers from private concerns, at charges not subject to regulation, sufficient material to complete the bedding. Suspended schedules ordered canceled. Bedding Livestock, 98 I. C. C. 323.

(c) Complainant attacked the rule promulgated during federal control, and which has since remained in effect upon most of the railroads, pertaining to the bedding of cars to be used in the transportation of livestock as unreasonable and prayed for reparation. In 80 I. C. C. 747 the Commission stated that whatever bedding is reasonably necessary the carrier by law is required to furnish, and that for such service it could make a reasonable charge, and the Commission found the rule attacked not unreasonable except as applied by those carriers west of the Missouri river whose transportation rates have included the cost of bedding. The record did not show which if these carriers had, and which had not, included the bedding costs in their rates. Original report affirmed 87 I. C. C. 157. Attention is directed to the consideration of whether the present charges of $1 and $1.50 provided by the rule for bedding single deck and double deck cars, respectively, are reasonable charges within themselves for such services. The costs of the service of bedding cars naturally vary with conditions in different parts of the country, and the fact that the respective carriers did not present uniform testimony upon this subject tends to strengthen rather than weaken its credibility. The present charges are at least not unreasonable. HELD, present rule not unreasonable. HELD, complaint dismissed. National Livestock

Exchange v. A. T. & S. F. Ry., 107 I. C. C. 512.

§9¼. Inspection.

See Inspection.

(a) Complainant attacked charges of $3 prior to July 1, 1922 and $2.70 on and after that date, exacted at Cincinnati as inspection charges on six cars of hay originating in Indiana between June 16, 1922 and March 4, 1924 as unreasonable and inapplicable. Inspection of these cars took place on the so-called plug track which is leased by the Cincinnati Grain & Hay Exchange for the sole purpose of providing facilities for the inspection of incoming shipments of grain and hay. This plug track is served only by the Pennsylvania. Under standing orders from complainants, the defendant, through the Pennsylvania, places all incoming cars of hay consigned to them on the plug track. After inspection of the contents it is complainants practice to tender a switch ticket to the Pennsylvania ordering delivery of the car to a certain outbound carrier, if the subsequent movement is to a point beyond Cincinnati, and to furnish such outbound carrier with a new bill of lading providing for the movement to the new destination. No disposition orders are given to defendant after inspection and the shipments are sold f. o. b. the plug track. The transaction is regarded as a through movement, interrupted only by the inspection at Cincinnati. The plug track being under lease to the exchange could not be described as a public delivery track on which any or all shippers could receive or ship any or all freight. Consequently it falls into the general category of private tracks. Witnesses for both parties testify that hay is not delivered from the plug track in the sense that delivery means the actual passing of the contents of the car from the possession of the carrier to that of the consumer. Where the point of placement is admittedly selected solely for the purpose of inspection it is obvious that any unloading which there takes place is incident to the inspection and that an immediate sale of the contents to another party is not sufficient to change the character of the transaction from that of inspection to that of an actual or constructive delivery. HELD, charges applicable and not unreasonable, complaint dismissed. Brown & Co. v. E. R. R. Co. 109 I. C. C. 109.

§9½. Milling, Mixing and Elevation.

(a) Defendants' refusal to establish joint rates on grain and products from the West and South via Bangor, Pa., over certain through routes, with milling in transit at that point, found contrary to public interest and unreasonable. Because of business and transportation practices prevalent in dealing in grain and products, to compete upon an equality complainant requires joint rates with transit at Bangor equal to rates in effect over existing routes through other milling points. Moreover, if joint rates via Bangor are confined to routes involving substantial similarity in service to already existing routes with joint rates, and lawful rights of carriers are preserved, the commission is unable to see that result will be numerous unreasonable requests for extension of transit or that publication of such joint rates will result in undue multiplication of routes or diversification of traffic. Flory Milling Co. v. C. N. E. Ry., 93 I. C. C. 129.

(b) Milling in transit of grain, grain products, and commodities entering into the manufacture of mixed feeds at joint rates has become such a widely diffused and common practice, due in large extent to voluntary act of carriers, that any manufacturer not accorded transit under joint rates is at a substantial disadvantage which will confine his opportunities of sale to limited areas. Flory Milling Co. v. C. N. E. Ry., 93 I. C. C. 129, 133, 134.

ALL OTHER CITATIONS

Detroit Board of Trade v. W. Ry. Co., 88 I. C. C. 413.

§10. Loading, Unloading, Delivering, Insulating, Bracing, etc.

See Classification §13; Demurrage §10¾ (f); Evidence §65; Express Companies §2; Facilities and Privileges §2 (b), §14; Loading and Unloading; Transportation §10.

(a) Complainant alleged that rules, regulations, and practices of defendant at Piers, 10, 11, 39, 46 and 81, North River, Manhattan Island, N. Y., in connection with shipments of cast iron soil pipe, any quantity, from Somerville, N. J., to New York, N. Y., are unreasonable, unjustly discriminatory, and unduly

prejudicial in that they restrict the handling of shipments of cast iron soil pipe and do not restrict the handling of substantially similar commodities. The pipe is listed in the trade as a plumbers supply and is essential in all building operations. The center of the plumbing supply industry on Manhattan Island is in close proximity to Piers 10, 11, 39 and 46. The commodity is shipped in boxed cars and is loaded in excess of the minimum of 36,000 pounds. Rate from Somerville is 8c per 100 pounds. All railroads, except defendant, handle cast iron soil pipe at their pier stations on North river. Effective May 10, 1924, defendant has published a tariff which removes the restriction on less carload shipments of cast iron soil pipe at its North River piers, and publishes restrictions at its New York piers on carload shipments of iron and steel articles, single pieces exceeding 1,000 pounds in weight, and pieces exceeding 20 feet in length. There is nothing of record to indicate that these articles should be accorded more favorable rules respecting delivery than cast iron soil pipe. HELD, rules maintained by defendant restricting the delivery of cast iron soil pipe, carloads result in an unreasonable practice within the meaning of section 1 of the act, from which defendant will be required to cease and desist. Somerville Iron Works v. C. R. R. of N. J., 93 I. C. C. 39.

(b) Complainant attacked handling charge of 50c per ton on cottonseed cake exported from the I. C. dock at New Orleans between Oct. 1922 and April 1923 as illegal and unreasonable. The cars were unloaded on the dock and remained there in excess of the free time and storage charges as well as the handling charge. The charges assessed were under item 44 under the heading: Handling to or from shipside." Storage charges were in item 15 "import, export and coastwise storage charges including cost of handling incidental to storage". There was no published charge for any handling except that to or from shipside. On a shipment stored there would ordinarily be handling costs other than those covered by the charge for handling to or from ship side. Such costs would arise out of handling between cars and storage, handling from one storage place to another, rearrangement of the commodities, and probably other forms of handling. Any one or all might be for the benefit or convenience of the carrier, of the shipper whose commodities are so handled, or perhaps of other shippers. In those instances in which the point of storage was in fact shipside it might well be that no handling costs such as those mentioned would be incurred. The Commission is of the opinion that the cost of handling incidental to storage included in the storage charges was not the published charge for handling to or from ship side. And the fact, if it were a fact, that the point of storage and ship side did in some instances coincide would not change the situation. In those instances the charge would be applicable for the handling to or from ship side and not for that incidental to storage. HELD, storage charges applicable and not unreasonable, complaint dismissed. New Orleans Export Co. v. I. C. R. R., 96 I. C. C. 509.

(c) In 41 I. C. C. 181, 44 I. C. C. 368, the Commission had under consideration the charges for the transportation of iron ore from the lower Lake Erie ports to Ohio, and prescribed reasonable maximum rates to apply from the docks of the line haul carriers at the lake ports after the ore had been loaded into the car to the point of interchange with private industry tracks at destination. This was considered the line haul rate. This rate did not include the dock service and the service of placing carload shipments of ore at the point of unloading on private industry tracks at destination, for which service separate charges should be established. The carriers established effective May 23, 1917 a line haul rate of 50c per long ton to Youngstown, O., in lieu of the previous rate of 56c and a delivery charge at complainants plant of 2c per long ton. Under 45 I. C. C. 303 the rate increased to 65c, and in 1920 to 91c the delivery charge at the time of the latter increase becoming 3c. Effective June 15, 1922 the rate was reduced to 82c but no reduction was made in the delivery charge. Complainant attacked delivery charge made against it by defendants as being without tariff authority, and unreasonable, and unduly prejudicial. The plants alleged to be preferred are in the Youngstown district, and are those of the Youngstown Sheet & Tube Co. at Haselton, O., and other at Youngstown proper. No delivery charges are made at these plants. HELD, carriers will be expected to remove the undue prejudice found to exist in one of the alternative

methods suggested. Carnegie Steel Co. v. Director General, 96 I. C. C. 527.

(d) Complainant alleged defendants attempt to eject him from its produce house at Harlem River station and defendants threat to refuse to place cars consigned to him in the general delivery yard subject him to unjust discrimination and undue prejudice. Since 1916 complainant has been in possession, under lease, of what was known as section 14 of the Bronx Produce House at Harlem River owned by defendant. There is sufficient track space alongside for three cars. These tracks are not public delivery tracks. The produce house was constructed to divert competitive traffic, particularly potatoes originating on the B. & A., to defendants line. It is not used for any service of transportation but for the conduct of complainants produce business and the business of other lessees. The last lease was entered into with complainant on Jan. 4, 1921. It specifically provided that the premises were to be used for the sale of produce only and could be terminated in writing giving thirty day notice which was done by defendant. HELD, complainant has not proven damage by reason of any undue prejudice which may have existed by reason of defendants refusal and failure to place cars consigned to complainant on the tracks adjoining the produce house during the time when the question of the lease was in process of litigation in the courts, complaint dismissed. Gallup v. N. Y. N. H. & H. R. R., 98 I. C. C. 453.

(e) The loading of grain products is generally lighter than that of grain. It often happens that three cars are required to handle milled products from grain that moves into a transit point in two cars. Rates and Charges on Grain and Products, 91 I. C. C. 105, 130.

(f) Transit arrangements to complete loading are beneficial to carriers if means adopted are proper and nondiscriminatory. They are conducive to heavier loading and result in more economical transportation, provided a reasonable charge is made for extra service rendered. Wool Rates Investigation, 1923, 91 I. C. C. 235, 280.

(g) Service performed in setting out a car to finish loading is not comparable with switching at terminals. In former the switch must be made by train crew and two movements are involved, one in setting out car and another in picking it up, whereas in terminal switching it is done by switching crew, which handles a number of cars at same time. Wool Rates Investigation, 1923, 91 I. C. C. 235, 280, 281.

(h) Proposed rule requiring shippers on water front in Norfolk, Va., harbor to load l. c. l. freight on carriers' barges for outbound movement found not justified. Present rates on l. c. l. freight from Norfolk were made to include this service, and it would be unfair to shippers to require them to assume entire burden and still pay carriers for doing work. Loading of L. C. L. Freight, 91 I. C. C. 394.

(i) Respondents proposed to cancel their present arrangements whereby they load and unload or assist in loading and unloading carload package freight without charge in addition to the line haul rate at Chicago, Ill., Cleveland, O., Pittsburgh, Pa., Buffalo, Rochester, Troy and Green Island, N. Y., and to establish charges for certain of such services at Chicago, Pittsburgh and Buffalo when performed on request of shippers. The general rule in the United States is and long has been that shippers are required to load, and receivers to unload, carload freight. In these cases the loading and unloading services performed by the carriers vary in extent and character at these points and differ on the various roads. In general respondents aim to relieve themselves of the burden of performing these services free of charge at all of the points, which the exception of seaboard cities and Washington, D. C. Chicago. Eastern lines load and unload without charge carload package freight and make deliveries either to one consignee or to various parties presenting proper orders from the original consignee for certain portions of the carload. The provisions vary on the different lines and as between loading and unloading, freight houses and team tracks general freight, and special commodities. As an exception to the classification respondents propose a general rule uniformly applicable on all the eastern roads serving Chicago. The substitution of this rule for the present variant exceptions will bring about cancellation of the general provisions for loading carload package freight except such as are contained in the classification; a charge of 2.5c for unloading and delivering car-

load package freight at freight houses, platforms and team tracks; elimination of free car door receipt and delivery of carload shipments of fruits and vegetables; and cancellation of provisions for the handling of bonded freight through houses without charge. The western lines serving Chicago do not perform any of the free loading or unloading services herein under consideration except on carload shipments of fruits and vegetables in packages. These commodities are handled free between the car door and the inside of the car on team tracks and are received from consignors at freight platforms and loaded in the cars. The western lines also provide for the unloading, sorting, and distribution of consolidated carloads of fruits and vegetables at stations or platforms at an added charge, usually 2c but for the Wabash and I. C., 1c. They propose to eliminate entirely the services on team tracks, but provide for the handling of carloads of fruits and vegetables in packages through freight houses or over platforms including distribution of the contents of consolidated shipments, at a charge of 2.5c in addition to the line haul rate. Fruits and Vegetables. With respect to fruits and vegetables the carriers at Chicago, both eastern and western lines, are here proposing to eliminate the free assistance in loading and unloading at team tracks. The eastern lines would substitute therefor a provision for unloading upon request at a charge of 2.5c. The western lines would require the consignees to unload. For the service of loading and unloading at platforms both eastern and western lines would increase the present charges from 1 and 2c to 2.5c. The reasons for making an exception to the general rule requiring shippers to unload carloads of fruits and vegetables on team tracks no longer apply at Chicago. Fruits and vegetables usually move at estimated weights per package, which vary with the different articles and size of package. Split Delivery Cars. A split delivery car contains a carload shipments under a single bill of lading from one consignor to one consignee, made up of separate shipments to be delivered to two or more ultimate consignees. The consignors and consignees of the separate lots may be numerous, or there may be one consignor and several ultimate consignees. Where there is more than one consignor the shipments are handled by forwarders, whose office it is to combine small quantities of freight of various owners into carload quantities and ship at the lower carload rates. The nature of the traffic in split delivery cars requires the use of a platform, freight house, or warehouse where the shipments can be sorted for delivery to the different parties for whom intended. At Chicago, these cars, with the exception of granger cars of fruits and vegetables, are unloaded, sorts, and delivered by respondents at their freight houses free of charge. Cleveland. At Cleveland the tariffs provide for the free loading and unloading of carload package freight at freight houses or platforms, and for assistance in loading and unloading at team tracks, but there has been no request for such services at that point, and carriers do not handle any carload freight at the freight houses. The team tracks of the carriers at Cleveland are adequate to handle all the carload freight tendered for delivery, and there have been no complaints in the past few years charging insufficiency of team track facilities. Pittsburgh. At Pittsburgh respondents now load and unload carload package freight free of charge through the freight houses or over platforms. It is proposed to cancel all provisions for loading and to provide for unloading at freight stations at a charge of 65c per net ton and for assistance in unloading at team tracks at a charge of 50c per ton. The provision for assistance should be replaced by a provision for performing the entire service of unloading on team tracks, as is proposed at Chicago and Buffalo. Buffalo. The practice of loading and unloading carload package freight on team tracks has been followed by respondents for 30 years or more. It is not proposed to cancel or eliminate any of the services at Buffalo. The only charge will bring about the assessment of a charge for the service heretofore performed without charge in addition to the line haul rate. Very few carload shipments are handled through respondents freight houses at Buffalo. They are loaded or unloaded at the team tracks, contract warehouses or private sidings. The long established practice of warehouse deliveries at the expense of the carriers has naturally developed business at Buffalo and many arrangements have been made on the basis of existing conditions, Rochester, Troy and

Green Island New York. The present tariffs provide that when the railroad furnishes a man to tally carload package freight loaded or unloaded on station team tracks this checker will assist in the loading or unloading. It is proposed to eliminate entirely these services and to apply the classification rule requiring owners to load and unload carload freight. Reasonableness of the Proposed Charges. The proposed charge for all of the services in question is uniformly 2.5c per 100 pounds, or 50c per ton except at Pittsburgh where the proposed charges are 65c per ton for unloading package freight through freight stations, and 50c per ton for assisting in unloading on team tracks. No reason has been shown for a charge at Pittsburgh any higher than that proposed at the other points. No sufficient reason appears for requiring respondents to maintain other than a reasonable average charge, based on the average service performed. The record does not justify a charge in excess of 1.5c for unloading at team tracks, even where all of the unloading service is performed by the carriers. Conclusions. In the face of the general rule requiring consignors to load and consignees to unload carload freight, the conditions existing at the cities in question do not justify the Commission in requiring the carriers to make exceptions to the general rule. Delivery at freight houses or warehouses may be more convenient, cheaper, and more expeditious for the shipper of ordinary package freight than delivery at team tracks, but the burden of this service should be borne by the shipper making use thereof and not by the carriers or by the general shipping public. Many of the line haul rates to and from these points have been prescribed as approved by the Commission and the reports do not indicate that it has given any consideration to the cost of unloading carload freight in arriving at such rates. The same line haul rates are assessed on shipments to and from industrial sidings or outlying team tracks at these points although the loading and unloading is not performed by the carriers. These facts indicate that the general measure of the rates to and from the points in question are not unreasonable for the line haul service alone, and warrant the conclusion that if the carriers justify the charge for the loading and unloading services, they have borne their burden of proof under the law. HELD, proposed cancellation of tariff provisions for the loading and unloading of carload package freight without charge in addition to the line haul rate, applicable at Chicago, Cleveland, Pittsburgh, and Buffalo, Rochester, Troy and Green Island has been justified. HELD, further the proposed continuance of the unloading service at Chicago and at freight stations at Pittsburgh, and the loading and unloading service at Buffalo to be performed upon shippers request and subject to a charge thereof, has been justified, but that the restriction of the services at team tracks in Pittsburgh to assistance in unloading has not been justified HELD, further, the measure of the proposed charges for these services has not been justified and that reasonable charges should not exceed the following: for loading or unloading carload package freight at team tracks, 1.5c per 100 pounds, or 30c per ton; for receiving and loading or unloading and delivering carload package freight at freight houses, warehouses or platforms, 2.5c per 100 pounds, or 50c per ton. Loading and unloading carload freight, 101 I. C. C. 394.

(j) Rules, regulations and practices of C. R. R. Co. of N. J., under which it refuses to float shipments of cast-iron soil pipe from Jersey City to its North River piers, Manhattan Island, N. Y., and requiring shippers to take delivery at former point, found unreasonable. Iron pipe, due chiefly to amount of time required to unload, may be undesirable traffic at pier stations, but defendant does not similarly restrict other substantially similar commodities which are bulky and difficult to handle, and nothing of record indicates that latter should be accorded more favorable rules respecting delivery than cast-iron soil pipe. Somerville Iron Works v. C. R. R. Co. of N. J., 93 I. C. C. 39.

(k) It is duty of carrier in making "stringpiece" delivery of lumber from lighters or barges to pass lumber over the stringpiece to assigned space on the dock or to consignee. It is not required that lumber be piled symmetrically, that it be tiered, or that ends of pieces be even, but at least the various pieces must be approximately parallel lengthwise. No obligation rests upon carrier to place men upon a dock to receive lumber except to extent necessary to effect delivery thereof in a safe and orderly manner. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288, 295.

(l) Delivery charge on ex-lake iron ore at Carnegie Steel Company's plant at Youngstown, Ohio, found applicable and not unreasonable. Contention that movement of the ore within yards of complainant to its incline tracks, where it is received and handled by an unloading mechanism operated by complainant, does not constitute spotting of cars or placing of cars for unloading within meaning of the tariffs, not sustained; the service being performed at convenience of complainant and almost wholly under its directions. Mere fact that the special service following delivery at interchange tracks may be less than that generally included in deliveries at private sidings does not prove the charge unreasonable. Carnegie Steel Co. v. Director General, 96 I. C. C. 527.

(m) Loading from warehouse to cars and between piers and cars are services which should either be performed by the shipper or paid for by him, and the carriers are not required to perform such services without charging for them. There is no provision in the laws which precludes a carrier from performing such services, without charge to the shipper. Increased rates on tobacco, 102 I. C. C. 665, 672.

(n) Complainant alleged that by reason of the refusal of defendant, Western Maryland R. R., in April 1922, to load a cargo of imported cork waste. in bales, from alongside ship docked at that carriers Port Covington piers at Baltimore, Md., to cars on such piers for shipment to complainants plant at Beaver Falls, Pa., complainant was subject to payment of handling charges contrary to defendants tariffs. At the time of docking the ship complainant gave shipping instructions to the W. M., to forward the entire consignment over its line and the P. & L. E., to Beaver Falls, charged fifth class rate of 35c. Rule 10 of the tariff provided "freight in carloads, other than bulk freight, carried at carload rates, received or delivered at stations in Baltimore, through carriers warehouse or sheds or over platforms, will be loaded into and unloaded from cars by carriers." Contemporaneous tariff provided: when property is received from or delivered to vessels docked at the piers of the B. & O., Pennsylvania, Canton R. R., or W. M., or from or to ships side in stream, within lighterage limits, when said ship is awaiting docking at any of the piers, the rates will apply from or to ships side." This provision was one of a number under the heading, "Handling of freight by lighter or float within the lighterage limits." The Commission is of the opinion that the operation of the rule was not restricted by the heading to traffic involving lighterage or floatage, and that such paragraph was applicable to complainants shipments. HELD, refusal of defendant to handle such shipments from ship side to cars at their own expense, in accordance with tariffs, was unlawful, reparation awarded. Armstrong Cork Co. v. W. M. Ry., 102 I. C. C. 713.

(o) Complainant attacked charges made by defendants for the loading and unloading at Philadelphia of export, import, and intercoastal traffic, and the rules and regulations in connection with the absorption of such charges, as unreasonable unjustly discriminatory and unduly prejudicial. Prior to May 19, 1924 defendants rates on export and import freight to and from Philadelphia included loading into or unloading from the cars in all cases where the transportation rate was not less than 5c per 100 pounds or $1 per ton. Where the rate was less than those amounts a loading and unloading charge of 10c per ton became applicable, subject to a proviso that the total charge should not exceed 5c per 100 pounds. On that date, pursuant to negotiations with the Ocean Traffic Bureau defendants provided that the loading and unloading of export, import and intercoastal traffic moving to and from Philadelphia would be included in the rail rate where such rate was not less than 9c per 100 pounds, or $1.80 per ton, and that where the rate was less than the amounts specified a loading or unloading charge of 50c per ton would become applicable, subject to the proviso that the total charge should not exceed 9c. Complainant is a shipper and receiver of freight whose rates from and to Philadelphia are less than 9c. The revision of handling charges on export, import and intercoastal traffic was for the purpose of placing Philadelphia on a parity with Baltimore and a substantial parity with New York. At the present time traffic may move through the various ports mentioned under substantially similar terms, with the result that the port situation is in harmony in-

sofar as the loading and unloading charges are concerned. HELD, rates, rules and regulations attacked not unreasonable or otherwise unlawful, complaint dismissed. Philadelphia Commercial Traffic Managers v. B. & O. R. R., 104 I. C. C. 173.

(p) Carriers parties to supplement 92 to Lelands southwestern lines tariff I. C. C. No. 1645 proposed to increase the charges on nitrate of soda, in carloads, from ship side at New Orleans, La., and subports to points in Arkansas and Oklahoma. The present rates on nitrate of soda from New Orleans and subports to points in Arkansas were prescribed in 89 I. C. S. 223. The rates under consideration in that case applied from ship side and the handling charge of 2.5c per 100 pounds was absorbed in the line haul rates under proper tariff authority. Respondents now propose to discontinue absorbing this handling charge on traffic destined to points on the class A lines, which would have the effect of increasing the total charges 2.5c per 100 pounds from ship side, and further proposed to apply the same basis to points in Oklahoma on class A lines. HELD, proposed schedules not justified. Nitrate of soda from New Orleans, 104 I. C. C. 761.

(q) Upon further hearing, former report 58 I. C. C. 164, collection of separate charges for loading and unloading of livestock at the Chicago stockyards, in addition to the line-haul rates, found unlawful and unreasonable, and amount of reparation due and parties entitled thereto determined. Chicago Live Stock Exchange v. A. T. & S. F. Ry. Co., 100 I. C. C. 266.

(r) Proposed cancellation of present arrangements whereby carriers load and unload or assist in loading and unloading c. l. package freight without charge in addition to line-haul rates at Chicago, Cleveland, Pittsburgh, Buffalo, Rochester, Troy, and Green Island, found justified. In the face of the general rule the country over requiring consignors to load and consigees to unload c. l. freight, the conditions existing at the above-named cities do not justify the commission requiring carriers to make exceptions to the general rule. Moreover, the burden of this service should be borne by shippers making use thereof and not by carriers or the general shipping public, and in 18 I. C. C., 234 and 18 I. C. C. 271, the commission approved the action of carriers in refusing to load and unload c. l. freight free of charge. Loading and Unloading C. L. Freight, 101 I. C. C. 394.

(s) With certain exceptions, the general rule in the United States is and long has been that shippers are required to load, and receivers to unload, c. l. freight. Loading and Unloading C. L. Freight 101 I. C. C. 394, 396.

(t) Contention that in C. F. A. Class Scale case, 45 I. C. C. 254, 272, the commission fixed the c. l. class rates high enough to cover cost of loading and unloading, found untenable. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 401.

(u) It is impractical to assess varying charges for loading and unloading different commodities based on the relative difficulty of handling. Carriers should not be required to maintain other than a reasonable average charge, based on the average service performed. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 411.

(v) Cost of handling all freight through freight houses is not an accurate measure of the cost of handling straight c. l. shipments of package freight. Loading and Unloading C. L. freight, 101 I. C. C. 394, 412.

(w) Upon contention by protestants that rule requiring shippers to load and unload c. l. freight presupposes the furnishing by carriers of adequate facilities and that at Chicago and Buffalo the facilities are wholly inadequate, due to congestion at team tracks and narrow and poorly paved driveways, HELD: While team tracks at Chicago and Buffalo are not ideal in many respects and are frequently congested, the record does not warrant conclusion that under reasonable regulations and proper supervision they are not reasonably adequate. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 413.

(x) Shippers urge that line-haul rates include loading and unloading services, and under the law carriers not only must justify charges for such services, but burden is upon them to show that line-haul rates heretofore contemplating loading and unloading services are reasonable when demanded for road-haul alone. FOUND: Same line-haul rates are assessed on shipments to and

from industrial sidings and outlying team track, also to or from other points in the same group or for a similar distance, under which rates no loading or unloading is included. Such facts indicate that the general measure of rates is not reasonable for line-haul service alone and warrant conclusion that if carriers justify charges for loading and unloading, they have borne their burden of proof under the law. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 413.

(y) Proposal of carriers to continue certain unloading services at Chicago and at freight stations in Pittsburgh and certain loading and unloading services at Buffalo, to be performed upon request by consignee and subject to a charge therefor in addition to line-haul rates, found justified. Restriction of services at team tracks in Pittsburgh to assistance in unloading found not justified. Measure of charges for these services suggested. Loading and Unloading C. L. Freight, 101 I. C. C. 394, 414.

Hershman & Co. v. Director General, as Agent, 85 I. C. C. 695.

§10½. Protective service.

See Heater Service; Protective Service.

(a) A superheater is an arrangement of pipes through which wet steam is passed for purpose of adding thereto heat units and increasing its efficiency. Power Specialty Co. v. D. & M. M. R. R. Co., 89 I. C. C. 251.

§12½. Spotting and special services.

See Allowances §8 (5); Special Rates and Services; Spotting; Storage.

(a) Complainant attacked a charge by defendants of $7.50 per hour, minimum eight hours, in addition to the rates to the lake ports, during 1918, 1919, 1920 and 1921, for the use of a locomotive and crew when ordered by the shipper, for spotting cars in the loading of iron ore from stock piles or shafts or for other service required by mining companies on the Masabi Range in Minnesota and the Marquette and Menominee ranges in Michigan as unjust and unreasonable, unjustly discriminatory and unduly prejudicial. In consequence of negotiations between the interested carriers and complainants the separate charge was discontinued on March 15 and July 1, 1921. In a number of instances the mining companies, having their own locomotives and crews available, chose to use them instead of railway equipment for stock pile spotting, while in other instances the operators employed private contractors to do the work, in the belief that it could thus be done at less expense than the published charge of the carriers. These companies seek reimbursement for the expense thereby incurred. The first consideration here is whether the service is such that it should have been performed by the carriers under their road haul rates. The record supports the conclusion that stock pile spotting is service in excess of what may be required of the carriers on the iron ore ranges in connection with their road hauls and that a reasonable separate charge therefor during the period under consideration was not inappropriate. Its exaction did not unduly prejudicial interveners or prefer shippers from shaft or open pit mines. There seems to be no basis on the record for finding that the spotting charge was unreasonable for the service required. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Jones & Laughlin Ore Co. v. Director General, 92 I. C. C. 683.

(b) Whenever a particular delivery service-spotting at some place of unloading within a plant—properly may be construed as the equivalent of either of these two services (typical team track delivery or typical shunting of a car upon a shippers siding clear of a main track) and the rendition of such service practical, the commission may compel a carrier to perform such a service with its own equipment as part of its legal obligation as to delivery of carload traffic. As the magnitude of the service becomes greater than the equivalent of track team delivery or single switching delivery, the demand on the carrier for its performance tends to exceed what may be regarded as a proper delivery service under transportation rates. Carnegie Steel Co. v. Director General, 96 I. C. C. 527, 532.

(c) Upon rehearing, prior report, 77 I. C. C. 110, failure or refusal of defendants to perform spotting service at complainant's plant at Jackson, Ohio, or to make complainant an allowance for its own performance of service, while performing such services at Wellston, Law-

rence, and Ironton, Ohio, competing points, without charge therefor in addition to line-haul rates, found not unreasonable but unduly prejudicial to complainant and unduly preferential of complainant's competitors. Reparation denied. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201.

(d) Tracks laid within confines of an industrial plant, placed for furtherance of industrial operations, used principally for intraplant switching and usually within exclusive control of industry, are not ordinarily to be considered as parts of line-haul carriers' terminal facilities. While a carrier may by its own practices assume a general obligation to render spotting service on such tracks, fact should satisfactorily appear, in absence of other appropriate evidence, in order to justify a finding that failure or refusal to perform service in a particular case is violative of section 1 of the act. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 205.

(e) Carrier in instant case relieved of burden of proof to justify increased cost of service resulting from discontinuance of a spotting service formerly rendered by it, and converse case of Hanging Rock Iron Co., 87 I. C. C. 373, distinguished. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 205, 206.

(f) Carriers are not obligated to perform spotting service after delivery has been made by placing cars within a plant, although carrier may not perform such extra service for one shipper and refuse it to another competing shipper where conditions are similar. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 209.

(g) There is no burden upon carrier to absorb cost of spotting service when performed by shipper if for own convenience latter excludes carrier from performing final placement by a single movement, but service performed for competing shippers where conditions are substantially similar must be approximately equal. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 209.

(h) While a carrier may not be required to perform spotting service at convenience of shipper, service that it does perform must be adequate, reasonable, and nonprejudicial. This does not require placing of cars more than once or include respotting or reswitching, unless carrier performs reswitching or respotting services for competitors under substantially similar conditions. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 210.

(i) Service performed in setting out a car to finish loading is not comparable with switching at terminals. In former the switch must be made by train crew and two movements are involved, one in setting out car and another in picking it up, whereas in terminal switching it is done by switching crew, which handles a number of cars at same time. Wool Rates Investigation, 1923, 91 I. C. 235, 280, 281.

(j) Charge for spotting cars in loading of iron ore from stock piles on iron-ore ranges in Minnesota, Michigan, and Wisconsin, and rates thence to vessels at the lake ports, found not unreasonable or otherwise unlawful. In stock-pile spotting operating conditions are unfavorable, delays frequent, and service in connection therewith is in excess of what may be required of carriers in connection with road hauls. Moreover, a reasonable charge for the service is not inappropriate, and it was not shown that those assessed unduly preferred shippers from shaft or open-pit mines, or that they were included in line-haul rates. Jones & Laughlin Ore Co. v. Director General, 92 I. C. C. 683.

(k) Contention that admissions on part of carriers, by their offer to perform spotting service, their subsequent absorption of charge for that service, and payment of reparation, and admission on part of director general, by offer of settlement, establishes fact that line-haul rates included spotting service at points of loading and unloading, or at point of final placement within plants. HELD, these admissions, although entitled to consideration, are not conclusive. Director general is not chargeable with concessions which may have been made by corporations which succeeded him. His offer was in nature of a compromise, and in accordance with familiar rules of law is not to be held against him. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 232.

(l) Service performed by the Pittsburgh & Ohio Valley Ry., a common carrier subject to the act, which consists of movements between points of loading and unloading and the interchange yards at complainant's plant, is

essentially a spotting service even though service, from points of interchange is over the right of way of the Valley. The gravity tracks leading to the car dumper must be considered for all practical purposes as the point of unloading. Carnegie Steel Co., 96 I. C. C. 527. Carnegie Steel Co. v. Director General 101 I. C. C. 638, 644.

§14. Storing, Grading and Resacking.

See Supra §10; Storage.

(a) Request for establishment of transit at St. Louis, Mo., on shipments of wool from points on A. T. & S. F. and C., M. & St. P. west of Mississippi River when destined to north Atlantic ports, denied. Before transit can be required at any point through rates must apply via that point. There are no through routes in effect via St. Louis gateway in connection with these carriers, and a compliance with request would require such carriers to short-haul themselves Moreover, existing through routes were found reasonable and adequate in Boston Wool Trade Asso., 62 I. C. C. 228, and St. Louis has not shown that it is unduly prejudiced by refusal of these carriers to provide joint rates and transit arrangements via that gateway. Wool Rates Investigation, 1923, 91 I. C. C. 235, 278, 279.

(b) Proposed rules and regulations of the St. L. S. F. Ry., under which Hayti, Malden, and Steele, Mo., will be added to list of points from which East St. Louis may receive compressed cotton for storage in transit, when destined for beyond, and establishment of storage in transit at Jonesboro and West Memphis, Ark., equal to those applicable at East St. Louis, found not unreasonable or otherwise unlawful. Storage in transit at primary and intermediate markets on various products is quite generally practiced and storage in transit of compressed cotton at these points is to interest of cotton growers and shippers alike. Compression, Concentration, and Storage of Cotton, 91 I. C. C. 472.

(c) Complainant attacked defendants failure to permit at Marshall, Tex., the storage in transit of flour and other grain products and the reshipment thereof to Arkansas, Louisiana and Texas, subjects it to undue prejudice and unduly prefers distributors at Shreveport, La., and Texarkana, Tex. Marshall is a local point on the T. & P., 42 miles west of Shreveport and 67 miles southwest of Texarkana, both of which points are reached by the rails of this carrier. Shreveport is served also by the K. C. S., and other lines and Texarkana by the K. C. S., M. P., and St. L. S. W. The T. & P., K. C. S., and M. P., accord transit on grain and grain products at the points named. The T. & P., also accords transit at Marshall, among other Texas points, on numerous grains and seeds, and on middlings, shorts, wheat bran or shorts, corn bran, and hominy feed. The applicable tariff does not permit the storing of flour and other grain products at Marshall, this arrangement being limited to shipments stored in transit at T. & P., stations Shreveport to Boyd, Ark., Shreveport to Alexandria, La., and to stations Shreveport to Cypress, La. The K. C. S., and M. P., do not reach Marshall with their own rails, and the T. & P., has no control over the arrangements established by those carriers at Texarkana and Shreveport. The latter carrier, however, does have control of the transit situation at Marshall. The circumstances which, it is contended, differentiates the situation at Marshall from that at Shreveport and Texarkana is the competition of the M. P., and K. C. S., found at the latter points. Otherwise no dissimilarity of circumstances and conditions surrounding this traffic is made to appear. The competitive situation stressed is not adequate justification for the disadvantage to which Marshall and shippers there located are subjected by the present transit arrangements in this territory. HELD, granting by T. & P., of transit on products of grain, including flour, at Texarkana and Shreveport while contemporaneously denying like transit at Marshall subjects complainant to undue prejudice. Marshall Mill & Elevator Co. v. K. C. S. Ry., 101 I. C. C. 270.

(d) Rates assessed on shipments of wheat from St. Joseph, Mo., to Cannon Falls and Lake City, Minn., accorded transit at Leavenworth, Kans., found not to have been unreasonable, unjustly discriminatory, or unduly prejudicial, as compared with lower contemporaneous rate on like traffic from Kansas City over various lines other than route of movement, with transit at Leavenworth. Moore Lawless Grain Co. v. M. P. R. R. Co., 100 I. C. C. 303.

ALL OTHER CITATIONS

Rules for Storing and Sacking Cement, 88 I. C. C. 662.

§15. Transit.

See Infra §18, §19, §20; Supra §10; Advanced Rates §7 (6) (f) (h); Bills of Lading §4; Blanket Rates §10½ (f); Cars and Car Supply §11; Class Rates §2 (3z); Compress Companies and Charges; Concentrating Rates and Privileges; Dressing in Transit; Live Stock Shipments (u); Long and Short Hauls §2½ (b); Panama Canal Act; Penalty Charges; Routing and Misrouting §8½; Stoppage in Transit; Storage; Through Routes and Joint Rates §8 (a), §18, §19, §20. §24 (b); Transfer; Transit; Yardage.

(a) Complainant attacked rules, regulations and practices of defendants in connection with carload shipments of butter from Minnesota points to eastern destinations, when stopped in transit to finish loading, and in connection with the distribution of butter tubs and salt to its creameries as unjust and unreasonable. The tariffs provide that a car partially loaded with butter may be stopped in transit to complete loading at a charge of $6.30 per car. This charge is assessed whether the car is spotted in order to receive the additional load, or "loaded in passing" without being removed from the train. The applicable carload rate from point of origin to the eastern destination is assessed on the total weight of the shipment. Defendants are entitled to make a charge for the transit privilege of "loading in passing." The $6.30 charge is applicable for similar privileges on other commodities. HELD, rules attacked not unreasonable, complaint dismissed. Minnesota Creameries Asso. v. C. M. & St. P. Ry., 91 I. C. C. 21.

(bc) Respondents A. C. L., N. S., S. A. L., and Southern proposed to establish certain rules for application in connection with refining of vegetable oil in transit at Portsmouth, Va., providing for payment by the refiner of switching charges on outbound shipments. For more than 20 years protestant has had the benefit of a transit arrangement enabling them to ship crude cottonseed and other vegetable oils from southern points to Portsmouth and to reship the refined oil to destinations in northern states and Canada at the rate applicable from original point of shipment to final destination. Protestant is served by the Belt Line, whose charge is $4.95 per car. On incoming shipments this charge is absorbed by respondents. The charge on outgoing shipments for many years has been borne by the carriers securing the road haul on the refined oil. Shortly prior to Feb. 1, 1924 the Pennsylvania, which appears to be the carrier principally interested in the outbound movement, notified respondents that on and after that date it would not absorb this charge, stating that it was not required to do so by its absorption tariff. HELD, the record contained no evidence supporting the reasonableness of the increased charges which would be exacted from protestant, and as the proposed rules would conflict with the provisions of the Pennsylvania absorption tariff the Commission finds that the schedules under suspension have not been justified. Absorption of switching charges at Portsmouth, 91 I. C. C. 296.

(d) M. K. & T., respondent, proposed to cancel transit privileges at points on its lines on interstate shipments of grain originating on or moving via the C. R. I. & P., and C. R. I. & G. If permitted to become effective the proposed cancellation will result in substantial increases in interstate rates on grain to Texas destinations on the line of respondent or its connections beyond. Transit privileges, free of charge except where additional service or out of line hauls are involved, are accorded by respondent at 50 pounds on its line to interstate shipments of grain and grain products in connection with through rates via its line. Joint through rates and divisions are in effect on grain and grain products originating on or moving via the Rock Island, the Santa Fe, the M. K. T., and Frisco, and moving to Texas destinations via respondents line and the G. S. & S. F., T. G. N., or H. & T. C. Similar transit privileges, under protection of joint through rates, are now accorded this traffic at Kansas and Oklahoma points on the originating lines and also at points on all the Texas lines named. The proposed schedules would subject complainant to combination of local rates to and from the transit point on Rock Island grain to Texas destinations. The suspended schedules were published after respondent had been notified by the Rock Island that the divisional arrangement in effect between the two lines entitled the Rock Island to its proportion of the rate from point of

origin to the transit station, and that interline business must be adjusted on such basis. This proportion is often materially greater than the division which the Rock Island would have received of the joint rate from point of origin of the grain to point of destination of the product. This is respondents sole justification of the suspended schedules. Respondent states that it does not desire to work a hardship on dealers and millers located on its line, and it does not question the reasonableness of the joint through rates now in effect on this traffic HELD, suspended schedules not justified. Transit privileges on grain, 92 I. C. C. 161.

(e) Transit privileges are local to the carrier according them. Transit privileges on grain, 92 I. C. C. 161, 163.

(f) Respondent proposed to restrict the territory of origin in the rules governing stop off in transit of lumber westbound at Black Rock, Buffalo and North Tonawanda, N. Y. The proposal is to restrict this transit arrangement to lumber originating at points on the Erie east of Corning, and on the N. J. & N. Y., N. Y. S. & W., and W. B. & E. The present transit arrangement was established by respondent, the Erie, on March 31 1924. Respondent claimed the proposed restriction only carries out its original intention. There is no warrant for extending to Buffalo, Black Rock and North Tonawanda on the one hand, different treatment from that accorded Falconer, Jamestown and Corry, on the other, in respect of the territory from which lumber may be drawn and accorded transit. HELD, suspended schedules not justified. Transit on lumber at Buffalo, 92 I. C. C. 181.

(g) Complainant attacked rates on wire bound box material carloads applying via Clarksburg, W. Va., from origin on defendants line in West Virginia to intermediate destinations on its line as unduly prejudicial to that commodity and unduly preferential to box shooks and that defendants failure to accord said commodity dressing in transit arrangements at Clarksburg is unduly prejudicial to complainant and unduly preferential of complainants competitors at Cincinnati, O., and other named points. The only difference between wire bound box material and box shooks is that the latter are nailed together. The through rates on lumber, including box shooks from points in West Virginia to interstate destinations on defendants line do not apply on wire bound box material. In 52 I. C. C. 598, the Commission found that the carriers should provide rates on wire bound box material not in excess of the rates on lumber maintained between the same points. HELD, rates attacked unduly prejudicial and defendant ordered to accord same privileges on wire bound box material as on box shooks. Lange & Crist Box & Lumber Co. v. B. & O. R. R., 93 I. C. C. 207.

(h) Transit arrangements are treated as matters local to the line on which the transit points is situated. Lange & Crist Box & Lumber Co. v. B. & O. R. R., 93 I. C. C. 207, 208.

(i) Complainant attacked rates of $1.255 and $1.335 charged on steel plates, sheet iron, and tank material, knocked down, carloads from Niles O., to Mexia, Tex., in October and Nov. 1921 as unjust and unreasonable to extent they exceeded 93c. Niles is on the Erie the Pennsylvania and B. & O., 9 miles west of Youngstown, O. Mexia is on the S. P., and T. & B. V., 78 miles south of Fort Worth, Tex. Proof developed that all of the shipments on which reparation is asked originated at Youngstown, Pittscated in transit at Niles. Complainants practice has been to ship its products under transit arrangement wherever possible. The transit arrangement provides for the stopping in transit of iron and steel articles for the purpose of binding, bolting, boring, cutting, drilling, etc. The rate applied is the through rate on the material in its inbound or outbound form, whichever is higher, from point of origin to final destination in effect at the time of shipment from such point of origin, plus a transit charge of 3.5c, and that was the basis applied on these shipments. The attacked rates from Niles were not charged or applicable and their lawfulness will therefore be considered only as of the present and future. The rates from Niles to Mexia were and are the same as from Pittsburgh, the rates from Johnstown being 2c higher than those from Pittsburg. HELD, rate attacked not unreasonable, complaint dismissed. Standard Boiler & Plate Iron Co. v. P. R. R. Co., 93 I. C. C. 285.

(j) B. & O., proposed new regulations and practices affecting the storage of apples and pears in transit at named

points in c. f. a. territory. At present time shipments which move on through rates may be stopped in transit for the privilege of storage in c. f. a. territory regardless of point of origin, provided same is on direct line and the storage point is directly intermediate between point of origin and final destination. The restriction desired is that the shipments may be stored in transit at points where the shipments are handled into and out of the transit point by the B. & O. It is true that much of this traffic, perhaps the greater part of it, could still move on the joint rates for the respondent has many joint routes to points east of those here considered; but that does not justify the instances where rates would be increased. HELD, schedules not justified. Storage in transit on apples and pears, 95 I. C. C. 101.

(k) Respondents proposed (a) exceptions to certain transit privileges on lumber, shingles, and other forest products, including wooden piles, posts, ties, and paving blocks, at Minneapolis and St. Paul, Minn., on traffic destined to those points from the Pacific northwest; (b) changes in the intermediate rule restricting the application thereof. Prior to June 25, 1918 forest products from the Pacific northwest moved to destinations east of the Twin Cities under joint rates which were practically the same as the combinations of local rates to the Twin Cities and proportional rates beyond. On that date the lumber rates were increased 25% with a maximum increase of 5c. This increased the rates on lumber to the Twin Cities and Minnesota Transfer 5c and from the Twin Cities and Minnesota Transfer to Chicago and St. Louis 2.5c, whereas the joint rates were increased only 5c making the combination on Twin Cities 2.5c higher than the joint rates. This disadvantage to the Twin City dealers was accentuated by the general increases of August 26, 1920 and was not materially changed by the reduction of July 1, 1922. The principal objection to the proposed exceptions is that joint rates are now and will continue in effect to points beyond the Twin Cities on the same basis as those to the Twin Cities under which dealers at Twin Cities may reship to those destinations without any additional charge except for transit. The additional service necessary, on movement from Minneapolis to Mankato or to Duluth is obviously greater than on a movement from Minneapolis to Minnesota Transfer and thence to another point in Minneapolis. HELD, suspended schedules not justified. Transit privileges on lumber, 95 I. C. C. 154.

(l) It is held that a transfer arrangement provided by one carrier party to a joint rate and refused by another did not result in undue preference. Demurrage rules on coke, 96 I. C. C. 731, 734.

(m) Complainant attacked defendants rules, regulations and practices governing transit at Savannah, Ga., on cotton from points in the southeast, Mississippi Valley, and territory west of the Mississippi river when destined to cotton mills in North Carolina and South Carolina or for export, and rates on this traffic from certain points on the C. of Ga., and its short line connections, the S. A. L., and L. & N., to cotton mills in North and South Carolina as unreasonable and unduly prejudicial to Savannah and unduly preferential of Atlanta and Augusta, Ga. **The Rates.** Through routes and local or joint rates on cotton are generally maintained via Savannah from stations on the lines of these defendants and their connections to cotton mills in North and South Carolina. There are, however, no joint rates to Carolina mill points from local stations on the C. of Ga., east of Dawson and Columbus, Ga., from stations on certain short line connections of the C. of Ga., from stations on the S. A. L., south of Savannah and west of Omaha, Ga., or from stations on the L. & N., south of Montgomery, Ala. The combination rates on (1) cotton, in bales, uncompressed, with privilege to carrier of compressing at origin or in transit, carriers privilege rates; (2) cotton, in bales, uncompressed to go through to destination uncompressed; and (3) cotton, in bales moving into concentration point uncompressed and for concentration point to destination compressed from these points via Savannah to the Carolina mill points are attacked on the ground that they are substantially higher via Savannah than the combination rates for corresponding service from and to the same points in effect by way of Augusta and Atlanta, and that these rates exceed materially the through rates, both local and joint, in effect via Savannah from other points in the same general territory to the same destinations. Defendants are willing to establish through rates on this commodity from these points if production

should develop. HELD, through combination rates are not unreasonable or otherwise unlawful. **Transit.** Under the tariffs of C. of G., S. A. L., and A. C. L., cotton originating at points on their lines, within certain exceptions not here in question, may be concentrated at Savannah for reshipment to Carolina mills on the basis of the through local or joint rate or lowest available combination rate from original shipping points to final destination. An additional charge of 3c is, also provided by the C. of Ga., on uncompressed cotton handled from a concentration point or through compress points to a compress point for compression. The rates on cotton from most of the points on the C. of Ga., to Savannah apparently are carriers privileged rates under which as shown that carrier may, if it so elects, compress the cotton destined to Savannah at point of origin or enroute, when it originates at or beyond a compress point on its line. If, therefore, it elected to compress such cotton at the first compress point the relative hauls of a given shipment uncompressed and compressed would be substantially the same whether concentrated at that compress point or at Savannah and the extra cost of moving the cotton uncompressed to Savannah would not be incurred. It would appear to be within the discretion of this defendant whether cotton going to Savannah moves uncompressed from or through a compress point. Cotton concentrated at Savannah for reshipment to the Carolina mills or for export generally moves on carriers privilege rates and complaint is made that certain of defendants fail to compress such cotton at their own expense when it reaches that point uncompressed. Complainant attacked as unreasonable the failure of defendants other than the S. A. L., to provide for the concentration at Savannah of cotton originating at points on the lines of their connections. HELD, rates attacked not unreasonable or unduly prejudicial. Rates for the future will be unreasonable for C. of Ga., to exact any charge for the concentration at Savannah on cotton originating on and moving over its line uncompressed at its election at carriers privilege rates from a compress point or through compress points to Savannah and reshipped to cotton mill points in North and South Carolina. That the attacked charges, rules, regulations, and practices here considered, except as above stated, not unreasonable or otherwise unlawful. Savannah Traffic Bureau v. A. & R. R. R., 96 I. C. C. 749.

(n) M. & St. L. R. R., proposed changes in its rules governing transit on hogs at Watertown, S. D. Protestant is interested in that portion of the transit provision which authorizes the concentration of shipments of hogs from country stations in South Dakota to Watertown in single deck cars and their movement outbound in double deck cars at through rates from points of origin. Rates on hogs in single deck cars from points in South Dakota are 115% of the rate on hogs in double deck cars. Under the present rules the through double deck rate applies on shipments moving inbound to Watertown in single deck cars and outbound in double deck cars. The proposed rules remedy the situation in respect of tonnage originating at Watertown and there added to through shipments by providing for application of the local rate from Watertown instead of the through rate from point of origin of the initial shipment. Moreover the weight of this added tonnage may be combined with the weight of the inbound movement to make up the required minimum. HELD, suspended schedules justified. Transit on hogs, 98 I. C. C. 153.

(o) Transit is a thing of value to the shipper, involving additional service on the part of the carrier, for which a reasonable charge may properly be made. It is something offered to the shipper in addition to the transportation service. Transit rules on grain, 98 I. C. C. 679, 684.

(p) Charges assessed on wheat from Kansas City, Mo., to Memphis, Tenn., Hot Springs, Ark., and Deport, Tex., with transit accorded to Leavenworth, Kans., and Marshall, Mo., found applicable and not unreasonable or discriminatory. While grain moving into Kansas City moves out to destinations here considered under proportional rates which are protected when transit is accorded at points in direct line of shipment and at points where specifically authorized. Marshall is not in direct line of shipment and complainant's shipments were backhauled through Kansas City. Moreover, at time complainant's shipments moved, defendant's tariffs did not authorize transit at Leavenworth and Marshall on basis of proportional rates from Kansas

City. Victor Milling Co. v. M. P. R. R. Co., 91 I. C. C. 58.

(q) Transit often involves out-of-line hauls and more terminal service than is involved in direct movements. Extra charges are, however, often assessed for out-of-line service. Rates and Charges on Grain and Products, 91 I. C. C. 105, 147.

(r) Before transit can be required at any point through rates must apply via that point. Wool Investigation, 1923, 91 I. C. C. 235, 278.

(s) Request for establishment of transit at St. Louis, Mo., on shipments of wool from points on the A., T. & S. F. and C., M. & St. P. west of Mississippi River, when destined to north Atlantic ports, denied. Before transit can be required at any point through rates must apply via that point. There are no through routes in effect via St. Louis gateway in connection with these carriers, and a compliance with request would require such carriers to short-haul themselves. Wool Rates Investigation, 1923, 91 I. C. C. 235, 278.

(t) Transit arrangements to complete loading are beneficial to carriers if means adopted are proper and nondiscriminatory. They are conducive to heavier loading and result in more economical transportation provided a reasonable charge is made for extra service rendered. Wool Rates Investigation, 1923, 91 I. C. C. 235, 280.

(u) Failure of carriers to publish either concentration rates, or stopping in transit to complete loading arrangements, in connection with wool and mohair shipments found unjust and unreasonable Such arrangements are desirable, as they are conducive to heavier loading and result in more economical transportation. Moreover, small growers will be able to secure benefit of c. l. rates by being permitted to consolidate their l. c. l. shipments into carloads. Reasonable charge per car for each stop prescribed. Wool Rates Investigation, 91 I. C. C. 235, 281.

(v) Fact that one carrier as a matter of policy voluntarily provides for transit at points on its lines, but at a charge adequate to cover additional service rendered, is not sufficient to require other carriers serving other points, and which do not control policy of aforementioned carrier, to grant transit at points on their lines. Wool Rates Investigation, 1923, 91 I. C. C. 235, 284.

(w) Theory of transit is service at some point between origin and destination and in direction of movement of traffic to point of final destinations, and transit involving back-haul service should not be required to be established except where it is clearly shown that failure to do so results in unjust discrimination or other violations of law. Stock & Sons, 31 I. C. C. 150. Wool Rates Investigation, 1923, 91 I. C. C. 235, 284.

(x) Finding to effect that transportation act, 1920, contemplates that railroads of the country should be considered as one national system of transportation, and that eastern carriers, forming a part of such national system and participating in joint rates, are unduly discriminating against eastern points, in refusing to grant transit on wool at such points while permitting it at western points, would be contrary to conclusion of Supreme Court in Central R. R. Co. v. United States, 257 U. S. 247. Wool Rates Investigation, 1923 91 I. C. C. 235, 284, 285.

(y) No compelling competition found to exist between wool and cotton, and fact that New England carriers provide for transit on commodities which are not in competition with wool does not prove any unjust discrimination or undue prejudice against wool shippers. Wool Rates Investigation, 1923, 91 I. C. C. 235, 286.

(z) Failure or refusal of carriers serving Boston, Mass., to establish transit arrangements at that point on shipments of wool and mohair from western territory to eastern destinations which would require out-of-line or back-haul movements, while participating in joint rates under which transit at points on direct line of movement is authorized on lines of other carriers parties to joint rates, found not unreasonable or unduly preferential of other transit points or unduly prejudicial to Boston. Wool Rates Investigation, 1923, 91 I. C. C. 235, 287.

(aa) Failure of Pennsylvania and B. & O., to accord transit in Philadelphia district on wool and mohair, while contemporaneously maintaining transit on same commodities at other competitive points on their respective lines, found unduly prejudicial in favor of dealers at such competitive points. Philadelphia

dealers buy in same western markets and compete in sale thereof at same destinations as their competitors at other competitive transit points. Wool Rates Investigation, 1923, 91 I. C. C. 235, 288.

(bb) Maintenance of milling-in-transit arrangements providing for manufacture and reshipment of wooden tanks at certain Pacific coast points, while no such arrangements are accorded complainants at Milwaukee, Wis., Chicago and Batavia, Ill., and Cincinnati, Ohio, on lumber originating at Pacific coast points, found not unduly prejudicial to complainants. Complainants are at a disadvantage due to geographical location and such arrangements, if accorded complainants, would entail a wasted haul of 20 per cent for a distance of more than 2,000 miles to manufacturing point. Tank & Tower Council v. A. & R. R. R. Co., 91 I. C. C. 309.

(cc) Rules and regulations of St. L. S. F. Ry. Co. governing concentration and compression of cotton at Jonesboro, Ark., and at Hayti, Steele, Caruthersville, and Malden, Mo., whereby such points are denied right to draw or "float" uncompressed cotton from points at which compresses are located, while granting such privilege to Blytheville and West Memphis, Ark., and Memphis, Tenn., found unduly prejudicial to former points and preferential of latter. Compression, Concentration, and Storage of Cotton, 91 I. C. C. 472.

(dd) Complainant attacked failure of defendants to provide transit privileges on scrap brass and copper, carloads, from points generally in official territory to Pittsburgh and the rates on brass and copper ingots outbound from Pittsburgh to destinations in that territory as unjust and unreasonable, and unduly prejudicial. Complainants plant is local to the Pennsylvania. It buys scrap copper and brass at points in official territory which it ships to Pittsburgh refines and reduces to copper and brass ingots, and ships to points throughout official territory. Complainant is asking the establishment of a transit arrangement whereby scrap copper or brass may be shipped to Pittsburgh, refined into ingots and reshipped from its plants at the through rates from points of origin of the scrap copper or brass to the final destination of the copper or brass ingots. Pennsylvania provides that copper brass, blister, bullion, cakes, cathodes, ingots, matte, ore, and slabs, originating south and west of Baltimore may be refined in transit at Baltimore, when reshipped over that line to Brooklyn, Jersey City and New York stations on its lines and those of participating carriers named in its tariff and to points on the New Haven. The B. & O., provides a similar transit arrangement. A transit charge of 4.5c applies except in connection with rail ocean and rail traffic reshipped over the B. & O. The rates on scrap copper and brass to Pittsburgh are generally on the sixth class basis. Outbound the rates on the ingots are generally commodity rates, but in some instances fifth class rates apply. Baltimore is the only point at which the Pennsylvania provides for refining copper in transit. At no point in official territory is transit accorded on scrap material of any kind. Complainants plant is served only by the Pennsylvania. The refinery at Baltimore is served by the Pennsylvania and also by the B. & O. Both roads grant transit, but the Pennsylvania alone can be charged with prejudicing complainant by its failure to grant transit at West Liberty while contemporaneously providing such an arrangement at Baltimore. If the transit on the Pennsylvania at Baltimore were to be canceled, the plant at that point would still be able, under transit accorded by the B. & O., to refine copper originating at western points and ship the refined product over that line to New York and New England points at through rates. HELD, failure to establish the transit arrangements sought not unreasonable or otherwise unlawful, complaint dismissed. Duquesne Reduction Co. v. P. R. R., 101 I. C. C. 625.

(ee) Where a carrier is a party to joint through rates under which transit privileges are accorded by connecting lines, the former is not concerned with transit privileges accorded by latter, as transit privileges are local to carrier according them. Transit Privileges on Grain, 92 I. C. C. 161.

(ff) Proposed cancellation of transit privileges by M.-K.-T. R. R. of Texas on grain originating on or moving via C., R. I. & P. and C., R. I. & G. found not justified. Sole justification offered by respondent is demand of Rock Island for a proportion of the rate from origin to transit station, instead of division from origin to ultimate destination, but a dispute among carriers over divisions is not justification for increased rates.

The Rock Island is a party to joint through rates under which transit is accorded and is not concerned with transit privileges accorded by respondent, as transit privileges are local to carrier according them. Transit Privileges on Grain, 92 I. C. C. 161.

(gg) Failure of B. & O. to accord wire-bound box material dressing-in-transit arrangements at Clarksburg, W. Va., on traffic originating on its line in West Virginia to interstate destinations on its line, while according such arrangements at Cincinnati, at which competitors are located, found to result in undue prejudice. Lange & Crist Box & Lbr. Co. v. B. & O., 93 I. C. C. 207.

(hh) Complaint sought establishment of transit arrangements on line of a certain carrier. Contention of such carrier that commission can not make any order in such cases affecting traffic moving from origins or to destinations on other lines, found without merit, since transit arrangements are treated as matters local to line on which transit point is situated. C. R. R. Co. v. U. S., 257 U. S. 247. Lange & Crist Box & Lbr. Co. v. B. & O., 93 I. C. C 207, 208.

(ii) Shipments of apples and pears moving on through rates may be stopped in transit at points in c. f. a. territory for privilege of storage, regardless of point of origin, provided storage point is on a direct line and directly intermediate between point of orgin and final destination. Proposal of the B. & O. to restrict application of joint rates on such commodities stored in transit at c. f. a. points to shipments moving into and out of transit points over its own rails, found not justified. Numerous increases and an abnormal rate situation would result, which carrier made no attempt to justify. Storage in Transit of Apples and Pears, 95 I. C. C. 101.

(jj) Proposed changes in rules covering transit on forest products at Minneapolis, St. Paul, Minnesota Transfer, St. Louis Park, and other points in Minnesota and Wisconsin, and proposed changes in intermediate rule restricting application thereof, found not justified. Under existing tariff forest products moving under through rates may be stopped in transit for creosoting or treating. Under proposed rules transit will not apply when both transit point and final destination are within same switching district, such shipments being treated as switching movements subject to switching charges. Proposed modification of intermediate rule to restrict its application to stations "on the same line of railway" would result in elimination of intermediate application of joint rates in many instances. Moreover, both changes would create departures from the fourth section. Transit Privileges on Lumber, 95 I. C. C. 154.

(kk) Governing tariff provided no routing restrictions and allowed fabricating in transit at points in direct line to final destination. Shipments here involved moved via circuitous routes over one of which a back haul to and from the transit point was required. FOUND, there being no routing restrictions in connection with the transit arrangement joint rates applicable in connection therewith applied over all routes of carriers parties to tariff naming the rates where no back haul was involved, and combinations were applicable in connection with such routes where back hauls necessitate. Refund of overcharges directed. Maloney Tank Mfg. Co. v. B. & O., 95 I. C. C. 725.

(ll) Rates between any given points, where no restriction is made as to routing, apply over all routes of carriers parties to tariff naming the rates, whether such routes are circuitous or not, if there be no back haul. Likewise transit arrangements applicable in connection with such rates, where no special restriction is contained in the tariff, are coextensive with the routes over which the rates apply, provided routes are not employed which necessitate a back haul. Maloney Tank Mfg. Co. v. B. & O., 95 I. C. C. 725, 726.

(mm) Stop-in-transit and reconsignment charges assessed under applicable tariff on hay stopped and held for reconsignment at Cincinnati and Chattanooga found not unreasonable or otherwise unlawful. Shipper contended that charges were illegal and unlawful to extent they exceeded the stop-in-transit charges applicable on grain and hay "held for inspection and disposition incident thereto." However, there is a clear distinction between ordinary diversion or reconsignment service and that performed in connection with grain and hay held for inspection. Furthermore, in 47 I. C. C. 590, commission approved charges for reconsignment in addition to charges for service of stopping in transit. Toberman, Mackey & Co. v. C., N. O. & T. P., 93 I. C. C. 237.

(nn) Defendant carriers' rules, regulations, and practices governing transit

at Savannah, Ga., on cotton from points in the Southeast, Mississippi Valley, and territory west thereof, when destined to cotton mills in North and South Carolina, or for export, found not unreasonable or unduly prejudicial, except that the charge of the Central of Georgia for concentration at Savannah of cotton which has moved from or through compress points without compression at carriers' privilege rates and which is subsequently reshipped to Carolina mills is found unreasonable. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749.

(oo) The real purposes of compression of cotton in transit at the expense of the carrier are conservation of equipment and economy of transportation. Savannah Traffic Bureau v. A. & R. R. R. Co., 96 I. C. C. 749, 755.

(pp) Proposed changes in rules governing transit on hogs at Watertown, S. Dak., resulting in increased through charges on shipments moving inbound in single-deck cars and outbound in double-deck cars, found justified. Proposed rules remedy the existing situation in respect of tonnage originating at Watertown and there added to through shipments by providing for application of local rate from Watertown instead of through rate from point of origin of initial shipment. Moreover, the weight of this added tonnage may be combined with the weight of the inbound movement to make up the required minimum. Transit on Hogs, 98 I. C. C. 153.

(qq) There is a commercial necessity for permitting grain produced in Group G to move eastward to the Missouri River cities for transit before being shipped to California. Indeed, this necessity appears to extend to points more than 150 miles west of the Missouri River cities. Provided reasonable charges are assessed for the total transportation, the commission is of the opinion that grain should be permitted to move from all of Group G via the Missouri River cities to California, and that carriers should not be permitted to increase their charges to an unreasonable basis which will prohibit, or nearly prohibit, that movement. Grain to Pacific Coast, 98 I. C. C. 158.

(rr) Following 60 I. C. C. 579, rate on refined sulphur from Bryanmound and Freeport, Tex., to New Orleans, La., and points taking same rates found not unreasonable, unjustly discriminatory or unduly prejudicial as compared with rates from Sulphur Mine and Mossville, La., via Texarkana, Ark.-Tex., to same destinations, with privileges of transit at Texarkana. Rate from same points of origin to certain points in Louisiana intermediate to New Orleans found unreasonable to extent it exceeded rate to that point. Reasonable basis prescribed for future. Stauffer Chemical Co. v. H. & B. V. Ry. Co., 98 I. C. C. 326.

(ss) Refusal of defendants to establish, at Cleveland, Ohio, refining-in-transit on lard found not to result in unreasonable or prejudicial rates on steam lard from western rendering points to Cleveland and on refined lard from Cleveland to the Atlantic seaboard for export. Fact that the aggregate of the inbound and outbound rates through Cleveland are higher than rates paid by competitors at Chicago does not establish that rates charged complainant are unreasonable, and neither does the fact that another form of transit on lard obtains at Cleveland indicate that it is unreasonable to decline to extend the transit to refining. Cleveland Provision Co. v. A., T. & S. F. Ry. Co., 98 I. C. C. 421.

(tt) Combination of local rates found applicable on shipment stopped in transit to finish loading, no tariff authority existing for such a stop. Mississippi Pearl Button Co. v. A., T. & S. F. Ry. Co., 98 I. C. C. 560, 563.

(uu) Proposal to reestablish a charge for transit services in connection with and in addition to joint through rail-and-water rates on carload shipments of grain originating in western half of Montana and coarse grains originating in transcontinental Groups F, G, and J, milled in transit at intermediate points, but not including tidewater mills; and the products thereof forwarded through north Pacific ports to California ports, found justified. Through charges will still remain somewhat less than the combinations on the ports and a separate charge for transit is now in effect on similar traffic from certain other points of origin to destination territory. Transit Rules on Grain, 98 I. C. C. 679.

(vv) Proposal to reestablish a charge for transit services in connection with and in addition to joint through rail-and-water rates on carload shipments of grain originating in western half of Montana and coarse grains

originating in transcontinental Groups F, G, and J, milled in transit at intermediate points, but not including tidewater mills, and the products thereof forwarded through north Pacific ports to California ports, found justified. This added charge will not result in undue prejudice to millers of grain from origin territory under consideration and undue preference to millers of grain from points in other localities where free transit is permitted, as contended, nor will interior grain millers be subjected to any undue prejudice and disadvantage by reason of the continuation of free transit at tidewater mills. Transit Rules on Grain, 98 I. C. C. 679.

(ww) Proposal to reestablish a charge for transit services in connection with and in addition to joint through rail-and-water rates on carload shipments of grain originating in western half of Montana and coarse grains originating in transcontinental Groups F, G, and J, milled in transit at intermediate points, but not including tidewater mills, and the products thereof forwarded through north Pacific ports to California ports, found justified. This added charge, among other things, will conform with the principle announced in numerous decisions that transit is a thing of value to the shipper, involving additional service on the part of the carrier, for which a reasonable charge may properly be made. Transit Rules on Grain, 98 I. C. C. 679.

(xx) Respondent lines do not serve the millers of Kansas grain which moves all rail to Los Angeles and San Francisco, and do not participate in such transportation. No prejudice can therefore result by reestablishment of transit charge on shipments of grain from western Montana while none is assessed under the wheat rate from Kansas, Central R. R. Co. v. U. S. 257, U. S. 247. Transit Rules on Grain, 98 I. C. C. 679, 685.

(yy) Assessment of a transit charge in addition to the through rate at an intermediate point while no charge is assessed from a farther distant point, resulting in higher aggregate charges from the intermediate point, would be in violation of the long-and-short-haul clause. Transit Rules on Grain, 90 I. C. C. 679, 686.

(zz) Complainant attacked combination rate charged on a car of wheat in October, 1922, from Chappell, Neb., to Wichita, Kas., stored at that point in their elevator on the Rock Island and afterwards reshipped to San Diego, Calif., as unreasonable and unduly prejudicial. Shipment moved U. P., to Topeka, Kas., Rock Island to Wichita, K. C. M. & O., to Alpine, Tex., and S. P., beyond, 2,401 miles, charged 31 to Topeka, 17.5c Topeka to Wichita and 74.5c beyond. Reparation is sought to basis of 74.5c applicable at time of movement from both Chappell and Wichita to San Diego. The tariff which carried the rate claimed did not restrict its application east of El Paso, Tex., and the other socalled western gateways, and it was therefore applicable over the circuitous route of movement. The transit tariff of the Rock Island, which authorized storage at Wichita of grain originating at Chappell under the rate claimed, plus an amount of line charge, did not authorize such storage on shipments moving from Wichita via other lines. HELD, rate not unreasonable, complaint dismissed. Wallingford Bros. v. C. R. I. & P. Ry., 102 I. C. C. 239.

(3a) Complainant alleged that the rates rules and regulations for the transportation of grain, grain products and feed from Jackson, Miss., to certain stations on the G. M. & N., south of Laurel, Miss., as unjust, unreasonable, unjustly discriminatory unduly prejudicial to its members, and unduly preferential of their competitors at Memphis, Tenn., Meridian, Miss., and Laurel. Its real interest is in the establishment at Jackson of transit arrangements on shipments from St. Louis, Mo., Cairo, Ill., and Memphis. When its complaint was filed joint rates applied from St. Louis, Cairo and Memphis to all stations on the G. M. & N., in case the movement was via designated points of junction with the G. M. & N., north of Laurel, and also via Laurel when the shipments moved into Laurel over the I. C., to Jackson and G. & S. I., beyond, or over the N. & O. M. E., were there accorded transit and were forwarded to destinations south of Laurel. Prior to the hearing, the available routing under the joint rates was still further restricted by canceling that via Laurel when the inbound movement was over the I. C. and G. & S. I. The I. C. serves Jackson but not Laurel. It apparently is willing to accord transit at Jackson, but is unable to

do so because the G. M. & N., is unwilling to concur in joint rates via Laurel when the shipments are accorded transit at Jackson. The short line distance from Memphis to Laurel in connection with the G. M. & N., is 295 miles over the Frisco to New Albany, Miss., and G. M. & N., beyond. HELD, rates rules and regulations attacked not unjust, unreasonable unjustly discriminatory or unduly prejudicial, complaint dismissed. Jackson Traffic Bureau v. G. & S. I. R. R., 102 I. C. C. 259.

(3b) The Commission has said several times that it is more desirable to operate under a rate break than under transit, but it has also found that rate breaks do not necessarily constitute undue preference of the market enjoying such an adjustment nor subject transit points to undue prejudice. Kansas City Board of Trade v. A. & W. Ry., 102 I. C. C. 285, 301.

(3c) Respondents proposed to establish a transit charge of 3c at Pensacola, Fla., Louisville, Central Covington, Latonia, Erlanger, and Ludlow, Ky., and Cincinnati, O., on rosin and turpentine originating at points in the southeast when reforwarded to destinations on or beyond the Ohio river, in addition to the through rate from point of origin to final destination. L. & N., in an effort to assist dealers at Pensacola in building up their business in the territory naturally tributary thereto established a transit arrangement there to protect the through rate from point of origin to destination. Later transit arrangements were established at other points. Respondents state that requests for the extension of these transit service to other points forcibly brought to their attention the fact that these extra services were being performed without compensation. Their desire to correct this situation and to make this transit arangement conform to all similar transit arrangements in so far as the assessment of a charge is concerned led to the proposed charge. HELD, proposed schedules have not been justified in so far as they provide for the application of a charge in conflict with charges under the diversion and reconsignment tariffs. Transit privilege on rosin, 104 I. C. C. 437.

(3d) Transit privileges rest upon the fiction that the incoming and outgoing transportation services, which are in fact distinct, constitute a continuous shipment of the identical article from point of origin to final destination. North Packing & Provision Co. v. Director General, 104 I. C. C. 607, 613.

(3e) Respondents proposed to modify the rules providing for storage in transit so as to reduce the time limit on tea and matting at various western points and on grass, matting and grass articles, and rattan furniture at Minnesota Transfer, Minneapolis, St. Paul, and Duluth, Minn., from 18 months to 12 months. The facts in this case indicate that respondents, as well as protestant, would be at a disadvantage if the proposed schedules should go into effect. Apparently the greater disadvantage would fall upon respondents, inasmuch as protestant might adjust itself to some extent by the use of Atlantic coast ports. It is not suggested that the 18 month transit limit on tea has been or will be abused, and no reason appears for depriving the transcontinental carriers of the opportunity to compete for this traffic. HELD, proposed schedules not justified as to tea but are on the other commodities. Storage in transit on import traffic 104 I. C. C. 755..

(3f) Following 91 I. C. C. 58, rates assessed on shipments of wheat from Kansas City, Mo,. to various interstate destinations accorded transit at Leavenworth, Kans., Sweet Springs and Marshall, Mo., found applicable and not unreasonable, unjustly discriminatory, or unduly prejudicial. While grain shipped to Kansas City moves out to destinations here considered under proportional rates which are protected when transit is accorded at points in direct line of shipment and at other poiints where specified, shipments involved were reshipped from Leavenworth through Kansas City to Sweet Springs or Marshall, thus constituting an out-of-line haul through Kansas City. Moreover, at time shipments moved, defendants' tariffs did not authorize transit both at Leavenworth, and at Sweet Springs or Marshall from Kansas City. Moore Lawless Grain Co. v. M. P. R. R. Co., 100 I. C. C. 303.

(3g) Rates assessed on shipments of wheat from St. Joseph, Mo., to Cannon Falls and Lake City, Minn., accorded transit at Leavenworth, Kans., found not to have been unreasonable, unjustly discriminatory, or unduly prejudicial, as compared with lower contemporaneous rate on like traffic from Kansas City

over various lines other than route of movement, with transit at Leavenworth. Moore Lawless Grain Co. v. M. P. R. R. Co. 100 I. C. C. 303, 306.

(3h) Combination rates on lumber from Roach and Springdale, Fla., and Scott, Ga., to Harrison and Jersey City, N. J., and Great Works, Me., stopped in transit at Portsmouth, Va., found applicable but found unreasonable to extent they exceeded lower contemporaneous combination rates based on Live Oak, Fla., and Savannah, Ga., plus a transit charge. Reparation awarded. M'Clave & Son v. A. C. L. R. R. Co., 100 I. C. C. 405.

(3i) So-called normal or commercial rate on coal from East Birmingham to Jasper, Ala., assessed on shipments coked at Jasper and reshipped to Sheffield, Ala., found not unreasonable or unjustly discriminatory and no damage found to have been proven as result of any prejudice which may have existed. Coking-in-transit was subsequently established but this fact does not necessarily demonstrate unreasonableness. Sheffield Iron Corp. v. Director General, 101 I. C. C. 31.

(3j) There seems to be merit in the contention that the intrastate traffic in grain and grain products within Texas should have no more favorable transit arrangements than like traffic from Oklahoma to Texas points and it is suggested that carriers immediately survey the situation with the object of equalizing the transit practices. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 125.

(3k) Failure of Texas & Pacific to permit storage in transit on flour and other grain products at Marshall, Texas and reshipment thereof in straight or mixed carloads on basis of through rates to points in Arkansas, Louisiana, and Texas, while contemporaneously granting such transit arrangements at Shreveport, La., and Texarkana, Ark.-Tex., found unduly prejudicial to shippers at Marshall and unduly preferential of competitors located at Shreveport and Texarkana. Marshall Mill & Elevator Co. v. K. C. S., 101 I. C. C. 270.

(3l) The K. C. S. and M. P. railroads do not reach Marshall, Tex., with their own rails and the T. & P. has no control over storage in transit arrangements established by those carriers at Texarkana and Shreveport, but does have control of the transit situation at Marshall. The circumstances which differentiates the situation at Marshall from that at Shreveport and Texarkana is the competition of the M. P. and K. C. S. found at the latter points. HELD: Competitive situation stressed is not adequate justification for the disadvantage to which Marshall and shippers there located are subjected by the present transit arrangements in this territory. See 263 U. S. 515. Marshall Mills & Elevator Co. v. K. C. S., 101 I. C. C. 270, 272.

(3m) The utility of a transit arrangement is primarily a question for the shipper, to be determined by ascertaining whether or not it can profitably be availed of under a reasonable charge for the service rendered. See 31 I. C. C. 678. Armour & Co. v. D. L. & W., 101 I. C. C. 337, 341.

(3n) Failure of defendant to afford transit on scrap brass and copper refined at East Liberty (Pittsburgh), and reshipped to points in official territory in form of ingots, while according such transit arrangements at Baltimore, found not unreasonable or unduly prejudicial. Baltimore is the only point on line of defendant at which transit is accorded, and such transit was established to meet competition. Furthermore, if defendant should cancel all its transit arrangements, the plant located at Baltimore would still be able to refine scrap brass and copper under transit accorded it by the B. & O., and complainant would still meet such competition. Du Quesne Reduction Co. v. P. R. R., 101 I. C. C. 625.

(3na) Following American Creosoting case, 257 U. S. 247, no undue prejudice results where a carrier participates in joint rates with connecting lines upon whose rails transit arrangements are permitted while denying similar arrangements at points on its own rails. San Diego Chamber of Commerce v. A. & V., 102 I. C. C. 27, 30.

(3nb) Combination rate charged on shipments moving into transit point via one carrier, the outbound movement being performed by a different line, found not unreasonable or unduly prejudicial. Governing tariff at time of movement restricted transit privilege to shipments moving outbound from transit point over rails of carrier performing the inbound

haul, and fact that such tariff has since been amended so as to allow transit at joint rates when outbound movement is performed by a connecting line is not sufficient to warrant a finding that higher combination formerly in effect was unreasonable. Wichita Terminal Elevator Co. v. C., R. I. & P., 102 I. C. C. 115.

(3nc) Rates, rules, and regulations for the transportation of grain, grain products, and feed from Jackson to certain destinations on lines of Gulf, Mobile & Northern south of Laurel, Miss., found not unreasonable, discriminatory, or unduly prejudicial. As the Gulf, Mobile & Northern does not serve Jackson, it does not unduly prejudice shippers at that point by according transit at Laurel, and to establish joint rates via Laurel, with transit at Jackson, would short haul that carrier. Jackson Traffic Bureau v. G. & S. I., 102 I. C. C. 259.

(3nd) Upon investigation by commission on its own motion into tariffs of the St. L.-S. F. Ry., purporting to accord transit at Ada, Okla., and under which limestone and shale shipped into that point can be manufactured into cement and shipped beyond over that carrier's line to interstate points at lower through charges than when moving beyond over competitive lines, FOUND: Such tariffs are vague, indefinite, contradictory, and therefore unreasonable and unlawful. They attempt to restore in tariff form the provisions of a contract between the Frisco and a cement company; no justification appears for charging a rate lower than inbound local upon theory that shipments may be given transit, and, if shipments are not connected up with an outbound movement policing and subsequent collection of local rate will be impossible. Furthermore, all local inbound shipments should in first instance be subject to same rates. Limestone Into and Cement Out of Ada, Okla., 102 I. C. C. 407.

(3ne) Rates assessed on wheat from Kansas City, Mo., to Pine Bluff, Ark., with transit at Leavenworth, Kans., and Sweet Springs and Charleston, Mo., found not unreasonable or unduly prejudicial. A lower proportional rate applied for factor from Kansas City to Pine Bluff, but complainant was denied its use because applicable tariff permitted only two stops for transit. While present tariff permits three transit services, tariff assailed may not be condemned on this account. Moreover, in Victor Milling Co., 91 I. C. C. 58, commission considered a somewhat similar situation and found rates not unreasonable or discriminatory, and in view of conclusions reached therein it is doubtful whether lower proportional from Kansas City could have been applied to complainant's shipments if three stops had then been authorized. Moore-Lawless Grain Co. v. M. P., 102 I. C. C. 465.

(3o) Connecting lines can not dictate to the road that alone serves the transit point the manner in which joint rates through that point shall be applied in conjunction with the transit arrangements as long as they are not deprived of their long haul. They perform no greater service on shipments fabricated in transit than they do on shipments not so handled. Parkersburg Rig & Reel Co. v. B. & O. R. R. 109 I. C. C. 569, 575.

(3p) Transit arrangements represent a departure from the ordinary transportation service, under which shippers are accorded a more favorable basis of rates than would be obtained if the inbound and outbound movements were treated as separate shipments. Montgomery Cotton Exchange v. L. & N. R. R. 112 I. C. C. 325, 329.

(3q) Transit is a departure from ordinary transportation service. It is necessarily founded on the asssumption that two separate and distinct local movements to and from the transit point constitute an interrupted through movement. Notwithstanding the assumption of which it is based, the fact remains that it involves two distinct movements and two separate and complete terminal services at the transit point with all the accompanying physical handling and the keeping of necessary records in connection therewith. The fact that transit on cotton has been so long in effect and so widely accorded as to become practically an inherent incident in the transportation of that commodity does not less the application to it of the general observations above made. Also, while the compression of cotton is an advantage to the carrier in that it permits more efficient and economical use of equipment, it must be borne in mind that under the carriers privilege rates the cost of compression is absorbed out of the carriers revenue. Montgomery Cotton Exchange v. L. & N. R. R. 112 I. C. C. 325, 332.

(3r) The theory of transit is service at some point between the point of ori-

gin and destination of the traffic, and in the direction of the movement of the traffic to the point of final destination. A back haul is contrary to the purpose of transit and should generally be permitted only to meet unusual situations, and when to do so does not result in unjust discrimination or other violation of law. Montgomery Cotton Exchange v. L. & N. R. R. 112 I. C. C. 325, 333.

C. 99; Tuscaloosa Cotton Seed Co. v. A. G. S. Ry. Co., 88 I. C. C. 258; Michigan Silo Co. v. C. & N. W. Ry. Co., 88 I. C. C. 467; Rules for Storing and Sacking Cement, 88 I. C. C. 662.

§15½. Transshipment and transfer.

(a) Respondents proposed to increase their charges for handling shingles at South Atlantic and Gulf ports east of New Orleans, La., and to increase their charges for handling shingles at New Orleans and certain other Louisiana ports. The term handling used herein means the physical handling or movement of traffic between cars and shipside (including carriers barges), or between cars at ship side (including carriers barges) and storage, and between storage and ship side (including carriers barges) or cars and does not include marking services. Respondents proposed to take shingles out of the box and barrel material item and to increase the handling charges on this commodity to 3c. The present handling charge on shingles at the Louisiana ports is 2c. It is proposed to increase this charge to 4c. There is no separately established wharfage charge at the Louisiana ports. If the proposed charges become effective the combined charge for wharfage and handling of shingles will be 4c at all ports. Shingles arriving at Mobile are taken from the hold of the vessel by the ship sling or tackle, lowered to the dock and piled under a shed by the stevedore force. This service is performed by the water carrier. The handling service performed by respondents at Mobile is from the shed into the cars in which the shingles are transported from that port. HELD, proposed schedules justified. Handling charges on shingles, 89 I. C. C. 641.

(b) Complainant attacked defendants charges for terminal services incident to the transfer of the coal from cars to vessels as unlawful and unreasonable. Charges for Dumping and Dumping and Trimming Combined. The transfer of the coal is effected at the piers of the defendant rail carriers, the C. & O., N. & W., and Virginian Rys. The piers used for most of this traffic are of the most modern and approved type and are very efficient in their operation. Defendants publish a charge of 5c per long ton for dumping, and charges ranging from 9c to 30c per long ton for dumping and trimming combined, dependent generally upon the amount and nature of the trimming necessary. There is no stated charge for trimming only, because there could be no trimming without dumping. These charges apply to the entire amount of coal taken, for practical reasons it being desirable to so apply them rather than on the basis of the amount trimmed. No question is raised as to this matter. All the terminal charges referred to are in addition to the line haul rates to Hampton Roads port on coal destined beyond the Virginia capes, the tariffs providing that these line haul rates do not include the dumping and trimming charges. The rates on coal to Hampton Roads proper, which include the placing of the cars on sidings or team tracks, are higher than the transshipment rates. The Dumping Charge. If allowance is made for interest, the dumping costs of all three carriers greatly exceed the revenue derived from the dumping charges. As a matter of law defendants are entitled to charges for this separate and additional service that will yield reasonable profit. Bills for Dumping Charges. The operaters of vessels plying from Hampton Roads may be either the consignees of the coal or merely carriers of the coal under charter parties with the consignees. In either event, the rail lines, as a matter of practice, bill against the vessels for the dumping and trimming charges. The tariffs provide that these charges will constitute a part of the total charges to be collected by the carriers on the property. The charter parties between the vessel operators and the owners of the cargo coal provide that the vessels will bear the trimming charge, but not the dumping charge. Bunker coal is bought delivered into the ship, the vendor agreeing to bear the dumping charge. Com-

plainants are willing that the trimming charge be billed against them, but they contend that the rail lines should be required to bill against the consignees for the dumping charges. The interstate commerce act does not affect the common law rights and obligations of the parties in this matter. The parties responsible for the trimming charges may not be responsible for the dumping charges. If complainants are not liable at common law for the dumping charges, they are not liable under the act. The mere fact that defendants render them bills does not make complainants responsible for payment thereof. It is not clear from the record and briefs why the practice referred to is followed. In the interest of accuracy and simplicity, therefore, a charge for trimming only should be published as well as the charge for dumping. Trimming Charges. Defendants tariffs provide combined dumping and trimming charges, because there can be no trimming without dumping. The trimming charges are obtained, at least approximately, by deducting the separately published dumping charge from the combined and trimming charge. The Bunker Trimming Charge. When ships or tugs take coal into their bunker holds at defendants piers, the dumping and trimming charge is 30c per gross ton. This is much in excess of the charge made when the coal is loaded into cargo holds. The reason for the difference lies in the fact that defendants must pay much higher wages to get men to descend into the cramped and more or less inaccessible bunker holds and shovel coal at high temperatures and unfavorable atmospheric conditions. The dumping and trimming charge of 30c approximates the dumping charge of 5c, plus the 24.5c paid the trimmers. Apparently in the interest of simplicity and because the bunker trimming wages are the same for all kinds of vessels, the charges to the public are the same for all kinds. Greater refinement in the classification of vessels for the purpose of assessing trimming charges would probably involve both increases and reductions, and upon this record it would be difficult to determine what the charges should be if a change were to be made. It might also lead to frequent disputes as to whether a given vessel was in one class or another. Moreover, the record is silent as to what the shipping interests in general would say about the proposition. Docking and Undocking. Vessels that are to receive coal generally lie at anchor a few hundred yards from defendants piers. They register with the pier authorities and await their turn at a pier. When space for loading is available tugs go out and tow them or assist them in reaching and getting alongside the pier, and, when loaded, tugs tow them or assist them in getting back into the channel. This service constitutes what is called docking and undocking. Under very unusual circumstances steamers have been known to come to and depart from the piers under their own power. The pier authorities control the time and place of docking; they say when a certain vessel shall be brought to the pier and at what berth it shall dock. They notify the vessel by sending out a tugboat to tow the vessel in. This method of doing business is necessary to the proper operation of the piers and the delivery and receipt of the coal. The C. & O., performs the docking and undocking with its own tugs. The N. & W., and Virginian do not but allow local tugboat companies to do it. The charges for these services are not published in tariffs filed with this commission. The fact that these services are performed or not performed by the defendants is not material. If docking or undocking are transportation, within the meaning of the act, defendants may be required to perform them or arrange for their performance by an agent. If they are not such services defendants are not responsible for them and are not bound by any requirements that do not apply to other parties doing the same thing. The service is not service given the property transported, but is a service performed for, or assitance given, the vessel of the consignee or the connecting water line which receives the coal at defendants piers. Defendants must deliver the coal but the vessel must do its part and put itself in position to receive it. It is just as much the vessels duty to get itself promptly to the designated berth at the coal pier as it is for any ship to get itself to the allotted space at any other pier where it desires to stop. The fact that it is to receive coal at a rail carriers pier does not alter the situation. The rail carriers initial duty in respect of delivery is fulfilled when it communicates to the vessel through the tugboat authorities or otherwise that a designated berth is available at the pier. It is

the vessels duty to go there with reasonable dispatch, otherwise the coal would be held for or by consignee thereby entailing demurrage and storage charges until the vessel has put itself in position to take delivery. This does not make it a transportation service in connection with the delivery of the coal and does not subject the independent tugboat company to the jurisidiction of the commission. Defendant rail lines have the same right to do this work with their own tugs and without bringing the service under the jurisdiction of the commission as they have to operate restaurants at their depots. The tugboat service is a marine service performed for the vessel and is not a service in connection with the delivery of the coal. The towing is done before and after delivery and can not reasonably be said to be in connection with it. Clearly, the service is not within the law. Running Lines. When the vessels come alongside the piers it is necessary that men be on hand to receive the lines, or ropes, as they are thrown out and to make them fast; also to release the lines when the vessel is ready to leave. This work is necessarily incident to the docking and undocking of the vessel and the delivery of the coal ,and can not be done by the vessels crew. This service is beyond the jurisdiction of the Commission. Furnishing Fresh Water to Ships. Defendant C. & O., furnishes fresh water to steamships at its piers, for which it makes a charge. The Virginian and the N. & W., do not furnish water, but permit an independent concern to do so from city pipe lines laid on their piers. The interstate commerce act furnishes no jurisdiction. Port or Wharfage Charges. Vessels taking bunker coal at defendants piers are required to pay port or wharfage charges, not on file with the Commission, which is in addition to the other charges connected with the delivery of the coal. This charge is based on the idea that defendants are entitled to special compensation for the use of their pier facilities because a vessel taking bunker coal may have to remain at the pier longer than one taking cargo coal, which is generally delivered in much greater volume. A vessel taking bunker coal may displace or interfere with a vessel taking cargo coal which brings defendants greater revenue. The charge is not made against vessels taking cargo coal if they do not also take bunker coal. About 75% of the vessels stopping at defendants piers take only bunker coal. The charge under consideration is for the use of the same transportation facilities as are employed for cargo coal, the only difference being in the extent of the use, and these facilities are of the kind that carriers are expected to provide in order to make deliveries. The charge is clearly one in connection with the transportation and delivery of the coal and subject to the act, although it is not supported by tariff authority or by contract for special or rate services. Defendants should publish their charge in the future, but what, if any, charge may reasonably be made must be left for consideration after further hearing limited to this subject. Southern Transportation Co. v. N. & W. Ry., 101 I. C. C. 211.

(c) Rates on bituminous coal from mining districts in Pennsylvania, Ohio, Maryland, the Virginias, Kentucky, and Tennessee to Lake Erie ports, for transshipment by vessel to destinations beyond found not in excess of the maximum of reasonableness. Such rates found to be just and reasonable and not unduly prejudicial as compared with rates from other districts in the Appalachian region. Lake Cargo Coal Rates, 1925, 101 I. C. C. 513.

§16. Wharfage and Dockage.

See Dockage; Facilities and Privileges §1 (c); Transportation §1 (c); Wharfage.

(a) Proposed rule requiring shippers on water front in Norfolk, Va., harbor to load l. c. l. freight on carriers' barges for outbound movement, found not justified. Present rates on l. c. l. freight from Norfolk were made to include this service of loading freight on barges and it would be unfair to shippers to require them to assume entire burden and still pay carriers for doing work. Loading of L. C. L. Freight, 91 I. C. C. 394.

(b) Carriers applied advances authorized under Increased Rates, 1920, 58 I. C. C. 220, to through ship-side rates, which included separately published wharfage charges. HELD: Such through rates found unreasonable since decision cited did not authorize increases in wharfage charges. Houston Cotton Exchange v. A. & S. Ry., 92 I. C. C. 363.

(c) Congestion existing at piers on

Manhattan Island has been referred to by commission in various cases, and reasonable rules and regulations designed for its relief and to facilitate handling increasing tonnage of merchandise freight at the piers will not be condemned. Somerville Iron Works v. C. R. R. Co. of N. J., 93 I. C. C. 36, 42.

(d) Upon consideration of matters involved in the investigation instituted by commission on its own motion into reasonableness of wharfage, handling, storage, and other accessorial services at south Atlantic and Gulf ports. FOUND, in view of numerous instances of overlapping of competitive conditions affecting traffic handled through north and south Atlantic ports raising questions that can not be satisfactorily disposed of by limiting the proceeding to south Atlantic and Gulf ports, such proceedings reopened and its scope broadened to include all Atlantic and Gulf ports. Wharfage Charges at South Atlantic and Gulf Ports, 93 I. C. C. 609.

(e) Following Handling Charges at Louisiana Ports, 61 I. C. C. 379, combined wharfage and handling charges on kerosene in cases, at New Orleans, found unreasonable for future to extent it exceeds 3.5 cents per 100 pounds. Wharfage Charges at South Atlantic and Gulf Ports, 93 I. C. C. 609, 613.

(f) Service of docking and undocking, running lines, and furnishing fresh water to ships in connection with the dumping and trimming of coal into vessels found not to be "transportation" within the meaning of section 1 (3) of the act, and beyond the commission's jurisdiction. Southern Trans. Co. v. N. & W. Ry., 101 I. C. C. 211, 221, 223.

(g) Port or wharfage charge at Hampton Roads piers assessed vessels taking bunker coal found to be one in connection with the transportation and delivery of such coal and subject to the act, although not supported by tariff authority or by contract for special or separate services. Defendants required to publish such charge in the future. Southern Trans. Co. v. N. & W., 101 I. C. C. 211, 224, 225.

ALL OTHER CITATIONS

Dockage, Handling, and Storage Charges, 88 I. C. C. 24.

§16½. Warehousing, Storage, Station and Terminal Facilities.

See Storage; Terminal Facilities; Warehousing.

(a) Under Rev. Gen. St. Fla. 1920, §4618, subds. 5, 12, as amended by Acts 1921, c. 8469, and federal Transportation Act of 1920, Railroad Commissioners may, in proper case, require railroad companies to construct sheds along tracks in connection with station for protection, comfort, and convenience of passengers. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(b) There being no joint duty to erect train sheds for two railroads maintaining joint station, order of railroad commissioners should impose duty on each railroad separately to erect and maintain shed along its particular road. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(c) Fifth-class rates assessed on sisal from Indianapolis to certain points in c. f. a. territory, western New York, and Ontario, Canada, found not unreasonable. Shipments here involved represented the reshipment of sisal imported via Gulf ports and held in storage at Indianapolis beyond the transit period. Had they been shipped out from transit point within transit period they would have been entitled to joint rates from the ports to ultimate destination, plus transit charge. Complainant did not attack the rating or class rates as such but in effect sought extension in some degree of benefit of the storage-in-transit arrangement to shipments made after expiration of the transit period. Similar proposals, however, were found not justified in 73 I. C. C. 455 and 78 I. C. C. 575. Sisal Sales Corp. v. B. & O., 93 I. C. C. 297.

(d) Present adjustment of rates on cotton from Oklahoma, Arkansas, Texas, and Louisiana to Texas Gulf ports found unduly prejudicial to the uptown and interior warehouses and compresses and unduly preferential of the water-front warehouses and compresses; the rates should be so adjusted that one rate will apply for all deliveries within the usual switching limits of the ports, except that the export rates should be made higher than the domestic rates by amount equal to the wharfage charge. This finding is not to be construed as condemning the practice of the carriers of absorbing drayage charges in lieu of switching. Reasonableness of the rates

was not in issue and the findings herein are not to be construed as authorizing the carriers to increase their present revenues, rather, the rates should be so readjusted as to preserve existing revenues. Application of Rates on Cotton to Gulf Ports 100 I. C. C. 159.

(e) Respondents proposed to reduce the charges for handling, storage and wharfage of imported fertilizer and fertilizer materials at Pensacola, Fla., and Mobile, Ala., when stored at the port from 4 to 12 months, from $1.60 to 60c per ton. The facilities at Pensacola are operated by the L. &. N., and those at Mobile by the M. & O., and Southern. The charges are substantially the same as those maintained at other south Atlantic and Gulf ports, except on potash salts at Pensacola, and on all fertilizer materials at Gulfport, Miss. At the latter, which is served by the I. C., a charge of 60c per ton is maintained. The Mobile interests are no doubt injuriously affected by the maintenance of the 60c charge on potash salts at Pensacola. If the interested carriers do not take proper steps to correct the maladjustment resulting from the maintenance of this charge, as well as the 60c charge on all fertilizer material at Gulfport, within 60 days of the service of this report, the matter may again be called to the attention of the Commission. The Commission cannot permit this maladjustment to be partially corrected even for a temporary period by the establishment of a charge which the record clearly shows to be below a reasonable minimum. HELD, suspended schedules not justified. Handling Storage and Wharfage of Fertilizer 109 I. C. C. 609.

III. PUBLICATION AND TARIFFS.

§16¾. In General.

See Tariffs.

(a) Although a rate published as applicable to export shipments should be applied to such shipments in preference to an interstate domestic rate if the service which the carrier holds itself out to perform under the export rate is actually rendered, where, as here, that completed service is not rendered, but rather a delivery of the character which be effected on a domestic shipment is made, the commission holds that it is not illegal to apply the interstate domestic rate even though the shipment at some time subsequent to delivery may be exported. Therefore, except where shippers avail themselves of transit provisions at the ports, under which the carriers are obligated to place the cotton at ship side, the collection of the interstate domestic rates on cotton delivered to the waterfront warehouses or compresses at Houston and Galveston, Tex., is not illegal. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 163.

(b) Practice of applying interstate domestic rates on shipments of cotton delivered to warehouses and compresses at the Gulf ports, where delivery is effected at a point other than ship side, found not illegal, but found unduly prejudicial to uptown and interior warehouses and compresses and unduly preferential of water-front warehouses and compresses. Complainant has failed to prove damages and prayer for reparation is denied. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 167.

§17. Obligation to publish.

See Import Traffic §2 (a).

(a) Complainant attacked commodity rates charged on cotton shipped during October 1918 from Tryon and Carney, Okla., to Guthrie, Okla., for concentration and reforwarded from Guthrie on Dec. 20, 1918 to Columbia, S. C., as illegal and unreasonable. The cotton moved into Guthrie over the M. K. & T., but while being held there service on that line between Guthrie and Fallis, Okla., was discontinued under an arrangement whereby the Ft. S. & W., a line not under federal control, handled the traffic of both roads between those points. The arrangement between these roads, which, according to the written agreement, was to have become effective on Oct. 1, 1918, but which appears actually not to have been operative at the time of the inbound movement to Guthrie, was not one of joint operation, and the M. K. & T., received no revenue for the service rendered by the Ft. S. & W. Complainants tendered the shipments to the Ft. S. & W. but neither directed that they be routed over the M. K. & T., from Fallis, nor apprised the Ft. S. & W., that they have moved into Guthrie over the M. K. & T. and would be made the subject of claims for refund of the inbound charges. The shipments moved from Guthrie to Columbia via the Ft. S. & W., and connections other than the M. K. & T. The tariffs of both the M. K. & T., and Ft. S. & W., permitted concentration of cotton at

Guthrie and reshipment under joint rates from point of original shipment to final destination, provided the outbound movement was over the line bringing the cotton into Guthrie. A joint rate of $1.14 was in effect from Tryon, Carney and Guthrie to Columbia, and charges from Guthrie appear to have been collected at that rate. HELD, although the situation is unfortunate there does not seem to have been any disregard of the tariffs by the carriers, and it can not be held that the shipments were overcharged. Neither can relief be granted on the ground that the charges collected were unreasonable, inasmuch as complaint was not presented until the period of limitations governing such actions had expired. HELD, complaint dismissed. Anderson Clayton & Company v. Director General. 91 I. C. C. 233.

(b) The Commission may not read into the rule something that would be favorable to complainants contention. Transit rights must be specifically authorized by tariff provision; they can not be inferred. See 50 I. C. C. 233. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337, 339.

(c) There is no warrant that the Commission acceded to the suggestion that substitution of one kind of lumber for another may lawfully be made unless it is authorized by tariff, or that it has receded in any degree from the opinions hitherto expressed touching the lawfulness of any practice or device not authorized by the tariff by which the integrity of a through rate is impaired; unjust discrimination or undue preference is given or secured; or the requirements of the law or the tariff are in any wise evaded. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337, 342.

§18. Reshipping under through rate.

See Local Rates and Combinations (vv); Proportional Rates; Reshipping Rates; Storage in Transit (a); Through Routes and Joint Rates §18, §19, §20.

(a) Complainant attacked combination rates on cottonseed cake and meal, carloads, from Texas common points to points in eastern trunk line and New England territories as unreasonable, unjustly discriminatory and unduly prejudicial. Complainant receives under transit arrangements at Rossford, O., large quantities of cottonseed cake and meal from Texas, and forwards its manufactured products to eastern trunk line and New England markets at the through rates. Defendants maintain joint rates on cake and meal, carloads, from Texas to about 75 points in the destination territory described, including the so-called eastern basing points. No provision is made for applying the joint rates at the majority of places intermediate to the basing points and usually grouped therewith in constructing rates from beyond trunk line territory. The combination rates applicable to the intermediate points exceed the joint rates to the farther distant basing points, in contravention of the fourth section. Defendants introduced no evidence, filed no brief and were not represented at argument. HELD, rates attacked unreasonable to extent they exceeded rates to farther distant points, reparation awarded. Larrowe Milling Co. v. A. T. & S. F. Ry., 89 I. C. C. 439.

(b) Complainant attacked commodity rates charged on wheat, car loads, from Kansas City, Mo., to Memphis, Tenn., Hot Springs, Ark., Deport, Tex. and Omaha, Neb., with transit at Leavenworth, Kans., and Marshall, Mo., as unjust, unreasonable and unjustly discriminatory to extent they exceeded rates from Kansas City to the respective destinations. The sole issue appears to be whether or not defendants tariffs authorize the protection of the proportional rate from Kansas City to destinations on shipments moving from Kansas City to Memphis, Hot Springs and Deport, with transit accorded at Leavenworth and Marshall. Effective August 15, 1922 rates were published providing transit at Leavenworth on grain from Kansas City to Marshall on basis of Kansas-St. Louis proportional rates. HELD, defendants tariffs did not authorize transit at Leavenworth and Marshall on grain from Kansas City to destinations named, rates attacked not unreasonable or unjustly discriminatory, complaint dismissed. Victor Milling Company v. M. P. R. R., 91 I. C. C. 58.

(c) Complainant attacked commodity rates charged on four cars of wheat shipped in July and August, 1921 from Oklahoma to Wichita, Kas., there stored in transit and later reshipped to Galveston, Tex., for export, as unreasonable, unduly prejudicial and inapplicable. Shipments originated, one at Avard, Okla., one at Lucien and Carleton and

two at Carrier, Okla., stations on the Frisco, from 184 to 232 miles south and southwest of Wichita, and moved over that line through Enid, Okal., northward to Beaumont Junction, thence westward to Wichita. From Wichita the shipments were unrouted, but according to distances shown they moved over Frisco eastward through Beaumont Junction and Cherryvalle, Kas., to Baxter, Kas., thence south through West Tulsa, Okla. Except for the handling at Wichita this grain might have moved from points of origin east to West Tulsa, thence to destination, at a saving of transportation of from 330 to 381 miles. At time shipments moved, rates of 27c from Avard, Carrier and Lucien and 32.5c from Carleton, to Cherryvalle, with the privilege of storage in transit at Wichita without extra charge for the back haul and a rate of 38c from Cherryvalle to Galveston were in effect. There was also a provision that when the final destination was on a connecting line and through rates were based on combination rates the basing point would be considered the final destination within the meaning of the tariff. Having surrendered inbound billing on the shipments from Wichita, complainants, under these tariff provisions, are entitled to the Cherryvalle combinations of 65c from Avard, Carrier and Lucien and 70.5c from Carleton, HELD, shipments overcharged, not unreasonable in themselves, overcharges ordered refunded. Craig Grain Co. v. G. H. & S. A. Ry., 95 I. C. C. 464.

(d) Complainant attacked transportation charges assessed on three cars of steel plates shipped from Gary, Ind., to Tulsa, Okla., fabricated there in transit and reshipped to Casper, Wyo., and Sunburst, Mont., as unreasonable and illegal. Shipment to Casper was eliminated. One shipment was routed E. J. & E., to Joliet, Ill., C. & A., to Kansas City, Mo., Frisco to Tulsa; the other moved C. & E. I., to St. Louis, Mo., Frisco to Tulsa. After fabrication both shipments moved Frisco to Kansas City and Burlington and G. N., beyond, charged on each car at 81c to Tulsa and $2.145 beyond. Complainant contended proper rate was joint rate of $1.785 Gary to destination, plus charge of 2c per 100 pounds for fabrication in transit. Complainant showed on bill of lading routing via Frisco but gave no other routing instructions. The tariff naming the rates from Gary to Sunburst carried no limitation with respect to routes. Complainant was entitled to fabrication arrangement at Tulsa on the shipment which moved through St. Louis at applicable rate of $2.185 from Tulsa to Sunburst, plus 2c transit charge. That rate is applicable because it is the highest of the alternative rates, origin to final destination, origin to transit point, or transit point to final destination, named in the tariffs. Complainant was not entitled to transit on the shipment which moved through Kansas City to Tulsa and thence back to Kansas City as the through rate did not apply via that route, necessitating as it did a straight back haul. Applicable combination was 81c from Gary to Tulsa and $2.145 beyond. HELD, overcharge should be refunded, complaint dismissed. Maloney Tank Mfg. Co. v. B. & O. R. R., 95 I. C. C. 725.

(e) Proposed rules in connection with refining of vegetable oil receiving transit at Portsmouth, Va., under which refiners would be required to pay switching charges on outbound movements, found not justified. For many years switching charges on inbound and outbound movements have been absorbed by road-haul carriers and respondents made no attempt to justify increased charges which would result from the proposed schedules, which, if allowed to become effective, would also conflict with provisions of Pennsylvania's absorption tariff under which switching charges are absorbed by that carrier where it receives a road haul. Absorption of switching charges at Portsmouth, 91 I. C. C. 296.

(f) Complainant attacked rates charged on wheat, carloads, from Kansas City and St. Joseph, Mo., to Judsonia, Ark., New Orleans, La., Birmingham, Ala., Houston, Tex., and Cannon Falls and Lake City, Minn., accorded transit at Leavenworth, and at Marshall and Sweet Springs, Mo., as unjust, unreasonable, unjustly discriminatory unduly prejudicial and in violation of the fourth section to extent they exceeded contemporaneous rates from Kansas City or St. Joseph to the respective destinations. Grain shipped to Kansas City and St. Joseph moves out to the destinations here considered under proportional rates. The points at which transit was accorded are on the M. P., and in certain instances under that carriers transit tariff the proportional rates apply with

transit at points in direct line of shipment and also at other points where specified. The applicable tariffs allowed two stops for transit, including blending, storage and milling. Shipments originated at various points west of Kansas City during January 1920 and October 1922; moved from the latter point over the M. P., to Leavenworth for blending or storage, and were reshipped through Kansas City to Marshall or Sweet Springs, there milled into flour, and the product forwarded to destinations in Arkansas, Louisiana, Texas and Alabama. Leavenworth is 26 miles northwest of Kansas City and there was an out of line haul through the latter point of 52 miles. Charged on basis of proportional rates of either 4 or 4.5c from Kansas City to Leavenworth plus the proportional rates from Leavenworth to final destinations with transit at Marshall or Sweet Springs. An out of line haul charge of 2c was also collected on the shipment accorded transit at Sweet Springs for which there was no tariff authority. This overcharge should be promptly refunded. The alleged undue prejudice has been removed. Sub. 2 relates to 19 cars of wheat from St. Joseph of which 6 were shipped to Lake City and the remaining 13 to Cannon Falls. These shipments originated at points west of St. Joseph during September and Oct., 1919, moved from that point over the M. P., to Leavenworth, were there stored, and were reshipped thence to destination over the M. P., to Kansas City and the Milwaukee beyond. No joint rates under which transit was permitted at Leavenworth were in effect, and charged at combination of 19c, composed of proportional rates of 4c to Leavenworth and 15c beyond. During this period a joint rate of 15c applied from St. Joseph to these destinations via Leavenworth and Kansas City and Milwaukee beyond, but transit at Leavenworth was not authorized under that rate. Since April 28, 1924 the transit tariff has authorized transit at Leavenworth under the 15c rate from St. Joseph. HELD, applicable rates not unreasonable or otherwise unlawful, complaint dismissed. Moore Lawless Grain Co. v. M. P. R. R., 100 I. C. C. 303.

(g) Complainant attacked commodity rates charged on 6 cars of lumber during April, May and June 1920 from Roach and Springdale, Fla., and Scott, Ga., to Harrison and Jersey City, N. J., and Great Works, Me., as unreasonable and in violation of section 6. Roach and Springdale are on the L. O. P. & G., and Scott is on the C. of Ga. Shipments were accorded transit at Portsmouth by the A. C. L., and the material reshipped at the joint rates from points of origin to final destinations, plus a transit charge. Subsequently defendant discovered that the transit tariff under which transit had been accorded was applicable only to shipments originating at points of origin on the A. C. L., and additional charges were collected at rates which were intended to be based on Norfolk, Va., combination, but overcharges and undercharges resulted. The record warrants the conclusion that reasonable rates on these shipments should not have exceeded the combinations on Live Oak and Savannah, plus a transit charge. HELD, shipments unreasonable to extent they exceeded Live Oak and Savannah combinations, plus a transit charge, undercharges waived, reparation awarded. McClave & Son v. A. C. L. R. R., 100 I. C. C. 405.

(ga) Maintenance of reshipping rates on grain and products to and from Memphis without contemporaneously maintaining similar rates to and from Mississippi points found not unduly prejudicial, but in so far as rules, regulations and practices under which grain or its products may be stopped at Memphis for milling, storing, or other transit service and later reforwarded at less than sums of local rates to and from Memphis are more favorable than rules, regulations, and practices under which transit service is accorded at Mississippi points, they are unduly prejudicial. Mississippi R. R. Commission v. A. & V., 93 I. C. C. 435.

(gb) Rates on grain and products from interior points in Texas, Oklahoma, Kansas, Nebraska, Colorado, Iowa, Minnesota, Indiana, Illinois, and Missouri, and reshipping rates on the same commodities from reshipping points in States named to points in Mississippi found not unreasonable. Mississippi R. R. Commission v. A. & V. Ry., 93 I. C. C. 435.

(gc) Rates assessed on wheat moving from points in Oklahoma to Wichita, Kans., there stored in transit and later shipped to Galveston, Tex., for export, found not unreasonable as compared with rates from and to same points with privilege of storage in transit at Kansas

City, Mo., or with rates from Kansas points to Galveston with privilege of storage at Wichita. Shipments here involved moved via a circuitous route involving an out-of-line haul to and from the transit point. Rates assessed, however, found illegal, applicable rates being combinations based on Cherryvale, Kans. Adjustment of charges directed. Craig Grain Co. v. G., H. & S. A., 95 I. C. C. 464.

(h) Combination rates charged on wheat shipped during Federal control from various points in Colorado to Antonito, Colo., there milled, and the flour reshipped via Memphis to Nashville, Tenn., found not unreasonable, as compared with lower joint rates, with milling in transit privileges, subsequently established from Durango, Colo., and other intermediate points of origin to Memphis and lower joint rates contemporaneously in effect from Utah common points, with like privileges, to Cairo and Memphis, Tenn., except to extent that the aggregate of the factors assessed from Antonito to Nashville exceeded a rate herein prescribed as reasonable. Reparation awarded. Conejos Cooperative Mills & Mfg. Co. v. Director General, 98 I. C. C. 515.

(i) Contention that during period of Federal control the lines, both inbound and outbound, were being operated as a unified system by reason of which the forwarding of commodities over any line was same as forwarding them over the particular line having the inbound movement into transit point, not sustained from standpoint of tariff interpretation, since the lines were still distinguished in the tariffs by their corporate names. Haas & Co. v. Director General, 98 I. C. C. 619, 621.

(j) Complainant attacked combination rate of 44.5c charged on a car of bulk corn Dec. 10, 1922 from Alvo, Neb., to Wichita, Kas., stored and reshipped on Dec. 30, 1922 to Custer City, Okla., as unjust and unreasonable and unduly prejudicial to extent it exceeded joint rate of 34c between the same points. Alvo is in the eastern part of Nebraska on the Rock Island. Custer City is in the western part of Oklahoma on the Orient and Frisco. Shipment moved over Rock Island to Wichita and Orient beyond. The shipment was unloaded into complainants elevator for the purpose of obtaining official weights, charged 24c to Wichita and 20.5c beyond. A joint rate of 34c applied between Alvo and Custer City over the Rock Island in connection with either the Frisco or Orient. The transit tariffs of the Frisco and Orient allowed storing in transit at Wichita on the basis of the through rate. The transit tariff of the Rock Island accorded transit privileges only on shipments forwarded from the transit station over the Rock Island. Effective April 29, 1923 the latter tariff was amended so as to permit storing in transit at Wichita on the basis of the through rate on shipments moving out of Wichita over a connecting line. The only exception was at Kansas City. The fact that the tariff has been amended since the movement so as to allow transit when delivery is made to a connecting line at Wichita is not sufficient to warrant a finding that the exaction of the combination rate was unreasonable. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Wichita Terminal Elevator Co. v. C. R. I. & P. Ry., 102 I. C. C. 115.

(ja) Combination rate charged on shipments moving into transit point via one carrier, the outbound movement being performed by different line, found not unreasonable or unduly prejudicial. Governing tariff at time of movement restricted transit privilege to shipments moving outbound from transit point over rails of carrier performing the inbound haul, and fact that such tariff has since been amended so as to allow transit at joint rates when outbound movement is performed by a connecting line is not sufficient to warrant a finding that higher combination formerly in effect was unreasonable. Wichita Terminal Elevator Co. v. C., R. I. & P., 102 I. C. C. 115.

(jb) Proportional rates on grain generally apply without regard to the territory in which the grain is produced. Such an adjustment differs from a transit arrangement in that it furnishes a constant balance. Under ordinary transit arrangements the traffic must move outbound over the same line at the balance of the through rate from point of origin to final destination, and varying inbound local rates produce varying outbound balances. As grain must be accumulated in elevators when it is moving in abundance and held until there is a demand for it, the dealer who stores his grain at a rate-breaking market has an advantage over one who stores at a transit

market. Des Moines Board of Trade v. D. M. & C. I., 102 I. C. C. 186, 192.

(jc) Rate assessed on wheat moving from Chappell, Nebr., to Wichita, Kans., there stored and later reshipped to San Diego, Calif., found not unreasonable. While tariff carrying rate claimed was applicable over circuitous route of movement because unrestricted in its application, on other hand, tariff of carrier moving the shipment into transit point did not authorize storage at that point where outbound movement is made over other lines, as was the case here. Moreover, shipment here moved out of direct route to such extent as to entail wasteful transportation of the nature objected to by commission in 73 I. C. C. 116. Wallingford Bros. v. C., R. I. & P., 102 I. C. C. 239.

(jd) Upon investigation by commission on its own motion into tariffs of the St. L.-S. F. Rv., purporting to accord transit at Ada, Okla., and under which limestone and shale shipped into that point can be manufactured into cement and shipped beyond over that carrier's line to interstate points at lower through charges than when moving beyond over competitive lines, FOUND: Such tariffs are vague, indefinite, contradictory, and therefore unreasonable and unlawful. They attempt to restore in tariff form the provisions of a contract between the Frisco and a cement company; no justification appears for charging a rate lower than inbound local upon theory that shipments may be given transit, and, if shipments are not connected up with an outbound movement policing and subsequent collection of local rate will be impossible. Furthermore, all local inbound shipments should in first instance be subject to same rates. Limestone Into and Cement Out of Ada, Okla., 102 I. C. C. 407.

(k) No. 16640 is an investigation instituted by the Commission into and concerning the lawfulness and propriety of Frisco tariff I. C. C. 8410 which names, rates, rules and regulations governing the transportation of crushed limestone or shale from Lantry and Lawrence, Okla., to Ada, Okla., in connection with the movement of cement manufactured from such limestone and shale and subsequently reshipped to interstate destinations. Lawrence and Lantry are local stations on the Frisco about 6 miles south of Ada, a point served by the Atoka and by the Santa Fe, as well as the Frisco. The cement company discovered the stone deposit at Lawrence in 1906. Lawrence was then only a railroad station, and the nearest town was Ada. This fact, and the further fact that the Frisco was agreeable to entering into a contract relating to the movement of the rock from Lawrence to Ada, had a direct bearing upon the selection of Ada instead of Lawrence as the site for the cement company's plant. Under the terms of the contract entered in 1906 the Frisco agreed to haul the rock from Lawrence to Ada at a rate of 8c when loaded in cars of the cement company and 10c when loaded in carrier cars; and the cement company agreed to ship the products of its plant over the Frisco, provided the rates were no higher than over competitive lines. The present tariff provides that the charge will be $6.60 per car of 80,000 pounds capacity and $8.25 per car of 100,000 pounds capacity and that the arrangement herein authorized provides that charges will be assessed and collected on basis of rates shown in item 20 and upon reshipment via Frisco rails of the product (cement in carloads) the inbound charges on the raw material will be revised to basis of a charge of 10c per ton. Both tariffs are vague, indefinite, contradictory and appear impossible of execution. It is plain that they are intended to restore in tariff form the substantial provisions of the contract of 1906 between the Frisco and the cement company. Assuming the lawfulness of the respondents purpose to control the outbound movement of the cement from Ada by means of a transit arrangement, there appears no justification for charging a rate lower than the local inbound rate upon the theory that the shipments may be given transit. If the shipments were not connected up with an outbound movement, it would be impossible for the carrier to police the shipments and subsequently collect the local rate. Further, all local inbound shipments in the first instance should be subject to the same rates. HELD, provisions of existing tariff here under consideration unreasonable and unlawful. Limestone into and cement out of Ada, Okla., 102 I. C. C. 407.

(l) Transit is sometimes beneficial in its results; but it is open to grave abuses. To police it adequately is difficult and expensive. Unless adequately policed, it is an avenue to illegal rebates and seriously depletes the carriers revenues. Railroad managers differ

widely as to the policy of granting such privileges. The Commission clearly has power under section 1 of the act as amended to determine whether in a particular case a transit privilege should be granted or should be withdrawn. Limestone in and cement out of Ada, Okla. 102 I. C. C. 407, 410.

(m) In 91 I. C. C. 3, the Commission found that the application of penalty charges for detention at Pawtucket and Providence, R. I., in June and July 1921 of three cars of lumber shipped from Stockbridge Mass., and reforwarded to South Providence, R. I., was not illegal and dismissed the complaint. If the movement were reconsignments the penalty charges were applicable; if reshipments, the application of penalty charges was illegal. If a shipper is to avail himself of the advantages of reshipment instead of reconsignment there must be two shipments without the carrier or his agent acting for the shipper. Shipments were reconsigned therefore rates applicable were the through rates plus reconsignment charges, shipments overcharged, complaint dismissed. Stetson Cutler & Co. v. N. Y. N. H. & H. R. R., 102 I. C. C. 471.

(ma) Upon reconsideration, finding in original report, 91 I. C. C. 3, that application of penalty charges for detention at originally billed destinations of shipments of lumber which were subsequently reforwarded to new destinations were not illegal, affirmed. Cars were placed for delivery on defendant's team tracks, but they had not been unloaded or accepted by consignee or owner, and, under the terms of the governing tariff rule, must be considered reconsignments and not reshipments, as contended by complainants. Stetson, Cutler & Co. v. N. Y., N. H. & H., 102 I. C. C. 471.

(n) Complainant attacked rates charged on 7 cars of apples shipped in Oct. 1921 from Delta and Montrose, Colo., to Lincoln, Neb., there stored in transit and reshipped in Jan. 1922 to St. Louis, Mo., Coffeyville, Kas., Guthrie, Okla., and Austin and La Grange, Tex., as unreasonable. Six cars were shipped from Delta and one from Montrose. They were routed and moved to Lincoln over the D. & R. G. W., and Burlington. Six of the shipments were consigned to consignors' order at Lincoln. Before the cars reached Lincoln the respective consignors instructed the Rio Grande to deliver to Beatrice Creamery Co., on storing in transit privilege. The agent of that carrier placed upon the bills of lading the following: Diverted to Beatrice Creamery Co., Lincoln, Neb., C. B. & Q., for storage in transit. One shipment was consigned to the Beatrice Creamery Co., at Lincoln and the bill of lading, issued at Delta read: for storage in transit. On the movement into Lincoln charged $1, applicable rate, and on reshipments the rates applicable from Lincoln were collected, namely, 38.5c to St. Louis, 64c to Coffeyville,, 73c to Guthrie, and $1.335 to Austin and La Grange. Contemporaneously, through rates were in effect on apples, carloads, from Delta and Montrose to final destinations over the routes of movement through Lincoln, as follows: $1 to Coffeyville, $1.165 to St. Louis and $1.255 to Guthrie, Austin and La Grange, and tariffs provided, subject to certain conditions, that apples would be stored in transit at Lincoln at the through rates plus a 7c transit charge. For many years complainant had operated under the storage in transit arrangements applicable on butter and eggs, and understood that apples could be handled in the same manner. It paid the inbound freight charges to Lincoln, but failed to have the freight bills recorded. It retained these documents and submitted them to the carrier when the apples were reshipped. Due to the failure of complainant to comply with the transit rules the rates to and from Lincoln were applicable on the shipments. The mere comparison of the through rates with the combination of rates to and from Lincoln does not prove that the rates to and from Lincoln charged on the shipments were unreasonable. The record does not show, nor is it claimed, that the transit rules are unreasonable per se. While the shipper is not presumed to know with what representative of the carrier he is to record the freight bills, if he desires transit it is his duty to make inquiry of the carrier and thus inform himself. HELD, rates attacked not unreasonable, complaint dismissed. Beatrice Creamery Co. v. C. B. & Q. R. R., 107 I. C. C. 568.

(o) Knowledge on the part of carriers agent of complainants intention to store apples in transit does not relieve complainant from a strict compliance with the transit rules. Ignorance of tariff provisions does not excuse a shipper from noncompliance with such provisions. Beatrice Creamery Co. v. C. B. & Q. R. R., 107 I. C. C. 568, 570.

(p) Upon contention of the uptown warehouses and compresses at the ports that under any readjustment that is made in the domestic and export rates on cotton to the Gulf ports, they should continue to receive a free second merchandising or compression in transit on cotton purchased by them which has already been concentrated at the through rate, FOUND: That such a request is not reasonable, for shipments stopped at other points for second merchandising or compressing must pay a transit charge and the commission sees no reason why an exception should be made in the case of the uptown warehouses or compresses at the ports. Cotton passing through these uptown facilities is, however, entitled to one free transit privilege. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159, 166.

(q) Following 91 I. C. C. 58, rates assessed on shipments of wheat from Kansas City, Mo., to various interstate destinations accorded transit at Leavenworth, Kans., Sweet Springs and Marshall, Mo., found applicable and not unreasonable, unjustly discriminatory, or unduly prejudicial. While grain shipped to Kansas City moves out to destinations here considered under proportional rates which are protected when transit accorded at points in direct line of shipment and at other specified points, shipments involved were reshipped from Leavenworth through Kansas City to Sweet Springs or Marshall, this constituting an out-of-line haul through Kansas City. Moreover, at time shipments moved, defendants' tariffs did not authorize transit both at Leavenworth, and at Sweet Springs or Marshall on shipments from Kansas City. Moore Lawless Grain Co. v. M. P. R. R. Co., 100 I. C. C. 303.

(r) Complainant attacked aggregate of inbound and outbound rates on carloads of rough rice from Louisiana to Lake Charles, La., and reshipped as clean rice and rice products to various destinations over interstate routes between May 20, 1921 and August 6, 1922 as unjust, unreasonable, unjustly discriminatory, and as compared with the rates and privileges accorded competitors at Orange and other Texas milling points, unduly prejudicial. When the shipments moved a transit arrangement was in effect at Lake Charles which permitted the milling of rough rice into clean rice and reshipment under joint through rates applicable on clean rice from point of origin to final destinations at a charge of 2.5c per 100 pounds. At that time this transit arrangement was not in effect on shipments that received a back haul. HELD, rates rules and regulations with respect to milling in transit or rice at Lake Charles during the period of movement not unreasonable, or unjustly discriminatory to any greater extent than indicated in 77 I. C. C. 631. The establishment of the same transit arrangements at Lake Charles as at the Texas milling points had the effect of removing departures, complaint dismissed. Lake Charles Rice Milling Co. v. L. W. R. R. 109 I. C. C. 195.

Eshelman & Sons v. Director General, as Agent, 85 I. C. C. 578; Kneeland-Bigelow Co. v. Director General, as Agent, 85 I. C. C. 659; Locke & Co. v. Director General, as Agent, 88 I. C. C. 487.

§19. Retroactive Application.

See Reconsignment.

(a) The Commission has repeatedly refused to sanction the retroactive application of a transit service in the absence of unjust discrimination or undue prejudicial and damage thereunder. Capital Warehouse Co. v. Director General, 96 I. C. C. 293, 296.

ALL OTHER CITATIONS

Parkersburg Rig & Reel Co. v. B. & O. R. R. Co., 88 I. C. C. 49; Locke & Co. v. Director General, as Agent, 88 I. C. C. 487.

§20. Substitution of tonnage.

See Substitution of Tonnage.

(a) Grain products usually move from transit point on remainder of through rates. Transit arrangements are of value to the farmer as well as to the miller and the market, in that the farmer is thus afforded wider marketing opportunities. Rates and Charges on Grain and Products, 91 I. C. C. 105, 125.

(b) The Commission has consistently held it would be unlawful for a carrier to allow the substitution of one commodity for another of like quantity from a different rate point without clearly and comprehensively specifying in the published tariffs the right to lost identity or

to make substitution. The utility of a transit arrangement is primarily a question for the shipper, to determine by ascertaining whether or not it can profitably be availed of under a reasonable charge for the service rendered. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337, 341.

(c) It is not practicable that the identity of each carload of grain, lumber, salt, etc., be preserved, but it is not possible to lawfully substitute at the transit point any commodity of a different kind from that which moved into such transit point under a transit rate or rule. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337, 342.

(d) It is the duty of the carriers to initiate and properly police their transit arrangements. It is the duty of the shipper to conform his operations to the requirements of the law and of all reasonable rules and regulations of the carriers designed to insure the observance of the law. Property treated or stored in transit necessarily passes temporarily out of the possession of the carrier and into the custody of the shipper. Armour & Co. v. D. L. & W. R. R., 101 I. C. C. 337, 343.

IV. DISCRIMINATION.

See Supra §15; Discrimination; Passenger Fares and Facilities III, §9.

§21. In General.

(a) Complainant attacked charges exacted on and rules governing the transportation of grain and grain products from various points in the west and south to Bangor, Pa., for milling, mixing or malting, and on the manufactured product thence to destinations in trunk line and New England territories as unreasonable and unduly prejudicial. This is a proceeding to require of defendants the establishment of through routes via Bangor from the west and south to eastern territory and the granting of milling in transit arrangements at that point at joint rates equal to those now applicable over other routes from and to the same districts. Bangor is on the Bangor & Portland branch of the Lackawanna, 8 miles south of Portland, Pa. It is a main line point on the L. & N. E., which operates from Nesquehoning, Pa., through Tamaqua and Portland to junction with New England roads at Campbell Hall, N. Y., 139.5 miles. This road would be an intermediate carrier by all the desired routes. Milling in transit is already authorized on both of these lines, hence the chief question at issue is the propriety of requiring the establishment of the through routes and joint rates sought. Transit practice is common in this industry. It is now accorded complainant by the Lackawanna when the inbound and outbound movements are over that road and certain connectings forming through routes over which current joint rates from origin or intermediate basing points are applicable. To destinations on other than the specified roads combination rates apply. Because of the business and transportation practices prevalent in dealing in grain and grain products, to compete upon an equality complainant requires joint rates with transit at Bangor equal to the rates in effect over existing routes through other milling points. HELD, to extent indicated joint rates over the routes described are necessary and desirable in the public interest. Flora Milling Co. v. C. N. E. Ry., 93 I. C. C. 129.

(b) An individual miller is a shipper and entitled to reasonable rates, rules and regulations measured in the light of the business and transportation practices in the industry in which he is engaged. Milling in transit of grain, grain products, and commodities entered into the manufacture of mixed feeds at the joint rates in effect to ultimate destination has become such a widely diffused and common practice, due in large extent to the voluntary act of the carriers, that it is undoubtedly true that any manufacturer not accorded transit under joint rates is at a substantial disadvantage which will confine his opportunities of sale to limited areas. It is the province of the carriers to conduct commerce in the channels demanded by shippers. Flora Milling Co. v. C. N. E. Ry., 93 I. C. C. 129, 133.

(c) Complainant attacked combination rates charged on wheat, carloads, shipped between August 2, 1921 and Sept. 16, 1922 from Kansas and Colorado to Atchison, Leavenworth and Fort Leavenworth, Kas., and St. Joseph, Mo., as inapplicable, unreasonable, unduly prejudicial and in violation of the fourth section. Wheat moved to Kansas City, Mo., where it was milled into flour and feed, which was forwarded to these destinations. Local rates to Kansas City,

plus a proportional rate beyond a 5.5c prior to the reduction of Jan. 1, 1922 and 4.5c thereafter, was charged. During this period wheat could be moved from the same shipping points to mills on defendants lines west of Kansas City, milled in transit, and then shipped through Kansas City to Atchison and the other destinations on the local rate from point of origin to destination. As the local rates to Atchison and the other destinations were the same as the local rate to Kansas City complainants were forced to pay rates higher than their competitors at the intermediate milling points by the amount of the proportional rates beyond Kansas City. No reason appears why higher rates should be assessed from and to the points here under consideration on shipments milled at Kansas City than on shipments moving over the same route which have been milled at competitive stations, west of Kansas City or on shipments milled at Kansas City and thence shipped to points in Missouri, Minnesota and Iowa. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed the rates from the points named to the same ultimate destinations upon which milling in transit is allowed at points in Kansas west of Kansas City, Mo., reparation awarded. Rodney Milling Co. v. M. P. R. R., 93 I. C. C. 200.

(de) Finding to effect that transportation act, 1920, contemplates that railroads of the country should be considered as one national system of transportation, and that eastern carriers, forming a part of such national system and participating in joint rates, are unduly discriminating against eastern points, in refusing to grant transit on wool at such points while permitting it at western points, would be contrary to conclusion of Supreme Court in Central R. R. Co. v. United States, 257 U. S. 247. Wool Rates Investigation, 1923, 91 I. C. C. 235, 284, 285.

(f) Santa Fe sought to amend its transit rules in respect of the movement of grain and grain products, from Kansas and Colorado through Kansas City, Mo., for reshipment under domestic and export rates to Texas and Louisiana and to Texas Gulf ports. Respondents present tariff provide that grain moving into Kansas City for reshipment to the Texas Gulf ports for export or to destinations in interior Texas and Louisiana shall be subject to stated charges for out of line hauls up to 150 miles. When the out of line service exceeds 150 miles, such shipments are subject to the combination of rates to and beyond Kansas City. The effect of the proposed schedules would be to wipe out all out of line charges on grain originating at any point in Kansas on respondents line, moving to Kansas City and reshipped in accordance with the transit rules to the Texas gulf ports, for export. On domestic traffic, transited at Kansas City and reshipped to destinations in Texas and Louisiana the waiver of out of line charges covers only that territory on and north of respondents main line through Kansas to Colorado. The suspended schedules would not result in any increased transportation charges. Under the circumstances, therefore, their lawfulness depends entirely upon whether their application would result in undue prejudice to Wichita or other interior Kansas points, or whether the out of line hauls proposed should be regarded as constituting wasteful transportation. There is no reason why grain should not be permitted to move through Kansas City to interior points in Texas and Louisiana or to Texas gulf ports. But if it does so move, there is also no reason why the same rate should apply as for a direct movement. It is appreciated that the M. P., and possibly some of the other lines serving Kansas wheat fields are now doing what the Commission is here condemning. Respondents request that the Commission should allow it to meet this competition until such time as the formal complaint attacking similar practices by other lines shall have been decided, can not be granted. The Commission is convinced on this record that there is no justification for performing such an excessive amount of extra transportation without additional charge and being so convinced it is not prepared to allow the arrangement to become effective even temporarily. HELD, proposed schedules not justified, but carrier may provide for a charge for the out of line haul lower than the present combinations but sufficiently higher than the direct haul rates to compensate for the extra service. Transit at Kansas City, 101 I. C. C. 696.

(g) Mere fact of participation by carrier in joint rates in connection with which transit is allowed at points on other lines does not make it guilty of

undue prejudice against shippers or localities on its own line. C. R. R. Co. v. U. S., 257 U. S. 247. Lange & Crist Box & Lbr. Co. v. B. & O., 93 I. C. C. 207, 208.

(h) It does not follow from fact that the commission has approved increases in handling charges at certain ports that a lower basis of charges would have been unlawful. Carriers may, subject to certain restrictions, initiate rates lower than the commission may prescribe. The question is as to whether or not they are proposing to go to such lengths in attempting to meet competition and attract business that resulting charges will be so low as to create a burden upon other traffic. Handling Charges on Cement, Fertilizer, and Salt, 93 I. C. C. 640, 644.

(i) Practice of charging complainant for a service in excess of the line-haul service rendered in transporting iron ore from the lower Lake Erie ports to points in Ohio and other States, while furnishing an excess service free in making delivery at competing plants, constitutes undue prejudice to complainant and undue preference of such competitors. Carnegie Steel Co. v. Director General, 96 I. C. C. 527, 535.

(j) The K. C. S. and M. P. railroads do not reach Marshall, Tex., with their own rails and the T. & P. has no control over storage in transit arrangements established by those carriers at Texarkana and Shreveport, but does have control of the transit situation at Marshall. The circumstance which differentiates the situation at Marshall from that at Shreveport and Texarkana is the competition of the M. P. and K. C. S. found at the latter points. HELD: Competitive situation stressed is not adequate justification for the disadvantage to which Marshall and shippers there located are subjected by the present transit arrangements in this territory. See 263 U. S. 515. Marshall Mill & Elevator Co. v. K. C. S., 101 I. C. C. 270, 272.

(ja) It is more desirable to operate under a rate break than under transit; but the rate breaks do not necessarily constitute undue preference of the market enjoying such an adjustment nor subject transit points to undue prejudice. See 78 I. C. C. 209 and cases cited at page 213 thereof. Kansas City Board of Trade v. A. & W. Ry., 102 I. C. C. 285, 301.

(k) It is one thing for carriers to grant a privilege if based upon proper considerations, and quite another for the commission to order it; but the carriers themselves may not lawfully discriminate in this respect. Western Paper Makers Chem. Co. v. A. A. R. R. 109 I. C. C. 133, 137.

Parkersburg Rig & Reel Co. v B. & O. R. R. Co., 88 I. C. C. 49.

VI. REASONABLENESS OF CHARGES.

See Reasonableness of Rates.

§23. In General.

(a) On further consideration, original report 77 I. C. C. 317, relating to division of joint rates in which Warrior River Barge Line and lines of L. & N. participate, FOUND: That the just and reasonable amount which the L. & N. should receive for its transit service on shipments of cotton should not exceed 3 cents per 100 pounds, minimum $3 per car; and that just, reasonable, and equitable divisions will result to the two carriers on such traffic if from the gross barge-and-rail rates there are first deducted 15 cents to cover compress charge and 3 cents to cover transit charge of L. & N., the balance then to be divided upon the general basis herein approved, subject to a minimum division to L. & N. of 50 per cent of net rate after deduction of compress charge. U. S. War Dept. v. A. & S. Ry. Co., 100 I. C. C. 491.

FEDERAL TRADE COMMISSION

(a) While the Trade Commission may prohibit agreements between dealers for the fixing of prices for goods to be sold in interstate commerce, it is without authority to forbid discussion of uniform terms, discounts, and prices by associations of dealers, in the absence of evidence that such discussions result in agreements fixing interstate prices. Pa-

cific States Paper Trade Ass'n. v. Federal Trade Commission, 4 Fed (2d) 457.

FERRY CHARGES

See Car Ferry.

(a) Carriers compare barge service on water front in Norfolk, Va., harbor with trap-car service on belt line at that point and insist that the two services are similar. In trap-car service shippers are required to perform initial loading and it is carriers contention that there is no reason why shippers on water front should be accorded special privilege of having their freight loaded for them onto carriers' barges. HELD: This contention is not convincing. Shippers accorded trap-car service can not use barge service and those accorded barge service can not use trap cars. There can be no discrimination since service rendered is dissimilar. Loading of L. C. L. Freight, 91 I. C. C. 394, 396.

(b) While municipal corporations may adopt and enforce reasonable regulations for the safety and convenience of the public using ferries, and may fix reasonable rates to be charged in carrying passengers, vehicles, and freight from their own shores, they cannot prohibit the operation of interstate ferry, nor exact a license fee for the privilege of landing or taking on passengers, vehicles, etc. McNeely v. Mayor and Board of Aldermen of City of Natchez, 4 Fed. (2d) 899.

(c) Though a ferry be an interstate transportation facility, till Congress and the Interstate Commerce Commission see fit to act, the state can prescribe rates. McNeely v. Town of Vidalia (La., 1924) 102 So. 422.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. In general.

(a) Indefiniteness of terms of a decree of foreclosure and sale of a line of railroad is a matter properly to be brought before a court having jurisdiction in the premises, and has no bearing upon an application for certificate of convenience and necessity for abandonment of a line of railroad. Abandonment of M., B. & S. R. R., 90 I. C. C. 31, 34.

(b) Under the provisions of section 5 (2) of the act the commission has authority to authorize two or more carriers to acquire joint control of another carrier. Clinchfield Ry. Lease, 90 I. C. C. 113, 134.

(c) Provisions of section 5 (8) of the act deemed sufficient to relieve carriers from restraints imposed by State constitutions prohibiting the leasing, operation, or purchase by foreign corporations or associations of railways within the State, or any interest therein. Clinchfield Ry. Lease, 90 I. C. C. 113, 134.

(d) Under the provisions of section 5 (2) of the act the commission is given broad powers to consider questions of public interest involved in the acquisition of control of one carrier by another, and is given authority by order to approve and authorize such acquisition under such rules and regulations and for such consideration and on such terms and conditions as shall be found to be just and reasonable. Clinchfield Ry. Lease, 90 I. C. C. 113, 120.

(e) Under the provisions of section 5 (2) of the act the commission is not in a position to consider whether a proposed acquisition of control in some manner other than that proposed, or by some

carrier other than applicant, would better serve the public interest. The commission must determine whether an acquisition of control as proposed is in the public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 132.

(f) Whatever may be the commission's action on underlying land, engineering, and accounting reports of its Bureau of Valuation when making a determination of final value it is obvious that in dealing with the financial structure of a carrier the commission must consider and give proper effect to the existing financial structure with its attendant vested and contingent rights and obligations. D. & R. G. W. Reorganization, 90 I. C. C. 141, 148.

(g) When it is established that a project will render important public service, and its sponsors are willing to assume the risk of loss in the expectation of ultimate gain either directly through the property or indirectly through benefits to themselves and to the shipping community, requirements as to the public interest may be fully satisfied, although losses to investors seem more probable than gain. Construction of Line by W. S. Ry. 90 I. C. C. 237, 255.

(h) The commission is to consider what is best in order to foster, build, and make efficient transportation facilities as a whole in interest of the greatest number. Where only the private aspect is involved, individuals are at liberty to take risks. So far as the public is concerned, advantages of new or better service may be so great as to justify increasing the burden upon shippers generally by amount necessary to sustain the facility. If it should prove later, however, that the line, because of competitive conditions, lack of business, or other circumstances, can not be operated profitably under fair divisions and fair rates, the burden of loss would properly fall upon investors and not upon the shipping public. Construction of Line by W. S. Ry., 90 I. C. C. 237, 255, 256.

(i) Section 5 (2) of the act confers jurisdiction upon the commission to authorize one carrier to acquire control of another carrier by purchase of capital stock or in any other manner not amounting to a consolidation, thus recognizing that the acquisition of a controlling stock interest does not effect a consolidation of the companies. Control of I.G. N. R. R. 90 I. C. C. 262, 267.

(j) Constitution and statutes of State of Texas prohibit a railroad company organized under laws of that State from consolidating with a railroad company organized under laws of any other State or of the United States, and provide that no railroad corporation shall acquire control of another railroad corporation which owns or controls a parallel or competing line. However, with few exceptions, the controlling stock interest of all railroads operating in Texas is owned by railroad corporations foreign to that State, a fact of evidentiary value in illustrating the construction that the State has placed upon such constitutional provisions. If two railroads are to some extent, parallel and competing, that fact should not control the commission's action in a proceeding involving the acquisition of control of one carrier by another, by purchase of capital stock. Control of I. G. N. R. R., 90 I. C. C. 262, 267.

(k) In certifying payments to carriers under section 209 of the transportation act, 1920, the commission has consistently dealt with each operating company individually and without reference to corporate control, so far as the determination of railway operating income or deficit is concerned. A contrary course would have been impracticable as well as illegal. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(l) Section 210 of the transportation act, 1920, as amended, neither authorizes nor restricts the commission's authority to make extension of loans, nor grants the right of carriers to apply therefor. The broad general purpose of the act as well as the loans authorized thereby, in consonance with the purpose of the whole transportation act, is to promote the public interest by aiding carriers in furnishing to the public the maximum transportation service of which they are capable without hindrance by conditions as to credit or capacity resulting from Federal control in the adjustment period following its termination. Loan to Receiver of G. & F. Ry., 90 I. C. C. 407, 409.

(m) The commission has held in a number of cases that it was without jurisdiction under section 1 (18) of the act where a carrier was seeking to acquire and operate a line of railroad which was in operation in interstate commerce prior to effective date of the transportation act, 1920. While these cases have not been overruled the com-

mission's conference ruling in conformity with which they were decided has been withdrawn and the commission has taken jurisdiction and issued certificates in a number of cases where the line to be acquired and operated has been employed in interstate commerce previous to effective date of the transportation act. Acquisition of Line by B. & H. S. R. R., 90 I. C. C. 448, 453.

(n) Where carrier represented that it had been advised that an application for a certificate of public convenience and necessity to acquire and operate a line of railroad which was in operation in interstate commerce prior to effective date of the transportation act, 1920, was requisite, and it voluntarily sought a certificate, perhaps as a protection against a possible injunction suit under the provisions of section 1 (20) of the interstate commerce act, it is unnecessary for the commission to decide whether it has jurisdiction, granting that the question of jurisdiction is debatable, and it is entirely proper for the commission to afford the protection sought. Acquisition of Line by B. & H. S. R. R., 90 I. C. C. 448, 453, 454.

§1a. Constitutionality or Construction of Act.

(a) The existence of the varying needs of the several lines and of their widely varying earning power was fully recognized. It was necessary to avoid unduly burdensome rate increases and yet secure revenues adequate to satisfy the needs of the weak carriers. To accomplish this two new devices were adopted; the group system of rate making and the divisions of joint rates in the public interest. Through the former, weak roads were to be helped by recapture from prosperous competitors of surplus revenues. Through the latter, the weak were to be helped by preventing needed revenue from passing to prosperous connections. Thus, by marshalling the revenues, partly through capital account, it was planned to distribute augmented earnings, largely in proportion to the carriers needs. This, it was hoped, would enable the whole transportation system to be maintained, without raising unduly any rate on any line. The provision concerning divisions was, therefore, an integral part of the machinery for distributing the funds expected to be raised by the new rate fixing sections. It was, indeed, indispensable. Divisions of joint rates and fares of M. & N. A. Ry., 98 I. C. C. 119, 121.

(b) Interstate Commerce Act, §20a, subsec. 7, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), giving Interstate Commerce Commission power to regulate and control issuance of securities by interstate carriers, is not an invasion of sovereign power of state because interstate carrier was organized in such state. Whitman v. Northern Cent. Ry. Co. (Md., 1924) 127 Atl. 112.

(c) Interstate Commerce Act, §20a, subsec. 7, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), giving Interstate Commerce Commission power to regulate and control issuance of securities by interstate carriers, is within power of Congress to regulate interstate commerce and is valid. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(d) Salary allowed receiver or appointment of new receiver are matters properly to be brought before a court having jurisdiction in the premises, and have no bearing upon an application for certificate of convenience and necessity for abandonment of line of railroad. Abandonment of M. B. & S. R. R., 90 I. C. C. 31, 34.

(e) Under provisions of section 5 (2) of the act the commission is given broad powers to consider questions of public interest involved in the acquisition of control of one carrier by another, and is given authority by order to approve and authorize such acquisition under such rules and regulations and for such consideration and on such terms and conditions as shall be found to be just and reasonable. Clinchfield Ry. Lease, 90 I. C. C. 113, 120.

(f) The primary consideration in all cases arising under section 5 (2) of the act must be whether the proposed acquisition of control is in the public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 121.

(g) Carriers affected by any order made by the commission pursuant to section 5 (2) of the act are under provisions of paragraph (8) of that section relieved from operation of antitrust laws, and of other State or Federal laws, in so far as may be necessary to enable them to do anything authorized or re-

quired by such order. The relief is not granted for the benefit of any railroad, particular industry, or community, and benefits to be derived or injury which may be suffered because of a proposed acquisition of control of one carrier by another, may be considered only in so far as it relates to general public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 120, 121.

(h) Public interest is the aggregate of many individual and community interests, and where there is conflict as to results which would follow approval of a proposed acquisition of control by one carrier or another, it becomes necessary to examine claims of conflicting interests in order to determine the ultimate public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 121.

(i) Loss of competitive service to territory reached by a carrier would hardly be in interest of such territory, and relation of that carrier's loss of revenue to the public interest would depend, of course, upon extent of the loss. Diminution to a point where it could not earn its fixed charges, or even to a point where its credit would be impaired, would certainly not be in the public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 130.

(j) One purpose of the transportation act, 1920, is to foster the weak carriers. Clinchfield Ry. Lease, 90 I. C. C. 113, 131.

(k) Under the provisions of section 5 (2) of the act the commission has authority to authorize two or more carriers to acquire joint control of another carrier. Clinchfield Ry. Lease, 90 I. C. C. 113, 134.

(l) Provisions of section 5 (8) of the act deemed sufficient to relieve carriers from restraints imposed by State constitutions prohibiting the leasing, operation, or purchase by foreign corporations or associations of railways within the State, or any interest therein. Clinchfield Ry. Lease, 90 I. C. C. 113, 134.

(m) Under the provisions of section 5 (2) of the act the commission is not in a position to consider whether a proposed acquisition of control in some manner other than that proposed, or by some carrier other than applicant, would better serve the public interest. The commission must determine whether an acquisition of control as proposed is in the public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 132.

(n) The public interest requires that before an issue of securities by a carrier is authorized, the probability of earnings sufficient to pay costs of operation and of fixed charges be reasonably established, with some surplus for dividends and other purposes. D. & R. G. W. Reorganization, 90 I. C. C. 141, 148.

(o) In exercising authority conferred upon the commission by section 5 (2) of the act relative to the acquisition of control by one carrier of another by purchase of stock, not involving consolidation into a single system for ownership and operation, the commission must be of opinion that the proposed acquisition is in the public interest before its approval and authorization can be given. Acquisition of D. & R. G. W. Common Stock, 90 I. C. C. 161, 163, 164.

(p) In considering whether or not a proposed acquisition of control of one carrier by another is in the public interest, the commission must consider not only interests of people of the State in which an applicant is located but also interests of people of other States, including those States served by railroads connecting with lines of carrier to be controlled. Acquisition of D. & R. G. W. Common Stock, 90 I. C. C. 161, 165.

(q) Under section 20a (9) of the act carriers may, without having first obtained the commission's authority, issue notes maturing not more than two years after date and aggregating, together with all other then outstanding notes of a maturity of two years or less, not more than 5 per centum of the par value of their then outstanding securities. Bonds of I.-G. N. R. R., 90 I. C. C. 197, 198.

(r) When it is established that a project will render important public service, and its sponsors are willing to assume the risk of loss in the expectation of ultimate gain, either directly through the property or indirectly through benefits to themselves and to the shipping community, requirements as to the public interest may be fully satisfied, although losses to investors seem more probable than gains. Construction of Line by W. S. Ry., 90 I. C. C. 237, 255.

(s) The problems in convenience and necessity cases have been intensified by uncertainty as to how the law should be interpreted. Ability to earn is not the sole test of public convenience and necessity, although always a factor to be given consideration. When such ability is shown to exist a strong presumption may

arise that public need for a new facility exists. When not shown to exist it may frequently be concluded that such need is too slight to warrant expenditure necessary for a proposed construction of a new line of railroad. Construction of Line by W. S. Ry., 90 I. C. C. 237, 255.

(t) Prospective earnings or losses may properly be considered as one of the factors evidencing the public interest, but, taken alone, does not determine whether a particular enterprise is or is not required by public convenience and necessity. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(u) The significance of the financial aspect may vary in different cases. Certainty of failure to earn may have effect different from uncertainty of earnings or as to time when they are to be realized. A prospect for earnings not free from uncertainty may justify the granting of a certificate permitting construction of a line, subsequent abandonment of which may be authorized on demonstration of futility of the prospect. Cases must be determined by particular facts presented regarding them, and it is not possible to state a rule applicable alike to all. Circumstances may warrant the drawing of final conclusions regarding the financial aspect before the issuance of a certificate authorizing construction, or, conversely, may justify deferring such consideration. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(v) It is not to be presumed that Congress contemplated discarding, as insufficient, conditions which in the past have furnished the warrant for a constructive policy in upbuilding the system of transportation. It is rather to be presumed that Congress did not contemplate an interpretation of its enactment which, applied as a policy in the past, would have prevented the construction of many railway properties now serving the public interest in an important way. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(w) The commission is to consider what is best in order to foster, build, and make efficient transportation facilities as a whole in the interest of the greatest number. Where only the private aspect is involved, individuals are at liberty to take risks. So far as the public is concerned, the advantages of new or better service may be so great as to justify increasing the burden upon shipper generally by amount necessary to sustain the facility. If it should prove later, however, that the line, because of competitive conditions, lack of business, or other circumstances, can not be operated profitably under fair divisions and fair rates, the burden of loss would properly fall upon investors and not upon the shipping public. Construction of Line by W. S. Ry., 90 I. C. C. 237, 255, 256.

(x) The history of railway construction illustrates that prospective tonnage depending for its development upon transportation facilities, rather than tonnage immediately in view, has been the main justification for railway construction. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(y) The commission's approval of a new enterprise neither constitutes nor requires a finding that such enterprise will prove successful. The commission's responsibility is to determine the public interest involved in a proposed construction of a new line. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(z) Competition, within reason, rather than monopoly, is in the public interest. Construction of Line by W. S. Ry., 90 I. C. C. 237, 257.

(aa) Section 5 (2) of the act confers jurisdiction upon the commission to authorize one carrier to acquire control of another carrier by purchase of capital stock or in any other manner not amounting to a consolidation thus recognizing that the acquisition of a controlling stock interest does not effect a consolidation of the companies. Control of I. G. N. R. R., 90 I. C. C. 262, 267.

(bb) Contention that the commission is required by section 204 of the transportation act, 1920, to make necessary adjustments in its computation of railway operating income in order to bring about a proper comparison between operations of the Federal control period and the test period, HELD: In the requirements of section 204 (b) and 209 of the transportation act, or in section 1 of the Federal control act, there is no suggestion that Congress had in mind a complete, or substantially complete, change in the road operated by a carrier. Where operation on a short line was not entirely discontinued in the Federal control period, but was of such small importance in the latter period as to be practically negligible, a comparison of the results of the negligible operations in the Federal control period with the

results of operations of the same line in the test period would be manifestly improper. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 273.

(cc) Whether commission considers accounts of carrier separately, or combines them with accounts of other roads in the system, the result is a showing of railway operating income in Federal-control period; therefore, a claim, if allowed, would fall within class given status by decision in Construction of the Word "Deficit," 66 I. C. C. 765. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(dd) Contention that inasmuch as different companies which operated in the Federal-control period were under the same corporate and financial control they constituted a "system of transportation" within meaning of the law and that comparisons should be made of the results of their combined operations in determining deficits under section 204 of the transportation act, 1920. HELD: In no instance in the laws in which the term "system of transportation" is employed is there evidence that such phrase was intended to refer to groups of companies under common control; on the contrary, it is clearly intended to refer only to facilities used in the performance of a carrier's service. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(ee) Contention that operation of two separate portions of a system during a portion of the Federal-control period were exclusive and that combination of the results of operation of the two lines for that period is both practicable and legally necessary overlooks the duty of finding a basis for comparison in the operations of the same lines in the test period. During that period one portion of the line was operated by another carrier as part of its system, and since no segregation of income for that portion of the system is practicable it would be manifestly improper to use for purposes of accounting comparison the test-period experience of the short line. Deficit Settlement with C. C. & C. S. R. R. 90 I. C. C. 271, 274.

(ff) Following opinions of the Attorney General of the United States in Transportation Act—Extension or Renewal of Loans, 34 Op. Atty. Gen. 107, wherein it was held that the renewing or extending of an obligation evidencing a loan, where a loan already exists, is not the making of a loan, but is the modification of an existing loan, HELD: That upon application of a carrier for extension of the maturity date of a loan heretofore granted, the commission is confined only by the general limitations of the statute that the period of loans under section 210 of the transportation act, 1920, as amended, together with extensions thereof, may not exceed 15 years in duration. Loan to Receiver of G. & F. Ry., 90 I. C. C. 407, 409.

(gg) Section 210 of the transportation act, 1920, as amended, neither authorizes nor restricts the commission's authority to make extension of loans, nor grants the right of carriers to apply therefor. The broad general purpose of the act as well as the loans authorized thereby, in consonance with the purpose of the whole transportation act, is to promote the public interest by aiding carriers in furnishing to the public the maximum transportation service of which they are capable without hindrance by conditions as to credit or capacity resulting from Federal control in the adjustment period following its termination. Loan to Receiver of G. & F. Ry., 90 I. C. C. 407, 409.

(hh) The public convenience and necessity to be subserved would hardly justify the building of railroads to serve oil fields the production of which are limited or uncertain, or to anticipate exploitation of fields, the location and yield of which have not been determined by exploration. A railroad is, of course, very useful for hauling materials and supplies for exploration work and may earn good returns therefrom, but the life of such traffic is of necessity extremely uncertain. Construction of Lines by S. A. & M. Ry., 90 I. C. C. 597, 605, 606.

III. EXTENSION, ACQUISITION, OR CONSOLIDATION.

§3. In General.

See Consolidation of Carriers; Passenger Fares and Facilities §13 (t).

(a) Complainant alleged extension to Bijou Hills, Brule County, S. D., of the branch line of the Milwaukee, terminating at Platte, Charles Mix County, is reasonably required in the interest of public convenience and necessity and prayed that defendant be required to construct and operate such an extension. A line of the Milwaukee through Sioux City

Iowa and Yankton, S. D., connects its Chicago-Omaha and Minneapolis-Seattle lines. The branch sought to be extended reaches 82.4 miles north westward from a junction with this connecting line at Napa, S. D., 5.6 miles northwest of Yankton. The extension would be about 19 miles in length. This section is served only by the branch of the Milwaukee terminating at Platte and by that carriers line about 20 miles north of Bijou Hills extending from Canton to Rapid City, S. D. The chief market for its produce is Sioux City, to which the haul from Platte is about 150 miles. Distances by wagon road from points which would be served by the extension to Platte or to the nearest stations on the Canton-Rapid City line range from about 10 to 30 miles. Bijou Hills is about 20 miles by wagon road from Platte and from the nearest station on the Canton-Rapid City line. It is evident that the extension would be of benefit to the inhabitants of the region described. On complainants showing the return on investment at the outset would be but 1.57%. The record shows that the proposed extension would not at the outset earn a fair return on the investment, and the prospects for the future would be highly uncertain. HELD, proposed extension not reasonably required in the interest of public convenience and necessity, complaint dismissed. Peter Gunderson v. C. M. & St. P. Ry., 91 I. C. C. 702.

(b) The controlling part of Transportation Act, §402, pars. 18-22 (Comp. St. Ann. Supp. 1923, §8563), is paragraph 18, which prohibits an extension of a railroad line without authority of the Interstate Commerce Commission, based on a finding that public necessity or convenience requires it, and par. 22, providing that the authority of the Commission shall not extend to spur or industrial tracks, is a limitation to be strictly construed, and in a suit to enjoin a construction as in violation of the act the burden should rest on defendant to show that the proposed track is clearly within the exception. Lancaster v. Gulf C. & S. F. Ry. Co. (Tex. 1924) 298 F. 488.

(c) Under Interstate Commerce Act, §1, pars. 18, 20, 22, as added by Transportation Act, §400-403 (Comp. St. Ann. Supp. 1923, §8563), providing that no interstate carrier shall undertake an extension of its line of railroad without first obtaining from the Interstate Commerce Commission a certificate authorizing it, that any construction in violation of such provision may be enjoined by the courts, and that the authority of the Commission thereunder shall not extend to spur or industrial tracks, it is the province of the court in a suit for an injunction to determine whether the proposed construction is an extension or an industrial track, and that question need not first be determined by the Commission. Lancaster v. Gulf C. & S. F. Ry. Co. (Tex. 1924) 298 F. 488.

(d) A proposed track to be built from a station on an interstate railroad, 7½ miles long and to cost about $500,000, with long side tracks, though designed solely for the purpose of securing carload shipments from large industrial plants now tributary to another line, HELD not an "industrial track," but an "extension" of the line of road, within the meaning of Transportation Act, § 402, par. 18 (Comp. St. Ann. Supp. 1923, § 8563), requiring a certificate of authority from the Interstate Commerce Commission. Lancaster v. Gulf C. & S. F. Ry. Co. (Tex. 1924) 298 F. 488.

(e) Under Interstate Commerce Act, §1, pars. 18-21, as amended by Transportation Act 1920, §402 (Comp. St. Ann. Supp. 1923, §8563), providing that no interstate carrier shall extend its line, or construct new line, or acquire or operate any line or extension, or engage in transportation over such additional or extended line, or abandon any portion of its line, unless the Interstate Commerce Commission shall grant a certificate and in view of paragraph 17, as amended by section 402, paragraph 3, as amended by Transportation Act 1920, §400 (Comp. St. Ann. Supp. 1923, § 8563), section 3 as amended by Transportation Act 1920, § 405 (Comp. St. Ann. Supp. 1923, § 8565), and section 20a, added by Transportation Act 1920, § 439 (Comp. St. Ann. Supp. 1923, § 8592a), the Railroad Commission of California had no power to require interstate railroads to build an interstate union station and make incidental additions, extensions, improvements, and changes, where compliance with order would require the joint use of land, tracks, and terminal facilities valued at more than $28,000,000, the abandonment of three existing passenger stations, and the ultimate capital expenditure of from $25,000,000 to $45,000,000, since construction of such an interstate union station required certificate of ap-

proval of Interstate Commerce Commission. Railroad Commission of California v. Southern Pac. Co., 44 Sup. Ct. 376; Same v. Atchison, T. & S. F. Ry. Co., 44 Sup. Ct. 376; Same v. Los Angeles & S. L. R. Co., 44 Sup. Ct. 376.

(f) Complaint praying for issuance of an order under paragraph (21) of section 1 of the act requiring C., M. & St. P. Ry. Co. to extend its lines from Platte, to Bijou Hills, S. Dak.; HELD: Proposed extension is not reasonably required in interest of public convenience and necessity and, while extension would benefit inhabitants of region, it would not at outset earn a fair return on investment, and prospects for the future would be highly uncertain. Gunderson v. C., M. & St. P. Ry. Co., 91 I. C. C. 702.

(g) Section 1 (21) of the act, empowering commission to require railroads to extend their lines, provides "That no * * * order shall be made unless the commission finds, as to such extension, that it is reasonably required in the interest of public convenience and necessity, or as to such extension * * * that expense involved therein would not impair ability of the carrier to perform its duty to the public." First condition contains second, and of necessity an order could not be made under second condition unless first is also satisfied. Cooke case, 66 I. C. C. 452. Gunderson v. C., M. & St. P. Ry. Co., 91 I. C. C. 702, 705.

(h) Public interest is the aggregate of many individual and community interests, and where there is conflict as to results which would follow approval of a proposed acquisition of control by one carrier of another, it becomes necessary to examine claims of conflicting interests in order to determine the ultimate public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 121.

(i) Where carrier represented that it had been advised that an application for a certificate of public convenience and necessity to acquire and operate a line of railroad which was in operation in interstate commerce prior to effective date of the transportation act, 1920, was requisite, and it voluntarily sought a certificate, perhaps as a protection against a possible injunction suit under the provisions of section 1 (20) of the interstate commerce act, it is unnecessary for the commission to decide whether it has jurisdiction, granting that the question of jurisdiction is debatable, and it is entirely proper for the commission to afford protection sought. Acquisition of Line by B. & H. R. R., 90 I. C. C. 448, 453, 454.

(j) The public convenience and necessity to be subserved would hardly justify the building of railroads to serve oil fields the production of which are limited or uncertain, or to anticipate the exploitation of fields, the location and yields of which have not been determined by exploration. A railroad is, of course, very useful for hauling materials and supplies for exploration work and may earn good returns therefrom, but the life of such traffic is of necessity extremely uncertain. Construction of Lines by S. A. & M. Ry., 90 I. C. C. 597, 605, 606.

(k) Morgan's Louisiana & Texas R. R. & S. S. Co., acquisition of control of Franklin & Abbeville Ry. Co., by purchase of capital stock, approved and authorized. The Abbeville serves an agricultural community engaged chiefly in raising sugar cane. Planters are unable, because of the local rates, to market their products on other lines and must depend entirely on refineries located on the Abbeville, and this has retarded development of the territory it serves. The proposed acquisition will remove this handicap, making possible a substantial reduction in rates on sugar cane and other commodities. It will also result in better service to those now dependent upon the Abbeville for transportation facilities and in substantial economics in operation. Control of F. & A. Ry. Co., 90 I. C. C. 815.

(l) Extension by defendants of their main lines of steam railroad so as to reach and serve such union passenger stations and terminals as they may construct and establish in described portion of city of Los Angeles, Calif., and extention of such main lines to provide for rearrangement of their passenger and freight routes incidental to the convenient and proper operation of such union station and terminal, found reasonably required in the interest of public convenience and necessity, and expense involved therein found not to impair the ability of defendants to perform their respective duties to the public. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 460.

(m) Public convenience and necessity found not to require the construction of new or extension of existing lines

of railroad in city of Los Angeles, Calif., by Southern Pacific and Los Angeles & Salt Lake as described. Application denied. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 459, 460.

(n) Paragraph 18 of section 1 of the act relating to a certificate of convenience and necessity respecting the construction and operation of new and additional lines is specifically limited to line of railroad. Nelson S. S. Co. v. B. A. & P. Ry., 109 I. C. C. 529, 537.

IV. ABANDONMENT OF SERVICE.

§4. In general.

(a) Court order appointing receiver authorized him to exercise all powers and to perform all duties theretofore conferred upon former receiver, HELD: Such former receiver is not a necessary party to a proceeding involving an application for certificate of convenience and necessity for abandonment of line of railroad. Abandonment of M., B. & S. R. R., 90 I. C. C. 31, 34.

(b) State commission is recommending that application for abandonment of line be granted, requested that when question of sale of the road is finally considered the order of sale be in alternative form, both as a going concern and as junk, in order to give people along the line an opportunity to buy and operate the road. HELD: Question is one properly to be brought before court having jurisdiction in the premises. Abandonment of P. & H. R. R., 90 I. C. C. 51, 52.

(c) Public convenience and necessity found to permit abandonment of operation of all passenger and freight train service, except industrial freight-switching service, on main line of Southern Pacific on Alameda Street from College Street to East Fifteenth Street, inclusive, in city of Los Angeles, Calif. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 459.

(d) Public convenience and necessity found to permit abandonment by defendants of such portions of their lines of steam railroad, or of all or any portion of the interstate service thereon, as may be incidental to the rearrangement of routes, tracks, and terminal facilities necessitated by the establishment of a union passenger station and terminal in city of Los Angeles, Calif. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 460.

(e) Contention that under section 1, paragraphs (18) to (22) of the act, the commission has no jurisdiction in matter of proposed abandonment of mine sidings, relying largely on paragraph (22) which provides that authority conferred by paragraphs (18) to (21) shall not extend to sidetracks located wholly within one state, or to street, suburban, or interurban electric railways not operated as part of general steam-railroad system, not sustained. Provisions of foregoing paragraph limit commission's jurisdiction only with respect to specified paragraphs and do not come into conflict with the provisions of paragraph (9) under which commission may authorize the construction, maintenance, and operation of switch connections with private sidetracks of shippers when such connection is, in opinion of commission, reasonably practicable, can be safely put in, and will furnish sufficient business to justify its construction and maintenance. Hood Coal Co. v. M. V. T. Co., 101 I. C. C. 719, 720, 721.

(f) Proposal of Monongahela West Penn Public Service Co. to cancel interstate rates on coal from mines on its line and to eliminate mine sidings from its list of stations, found justified. Sidetracks concerned have not been used for approximately two years, with little likelihood of future operation except under abnormal market conditions, and in justice to carrier it should not be compelled to maintain switch connections and continue present rates because of a remote possibility of a return of favorable market conditions under which mines previously operated. Moreover, contracts between shippers and the Monongahela provided, among other things, that carrier should have the right, at any time after 30 days' written notice, to discontinue use of siding, terminate the contract, and remove tracks, and such written notice had been duly served. Hood Coal Co. v. M. V. T. Co., 101 I. C. C. 719, 723.

(fa) Upon allegation of an intermediate carrier that unless it can obtain additional revenues from traffic to be secured by establishment of through routes and joint rates in connection with its line it will be compelled to cease operations and deprive territory now served by it, and dependent upon it, of services essential to people living therein, FOUND: While net revenues of this line are insufficient to meet all expenses and interest on obligations, such line is earn-

ing a surplus over all operating expenses and taxes, and on such a showing there would be no possible ground for abandonment of line. Fort Smith, S. & R. I. R. R. v. A. & V. Ry., 102 I. C. C. 708, 711, 712.

(g) This is an investigation instituted on motion of the Commission into and concerning the justness, reasonableness, and lawfulness of the proposal of the Nor. Pac. to discontinue daily train service on its line extending between Beach, N. D., and Ollie, Mont., and to establish in lieu thereof a triweekly service, and into and concerning the adequacy of the restricted service. Respondent owns and operates a branch line 26 miles in length, extending from Beach, about 2.5 miles east of the North Dakota-Montana state line to Ollie, a short distance west thereof. Three open stations are maintained on this branch, Golva, Carlyle and Ollie. For some time past respondent has maintained daily mixed train service on this branch in both directions. Because of the decreased revenues from the line and in order to curtail expenses, respondent proposed to curtail the service to triweekly. The record shows that revenues derived from the line under consideration are not sufficient to defray the expense of the service. It is also clear that the proposed curtailment in service will result in substantial savings. HELD, proposed discontinuance of daily service and establishment of tri-weekly service not unjust or otherwise unlawful. Train service on N. P. 112 I. C. C. 191.

Abandonment of Chicago, Peoria & St. Louis R. R., 76 I. C. C. 801.

V. STOCKS AND CAPITAL ISSUES.

§5. In general.

(a) The commerce clause in the federal Constitution (article 1, §8, cl. 3) being broad enough to include transportation among the several states, it is broad enough to include means through which alone transportation can be furnished, such as the issuance of capital stock by railroad to pay for improvements and maintenance of its property. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(b) The issuance of securities by interstate carrier being interstate commerce, and states having granted federal government right to regulate inter-Act, §20a, subsec. 7, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), giving Interstate Commerce Commission power to regulate and control issuance of securities by interstate carriers, is not an invasion of sovereign powers of the states. Whitman v. Northern Cent. Ry. Co. (Md., 1924) 127 Atl. 112.

(c) What consequences may follow Interstate Commerce Act, §20a, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), giving Interstate Commerce Commission power to regulate and control issuance of securities by interstate carriers, must be dealt with by Legislature, and, so long as Legislature acts within its constitutional powers, wisdom of its act cannot be reviewed by the courts. Whitman v. Northern Cent. Ry. Co. (Md., 1924) 127 Atl. 112.

(d) Until Congress, by Interstate Commerce Act, §20a, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), exercised right to regulate issuance of securities by interstate carriers, states could regulate it so long as it did not interfere with operation of service of corporations as interstate carriers; but, when Congress did exercise such power by placing control in federal agency, power of state ceased. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(e) Interstate Commerce Act, §20a, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp, 1923, §8592a), giving Interstate Commerce Commission power to regulate and control issuance of securities by interstate carriers, is applicable to issuance of capital stock by interstate carrier to pay for improvements and maintenance of its property, and under subsections 2 and 7 an interstate carrier organized in Maryland may issue such securities without consent of Public Service Commission of Maryland. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(f) Under the provisions of section 5 (2) of the act the commission is not in a position to consider whether a proposed acquisition of control in some manner other than that proposed, or by some carrier other than applicant, would better serve the public interest. The commission must determine whether an

acquisition of control as proposed is in the public interest. Clinchfield Ry. Lease 90 I. C. C. 113, 132.

(g) The public interests require that before an issue of securities by a carrier is authorized, the probability of earnings sufficient to pay cost of operation and of fixed charges be reasonably established, with some surplus for dividends and other purposes. D. & R. G. W. Reorganization, 90 I. C. C. 141, 148.

(h) The commission can not upon an application for authority to issue securities give to underlying land, engineering, and accounting reports of its Bureau of Valuation the force and effect of final valuation, because they are subject to revision and correction before they become a tentative valuation of the property covered, and because such tentative valuation, when made, will be subject by express terms of section 19a, to protest and change. D. & R. G. W. Reorganization, 90 I. C. C. 141, 144.

(i) In passing upon an application for authority to issue securities such consideration and weight is given to underlying land, engineering, and accounting reports of the commission's Bureau of Valuation as the commission deems to be proper under the circumstances and conditions of their present status and future disposition. In giving these reports weight and consideration the commission is not to be understood as in any way making determinations which section 19a of the act authorizes it to make. D. & R. G. W. Reorganization, 90 I. C. C. 141, 144.

(j) In exercising authority conferred upon the commission by section 5 (2) of the act relative to the acquisition of control by one carrier of another by purchase of stock, not involving consolidation into a single system for ownership and operation, the commission must be of opinion that the proposed acquisition is in the public interest before its approval and authorization can be given. Acquisition of D. & R. G. W. Common Stock, 90 I. C. C. 161, 163, 164.

(k) Where record before the commission justifies conclusion that acquisition by one carrier of one-half of the common stock of another, with all such common stock to be placed in a voting trust is in the public interest, the commission does not regard the fact that lines of applicant acquiring the stock and lines of carrier whose stock is to be acquired are not placed in the same system in the tentative plan for consolidation of railroads into a limited number of systems as a sufficient reason for withholding approval and authorization of the proposed acquisition. Acquisition of D. & R. G. W. Common Stock, 90 I. C. C. 161, 164.

(l) Section 5 (2) of the act confers jurisdiction upon the commission to authorize one carrier to acquire control of another carrier by purchase of capital stock or in any other manner not amounting to a consolidation, thus recognizing that the acquisition of a controlling stock interest does not effect a consolidation of the companies. Control of I.-G. N. R. R., 90 I. C. C. 262, 267.

(m) The commission is without jurisdiction to authorize an issue of securities by a boat company which is not an operating company but a holding company solely and a subsidiary of a railroad company. Such companies are not "carriers by railroad" or otherwise "carriers" within meaning of section 20a of the act. Guaranty of Bonds by A. A. R. R., 90 I. C. C. 331, 332.

(n) Following opinion of Attorney General of the United States in Transportation Act—Extension of Renewal of Loans, 34 Op. Atty. Gen. 107, wherein it was held that the renewing or extending of an obligation evidencing a loan, where a loan already exists, is not the making of a loan, but is the modification of an existing loan, HELD: That upon application of a carrier for an extension of the maturity date of a loan heretofore granted, the commission is confined only by general limitations of the statute that the period of loans under section 210 of the transportation act, 1920, as amended, together with extensions thereof, may not exceed 15 years in duration. Loan to Receiver of G. & F. Ry., 90 I. C. C. 407, 409.

(o) Section 210 of the transportation act, 1920, as amended, neither authorizes commission nor restricts its authority to make extension of loans, nor grants the right of carriers to apply therefor. The board general purpose of the act as well as the loans authorized thereby, in consonance with purpose of the whole transportation act, is to promote the public interest by aiding carriers in furnishing to public the maximum transportation service of which they are capable without hindrance by conditions as to credit or capacity resulting from Federal control in the adjustment period following

its termination. Loan to Receiver of G. & F. Ry., 90 I. C. C. 407, 409.

(p) While it is within the commission's province to give its authority and consent under section 20a of the act for the issue of receiver's certificates, it is not to be understood that by giving such authority it passes upon or in anywise determines or effects the nature of rights or liens to be enjoyed under such certificates or the priority thereof in their relation to other liens. M. & St. L. Receiver's certificates, 90 I. C. C. 491, 492.

VI. GOVERNMENT GUARANTY.

See Interstate Commerce Commission §9½.

§6. In general.

(a) In adjusting transportation rates which will yield carriers the fair return contemplated in section 15a of the act, it is encumbent upon the commission to take into account all circumstances and conditions which, in its best judgment, will influence the return under any given level of rates. If the commission is persuaded that increases in rates beyond any certain point would divert traffic to other means of transport or depress its volume, and so defeat the very end the statute is meant to attain, it clearly becomes its duty to readjust or modify the rates in such manner as will, in its judgment, produce as nearly as may be the desired result. Express Rates, 1922, 89 I. C. C. 297, 310, 311.

(b) The commission is required to so adjust transportation rates that they may, under conditions named, yield carriers, as nearly as may be, the fair return contemplated in section 15a of the act. The commission's determination is to be made in the exercise of its power to prescribe just and reasonable rates, and it is within "the flexible limits of judgment" that the commission must determine what basis or bases of rates will yield "as nearly as may be," that return. Express Rates, 1922, 89 I. C. C. 297, 310, 311.

(c) Section 15a of the act does not repeal or supersede other provisions of the act. Express Rates 1922, 89 I. C. C. 297, 311, 314.

(d) Fact, that, because of a falling off in business, among other things, rates determined by the commission under section 15a of the act, did not yield carriers generally the contemplated return prescribed, confirms the soundness of the commission's statement viz., that its duty in such cases includes an appropriate consideration of all evident circumstances and conditions which, in its judgment, will affect the final result. Express Rates, 1922, 89 I. C. C. 297, 311.

(e) Hannibal Connecting R. R. Co. found to be a common carrier engaged in interstate commerce and subject to recapture provisions of section 15a of the act. Contention that such carrier was not subject to recapture provisions, upon theory that its excess earnings came from intraplant service, not sustained, following Dayton-Goose Creek case, 263 U. S. 456. Intrastate and interstate operations are so inextricably commingled as to make segregation impracticable, and to segregate would also defeat plan of Congress to control excess profits due to level of whole body of rates. Status of H. C. R. R. Co., 91 I. C. C. 744.

(f) The significance of the financial aspect may vary in different cases. Certainty or failure to earn may have effect different from uncertainty of earnings or as to the time when they are to be realized. A prospect for earnings not free from uncertainty may justify the granting of a certificate permitting the construction of a line, the subsequent abandonment of which may be authorized on demonstration of futility of the prospect. Cases must be determined by the particular facts presented regarding them, and it is not possible to state a rule applicable alike to all. Circumstances may warrant the drawing of final conclusions regarding the financial aspect before the issuance of a certificate authorizing construction, or, conversely, may justify deferring such consideration. Construction of Line by W. S. Ry., 90 I. C. C. 237, 256.

(g) Contention that the commission is required by section 204 of the transportation act, 1920, to make necessary adjustments in its computations of railway operating income in order to bring about a proper comparison between operations of the Federal control period and the test period, HELD: In the requirement of section 204 (b) and 209 of the transportation act, or in section 1 of the Federal control act, there is no suggestion that Congress had in mind a complete, or substantially complete, change in the road operated by a carrier. Where operation on a short line

was not entirely discontinued in the Federal control period, but was of such small importance in the latter period as to be practically negligible, a comparison of the results of the negligible operations in the Federal control period with the results of operations of the same line in the test period would be manifestly improper. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 273.

(h) In certifying payments to carriers under section 204 and 209 of the transportation act, 1920, the commission has consistently dealt with each operating company individually and without reference to corporate control, so far as the determination of railway operating income or deficit is concerned. A contrary course would have been impracticable as well as illegal. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(i) Whether commission considers accounts of a carrier separately, or combines them with accounts of other roads in the system, the result is a showing of railway operating income in Federal-control period; therefore, a claim, if allowed, would fall within class given status by decision in Construction of the Word "Deficit," 66 I. C. C. 765. Deficit Settlement with C. C. & C. S. R. R. 90 I. C. C. 271, 274.

(j) Contention that operation of two separate portions of a system during a portion of the Federal-control period were exclusive and that combination of the results of operations of the two lines for that period in both practicable and legally necessary, overlooks the duty of finding a basis for comparison in the operations of the same lines in the test period. During that period one portion of the line was operated by another carrier as part of its system and since no segregation of income for that portion of the system is practicable, it would be manifestly improper to use for purposes of accounting comparison the test period experience of the short line. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(k) In certifying payments to carriers under section 204 of the transportation act, 1920, the commission has consistently dealt with each operating company individually and without reference to corporate control, so far as the determination of railway operating income or deficit is concerned. A contrary course would have been impracticable as well as illegal. Deficit Settlement with C. C. & C. S. R. R., 90 I. C. C. 271, 274.

(l) Section 209 does not provide for a recovery by the Government of the difference between a deficit in the test period and a smaller deficit in the guaranty period. Guaranty Status of M., I. & L. Ry., 90 I. C. C. 811, 812.

(m) Where a carrier is not earning a fair return on value of property used in service, it does not follow that any and every method advanced by it to increase its revenues must receive stamp of commission's approval merely because of its financial needs. Ft. Smith, S. & R. I. R. R. v. A. & V. Ry., 102 I. C. C. 708, 712.

VII. PHYSICAL VALUATION.

See Physical Valuation.

§8. In general.

(a) In the valuation of street railway property for the purpose of rate-making, opinions of experts who have given the subject long study and reflection, and whose continuous practical experience for many years have informed them on every phase of the inquiry, ought not to be lightly weighed though they need not be literally followed. Westinghouse Electric & Mfg. Co. v. Denver Tramway Co., 3 Fed. (2d) 285. Stenger v. City and County of Denver, 3 Fed. (2d) 285.

(b) Where a so-called expert on public utility matters was not qualified as an expert on valuation of street railways, his nonexpert testimony as to facts shown by tramway company's books should be rejected, where so modified enlarged, or restricted by his personal opinion as to be inseparable from his opinion testimony. Westinghouse Electric & Mfg. Co. v. Denver Tramway Co., 3 Fed. (2d) 285. Stenger v. City and County of Denver, 3 Fed. (2d) 285.

(c) In inquiry as to valuation of street railway system for the purpose of rate-making, ordinarily reproduction cost new, less depreciation, is the dominant factor, and of necessity must be the rule, where there are no other sufficient data on the subject. Westinghouse Electric & Mfg. Co. v. Denver Tramway Co., 3 Fed. (2d) 285. Stenger v. City and County of Denver, 3 Fed. (2d) 285.

(d) A writer and student of econogy, holding degrees of Bachelor of mics, public law, government, and sociol-

Arts, Master of Arts, and Doctor of Philosophy, who was not an engineer, having never been employed by any street railway in any capacity, and having little experience in valuation of properties, held not shown to be qualified to testify as an expert as to valuation of a street tramway system for rate-making purposes. Westinghouse Electric & Mfg. Co. v. Denver Tramway Co., 3 Fed. (2d) 285. Stenger v. City and County of Denver, 3 Fed. (2d) 285.

(e) In computing the valuation of a street railroad for the purpose of rate making, the federal income tax should be included in "operating expenses." Duluth St. Ry. Co. v. Railroad and Warehouse Commission, 4 Fed. (2d) 543.

(f) New evidence introduced in a suit to set aside the final valuation of railroad property by the Interstate Commerce Commission, certified to the Commission under Interstate Commerce Act, §19a, as amended (Comp. St. Ann. Supp. 1923, §8591). Los Angeles & S. L. R. Co. v. United States 4 Fed. (2d) 736.

(g) Equity will not cancel Interstate Commerce Commission's tentative valuation of railroad's property under Interstate Commerce Act, §19a, as amended by Act March 1, 1913, Act Feb. 28, 1920, and Act June 7, 1922 (Comp. St. Ann. Supp. 1923, §8591), in proceeding involving same issues as were raised by protest filed by railroad under such statute, prior to Commission's ruling on protest, in absence of showing that Commission has willfully disregarded the law as honestly interpreted, or has failed to proceed in an orderly manner, or that it will not consider any pass on all matters set up in protest. Delaware & H. Co. v. United States, 45 Sup. Ct. 153.

(h) Interstate Commerce Commission's tentative valuation of railroad's property, under Interstate Commerce Act, §19a, as amended by Act March 1, 1913, Act Feb. 28, 1920, and Act June 7, 1922 (Comp. St. Ann. Supp. 1923, §8591), is merely an ex parte appraisement, without probative effect, and does not become final, on protest by railroad until Commission has ruled thereon. Delaware & H. Co. v. United States, 45 Sup. Ct. 153.

FIRE

See Demurrage §4¾ (f).

FLOATAGE

See Car Ferry; Lighterage; Towage.

(a) Rules, regulations, and practices of C. R. R. Co. of N. J., under which it refuses to float shipments of cast-iron soil pipe from Jersey City to its North River piers, Manhattan Island, N. Y., and requiring shippers to take delivery at former point, found unreasonable. Iron pipe, due chiefly to amount of time required to unload, may be undesirable traffic at pier stations, but defendant does not similarly restrict other substantially similar commodities which are bulky and difficult to handle, and nothing of record indicates that latter should be accorded more favorable rules respecting delivery than cast-iron soil pipe. Somerville Iron Works v. C. R. R. Co. of N. J., 93 I. C. C. 39.

New England Divisions, 85 I. C. C. 482.

§1. Jurisdiction of Commission.

(a) The commission has no jurisdiction to require the establishment of joint rates for future from or to a point in United States to or from a point in a foreign country or from a point in United States through a foreign country to a point in the United States. See 69 I. C. C. 337, 343. San Diego Chamber of Commerce v. A. & V., 102 I. C. C. 27, 29.

§2. Determination of Status.

See Common Carrier.

(a) Transportation of passenger HELD not "foreign commerce" as to transportation on urban line.—Borelli v. International Ry. Co., 240 N. Y. 54, 147 N. E. 356.

II. LIABILITY OF CARRIER.

See Common Carrier.

§3. In General.

(a) Where shipments move under unreasonable joint rates from points in adjacent foreign countries to points in the United States, the American lines participating in the transportation are tort feasors and the full amount of reparation may be awarded against them. Lewis-Simas-Jones Co. v. S. P., 102 I. C. C. 245, 246.

FREE TIME

See Demurrage §12, §15; Export Rates and Facilities §7 (b).

FREE TRANSPORTATION

See Caretakers; Crimes III; Express Companies §5; Passenger Fares and Facilities §12; Personal Injuries; Reduced Rates; Transportation §5½.

FREIGHT CHARGES

See Credit Account; Currency; Demurrage VI; Export Rates and Facilities; Overcharges; Transportation §4; Undercharges.

(a) Carriers are obliged to collect and shippers to pay the legally published charges. It is not within the purview of the Commission to pass upon the question of the liability of consignors or consignees thereunder. Wuille & Company v. M. H. R. R. 92 I. C. C. 299, 301.

(b) Where wheat, which had been reconsigned several times, was sold to defendant f. o. b. cars in defendant's city, and carrier erroneously told defendant that the freight had been paid to a certain point, and defendant paid the freight charges from that point, and paid seller the balance of the purchase price after deducting the freight paid, HELD, that carrier is estopped from demanding further payment of freight by defendant. Davis v. Akron Feed & Milling Co., 296 F. 675.

(c) An interstate carrier is not estopped from recovering balance of freight due by unauthorized act of its agent in quoting an illegal freight rate. Davis, Director General of Railroads v. Gulley (N. C. 1924) 123 S. E. 318.

(d) Representations or claims made by carrier as to the correct amount of the freight charges will not relieve a consignee from payment of the scheduled rate, as a shipper or consignee has equal opportunity with a carrier to know the published rate. Davis v. Akron Feed & Milling Co. 296 F. 675.

(e) As to prepaid shipments of coal consigned to a coal exchange for account of shipper and under regulations of exchange, loaded on ship for account of other members, course of dealing between shipper and carrier HELD not to show an implied contract by carrier to collect, from those for whose account the coal was so reshipped, the freight prepaid by the original shipper. Pennsylvania R. Co. v. S. M. Hamilton Coal Co. (Md. 1923) 125 A. 405.

(f) The shipper, though he directs that the shipment be carried "freight collect," cannot escape liability for the freight and other lawful charges, unless he stipulates by signature in the space provided on the bill of lading that the carrier shall not make delivery without requiring payment of such charges. Western Maryland Ry. Co. v. Cross (W. Va. 1924) 123 S. E. 572.

(g) The fact that in a particular case no bill of lading is issued, and that federal statute, Barnes' Federal Code 1922 Supp. § 7886 (U. S. Comp. St. Ann. Supp. 1923, § 8565), forbids a carrier from relinquishing the possession of freight at destination without payment of transportation charges, does not save the consignor from his liability, unless he stipulates therefor in the manner provided in the uniform bill of lading.

Western Maryland Rv. Co. v. Cross (W. Va. (1924) 123 S. E. 572.

(h) It is no defense to an action for the recovery of demurrage that the defendant, after shipment was made, obtained the bill of lading, and is the owner of the freight, and had no notice of the arrival of the freight, where due notice was given to the original consignee as provided by the terms of the bill of lading. By obtaining the bill of lading and accepting the freight thereunder, the defendant assumed the liabilities as well as acquiring the rights of the consignee under the bill of lading. Atchison T. & S. F. Ry. Co. v. Johnson (Okla. 1924) 225 Pac. 939 (State Shipment.)

(i) Foreign bill of lading specified freight charges in pounds, shillings, and pence, and providing that, if freight paid at destination, normal rate of exchange was to be used, HELD not to give option to pay either in American currency or that mentioned in the bill. Pennsylvania R. Co. v. Cameron (Pa., 1924) 124 Atl. 638.

(j) Where a bill of lading on a foreign shipment of wool to a western port, and from there by rail east, specified freight charges in pounds, shillings, and pence, and provided "freight, if payable at destination, to be at the rate of $4.866 exchange," rather than at sterling current rates, held such provisions controlled and precluded payment at a lower current rate of exchange. Pennsylvania R. Co. v. Cameron (Pa., 1924) 124 Atl. 638.

(k) A check given in full settlement of all claims and demands, and accepted as such, should indicate to the person receiving it that it intends to close all accounts in order to entitle it to that effect. Pennsylvania R. Co. v. Cameron (Pa., 1924) 124 Atl. 638.

(l) Freight on an import shipment, though specified in foreign currency, if payable at destination, is payable in American currency. Pennsylvania R. Co. v. Cameron (Pa., 1924) 124 Atl. 638.

(m) Person designated in straight bill of lading as one to be notified, who directed carrier to deliver goods to third person on payment of freight charges, held not liable on any implied promise to pay balance of published rates which carrier through mistake failed to collect. New York Cent. R. Co. v. Sharp, 206 N. Y. S. 755.

(n) Where it was custom of express company to return empty milk cans to defendant owner in Boston without charge, and consignee of full cans, in violation of custom, delivered empty cans back to carrier to be taken to point in New Hampshire, where defendant had a place of business, and defendant refused to accept them, defendant was not liable for transportation charges to point in New Hampshire. American Ry. Express Co. v. Mohawk Dairy Co. (Mass., 1924) 144 N. E. 721.

(o) Tag on empty milk cans HELD not to be regarded as matter of law as shipping direction on the part of the owner shipper, when returned to express company by consignee after emptying them. American Ry. Express Co. v. Mohawk Dairy Co. (Mass., 1924) 144 N. E. 721.

(p) Interstate Commerce Act (U. S. Comp. St. §8563 et seq.) imposes no obligation on particular party to pay transportation charges, and tariff not providing by whom charges for interstate shipment must be borne, carrier and shipper are free to contract subject to rule against discrimination. American Ry. Express Co. v. Mohawk Dairy Co. (Mass, 1924) 144 N. E. 721.

(q) Express receipt, by word "collect" on its face, indicated that shipper and carrier intended consignee should pay transportation charges. American Ry. Express Co. v. Mohawk Dairy Co. (Mass., 1924) 144 N. E. 721.

(r) In absence of definite stipulation on point, it is implied that carrier agrees to carry goods and shipper agrees to pay transportation charges, and this applies to interstate shipments. American Ry. Express Co. v. Mohawk Dairy Co. (Mass., 1924) 144 N. E. 721.

(s) Ownership is important in connection with other factors in determining liability for transportation charges, but apart from other considerations is not decisive. American Ry. Express Co. v. Mohawk Dairy Co. (Mass., 1924) 144 N. E. 721.

(t) In absence of express contract binding him, or necessary implication to that effect, consignee is not liable for transportation charges; his obligation to pay commonly resting on acceptance of goods when transportation has ended, which obligation is coextensive which charge legally due. American Ry. Ex-

press Co. v. Mohawk Dairy Co. (Mass. 1924) 144 N. E. 721.

(u) Action by interstate carrier to recover difference between published schedule of rates filed with interstate commerce commission and rates provided for in contract of shipment, such scheduled rates forming part of contract of shipment by operation of law, is an action founded on contract in writing, governed by five-year statute of limitations. (Crawford & Moses' Dig. §6955), and not by three-year statute of limitations (section 6950). Missouri Pac. R. Co. v. Pfieffer Stone Co. (Ark., 1924) 266 S. W. 82.

(v) Stipulations in bill of lading that goods are to be delivered to consignee "he paying freight," or any similar provision, are for benefit of carrier, and delivery to consignee without collection of freight will not release consignor from liability therefor, in absence of special stipulation to contrary. Missouri Pac. R. Co. v. Pfieffer Stone Co. (Ark., 1924) 266 S. W. 82.

(w) Carrier, contracting with shipper to transport goods, has right to look to consignor for payment of freight, and may waive its lien on goods by delivering them to consignee, and still hold consignor liable on contract of shipment. Missouri Pac. R. Co. v. Pfieffer Stone Co. (Ark., 1924) 266 S. W. 82.

(x) Act of consignee of interstate shipment, in taking up bills of lading and reshipping to consignor, HELD to constitute receipt of shipment, making original consignee liable for freight charges on first shipment regardless of whether its clerk had authority to sign receipt for original shipment. Central R. Co. of New Jersey v. National Asbestos Mfg. Co., (N. J., 1925) 127 Atl. 184.

(y) The federal law is controlling as to liability for freight charges on interstate shipments. Central R. Co. of New Jersey v. National Asbestos Mfg. Co. (N. J., 1925) 127 Atl. 184 .

(z) Under uniform bill of lading, consignee, by accepting an interstate shipment, becomes liable for lawful freight charges accrued thereon. Central R. Co. of New Jersey v. National Asbestos Mfg. Co. (N. J., 1925) 127 Atl. 184.

(aa) Where, if there was agreement by interstate carrier to collect freight at pier, it was void under Interstate Commerce Act as contravening terms of published tariff, carrier was not required to notify original consignee of discontinuance of practice of collecting freight in such manner. Monongahela Ry. Co. v. Read (Md., 1925) 127 Atl. 739.

(bb) Transportation Act, Feb. 28, 1920, §424 (Comp. St. Ann. Supp. U. S. 1923, §8584), fixing time limits of three years for carriers to sue for charges, abrogates state six-year statute, and if applicable retrospectively to cause of action accruing more than three years before act was passed, without giving right to sue, would violate due process clause of federal Constitution (Const. U. S. Amend. 14, §1). Philadelphia, B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(cc) As Transportation Act, Feb. 28, 1920, §424 (Comp. St. Ann. Supp. U. S. 1923, §8584), requiring that "all actions" for carriers' charges be prosecuted within three years "from the time the cause of action accrues," specifies no time in future when it is to be operative, it affects all causes of action from date of enactment and gives causes already accrued full three years from passage, if not barred in less time by state statute in effect when cause accrued, though cause arose more than three years before passage of federal act. Philadelphia B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(dd) Delivering carrier may collect all charges from consignees, including those of its connections. Granger v. Davis, 2 Fed. (2d) 695.

(ee) The freight charges on a through shipment from a foreign country into the United States are payable at the rate fixed by the tariff schedules published and filed with the Interstate Commerce Commission in money of the United States, regardless of its exchange value in money of the foreign country. New York & Pennsylvania Co. v. Davis, 2 Fed. (2d) 858.

(ff) Under Interstate Commerce Act (U. S. Comp. St. §8563 et seq.), providing that freight rates are immutable by agreement, mistake, or artifice of parties, consignee's assignee of bill of lading, who accepted delivery of goods, was liable for demurrage charges arising prior to assignment. New York Cent. R. Co. v. Hendel, 207 N. Y. S. 234.

(gg) Generally, a consignee who ac-

cepts a shipment becomes liable as a matter of law for the full amount of freight charges. Louisville & N. R. Co. v. United States, 45 Sup. Ct. 233.

(hh) Carriers are obliged to collect and shippers to pay the legally published charges, and it is not within the commission's purview to pass upon question of liability of consignors or consignees therefor. See Conf. Ruling 314; Wilson case, 50 I. C. C. 571 and American Smelting & Refining Co., 62 I. C. C. 583, 589. Wuille & Co. v. M. H. R. R., 92 I. C. C. 299.

(ii) Failure of carriers to have a provision in bill of lading whereby all freight and other charges were to be collected from consignee without recourse to consignor, found not to have resulted in an unreasonable practice, in violation of section 1 of the act. Carriers are obliged to collect and shippers to pay the legally published charges, and it is not within commission's purview to pass upon question of liability of consignors or consignees therefor. See Conf. Ruling 314, Wilson case, 50 I. C. C. 571, and American Smelting & Refining Co., 62 I. C. C. 583, 589. Wuille & Co. v. M. H. R. R., 92 I. C. C. 299.

(jj) Carrier has lien on goods transported, for freight charges, while it retains dominion and control over goods. Mays v. Missouri & N. A. Ry. Co., (Ark. 1925) 271 S. W. 977.

(kk) Ordinarily person from whom goods are received for shipment assumes obligation to pay freight charges, and his obligation is ordinarily a primary one, though bill of lading imposes liability on consignee, but it may be shown that parties intended, not only that consignee should assume the obligations to pay the charges, but that shipper should not assume any liability whatsoever therefor, or he should assume only a secondary liability. Louisville & N. R. Co. v. Central Iron & Coal Co. 44 Sup. Ct. 441.

(ll) Where shipment is accepted, consignee is liable for the full amount of freight charges, whether they are demanded at time of delivery or not until later. Louisville & N. R. Co. v. Central Iron & Coal Co. 44 Sup. Ct. 441.

(mm) Where payment of freight charges is deferred until goods reach end of transportation, carrier may require it to be made before delivery, concurrently with delivery, or permit it to be made later. Louisville & N. R. Co. v. Central Iron & Coal Co., 44 Sup. Ct. 441.

(nn) Carrier and shipper are free to contract as to when or by whom payments of freight charges will be made. Louisville & N. R. Co. v. Central Iron & Coal Co., 44 Sup. Ct. 441.

(oo) No contract of carrier can reduce amount of freight on an interstate shipment legally payable, or release from liability a shipper who has assumed an obligation to pay such charges, and no act or omission of carrier, except allowing statute of limitations to run, will estop or preclude it from enforcing payment of full amount. Louisville & N. R. Co. v. Central Iron & Coal Co., 44 Sup. Ct. 441.

(pp) Delivering of goods to a carrier for shipment does not under the Interstate Commerce Act impose upon a shipper an absolute obligation to pay the freight charges. As to these matters carrier and shipper are free to contract subject to the rule which prohibits discrimination. The carrier is at liberty to require prepayment of freight charges or permit that payment be deferred until the goods reached the end of the transportation. Where payment is so deferred, the carrier may require that it be made before delivery of the goods, or concurrently with the delivery, or may permit it to be made later. Where the payment is deferred, the contract may provide that the shipper agrees absolutely to pay the charges, or it may provide merely that he shall pay if the consignee does not pay the charges demanded upon delivery of the goods, or the carrier may accept the goods for shipment solely on account of the consignee, and, knowing that the shipper is acting merely as agent for the consignee. may contract that only the latter shall be liable for the freight charges, or both the shipper and the consignee may be made liable. Nor does delivery of goods to a carrier necessarily import, under the general law, an absolute promise by the shipper to pay the freight charges. To ascertain what contract was entered into we look primarily to the bills of lading, bearing in mind that the instrument serves both as a receipt and as a contract. Ordinarily, the person from whom the goods are received for shipment assumes the obligation to pay the freight charges, and his obligation is ordinarily a primary one. This is true, even where the bill of lading contains,

as here, a provision imposing liability upon the consignee; for the shipper is presumably the consignor, the transportation ordered by him is presumably on his own behalf, and a promise by him to pay therefor is inferred (that is, implied in fact), as a promise to pay for goods is implied, when one orders them from a dealer. But this inference may be rebutted, as in the case of other contracts. It may be shown, by the bill of lading or otherwise, that the shipper of the goods was not acting on his own behalf; that this fact was known by the carrier; that the parties intended not only that the consignee should assume an obligation to pay the freight charges, but that the shipper should not assume any liability whatsoever therefore; or that he should assume only a secondary liability. In this case, the bills of lading acknowledge receipt of the coke from the central company. But it did not sign them. Nor was it described therein as the consignor. There was no clause by which the shipper agrees expressly either to pay the freight charges or to guarantee their payment. The goods received were not declared to be deliverable to the Central Company's order. On the contrary, the form of the bills of lading indicated that it was neither the owner nor the person on whose behalf the shipment was being made, and that Tutwiler & Brooks were either the owners or the persons in whose behalf the shipment was being made. On these facts, the trial court was justified in finding that the Central Company did not assume the primary obligation to pay the freight charges. Louisville & N. R. Co. v. Central Iron & Coal Co., 44 Sup. Ct. 441, 442.

(qq) A railroad common carrier HELD without legal authority to purchase coal and pay for the same by releasing a claim for freight and demurrage. Lake & Export Coal Corporation v. Chesapeake & O. Ry. Co., 1 Fed. (2d) 968.

(rr) In action by carrier against shipper of coal for freight charges and demurrage, a defense that plaintiff bought the coal, and that the freight and demurrage due were to be a part of the price, HELD not sustained, in that it was not shown that employee of plaintiff alleged to have made the contract had authority to make it, or was held out as having such authority. Lake & Export Coal Corporation v. Chesapeake & O. Ry. Co. 1 Fed. (2d) 968.

(ss) The general rule is that the consignor, who makes the contract with the carrier, is primarily liable for tariff charges. The question is one of contract to be determined from the facts of the case. An interstate shipment was made, with a milling in transit privilege, the consignor making the contract with the carrier, retaining control, and changing the consignee in the course of the transportation. Delivery, as permitted by the rule of the Commission, was made by the carrier to the consignee without payment of freight. The bill of lading provided that the consignee should pay charges. A finding that the consignor remained liable is sustained. Chicago Junction Ry. Co. v. Duluth Log Co. (Minn. 1925) 202 N. W. 24.

(tt) Transportation Act 1920, prohibiting the delivery of freight at the point of destination without the payment of tariff charges, except under such rules and regulations as the Interstate Commerce Commission may prescribe, does not of itself operate to release the consignor from liability when the carrier delivers freight to the consignee without payment, or make the consignor's liability secondary to that of the consignee. Chicago Junction Ry. Co. v. Duluth Log Co. (Minn., 1925) 202 N. W. 24.

(uu) In interstate shipments of merchandise under the interstate commerce act, where the contract between the carrier and consignee requires merchandise to be delivered f. o. b. at the place of delivery, the primary liability for transportation charges rests upon the consignor, and, while a secondary liability rests upon the consignee who accepts and unloads the merchandise, and where no actual discrimination or preference is attempted, no considerations of public policy require that the consignee should insure the carrier against loss of transportation charges. Cleveland C. C. & St. L. Ry. Co. v. McKenzie Lumber Co. (O., 1925) 147 N. E. 8.

(vv) Where a purchaser of merchandise which at the time of purchase is located at a place in a state other than that of the place of delivery, and by the terms of purchase such merchandise is to be delivered f. o. b. at the place of delivery, and the merchandise has prior to the time of purchase been shipped from place to place by common carrier, and demurrage charges have accrued, none of which has been paid, and all of which have been made to follow the mer-

chandise in the hands of successive carriers, none of which facts is known to the purchaser, and nothing has occurred to put such purchase upon inquiry, and without notice or knowledge thereof the purchaser, being at the time upon the credit list of the final carrier, receives and unloads the merchandise before being presented with a bill of freight and demurrage charges, and where such purchaser thereupon tenders the full value of the merchandise to the final carrier in either full or partial payment of such freight and demurrage charges, and such payment is refused, and the purchaser and consignee of the merchandise is instructed to pay the value of the merchandise to the person from whom he had purchased it, and where such consignee thereupon actually pays the value of the merchandise to the vendor and consignor, and where the carrier thereafter seeks by legal process to recover such freight and demurrage charges from the vendors and consignors, and makes no further claim against the consignee until a period of five years and four months thereafter, the carrier will be estopped from demanding and collecting any part of such freight and demurrage charges from such consignee. Cleveland C. C. & St. L. Ry. Co. v. McKenzie Lumber Co. (O., 1925) 147 N. E. 8.

(ww) Where contract of shipment of cut stone provided for rate less than published schedule filed with interstate commerce commission, carrier could recover difference, since scheduled rate formed part of contract of shipment by operation of law, and parties could not contract for less rate than schedule filed with commission. Missouri Pac. R. Co. v. Pfeiffer Stone Co. (Ark., 1924) 266 S. W. 82.

(xx) On interstate shipments carrier can compel shipper to pay difference between legally established interstate rate and lower rate quoted or collected by mistake or otherwise. Missouri Pac. R. Co. v. Pfeiffer Stone Co., (Ark., 1924) 266 S. W. 82.

(yy) Stipulations in bill of lading that goods are to be delivered to consignee, "he paying freight," or any similar provision, are for benefit of carrier, and delivery to consignee without collection of freight will not release consignor from liability therefor, in absence of special stipulation to contrary. Missouri Pac. R. Co. v. Pfeiffer Stone Co. (Ark., 1924) 266 S. W. 82.

(zz) Action by interstate carrier to recover difference between published schedule of rates filed with interstate commerce commission and rates provided for in contract of shipment, such scheduled rates forming part of contract of shipment by operation of law, is an action founded on contract in writing, governed by five-year statute of limitations (Crawford & Moses' Dig. §6955), and not by three-year statute of limitations (section 6950). Missouri Pac. R. Co. v. Pfeiffer Stone Co. (Ark., 1924) 266 S. W. 82.

(3a) Carrier, contracting with shipper to transport goods, has right to look to consignor for payment of freight, and may waive its lien on goods by delivering them to consignee, and still hold consignor liable on contract of shipment. Missouri Pac. R. Co. v. Pfeiffer Stone Co. (Ark., 1924) 266 S. W. 82.

(3b) Where coal, consigned to named consignee at Toledo for lake and export shipment, after its arrival in Toledo, came under control of consignee, on reconsignment by consignee and shipment for port designated, carrier was warranted in collecting from consignee freight and demurrage charges thereon. Pennsylvania R. Co. v. Rice Coal Co. (Ohio, 1925) 148 N. E. 349.

(3ba) The commission does not determine who is liable for the payment of tariff charges, that being a matter for the courts. Conf. Ruling 314. Kansas City Structural Steel Co. v. A., T. & S. F., 102 I. C. C. 113, 114.

(3c) It is the duty of the delivering carrier to collect the applicable rates on prepaid shipments and to correct any errors that may have been made by the agent of the initial carrier in the billing or in the collection by it of the prepaid charges. It is not for the Commission to determine in any case which party is legally liable for an undercharge; that question is determinable only by a court of competent jurisdiction. Continental File Corp. v. Director General 109 I. C. C. 403, 404.

FROZEN SHIPMENTS

See Demurrage §19.

GAS AND ELECTRIC COMPANIES

See Interstate Commerce.

(a) With delivery of gas by one transporting it in interstate commerce to distributing companies, interstate movement ends, and its subsequent sale and delivery by these companies to their customers at retail is intrastate business, subject to state regulation. State of Missouri ex rel. Barrett, v. Kansas Natural Gas Co., 44 Sup. Ct. 544. Kansas Natural Gas Co. v. Kansas. Helm, 44 Sup. Ct. 544. State of Kansas ex rel. Jackson v. Central Trust Co. of New York, 44 Sup. Ct. 544.

(b) State Public Utilities Commission cannot regulate wholesale prices chargeable to local distributing companies, operating under state franchises for gas, by one transporting gas in interstate commerce by pipe line and exercising no state franchise right, though Congress has not acted. State of Missouri ex rel. Barrett, v. Kansas Natural Gas Co., 44 Sup. Ct. 544. Kansas Natural Gas Co. v. State of Kansas ex rel. Helm, 44 Sup. Ct. 544. State of Kansas ex rel. Jackson v. Central Trust Co. of New York, 44 Sup. Ct. 544.

(c) Transportation from one state to another is "interstate commerce," and sale and delivery of it to local distributing companies is a part of such commerce. State of Missouri ex. rel. Barrett, v. Kansas Natural Gas Co., 44 Sup. Ct. 544. Kansas Natural Gas Co. v. State of Kansas ex. rel. Helm, 44 Sup. Ct. 544. State of Kansas ex. rel. Jackson v. Central Trust Co. of New York, 44 Sup. Ct. 544.

GOVERNMENT CONTROL

See Advanced Rates §7 (9); Evidence §25.

GOVERNMENT GUARANTY

See Finance Dockets VI, §6; Interstate Commerce Commission §9½.

GOVERNMENT MATERIAL

See Reduced Rates §4.

GRADE CROSSINGS

(a) Interstate Commerce Act, §20a (as added by Transportation Act (U. S. Comp. St. Ann. Supp. 1923, §8592a), preventing interstate carriers from issuing securities or extending their lines without approval of the Interstate Commerce Commission, HELD inapplicable in proceedings to compel railroad separation of grade crossing where it was not alleged nor did evidence show that expense thereof was so great as to require an issue of securities by railroads affected, or that their main lines would be required to be extended. State v. Public Service Commission (Mo., 1924) 267 S. W. 102.

(b) Transportation Act (U. S. Comp. St. Ann. Supp. 1923, §10071¼ et seq.) does not expressly or by implication give Interstate Commerce Commission power to eliminate grade crossings nor prohibit state authorities from so doing. State v. Public Service Commission (Mo., 1924) 267 S. W. 102.

(c) The commission has no jurisdiction to require the elimination of grade crossings. Oklahoma Corp. Comm. v. A., T. & S. F., 101 I. C. C. 647, 651.

GRADED RATES

See Blanket Rates §9; Distance Rates.

HEATER CAR SERVICE

See Cars and Car Supply §9½; Demurrage §5½; Facilities and Privileges §9⅛; Special Rates and Services.

(a) Complainant attacked commodity rate charged on two cars of grapefruit in December, 1919, and Jan., 1920, from Largo, Fla., to Seattle, Wash., as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded rates previously and subsequently in effect, and that a heater service charge of $30 on one of the car was illegal and in violation of section 6 of the act to the extent it exceeded $12. Shipments moved as routed by shipper over A. C. L., to Montgomery, Ala., L. & N., to New Orleans, La., S. P., to Portland, Ore., and O. W. R. & N., to Seattle. When these shipments moved a rate of $2.095 applied from Jacksonville, Fla., and other basing points to Seattle on traffic originating beyond. On Nov. 5, 1919 the routing in connection with this rate through the California gateways had been cancelled, thereby making applicable over that route the third class

rate of $3.315 from Group A, including Largo. The rate from Largo to Jacksonville was 24c per box, and it is not attacked. Effective Sept. 15, 1920, the rate of $2.095 was again made applicable via the California gateways. The transcontinental rate of grapefruit in effect from California to New York city was $1.44. HELD, rate attacked unreasonable to extent it exceeded 24c per box to Jacksonville and $2.095 beyond, reparation awarded. Ryan Fruit Co. v. Director General 100 I. C. C. 237.

(b) Under the heater protection tariffs the shipper must either assume the responsibility for protection againt freezing or request carrier to do so. In absence of any request the carrier becomes responsible and the heater charges apply. Ryan Fruit Co. v. Director General, 100 I. C. C. 237, 239.

HOCH-SMITH RESOLUTION

(a) In conformity with S. J. Res. 107, the so-called Hoch-Smith resolution, respondents offered opportunity to obviate undue preference to Omaha, Nebr., which proposed schedules on grain would create, contemporaneously with the taking effect of the rates under suspension, thus making the rates effective with the "least practical delay." Grain to Texas, 96 I. C. C. 727, 729.

(b) By the terms of S. J. Res. 107, effective January 30, 1925, the commission is directed to investigate the rate structure of the country and to consider certain factors in rate making therein set forth, with the provision that any resulting investigation shall not be permitted to delay the decision of pending cases in volving rates on products of agriculture, and that such cases shall be decided in accordance with the resolution. The conclusions herein reached are without prejudice to any further changes which may result from such broader investigation. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 189.

I. DETERMINATION OF STATUS.

See Interstate Commerce I.

§1. In General.

(a) Shipments originating at foreign points moving by water to United States, and thence by rail from port of entry to intrastate destinations in same State, are import traffic and subject to commission's jurisdiction. Goldsboro Chamber of Commerce v. A. C. L. R. R. Co., 91 I. C. C. 315, 321.

(b) Imported shipments of fertilizer and fertilizer materials delivered and stored in warehouses at Wilmington, N. C., and subsequently shipped under new bills of lading to North Carolina destinations, found to be intrastate traffic and not within commission's jurisdiction. At time shipments were stored there was no original or continuing intention to ship goods to any particular inland destination, but they were to be sold wherever a sale might be found, otherwise they were stored and transportation ceased. Shipments here involved fall within class of shipments "where a local shipment follows quickly upon an interstate shipment and yet is not to be deemed part of it, even though some further shipment was contemplated when original movement began." See Settle case, 260 U. S. 166. Goldsboro Chamber of Commerce v. A. C. L. R. R. 91 I. C. C. 315, 321.

II. REASONABLENESS OF RATES AND DISCRIMINATION.

See Discrimination; Evidence §13 (4); Percentage Rates (d); Proportional Rates II (kk); Reasonableness of Rates.

§2. In general.

(a) Complainant attacked import rates charged on fertilizer and fertilizer materials from Wilmington, N. C., to Goldsboro, Mount Olive, Fremont and other destinations in North Carolina, as unreasonable, unjustly discriminatory and unduly prejudicial. Prior to Oct. 13, 1914 a distance scale of rates on fertilizer prescribed by the North Carolina Commission applied on both intrastate and interstate shipments from Wilmington to North Carolina points. Effective on that date lower rates on intrastate traffic were prescribed, leaving the existing rates in effect on interstate traffic. On June 25, 1918 all import commodity rates were cancelled and on Dec. 31, 1918 the director general established specific interstate commodity rates the same as the intrastate distance rates, but within minimum of 40,000 pounds instead of 30,000 pounds. The intrastate distance rates were charged on shipments which were considered to be in intrastate commerce, and the specific commodity rates upon shipments covered by the commodity tariffs. Nitrate of soda is imported in large quantities. In assessing freight charges the carriers exacted the interstate rates on shipments from shipside; also on shipments from storage warehouses without change of ownership and where the imported was consignor and consignee or where the shipment was made by the agent at Wilmington of the importer; in fact, in all cases where change of ownership was not indicated on the bill of lading, and where the bill of lading indicated change of ownership and the shipment was made from the ship side or handling and wharfage charges were included in the freight bill against the consignee. Where such shipments were made to points to which the specific commodity rates applied, the charges were assessed thereunder. Where the bill of lading indicated that the shipment was from a shipper other than the importer, the intrastate rate was applied. HELD, shipments from ship side at Wilmington to North Carolina destinations were import traffic and subject to jurisdiction of the Commission; and that shipments made from warehouses under the circumstances of this case were intrastate traffic and not within the scope of the jurisdiction of the Commission. In this case there was no original or continuing intention to ship the goods to any particular inland destination; the goods were to be sold wherever sale for them might be found, but if there was no immediate sale the goods were placed in warehouses and transportation ceased. Defendants had no tariffs on file with the Commission authorizing storage in transit of this traffic at Wilmington. The shipments which were stored at the port fall within the class of shipments "where a local shipment follows quickly upon an interstate shipment and yet is not to be deemed part of it, even though some further shipment was contemplated when the original movement began." HELD, rates interstate attacked unduly prejudicial to extent they exceed rates based upon minimum of 30,000 pounds in effect, distance considered, from Norfolk, Va., to North Carolina and for the future unreasonable to the extent they exceeded rates ranging from $1.58 single line for 35 miles, $1.91 joint line for 35 miles to $5.52 single line and $5.74 joint line for 500 miles, reparation awarded. Goldsboro Chamber of Commerce v. A. C L. R. R., 91 I. C. C. 315.

(b) Complainant attacked import commodity rates charged on fluorspar, carloads, from Mobile, Ala., and Pensacola, Fla., to East St. Louis, Ill., as unreasonably low, unjustly discriminatory and unduly prejudicial to complainant. Fluorspar moves in open top equipment and does not require expedited service. Prior to April 5, 1923 there was no commodity rate, domestic or export, from Mobile to East St. Louis, on fluorspar imported from Europe and Africa the sixth class rate of 45.5c was applicable. Effective on that date the defendant published a rate of $4.50 from Mobile to East St. Louis on traffic imported. HELD, rate attacked is less than a maximum reasonable rate, but the evidence is not convincing that it is less than a minimum reasonable rate, or that it has resulted or will result in undue prejudice or is otherwise unlawful, complaint dismissed. Rosiclare Lead & Fluorspar Mining Co. v. M. & O. R. R., 91 I. C. C. 577.

(c) Complainant attacked import

rates charged since January 1, 1922 on flaxseed, carloads from New York harbor points to Buffalo, N. Y., 425 miles, as unreasonable. The flaxseed was imported from Argentina. It was unloaded from the vessel into defendants barges, lightered to its terminal on the New Jersey shore and there transferred into cars, charged sixth class rates of 26.5c. A rate of 21.79c was in effect in the reverse direction. The rate to Buffalo from New York made with relation to the Chicago rate would be 60% of the New York-Chicago rate less 2c. The import rate to Chicago was 40c which would give a rate of 22c to Buffalo. HELD, rate attacked unreasonable to extent it exceeded 22c, reparation awarded. American Linseed Co. v. Erie R. R., 91 I. C. C. 663.

(d) Complainant attacked class rates on green coffee, carloads shipped since March 1, 1920, from New York, New Orleans and Galveston and Houston to Denison, Fort Worth and Dallas, Tex., and from the Gulf ports named to Waco, Tex., as unjust and unreasonable. Rates charged from March 1, 1920 to spring of 1922 were fifth class rates from Galveston and Houston and commodity rates from New Orleans. The rate changes of April and June 1922 were made in order to comply with the decision in 58 I. C. C. 716 and 64 I. C. C. 26. This adjustment resulted on the whole in a lower level of rates and was made primarily to eliminate violations of section four and to harmonize rates to competing points. However, Denison, Fort Worth, Dallas and Waco are the principal coffee roasting points in Texas common point territory and were clearly entitled to rates lower than the class basis from the Texas ports as well as from New Orleans during the entire period in which these shipments moved. Charged from New York 79c prior to August 26, 1920 and 105.5c thereafter, for average distance of 2,400 miles. Rates in effect to Ardmore, Durant, Enid and Oklahoma City, Okla., were 75c prior to August 26, 1920 and 100c thereafter, to Muskogee and McAlester, Okla., 69 and 92c, to Little Rock 51.5 and 68.5c. Since the hearing the rate from New York to Denison, Fort Worth and Dallas, has been reduced to 80.5c and has subsequently been still further reduced to 70c. HELD, rates charged to points shown unreasonable to extent they exceeded prior to August 26, 1920, 64c from New York, 49c from New Orleans and 44c from Galveston and Houston; subsequent thereto, 86.5c from New York, 66c from New Orleans and 59.5c from Galveston and Houston, Tex., reparation awarded. National Coffee Company v. G. C. & S. F. Ry., 92 I. C. C. 14 .

(e) Respondents proposed certain changes in their interstate rates on fertilizers, carloads, from New Orleans, La., to Louisiana destinations. Rates proposed are to apply on these commodities which have moved coastwise, or from beyond, or were imported. Carriers at the hearing agreed to withdraw the rates on coastwise and beyond traffic, leaving only for consideration import rates. The rates proposed apply from shipside and include handling charges. Rates now in effect do not include such charges which range in total amount to about 3.5c per 100 pounds. So far as the mere level of rates is concerned the rates proposed generally carry forward present rates with 3.5c added. The record indicates that both domestic and import rates are in need of adjustment. Respondents have not satisfactorily explained the reasons for changes in commodity lists applying to import traffic and in minimum weights. HELD, schedules not justified. Fertilizer from New Orleans to Louisiana, 92 I. C. C. 151.

(f) Respondents sought to cancel the carload rates from Boston and Lowell, Mass., New London, Conn., and New York, N. Y., to LaPorte and Mishawaka, Ind., applicable exclusively to wool in the grease, in machine pressed bales, imported from South America and Australia. At present there are three carload rates on wool in the grease from Boston and New York to LaPorte, viz., the third class rate of 90.5c, minimum 16,000 pounds, applicable to all wool in the grease, irrespective of the place of production or the character of the package, the rate of 72.5c, equal to rule 26, minimum 32,000 pounds, subject to rule 34, applicable to all wool in the grease, irrespective of the place of production when in bales compressed to a density of not less than 19 pounds per cubic foot, and the commodity rate of 63.5c, equal to the fourth class rate, minimum 32,000 pounds, applicable exclusively to baled South American and Australian wool in the grease and carrying no density requirements. The last named rate

was published following 49 I. C. C. 656. Respondent proposed to apply on wool in the grease, imported from South America and Australia, from the points of origin involved, rates of 72.5c to La-Porte and 71c to Mishawaka, equal to rule 26 rates, minimum 32,000 pounds, which rates now apply on wool in the grease generally, whether of domestic or of foreign origin, when in bales compressed to a density of not less than 19 pounds per cubic foot. HELD, suspended schedules justified. Imported wool from Boston and New York, 93 I. C. C. 26.

(g) Complainant attacked domestic rates of $1.75 charged on three cars of imported Indian shelled peanuts shipped Oct. 10 and 15, 1918, from San Francisco, Calif., to Wilmington, N. C., as unreasonable to extent it exceeded the subsequently established import rate of $1.50, effective May 29, 1919. During federal control a complete line of class and commodity rates was established to the southeastern territory by putting it into what is known as Group A transcontinental territory, thus making applicable a rate of $1.50 on imported peanuts from the Pacific coast to southeastern territory, including Wilmington, the same as the rate applicable from the north Pacific coast points. HELD, rates attacked not unreasonable, complaint dismissed. Universal Oil Co. v. Director General, 93 I. C. C. 237.

(h) Complainant attacked fifth class rates charged on carload shipments of sisal from Indianapolis, Ind., to central territory, western New York, and Ontario, Can., during a period of one year beginning July 1, 1922, as unreasonable. These shipments represented the reshipment of sisal which had been imported via Gulf ports and held in storage at Indianapolis for about two years. If it had been shipped out from Indianapolis within a year, it would have been entitled, under tariffs applicable, to transit on the basis of the joint rates from the Gulf ports to ultimate destination plus a 2.5c transit charge. Complainant sought establishment of reshipping rates from Indianapolis at 60% of fifth class. There is no domestic production of sisal. Most of it comes from Mexico, and relatively low Atlantic and Gulf ports to the destinations here considered. There is apparently no movement at class rates except under circumstances such as those surrounding these shipments. HELD, rates attacked not unreasonable, complaint dismissed. Sisal Sales Corp. v. B. & O. R. R., 93 I. C. C. 297.

(i) Complainant attacked import rate of 55c which included absorption of part of the tollage charges at New Orleans, La., on 10 cars of imported flint pebbles shipped from New Orleans to Dewey, Okla., during 1920, as unreasonable to extent it exceeded a rate of 28c, including absorption of all tollage charges. Shipments were imported from France and moved from New Orleans via L. R. & N., to Shreveport, La., K. C. S., to Panama, Okla., M. V., to Ulsa, Okla., and Santa Fe to Dewey 734 miles. Defendants absorbed 5c out of the tollage charges of 15c. For many years pebbles have been rated class D in western classification, but, prior to Dec. 31, 1919 import commodity rates applied. The rate charged came about through the cancellation on that date of the import commodity rate of 33c and an increase of 6c on Feb. 16, 1920, in the class D domestic rate of 49c which became applicable upon cancellation of the import rate. Effective June 10, 1922, an import commodity rate of 40c was established, the class D import rate to Kansas City through Dewey being 40c. The rates to Dewey and Kansas City prior to Dec. 31 1919 and at the present time included the absorption of all tollage charges. As a general rule the import rates of the carriers serving New Orleans include absorption of all of such charges. HELD, rate attacked unreasonable to extent it exceeded 30c including absorption of tollage charge of 15c per ton, reparation awarded. Dewey Portland Cement Co. v. A. T. & S. F. Ry., 93 I. C. C. 311.

(j) Complainant attacked import rate charged on six cars of ferromanganese from Seattle, Wash., to Minnequa, Colo., between Dec. 9 and 29, 1919, as unjust and unreasonable. In July 1919 application was made to the Director General for a lower rate to Minnequa. On Dec. 31, 1919 a rate of 65c was established. The normal movement of this commodity is through Atlantic and Gulf ports and the rates from New Orleans were on a competitive basis. HELD, rates attacked not unreasonable, complaint dismissed. Bush v. Director General, 95 I. C. C. 661.

(k) It is a matter of common knowl-

edge that import rates lower than domestic rates are frequently, if not generally influenced by considerations which are unrelated to, and have little if any, bearing upon the reasonableness per se of the domestic rates. Capital Warehouse Co. v. Director General, 96 I. C. C. 293, 299.

(l) Complainant attacked import fifth class rate charged on carloads of imported linseed oil from New York harbor to Black Rock, Buffalo and Bridgeburg, N. Y., as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates on cottonseed and other vegetable oils. Commodity rates were in effect on cotton seed oil approximating sixth class. HELD, rates attacked unreasonable to extent they exceeded rates on cottonseed oil, reparation awarded. Pratt & Lambert v. N. Y. C. R. R., 96 I. C. C. 460.

(m) Complainant attacked import commodity rate of 49c charged on green coffee, carloads, from New Orleans, La., to Chattanooga, Tenn., as unjust and unreasonable. Shipments moved over the Southern, 498 miles. Contemporaneously there was in effect import rate of 49c from New Orleans to Louisville, Ky., Cincinnati, O., and other destinations more distant than Chattanooga. The rate attacked is the same as to Atlanta, Ga., and the circumstances and conditions affecting the movement of traffic as well as the distances are substantially the same in respect of the two destinations. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Chattanooga Mfrs. Asso. v. N. O. & N. E. Ry., 96 I. C. C. 481.

(n) Complainant attacked import rate of 49c on green coffee carloads, from New Orleans, La., Jacksonville, Fla., Brunswick and Savannah, Ga., and Charleston, S. C., to Nashville, Tenn., as unjust, unreasonable and unduly prejudicial in that it is higher than the rate from New Orleans to Cairo, Ill., and as high as those from New Orleans to St. Louis, Mo., Louisville, Ky., and Cincinnati, O. The 49c rate also applies from New Orleans to Cincinnati, 836 miles and Louisville, 747 miles, and from South Atlantic ports to Nashville, Louisville and Cincinnati. The average short line distance from these latter points to Nashville is 586 miles, to Louisville 751 miles and to Cincinnati 773 miles. The same rate also applies from New Orleans to St. Louis 698 miles, and 47c to Cairo, 554 miles. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Nashville Traffic Bureau v. I. C. R. R., 96 I. C. C. 519.

(o) Complainant attacked import rates on wool in the grease, in machine pressed bales, from Boston, Mass., and New York to Cleveland, O., as unjust, unreasonable and unduly prejudicial as compared with rates from some points to La Porte, Ind. The rate on South American and Australian wool from Boston and New York to La Porte was established in 49 I. C. C. 656, and 80 I. C. C. 309. The carriers voluntarily established, effective March 1, 1923, rates equal to the rule 26 rates on wool in the grease, in bales. HELD, rates attacked between Feb. 2, 1922 and March 1, 1923 unreasonable to extent they exceeded rule 26 rate reparation awarded. Cleveland Worsted Mills Co. v. B. & O. R. R., 98 I. C. C. 427.

(p) Import rate on fluorspar from Mobile, Ala., and Pensacola, Fla., to East St. Louis, Ill., found not unreasonably low, unjustly discriminatory, or unduly prejudicial to complainants' mines in southern Illinois and western Kentucky. While rate assailed is less than a maximum reasonable rate, evidence is not convincing that it is less than a minimum reasonable rate, or that it is out of line with rates from complainants' mines to East St. Louis. Rosiclare Lead & Fluorspar Mining Co. v. M. & O. R. R. Co., 91 I. C. C. 577.

(q) Sixth-class rate on imported flaxseed from New York Harbor points to Buffalo, N. Y., found unreasonable as compared with rate on flaxseed between same points in opposite direction, and to extent it exceeded 60 per cent of New York-Chicago rate less 2 cents. Reasonable rate prescribed and reparation awarded. American Linseed Co. v. E. R. R. Co., 91 I. C. C. 663.

(r) Respondents proposed to increase their import, coastwise and proportional rates on fertilizer and fertilizer materials carloads from New Orleans, La., and subports to points in Louisiana. The proposed rates, with the exception of the rate on crude phosphate are based upon the rates prescribed in 77 I. C. C. 473. The present rates do not include handling charges from ship side to cars,

whereas the proposed rates apply from shipside. This charge at the time of hearing was 3.5c but has since been reduced to 2.5c. It will be absorbed by respondents. HELD, suspended schedules justified. Fertilizers to Louisiana points, 100 I. C. C. 64.

(s) Complainant attacked import commodity rates charged on 11 cars of chinawood oil from Pacific coast points to Cleveland, O., between Oct. 3, 1921 and Oct. 17, 1922 as unreasonable, unduly prejudicial and in excess of aggregate of intermediates. Charged import commodity rates of 1.05. Prior to Oct. 3, 1921 the rates to Cleveland and to Toledo and Cincinnati, O., Detroit, Mich., and Louisville, Ky., where competitive plants were located, were the same. On that date the rates to the competitive points were reduced to 75c and subsequent to these movements the rates to Cleveland were reduced to 75c. HELD, rate attacked not unreasonable and no damage has been shown as the result of any undue prejudice which may have existed, complaint dismissed. Glidden Co. v. E. R. R., 100 I. C. C. 331.

(t) Complainant attacked import rate charged on rapeseed, carloads, from San Francisco, Calif., to Sioux City, Iowa, on Dec. 5, 1922 as unreasonable. Shipment moved over S. P., to Ogden, Utah, U. P., to Council Bluffs, and Northwestern beyond, charged import rate of $1.50. The import and domestic rates on rapeseed were the same. Effective Dec. 10, 1922 a rate of $1 minimum 60,000 pounds was established. Rapeseed is rated class A in the western classification. In 1923 after the reduced rate was published, the S. P., and its connections transported 2,124 tons of rapeseed to eastern destinations. That was an increase of more than 100% over the volume transported in 1922. HELD, rate attacked unreasonable to extent it exceeds $1, reparation awarded. Sioux City Seed Co. v. C. & N W. Ry., 101 I. C. C. 447.

(u) Complainant attacked import commodity rate charged on four cars of newsprint paper from Houston, Tex., to Oklahoma City, Okla., April 25, 1923 as unreasonable and in violation of the fourth section. Shipments moved Santa Fe., distance 557 miles, charged 57.5c. Import rate from Houston to Kansas City, Mo., was 45.5c, carried a note that it would be established on one days notice to any point intermediate via the short route. Oklahoma City is intermediate to Kansas City over the Santa, but the Santa Fe is not the short route. On Sept. 1, 1923 the rate of 45.5c was established to Oklahoma City. The short line distance from Houston to Oklahoma City is 465 miles via T. & B. V., to Fort Worth and Santa Fe beyond. HELD, rate attacked unreasonable to extent it exceeded 46.5c, reparation awarded. Oklahoma Publishing Co. v. A. T. & S. F. Ry., 101 I. C. C. 635.

(v) Proposal to increase rates on imported fertilizer and fertilizer materials from New Orleans and related points to points in Louisiana, by raising the rate level by amount of handling charges at the ports, by eliminating certain commodities, and by increasing the minimum weight, found not justified. Respondents failed to satisfactorily explain reasons for changes in commodity lists and minimum weights, and were under impression that import rates applied mainly to fertilizer factories. However, many items listed in proposed schedules move directly from ship side to farms. Fertilizer from New Orleans, 92 I. C. C. 151.

(w) Proposed increased rates on South American and Australian imported wool in the grease, in machine-compressed bales, from Boston, Lowell, New London and New York, to La Porte and Mishawaka, Ind., found justified. Wool in the grease, in bales of the same density as South American and Australian wool, move under higher rates from Boston and New York to all points of consumption in official territory. Present rate to LaPorte, although fixed by commission, is low and gives undue preference to South American and Australian wool as against wool imported from other foreign countries, and as against domestic wool, and unduly prefers La Porte as against other consuming points in official territory. Imported Wool from Boston and New York, 93 I. C. C. 26.

(x) Domestic rate on imported shelled peanuts from San Francisco to Wilmington, N. C., found not unreasonable as compared with lower import rate subsequently established. Complainant relies exclusively on cases in which reparation was awarded on import shipments to basis of subsequently established rates, but earnings on shipments here involved are substantially lower than on those in cases referred to. Moreover, the subsequent reduction does not in itself warrant a finding that former rate was unreason-

able. Universal Oil Co. v. Director General, 93 I. C. C. 237.

(y) Domestic class rate, which included absorption of part of tollage charges at New Orleans, on imported flint pebbles shipped to Dewey, Okla., assessed as a result of cancellation of import commodity rate on account of no movement, under general policy of director general with respect to unused rates, found unreasonable as compared with import rate to Kansas City, a farther distant point, which rate included absorption of all tollage charges and was subsequently established to Dewey. Reparation awarded. Dewey Portland Cement Co. v. A., T. & S. F., 93 I. C. C. 311.

(z) Fourth-class rate assessed on shipments of sisal from New Orleans, La., to Mounds, Ill., during Federal control found unreasonable as compared with import commodity rate contemporaneously in effect from New Orleans to Indianapolis, Ind., and to extent it exceeded lower import commodity rates subsequently established over route of movement. Reparation awarded. Capital Warehouse Co. v. Director General, 96 I. C. C. 293, 297, 298.

(aa) Import rate on green coffee, in carloads, from New Orleans, La., to Chattanooga, Tenn., found not unreasonable or otherwise unlawful, comparing favorably with rates from the same port and the Port of New York to other destinations, as well as with the rate found not unreasonable in 93 I. C. C. 555. Chattanooga Mfrs. Asso. v. N. O. & N. E. R. R. Co., 96 I. C. C. 481.

(bb) Import rate on green coffee from New Orleans, La., and south Atlantic ports to Nashville, Tenn., found not unreasonable or unduly prejudicial as compared with rates on like traffic from same ports to other farther distant destinations, as well as from other ports to same and other farther distant distant destinations. Nashville Traffic Bureau v. I. C. R. R. Co., 96 I. C. C. 519.

(cc) Proposed charge of 25 cents per shipment for opening, recoopering, and rewrapping packages for customs examination at the border ports on import shipments by express from Canada to points in the United States found not justified. This charge would not apply on shipments where the American Express Co. acts as the broker and attends clearance details, nor on shipments of milk or cream. The suspended schedules ordered cancelled without prejudice to the filing of new schedules which will provide that a charge of 12 cents per shipment be assessed on shipments when one or more packages are actually opened by order of the Customs and will not apply on any shipments where the American Express Co. or other concern or individual acts as broker for the importer and in that capacity attends to the physical work above described. Charge for Opening, Recoopering, and Rewrapping Packages for Customs Examination, 98 I. C. C. 284.

(dd) Domestic rates on imported wool in the grease, in machine-pressed bales, in carloads, from Boston, Mass., and New York, N. Y., to Cleveland, Ohio, between February 2, 1922, and March 1, 1923, found unreasonable to extent they exceeded contemporaneous rule 26 rate applicable from same ports to La Porte, Ind. Reparation awarded. Cleveland Worsted Mills Co. v. B. & O. R. R. Co., 98 I. C. C. 427.

(ee) Complainant attacked rates charged on imported wood pulp carloads from Boston, Mass., to Ondawa, N. Y., since July 1922 as unreasonable, and, as compared with the rates to Niagara Falls, Watertown and North Bennington, Vt., unduly prejudicial. Ondawa is local on the G. & J., 17 miles north of Johnsonville and 191 miles from Boston. Shipments moved B. & M., to Johnsonville and G. & J., beyond, charged commodity rate of 24c, applicable on both domestic and imported wood pulp. Effective August 30, 1924 the rate on imported wood pulp was reduced to 20 cents and the commodity rate on domestic wood pulp was canceled, leaving in effect sixth class rate of 28.5 cents. HELD, present rate not unreasonable but rate of 24c unreasonable to extent it exceeded 22.5c, reparation awarded. Stevens & Thompson Paper Co. v. B. & M. R. R., 102 I. C. C. 109.

(eea) Present commodity rate on imported wood pulp from Boston, Mass., to Ondawa, N. Y. found not unreasonable as compared with similar rates on like traffic from Boston to other points in New York for comparable distances, but rate charged on shipments here involved was unreasonable to extent it exceeded lower contemporaneous rate on like traffic from Boston to certain other points on the D. & H. R. R. Reparation awarded. Stevens & Thompson Paper Co. v. B. & M., 102 I. C. C. 109.

(eeb) Proposed increased import rates on ferromanganese, spiegeleisen, and pig

iron from south Atlantic and Gulf ports to various points in Alabama and Tennessee and Atlanta, Ga., found justified, contingent upon such rates being also made applicable from ship side. These rates are on a very low basis as compared with similar rates from north Atlantic ports to consuming centers, and with rates applying for similar distances between points in trunkline and c. f. a. territories. Furthermore, rates on pig iron in the South were made many years ago on the old competitive basepoint system, whereby rates to junction points were depressed and those to intermediate points made higher, with a view to developing furnaces in Alabama and Tennessee and have never been revised for purpose of curing fourth section departures. Under proposed schedules higher rates to the common or base points will be made effective with somewhat lower rates to intermediate points. Protestants furnished no convincing proof that proposed increases will result in unreasonable rates. Ferromanganese, etc., to Southern Points, 102 I. C. C. 150.

(ff) Respondents proposed to increase the import commodity rates on ferromanganese, spiegeleisen and pig iron, carloads, from south Atlantic and Gulf ports to Alabama City, Anniston, Attalla, Birmingham, and Gadsden, Ala., Alcoa, Chattanooga, Knoxville, and Lenoir City, Tenn., and Atlanta, Ga. In the suspended schedules respondents seek to establish import commodity rates from south Atlantic and Gulf port to interior southern destinations where only domestic rates or class rates now apply, and to increase the present import commodity rates to points where such rates are now published. They propose a higher level of rates on ferromanganese and spiegeleisen than on pig iron. The effect will be to reduce the rates to points where only domestic rates now apply and to increase them to points where import rates are in effect. Respondents stated at the hearing that in filing their proposed schedules they inadvertently failed to provide that the proposed rates apply from ship side. The handling charge from ship side to car is 56c per ton. With the provision that the rates apply from ship side the Commission feels that the proposed schedules have been justified. Ferromanganese, etc., to southern points, 102 I. C. C. 150.

(gg) Complainant attacked import rates on wood pulp from Canada to Thomson, N. Y., as unreasonable and unduly prejudicial to it and preferential of its competitors at Glens Falls, Fort Edward, Corinth and Warrensburg, N. Y. Traffic from all points of origin is received by D. & H., at Rouses Point, N. Y. From that gateway the D. & H., has a line south through Whitehall, Fort Edward and Saratoga Springs, N. Y., to Albany, N. Y. Fort Edward is 135 miles south of Rouses Point, and Glens Falls is 5 miles from Fort Edward. Thomson is on the G. & J., about 180 miles from Rouses Point; it is 39 miles more distant than Glens Falls, 10 miles more distant than Corinth, and 13 mile less distant than Warrensburg. Defendants admit that the transportation conditions to all of these points are not substantially different. HELD, rate attacked not unreasonable but unduly prejudicial to extent they exceeded rate to Warrensburg, reparation denied. Iroquois Pulp & Paper Co. v. G. & J. Ry., 102 I. C. C. 121.

(gga) Proposed cancellation of import class rates on clay from Portland, Me., to Charlotte, Rome, Rochester, Syracuse and Utica, N. Y., leaving applicable higher domestic rates, found justified. The rates resulting from proposed cancellation are equal to the domestic class rates in effect over a more direct route, and compare favorably with domestic class rates from Portland to other points on respondent's lines in the vicinity of destinations involved. Import Clay and Class Rates to New York Points, 102 I. C. C. 217.

(ggb) Proposed cancellation of import commodity rate on clay from Montreal, Canada, to Syracuse and Solvay, N. Y., leaving applicable higher domestic rates, found not justified. No justification whatever was offered for the increased rate which would result. Moreover, import rate proposed to be cancelled is same as the import rate on like traffic in effect from and to same points over other routes. Import Clay and Class Rates to New York Points, 102 I. C. C. 217.

(ggc) Class rates assessed on imported soya-bean oil and coconut oil, in tank-car loads from Wilmington, Calif., to Los Angeles, found unreasonable to extent they exceeded lower commodity rates subsequently established from and to same points. Reparation awarded. Los Angeles Soap Co. v. P. E. Ry., 102 I. C. C. 235.

(hh) Respondents proposed to cancel the import commodity rate on clay, car-

loads, from Montreal, Que., to Syracuse and Solvay, N. Y., and the import class rates from Portland, Me., to Charlotte, Rome, Rochester, Syracuse and Utica, N. Y., over routes composed of the Grand Trunk and C. N., to Massena, N. Y., and the N. Y. C., beyond, leaving applicable higher domestic rates. The import class rates from Portland to the New York destinations named were first published effective Nov. 4, 1924 in a tariff filed with the Commission by the Canadian National and Grand Trunk. Respondent New York Central states that they were published without specific authority from it and proposed that their cancellation in order to avoid disruption of the class rate structure to these and other destinations on its lines. The lines of respondents form the circuitous route from Portland to these destinations. The distance from Portland to Syracuse over this route is 554 miles, as compared with 400 miles the distance over the direct route, composed of B. & M., and N. Y. C. Import class rates are not maintained over the direct route from and to these points. The rates which would result from the proposed cancellation are the same as the domestic class rates in effect over the direct route, and compare favorably with the domestic class rates from Portland to other points on the lines of respondent in the vicinity of these destinations. Clay, n. o. i. b. n. carloads is rated sixth class in official classification. The record indicates that imported clay is shipped from Portland to Syracuse but not to the other destinations. The present import sixth class rate is 25c. N. Y. C., expressed willingness to join with the G. T., and C. N., in the publication of a commodity rate the same as the present import class rate thereon. No justification was offered for the increased rate on imported clay from Montreal to Solvay and Syracuse which would result from cancellation of the existing import commodity rate. This import rate is 25c, and is the same as the import rate on like traffic in effect from and to the same points over the N. Y. C., and C. P., and N. Y. C. HELD, proposed cancellation of import rates on clay from Montreal to Syracuse and Solvay and from Portland to Syracuse not justified, but that with the latter exception, the proposed cancellation of import class rates is justified. Import clay from Montreal, 102 I. C. C. 217.

(ii) Complainant attacked import rate on imported soya bean oil and coconut oil, in tank cars, from Wilmington, Calif., to Los Angeles, Calif., as not applicable and unreasonable and unduly prejudicial. The oil is unloaded from vessels and stored in tanks at Wilmington. Shipments of imported soya bean oil and coconut oil were delivered to the defendants within two years of the date of filing the complaint and transported them from Wilmington to Los Angeles, 19 miles. Soya bean oil and coconut oil, carloads, are rated fifth class in the western classification and the minimum fifth class rate of 11c was assessed on both commodities prior to Oct. 11, 1922 when a commodity rate of 7c became applicable on coconut oil, and on March 21, 1924 on soya bean oil. Defendants maintained fifth class rates of 8c prior to July 1, 1922 and 7c thereafter on traffic transported on the high seas to or from points beyond the port of Wilmington, and receive from or delivered to ocean carriers at Wilmington. Defendants admit that the rates attacked were unreasonable to extent they exceeded 8 and 7c respectively. HELD, rates attacked unreasonable to extent they exceeded 8c prior to July 1, 1922 and 7c thereafter, reparation awarded. Los Angeles Soap Co. v. P. E. Ry., 102 I. C. C. 235.

(jj) Complainant attacked commodity rate of 31c charged on 26 cars of imported wood pulp from New York to Big Island, Va., in March 1923 as unjust and unreasonable. The shipments were imported from Norway and moved from ship side through Greenville piers over the Pennsylvania and C. & O., to Big Island. The rate on wood pulp in the opposite direction was and is 27c. HELD, rate attacked unreasonable to extent it exceeded 27c, reparation awarded. Bulkley Dunton & Co. v. P. R. R., 102 I. C. C. 347.

(jja) Big Island, Va.: Rate on imported wood pulp from New York to, found unreasonable as compared with contemporaneous rates on like traffic from and to other points for comparable distances. Bulkley, Dunton & Co. v. P. R. R., 102 I. C. C. 347.

(kk) Complainant attacked import rates charged on rattan furniture, in bundles, shipped in June and Nov. 1922 from Seattle, Wash., to Cleveland, O., as illegal. Charged any quantity rate of $7.20 and $8. Rates published in tariffs are governed by the provisions contained in those tariffs. The special rule is ap-

plicable only in connection with rates published in the tariffs in which the special rule appears. The rates of $4.65 and $5.165 to which bases complainant is seeking reparation, are applicable only in connection with the minimum weights published in the tariffs naming such rates . HELD, rates charged not illegal, complaint dismissed. Bailey Company v. I. C. R. R. 104 I. C. C. 255.

(ll) Complainant attacked rates on import shipments of wood pulp, carloads, from Boston, Mass, to Hudson Falls, N. Y., as unreasonable, unduly prejudicial to complainant and unduly preferential of paper mills at Niagara Falls, Phoenix and Watertown, N. Y. The commodity is shipped in bales, wired and wrapped, and in the transshipment over the docks at Boston is handled and loaded into the cars by the railroad employees. The present rate on imported wood pulp from Boston to Hudson Falls is 21.5c This rate has been in effect since July 17, 1924. Prior to that date the applicable rate on the shipments was 22.5c. The route is over the B. & M., to Mechanicville, N. Y., and D. & H., beyond 225 miles. The traffic in issue is in the direction of the principal empty movement. The distance from Boston to the Hudson river is 13 miles less over this line than over the B. & A. Its traffic density compares favorably with that of the B. & A., and N. Y. C. The rate from Boston to Hudson Falls is not out of line with the single line and joint line rates from New York or with the single line rates from Boston. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Union Bag & Paper Corp. v. B. & M. R. R., 104 I. C. C. 327.

(mm) Complainant attacked rates charged on imported marble blocks, carloads, from New York, N. Y., to Chicago as unjustly, discriminatory, unduly prejudicial and in violation of the fourth section. Shipments consisted of rough quarried marble blocks 8 ft. long, 4 ft. wide and 4 ft. high, moving between Dec. 8, 1921 and Dec. 28, 1922, as routed by shipper over the standard all rail lines. charged sixth class rate of 52.5c prior to July 1, 1922 and 47.5c thereafter. A commodity rate was in effect canceled Jan. 31, 1924 applicable over a socalled differential route through Canada, of which the New Haven, not a defendant, was the initial carrier, and was not participated in by the defendant carriers maintaining the rate attacked. HELD, rate attacked not unjust, discriminatory, unduly prejudicial or in violation of the fourth section, complaint dismissed. Liquid Carbonic Co. v. C. & E. R. R., 104 I. C. C. 446.

(nn) Complainant attacked charges assessed on four cars of imported portland cement shipped in Nov. 1923 from San Pedro, Calif., to Los Angeles based on track scale weights and at a rate of 7.5c per 100 pounds as unreasonable. These shipments were part of a total of 40,000 bags of imported cement which complainant purchased c. i. f. ex ships slings under an order placed before the arrival of the cement at the port. The ship in which the cement was transported arrived Sept. 15, 1923 at East San Pedro where the cement was unloaded. Complainant was unable to handle the cement as rapidly as it was discharged from the ship and some 8,900 bags were moved from East San Pedro over the Salt Lake and defendant to San Pedro and there stored in the Union Terminal Warehouse. In Nov. 1923, 3,754 bags of this cement were shipped from the warehouse to complainant at Los Angeles over the line of defendant. The remainder of the cement in storage apparently was shipped to complainant at Wingfoot, within the corporate limits of Los Angeles. Complainant had no place of business at either San Pedro or East San Pedro and did not sell any of the cement at these points or use these points for the purpose of distributing the cement to consumers at other points. All of the cement was intended to be shipped to complainant at Los Angeles. In other words, the intention was that its transportation should not end at San Pedro but that a further movement to a particular point beyond San Pedro would follow the water transportation. That intention was carried out as to these shipments and also, apparently as to the remainder of the consignment. It would appear that the foreign character of this commerce was not destroyed by the temporary of the shipments at San Pedro. Charged class C rate of 7.5c. No evidence was adduced by complainant to show that the rate attacked was unreasonable per se. The record fails to indicate wherein the track scale weights on these shipments were in error. HELD, rate charged applicable and not unreasonable, complaint dismissed. Woodhead Lumber Co. v. P. E. Ry.104 I. C. C. 751.

(oo) Proposal to increase import,

coastwise, and proportional rates on fertilizer and fertilizer materials from New Orleans, La., and subports to points in Louisiana, effecting an adjustment of both domestic and import rates to the basis of rates prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, found justified. Proposed schedules will correct the present lack of uniformity in minimum-weight provisions and in tariff descriptions of commodities accorded fertilizer rates and provide rates applicable from shipside to cars, handling charges being absorbed by carriers. Suspended schedules vacated and proceeding discontinued. Fertilizer to Louisiana Points, 100 I. C. C. 64.

(pp) Relationship of rates on certain commodities for export, import, or coastwise movement via Galveston, Tex., from or to points in Texas, Oklahoma, western Louisiana, Arkansas, and Kansas found unduly prejudicial to Galveston and unduly preferential of New Orleans, La. Such undue prejudice should be removed by establishing the same rates to or from New Orleans or Galveston, as the case may be, in instances where the differences in distance from and to the two ports are not greater than 100 miles, and by establishing rates to or from Galveston, as the case may be, certain prescribed differentials herein prescribed, under New Orleans in instances where the differences in distance in favor of Galveston are greater than 100 miles. The record is not sufficiently complete to warrant the commission in prescribing relationships between the rates to or from Galveston and New Orleans on other commodities or from or to points other than those embraced in the foregoing findings. Relationships herein prescribed will serve as a guide to defendants in readjusting the rates on other export, import, and coastwise traffic. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110.

(qq) Rates on China-wood oil from Pacific coast points to Cleveland, Ohio, found not unreasonable nor in violation of the aggregate-of-intermediates clause of section 4 of the act. Applicable import tariff provided for alternative application of domestic tariff if lower, and domestic tariff, in turn, provided for aggregate-of-intermediate rates wherever found lower than joint rates. Under these double alternatives no fourth-section violation existed, but lower combinations applied on two of the shipments involved, resulting in overcharges. Refund of such overcharges directed and complaint dismissed. Glidden Co. v. E. R. R. Co., 100 I. C. C. 331.

(rr) Applicable import rate assessed on rapeseed moving from San Francisco to Sioux City found unreasonable as compared with rates on various analogous commodities of higher value, and to extent it exceeded lower rate established subsequent to movement. Reparation awarded. Sioux City Seed Co. v. C. & N. W., 101 I. C. C. 447.

(ss) Rate on imported newsprint paper from Houston, Tex., to Oklahoma City, Okla. found unreasonable as compared with lower rate contemporaneously in effect from Kansas City, Mo., a farther distant point, with rates prescribed in Minnesota & Ontario Paper Co., 66 I. C. C. 571, and with rates from Houston to various points in Texas common-point territory. Reparation awarded. Oklahoma Publishing Co. v. A., T. & S. F., 101 I. C. C. 635.

(tt) Rate on imported newsprint paper from Houston, Tex., to Oklahoma City, Okla., higher than to Kansas City, Mo., a farther distant point, found in violation of the long-and-short haul provision of section 4 of the act. Oklahoma Publishing Co. v. A., T. & S. F., 101 I. C. C. 635.

(uu) Rate on imported newsprint paper from Houston, Tex., to Oklahoma City, Okla., found unreasonable to extent it exceeded rates based upon the distance scale prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, 564, and the percentage relationship found reasonable in Minnesota & Ontario Paper Co., 66 I. C. C. 571. Reparation awarded. Oklahoma Publishing Co. v. A., T. & S. F., 101 I. C. C. 635.

(vv) Respondents proposed to revise the rates on bananas, carloads and less carloads from New Orleans, La., Mobile, Ala., and Pensacola, Fla., to points in southeastern and Carolina territories. The suspended schedules constitute a general revision of rates on bananas from the Gulf ports named to destinations generally in Alabama, Georgia, Florida, North Carolina, South Carolina, Tennessee and to a few points in Kentucky, Virginia and West Virginia. It is proposed to cancel less carload commodity rates and apply class rates from New Orleans and Mobile; to

cancel both carload and less carload commodity rates from Pensacola, Fla., on account of absence of movement through that port; to cancel all carload commodity rates from the various Gulf ports to points to which no movement has developed; to adjust rates at intermediate points with relation to present rates at Ohio river crossings and Virginia gateways; and to provide rates from Mobile 5c less than from New Orleans to such destinations as now have rates differentially less from Mobile than from New Orleans. The proposed tariffs will result in lowering the carload rates to certain points to which in most instances, there have been and probably will be no carload shipments. To the larger cities where bananas are usually shipped in carloads, the rates are increased. Present rates on bananas from Gulf ports to southeastern territory have, except for general changes in recent years, been in effect for a long period of time. The I. C., declines to make any increases in its rates to the Ohio river crossings or intermediate points in the Mississippi valley. The southeastern carriers could not expect to compete at the Ohio river with the I. C., at rates higher than it maintains and therefore they are not here proposing any increases in those rates. The proposal to cancel less carload commodity rates would leave second class rates to apply and would result in considerable increases. HELD, rates on bananas from Gulf ports to the Ohio river in so far as they apply over lines which are here proposing increases in their rates to the southeast and Carolina territory are upon less than a maximum reasonable basis. HELD, schedule of reasonable maximum rates would be rates ranging from 32c for 100 miles to 95c for 1,000 miles, Mobile to be given the full benefit of its shorter distance than New Orleans on the basis of the scale rates. Bananas from Gulf ports 109 I. C. C. 211.

(ww) Complainant attacked rate of 38c charged prior to July 1, 1922 and 34c thereafter, on 74 cars of plumbago and graphite carloads, between April 1922 and June 1923, inclusive, from New York Harbor, free lighterage limits to Delano Junction, N. Y., and destined to Ticonderoga, N. Y., over interstate routes, as unjust and unreasonable. This crude graphite was imported from various foreign countries, packed in barrels and bags. It was transported by lighter to the Jersey Central shipments moving via that line to Wilkesbarre, Pa., D. & H., and Ticonderoga R. R. via Delano Junction. Short line route is over N. Y. C., 235 to Delano Junction, over the route of movement the distance is about 463 miles to the same point. The rates charged are higher than the rates from Jersey City to the same destination. HELD, rates attacked unreasonable to extent they exceed 34.5 prior to July 1. 1922 and 31.5c thereafter, and for future unreasonable to extent they exceed by more than 3c the rate from Jersey City, reparation awarded. Dixon Crucible Co. v. D. & H. Co. 109 I. C. C. 380.

(xx) Complainant attacked import rate on wood pulp from Baltimore, Md., to Baltimore, O., since 1923 as unreasonable and unduly prejudicial. Baltimore, O., is 25 miles southeast of Columbus, O., served by the New York Central. Import rate in effect prior to June 24, 1918 were canceled as of that date, leaving the domestic rates for application from the eastern seaboard to c. f. a. territory. On May 1, 1922 because of the competition of the Gulf lines at Chicago, it became necessary for the eastern trunk lines to publish an import rate which was scaled back to the 87% group including Cincinnati at which points the competition of the Gulf lines was encountered. The rate from New York to Chicago became 42c, which was the old import rate of 20c with the general increases applied. After July 1, 1922 the carriers did not apply their import base rate east of the 82% group or Cincinnati. The fact that the present rate from Baltimore, Md., to Baltimore, O., is not 78% of the New York-Chicago rate, less the differential of 3c from Baltimore, is not evidence that the rate in effect is unreasonable or unduly prejudicial. The percentage formula is not a hard and fast rule, but is merely a guide. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Fairfield Paper Co. v. B. &. O. R. R., 109 I. C. C. 514.

(yy) Complainant attacked rates charged on one car of imported nitrate of soda, shipped Jan. 28 1921 from New Orleans, La., to Houston, Tex., as unreasonable. Shipment moved over N. O. T. & M., to Sabine River, La., and B. S. L. & W., beyond, 367.8 miles, charged commodity rate of 44c. Prior

to June 25, 1918 nitrate of soda was grouped with muriate of potash, sulphate of potash and other fertilizer materials taking an import commodity rate of 11.25c on that date import rates were cancelled, thereby making applicable domestic rates the latter being so restricted as not to cover nitrate of soda, the rate applicable thereon being 32.5. On August 26, 1920 the 32.5c rate became 44c and fertilizer rate 24.5c. On Dec. 5, 1921 nitrate of soda was added to the list of materials accorded the 24.5c fertilizer rate. HELD, rate attacked unreasonable to extent it exceeded 24.5c, reparation awarded. Armour Fertilizer Works v. N. O. T. & M. Ry., 109 I. C. C. 549.

(zz) Complainant attacked import commodity rates of $2.665 charged prior to Feb. 15, 1922 and $2.40 on and after that date on eleven cars pyretheum flowers from Seattle and Tacoma, Wash., and San Francisco, Calif., to Minneapolis, Minn., there ground and product shipped to Winona, Minn., as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved Dec. 17, 1921 and Dec. 6, 1922. On Jan. 20, 1923 an import commodity rate of $1.75 was established. On June 25, 1918 import rate was cancelled of $1, on July 7, 1919 the import rate was reestablished at $2 subsequently changed to $1.75. HELD, rates charged unreasonable to extent they exceeded $1.945 prior to July 1, 1922 and $1.75 thereafter, reparation awarded. Winona Asso. of Commerce v. C. R. I. & P. Ry., 109 I. C. C. 648.

(3a) Complainant attacked rates charged on imported fertilizer materials, carloads, shipped from March 1, 1922 and April 24, 1924 from Savannah, Ga., and Charleston, S. C., to Knoxville, Tenn., as unreasonable unduly prejudicial and in violation of the fourth section. Shipments consisted of manure salts, muriate of potash and nitrate of soda, charged domestic fertilizer rate of $4.95, no import rate being published to Knoxville. The rate sought was established to Knoxville on April 24, 1924. HELD, rate charged not unreasonable but unduly prejudicial to extent it exceeded the rate to Chattanooga, reparation denied, complaint dismissed. Knoxville Traffic Bureau v. A. C. L. R. R., 109 I. C. C. 705.

(3b) There is nothing inherent in import traffic, as such, that entitles it to lower rates than domestic traffic, and the Commission may not require a difference in the rates on the two classes of traffic unless there is a substantial difference in the services performed. Neither can the Commission consider the needs of the shipper as a basis for reasonable rates, nor the fact that a rate has been reduced, as establishing the unreasonableness of the former rate. Knoxville Traffic Bureau v. A. C. L. R. R., 109 I. C. C. 705, 709.

(3c) Complainant attacked sixth class carload rate of 77c charged on imported mahogany logs from Greenville Piers, N. J., a New York city rate point, to Knoxville, Tenn., as unreasonable to extent it exceeded commodity rate of 49c contemporaneously in effect via the Virginia gateways. Shipments, covered by one bill of lading, moved as routed via Pennsylvania to Cincinnati, O., thence L. & N., 1,042 miles. The distance to Knoxville via the Virginia cities gateways, over which route, composed in part of the Pennsylvania, the 49c rate applied, is much shorter than via Cincinnati; but the rates, both class and commodity, are with few exceptions the same over both routes. It is the usual practice of carriers to publish the same rates via Cincinnati as via the Virginia gateways. This is true not only as to Knoxville but to the surrounding territory as well; and while the distance to Knoxville via Cincinnati is greater than that over the short route by about 41%, the record shows even wider disparities in distances to points taking the same rates via both gateways. HELD, rate attacked unreasonable to extent it exceeded 49c, reparation awarded. Foreign & Domestic Veneer Co. v. L. & N. R. R., 112 I. C. C. 46.

IV. TARIFFS AND CONSTRUCTION.

§1. In General.

See State Rates and Regulations (3e); Tariffs.

(a) In 78 I. C. C. 387, the Commission found that a commodity rate on dry hides was not applicable on kangaroo or rabbit skins in the absence of the specific inclusion of the latter in the commodity item; that the rates of $4.625 on imported rabbit skins, dry, carloads, from San Francisco, Calif., Tacoma and Seattle, Wash., and Vancouver, B. C., to New York, N. Y., and Danbury, Conn., and on imported kangaroo skins, dry, carloads, from San Francisco to North Philadelphia, Pa., were unreasonable to extent they exceeded $2, minimum 20,000 pounds, and awarded reparation. Since the original report the parties have stipulated that reparation may be made on basis of a rate of $2.62 on the informal docket. The original report herein need not stand in the way of such disposition and the case will be so handled by the Commission on the special docket. American Trading Co. v. Director General, 92 I. C. C. 461.

(b) Complainant attacked import rate charged on hog bristles from Pacific coast ports to New York between July 9, 1918 and August 1919 as unreasonable and illegal. The bristles were substantially straight, but prior to shipment they were washed, sorted, bunched and packed in wooden boxes. Western classification provided an any quantity rating of first class on bristles, other than crude, in boxes. Effective Jan. 15, 1919 a less carload import commodity rate of $3 was established on bristles in packages and on May 29, 1919, it was reduced to $2.50. During the entire period of movement domestic commodity rates of $2.75 less carload and $1.065 carload, applied on hair, not curled, including crude hog bristles, in machine pressed bales. These domestic rates were applicable on import traffic in the absence of import rates. The western classification governing the shipments contained an item covering "washed" crude hog bristles, indicating that defendants do not consider washing sufficient to change crude bristles into bristles other than crude. Imported bristles, which are sorted, bunched or prepared, are subject to a customs duty, while crude bristles, not sorted, bunched, or prepared are admitted free. The courts have held that bristles such as those shipped by complainant are not included in the latter description. HELD, complaint dismissed. Cone & Company v. Director General, 96 I. C. C. 629.

V. FACILITIES AND PRIVILEGES.

See Facilities and Privileges.

§5. In General.

(a) Refusal of rail carriers to handle, at their own expense, import shipments of cork waste, in bales, from side of ships docked at Baltimore, Port Covington piers to cars on such piers, for transportation to Beaver Falls, Pa, found unlawful. Tariff specifically provided that rates will apply from ship's side when property is received from vessels docked at piers or from ship's side in stream, within lighterage limits, when ship is awaiting docking at piers. Fact that such provision was carried under heading "Handling of freight by lighter or float within lighterage limits" did not operate to restrict it to traffic involving floatage or lighterage, but was also applicable to traffic handled from ship to car in transfer of which no lighterage or floatage is involved. Reparation awarded. Armstrong Cork Co. v. W. M. Ry., 102 I. C. C. 713.

INDUSTRIAL RAILROADS

See Common Carrier; Divisions; Tap Lines.

(a) For many years defendants trunk lines, published tariffs providing for absorption of the switching charges of defendants Monongahela Connecting R. R., the South Buffalo Ry., the Union R. R., and the Newburgh & South Shore Ry. and shippers located on the industrial roads were thereby accorded the same basis of rates as shippers located on th

trunk lines in the same rate districts. In 29 I. C. C. 212, the Commission found that these industrial roads were plant facilities rather than common carriers, and effective April 1, 1914, the trunk lines discontinued their absorption of the industrial roads switching charges on interstate shipments. Subsequently following 32 I. C. C. 129, trunk lines filed with the Commission a stipulation and on April 15, 1915, resumed absorption of switching charges in the amounts specified in the stipulation, thereby restoring to plants located on the industrial roads the rate adjustment existing prior to April 1, 1914. Throughout that period shippers to and from points on the industrial roads were compelled to pay the switching charges of those roads on interstate shipments in addition to the district rates, and were thus at a disadvantage to the extent of the switching charges as compared with competitors shipping to or from points in the same rate districts which were located on the trunk lines HELD, defendant industrial roads are common carriers and lawfully entitled to receive from their trunk line connections divisions of joint rates or absorption of switching charges, such divisions or absorptions to be reasonable, reparation awarded to extent of switching charges of industrial roads. Jones & Laughlin Steel Co. v. P. & L. E. R. R., 91 I. C. C. 300.

§½. In General.

See Foreign Commerce §2; Import Traffic I.

(a) Whether the interstate or the intrastate tariff is applicable depends upon the essential character of the movement. That the contract between shipper and carrier does not necessarily determine the character is well settled. Goldsboro Chamber of Commerce v. A. C. L. R. R., 91 I. C. C. 315, 320.

(b) It is well settled that whether a shipment is interstate or intrastate must be determined by the essential

character of the commerce, which is to be ascertained from all the pertinent facts, circumstances and conditions of each particular case. Givens v. Director General, 92 I. C. C. 63, 65.

(c) Shipment of carload of oats from West Nashville, Tenn., to Fayetteville, N. C., constitutes interstate commerce. Norfolk S. R. Co., v. Armfield., (N. C., 1925) 127 S. E. 557.

(d) The question as to whether or not a shipment is interstate must be determined by the essential character of the commerce, taking into consideration, among other things, the intention of the party controlling the movement of the traffic; and this must be ascertained from all the pertinent facts, circumstances, and conditions and not by mere billing or forms of contract. Hines Yellow Pine Trustees v. A. C. & Y. Ry., 109 I. C. C. 453, 456.

ALL OTHER CITATIONS

Muse Lumber Co. v. Director General, as Agent, 85 I. C. C. 267.

§1. Beginning and End of Transit.

See Through Routes and Joint Rates §19; Transportation §11.

(a) The fact that commodities received on interstate shipments are reshipped by the consignees, in the cars in which they are received, to other points of destination, does not necessarily establish a continuity of movement or prevent the reshipment to a point within the same state from having an independent and intrastate character. Goldsboro Chamber of Commerce v. A. C. L. R. R., 91 I. C. C. 315, 318.

(b) Complainant attacked as overcharges rates on carloads of steel tank and tower materials from Pittsburgh, Pa., through Kansas City, Kans., for fabrication to Shreveport thence to Harmon and Emmett Spur, La.; between June and December, 1919. Charged 62.5c plus transit charge at Kansas City of 1.5c, or total of 64c. Shipments arrived at Shreveport during November, 1919, and the legal title to them there passed to complainant. Within a few days he shipped them to Harmon and Emmett Spur on the T. & P., about 40 miles distant. When complainant ordered the 10 tanks neither he nor the steel company knew what disposition would be made of any of them. Their contract was complete upon arrival of the tanks at Shreveport and the payment of the purchase price. Shipments moved to destinations without having been delivered at complainants yard or unloaded by them. HELD, interstate character of the shipments terminated at Shreveport, shipment beyond that point being intrastate in character, and should be charged on intrastate basis, reparation awarded. Givens v. Director General, 92 I. C. C. 63.

(c) The mere fact that cars received on interstate movement are reshipped by the consignee, after a brief interval, to another point, does not, of course, establish an essential continuity of movement to the latter point. The reshipment, although immediate, may be an independent intrastate movement. The instances are many where a local shipment follows quickly upon an interstate shipment and yet is not to be deemed a part of it, even though some further shipment was contemplated when the movement began. Givens v. Director General, 92 I. C. C. 63, 65.

§2. State Shipment Through Another State.

(a) Transportation between two points in same state over route partly within and partly outside of state is "interstate commerce." Missouri Pac. R. Co. v. Stroud, 45 Sup. Ct. 243.

§3. Participation in Interstate Movement.

See Through Routes and Joint Rates §3½, §6½.

(a) Shipments moved interstate to Shreveport. Complainant did not know whether he would ultimately assign them to orders calling for deliveries at local or near-by points and consequently was unable to give any destination other than Shreveport. Finding it impossible to take actual possession within reasonable periods after arrival complainant located his shipments throughout the terminals and directed their reshipment to Harmon and Emmett Spur, La. FOUND: Fact that shipments were received on an interstate movement and were reshipped after a brief interval to other points in the same State did not establish a continuity of movement to the latter points. The reshipment, under facts of this case, although immediate, was intrastate in character. Iowa case, 233 U. S. 334, and Settle case, 260 U. S. 403, distinguished. Givens v. Director General, 92 I. C. C. 63.

§4. State.

See Courts V; Crimes XI; Discrimination §11; Evidence §35; Express Companies §1½; Loss and Damage §9; State Rates and Regulation; Transportation §9, §11.

(a) Where a shipment was stored in carrier's warehouse at destination, because of disputes between buyer and seller, its character as shipment in interstate commerce ceased, and Laws Ill. 1921, p. 754, regulating warehouses, was applicable thereto without interfering with interstate commerce, in violation of Const. U. S. art. 1, §8. Rudin v. King-Richardson Co. (Ill., 1924), 143 N. E. 198.

§5. United States.

See Constitutional Law.

(a) Where shipments move interstate by water to a port of entry, thence by rail to interior intrastate destinations, the commission has jurisdiction over the intrastate rail factor since it is part of the through interstate movement. Du Pont de Nemours & Co., 74 I. C. C. 191. Schloss & Kahn Grocery Co. v. L. & N., 95 I. C. C. 618.

§1; Reconsignment §9; Reduced Rates §1; Refrigeration §1; Released Rates §1; Reparation §1; Routing and Misrouting §1; Storage §1; Substitution of Tonnage; Switch Tracks and Switching §2; Tap Lines §2; Tariffs §1; Terminal Facilities §1; Through Routes and Joint Rates §1; Transportation §1½; Undercharges §1; Water Carriers §2; Weights and Weighing §2.

§1. In General.

(a) The sole function of the Commission is to administer the act, in conformity with the standard given it by Congress as interpreted by the courts. The shippers safeguard against the exaction of exorbitant charges is found in section 1 of the act, which provides that all charges made for any service rendered or to be rendered in the transportation of passengers or property shall be just and reasonable. The determination of whether rates on particular commodities are reasonable or unreasonable involves many considerations and is affected by many circumstances and conditions. In testing the reasonableness of rates certain prescribed criteria have received authoritative acceptance by the Commission, have been sanctioned by the courts, and are taken as correct expositions of the principles which Congress has intended to be applied. If those advocating reductions in the instant proceedings have met the usual tests of the reasonableness of rates approved by experience and valid in law, and the rates on grain and grain products and hay are unreasonable it is the duty of the Commission under the act to prescribe the just and reasonable rates hereafter to be observed. Rates and charges on grain and grain products, 91 I. C. C. 105, 153.

(b) The act prescribes no different tests or standards for the determination of just and reasonable minimum rates than by just and reasonable maximum rates. And there is nothing in the act which either directs or implies that the Commission should use tests of different general character in the determination of reasonable minimum rates than those which it has consistently and uniformly applied for many years, with the tacit consent and sanction of Congress and the express approval of the courts, in fixing reasonable maximum rates. These standards are too well known to require a summary of them here, but when the Commission has been called upon to adjust maximum reasonable rates on a specified commodity from different points of origin to a common destination, it has always given special consideration to comparisons of going rates on the same commodity in the same or similar territories, in relation to distances, revenue per car, car mile, and ton mile, variations in traffic density, and peculiarities in transportation which affect transportation costs in general. No practical reasons are advanced why these same standards should not be applied in the fixing of reasonable minimum rates. Salt cases of 1923, 92 I. C. C. 388, 410.

(c) In the absence of proof that a promise by a railroad to collect freight from consignee and to refund it to shipper was not an established practice, the question of the reasonableness of the practice was solely for the Interstate Commerce Commission and not for the courts, since it is only when there is some variation from a published regulation or practice, established by the rule and not contrary to law, that a court has power to intervene. Pennsylvania R. Co. v. Chesapeake & Ohio Coal & Coke Co. (New York, 1923) 297 Fed. 249.

(d) What the Commission may permit the carriers to do and what it may require them to do are entirely different matters. Union Sulphur Co. v. T. & N. O. R. R., 98 I. C. C. 76, 81.

(e) The Commission has repeatedly condemned the action of carriers in adjusting rates so as to impede or stifle the movement of commodities in any given direction. Wyoming Coal Co. v. Virginian, 98 I. C. C. 488, 491.

(fg) No doubt the power to fix minimum rates can in some instances be employed to advantage and with propriety, for the purpose of averting rate wars, which are always injurious to the carriers and ordinarily, in the long run, to the public interest, or for the purpose of preventing an unjust burden upon other forms of traffic or upon other parts of the country. The Commission believes that this power should be sparingly exercised and only in cases where it clearly appears that its exercise is necessary in order that substantial public injury may

be avoided. Lake Cargo coal rates, 1925, 101 I. C. C. 513, 545.

(h) Under section 1, paragraph 2 of the act, jurisdiction of the Commission over transportation applies only to such transportation as takes place within the United States. Natl. Amer. Wholesale Lumber Asso. v. B. & O. R. R., 101 I. C. C. 741, 743.

(i) By the Transportation Act there is a vast power declared to exist in the Interstate Commerce Commission, and there is also a power reserved to the states. The intent of Congress to supersede the exercise by the states of their police power will not be inferred, unless the act of Congress, fairly interpreted, is in actual conflict with the law of the state. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(j) Under the Transportation Act, the dictum of the Commission is the last word in such matters as through route and rate regulation, just division of joint rates, car and terminal service in the interchange of interstate freight and passengers between railroads, construction of new and extension of old lines, purchasing of equipment, safety devices, issuance of securities, safety and adequate facilities, and such others as tend to prompt and continuous service in interstate commerce. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(k) Fixing of rates by Interstate Commerce Commission is not unconstitutional interference with liberty to contract nor deprivation of property without due process of law, but it is proper exercise of police power for prevention of unreasonable extortion and discriminatory rates, service, and preference. Davis, v. Keystone Steel & Wire Co., (Ill., 1925) 148 N. E. 47.

(l) Counsel for defendants questioned right of opposing counsel to represent many shippers named as complainants, and also contended that many claims presented are barred by the statute of limitations. But as they admit that at least some shippers named are bona fide complainants and that some claims are not barred by the statute the commission may proceed to consider issues without passing upon jurisdictional question as to individual complainants and claims. Dickerson v. Director General, 93 I. C. C. 304, 305.

(m) The commission has no arbitrary power to do what may seem to be in the public interest, but only such powers as are conferred by statute. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 565.

(n) Commission doubted its jurisdiction to pass upon an issue raised, but in order that further litigation may, if possible, be avoided, an opinion was rendered thereon in so far as covered by evidence of record. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 568.

(o) What the commission may permit carriers to do and what it may require them to do are entirely different matters. Union Sulphur Co. v. T. & N. O. R. R. Co., 98 I. C. C. 76, 81.

(p) The commission does not determine who is liable for the payment of tariff charges, that being a matter for the courts. Kansas City Structural Steel Co. v. A. T. & S. F. Ry., 102 I. C. C. 113, 114.

(q) There is no principle more clearly established than that it is not the province of the Commission to equalize different natural or economic conditions. New Orleans Joint Traffic Bureau v. B. S. L. & W. Ry., 102 I. C. C. 686, 691.

(r) Upon contention of complainant that no reversal of opinion by the commission or modification of a former opinion could wipe out or extinguish the vested rights of a complainant secured by contracts made in reliance upon the former opinion, FOUND: That the commission is without authority to make an award of reparation based upon such a contention, and this applies with equal force to unfulfilled promises alleged to have been made by representatives of carriers that the reduced rates would be made effective in accordance with the exception expressed in the report. The powers of the commission are not those of a court of equity. Northern Grain & Warehouse Co. v. O. S. L. R. R. Co., 100 I. C. C. 319, 322.

(s) The commission is the guardian of the general public interest, and it must have in mind not only the carriers and the larger shipping interests but also the smaller communities and the great body of consumers. One of the main reasons for the creation of the commission was the protection of those public interests which are rarely equipped for self-protection. Southern Class Rate Investigation, 100 I. C. C. 513, 603.

(t) It is elementary and well settled that there can be no divided authority over interstate commerce and that acts of Congress on that subject are supreme and exclusive. Train service on N. P., 112 I. C. C. 191, 195.

II. PRIMARY JURISDICTION.

See Actions at Law; Courts.

§2. In General.

(a) If the minimum rate making power were intended by Congress to be used only in cases where the rate attacked had been proven with arithmetical exactitude to be less than the cost of service, the grant of that power would be ineffectual, because such a test of exact cost of service is impracticable of application to specific rates on a single commodity, and this has been recognized by the Supreme Court. Salt cases of 1923, 92 I. C. C. 388, 410.

(b) Maintenance of suit to recover damages from a carrier because of the collection of an unreasonable rate, in violation of the Act to Regulate Commerce (Comp. St. §8563 et seq.), depends on prior action by the Interstate Commerce Commission as a foundation for it whereby a right to reparation has been decided. Chicago, B. & O. R. R. Co. v. Merriman & Millard Co., 297 Fed. 1.

(c) Generally the reasonableness of rates or of divisions of joint rates will not be considered by courts before application has been made to Interstate Commerce Commission, under Interstate Commerce Act, §15, subds. (1), (3), (6), as amended by Act Feb. 28, 1920, §418 (Comp. St. Ann. Supp. 1923, §8583). Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

§3. Finality of Findings.

See Adjacent Foreign Country; Allowances §3; Discrimination; Procedure Before Commission §11.

(a) The decisions of the Interstate Commerce Commission on questions properly before it are entitled to great weight, and as to questions of fact are conclusive. Davis, Director General of Railroads v. Prairie Pipe Line Co., 298 Fed. 393.

III. OVER PROCEDURE.

§5. Orders.

See Advanced Rates §21½; Allowances §3; Courts; Long and Short Hauls §11; Procedure Before Commission IV.

(a) The rate charged on the shipments was established and continued in effect during the period of movement under an order made by the Commission. It follows that such order can be altered or set aside only by a further order made by the Commission or by a federal court. Indiana rates, fares and charges. 92 I. C. C. 487, 492.

(b) Interstate Commerce Commission's order, under Interstate Commerce Act, §15 (6) as ammended by Transportation Act 1920, §418 (Comp. St. Ann. Supp. 1923, §8583), made after a consideration of data taken from annual reports filed with the Commission by railroads, but not introduced in evidence by specific reference thereto under Interstate Commerce Commission, rule No. 13, held void. United States et al. v. Abilene & S. Ry. Co. et al., 44 Sup. Ct. 565.

(c) By section 15 (2) of the act it is required that the orders of the commission, other than orders for the payment of money, shall take effect within such reasonable time, not less than 30 days, as may be prescribed in the order, and also authorizes the commission to modify its order whenever it deems it to be necessary. Northern Grain & Warehouse Co. v. O. S. L. R. R. Co., 100 I. C. C. 319, 321.

ALL OTHER CITATIONS

New England Divisions, 85 I. C. C. 482.

IV. OVER RAILROADS.

§6½a. In General.

(a) The Commission has held that the carriers may, subject to certain restrictions, initiate rates lower than the Commission can prescribe. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 644.

(b) Commission can not prohibit carriers from meeting competition so long as they are not guilty of undue preference and prejudice and so long as they do not charge rates which are so unreasonably low that they burden other traffic. On the other hand, the Commission can not require carriers to meet competition. Maritime Asso. Boston Chamber

of Commerce v. A. A. R. R., 95 I. C. C. 539, 565.

V. OVER RATES.

§8½. In General.

(a) In adjusting transportation rates which will yield carriers the fair return contemplated in section 15a of the act, it is incumbent upon the commission to take into account all circumstances and conditions which, in its best judgment, will influence the return under any level of rates. If the commission is persuaded that increases in rates beyond any certain point will divert traffic to other means of transport or depress its volume, and so defeat the very end the statute is meant to attain, it clearly becomes its duty to readjust or modify the rates in such manner as will, in its judgment, produce as nearly as may be the desired result. Express Rates, 1922, 89 I. C. C. 297, 310, 311.

(b) A report and opinion of the Interstate Commerce Commission cannot annul or change an existing tariff rate, in view of Interstate Commerce Act, §15 (Comp. St. §8583), requiring any change of rates made by the Commission to be made, not by report, finding, or opinion, but by an order to carrier to cease collecting the existing rate, to take effect not less than thirty days after the date of the order. Chicago, B. & O. R. Co. v. Merriman & Millard Co., 297 Fed. 1.

(c) It should be borne in mind that it is not the province of the Commission to require carriers to maintain rates to meet competition. Rates to Southwestern Destinations, 95 I. C. C. 188, 199.

(d) It is not the province of the Commission to prescribe rates less than reasonable maxima for the purpose of overcoming disadvantages of location or cost of manufacture, and unless the proposed rates are in themselves unreasonable or otherwise in violation of law, the Commission may not require respondents to maintain lower rates, although it has recognized that carriers in order to meet competition may voluntarily establish rates lower than the Commission is in position to prescribe, provided always that no undue prejudice, unjust discrimination or other violation of law results. Glass and Glassware to Interstate Points, 98 I. C. C. 83, 86.

(e) Power to prescribe minimum rates should be sparingly exercised and only in cases where it clearly appears that its exercise is necessary in order that substantial public injury may be avoided. Salt Cases of 1923, 92 I. C. C. 388, 409.

(f) If minimum rate-making power were intended by Congress to be used only in cases where rate assailed had been proven with arithmetical exactitude to be less than cost of service, the grant of that power would be ineffectual, because such a test of exact cost of service is impracticable of application to specific rates on a single commodity, and this has been recognized by United States Supreme Court. Salt Cases of 1923, 92 I. C. C. 388, 410.

(g) The act prescribes no different tests or standards for determination of just and reasonable minimum rates than for just and reasonable maximum rates. And there is nothing in the act which either directs or implies that the commission should use tests of different general character in determining reasonable minimum rates than those which have been consistently and uniformly applied for many years, with tacit consent and sanction of Congress and express approval of the court, in fixing maximum reasonable rates. Salt Cases of 1923, 92 I. C. C. 388, 410.

(h) When the commission has been called upon to adjust maximum reasonable rates on a specific commodity from different points of origin to a common destination, the commission has always given special consideration to comparisons of going rates on same commodity in the same or similar territories, in relation to distances, revenue per car, per car-mile, and per ton-mile, variations in traffic density, and peculiarities in transportation which affect transportation costs in general. No practical reasons appear why these same standards should not be applied in fixing minimum reasonable rates. Salt Cases of 1923, 92 I. C. C. 388, 410, 411.

(i) Fixing of rates by Interstate Commerce Commission establishes that they are reasonable, and not discriminatory. Davis v. Keystone Steel & Wire Co., (Ill., 1925) 148 N. E. 47.

§10. Intrastate Rates.

See State Rates and Regulation.

(a) Ordinarily the commission does not have jurisdiction over intrastate rates in absence of a showing of substantial disparity which operates as a real discrimination against and obstruction to interstate commerce. Discretion rests

with State authorities to deal with intrastate rates on general levels found by the commission to be fair to interstate commerce. Wisconsin R. R. Commission, 257 U. S. 563. Lake Dock Coal Cases, 89 I. C. C. 170, 200, 201.

(b) Courts will not review determinations of the Interstate Commerce Commission, made within the scope of its powers, or substitute their judgment for its findings and conclusions. United States v. New River Co., et al Slab Fork Coal Co. v. Same, 44 Sup. Ct. 610.

(c) Under Act June 18, 1910, Judicial Code, §207, and Act. Oct. 22, 1913, order of Interstate Commerce Commission, reversing former findings and dismissing complaints against rule of Commission and permitting carriers to apply such rule, HELD, an affirmative order, reviewable by District Court. United States v. New River Co. et al. Slab Fork Coal Co. v. Same, 44 Sup. Ct. 610.

(d) The commission is without power to review orders of State commissions. Kneeland-Bigelow Co. v. Director General, as Agent, 85 I. C. C. 659, 661, 662.

ALL OTHER CITATIONS

Ohio State Rates on Sand, Gravel, Stone and Paving Blocks, 85 I. C. C. 66; Trojan Powder Co. v. Director General, as Agent, 88 I. C. C. 447.

§11. Suspension.

See Advanced Rates §1 (4); Suspension of Rates.

(a) An order of suspension is not an order such as is contemplated by Congress when it refers to the establishment of a rate by order of the Commission. Petroleum Oil from Arkansas to Louisiana, 95 I. C. C. 55, 65.

§13. Unpublished Rate.

See Evidence §60; Unpublished Rates.

(a) Where a transportation service has been rendered for which there was no tariff authority the commission has jurisdiction to determine what was a reasonable charge for the service and, if the carrier has collected from the shipper more than such reasonable charge, to order repayment of the excess. Southern Transportation Co. v. N. & W. Ry., 101 I. C. C. 211, 225.

VI. TO AWARD DAMAGES.

§14. In General.

See Reparation.

(a) The Commission does not exercise jurisdiction over claims for loss of freight in transit. Smith & Duckworth v. C. C. C. & St. L. Ry., 100 I. C. C. 300, 302.

VII. APPEALS TO COURT.

§15. In General.

See Courts.

(a) Regulations, which are primarily within the competency of the Commission, are not subject to judicial supervision or enforcement until the Commission has been properly afforded an opportunity to exert its administrative functions. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 315.

§17. Validity of Orders.

See Courts §5, §16a.

(a) The mere admission by an administrative tribunal of matter which, under the rules of evidence applicable to judicial proceedings, would be deemed incompetent, does not invalidate its order, but the finding must be sustained by evidence. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(b) Railroads did not waive invalidity of Interstate Commerce Commission's order relating to division of joint rates, based on a consideration of matter not introduced in evidence, by submitting case without argument and acquiescing in suggestion that presentation of tentative report by examiner be omitted. United States v. Abilene & S. Ry. Co. 44 Sup. Ct. 565.

(c) In determining whether an order of the Interstate Commerce Commission or a regulation of a carrier shall be suspended or set aside, power to make, and not the wisdom of the order or regulation, is the test. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co., (Mo., 1924), 2 Fed. (2d) 291.

INTERTERRITORIAL RATES

See Basing Points and Lines §2 (h); Class Rates §1 (n), §2 (3k) (7b) (7c) (7d) (7s); Through Routes and Joint Rates §13 (w).

INTERVENERS

fore Commission §10 (3); Reparation §24.

INTOXICATING LIQUORS

See State Rates and Regulations.

JUNCTION POINT RATES

See Branch Lines §1 (cc); Cars and Car Supply §14½, §23½; Routing and Misrouting §5½.

(a) On further hearing, rates on naval stores from points on the Alabama, Tennessee & Northern to various destinations prescribed on basis of the junction-point rates, plus varying differentials on rosin and turpentine. Naval Stores from Southern Points, 96 I. C. C. 417.

(ab) Combination rate to and from Perryville Junction, Mo., assessed on gasoline moving from Cushing, Okla., to Perryville, Mo., on the Cape Girardeau Northern Ry., found unreasonable as compared with lower rate contemporaneously in effect to the junction point and numerous other points in southeastern Missouri. Reparation awarded. Illinois Oil Co. v. C. G. N., 102 I. C. C. 154.

(b) The extension of junction points rates to points on branch lines is not unusual but generally has not been required by the Commission unless it has appeared that the carriers had adopted such practice with respect to other points similarly located and circumstanced, or that the rates to the junction points were made on the group basis and applied over a considerable territory where the conditions of operating and transportation on the main and branch lines were substantially similar. Macia v. A. T. & S. F. Ry., 102 I. C. C. 430, 432.

JURISDICTION OF COMMISSION

See Accounting §1; Adjacent Foreign Country; Advanced Rates §1, §2; Allowances §1, §2; Bills of Lading §1; Blanket Rates §1; Branch Lines §6; Bridges and Tolls §1; Cars and Car Supply I A; Classification §2; Control and Regulation; Courts; Demurrage §1; Discrimination §2; Divisions §1; Equalization of Rates §1; Export Rates and Facilities §1; Express Companies §1; Facilities and Privileges I; Foreign Commerce I; Government Control; Interstate Commerce Commission I, II; Lighterage §1; Long and Short Hauls §2; Loss and Damage §4; Panama Canal Act; Passenger Fares and Facilities §1; Proportional Rates §1; Rail and Water Rates (h) (3r); Reconsignment §9; Reduced Rates §1; Refrigeration §1; Released Rates §1, §4; Reparation I; Routing and Misrouting §1; Special Contracts §4 (1); State Rates and Regulations; Storage §1; Switch Tracks and Switching §1, §2; Tap Lines §1, §2; Tariffs §1; Telephone and Telegraph Companies §3½; Terminal Facilities §1; Through Routes and Joint Rates §1; Transportation §1½; Undercharges §1; Unpublished Rates; War Taxes; Water Carriers §2.

KNOCKED-DOWN SHIPMENTS

See Classification §4½, §5.

LACHES

See Evidence §1½ (f).

LEASE

See Cars and Car Supply §11½; Common Carriers §2; Finance Dockets §3; Railroad Yards (a); Warehousing.

(a) The Act contains no provision authorizing the Commission to prescribe or regulate the terms or conditions under which carriers may lease their lands to shippers. The authority which it has over such leases is wholly indirect, and comes into being only where the lease results in some violation of the act or other statutes administered by the Commission. Gallup v. N. Y., N. H. & H. R. R., 98 I. C. C. 453, 454.

(b) Upon complaint that attempt of N. Y., N. H. & H. R. R. Co. to eject complainant from its produce house at Harlem River Station, New York, N. Y., previously leased to him, and threat to refuse to place cars consigned to him, subjected complainant to unjust discrimination and undue prejudice; HELD: That complainant's evidence is insufficient to warrant a finding that consignees receiving shipments on team tracks are unduly prejudiced or lessees of the produce house unduly preferred, and that he has not proven damage by reason of any undue prejudice which may have existed

during the time when the question of the lease was in process of litigation in the courts. Complaint dismissed. Gallup v. N. Y., N. H. & H. R. R. Co., 98 I. C. C. 453.

(c) Whether complainant was a lessee during the periods of the stays in court proceedings is a question for the courts. If, under the laws of the state of New York, he was a tenant, he was entitled to the completion of the transportation service by delivery of the cars consigned to him. Gallup v. N. Y., N. H. & H. R. R. Co., 98 I. C. C. 453, 455.

§7. In General.

(a) Manifestly, the maritime rule that last shipment in is first shipment out must apply to lighterage delivered in

the generality of cases notwithstanding endeavor on part of rail carriers wherever practicable to deliver shipments in sequence of arrival. In a busy terminal yard, through which many commodities are moved daily, switching and drilling which would be necessary to separate oldest car from all others would demoralize terminal operations. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288, 294.

(b) It is the duty of carrier in making "stringpiece" delivery of lumber from lighters or barges to pass lumber over the stringpiece to assigned space on the dock to consignee. It is not required that lumber be piled symmetrically, that it be tiered, or that ends of pieces be even, but at least various pieces of lumber must be approximately parallel lengthwise. No obligation rests upon carrier to place men upon a dock to receive lumber except to extent necessary to effect delivery thereof in a safe and orderly manner. Coastville Lumber & Supply Co., 93 I. C. C. 288, 295.

(a) Adjustment of rates on ordinary livestock from Nebraska points to Missouri River cities found unduly prejudicial to interstate shippers and localities, unreasonably preferential of intrastate shippers and localities, and unjustly discriminatory against interstate commerce; and in certain instances found unreasonably preferential of interstate shippers and localities, unduly prejudicial to intrastate shippers and localities, and unjustly discriminatory against interstate commerce. Distance scale of rates suggested for correction of the situation. Nebraska Livestock Case, 89 I. C. C. 444.

(b) Commission instituted an investigation on its own motion to determine whether the proper relationship existed between the interstate or intrastate rates on ordinary live stock, carloads, from all Nebraska points to Omaha and South Omaha, on the one hand, and the interstate rates from the same points of origin to St. Joseph and Kansas City, Mo., and Sioux City, Iowa, on the other, with a view of prescribing such rates as would remove any undue prejudice, unreasonable preference, or unjust discrimination against interstate commerce, as might be found to exist. The live stock rates of the various carriers from Nebraska points to the destinations here considered are not made according to any common or uniform scheme. The present structure is largely the product of years of competition. Each carrier has from time to time published such rates as it deemed proper to meet the direct and cross country competition of

other carriers. Certain markets are kept on an equality regardless of distance St. Joseph takes the same rates as Kansas City from practically all Nebraska points and Sioux City and Omaha have common rates from much of the northern portion of the state. The policy of competitive rate making, together with a purpose to develop the country, has resulted in lower rates than would otherwise exist. In 1907 the Nebraska Legislature required a 15% reduction in the intrastate rates on certain farm products, including livestock. The relationship thus created has remained until the present day, except that the differences in favor of the intrastate rates have been made more pronounced by the general percentage increases of recent years. For distances up to 250 miles the advantage is in favor of intrastate traffic, but for greater distances the reverse is generally true. For the longer distance the intrastate rates to Omaha are higher than the interstate rates to St. Joseph and Kansas City. From Northeastern Nebraska the rates to Sioux City on the average are about twice as high per mile as those to Omaha. There are no differences in distance or transportation conditions such as would justify this situation. From points on the Northwestern north and west of Norfolk, there is a parity of rates to Sioux City and Omaha, although traffic to Omaha requires about 40 miles more haul under substantially similar circumstances. In view of the fact that rates on livestock are made over circuitous lines to meet the cross country competition of direct lines and also to keep certain markets on an equality in spite of differences in distance, numerous instances may be found in which the rates of individual lines for a given distance differ widely. Accordingly it frequently happens that higher rates apply intrastate than interstate, but upon the whole from Nebraska points the intrastate rates to Omaha are on a lower level than the interstate rates. If the intrastate rates to Omaha are less than are necessary to bear a proper relation to the interstate rates in question, a revenue burden is being case upon interstate commerce, which amounts to an unjust discrimination against it. HELD, present rates from Nebraska points to Missouri river cities, Kansas City to Sioux City, unduly prejudicial; from points on the Northwestern line extending from Schribner via Dakota junction into Wyoming and South Dakota and from other points in Nebraska north of Albion, Humphrey, Schribner, and Oakland for single line application on cattle and on calves, hogs and sheep in double deck cars rates are prescribed of 8.5c for 10 miles or less up to 50c for 600 miles; from other points in Nebraska, rates ranging from 8c for 10 miles to 50c for 600 miles; on hogs and calves in single deck cars and on horses and mules, rates 115% of rates on cattle for like hauls; and on sheep in single deck cars, 125% thereof. Differential of 3.5c to be applied for joint hauls of 500 miles and less. Nebraska Livestock case, 89 I. C. C. 444.

(c) Respondents proposed to limit to the distance rates named in Lelands tariff I. C. C. 1667 on stocker or feeder cattle, carloads, from points on the Texas Mexican Ry. to Arkansas City, Wichita, and Wichita Union Stock Yards, Kans. If the schedules under suspension are permitted to become effective, the distance rates referred to would not be applicable on shipments to Wichita moving through Coffeyville, Kas., via the M. P. From the points of origin indicated the distances to Wichita via Coffeyville are from 98 to 125 miles greater than the distance over the short line route. HELD, proposed schedules justified. Livestock between Texas and Kansas points, 89 I. C. C. 720.

(d) The Commission in 74 I. C. C. 419, authorized the establishment of rates on livestock, carloads, to, from, and between points in the southeast based upon distance scales for edible livestock and on horses and mules respectively, which had been agreed upon by the shippers and carriers as a compromise. These scales were for single line application and differentials were to be added for joint line hauls. The compromise agreements did not specifically provide whether the single or joint line rates should be applied between points on different lines under a common management and control. Informal complaints were made that certain lines of the Southern Ry system, also the Atlanta & West Point R. R., and Western Ry. of Alabama, had applied the joint line rather than the single line rates between points on different lines under a common management and control. HELD, single distance scales should be applied

over two or more lines under the same management and control and that (1) the lines comprising the Southern Ry. system, (2) the Atlanta & West Point R. R. and Western Ry. of Alabama, and (3) the Illinois Central and Y. & M. V. R. R., are under the same management and control in the sense that those words are used in this report. Livestock to, from, and between points in the southeast, 91 I. C. C. 292.

(e) Complainant attacked commodity rates charged on horses and mules, carloads, from Illinois, Indiana, Ohio, Missouri, Kansas, Nebraska, Iowa and South Dakota and Oklahoma to Atlanta, Ga., and Birmingham and Montgomery, Ala., as unreasonable, unduly prejudicial and in violation of the fourth section. There are no joint rates on horses and mules from points north of the Ohio and west of the Mississippi rivers to these points. The rates are combinations of proportional commodity or class rates to the river crossings and commodity rates of southern lines beyond. Following 63 I. C. C. 6 and 74 I. C. C. 419, rates attacked unreasonable to extent they exceeded combination of intermediate rates, reparation, awarded. Hudson Mule Co. v. Director General, 91 I. C. C. 459.

(f) Complainant attacked commodity rates charged on straight and mixed cars of livestock between Dec. 31, 1919, and March 20, 1921, as unreasonable, unjustly discriminatory and unduly prejudicial. Prior to Dec. 31, 1919, rates on livestock in the Northwest were published in amount per car, regardless of weight. Subsequent thereto during the period specified they were constructed on the basis of cents per 100 pounds. It is said that this change was not made for the purpose of increasing rates on livestock but to secure more uniformity in them and to remove the incentive for overloading. In changing from the basis per car to cents per 100 pounds the Director General used the prevailing rates in amounts per standard car of 36 feet 6 inches and divided them by 24,000, 17,000, 25,500 and 22,000 pounds at arrive at the rates in cents per 100 pounds on cattle, hogs in single deck cars, hogs in double deck cars, sheep in single deck cars and sheep in double deck cars. In February, 1920, the carriers were instructed by the Director General to revise the rates on cattle using 26,000 pounds as the basis instead of 24,000 pounds. On March 20, 1921, carriers restored the former basis of rates. HELD: Rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Dickerson v. Director General, 93 I. C. C. 304.

(g) Respondents proposed to amend their tariffs carrying rates on livestock between points in central territory, which rates are now subject to the Kelly combination rule, so as to restrict the application of that rule so that it would only apply in connection with through rates where all the issues publishing the factors used in arriving at through rates from original point of shipment to ultimate destination, carry reference to Jones I. C. C. U. S. 1. It certainly was never intended that the burden of the combination rule shrinkage in both western and eastern rates should fall wholly upon one set of carriers. It is clear that the eastern lines should be responsible only for deductions properly to be made from their own separately established rates. HELD: Proposed schedules not justified but new schedules may be filed which will relieve respondents from deductions not properly applicable to the rate factors east of the gateways. Combination Rule on Livestock, 93 I. C. C. 458.

(h) Complainant attacked commodity rates charged on horses and mules in the Southwest, as unreasonable and unduly prejudicial. Although the allegations are sweeping in their extent, the evidence was confined principally to the rates between Forth Worth, Texas, and points in Louisiana, Arkansas, Oklahoma, Missouri, Kansas, Colorado and New Mexico. Class A rates are generally applicable from points in Kansas, Missouri and Arkansas to Texas points. Specific commodity rates are in effect from Kansas City, Wichita and St. Louis, to a few destinations in Texas, and also distance commodity rates between Kansas and points in western section of Texas. Class A rates obtain to Texas points from Louisiana points west of the Mississippi river, except from the Shreveport, La., group and points taking the Natchez, Miss., rate; from points in the Denver, Colo., group; and from Memphis and Vicksburg. In the reverse direction the rates from Texas points to destinations in the territories above mentioned are commodity rates. Be-

tween Texas and Oklahoma distance commodity rates are in effect. Between eastern New Mexico and Texas the rates are combinations on a Texas border point. Between points in western New Mexico and in Arizona and points in Texas the transcontinental rate applies subject to the lowest combination. Between Texas and other points in western territory, rates are made by combinations. Commodity rates substantially lower than the rates from Kansas points to Fort Worth are in effect between Kansas and points in western and southern Texas. The existence of these lower commodity rates to western and southern Texas points enables dealers at such points to receive horses and mules from the Kansas City market and distribute them throughout Texas at an advantage over the Fort Worth dealers. The class A rates which apply from Kansas thru Oklahoma to Texas destinations are much higher than the Kansas-Oklahoma rates for like distances. The applicable rates from Kansas points and from some Missouri points to Fort Worth have quite generally in the past exceeded, and in many cases still exceed, the combinations to and from Oklahoma points. The Oklahoma-Texas rates are plainly too high and the combination rates taken as entireties also appear excessive. Distance considered, the rates from Fort Worth are materially higher to points in Oklahoma, Arkansas and Louisiana south of the Shreveport-Natchez section than the rates to the same destinations from Kansas City, St. Louis or Wichita. Rates from New Mexico and Arizona to Fort Worth are combinations of local rates, while lower joint rates are in effect from New Mexico and Arizona points to Wichita, Oklahoma City and Kansas City. The carriers recognize the need for a revision of the rates. They ask that the Commission prescribe rates uniform in the southwest, but, because of their financial needs, seek a readjustment so made that their revenues will not be depleted. The Commission has found the southwestern scale to provide a reasonable basis of rates on cattle and hogs from Kansas City and South St. Joseph, Mo., to Fort Worth and Oklahoma City, 81 I. C. C. 79. In 81 I. C. C. 482 the Commission found rates on cattle, calves, hogs and sheep from Kansas City to Texas points unreasonable for the future to the extent that they might exceed rates under the southwestern scale. None of those scales appear to furnish a standard of rates that the Commission would be justified in prescribing in the entirety for general application to shipments of horses and mules from the southwest. HELD: Rates charged and applicable unreasonable to extent they exceed a distance scale ranging from 24c single line and 27c joint line for 100 miles to 78c single and joint lines for 1,000 miles. Horses and Mule rates in the Southwest, 1924, 93 I. C. C. 479.

(i) Respondents proposed to increase rates on cattle and calves, carloads, from New Mexico, western Oklahoma and northwestern and southwestern Texas to Omaha, Nebr. Most of points of origin are on the Rock Island, E. P. & S. W., and New Mexico Central. The purpose is stated to be the reestablishment of a fair and nonprejudicial relationship of rates from those points of origin to Omaha and Kansas City. Prior to the general increases of August 26, 1920, the rates on cattle and calves from a majority of the points of origin referred to were 8c higher to Omaha than to Kansas City. The general increases of 1920 increased this spread to 11c. The record is not sufficiently complete to enable the Commission to determine what would be a reasonable and nonprejudicial relationship between the rates to Kansas City and Omaha. HELD: Schedules not justified. Livestock from Southwest to Omaha, 95 I. C. C. 405.

(j) Complainant attacked rates and minimum weights on sheep and lambs in double deck cars, from Montreal, Can., to New York and Somerville, Mass. near Boston as unreasonable. Montreal is 387 miles from New York via the C. N., D. & H., and N. Y. C. Via the N. Y. C. is 502 miles. From Montreal to Somerville the short line distance is 330 miles via C. N., C. V., and B & M. The N. Y. C. has open a route to Boston by way of Rutland, over which it has trackage rights, and the B. & A., 520 miles, but there is no carload rate on sheep and lambs for application over this route. Rates to New York over short line routes was 50c minimum 22,000 pounds, over the N. Y. C., 7c minimum 18,000 pounds. To Boston over short line route 51c minimum 22,000 pounds. Rates sought are fifth class

of 41.5c to New York and 44c to Somerville, minimum 18,000 pounds. Subsequent to the hearing, on March 1, 1924, the 51c commodity rate to Boston was canceled, thereby making applicable via G. T. Ry the joint fifth class rate of 44c, minimum 22,000 pounds. While it is true that the minimum of 22,000 pounds appears to be excessive, it must not be overlooked that the minimum is a part of the rate, and in order to entitle complainants to an award of reparation it must be found that they paid unreasonable charges on their shipments. The combination rate which would become effective in the event of the lines within the United States ceasing from participating in the joint rate from Montreal would undoubtedly produce total charges in excess of those returned under the joint rate. HELD: Rates and minima attacked not unreasonable, complaint dismissed. Swift & Co. v. G. T. Ry., 98 I. C. C. 649.

(k) Proposal to establish in southern territory an estimated weight of 1,000 pounds per animal on horses and mules, when actual weights are not furnished by shipper, found justified. Purpose of proposed schedules is to provide a method for fair ascertainment of charges without delays incident to weighing and without temptation for overcrowding that a charge per car offers. Application of a reasonable estimated weight is desirable from standpoint of both shippers and carriers, as it has effect of reducing delays, such as are incident to weighing, and cost of feeding in transit, and estimated weight here proposed does not appear excessive. Estimated Weights on Horses and Mules, 91 I. C. C. 215.

(l) Upon further hearing, single-line distance rates authorized to be established on livestock to, from, and between points in Southeast in original report, 74 I. C. C. 419, should be applied over two or more carriers under same management and control. Term "carriers under same management and control" understood to refer to carriers generally controlled through ownership, lease, or otherwise, to extent of controlling traffic policy, even though separate corporate entity may be maintained. Blackshear Mfg. Co., 87 I. C. C. 654, 664. Livestock to, from, and between Points in the Southeast, 91 I. C. C. 292.

(m) Carload minima on, sheep, lambs, goats, and kids in double-deck cars, in western classification territory found so directly and intimately related to rates that propriety of minima can not be determined without considering the measure of the rates, and such minima, so considered, found not unreasonable or otherwise unlawful. Stanfield v. O. W. R. R. & N. Co. 91 I. C. C. 598.

(n) Complainant attacked as unreasonable, unjustly discriminatory, and unduly prejudicial the rates on beef and stock cattle, in carloads, calves, sheep, goats, and hogs in single deck and double deck cars, from Missouri, Oklahoma, Kansas, Colorado, Arizona, New Mexico and Texas, over interstate routes, to El Paso; on fresh meats and packing house products, carloads, and in peddler cars, from El Paso to Arizona, New Mexico and Tex.; cottonseed oil, meal, cake and hulls, carloads, from Arizona and California to El Paso, and lard substitutes and vegetable cooking oils, carloads, from El Paso to Arizona, Colorado, New Mexico, California, Texas, Oklahoma, Kansas, Missouri and other points; that defendants refuse to maintain joint through routes between El Paso, on the one hand, and points in Texas, Arizona, New Mexico, and Oklahoma, on the other hand, for the transportation of cattle and other livestock to El Paso and fresh meats and packing house products from El Paso; that rates on ice, carloads, from El Paso to Arizona and New Mexico are unreasonable. In I. & S. 2038 respondents proposed readjustments involving both increases and reductions in the carload rates on livestock in single deck and double deck cars between Arizona and New Mexico on the one hand and Deming, N. M., and El Paso on the other. El Paso is located in the extreme western portion of Texas, near the boundary line between that state and New Mexico. It is served by the T. & P., S. P., E. P. & S. W., and Santa Fe. Livestock. Generally speaking the rates on livestock to El Paso from all points in Texas and points in New Mexico on and east of the line of the Santa Fe extending northerly from El Paso through Belen, N. M., to Albuquerque, N. M., are on the basis of the 1716 scale from points in New Mexico on the Santa Fe west of this line and points in Arizona north and west of Tuscon the rates to El Paso are higher than those for equal distances under the 1716 scale. From points on the S. P., and Southwestern east of Tuscon the

rates to El Paso are generally lower than the 1716 scale. At time of hearing rates on beef cattle to El Paso from points on the Santa Fe west of Belen and Albuquerque were made by combination on Belen, but since the hearing rates have been established under 26 I. C. C. 37. In I. & S., 2038 the carriers proposed to revise the rates on livestock from Arizona and New Mexico on the S. P., and Arizona Eastern to El Paso to conform with the same scale. Generally speaking the effect of the proposed schedules would be to reduce rates from points west of Tuscon and increase them from Tuscon and stations south and east on (1) horses, mules, burros, donkeys, asses, and jacks, on feeder cattle, and on fat sheep, also goats, in single and double deck cars; to cause large increases from practically all stations on beef cattle and hogs in single deck and double deck cars; and to cause substantial reductions from nearly all stations on feeder sheep in single and double deck cars. The rates proposed are said to be graded on a basis consistent with other interstate rates on livestock now in effect between Texas on the east and California on the west. The rates here proposed on feeder cattle represent mostly reductions, with a few slight increases, from stations west of Tuscon. From Tuscon and stations south and east, the increases would be from 10 to 46%. The scale on this stock, as a whole would be from 26 to 60% higher than the southwestern rates on the same stock at a minimum of 20,000 pounds per car. On feeder sheep in single deck cars, chiefly reductions are contemplated from stations west of Tuscon and small increases from Tuscon and south and east, but the proposed basis would be considerably higher than that in effect in Texas and Oklahoma. In double deck cars, in all but three instances, reductions would result, but the basis proposed would average less than 20% over the Texas rates, at a minimum of 12,000 pounds. HELD, increases proposed not justified. Proposed reductions not protested. Rates on livestock from points on the E. P. & S. W., the Santa Fe running north from El Paso to the Colorado-Kansas state line are upon the modified 1716 scale. This scale also applies from points in Texas. As to these rates there is no complaint. From points on the Silver City branch of the Santa Fe, which connects with the main line at Deming, the rates to El Paso are on a higher basis than the rates under the 1716 scale in amounts ranging from 3.5c to 7. With very few exceptions, however, the rates on beef cattle from points in New Mexico are generally as low as or lower than the 1716 scale. The evidence in this record is not such as to warrant a finding as to whether or not the failure to publish rates based upon the short route in every instance results in unreasonable rates or is otherwise unlawful. HELD, rates attacked on livestock to El Paso not unreasonable except rates from Phoenix division of the Arizona Eastern to El Paso are unreasonable and unduly prejudicial to extent they exceed rates based on scale applicable from the same points to Los Angeles. HELD, since July 3, 1921 complainant entitled to reparation. **Fresh Meat and Packing House Products Including Vegetable Cooking Oils and Lard Substitutes.** Rates on fresh meat and packing house products, carloads, from El Paso to all points in Texas, over interstate routes, are on the basis of the 1716 scale and complainants offered no evidence to indicate that the distances used in arriving at these rates are improper. Rates on these commodities, carloads, from El Paso to some points in the eastern portion of New Mexico are predicated upon the 1716 scale but they are not those for the short line distances in all instances. Class rates, or commodity rates, materially higher than those under the 1716 scale apply on these articles from El Paso to all other points in New Mexico and all points in Arizona. Fresh meat and packing house products are rated third and fifth class, in western territory. Generally speaking, vegetable cooking oils and lard substitutes take the same rates as packing house products. The evidence in the present record indicates that for short distances the rates on some commodities from El Paso to New Mexico points are lower than rates on the same commodities between Texas points. Where this situation exists the New Mexico points apparently have a more favorable basis of rate to El Paso than exists between points in Texas differential territory for corresponding distances. Rates on fresh meats and packing house products from El Paso to points in New Mexico and Arizona are unreasonably high. Packing houses located at Fort Worth, Oklahoma City, and Wichita ship fresh meat and

packing house products to Arizona, New Mexico and western Texas in both carload and peddler car quantities in competition with complainant. To points within about 200 miles from El Paso the rates generally are lower from El Paso than from the competitive points, but to points distant more than 200 miles the rates are much lower from the competitive points than from El Paso, although El Paso from a distance standpoint is more favorably located. There are no commodity rates on fresh meats and packing house products in less than carloads or peddler car quantities, from El Paso to points in Arizona, New Mexico and Texas over interstate routes. Class rates apply on such shipments. HELD, rates on fresh meat and packing house products, including vegetable cooking oils and lard substitutes, carloads, in effect on and after July 1, 1922 from El Paso to Arizona and New Mexico are unreasonable to extent they exceed for 10 miles 17c on fresh meats carloads and 25c less carload and packing house products 14c carloads and 18c less carloads to 1000 miles rates carloads of 158c less carloads 240c on fresh meats and 131c carloads and 171c less carloads, on packing house products; that interstate rates maintained on peddler car quantities of fresh meat and packing house products from Fort Worth, Tex., Oklahoma City, Okla., and Wichita, Kans., to Arizona, New Mexico, and Texas differential territory result in undue preference of packers at Fort Worth, Oklahoma City and Wichita and defendants should remove the undue prejudice by establishing from El Paso the rates mentioned, reparation awarded. **Cottonseed Products.** Cottonseed oil is used in the manufacture of cooking oils and lard substitutes. Cottonseed cake and meal and hulls are used as feed for livestock. The evidence of record relates only to rates on these commodities from points in California and Arizona. The basis for the rate of 56.5c on cake and meal from California and Arizona to El Paso is to be found in 35 I. C. C. 215. It appears upon this record that there is no present necessity for a mileage scale of rates on cottonseed products from Arizona and California El Paso as requested, HELD, rates on cottonseed oil in tank cars from Los Angeles, Calexio, and El Centro, Calif., and from Phoenix, Ariz., to El Paso are unreasonable to extent they exceeded from Los Angeles, 67c, from Calexio, 61c, from El Centro, 61c, and from Phoenix, 50c; rates on cottonseed cake, meal and hulls from and to same points unreasonable to extent they exceeded from Los Angeles, 51c on cake and meal and 41c on hulls; from Calexio and El Centro 46c on cake and meal and 37c on hulls; and from Phoenix 40c on cake and meal and 32c on hulls. **ICE.** Ice is rated class E. Commodity rates somewhat lower than class E rates apply from El Paso to New Mexico and class E applies to other points in New Mexico and Arizona. HELD, rates on ice unreasonable to extent they exceed 10 miles and less 8c single line and 10c joint line to 500 miles at 42.5c single and 44.5c joint line. Peyton Packing Co. v. Arizona Eastern Ry., 100 I. C. C. 4.

(o) Director general cancelled "per car" rates on livestock and established rates in cents per 100 pounds. After Federal Control terminated carriers restored "per car" basis. FOUND: Charges on shipments moving during period when rates in cents per 100 pounds were in effect found not unreasonable. Complainants depended almost entirely upon showing that increases resulted from the change but they furnished no comparisons by which reasonableness may be judged. Even if it be granted that increased rates resulted, this alone would not prove them unreasonable for such increases might have been justified by increased cost of transportation and increased value of livestock during period under consideration. Dickerson v. Director General, 93 I. C. C. 304.

(p) Contention that on mixed c. l. shipments of live stock unreasonable rates were assessed because of enforcement of mixed-carload rule, which provides that highest rate and highest minimum applicable to any class of stock contained in the car shall govern, not sustained. This was the usual method of computing rates on mixed carloads throughout United States generally, its application to livestock shipments had been previously approved by commission, and while subsequently in 81 I. C. C. 305, a different rule for the future was prescribed, this finding was not intended to apply retroactively and does not establish unreasonableness in the past with respect to shipments here considered. Dickerson v. Director General, 93 I. C. C. 304, 307, 308.

(q) Proposed increased rates on cattle and calves from points in New Mexico,

Oklahoma, and Texas, to Omaha, for purpose of establishing from points of origin to Omaha and Kansas City a reasonable rate relationship, disrupted by application of the general increases and reductions, found not justified. Such increases would make permanent the highest differential brought about by the general percentage changes and would throw rates in issue out of line with rates from other points in the Southwest. Moreover, differences in distance to Omaha and Kansas City are generally ignored on cattle from the West and Northwest and to take mileage into consideration from one section and not from another would be unfair. Livestock from Southwest to Omaha, 95 I. C. C. 405.

(r) Proposal of carriers in c. f. a. territory to restrict applicaton of combination rule on livestock so that it will only apply where all factors used in arriving at through rates from origin to ultimate destination carry reference thereto and authorize an affirmative application thereof, found not justified. Such restriction would not merely relieve respondents of assumption of deductions from western lines' separately established rates, but also from their own, since the rule would not apply where any carrier in the through route did not make appropriate reference thereto. This would result in increased charges, the burden of justifying which rests upon respondents. Moreover, from some origin points tariffs of western carriers still refer to the rule, and an inadmissible result of the restriction would be to make rates to be applied by respondent eastern lines depend upon separate tariffs of western lines. This would not accord with requirements of section 6 of the act. Combination Rule on Livestock, 93 I. C. C. 458.

(s) Rates on horses and mules between Fort Worth and points in Arkansas, Kansas, Oklahoma, western Louisiana, southern Missouri, portions of Colorado and New Mexico, and in Texas other than in differential territory, found unreasonable and unduly prejudicial to Fort Worth and unduly preferential of Wichita, Kansas City, St. Joseph, St. Louis, and Oklahoma City. Reasonable and nonprejudicial distance rates prescribed. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479.

(t) Upon further consideration of Wichita Board of Commerce, 60 I. C. C. 536, Horses and Mules from Kansas City, Mo., 69 I. C. C. 97, and Kansas City Chamber of Commerce, 89 I. C. C. 22, previous findings modified by finding rates on horses and mules from Wichita and Kansas City to destinations in Arkansas and in certain portions of Louisiana and Texas unreasonable and unduly prejudicial in favor of St. Louis. Reasonable and nonprejudicial bases of rates prescribed. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479.

(u) Proposed changes in rules governing transit on hogs at Watertown, S. Dak., resulting in increased through charges on shipments moving inbound in single-deck cars and outbound in double-deck cars, found justified. Proposed rules remedy the existing situation in respect of tonnage originating at Watertown and there added to through shipments by providing for application of local rate from Watertown instead of through rate from point of origin of initial shipment. Moreover, the weight of this added tonnage may be combined with the weight of the inbound movement to make up the required minimum. Transit on Hogs, 98 I. C. C. 153.

(v) It is the opinion of the commission that under the present rules here involved the through double-deck rate on hogs applies on shipments moving inbound to the transit point in single-deck cars and outbound in double-deck cars. Transit on hogs, 98 I. C. C. 153, 154.

(w) The showing that double-deck loading by reducing the number of car-miles increases the car-mile revenue, does not change the equally apparent fact that respondent would be compelled to accept double-deck rates for that portion of the movement made in single-deck cars. Under the proposed rules car-mile revenues would be further enhanced. Transit on Hogs, 98 I. C. C. 153, 155, 156.

(x) Proposed changes in rules governing the bedding of cars used for the transportation of livestock in central territory, resulting in increased charges and the limitation of services performed, found not justified. Proposed schedules would eliminate present common-carrier obligation, as set forth in 80 I. C. C. 747 and 87 I. C. C. 157, to furnish suitable bedding and would substitute therefor an obligation to place in cars a specified amount of material, and when that amount is insufficient, to force shippers to furnish themselves, or to secure through carriers from private concerns, at charges not subject to regulation, suf-

ficient material to complete the bedding. Suspended schedules ordered canceled. Bedding Livestock, 98 I. C. C. 323.

(y) Charges assessed on mixed carload shipments of livestock from various points in Texas to North Fort Worth, found inapplicable in that they exceeded those accruing at the "rate and minimum weight on straight carloads of the highest-rated livestock in the car," provided for in tariffs. Reparation awarded. Barse Live Stock Commission Co. v. Director General, 98 I. C. C. 539.

(z) Based upon the present yield per car and the volume of traffic, charges resulting from rates on sheep and lambs, in double-deck cars, from Montreal, Canada, to New York, N. Y., and Somerville, Mass., and minima provided in connection therewith, found not unreasonable, as compared with rates and minima on like traffic between other points for similar distances. Swift & Co. v. G. T. Ry. Co. of Canada, 98 I. C. C. 649.

(aa) Carload minima on sheep and lambs in double-deck cars, from Montreal, Canada, to New York, N. Y., and Somerville, Mass., found not unreasonable. While it is true that the minimum appears to be excessive, it must not be overlooked that it is a part of the joint rate found reasonable. Swift & Co. v. G. T. Ry. Co. of Canada, 98 I. C. C. 649.

(bb) Respondents proposed increased interstate rates on horses and mules, carloads, to, from, and between points in the Southwest, more particularly from and to points in Texas differential territory and New Mexico to and from the markets of Fort Worth, Tex., Kansas City, St. Joseph and St. Louis, Mo., Wichita, Kas., and Oklahoma City, Okla. The tariffs under suspension were published in purported compliance with the order in 93 I. C. C. 479. Transportation conditions in differential territory and in New Mexico are substantially less favorable than in southwestern scale territory. In general, differential territory and New Mexico are semiarid, of comparatively rough topography, and sparsely settled. Compared with the territory to the east, differential territory and New Mexico receive and forward per mile of line but a small amount of freight. It has been and is the practice of respondents to add to the main line basis of rates certain arbitraries from and to points on certain branch and independent lines. HELD, suspended schedules not justified. For future maximum reasonable rates from the markets mentioned, on the one hand, and Texas differential territory and New Mexico, on the other rates, will be rates constructed on basis of 93 I. C. C. 479, plus the differentials for the respective short line continuous distances outside southwestern scale territory. Rates on horses and mules in the southwest, 102 I. C. C. 87.

(bba) Proposed increased interstate rates on horses and mules to, from, and between points in the Southwest, more particularly from and to points in Texas differential territory and New Mexico to and from the markets of Fort Worth, Kansas City, St. Joseph, St. Louis, Wichita, and Oklahoma City, published in purported compliance with commission's order in Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479, found not justified based on comparisons of numerous bases of rates, including scales of distance rates in effect on horses and mules to, from, or between points in Texas, New Mexico, and the territory west and north thereof. Maximum reasonable interstate rates, based differentially, prescribed for future. Rates on Horses and Mules in the Southwest, 102 I. C. C. 87.

(bbc) Shipment of stock cattle from Limon, Colo., to Atkinson, Nebr., stopped in transit for rest, feed, and water, moved over a route at a rate in excess of that which applied over another available route; FOUND: Shipment misrouted in that it was the duty of originating carrier to forward it over the lowest-rated route, in absence of specific proof or evidence that the higher-rated route was designated by shipper. Reparation awarded. Omaha Chamber of Commerce v. C., R. I. & P., 102 I. C. C. 103.

(cc) Complainant attacked combination rates charged on 70 cars of cattle shipped between Oct. 30, and Nov. 15, 1919 from Edmonton and Patricia, Alberta, Canada, to Chicago and alleged overcharge of 5c per 100 pounds. The shipments originated on the C. P., and were delivered to that carrier to the Soo Line at Portal, N. D. The shipments were accepted by the C. P., for transportation as far as South St. Paul or New Brighton only. Such bills of lading and livestock contracts of the C. P., as were introduced in evidence named St. Paul as the destination. At the time of these shipments and during a period prior thereto the C. P., refused to accept

cattle for movement to points beyond St. Paul, assigning as a reason therefor difficulty and delay in securing the return of its cars. As far as St. Paul the cars remained in the possession of the Soo Line, a carrier closely allied with the C. P. The applicable rates to St. Paul were joint rates of 65c from Edmonton and 64c from Patricia, from St. Paul to Chicago 25c. The record contains uncontradicted testimony that there was an original and continuing intention on the part of shippers that the cattle should move through to the Chicago market. The tariff naming the rate from St. Paul to Chicago was subject to the Morris tariff naming rules for constructing combination rates. The intention as carried out determined, as a matter of law, the essential nature of the movement. Within contemplation of law and within the terms of the tariff the shipments were through continuous shipments from the Canadian points of origin to Chicago and subject to the combination rule. HELD, applicable rates 85c from Edmonton and 84c from Patricia, reparation awarded. Chicago Livestock Exchange v. Director General, 102 I. C. C. 452.

(cca) Interstate rule providing free transportation, to market only, of caretakers accompanying single-car shipments of livestock from points in Washington, Oregon, Idaho, and Montana, to points in Washington and Oregon, while granting free return transportation to caretakers accompanying two or more cars, found not unreasonable or unduly prejudicial. Using a single car as a unit, present rule provides as much free transportation per loaded car-mile for single-car caretakers as is accorded those with two or more cars. Cattle & Horse Raisers Asso. v. A., T. & S. F., 102 I. C. C. 573.

(dd) Complainant attacked commodity rates charged on horses and mules, carloads, from Wichita, Kas., to Houston, Tex., and other destinations as unreasonable and in violation of the fourth section. Shipments moved between Jan. 1, 1919 and July 20, 1920 over lines operated by the Director General. Defendant admits rates charged unreasonable to extent they exceeded aggregate of intermediate rates. HELD, rates attacked unreasonable to extent they exceeded aggregate of intermediates, reparation awarded. Wichita Chamber of Commerce v. Director General, 102 I. C. C. 745.

(ee) Complainant attacked commodity rates charged on cattle, carloads, and calves, sheep, lambs, goats, kids, and hogs in single and double deck cars from eastern and central Oregon and southern Idaho to North Portland, Ore., and Seattle and Tacoma, Wash., as unreasonable and unduly prejudicial. Respondents proposed to increase the rates on cattle and sheep, carloads, from stations on the O. S. L., north of Jones, Idaho to Portland, Seattle and points taking the same rates. Expedited service is afforded livestock trains of the O. S. L., into North Portland. Rates to Tacoma and Seattle are grouped and complainants do not seek a disruption of that group. Except in a few instances, the rates per car on double deck carloads of sheep are the same as the rates on cattle. HELD, rates attacked are not unduly prejudicial but unreasonable to extent they exceed rates per standard car, on cattle fat or stock, carloads, and on sheep or goats in double deck cars, the amounts per car set forth herein for the respective distances over the shortest workable route. On sheep or goats single deck 80 per cent. On hogs in single deck cars. 90 per cent and double deck cars 125 per cent of the rates on cattle. The rates approved range from $53.00 per car for a distance of 100 miles to $156.50 per car for 1,000 miles. Oregon Cattle & Horse Raisers Asso. v. N. P. Ry., 104 I. C. C. 51.

(ff) While commercial conditions and carrier competition are factors to be considered in determining lawful rates, they should not be given such importance as completely to outweigh factors more directly related to transportation, such as the cost and value of the service. In general, if livestock and cured meats are entitled to rates lower than those on fresh meats in one instance, they should also be entitled to lower rates substantially in the same proportion and vice versa, in all other instances where the transportation conditions are similar. Morrell & Co. v. N. Y. C. R. R., 104 I. C. C. 104, 134.

(gg) Complainant attacked commodity rates charged on numerous shipments of livestock, carloads, from Fremont, Ind., and Montgomery and Reading, Mich., to East Buffalo, N. Y., since Sept. 15, 1923 as unreasonable and in violation of section four. The shipments may be divided into two classes, (1) cattle in single deck cars, or mixed livestock taking the cattle rate when in double deck cars, and (2) hogs in single deck cars.

The rates charged were 34c and 39c respectively. These were in effect from Angola, Ind., a farther distant point over a certain route. The rates sought, 32 and 37c, were specifically published from Hillsdale, Mich., a farther distant point over another route. The tariff in which the specific rates from Hillsdale and Angola are named did not restrict the routing to any certain junction point or points on defendants line. Therefore the rates from both Hillsdale and Angola applied through Waterloo and the rate from Angola applied through Hillsdale. Over either route the points of origin of these shipments were directly intermediate. The intermediate clause in the tariff provided in effect that where rates were not specifically named from points of origin located directly between two points from which rates were named, such intermediate point or points would take the higher of the named rates. In another section of the tariff distance rates were named which were to be applied for the distances traversed unless rates made by use of the intermediate clause were lower. The distance rates from Fremont and Montgomery were higher than the rates made by use of the intermediate clause, which, over both routes, were the Angola rates. The distance rates from Reading were the same as the Angola rates. The rates charged were based on those found reasonable in another proceeding, and no evidence, other than the fact that they are higher than the rates from Hillsdale, was directed against their reasonableness during the period of movement. The rates from Hillsdale, although technically applicable through these points of origin, are lower than rates based on those found reasonable by the Commission for the distance over that route. There is nothing to indicate that shipments from Hillsdale or from these origin points have moved over the longer route, but they might so move. This opening for an authorized departure from the fourth section should be promptly corrected. HELD, charges applicable and not unreasonable, complaint dismissed. Ohio Farm Bureau Federation v. N. Y. C. R. R., 104 I. C. C. 490.

(hh) Complainant attacked combination rates charged on live hogs, carloads between June 25, 1918 and Jan. 1, 1922 from Iowa and adjacent states to New England, as in violation of section 6. The hogs are shipped in single deck cars to Squire & Company, East Cambridge, Mass., with instructions to stop for feed, water, weighing, sorting, double decking, and in some cases to complete loading, at one of the Mississippi river crossings. The practice of collecting charges subsequent to June 25, 1918 varied somewhat, but generally Squire & Company paid at the Mississippi river, the June 24, 1918 rates increased 25 per cent and from the river a rate of 50c which is the June 24, 1918 rate increased 7c. The purpose of G O 28 and of the tariffs involved which were published pursuant thereto is plain—to make a maximum increase of 7c per 100 pounds on shipments of livestock whether handled by joint rates or on rates made by combination of separately established rates. The tariffs permitting transit on hogs at the Mississippi river provided that the through rate would be protected, and as no joint rates were published from Iowa stations to the east they specified that certain combination through rates would be charged. HELD, between June 25, 1918 and Feb. 28, 1920 via other carriers, and between August 29, 1918 and Feb. 28, 1920 via the Burlington the rates applicable were combination rates in effect June 24, 1918 increased 7c; that rates charged were unreasonable to extent they exceeded rates as above, reparation awarded. North Packing & Provision Co. v. Director General, 104 I. C. C. 607.

(ii) Complainant attacked commodity rates charged on hogs and sheep, in single deck and double deck carloads, shipped during January, February and March 1918 from South Omaha and various points in Iowa to Kansas City and Wichita, Kas., as unjust and unreasonable. During this period the rates in effect on livestock from and to these points were dependent upon value. Effective on various dates subsequent to the period of movement the rates on ordinary livestock based on value were eliminated from defendants tariffs, and the basic rates were made applicable regardless of value. In 100 I. C. C. 471 the Commission made a distinction between rates on which a declaration of value was required as the released rates, which is forbidden under section 20, and those where the declaration required is the actual value of the shipment, in which the underlying principle is that the articles covered by the different groups of valuations are in fact so different from a transportation standpoint as to constitute in effect different commodi-

ties. HELD, complaint dismissed. Cudahy Packing Co. v. Director General, 104 I. C. C. 705.

(jj) Complainant attacked commodity rates charged on cattle and hogs, carloads, from Chicago, Ill., Indianapolis, Ind., and South St. Paul, Minn., to Allentown, Pa., as unreasonable, unjustly discriminatory, unduly prejudicial and inapplicable. Complainants plant is on the Lehigh Valley, within the switching limits of Allentown, 0.75 mile from East Penn Junction, Pa., the point of interchange between the Reading and the Lehigh. The complaint is directed primarily against the rate applicable from Chicago and Indianapolis over the Pennsylvania to Harrisburg, Pa., Reading to East Penn Junction and Lehigh beyond. Joint rates are not published to complainants plant over the route traversed, but do apply to Allentown and East Penn Junction when for Reading delivery. On shipments over the route traversed fourth and fifth class rates applied and now apply from East Penn Junction to complainants plant. Joint rates which cover delivery to complainants plant, and which are not here attacked were and are now in effect over the following routes: Pennsylvania and other western carriers to Buffalo and Lehigh beyond; Pennsylvania to Mount Carmel, Pa., and Lehigh beyond; B. & O., to Cumbo, W. Va., C. V., to Shippensburg, Pa., Reading to East Penn Junction and Lehigh beyond. The route via Harrisburg is from 30 to 90 miles shorter than the other routes. The Lehigh and Reading also published rates of 5.5c prior to July 1, 1922, and 5c thereafter for switching carload traffic between industries on the Reading at East Penn Junction and industries on the Barber branch of the Lehigh at Allentown. Under the present rates, the charges on cattle and hogs from East Penn Junction to complainants plant would amount to $25.30 and $36.80 per carload. These charges seem excessive, especially when it is considered that, except for the expedited movement, the service required in handling a car of livestock from East Penn Junction to complainants plant is not shown to be essentially different from that required in moving a car loaded with some other commodity. HELD, through rates attacked unreasonable to extent that the component from East Penn Junction to complainants plant at Allentown exceeded 5.5c prior to July 1, 1922, and 5c thereafter, reparation awarded. Arrogast & Bastian Co. v. L. V. R. R., 107 I. C. C. 105.

(kk) Complainant alleged that he shipped one car of horses from Wichita, Kas., to Riverside, Calif., on Dec. 28, 1922 and one car of horses from Wichita to Colorado Springs, Colo., on June 14, 1923; that each of said shipments were for exhibition purposes; that said carloads were returned from said destination to Wichita on March 26 and August 28, 1923, respectively; that complainant paid the tariff rates for the movement from Wichita and complied with the tariff provisions entitling him to free return movements; that defendant has demanded that complainant pay the full tariff rates for said return movements; and that rates demanded are in violation of section 6 of the act. The horses in these shipments were so-called polo ponies and were used in polo tournaments at Riverside and Colorado Springs. Defendant urgues that a polo tournament is not "an exhibition or fair held under public auspices." Complainant asserts that a polo game is an "exhibition" of the ponies which corresponds to the riding of saddle horses or driving of coach horses at fairs. The view that a polo tournament is merely an exhibition of the ponies accords to their riders a role quite below that played by them. A polo tournament is a series of games testing the skill of both riders and ponies and in which the former are the dominating factors. HELD, rates attacked applicable complaint dismissed, undercharges should be collected. Vickers v. A. T. & S. F. Ry., 107 I. C. C. 575.

(ll) Complainant attacked combination rate charged on 38 cars of stocker cattle shipped April 24, 1922 from Alfred, Tex., to Foraker, Okla., as unreasonable and illegal. Cattle were shipped to Foraker to be fattened for market. They originated in the socalled quarantine area of Texas and were subject to federal and state laws for the prevention and spread of infectious or contagious diseases among livestock. These shipments were dipped twice at Fort Worth, Tex., upon arrival at Foraker 18 of the cars were unloaded into the railroad stockyards before further inspection developed that the cattle were not free from ticks. They were then ordered to Oklahoma City for further dipping. When this was accomplished the cattle were again forwarded to Foraker and de-

livered. Shipments moved S. A. & A. P., Waco, Tex., MKT through Muskogee, Okla., to Nelagony, Okla., and Midland Valley beyond, distance 769 miles. The tariff naming the rates provided for the application of the short line rate over any other routes of participating carriers accepting the freight for transportation. HELD, charges not applicable, as they should have been 42c rate applicable for original movement to Foraker, plus 17c per car mile for the 312 mile haul from Foraker to Oklahoma City and return plus $7 for stopping, shipments overcharged, applicable rates not unreasonable, complaint dismissed. Borroum & Tucker v. Midland Valley R. R., 107 I. C. C. 668.

(mm) Rates on livestock from points in Texas differential territory, New Mexico, and Arizona to El Paso, found not to have been or to be unreasonable or otherwise unlawful, except that rates on certain livestock from the Phoenix division of the Arizona Eastern found unreasonable and unduly prejudicial to the extent they exceed rates established upon the scale contemporaneously applicable from the same points to Los Angeles, Calif. Reparation awarded. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4.

(nn) Proposed readjustments, involving increases and reductions in rates on livestock in single-deck and double-deck cars between points in Arizona and New Mexico on the one hand and Deming, N. Mex., and El Paso, Tex., on other, to conform with the scale of rates prescribed in American National Livestock Asso., 26 I. C. C. 37, found not justified as to increases, the proposed reductions not being protested. Suspended schedules ordered canceled without prejudice to the filing of new schedules publishing the proposed reduced rates. Peyton Packing Co. v. A. E. R. R. Co., 100 I. C. C. 4, 8, 15.

(oo) No change has been justified in the present practice of transporting caretakers of live poultry. Dairy Products from Southern Points, 100 I. C. C. 756, 762.

(pp) Upon further hearing, joint-line rates under agreed distance scales on livestock to, from and between points in the Southeast found not justified for interstate application over certain specified lines under common management and control, and wherever such rates have been applied over these lines since date of establishment under authority conveyed in original report, 74 I. C. C. 419, they have been, are, and for the future will be, unreasonable to extent they exceeded, exceed or may exceed single-line rates under the agreed scales, as set out in appendixes to original report, on a joint or continuous mileage basis. Livestock to, from, and between Points in Southeast, 101 I. C. C. 105.

(qq) Main-line rates on beef cattle from points on defendants' lines in Arizona to points in their lines in California found not unreasonable or otherwise unlawful as compared with contemporaneous rates on like traffic to same points from producing districts in California and from points of origin in other states for comparable distances, except that single-line rates in effect on Southern Pacific and its subsidiary lines for distances between 5 and 230 miles and between 1000 and 1200 miles are unjust and unreasonable to extent they exceed for corresponding distances rates contemporaneously maintained by Santa Fe. Reasonable basis of rates prescribed. Arizona Cattle Growers Asso. v. A. Ry. Co., 101 I. C. C. 181.

(rr) Rates on feeder cattle from points in Arizona on defendants' lines, except the Tucson, Cornelia & Gila Bend and the Apache, to points in California, found unjust and unreasonable to extent they exceed 80 per cent of the rates on beef cattle from and to same points. Reasonable basis of rates prescribed. Arizona Cattle Grower Asso. v. A. Ry. Co., 101 I. C. C. 181, 188.

(ss) Rates on beef cattle from branch-line points on defendants' lines in Arizona to points in California or from other points on defendants' lines in Arizona to branch-line points on their lines in California; found unjust and unreasonable to extent they exceed rates contemporaneously mantained for corresponding distances from and to points on their main lines in Arizona and California. Reasonable basis of rates prescribed. Arizona Cattle Growers Asso. v. A. Ry. Co., 101 I. C. C. 181, 188.

(tt) Rates on beef and feeder cattle from points on defendants' lines in Arizona to points on their lines in California for joint line hauls in excess of 500 miles, found unjust and unrea-

sonable to extent they exceed rates for single-line hauls of same length, subject to observance of the joint-line rate for 500 miles as a minimum. Reasonable basis of rates prescribed. Arizona Cattle Growers Asso. v. A. Ry. Co., 101 I. C. C. 181, 188.

(uu) Rates on fresh meat, fresh frozen meat and packing-house products from Ogden, Utah, to various interstate destinations, except rates on fresh frozen meat to New York, Brooklyn, and Boston, found not unreasonable, discriminatory or unduly prejudicial. While there is competition in the purchase of livestock at Ogden and in contiguous territory, most of such competition comes from brokers and speculators and not, as complainant contends, from packers at the river cities and Chicago. Ogden Packing & Provision Co. v. A., T. & S. F., 101 I. C. C. 236, 252.

(vv) Rival packing houses are entitled to reasonable rates, which should be fairly related, the one to the other, upon the live animals from various points of production and each is also entitled to a reasonable rate, which again should be so related, upon the products to various markets of consumption. Any locality which remains at a disadvantage after this has been done must sustain that burden, which is due to its location with respect to this business. See 22 I. C. C. 160. Ogden Packing & Provision Co. v. D. & R. G., 101 I. C. C. 258, 268, 269.

(ww) Commission, by division 4 in 98 I. C. C. 649, found that the charges resulting from the rates and minimum weights provided in connection therewith on sheep and lambs, in double deck cars, from Montreal, Can., to New York, N. Y., and Somerville, Mass., were not unreasonable, and dismissed the complaint. HELD, original finding affirmed, complaint dismissed. Swift & Company v. G. T. Ry., 109 I. C. C. 45.

(xx) Complainant attacked class A rate of $1.095 charged on horses and mules, carloads, from Memphis, Tenn., to Fort Worth, Tex., as unreasonable and in violation of the fourth section. Shipments made between Oct. 10, 1923 and Jan. 17, 1924 over M. P., to Texarkana and T. & P., 538 miles. The aggregate of intermediate rates was $186 per car, which rate was made effective Nov. 5, 1924 and on April 20, 1925 a rate of 60c, minimum 23,000 pounds, became effective. HELD, rate attacked unreasonable to extent it exceeded $186 per car, reparation awarded. Darnell Commission Co. v. M. P. R. R., 109 I. C. C. 427.

(yy) Complainant attacked commodity rates charged on horses and mules, carloads, since Oct. 15, 1922 from Oklahoma and Kansas to Houston, Tex., as unreasonable, unjustly discriminatory and as compared with relatively lower rates maintained from the same points to Beaumont and other Texas destinations, unduly prejudicial. Subsequent to the filing of the complaint, and prior to the hearing report was issued in 93 I. C. C. 479, and rates established in accordance with the findings therein. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceeded rates to Beaumont, reparation denied, complaint dismissed. Cook v. A. T. & S. F. Ry., 109 I. C. C. 493.

(zz) Complainant attacked commodity rates on livestock, in single deck and double deck, carloads, from Sioux Falls, S. D., to Chicago, East St. Louis and Peoria, Ill., Milwaukee, Cudahy and Madison, Wis., St. Louis and Kansas City, Mo., Omaha, Neb., Ottumwa, Des Moines, Cedar Rapids and Mason City, Ia., and Albert Lea and Austin, Minn., as unreasonable and unduly prejudicial as compared with rates to the same destinations from St. Paul, Minn., Sioux City, Ia., Omaha, Neb., and Kansas City, Mo., and the failure to accord Sioux Falls the socalled test the market arrangement is unduly prejudicial to Sioux Falls and unduly preferential of Sioux City and Omaha. Sioux Falls is in the southeastern part of the state served by the G. N., Omaha Line, Milwaukee, I. C., and Rock Island. The rates here attacked were prescribed by the Commission in 77 I. C. C. 451. The relative extent of the haul within South Dakota is negligible. The record indicates with clarity that conditions in general are less favorable to St. Louis than to Chicago. But there is no convincing explanation of record why the same factors, although perhaps to a lesser extent, should not make for a higher rate from Sioux City to St. Louis than from the same point to Chicago. The existing disparity between the Sioux Falls and Sioux City rates to St. Louis in view of the difference in distance of about 61 miles, appears wider

than circumstances warrant. Rates applying on the same traffic in the same general region must be looked to, in order that, after allowance is made for such differences in conditions as exist: Sioux Falls may have rates in proper alignment with the rate structure in this territory. It appears from the record that Sioux Falls as a locality or community is endeavoring to build up a livestock market, and that in doing so is confronted by the competition and intrenched influence in the business of the long established markets in this territory, St. Paul, Sioux City, Omaha and Kansas City. HELD, rates attacked to Austin and Albert Lea not unreasonable or unduly prejudicial; rates to Chicago, Peoria, St. Louis, East St. Louis and Kansas City, Milwaukee, Madison, Cudahy, Omaha, Ottumwa, Cedar Rapids, Des Moines and Mason City unreasonable to extent they exceed 37c to Chicago, Peoria, Milwaukee, Madison and Cudahy, 38c to St. Louis and East St. Louis, 25.5c to Omaha, 36c to Kansas City, 30c to Ottumwa, 30c to Cedar Rapids, 27.5c to Des Moines and 26c to Mason City, these rates to apply on cattle, and on calves, hogs and sheep in double deck cars. On hogs and calves in single deck cars the rates may be 115% of the rates on cattle for the same haul, and on sheep in single deck cars, 125% thereof. TRANSIT. HELD, granting by defendants, C. M. & St. P., Northwestern and Omaha of transit at Sioux City while contemporaneously denying like transit at Sioux Falls subjects Sioux Falls to undue prejudice and this should be removed by establishing at Sioux Falls transit arrangements, embracing conditions, restrictions and limitations similar to those maintained at Sioux City. Sioux Falls Livestock Exchange v. A. T. & S. F. Ry., 109 I. C. C. 501.

(3a) Complainant attacked rates, charges and regulations governing the transportation of beef cattle, in carloads, and sheep and lambs, in double deck and single deck carloads, from points in Oregon, Washington, Idaho and Montana to Chicago, Ill., St. Paul, Minn., Omaha, Neb., and other middle western and Missouri river markets as unreasonable, unjustly discriminatory and unduly prejudicial. Livestock usually moves in trainloads. Yard and siding switching, which is injurious to stock thereby is reduced to a minimum. From the more distant points, if the number of carloads is not inadequate for a full train, dead freight may be and sometimes is included in the train until the accumulation of livestock is sufficient to warrant a segregation of the two classes of freight. Expedited service is given on livestock traffic. HELD, rates on beef cattle, carloads, and on sheep and lambs, double deck and single deck cars, from and to points involved unreasonable to extent they exceed rates ranging from 63c and 70c for 1000 miles and under to 103 and 110c for 2000 miles, rates to St. Louis to exceed rates to Omaha by not more than 12c and to Chicago 15c over St. Paul. Reparation held open. American National Livestock Asso. v. O. W. R. R. & N. Co., 109 I. C. C. 621.

(3b) The history of the adjustment showed that the rates had been based upon the minimum weights and a reduction in the minimum could not reasonably be required without giving consideration to the rates applicable in connection therewith. American National Livestock Asso. v. O. W. R. R. & N., 109 I. C. C. 621, 624.

(3c) There is no question that livestock rates yield car mile earnings lower than those on most other commodities. American National Livestock Asso. v. O. W. R. R. & N., 109 I. C. C. 621, 629.

(3d) Respondents propose to revise their rates on calves, in single and double deck carloads, from Texas to various markets outside of the state. The origin points are in central and northern Texas, including the Pan Handle. The destinations are in the territory reachng from Denver, Colo., on the west to Cincinnati, O., on the east. The only proposed changes of importance, however, are in the rates to Kansas City, Mo., and points grouped therewith, such changes being generally increases ranging from 0.5 to 6.5c. The proposal is not only to correct alleged errors but to make the rates fully 15% higher than the cattle rates. The present rates to Kansas City range from 102 to 115% of the rates on cattle. There seems to be no competitive reason for a spread between the rates on cattle and the rates on calves. It does not appear that the rates on cattle were prescribed by the Commission and the record contains no evidence to show that they are reasonable maximum rates. So far as the

record shows, it is as likely that the cattle rates are now too high as that the calf rates are too low. HELD, respondents have justified proposed rates to points other than those to the Kansas City group, rates not justified to points in that group. Calves to Texas, 112 I. C. C. 163.

(3e) Complainant attacked commodity rates on livestock shipped from points west of the Missouri river and west of and including Kansas, Oklahoma, Texas and extreme western Arkansas and Louisiana, to destinations in that territory other than recognized livestock market points, as unreasonable and unduly prejudicial. The rates primarily in issue are those on socalled stockers and feeders, animals which require further development and fattening before they are ready for the market. It would be difficult to exaggerate the complexity of the situation with which the Commission is called upon to deal. The attack is upon rates applicable on livestock throughout half of the United States. The present rates include specific single line and joint line rates to markets and a considerable number of specific rates from and to points other than markets where any considerable volume of movement has developed, mileage rates, class B rates in Pacific coast territory, round trip rates for the movement of stock cattle to and from feeding points, and feeding in transit arrangements under which stock cattle may be started toward a market, stopped for feeding and development, and then moved on to the market at the market rate for the through movement. This record indicates the desirability of a more stable and readily ascertainable basis of rates which will facilitate the movement of stock cattle between ranges and feeding points. In view of the pendency of Docket 15686, however, complaint dismissed. American National Livestock Asso. v. A. T. & S. F. Ry., 112 I. C. C. 197.

LOADING AND UNLOADING

See Allowances §8 (4⅞); Classification §4, §13; Demurrage; Facilities and Privileges §10; Minimiums; Reasonableness of Rates §15½; Transportation §10.

LOCAL RATES AND COMBINATIONS

See Across Lake Rates (b); Advanced Rates §5 (8); Class Rates; Commodity Rates; Evidence §13 (3) (5), §28, §47; Passenger Fares and Facilities §5¾; Reasonableness of Rates §28; Through Routes and Joint Rates §13½, §15, §22.

(a) Fact that certain factors of combination rates are depressed does not prove that combination rates themselves are unduly low. Afterthought Copper Co. v. Director General, as Agent, 89 I. C. C. 346, 347.

(b) Complainant attacked combination rates charged on munition linters in compressed bales, carloads, from Georgia, Mississippi, Tennessee, Arkansas and Oklahoma to Peoria, Ill., Philadelphia, Pa., Kingston, Pa., and Elizabethport, N. J., as illegal and unreasonable. Shipments made during January, February and March 1921 and between July 1920 and May 10, 1921. Charged proportional commodity rates to East St. Louis, Ill., plus the class R26 rates beyond, from Arkansas and Oklahoma, and sixth class rates from the other origins, while hull fiber or shavings took lower rates, namely, specially commodity rates from Arkansas and Oklahoma and class A rates from the other origins. Munition linters consisted of practically all the fiber taken from the seed after the cotton has been removed, that they were reasonably free from hull particles and other impurities, and that the proportion of linter fiber and hull fiber in the material was substantially equal. They bore a close resemblance to ordinary commercial linters, were shipped in the same manner, and prior to the armistice, generally, if not always, received the same rating. On Sept. 7, 1921 joint commodity rates of 38 and 53.5c were established on munition linters to Peoria from Little Rock and Pauls Valley, respectively. Effective Feb. 16, 1922, the southern carriers published a temporary schedule, expiring on July 31, 1922, providing that munition linters should take the same rates as hull fiber or shavings. HELD, cotton linter rates applicable but unreasonable to extent they exceeded cotton seed hull fiber or shavings, reparation awarded. Cotton By Products Company v. Southern Ry., 92 I. C. C. 201.

(c) Complainant attacked combina-

tion rates charged on chemically hardened fiber soles shipped Jan. 17, 1921 from Nashville, Tenn., to Tomahawk, Wis., as inapplicable, unjust and unreasonable. Shipment was described as 220 cases of rubber soles and moved via L. & N., to Evansville, Ind., C. & E. I., and C. M. & St. P. Ry. beyond, applicable rate second class of 59.5c to Evansville and third class rate of 86.5c beyond Textan sole is composed of rubber, fiber, and filler and complainant contended rate on rubber soles was not applicable. HELD, rate of $1.46 charged on boot and shoe findings, counters, heels, soles, or taps, rubber applicable, complaint dismissed. Tomahawk Shoe Co. v. C. M. & St. P. Ry., 92 I. C. C. 315.

(d) Complainant attacked combination rates charged on 13 cars of potatoes between April, May and June 1921, from Columbia Falls Kalispell, and Somers, Mont., to Kansas City, Mo., and Minneapolis and diverted to Anthony, Arkansas City, Goodland, Hutchinson, Wichita and Winfield, Kas., and Ponca City, Okla., as unreasonable and inapplicable. Rates charged $1.125 to Wichita, $1.205 to Ponca City, $1.26 to Goodland, and $1.085 to the other destinations, made up of commodity rates to Kansas City and class C rates beyond. HELD, rates attacked inapplicable, rates applicable were $1.205 to Ponca City and $1.085 to other destinations named, overcharges ordered refunded. Famechon Company v. A. T. & S. F. Ry., 92 I. C. C. 624.

(e) Complainant attacked combination rates charged on cabbage, in bulk, carloads, from East Grand Forks, Minn., to Topeka, Kans., as unreasonable and unduly prejudicial. Shipment moved over the N. P., at Minnesota Transfer, Minn., and Rock Island, 843 miles, applicable combination 78c, composed of class C rates of 31c to Minnesota Transfer and 47c beyond. A joint commodity rate of 54.5c was applicable over the route traversed on potatoes and on mixed cars of potatoes and other class C vegetables, including cabbage. The rates attacked compare favorably distance considered with the rates found not unreasonable in 89 I. C. C. 437 and 81 I. C. C. 626. HELD: Rates attacked not unreasonable, or otherwise unlawful, complaint dismissed. Anderson Commission Co. v. C. R. I. & P. Ry., 93 I. C. C. 241.

(f) Complainant attacked combination commodity rates charged on 63 cars of crushed stone between July 27, 1922, and Jan. 10, 1923, from Cape Girardeau, Mo., to Bowman, Ark., as unreasonable and in violation of the fourth section. All shipments moved over Frisco to Blytheville Ark., and J. L. C. & E. beyond, short line route being over same lines via Leachville, Ark., charged 9c and 6.5c to and from Blythville, and on some 8c and 5.5c to and from Leachville. A joint class E rate of 28.5c was applicable, shipments undercharged. On March 18, 1923, a commodity rate of 8c was established. HELD: Rate attacked unreasonable to extent it exceeded 8c, reparation awarded. Edwards Construction Co. v. J. L. C. & E. Ry., 93 I. C. C. 370.

(g) Complainant attacked commodity rates charged on clean rice, carloads, from Stuttgart, De Witt, Lonoke, Carlisle, and Wheatley, Ark., to all destinations in official, southern and western classification territories as unreasonable and that rates on clean rice, carloads and less carloads, from the same points to all destinations east of the Missouri and Mississippi rivers as unjustly discriminatory and unduly prejudicial as compared with the rates from New Orleans, La., Memphis, Tenn., and interior Louisiana. Effective Oct. 21, 1922, defendants from Arkansas made certain changes in the carload rates which were accepted by complainants. The report is confined to carload rates to East St. Louis, Cairo, Evansville, Terre Haute, Indianapolis western termini of trunk line territory, all points in southern territory except Florida and Virginia, and all points in Missouri, Kansas, Nebraska and Oklahoma. Principle competition is with New Orleans, Interior Louisiana and Memphis. Because of their geographical location complainants have been unable to engage to any appreciable extent in the export trade. The average short line distances from the milling points in the Arkansas group to interstate destinations are in all instances about the same as the short line distances from Stuttgart to the same destinations. Lake Charles is representative of the interior Louisiana group. Houston is representative of Texas milling points. The rates from Stuttgart to East St. Louis and Cairo are only 4 and 4.5c less than the rates from New Orleans, for differences in distance in favor of

Stuttgart of 346 and 293 miles and 9 and 13.5c less than the rates from Lake Charles for differences in distance of 335 and 332 miles. To points in Iowa the rates from Stuttgart range from 2.5c at Keokuk to 15.5c at Sioux City under New Orleans, and from 2.5c at Cedar Rapids to 10.5c at Keokuk under Lake Charles. The rates from Memphis to Cairo and St. Louis are 26.5 and 33.5c or 8.5c and 9.5c less than from Stuttgart. The rate from New Orleans to Memphis is 33.5c for 396 miles as compared with rate from Arkansas to Cairo of 35c of 273 miles. The rates from Stuttgart are 50c to Evansville, 420 miles, and 56c to Terre Haute and Indianapolis, 482 and 550 miles. The rates are higher to these points from Stuttgart for comparable hauls to other points in Indiana, Illinois and Ohio. They are higher than rates for similar or longer hauls from Stuttgart to points in western trunk line territory. The rates from Stuttgart to the western termini of trunk line territory compare favorably with rates from Stuttgart to other points in Pennsylvania, West Virginia and Ohio. The rates from Memphis to Pittsburgh, Pa., and Buffalo, N. Y. are 12c less than from Stuttgart. The spread between Stuttgart and Lake Charles is 9c for differences in distance of 374 miles at Buffalo and 340 miles at Pittsburg. This spread is the same as at points in central territory for much shorter distances. The rates from New Orleans are 6c at Parkersburg, W. Va., and 5c at other western termini points less than from Stuttgart although the hauls from New Orleans are longer by 233 miles to Parkersburg and 260 miles to Buffalo. The rates from Stuttgart to southern territory are generally the Memphis combinations, composed of the proportional rate of 15.5c to Memphis and Memphis rates beyond. The comparisons of record show that the rates from Arkansas to the south are too high in comparison with rates from other producing points. The rates to Oklahoma are before the Commission in 13954 now pending. HELD: Rates to New Orleans not unreasonable but local rates to Memphis and Vicksburg are unreasonable and unduly prejudicial to extent they exceed 22 and 32c; rates to Cairo not unreasonable but rates to points named unreasonable and unduly prejudicial to extent they exceed to East St. Louis, 41c, to Evansville, 45c, to Terre Haute 49c, to Indianapolis 50c; that rates to points shown not unreasonable but unduly prejudicial to extent they exceed to western termini 5c under New Orleans, Kansas City and Moberly, Mo., 11c under Lake Charles, to Omaha and Fremont 10c under Lake Charles. Stuttgart Rice Mill Co. v. A. & V. Ry., 93 I. C. C. 517.

(h) Complainant attacked combination rate charged on one car of bulk manure salts, shipped Feb. 28, 1920, from Savannah, Ga., to Laurel, Miss., as unreasonable and unduly prejudicial. Shipment moved over C. of Ga. to Birmingham, I. C. to Jackson, Miss., and G. & S. I., 1,011 miles, charged combination of $5.90 on Gulfport, Miss. Laurel is reached by the Southern, G. M. & N., and G. & S. I. With respect to the latter is 89 miles southeast of Jackson and 153 miles north of Gulfport; over Southern lines it is 56 miles south of Meridian and 146 miles north of New Orleans; and over G. M. & N. it is 111 miles north of Mobile and 298 miles south of Jackson, Tenn. The record indicates that the quantity of manure salts discharged from vessels at the Gulf ports is not always sufficient to meet the demands of the fertilizers and that movements from the south Atlantic ports to Mississippi points like Laurel are not unusual. HELD: Rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Laurel Oil & Fertilizer Company v. Director General, 95 I. C. C. 522.

(i) Complainant attacked combination rate charged on one car of silicate of soda, shipped Nov. 13, 1919, from Livny, Calif., to Los Angeles, Calif., as unreasonable. Livny is on the S. P. within the switching limits of Oakland. Vernon, destination, is on the Santa Fe within the Los Angeles switching limits. Tariffs named a rate of 34.5c via S. P. to Oakland thence Santa Fe or S. P. At request of agent at Livny complainant routed the shipment over the S. P., to Fresno, Calif., thence Santa Fe. This was for the purpose of affording the originating carrier a line haul. The usual routing was S. P. to Oakland and Santa Fe to destination. Rate applicable via Fresno was 39c to that point and 54c beyond. There was in effect a rate of 48.5c composed of 14c to Stockton and 34.5c beyond. HELD: Rate attacked

unreasonable to extent it exceeded 48.5c reparation awarded. Philadelphia Quartz Co. v. Director General, 95 I. C. C. 593.

(j) Complainant attacked combination rate of 28.5c charged on eight cars of feldspar between Nov. 13, and Dec. 12, 1922, from Keene, N. H., to Manchester, Conn., as unjust and unreasonable to extent it exceeded 19.5c. Owing to an embargo on the New Haven shipments were consigned to Williamantic, Conn., via B. & M., to South Vernon, Vt., and C. V., beyond, reconsigned at that point to Manchester via New Haven, charged 17c to Williamantic and 11.5c beyond. Direct route is via B. & M. to Springfield, Mass., and New Haven beyond, distance 109 miles, 13.5c rate. HELD: Rate of 17c charged to Williamantic unreasonable to extent it exceeded 15.5c, and that rate of 11.5c Willmantic to Manchester unreasonable to extent it exceeded 7c, reparation awarded. Oxford Soap Co. v. B. B. & N. R. R., 95 I. C. C 615.

(k) Complainant attacked commodity rate charged on 11 cars of green pears between August 9 and Sept. 11, 1921, from Sunnyside, Grand View and Yakima, Wash., to San Francisco and Campbell, Calif., as unjust, unreasonable and illegal. Shipments moved O. W. R. R. & N. to Portland, Ore., and S. P. beyond, charged Portland combination of 94.5c to San Francisco and 8c beyond to Campbell. HELD: Rates attacked applicable, complaint dismissed. Pacific Adjustment Co. v. O. W. R. R. & N. Co., 95 I. C. C. 669.

(l) Complainant attacked commodity rates charged in posts and poles, carloads, from Minnesota to Minnesota, Iowa, Illinois, North Dakota, South Dakota and Montana during 1919 and 1920 as unlawful, unauthorized, unjust and unreasonable. Shipments orginated on the M. & R. R., and M. R. L. & M. The former connects with the G. N., at Deer River, Minn., and the latter with the G. N., M. & I., and Soo Line at Bemidji, Minn. Rates assessed full combinations on Deer River or Bemidji. The rates from those junction points were subject to the rule for constructing combination rates under general increases of June 25, 1918. The tariffs of the originating lines neither carried nor referred to the rule. It is clear that in so far as the shipments prior to Feb. 15, 1919, are concerned the principle of the Sligo case is applicable. Neither the M. & R. R. nor the M. R. L. & M. were under federal control. HELD: rates attacked prior to Feb. 15, 1919, inapplicable and rates applicable were those made by use of the combination rule published in the tariffs naming the rates from Bemidji and Deer River. Rates unreasonable. Shipments originated on the M. & R. R. and moved on and after that date were applicable. Rates attacked on shipments originating on the M. R. L. & M. between Feb. 15 and June 29, 1919, applicable but rates originating on the M. R. L. & M., subsequent to June 30, 1919, inapplicable, reparation awarded. Pendleton & Gilkey v. Director General, 95 I. C. C. 699.

(m) Complainant attacked combination rate charged of $1.31 on fruit and vegetables, in mixed carloads, from Los Angeles, Calif., to Globe, Ariz., between June 27 and Sept. 20, 1918, as unreasonable and inapplicable to the extent it exceeded $1.145. Shipments moved S. P. to Bowie, Ariz., A. E. beyond, 736.7 miles, charged $1.045 to Bowie plus 26.5c beyond. There was a combination of $1.145 in effect made up of 31.5c to Colorado, Calif., 56.5c to Bowie and 26.5c beyond. HELD: Reparation awarded on basis of $1.145. Mauk Produce Co. v. Director General, 95 I. C. C. 728.

(n) Complainant charged combination rates charged on logs, carloads, between March 20, and Nov., 1918, from Goodrich, Whittlesey, Park Falls, and Rib Lake, Wisc., to Black Creek, Wisc., as unjust, unreasonable, unduly prejudicial and unjustly discriminatory. All of the points of origin are on the Soo. Shipments moved via Soo to Amherst Junction, Wisc., thence G. B. & W., 138.6, 134, 144.5 and 187.2 miles. Distance from Amherst Junction to Black Creek is 46.3 miles. When shipments moved joint rates on lumber applicable on logs were assessed. In Jan. 1919 the Soo established a mileage scale of rates on logs, resulting in rates to Amherst Junction log 5.5c from Park Falls, and 4.5c from Whittlesey, Rib Lake and Goodrich. The G. B. & W. maintained from Amherst Junction to Black Creek a proportional rate of 2.5c prior to and 3c on and after June 25, 1918. HELD: Rates attacked unreasonable to extent

they exceeded 6c from Goodrich and Whittlesey, 7.5c from Rib Lake and 8.5c from Park Falls, reparation awarded. Ronz Box & Lumber Co. v. Director General, 95 I. C. C. 741.

(o) Complainant attacked combination less carload rates on trunks, wrapped, from Petersburg, W. Va., to Pueblo., Colo., between April 14 and August 8, 1922, as unjust, unreasonable and inapplicable. Shipments moved via S. A. L. to Birmingham, Ala., and Frisco and M. P. beyond, charged $5.04 prior to July 1, made up of $2 to Memphis and $3.04 beyond, first class; and $4.535 on and after that date. Joint first class rates applied to Columbus, N. M., of $4.635 prior to July 1, and $4.17 thereafter, Pueblo being intermediate as the rates were not restricted to any particular route. HELD: Shipments overcharged to extent they exceeded $4.635 prior to July 1, and $4.17 thereafter, reparation awarded. Frazier Saddlery v. M. P. R. R., 96 I. C. C. 1.

(p) Complainant attacked combination rate charged on three cars of cement shipped April 15 and May 15, 1922, from Richard City to Normal, Tenn., as unjust, unreasonable and in violation of section four. Richard City is on the N. C. & St. L., 32 miles west of Chattanooga, Tenn., and Normal is local to the Southern, 6 miles east of Memphis, Tenn. Shipments moved interstate over N. C. & St. L. to Memphis and Southern beyond 369 miles, charged 19c to Memphis and 7.5c beyond. Effective August 30, 1922, a rate of 17c was established the same as to Memphis. HELD: Rate charged unreasonable to extent it exceeded 19c, reparation awarded. Dixie Portland Cement Co. v. N. C. & St. L. Ry., 96 I. C. C. 47.

(q) Complainant attacked combination rate charged on four cars of liquid tanning extract, during 1922, from Mariners Harbor, N. Y., to Millville, Pa., as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved to Linden Junction over the Staten Island Rapid Transit thence Pennsylvania, charged fifth class prior to July 1, 1922, of 125c to Linden Junction and 31.5c beyond; this combination being 40c after that date. Mariners Harbor has been accorded generally the same basis of rates as apply to and from other points in the limits of New York and from these other points fifth class rate of 31.5c was applicable prior to July 1, 1922, and 28.5c subsequently. Distance 211 miles. The rate requested was subsequently established. HELD: Rate attacked unreasonable to extent it exceeded 31.5c prior to July 1, 1922, and 28.5c thereafter, reparation awarded. Quebracho Products Co. v. S. I. R. T. Ry., 96 I. C. C. 52.

(r) Complainant attacked combination rate charged on four cars of cabbage, shipped in Dec., 1922, and Jan. 1923, over an interstate route from St. Francisville, La., to Monroe, La., as unreasonable. Shipments moved over Y. & M. V. to Vicksburg, Miss., 143 miles, thence V. S. & P., 91 miles, charged 38.5c to Vicksburg and 26.5c beyond. Effective Feb. 8, 1924, a joint rate of 38.5c was established. St. Francisville is served by the L. R. & N. but the railway station of that line is known as Bayou Sara. During the period of movement the rate on cabbagge from Bayou to Monroe, 191 miles over the L. R. & N. and M. P., was 43.5c. The basis for this rate, and also for the 26.5c rate from Vicksburg to Monroe is to be found in 52 I. C. C. 105, 58 I. C. C. 610, and 63 I. C. C. 288. HELD: Rate charged unreasonable to extent it exceeded 50c, reparation awarded. Sugar Bros. Co. v. Y. & M. V. R. R., 96 I. C. C. 97.

(s) Complainant attacked combination and commodity rates charged on 43 cars of seed potatoes in April, May and June, 1922, from Kalispell and other origins in western Montana to destinations in the Yakima district, Washington, as unjust and unreasonable. Forty-two moved G. N. to Spokane and N. P., or O. W. R. R. & N., beyond and one moved over N. P. throughout. On 40 charged commodity rate of 49.5c and on the other three charged 49.5c to junction point and local rate beyond. At the time the shipments moved, the rate to the Yakima district from Minnesota origins, about 1,500 miles, was 113c, and from Pendleton and Athena, Ore., about 200 miles, 20c. On April 1, 1924, the rate from the Minnesota origins to the Yakima district was reduced to 90c. HELD: Rates attacked not unreasonable, complaint dismissed. Northwest Potato Exchange v. G. N. Ry., 96 I. C. C. 187.

(t) Complainant attacked combination rates charged from mines on the Kanawha Central, composed of that carrier's proportional rate of 40c per long ton ton Brounland plus the district rate beyond, as unreasonable. Original decision in 78 I. C. C. 429. HELD: Rates attacked unreasonable to extent they exceeded between June 24, 1922, and July 13, 1923, district rates from Brounland plus $8.50 per car, reparation awarded. Kanawha Black Band Co. v. K. C. Ry., 98 I. C. C. 431.

(u) Complainant attacked combination rate of 71.5c charged on nine cars of sugar beets shipped from Talent, Ore., to Toppenish, Wash., between Nov. 21 and Dec. 8, 1919, as unreasonable to extent it exceeded 20c. Talent is on the main line of the S. P., 336 miles south of Portland, Ore., Toppenish is about 319 miles northeast of Portland on the N. P. Shipments moved over these lines except two which moved over the S. P. &. S. to Pasco, Wash., and N. P. beyond, charged class C of 37.5c to Portland and 34c beyond. In 1918 defendant established a 20c rate limited to expire Dec. 31, 1918, from Talent to Sunnyside and Yakima, Wash. Toppenish lies between these points. Considering the low level of sugar beet rates and the fact that defendant had previously established voluntarily the rate of 20c to points within a few miles of complainant's factory, the rate charged on the present shipments is clearly excessive. HELD: Rate attacked unreasonable to extent it exceeded 20c, reparation awarded. Utah Idaho Sugar Co. v. Director General, 98 I. C. C. 541.

(v) Combination rate on rig irons from Pawhuska, Okla., to Haynesville, La., found unreasonable to extent it exceeded joint commodity rate applicable to Haynesville from many points in immediate vicinity of Pawhuska, and which was blanketed from numerous Oklahoma to Louisiana points for distances equal to and greater than that over route of movement here involved. Reparation awarded. Parkersburg Rig & Reel Co. v. M. V. R. R. Co., 91 I. C. C. 583.

(w) Complainant attacked combination rates charged on 82 cars of pulpwood shipped between Nov. 29, 1919 and Feb. 7, 1920 from Keith, Eberlein Spur and Jones Siding, Wis., to Kaukauna, Wis., as unreasonable. Keith, Eberlein Spur and Jones Siding are on the Wisconsin & Northern, now a part of the Soo Line, 103, 101 and 94 miles north of Appleton Jct., Wis., a junction point with the North Western. Kaukauna is a local station on that line 7 miles beyond Appleton Jct. Shipments moved over W. & N., to Appleton Jct. and Northwestern beyond, charged 6c from Keith and Eberlein Spur and 5.5c from Jones Siding, being combination on Appleton Jct. A joint rate of 5c was established from these points on Nov. 29, 1919, but the tariff in which the rate was published was applicable to interstate traffic only, and the rate was not established on intrastate traffic until Feb. 7, 1920. The present record discloses that the W. & N., was not under federal control and was not joined as a party defendant in this case. The record affords no basis for condemning as unreasonable the 2c factor from Appleton Jct. to destination. HELD, factor of combination rate attacked not unreasonable, complaint dismissed. Kieckhefer Container Co. v. C. & N. W. Ry., 100 I. C. C. 317.

(x) Complainant attacked commodity rates charged on cars of bituminous coal, carloads, during April, 1922 from Folks and Narva, O., on Pennsylvania, to Munhall, Pa., and from Kentucky, Virginia and West Virginia to Clariton, as unreasonable, unjustly discriminatory and unduly prejudicial. The destinations are in the vicinity of Pittsburgh. The coal from the Ohio mines originated on the Pennsylvania. That from the other mines originated on the C. & O., N. & W., or their connections, and moved to destination over the Pennsylvania lines through Pittsburgh from the west., the Pennsylvania thus receiving a line haul both west and east of Pittsburg. Combinations of rates to and from Pittsburgh were charged. The movement was unusual as complainant ordinarily obtains its coal from other sources, in or near the Pittsburgh district, but the 1922 coal strike necessitated purchases elsewhere. Complainant shipped this coal regardless of the rates in order to keep its furnaces in operation. In the meantime it negotiated for joint rates from and to the points considered and in the latter part of April, 1922, such rates were made effective under authorization from the Commission based on a differential of 30c over the rates to Pittsburgh. Although the publication of these rates

was originally intended as a temporary expedient, the carriers have now no objection to continuing them indefinitely. The conditions surrounding the joint line haul from the C. & O., and N. & W., mines differ from those in respect of the Ohio mines, where only a single line haul of the Pennsylvania was or is required. No good reason appears for concluding that the territory just east of Pittsburgh should be opened to the coal from mines on their other lines. HELD, rates from Ohio to Munhall unreasonable to extent they exceeded rates to Pittsburgh plus 30c, rates from other mines not unreasonable, reparation awarded. Carnegie Steel Co. v. Pennsylvania R. R., 100 I. C. C. 353.

(y) Complainant attacked combination commodity rates charged on 31 cars of moulding sand, shipped since Sept. 29, 1922 from Rockport, and Sandale, Ind., to Cleveland, Tenn., as unreasonable and in excess of those applicable. Shipments moved E. & O. V. Ry. to Evansville, Ind., and Southern beyond, charged $3.18 prior to April 17, 1923 and $3.15 subsequent thereto. The tariff naming the rate from Evansville to Cleveland made reference to the combination rule and by using this rule the rates prior to April 17, 1923 would be $2.88 and since that date $2.85. HELD, rates charged inapplicable, and should have been $2.88 and $2.85, reparation awarded. Hardwick Stove Co. v. Southern Ry., 100 I. C. C. 409.

(z) Complainant attacked class and commodity rates charged on 10 cars of cork sheets or slabs without binder shipped between Oct. 17 and Oct. 21, 1922 from Camden, N. J., to El Centro and Brawley, Calif., as unjust unreasonable and unlawful. Routing designated by the shipper was B. & O., L. & N., and S. P., at New Orleans. The shipments were delivered by the B. & O., to L. & N., at Louisville, Ky., and moved thence to New Orleans where they were delivered to the S. P. Complainants contended that delivery should have been made to the L. & N., at Cincinnati and that shipments were misrouted. Charged fourth class of 64c to Louisville and a commodity rate of $1.80 beyond. If defendants had delivered the shipments to the L. & N., at Cincinnati, which is in Group C, the shipments would necessarily have moved through Group K. L. or M., to reach New Orleans and the joint commodity rate would not have applied. Effective May 1, 1924 the restriction on the joint commodity rate of $1.88 was changed so that it became applicable via the L. & N., over the route shipments moved. Present rate is $1.70. Fourth class rate from Camden to St. Louis was 75c and a commodity rate from St. Louis was $1.53, making a combination of $2.28. Complainant contends that the St. Louis combination should be protected under rule 5b of tariff circular 18A. This contention is sound, since the rates to and beyond St. Louis applied via the L. & N., through Louisville and New Orleans. HELD, combination rate of $2.28 properly applicable, shipments overcharged, rates attacked not unreasonable, complaint dismissed. Armstrong Cork & Insulating Co. v. Reading Co., 100 I. C. C. 468.

(aa) Complainant attacked combination rate of 35.5c charged on six cars of wet wood pulp between Feb. 5 and April 7, 1921 from Thomson, N. Y., to Whippany, N. J., as unreasonable to extent it exceeded 25c. Thomson is a local point on the G. & J. Whippany is a local point on the M. & E., 5 miles from Morristown, N. J. Shipments moved G. & J., to Johnsonville, D. & H., to Binghamton, N. Y., D. L. & W., to Morristown and M. & E., beyond 355 miles, charged 7.5c to Johnsonville and sixth class 28c beyond. Wet wood pulp is the primary raw material used in the manufacture of wood pulp boards and various papers, rated sixth class. In central territory, by exceptions to the official classification, it takes 90% of sixth class. In trunk line territory by exceptions wood pulp boards take 90% of sixth class and the same basis applies on wood pulp from practically all points where it is produced from which commodity rates are not named. The rates on wood pulp board from Thomson to practically all points in trunk line territory are on the Glens Falls, N. Y., basis. The sixth class rate from Glens Falls to Whippany at the time of shipment was 31.5c and the rate on wood pulp boards from and to these points was 90% of that rate, or 28.5c, and the same rate applied from Thomson. HELD, rates attacked unreasonable to extent they exceeded 28.5c prior to July 1, 1922 and 25.5c thereafter, reparation awarded. United Paperboard Co. v. G. & J. Ry., 101 I. C. C. 171.

(bb) Complainant attacked combination rate charged on cottonseed hull shavings, carloads, from Hermitage, Tenn., to Peoria, Ill., between Nov. 1, 1921 and July 31, 1922 as unreasonable. Collected 56c prior to July 1, 1922 and 50.5c thereafter, rate charged being combination of class A rate of 42c to Ohio River crossings at Cairo or Metropolis, Ill., or Evansville, Ind., and commodity rate of 14c beyond, the 50.5c rate consisting of class A of 38c to river and 12.5c beyond and that these factors of 42 and 38c to river were in violation of section 1 of the act to the extent they exceeded 15.5c and 14c. Some shipments moved N. C. & St. L., to Metropolis and Burlington beyond, others moved Tennessee Central to Hopkinsville, Ky., and I. C., beyond via Evansville. Hermitage is 11 miles east of Nashville on the main line of the T. C., and branch of the N. C. & St. L. Short line distance is 474 via T. C., Hopkinsville and I. C. HELD, rate attacked unreasonable to extent it exceeded 15.5c and 14c, reparation awarded. Barrett Co. v. N. C. & St. L. Ry., 101 I. C. C. 279.

(cc) Complainant attacked commodity rates charged on 61 cars of mine run coal shipped from Coil and Sunset Mine, Ky., to Bonne Terre, Rivermines, and Leadwood, Mo., between May 20 and 28, 1922 as unjust, unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded $2.70. Shipments moved as routed by shippers over the L. & N., to Nashville, Ill., Missouri, Illinois to Derby, Mo., M. R. & B. T., beyond, applicable rate $3.70 prior to May 27, made $1.74 to Nashville and $1.96 beyond, and $3.55 subsequent thereto, made $1.59 to Nashville and $1.96 beyond. On May 1, 1922, complainant made request for the publication of joint rates from and to the points in question intending to hold these shipments until such rates were published. The coal miners strike of 1922 which was on at that time did not materially affect production at western Kentucky mines and, in order to move the traffic, after conference with the other defendants, represented to complainant that all defendants would join in an application on the informal docket to make reparation on the basis of the joint rate which would be established if complainant would allow the shipments to go forward. Complainant could have availed itself of a lower combination of $3.46 by way of East St. Louis. After the shipments moved the L. & N., refused to join with the other lines in the application on the informal docket on the basis of the joint rate of $2.70 which was established on May 29, 1922. HELD, rate attacked unreasonable to extent it exceeded $2.70, reparation awarded. St. Joseph Lead Co. v. L. & N. R. R., 101 I. C. C. 352.

(dd) Complainant attacked combination commodity rates charged on two cars of sand from Montezuma, Ind., to Illiopolis, Ill., and reconsigned to Buffalo, Ill., as unreasonable. Shipments originated on C. I. & W., moved via that line via Decatur to Springfield, Ill., thence Illinois Traction through Buffalo to Illiopolis. After placement at Illiopolis the cars were ordered reconsigned to Buffalo. Charged 88c per ton to Illiopolis plus reconsignment charge of $6.30, plus 95c per ton Illiopolis to Buffalo. The rate from Montezuma to Buffalo was 88c. The charges assessed were applicable. No evidence is submitted as to the measure of the local rates. In 91 I. C. C. 615, the Commission found that the assessment in addition to the rates to and from the point of reforwarding, of the reconsignment charge provided by a rule similar to the one quoted was unreasonable. HELD, applicable rates charged, not unreasonable, reparation awarded of $6.30 per car, reconsignment charge. Meneely Co. v. C. I. & W. Ry., 101 I. C. C. 389.

(ee) Complainant attacked commodity rate of $3.36 charged on five cars of bituminous coal shipped Nov. 22 and 23, 1920 from Marissa, Ill., to Anderson, Ind., as unreasonable to extent it exceeded $2.40. Marissa is a local station on the I. C., in the Belleville group, this being the most distant group from which rates apply to Indianapolis, Ind. Coal from Indianapolis moves through the Du Quoin and Centralia groups, the former south and the latter north of the Belleville group. Anderson is about 36 miles northeast of Indianapolis, on the Big Four. When the shipments moved no joint rates applied to Anderson. Shipments moved as routed by shipper. I. C., via Paxton, Ill., L. E. & W., to Indianapolis, a distance of 374 miles, charged $1.96 joint rate. The distance between these points over the shorter route of the I. C., and Big Four is 279 miles, the rate being then the same over both routes. Shipments were later re-

consigned to Anderson over the Big Four and a rate of $1.40 was collected for the 36 mile haul. Total distance over route of movement 410 miles and over the shorter route 315 miles. Complainant offered no evidence in support of its prayer for the establishment of a joint through rate. Its sole interest apparently lies in securing reparation. The movement was unusual and its recurrence in the future is unlikely. HELD, rate not unreasonable, complaint dismissed. Municipal Elec. & Water Depts. v. C. C. C. & St. L. Ry., 101 I. C. C. 618.

(ff) Complainant attacked combination commodity rates on common unglazed doors, in straight carloads or in mixed carloads with other forest products, from Oregon and Washington to destinations in trunk line and New England territories. Rates charged were commodity rates from the points of origin to the Mississippi river or to Chicago plus fifth class rates beyond. In 78 I. C. C. 495 the combination rates were found unreasonable to extent they exceeded 115% of the lumber rates, and awarded reparation. No evidence of unreasonableness was offered by complainant. HELD, rates attacked unreasonable to extent they exceeded 115% of lumber rates, reparation awarded. Pacific Mutual Door Co. v. A. A. Co., 101 I. C. C. 633.

(gg) Complainant attacked combination rate of 62c charged on volcanic ash, carloads, from Meade, Kas., to Jersey City, N. J., two years prior to April 15, 1924 as unreasonable to extent it exceeded 48c. Rate charged 24c to Chicago and 38c beyond, distance Mead to Chicago 887 miles and beyond 908 miles. Shipments are made in box cars. Volcanic ash resembles bank sand, and is used by complainant in making scouring cleanser. It exists in vast beds, close to the surface, extending from the Dakotas to Texas. Volcanic sand is less valuable than glass and molding sand, on which the rate is 31.5c from Chicago to Jersey City, 22.5c from St. Louis to Rochester, N. Y., 777 miles, and 24c from St. Louis to Syracuse, 857 miles. HELD, rate attacked unreasonable to extent the factor east of Chicago exceeded 26.5c prior to July 1, 1922 and 24c thereafter, reparation awarded. Colgate & Co. v. P. R. R., 101 I. C. C. 716.

(hh) Ordinarily the rate charged as one factor of a combination on a through movement might well be less than the corresponding local rate covering the same haul. Salt Cases of 1923, 92 I. C. C. 388, 437.

(ii) Combination rates assessed on crushed stone from Cape Girardeau, Mo., to Bowman found unreasonable as compared with lower rates on same and other similar commodities between other points in same general territory for similar and greater distances, as compared with rate prescribed in Memphis Southwestern Investigation, 77 I. C. C. 473, on stone for distance similar to that here involved, and to extent they exceeded lower joint rate subsequently established. Reparation awarded. Edwards Construction Co. v. J., L. C. & E., 93 I. C. C. 370.

(jj) Combination rates on coal from points in the Meyersdale district of Pennsylvania and Fairmont district of West Virginia to New Castle, Del., a local point on the Pennsylvania, found not unreasonable or otherwise unlawful as compared with joint rates maintained by carriers other than the Pennsylvania from these districts to numerous eastern and New England destinations. Shipments moved during abnormal periods of car shortage and the Pennsylvania defends its policy of refusing to join with other coal-originating lines in publishing joint rates to local points on its line on ground that it was unable to find consumers on its own rails for all coal which it originates, and to maintain such joint rates would cause cross-hauling or substitution of two-line for one-line hauls with resulting reduction of transportation efficiency. Moreover, in 62 I. C. C. 49, the commission refused to condemn similar combinations. Chicago Heights Mfrs. Asso. v. B. & O., 95 I. C. C. 83.

(kk) Combination rate on silicate of soda during Federal control, from Livny, Calif., to Los Angeles, Calif., via Fresno, found unreasonable to extent it exceeded lower rate contemporaneously in effect via a longer distant route through Stockton. Following American Agricultural Chemical Co., 66 I. C. C. 650, shipments moved at time when carriers were operated under a unified and coordinated national control and not in competition and it was unreasonable for the director general to maintain a higher rate over one route than contemporaneously applied over the other where such routes were practically the same in length and subject to same transportation conditions.

Reparation awarded. Philadelphia Quartz Co. v. Director General, 95 I. C. C. 593.

(ll) Due to embargo shipments of feldspar from Keene, N. H., to Manchester, Conn., were forwarded over an indirect route to Willimantic, Conn., thence reconsigned to destination. Combination rates assessed found unreasonable, the initial factor to extent it exceeded lower rate subsequently established and equivalent to 90 per cent of sixth class, the basis maintained by carriers in this territory, and the Willimantic-Manchester factor as compared with rates for entire distance via the direct route and with rates and earnings on numerous comparable commodities for like distances. Reasonable rate for the Willimantic-Manchester factor prescribed and reparation awarded. Orford Soap Co. v. B. &. M., 95 I. C. C. 615.

(mm) Combination rates on naphtha and gasoline, in tank-car loads from Hodge, Tex., to Blue Creek, W. Va., exceeded rates on same commodities from Hodge, via Clarksburg, W. Va., to Charleston, W. Va., Blue Creek being intermediate to Charleston over the Clarksburg route. Resulting fourth-section violation was unprotected but subsequently removed and no damage found to result therefrom. Rates, however, found unreasonable to certain specified extent and reasonable rate prescribed for future, with permission to restrict its application to routes other than that via Clarksburg. Reparation awarded. Transcontinental Oil Co. v. A. & V., 96 I. C. C. 136.

(nn) Combination rates on lumber, box shooks, and articles taking lumber rates, from Williams, Flagstaff, and Holbrook, Ariz., to Nogales, Ariz., destined to points in Mexico, found not unreasonable or otherwise unlawful as compared with joint rates from California points to same destinations. The excessive charges complained of accrued solely in the local rate component of the connecting line in Mexico, which is operated as a separate road, is not a party defendant, and is not subject to the commission's jurisdiction. Arizona Lumber & Timber Co. v. A. E. R. R. Co., 96 I. C. C. 203.

(oo) Combination rates assessed on shipments of fruits and vegetables originally consigned from western points to New York, but reconsigned from Croston, N J., a hold point, to Philadelphia and Washington, found illegal to extent that they exceeded those which would have accrued at the joint rates from the point of origin to ultimate destinations, plus a reconsignment charge, the applicable transcontinental tariffs containing no restrictions prohibiting such movement. Freeman Grain Co., 68 I. C. C. 559, Van Dusen Harrington Co., 47 I. C. C. 59. Steinhardt & Kelly v. E. R. R. Co., 96 I. C. C. 229.

(pp) Applicable combination rate assessed on cull apples shipped from Lewiston, Idaho, to San Francisco, Calif., during Federal control, found not unreasonable because the factor Lewiston to Portland, Oreg., over the route of movement exceeded correspondinng factor over a different route. Upon contention by defendant that a combination rate must be considered in its entirety. HELD. It is the measure of the rate assessed for the through service which must be considered. California Packing Corp. v. Director General, 96 I. C. C. 239.

(qq) Combination rates assessed on coal to specific interstate destinations, from Hot Coal, Wyco, Jonben, Tracoal, Devil's Fork, Corinne, and Fireco, West Va., points in the Winding Gulf section of the New River district served exclusively by the Virginian Railway, found unreasonable and unduly prejudicial for the future to the extent they may exceed rates contemporaneously maintained from competing points on the main and branch line of the C. & O., in the New River district to the same destinations. Wyoming Coal Co. v. U. Ry. Co., 96 I. C. C. 359.

(rr) Combination rates assessed on Lepidolite, in carloads, from Embudo, N. Mex., to Wheeling, W. Va., found-unreasonable to the extent they exceeeded lower joint rates on fluorspar a somewhat analogous natural mineral product having similar transportation characteristics, from Silver City to the same destination. Reparation awarded and reasonable rate prescribed for the future. New Mexico Corp. Commission v. A., T. & S. F., 96 I. C. C. 412.

(ss) Combination rates on Tripoli, c. l., from Seneca, Mo., to destinations in central, trunk-line and Canadian territories, found unduly prejudicial to the extent the factor beyond St. Louis exceeds amounts having the same relationship to the sixth-class rates when rates on silica from Tamms, Ill., bear to the corresponding sixth-class rates. St. Louis Traffic Bureau v. A., T. & S. F., 96 I. C. C. 421.

(tt) Combination rates on prepared sizes of anthracite coal, in carloads, from the Pennsylvania field to Newport News, Va., found not unreasonable except to the extent that the rates by way of Cape Charles, Va., exceeded $4.30 per long ton. Relative adjustment found unduly prejudicial to Newport News and unduly preferential of Norfolk and Richmond. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425.

(uu) Present rates from the Southwest to points in Colorado west of Colorado common points are made by combination on the latter points, with rates to Utah common points as maxima. Defendants authorized to continue present basis, subject to the reasonable rates determined upon the basis herein prescribed, to the first point in Utah beyond the Colorado-Utah line as maxima. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 243.

(vv) Carload lumber moved from Delphi, Ind., to Bay City, Mich., where it was placed for unloading but refused by consignee, and upon instructions of shipper was reconsigned to Corry, Pa. The rate applied was the combination rate, and not the joint rate which complainant contends was applicable. HELD: Under the diversion or reconsignment rule governing, the combination rate charged was applicable and not unreasonable. Complaint dismissed. Liberty Cooperage & Lumber Co. v. C., I. & L. Ry. Co., 98 I. C. C. 461.

(ww) Combination rates charged on wheat shipped during Federal control from Colorado points to Antonito, Colo., there milled, and the flour reshipped via Memphis, to Nashville, Tenn., found not unreasonable, as compared with lower joint rates, with milling-in-transit privileges, subsequently established from Durago, Colo., and other intermediate points of origin to Memphis and lower joint rates contemporaneously in effect from Utah common points, with like privileges, to Cairo, Tenn., and Memphis, except to extent that the aggregate of the factors assessed from Antonito to Nashville exceeded a rate herein prescribed as reasonable. Reparation awarded. Conejos Cooperative Mills & Mfg. Co. v. Director General, 98 I. C. C. 515.

(xx) Combination of local rates found applicable on shipment stopped in transit to finish loading, no tariff authority existing for such a stop. Mississippi Pearl Button Co. v. A., T. & S. F. Ry. Co., 98 I. C. C. 560, 563.

(yy) The Commission has condemned the cancellation of combination rules without the substitution of some method of rate publication which would have the effect of holding the rates to their former level or to a level which is affirmatively shown to be reasonable. Combination Rule On Brick, 102 I. C. C. 97, 99.

(zz) Complainant attacked combination rate of $1.15 charged on a car of dried beans shipped Nov. 17, 1921 from Mills, N. M., to Rockdale, Tex., as unreasonable and unduly prejudicial to extent it exceeded 96c. Shipment moved E. P. & S. W., to El Paso, Tex., G. H. & S. A., and S. A. & A. P., distance 1,251 miles, applicable rate $1.33 using 96c to San Antonio plus class C rate of 37c beyond. Contemporaneously a rate of 96c applied from Mills to Rockdale over E. P. & W., to El Paso in connection with the T. & P., and I. & G. N. This rate subsequently became effective via route of movement. HELD, rate attacked unreasonable to extent it exceeded 96c, reparation awarded. Waco Chamber of Commerce v. E. P. & S. W. R. R., 102 I. C. C. 105.

(3a) Complainant attacked combination rate charged on a car of pig iron from Thomas, Ala., on July 12, 1922 to Iola, Kas., reconsigned to Okmulgee, Okla., as in violation of sections 1, 3 and 6 of the act. Charged commodity rate of $9 per long ton to Iola and class D beyond of 36.5c, plus reconsignment charge of $2.25. Although routing via Iola is circuitous, the carriers transporting the shipment are shown as parties to the tariff without restriction as to routing. HELD, overcharges should be refunded, complaint dismissed. United Iron Works v. M. P. R. R., 102 I. C. C. 107.

(3ab) Shipments of printing paper from Lawrence, Mass., to Long Island City, N. Y., found overcharged. There were no joint through rates in effect, and charges were collected on basis of combinations. However, lower combinations contemporaneously in effect were legally applicable. Reparation awarded. Merrimac Paper Co. v. B. & M., 102 I. C. C. 133.

(3ac) Combination rate assessed on lumber from Manchester, Vt., to Cobleskill, N. Y., found unreasonable to extent it exceeded joint commodity rate subsequently established over route of move-

ment. Contention that shipments involved constituted a "transient movement," and that lower rate was established for purpose of handling regular movements, not sustained. Lumber is relatively a low-grade product and generally moves at joint rates less than the combination of locals, and fact that but few shipments moved can not deprive complainants of a reasonable rate on such shipments. Reparation awarded. Harder Mfg. Corp. v. D. & H. Co., 102 I. C. C. 167.

(3b) Complainant attacked combination rates charged on 13 cars of crude clay during May, June and July, 1924 from Langley, S. C., to Cartersville, Ga., as unreasonable. Langley is on the Southern 8 miles from Augusta, Ga. Cartersville is on the L. & N., S. A. L., and N. C. & St. L., 47.6 miles northwest of Atlanta, Ga. Shipments moved over Southern by way of Columbia, S. C., to Atlanta and N. C. & St. L., to destination, distance 401 miles. Nine of the shipments were specifically so routed; the remainder were unrouted. Charged $1.47 to Atlanta and $1.12 beyond. On Oct. 13, 1924 a joint rate of $2.59 became effective. HELD, rate attacked not unreasonable complaint dismissed. Thompson Weinman & Co. v. Southern Ry., 102 I. C. C. 247.

(3c) Complainant attacked combination rate charged on rough oak staves and headings, in carloads, from Cherokee, Ala., to Jackson, Miss., as unreasonable. Cherokee is 129 miles east of Memphis, Tenn., on the southern and the distance from Memphis to Jackson over the I. C. is 211 miles. Complainant specified routing via Memphis and I. C., charged 8.5c to Memphis and 17c beyond. Defendants expressed willingness to publish a rate of 22.5c for the future. HELD, rate attacked not unreasonable, complaint dismissed. Chess & Wymond v. A. & V. Ry., 102 I. C. C. 282.

(3d) Complainant attacked commodity combination rate charged on a car of cedar posts shipped March 2, 1923 from Starks Spur, Minn., to Deer Creek, Ill., as unreasonable and illegal to extent it exceeded 37.5c, rate charged 39c. Shipment moved over M. & R. R., to Deer River, Minn., G. N., and Burlington to Peoria, Ill., and L. E. & W., beyond, charged 8c to Deer River and 31c beyond. The tariff named the latter rate contained reference to Jones tariff providing rule for constructing combination rates. All defendants, except M. & R. R., were a party to the latter tariff. HELD, rate applicable 37.5c, reparation awarded. MacGillis & Gibbs v. L. E. & W. Ry., 102 I. C. C. 333.

(3da) Combination rate charged on cedar posts from Starks, Minn., to Deer Creek, Ill., found inapplicable. Tariff naming rate assessed contained reference to another tariff which provided rules for constructing combination rates and application of those rules produced a lower rate. Refund directed. MacGillis & Gibbs Co. v. L. E. & W., 102 I. C. C. 333.

(3db) Combination rates on furniture from certain points in Indiana, Michigan, New York, and West Virginia to Little Rock, Pine Bluff, and Fort Smith, Ark., found not unreasonable as compared with rates subsequently established pursuant to Memphis-Southwestern Investigation, 77 I. C. C. 473, and which resulted in removal of fourth-section departures protected by appropriate applications and in a reduction in general level of rates on this traffic. Combination basis was maintained on furniture and numerous other commodities from origins in question to all points in Arkansas, except to those located in the Arkansas-Louisiana group. Moreover, earnings under rate found justified in 25 I. C. C. 299 compare favorably with those here assailed. Eads Bros. Furniture Co. v. B. & O., 102 I. C. C. 381.

(3e) Complainant attacked combination rates charged on furniture, carloads, to Little Rock, Pine Bluff, and Ft. Smith, Ark., from Indiana, Michigan, New York and West Virginia, between April 9, 1922 and Nov. 27, 1923 as unreasonable. The applicable rates were combinations on Chicago or East St. Louis, Ill., Memphis, Tenn., Mitchell, Seymour or North Vernon, Ind., whichever was lowest. The rates on furniture to the Arkansas-Louisiana group from all the origins mentioned and to the complaining points from Chicago and the Louisville territory were based on differentials over St. Louis, but the rates to the complaining points from the other origins were based on the lowest combination. The rates from the latter were lower in certain instances to the Arkansas-Louisiana group than to the complaining points. On Nov. 27, 1923, the rates on all furniture from St. Louis became 70c to Little Rock, 74c to Pine Bluff, 76c to Fort Smith, 80c to Hope, 82c to Texarkana, 83c to McNeil and Ashdown, and 86c to Shreveport pursuant to 77 I. C. C. 473. On the same

date the carriers established rates on all furniture to these destinations from all origins indefined territories on the basis of the class A differentials over St. Louis. This resulted in the removal of fourth section departures and in a reduction in the general level of rates on this traffic. It is to the basis of the rates thus established to the complaining points that reparation is sought. Both carriers and shippers in this territory have generally recognized that in most instances substantial justice would not be advanced by awarding reparation on previous shipments to the basis of rates established on Nov. 27, 1923 and where certain shippers have urged otherwise the Commission has found their contentions to be without merit. HELD, rates attacked not unreasonable, complaint dismissed. Eads Bros. Furniture Co. v. B. & O. R. R., 102 I. C. C. 381.

(3f) Complainant attacked combination rates charged on four cars of sugar between July 9 and July 29, 1921 from Brigham and Spanish Fork, Utah to Breckenridge, Tex., as unreasonable. The points of origin are in Utah common point territory. Breckenridge is about 100 miles west of Fort Worth, Tex., in Texas common point territory. It is the terminus of the Cisco & Northeastern, extending 28 miles north from Cisco, Tex., where it connects with the MKT. Distances 1,837 and 1,987 miles, charged $1.145 to Cisco and 20.5c beyond. When these shipments moved there were no joint through rates in effect to points on the Northeastern. Under the stress of competition of other carriers which entered Breckenridge subsequent to the advent of the Northwestern, the latter carrier on Sept. 15, 1921 established to points on its line joint through rates on sugar on the Texas common point basis of $1.145 from Utah and Idaho producing points. HELD, rate attacked not unreasonable, complaint dismissed. Utah Idaho Sugar Co. v. C. & N. E. Ry., 102 I. C. C. 388.

(3g) Complainant attacked combination rates charged on mine timbers, mine props, mine caps, mine ties, and kindred articles from points in Missouri on the M. P., Frisco, Bonne Terre to destinations in Illinois as unreasonable. When complainants shipments were made the rates on mine timbers were generally the combination of local rates to and from the Mississippi river. In 87 I. C. C. 622 these rates were found unreasonable to extent they exceeded a scale of rates then prescribed. HELD, rates attacked unreasonable to extent they exceeded rates prescribed in 87 I. C. C. 622, reparation awarded. Collins Timber Co. v. B. & O. R. R., 102 I. C. C. 467.

(3h) Complainant attacked commodity rates on wheat and coarse grain from points in Iowa on the Atlantic Northern to Council Bluffs, Ia., on the Rock Island, for application on shipments to points beyond Council Bluffs in states other than Iowa, as unreasonable and unduly preferential of Kansas City, Mo., Chicago, Ill., and St. Louis, Mo. The Atlantic Northern extends north from Atlantic, Iowa on the Rock Island, 60 miles east of Council Bluffs to Kimballton, Iowa, 17 miles. The maximum haul to Council Bluffs is 77 miles. Present rates from stations on the Atlantic Northern to Council Bluffs are combinations of distance rates to and from Atlantic, prescribed by the Iowa Commission, and are 20c on wheat and 18c on coarse grain from Kimballton and 19.5c and 18c from the other stations. The basis sought is 0.5c higher than that applying from stations on the Rock Islands Audubon branch, which extends 25 miles north from Atlantic and parallels the Atlantic Northern at cross country stations of from 5 to 8 miles. That is the basis also from stations on the Atlantic Northern to Kansas City, Chicago and St. Louis, in connection with the Rock Island, or the Rock Island and connections beyond Atlantic. The rates for interstate application to Council Bluffs from all short line connections of the Rock Island in Iowa are combinations on junction points, but on intrastate shipments to Council Bluffs and between all points in Iowa, the rates over two lines are 80 per cent of the combination. The rates to Omaha from Atlantic Northern stations are made 1c higher than to Council Bluffs. HELD, present rates from stations on the Atlantic Northern to Council Bluffs in connection with Rock Island beyond Atlantic interstate unreasonable, and that reasonable proportional rates would not exceed 14.5c on wheat and 13c on coarse grain from Kimballton and 13.5c and 12c from intermediate points. Omaha Grain Exchange v. A. N. Ry., 102 I. C. C. 533.

(3ha) Combinations of distance rates on wheat and coarse grain from points in Iowa to Council Bluffs for application

on shipments to interstate points beyond Council Bluffs found unreasonable and reasonable proportional rates prescribed. Omaha Grain Exchange v. A. N. Ry., 102 I. C. C. 533.

(3hb) Combination rate assessed on sporadic shipments of ash staves from Fort Lynn, Ark., to Gulfport, Miss., found unreasonable to extent it exceeded lower combination contemporaneously in effect over route of movement, which would have been applicable in absence of joint rate under ruling of commission in 18 I. C. C. 162, wherein principle was laid down that fair measure of reasonableness of a joint rate that exceeds a combination between same points via same route is the lowest combination that would lawfully apply if the joint rate were canceled. Reparation awarded. Hollingshead Co. v. T. & P. Ry., 102 I. C. C. 603.

(3hc) It is elementary that total charge under a through rate made on a combination basis may or may not be unreasonable because one factor is unreasonable. Wortham-Carter Publishing Co. v. Director General, 102 I. C. C. 729, 738.

(3i) Complainant attacked combination rate charged on two cars of soap stone furnace linings, shipped March 4 and 5, 1920 from Schuyler, Va., to Kaukauna, Wis., as in excess of applicable rate. Shipments moved over N. & A., 5 miles to Rockfish, Va., thence Southern and connecting lines. Charged combination on Rockfish using commodity rate of 9c to that point. At the time these shipments moved the only tariff item published to Rockfish applicable to soapstone products applied on "soapstone manufactured and in slabs, C. L., and less C. L., not exceeding 20 miles, 9c per 100 pounds. Contemporaneously the classification named sixth class on soapstone or talc, linings, fire box or furnace, carloads, 6c. The articles shipped by complainant are clearly comprehended within the commodity description "soapstone manufactured and in slabs." The fact that the classification description more specifically describes the article shipped does not prevent the commodity rate from applying. HELD, rates attacked legally applicable, complaint dismissed. Thilmany Pulp & Paper Co. v. N. & A. Ry., 104 I. C. C. 186.

(3j) Complainant attacked combination rates to and from Gorman, Tex., on a car of tank steel shipped May 13 1919 from Petroleum, Okla., to Gorman, thence reconsigned to Rangor, Tex., as unlawful to extent they exceeded charges based on joint through rate. Shipment was originally billed to complainant at German, routed over Midland Valley and MKT. On May 17 prior to its arrival Gorman, routed over Midland Valley and bill of lading to the MKT with instructions to divert the shipment to Ranger, a point on the T. & P. As an embargo was then in force against Ranger it also forwarded a copy of the diversion order to the T. & P., with request that the latter notify the MKT that the shipment would be accepted when offered. It appears that the MKT returned the bill of lading to complainant with the advice that diversion could not be accomplished until the permit was secured. The shipment arrived at Gorman May 20. At 4.16 p. m. of the same date the T. & P., wired the M. P., authority to divert the shipment to Ranger in accordance with complainants instructions. Charged combination rate of 89c composed of commodity rate of 62.5c to Gorman and fifth class 26.5c beyond. The 62.5c rate was a joint commodity rate then in effect on this traffic from Petroleum to Gorman and points grouped therewith, including Ranger. In the absence of a copy of the record showing that the car was actually placed for unloading at Gorman, the weight of the evidence is that it was not so placed. HELD, through rate of 62.5c was applicable, reparation awarded. Prairie Oil & Gas Co. v. M. V. R. R., 104 I. C. C. 252.

(3k) Complainant attacked combination rates charged on 5 cars of sand and gravel from South Beloit, Ill., and two cars of cement from Buffington, Ind., shipped during July 1924 to Darien, Wis., and reconsigned at the latter point to Vaughn Siding, Wis., as unreasonable and unjust. The material all moved through Bardwell, Wis., in reaching Darien. Darien is on the C. M. & St. P., and Vaughn Siding is on the C. H. & G. L. Ry. In order to accomplish the reconsignment it was necessary to back haul the sand and gravel 2.5 miles from Darien to Bardwell and the cement 11.1 miles from Darien to Walworth. Shipments of sand and gravel moved from South Beloit over the Milwaukee through Darien, and Walworth and the C. H. & G. L., 29.9 miles, and the cement moved over the E. J. & E., to Rondout, Ill., Milwaukee through Darien to Walworth, and C. H. & G. L., 176.5 miles. On sand and gravel, applicable distance commodity rates of 2.8c up to Darien, 2.6c Darien

to Walworth and a charge of $15 per car from Walworth to Vaughn Siding plus a charge of $6.30 per car for reconsignment at Darien were applied. On the cement, a commodity rate of 10.5c was applied from Buffington to Darien, and a class E rate of 11c from Darien to Vaughn Siding, plus $6.30. There was contemporaneously in effect on cement a lower combination rate of 10.5c from Buffington to Darien, 7c Darien to Walworth and $15 per car beyond, plus $6.30. Shipments overcharged. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Fess v. C. H. & G. L. Ry., 104 I. C. C. 262.

(3l) Complainant attacked commodity combination rate charged on nine cars of evaporated milk from Lamar, Colo., to Dawson, N. M., between May 21, 1921 and June 29, 1923 as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded the rates from Pueblo. Lamar is a local point on the A. T. & S. F., 53 miles east of La Junta, Colo. Dawson is a local point on the E. P. & S. W., 18 miles west of French, N. M. Lamar is not a Colorado common point and rates therefrom to destinations west of La Junta are generally based on the combination on that junction. Distance Lamar to Dawson 207 miles, charged 80.5c prior to July 29, 1922 and 70c on those which moved after that date. The rate from Pueblo prior to July 1, 1922 was 66c and subsequently 59.5c. So far as the record shows the shipments considered in this proceeding are the only ones which have moved to Dawson from any point within the past five years. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Helvetia Milk Condensing Co. v. A. T. & S. F. Ry., 104 I. C. C. 402.

(3m) Complainant attacked combination rates charged on internal combustion engines to Texas from Buffalo, N. Y., Springfield, O., and Mount Vernon, O., and from Mount Vernon to Gorden, Tex.; on pumps from Canton, Ohio to Gordon; on boilers from Covington, Ky., to Brazos, Joshua, and Gainesvville Tex.; and on fuel economizers from Readville, Mass., to Joshua as unjust and unreasonable. The commodities in issue were installed as an integral part of the machinery in the stations or plants, the major portion of the movement consisting of internal combustion engines of about 160 horsepower. They all come under the general heading of machinery, which takes Class A in the western classification. Complainant concedes that, with the exception of the heat exchanges, they are all of the same general character and should take the same rates. Heat exchanges are used in gasoline plants for the transfer of heat between the hot and cold mineral seal oils used in the extraction of gasoline from natural gas. They do not produce any power of themselves. The destinations other than Duncan and Wynewood are all in Texas common point territory. The rate from Mount Vernon to the Oklahoma points is 142c, composed of class A from St. Louis of 117c and plus arbitrary of 24c. The rates to the Texas points are from Buffalo 150c, composed of class A from St. Louis of 120c plus 30c; from Springfield 135.5c, or 16.5c over St. Louis; and from Covington 132c or 12c over St. Louis. There was a rate of 84c applicable on valves and other pipe fittings, minimum 46,000 pounds and with respect to the other commodities on basis of the distance rates prescribed on oil well supplies and agricultural implement from St. Louis to Arkansas and western Louisiana in 77 I. C. C. 473, plus 75 per cent of the fifth class from Painted Post and Readville to St. Louis, or 75 per cent of the class A arbitraries over St. Louis from the other origins, and the water and rail rates from Painted Post and Readville to be based on the same percentage relationship to the corresponding rail rates as at present. No persuasive reason appear for differentiating between any of the commodities in issue and other machinery or machines taking class A rates. While heat exchangers do not generate power, they appear to be of more elaborate construction than valves or pipe fittings and may be properly considered a part of the plant machinery. On traffic from defined territories, the maintenance of the same rates to all Texas common points and of somewhat lower rates to Houston and other destinations in southeastern Texas is chiefly the result of the competition between the rail routes via St. Louis and other gateways, on the one hand, and the water and rail routes via the Gulf ports, on the other. HELD, rates attacked not unreasonable, complaint dismissed. Lone Star Gas Co. v. A. T. & S. F. Ry., 104 I. C. C. 623.

(3n) Complainant attacked combination rate charged on a carload of chestnut hard coal shipped during July 1918

to Uniondale, Ind., from Dunmore, Pa., as inapplicable. Charged combination rate of $4.70 composed of $2.00 to Salamanca, N. Y., plus $2.10 beyond. The supplement containing the combination rule made no reference to the tariff naming the $2.60 rate to Salamanca, nor did the latter contain any reference to the rule. The combination rate on March 26 1918 was $3.60 composed of $2 to Salamanca plus $1.60 beyond, and by adding 15c as provided by the rule, complainants arrived at a rate of $3.75. This rate was applicable on the shipment by virtue of the publication of the rule in a supplement to the tariff naming what would otherwise have been one of the factors of the through rate. HELD, rate charged inapplicable, applicable rate $3.75, reparation awarded. Miller & Brickley Grain Co. v. Director General 107 I. C. C. 81.

(3o) Complainant attacked combination rates charged on 63 cars of pulpwood from Soo Junction and Hendrie, Mich., to Sartell, Minn., during Sept. Oct. and Nov. 1920, as unreasonable, unjustly discriminatory and unduly prejudicial. On 46 of the shipments complainants instructions to the originating carrier, the South Shore, contemplated a movement over the Soo Line from Trout Lake, Minn., to Minneapolis and N. P., beyond. The combinations applicable over that route were 32c from Soo Junction and 31.5c from Hendrie, composed of distance rates of 4.5c and 4c, to Trout Lake, 20.5c to Minneapolis and 7c beyond. The remaining 17 shipments were unrouted. All of the shipments were forwarded over the South Short to Superior and the N. P., via Brainerd, Minn., beyond. Over that route the rate charged was a combination of 23c to Superior and 10c beyond. When these shipments moved the rate on wood pulp, the manufactured product of pulpwood, from Sault Ste Marie, Ont., to Cartell was 22.5c. The rate on pulpwood to Sault Ste Marie was 6c from Soo Junction and 7.5c from Hendrie. Pulpwood could, therefore, have been shipped from Soo Junction and Hendrie east to Sault Ste Marie, and the product, wood pulp, could have been backhauled to Soo Junction 47 miles from Sault Ste. Marie, and thence moved to Sartell Junction over the route traversed by these shipments for 28.5c from Soo Junction and 30c from Hendrie. HELD, applicable rate unreasonable to extent it exceeded 22.5c reparation awarded. As between the South Shore and the Northern Pacific divisions should be 14.5c to the South Shore and 8c to N. P., no order being made as to divisions. Watab Paper Co. v. N. P. Ry., 107 I. C. C. 131.

(3p) Complainant attacked combination rate charged on a carload of fabricated steel tank material from Parkersburg, W. Va., to Riverton, Wyo., Jan. 21, 1922 and a carload of rig iron outfits from and to the same points Feb. 4, 1922 as unreasonable and unduly prejudicial. Shipments moved over B. & O., to Chicago and Northwestern beyond, 1,703 miles. Charged combination rate of $1.99 composed of fifth class of 40.5c to East Clinton, Ill., and a commodity rate on oil well outfits and supplies of $1.585 beyond. This was the applicable rate on the rig iron outfits. The applicable rate on the tank material was $1.925 made up of fifth class of 37c to Chicago and commodity rate on iron and steel articles of $1.555 beyond. Reparation is sought to basis of a rate of $1.735 made up of fifth class rate of 37c to Chicago and a commodity rate of $1.365 beyond. The latter rate was contemporaneously applicable from both Chicago and the Mississippi river crossing to Riverton over the route of movement on tructural iron and steel, fabricated or unfabricated. At the time of movement defendants maintained a commodity rate of $1.64 on fabricated steel tank material and rig irons, carloads from Parkersburg, Wyo., to Casper, Wyo., 1,578 miles. Defendants admit they can not defend a rate higher than $1.735 on the shipment of fabricated steel tank material, but intimate that a rate somewhat higher might properly be applied on rig iron outfits, in view of the fact that the latter are rated class A and the former fifth class in the western classification. HELD, rates attacked unreasonable on fabricated steel tank material to extent it exceeded $1.735, and on rig iron outfits $1.69 or 85 per cent of the rate on oil well outfits and supplies. Reparation awarded. Parkersburg Rig & Reel Co. v. C. & N. W. Ry., 107 I. C. C. 187.

(3q) Complainant attacked combination rates charged on two cars of hay, one shipped April 9, 1923, from Prospect, O., and the other April 17, 1923 from Delaware, O., to Waynesville, N. Y., as unreasonable. Shipments were tendered to the Hocking Valley, unrouted, and moved over that line to Columbus, O., where they were delivered to the B. & O., and Big Four, and moved over those

lines to Cincinnati, O., thence to destination over the C. N. O. & T. P., and Southern, 602 and 624 miles, charged 60.5c from Delaware and 61.5c from Prospect, composed of fifth class rates of 21 and 22c to Cincinnati and class D rate of 39.5c beyond. The rates on hay, car loads, to Columbus were fifth class rates of 13c from Delaware and 14.5c from Prospect. From Columbus to Waynesville the rate on hay was a class D rate of 39.5c, this latter rate not being applicable over either the B. & O., or Big Four. However, the shipments could have moved beyond Columbus over the N. & W., to St. Paul, Va., C. C. & O., to Marion, N. C., and Southern beyond, 641 and 653 miles, respectively. HELD, shipments misrouted by the Hocking Valley, reparation awarded. Dewey Bros. Co. v. H. V. Ry., 107 I. C. C. 303.

(3r) Complainant attacked combination rate of 28.5c charged on eight cars of feldspar between Nov. 13 and Dec. 12 1922 from Keene, N. H., to Manchester, Conn., as unreasonable to the extent that the component factors of 17c to Willimantic, Conn., and 11.5c beyond, exceeded 15.5c and 7c, respectively. In 95 I. C. C. 615, Commission found them unreasonable to that extent and awarded reparation. HELD, original decision affirmed. Oxford Soap Co. v. B. & M. R. R., 107 I. C. C. 338.

(3s) Complainant attacked combination rates charged on 13 cars of solid asphalt in iron barrels and drums shipped from Port Arthur and West Port Arthur, Tex., to Porter, Ind., between June 13 and 28, 1921 and on Feb. 17, 1923 and delivered between June 24 and July 18, 1921 and on March 1, 1923 as unreasonable and in violation of the fourth section. Applicable rates based on Chicago combination. Contemporaneously a lower combination, to the basis of which complainant sought reparation, was in effect on Whiting, Ind. The governing tariff was so restricted that the Whiting combination could not be applied. Effective April 5, 1924, a joint rate of 34.5 was established. HELD, rates attacked unreasonable to extent they exceeded the Whiting combination, reparation awarded. Sall Mountain Co. v. A. T. & S. F. Ry., 107 I. C. C. 395.

(3t) The restriction of the combination rule was tantamount to the absence of the combination rule and the tariff containing the restriction must be construed as if it contained no rule. Poston Brick Co. v. Ill. Traction, 107 I. C. C. 507, 508.

(3u) Complainant attacked combination rates charged on one car of grapefruit shipped Feb. 4, 1922 from Bowling Green, Fla., to St. Paul, Minn., and reconsigned in transit to Wausau, Wis., as unjust and unreasonable and in violation of the fourth section to extent it exceeded a rate of $1.28 per box to Duluth, Minn. Shipment moved over A. C. L., and connections to Chicago and Milwaukee beyond, charged $1.11 per box to Milwaukee, Wis., and 46c beyond, the $1.28 later being published to Wausau. The haul to Albert Lea and Eau Claire is substantially the same as that to Wausau and that to Duluth is considerably greater. Defendants make no attempt to justify the lower basis to those points, nor does the record afford justification for the maintenance of the higher rate to Wausau. HELD, rate attacked unreasonable to extent it exceeded $1.28 per box, reparation awarded. Murphy v. A. C. L. R. R., 107 I. C. C. 651.

(3v) In 88 I. C. C. 593 the Commission found not unreasonable or unduly prejudicial the commodity rate prior to August 26, 1920 of 31.5c and 44c on and after that date, charged on 70 cars of wrapping paper shipped between July 17, 1920 and Dec. 25, 1921 from Madison, Me., to New Hope, Pa. The rate of 44c from Madison to New Hope was composed of proportional commodity rate of 12.5c to Brunswick, Me., and joint commodity rate of 31.5c beyond. From Enfield and Lincoln, producing points on the main line of defendant and from Howland and Motague, located 4 miles from Enfield on a branch line extending from that point, there was a proportional commodity rate of 6.5c to Brunswick. The proportional rate from Madison was reduced to 6.5c on Dec. 26, 1921 making the through rate to New Hope 38c, the same as from the other points named. The distance from Madison to Brunswick is 79 miles, whereas from Enfield, Howland, Montague and Lincoln the distances to the same point range from 143 to 152 miles. HELD, rates attacked unreasonable to extent they exceeded 38c, reparation awarded. Universal Paper Bag Co. v. Me. Central R. R., 107 I. C. C. 661.

(3w) Combination rates on fuel oil from Pryse, Ky., to Newport News, Va., found unreasonable to the effect it exceeded a lower combination contempor-

aneously in effect via the route of movement, one factor of which was so limited as to exclude its application to destinations in Virginia. Subsequent to the movement, the application of this factor was extended to include these destinations. Newport News Shipbuilding & Dry Dock Co. v. L. & N. R. R. Co., 100 I. C. C. 1.

(3x) Application of full combination basis to continuous mileage would tend to force movement of traffic to points local to line of originating carrier, a practice which commission has uniformly condemned, holding that if a shipper pays a reasonable amount for transfer at interchange points he is entitled to a continuous-mileage basis of rates and that a scale of rates for joint-line application higher than the single-line scale approved in 15 I. C. C. 109 (the Beatrice scale), by an amount sufficient to cover the terminal service at interchange and with provision for an additional charge for drayage where necessary, would effect a reasonable adjustment, having due regard for the rights of both shipper and carrier. Kirschbraun & Sons., Inc., v. G. N. Ry. Co., 100 I. C. C. 28, 36.

(3y) Combination rates to Petaluma, Calif. composed of commodity rates to San Francisco, plus local commodity rates beyond, assessed on shipments of grain and grain products from certain points in Utah, Idaho, Montana, Wyoming and Oregon, on the Oregon Short Line, found not unreasonable, but failure to accord Petaluma the San Francisco basis of rates while contemporaneously maintaining that basis to San Francisco, Oakland, San Jose, South Vallejo, Stockton, Woodland and Marysville, Calif., found to be unduly prejudicial to Petaluma and unduly preferential of San Francisco, Oakland, San Jose, South Vallejo, Stockton, Woodland, and Marysville, points with which Petaluma comes into competition. Undue prejudice ordered removed. Golden Eagle Milling Co. v. B. E. R. R. Co., 100 I. C. C. 41.

(3z) Combination rate assessed on a shipment of lumber from Rose Lake, Idaho, to Danvers, Ill., found inapplicable and illegal to extent it exceeded the rate applicable to both Chicago Heights and Peoria, Ill. Danvers is intermediate between Peoria and Chicago Heights, and while the tariff carrying the rate to these points did not prescribe a specific rate to Danvers, it carried an intermediate clause. The commission has frequently found that if carriers desire to restrict the application of a joint rate to any particular route they should do so by clear and unequivocal language. With no routing restrictions shown in the tariff naming the joint rate sought, the shipment is properly entitled to such rate. Reparation awarded. Rose Lake Lumber Co., Ltd., v. O. S. L. R. R. Co., 100 I. C. C. 221.

(4a) Factor from Appleton Junction, Wis, of combination rates on pulp wood, shipped during Federal control, from Keith, Eberlein Spur, and Jones Siding, Wis., to Kaukauna, Wis., found not unreasonable as compared with a lower joint rate contemporaneously in effect applicable to interstate traffic only, and subsequently established on intrastate traffic. The originating carrier was not under Federal control and was not joined as a party defendant, and the jurisdiction of the commission is therefore limited to the participation of the line beyond the junction point during the period of Federal control. Electric Coal Co., 60 I. C. C. 683. Kieckhefer Container Co. v. C. & N. W. Ry. Co., 100 I. C. C. 317.

(4b) Combination rates on lumber from Roach and Springdale, Fla., and Scott, Ga., to Harrison and Jersey City, N. J., and Great Works, Me., stopped in transit at Portsmouth, Va., found applicable, but found unreasonable to extent they exceeded lower contemporaneous combination rates based on Live Oak, Fla., and Savannah, Ga., plus a transit charge. Reparation awarded. McClave & Son v. C. L. R. R. Co., 100 I. C. C. 405.

(4c) Combination rate assessed on cork sheets or slabs without binder from Camden, N. J., to El Centro and Brawley, Calif., found inapplicable. Joint rate alleged applicable was restricted by exception to exclude shipments passing en route through points taking Group K, L, or M rates, and complainant's shipments were therefore not entitled to the joint rate. They were, however, entitled to a lower combination based on St. Louis, applicable under rule 5 (b) of Tariff Circular 18-A. Refund of overcharges directed. Armstrong Cork & Insulation Co. v. Reading Co., 100 I. C. C. 468.

(4d) Combination rates applicable on shipment of wheat from Nebraska City, Nebr., to Kansas City, Mo., reconsigned to Westwego, La., found not unreasonable but found to have been in violation of the fourth section of the act to extent they exceeded joint commodity rates contemporaneously applicable from farther distant points over route of movement. No damage found to have resulted from such violations and complaint dismissed. Moore-Lawless Grain Co. v. C., B. & Q., 101 I. C. C. 52.

(4e) Complainant attacked combination rates charged on sand carloads, between Jan. 1 and Oct. 1, 1923 from Petersburg and Old Dominion Siding, Va., to Bunyan and Marsden, N. C., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section four. During the period from May 25 to June 19, 1923, 22 cars moved over A. C. L., to Wilson, N. C., and Norfolk Southern beyond, 174.5 miles, charged $1.60. Applicable rate was $2.06, composed of commodity rates of 76c to Arundel Siding, Va., and $1.60 beyond, subject to combination rule, shipments undercharged. Other shipments moved prior to May 9, 1923 over A. C. L., to Washington, N. C., W. & V., to W. & V., Jct., N. C., and N. S., beyond, 144.8 miles, charged $1.85. Effective Oct. 25, 1923 the rate from Petersburg to Bunyan over route of movement was reduced to $1.40 per ton. HELD, rates attacked unreasonable to extent they exceeded $1.40, reparation awarded. Raleigh Chamber of Commerce v. N. S. R. R., 109 I. C. C. 52.

(4f) Complainant attacked combination rate charged on 4 cars of ground limestone shipped in May and July 1924, from Ladds, Ga., to Henry, Tenn., as unjust and unreasonable and in violation of section 6. No joint rates in effect, rate applicable $2.63 constructed under the combination rule published in Jones I. C. C. U. S. 1. HELD, rate applicable $2.63, undercharges should be collected, complaint dismissed, rate attacked not unreasonable. Ladd Lime & Stone Co. v. L. & N. R. R., 109 I. C. C. 251.

(4g) Complainant attacked combination rate applicable on 34 cars of yellow pine piling from Lumberton and Ansley, Miss., to Bamfield, Mich., as unjust and unreasonable. Shipments moved from August 26, 1922 to Jan. 6, 1923, applicable combination 56.5c based on Au Sable, Mich. Bamfield is about 27 miles from Au Sable, Mich., on the Detroit & Mackinac. A rate of 50c was established to Comins, Bamfield being intermediate. HELD, rate attacked unreasonable to extent it exceeded 50c, reparation awarded. Edward Hines Yellow Pine Trustees v. C. S. & M. R. R., 109 I. C. C. 387.

(4h) Complaint attacked combination of rates over Lumberton, Miss., on forest products and naval stores, carloads, from Barth Kiln and Loretta to interstate destinations, and on coal, carloads, to the same points, and, as compared with blanket rates accorded complainants competitors unjustly discriminatory and unduly prejudicial. During 1921 and 1922 complainant constructed a line of railroad extending from Kiln, its southern terminus, in a northerly direction through Barth and Loretta to Lumberton, distance 52 miles. Blanket or group rates were generally applicable on lumber and naval stores from Lumberton and points in surrounding territory in the lower Mississippi valley. Subsequently the group rates were made applicable from Barth Kiln and Loretta. HELD, rates attacked not unreasonable or unjustly discriminatory, and undue prejudice was removed by subsequent establishment of through rates, complaint dismissed. Hines Yellow Pine Trustees v. A. C. & Y. Ry., 109 I. C. C. 453.

(4i) Complainant attacked combination rates charged on pulp wood, carloads, from Minnesota and Michigan to Wisconsin Dam, Wis., as unreasonable, unjustly discriminatory and unduly prejudicial. Wisconsin Dam and Kings are on the M. T. & W. Ry., called the Marinette. Distances to Wisconsin Dam are 6, 8.8 and 19.4 miles, respectively, from Tomahawk, Bradley and Harrison, the junction points with the trunk lines and to Kings they are 3.6, 9 and 9.8 miles respectively. As far as interstate rates are concerned, complainant and intervenor confine their attack to the rates from Duluth, Minn., or other gateways at the head of the lakes, to Wisconsin Dam and Kings, as applied on traffic originating at Minnesota points. Pulpwood from Minnesota to Wisconsin points usually moves on combination of proportionals to and from Duluth, Superior or other gateways. To the gate-

ways the rates are based on the scale prescribed in 27 I. C. C. 83. Beyond the gateways for single line hauls defendants usually apply a scale about equivalent to the scale prescribed by the Wisconsin Commission for two line hauls in that state, and 1.1c higher than the intrastate single line scale. This difference of 1.1c between the interstate and intrastate scales is accounted for by the addition of an arbitrary of that amount for the haul between Duluth and Superior. For the movement over the Marinette beyond the various trunk line connections that road assesses its local distance rates of 3.5c for 15 miles and under, 4c for 25 miles and 4.5c for greater distances. The short line distances from Duluth to Wisconsin Dam and Kings, are 188.4 and 188.6 miles, over the Soo to Bradley and thence Marinette. Present rate over that route is 10.4c composed of 6.9 and 3.5c to and from Bradley. The gravamen of the complaint is the addition of the full local rates of the Marinette to the trunk line junction point rates. HELD, rates attacked not unreasonable or unduly prejudicial execept rates on pulpwood, carloads, from Minnesota points to Wisconsin Dam and Kings, Wis., when routed from Duluth or Missabe Junction, Minn., over the Soo via Bradley thence M. T. & W., on and after Feb. 1, 1924 are unreasonable to extent the factor from Duluth or Missabe Junction to destinations exceeds 9c, reparation awarded. Tomahawk Kraft Paper Co. v. C. & N. W. Ry., 109 I. C. C. 517.

(4j) Complainant attacked combination rates or local rates plus transit charge on 14 cars of iron and steel articles shipped between Dec. 1, 1921 and Oct. 31, 1922 from Pennsylvania and Ohio to Parkersburg, W. Va., there fabricated in transit, and reforwarded to destinations in Kentucky and to New Orleans, La., for export to Mexico, as unjust and unreasonable; that denial by defendants of fabrication in transit in connection with joint rates over certain routes to points south of the Ohio river was unreasonable, unjustly discriminatory and unduly prejudicial; that the joint rates on like traffic from Parkersburg and from Bridgeport and Steubenville, O., and Pittsburgh, Pa., and points taking same rates to Glasgow and Glasgow Junction, Ky., with fabrication in transit at Parkersburg since July 1, 1923 as unreasonable. Parkersburg is on the B. & O., Ohio river and eastern border of central territory. Points of origin are Pittsburgh and Clairton, Pa., and Bridgeport, New Philadelphia and Warren, O. During the first named period the fabrication in transit tariffs of the B. & O. provided that transited material destined to points south of the Ohio river located on or reached by 15 named railroads would be subject to local rates to and from the Ohio river gateways through which the shipments were forwarded. The result was the application of combination rates on Parkersburg or of local rates to and from other Ohio river points plus a fabrication charge of 3.5c at Parkersburg prior to July 1, 1922 and 3c on and after that date. Contemporaneously fabrication in transit was accorded at Parkersburg in connection with joint rates over the same roads to points west of the Mississippi river, directly through some of these Kentucky destinations. Under the governing tariffs shipments from trunk line territory were entitled to fabrication in transit at the applicable joint rates from origin to ultimate destinations via the Virginia gateways. This restricted application of transit arrangements was discontinued by the B. & O., and its southern connections on Nov. 1, 1922 and fabrication in transit authorized at Parkersburg in conjunction with joint rates to most of the territory south of the Ohio river. The fabrication in transit of iron and steel articles is common and has been in effect in different territories for many years. Its convenience to the fabricator of these products makes it particularly a commercial necessity. HELD, tariff provisions and rates attacked unreasonable and unduly prejudicial to extent that on shipments to Bowling Green and New Orleans to extent they exceeded joint rates plus transit charge; that on shipments to Glasgow and Glasgow Junction Scottsville and Whitesville rates unreasonable to extent they exceeded 52c, plus the transit charge, subject to reduction of July 1, 1922, reparation awarded. Parkersburg Rig & Reel Co. v. B. & O. R. R., 109 I. C. C. 569.

(4k) Complainant attacked combination rate charged on one car of lumber shipped on April 17, 1922 from Millville Jct., Fla., to Decatur, Ga., thence reconsigned to Scottdale, Ga., as unreasonable. Decatur and Scottdale

are local points on the Georgia R. R., 6 and 8 miles east of Atlanta. Shipment was consigned to complainant at Decatur. In accordance with shippers routing instructions reading Ga. Ry. at Macon, Ga., the shipment moved from Macon in a northeasterly direction over a branch line of the Georgia R. R., to Camak, Ga., thence in a westerly direction over the main line of that road through Scottdale to Decatur. While the shipment was in transit complainant placed instructions with the G. R. R., to intercept the car and reconsign it to Scottdale, but the car arrived at Decatur before these instructions could be acted upon. The subsequent movement from Decatur to Scottdale constituted a back haul of 2 miles. Complainant admits that there was no negligence on the part of the carrier. The total distance shipment moved is 468 miles. The normal route from Millville Junction to Atlanta is over the initial line to Dothan, Ala., 80 miles, thence C. of Ga. to Atlanta, 289 miles, a total of 369 miles, charged 24c to Decatur and $8.13 per car Decatur to Scottdale plus $6.50 reconsigning charge. The rate of 24c to Decatur and 20.5c to Atlanta constituted a fourth section departure. HELD, rate attacked unreasonable to extent it exceeded 20.5c prior to July 1, 1922 and 18.5c thereafter from Millville Jct. to Decatur, plus $8.13 per car to Scottdale prior to July 1, 1922 and $7.32 thereafter, reparation awarded. Watters Tonge Lumber Co. v. A. & St. A. B. Ry. 109 I. C. C. 598.

(4l) Complainant attacked combination rate charged on clean rice, carloads, from Galveston, Tex., to Bluefield, W. Va., as unreasonable and unduly prejudicial. Bluefield is a local point on the N. & W., less than 3 miles north of the Virginia-West Virginia state line, and 105 miles west of Roanoke, Va. Shipments moved Aug. 18 and 30, 1921, first over I. & G. N., and T. & P., to New Orleans thence Southern to Bristol, Tenn., and N. & W., beyond; second, I. & G. N., to Houston, Tex., S. P., to New Orleans, thence L. & N., to Norton, Va., N. & W., beyond, applicable rate 101c composed of 42.5c to Memphis, Tenn., and 58.5c beyond. There was contemporaneously in effect a combination of 90.5c based on 42.5c to Memphis and 48c beyond over a route through New Orleans, Memphis Jct., Ky., and Cincinnati, O. On Jan. 10, 1924 a joint rate of 96c was established from both Galveston and Lake Charles to Bluefield over the various routes, increased June 8, 1925 to 104.5c, the present rate, which is 36c higher than the present rate from New Orleans. HELD, applicable rate of 101c not unreasonable but shipments overcharged, which should be refunded, complaint dismissed. Seaboard Rice Milling Co. v. A. G. S. Ry. 109 I. C. C. 718.

(4m) Complainant attacked combination rates charged on 10 cars of wooden railroad ties during April, May and June 1923 and August 1924 from Argyle, Canaan, Rosebud and Bagnell, Mo., to Rapid City, S. D., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section four in that they exceeded a rate of 53.5c maintained from St. Louis, Mo. Shipments moved M. P., or Rock Island and Burlington to Mystic, S. D., thence R. C. B. H. & W., to destination, distances ranging from 961 to 1,002 miles, charged 59.5c on shipments from Bagnell and 61 from the other points, based apparently on Kansas City or Omaha. Rosebud, Canaan and Argyle are local stations on the Rock Island, Bagnell on the M. P., 85 miles, 96, 125 and 170 miles west of St. Louis. The rates in issue appear somewhat low as compared with rates from and to points in Oklahoma, Missouri, North and South Dakota and other states for similar distance. HELD, rates not unreasonable or otherwise unlawful, complaint dismissed. Abeles & Taussig Lumber & Tie Co. v. C. R. I. & P. Ry. 112 I. C. C. 62.

(4n) Complainant attacked combination rates charged since Nov. 4, 1922, on unshelled peanuts, carloads, from Suffolk, Va., and other points in that state to Hutchinson, Kas., as unreasonable, unjustly discriminatory and in violation of section four. Unshelled peanuts carloads are classified sixth class in southern and fourth class in official and western classifications, minimum 24,000 pounds subject to rule 34. The rates from Suffolk to Kansas City, Mo., Hutchinson and other interior Kansas jobbing points are made by combinations on East St. Louis, Ill., Memphis, Tenn., or Chicago, Ill. The movement to Hutchinson is via Memphis. The factors east of the Mississippi river are commodity rate which are the same on traffic to Hutchinson, Kansas City or other destinations. The complainants con-

cede that the alleged disparities in the rates exist in the factors west of the river. The rate from East St. Louis to Kansas City is the proportional fourth class rate; to Hutchinson, Salina and Wichita a commodity rate; to Topeka and Concordia fourth class rate. From Memphis to all destinations the rates are the fourth class rates, except to Salina which takes a commodity rate. HELD, rates attacked unreasonable to extent they exceed 123c, minimum 30,000 pounds, reparation awarded. Western Brokerage Co. v. A. C. L. R. R., 112 I. C. C. 103.

(4o) Complainant attacked combination charged on a car of batting dross from Mangrum, Miss., Jan. 5, 1924 to Pensacola, Fla., via G. & S. I., to Gulfport, Miss., L. & N., beyond, 310 miles, as unreasonable, unjustly discriminatory and unduly prejudicial. Batting dross is a by-product of the process by which turpentine and rosin are obtained for the gum of yellow pine trees. It was formerly a waste product. Charged 34.5c, made 21.5c to Mobile and 13c beyond. A lower combination of 34c was applicable made up of 17c to Gulfport and 17c beyond. Shipments overcharged. Effective Feb. 28, 1924 a joint commodity rate of 29c on rosin and batting dross was established. The combination rate compared favorably with the rates in force at the same time from shipping points in territory contiguous to Mangrum. HELD, rate of 34c not unreasonable or otherwise unlawful, complaint dismissed. Western Paper Makers Chemical Co. v. G. & S. I. Ry., 112 I. C. C. 221.

§2. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Where there is an evident willful disregard by carriers of an order of the commission denying fourth section relief, such violations of law will be referred to the commission's bureau of inquiry for appropriate action. Knoxville Traffic Bureau v. S. Ry. Co., 89 I. C. C. 708, 718.

ALL OTHER CITATIONS

Atlas Portland Cement Co. v. C. R. R. Co. of N. J., 85 I. C. C. 611.

II. SECTION 4 AS AMENDED.

§2½. Construction in General.

(a) The Commission is of the opinion and find that in the administration of the fourth section the words "reasonably compensatory" imply that a rate properly so described must (1) cover and more than cover the extra or additional expenses incurred in handling the traffic to which it applies; (2) be no lower than necessary to meet existing competition; (3) not be so low as to threaten the extinction of legitimate competition by water carriers; (4) and not impose an undue burden on other traffic or jeopardize the appropriate return on the value of carrier property generally, as contemplated in section 15a of the act. It may be added that rates of this character ought, wherever possible, to bear some relation to the value of the commodity carried and the value of the service rendered in connection therewith. The Commission also finds that where carriers apply for relief from the long and short haul clause of the fourth section and propose the application of rates which they designate are reasonably compensatory, they should affirmatively show that the rates proposed conform to the criteria indicated above. It goes without saying that carriers should not propose rates or rate structures for approval in a fourth section application which create infractions of other provisions of the act, and particularly of section 3. Wool rates investigation, 1923, 91 I. C. C. 235, 242.

(b) Assessment of a transit charge in addition to the through rate at an intermediate point while no charge is assessed from a farther distant point, resulting in higher aggregate charges from the intermediate point, would be in violation of the long-and-short-haul clause. Transit Rules on Grain, 98 I. C. C. 679, 686.

(c) In the administration of the fourth section the words "reasonably compensatory" imply that a rate properly so described must (1) cover and more than cover the extra or additional expenses incurred in handling the traffic to which it applies; (2) be no lower than neccessary to meet existing competition; (3) not be so low as to threaten the extinction of legitimate competition by water carriers, and (4) not impose a burden on other traffic or jeopardize the appropriate return on the value of carrier propery generally, as contemplated in section 15a of the act. It may be added that rates of this character ought, wherever possible, to bear some relation to the value of the commodity carried and the value of the service rendered in connection therewith. Where carriers apply for relief from the long and short haul clause of the fourth section and propose the application of rates which they designate as "reasonably compensatory" they should affirmatively show that the rates proposed conform to the criteria indicated above. Class and commodity rates between western points 104 I. C. C. 578, 583.

(d) Contention that through rates on China-wood oil higher than a combination composed of a commodity factor applicable on whale, fish, and coconut oil and fifth-class factor were in violation of section 4, not sustained. The commodity factor was not specifically applicable on China-wood oil and it would not be proper to base a fourth-section violation on an assumption of analogy. Glidden Co. v. E. R. R. Co., 100 I. C. C. 331, 332.

(e) It is significant that many of the commission's early cases orignated in the South, and that they resulted in a series of Supreme Court decisions with respect to the provision of the fourth section which prohibits, with certain

qualifications, a higher charge for a shorter than for a longer distance over same line or route in same direction. These cases made it clear that commission could not deal effectively with the basing-point system so long as the words "under substantially similar circumstances and conditions" remained in that section. Southern Class Rate Investigation, 100 I. C. C. 513, 521.

(f) Contention that there is no violation of long-and-short-haul provision of section 4 of the act where carrier, under a trackage agreement, operates over another carrier's line between given points and there is no concurrence on part of latter in published rate of former, but a higher rate is charged to an intermediate point in which both lines concur, not sustained. See 81 I. C. C. 497. Shanks & Gannon Co. v. C., C., C. & St. L., 102 I. C. C. 462, 464.

ALL OTHER CITATIONS

North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270.

§1. Exceptions.

See Class Rates §2 (tt) (3k) (5i) (6q) (7s); Compress Companies and Charges II (i); Rail and Water Rates (kk); Reduced Rates §4½ (ii); Tariffs §12½.

(a) Emergency rates on hay from Keenesburg and Hudson, Colo., to St. Louis, Mo., were expected from reductions required in 64 I. C. C. 85, but similar rates from competing Colorado common points were not so excepted, Long-and-short-haul violation of fourth section thereby created was subsequently removed by restoration of rate parity. HELD: In absence of proof of damage unauthorized departure from fourth section does not warrant an award of reparation. National Hay & Milling Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 1.

(b) Authority to continue to charge for the transportation of cotton from points in Mississippi to points in Minnesota, Wisconsin, and all States east of Mississippi River, rates which are lower than on like traffic from or to intermediate points, denied. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47.

(c) Authority to continue to charge rates on coal from Chicago, Peoria, East St. Louis, Ill., and groups to points in Minnesota, the Dakotas, Iowa, Nebraska, and Canada, without observing the long-and-short-haul provision of the fourth section of the act, denied. Coal to Iowa Minnesota and Dakotas, 89 I. C. C. 105.

(d) Authority granted carriers to establish and maintain for transportation of nitrate of soda, via all routes, from New Orleans, La., and subports thereof taking same rates to destinations in Arkansas the lowest rate herein prescribed as maximum via any route between said points, and to maintain higher rates at intermediate points which shall not exceed rates prescribed as maximum, and in no case exceed the lowest combination. New Orleans Joint Traffic Bureau v. A. & V. Ry. Co., 89 I. C. C. 223.

(e) Applications for authority to continue to charge for the transportation of cottonseed cake and meal from Texas common points to New York, N. Y., Boston, Mass., and other points in trunk-line and New England territories, rates which are lower than the rates contemporaneously maintained on like traffic to intermediate points, denied. Larrowe Milling Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 439, 442.

(f) Application for authority to maintain class rates within eastern trunk-line territory, between C. F. A. territory on the one hand, and eastern trunk-line and New England territories on the other, and between eastern trunk-line territory and New England territory, lower for longer than for shorter distances over the same line in the same direction, or which are lower than rates from, to, or between intermediate points, denied. No evidence was introduced at hearing in justification of the departures; carriers were not prepared to justify them; and agreed that a general denial order should be entered. Fourth Section Departures in E. T. L. Territory, 89 I. C. C. 470.

(g) This proceeding involves consideration of fourth section applications of eastern carriers asking for authority to continue to maintain class rates in trunk line territory, between points in trunk line territory and central territory, and between trunk line territory and New England territory lower for longer than for shorter distances over the same line, the shorter being included within the

longer distance. No evidence was introduced in justification of the fourth section departures. HELD, applications denied, effective Nov. 15, 1924. Fourth Section Departures in E. T. L. territory, 89 I. C. C. 470.

(h) Petition of Missouri Pacific R. R. Co., for authority to maintain rates on grain and products from St. Louis, Mo., and Cairo, Ill., to Memphis, Tenn., and Mississippi River crossings south of Memphis and from Memphis to river crossings south of that point, than are contemporaneously maintained on like traffic to intermediate points, denied. Applicant failed to justify reasonableness and propriety of rate adjustment from St. Louis, Cairo, and Memphis to numerous points intermediate to the river crossings south of Memphis, and failed to show that proposed rates from St. Louis and Cairo to Memphis to be reasonably compensatory. Memphis Southwestern Investigation, 89 I. C. C. 566.

(i) Fourth Section order 7542 authorized applicants to establish and maintain class and commodity rates, except on fertilizer and grain and grain products, between Mississippi river crossings, St. Louis and south thereof, and points grouped therewith, and Memphis and Mississippi river and south thereof, via St. Louis and crossings south thereof not lower than the rates in effect over the lines of carriers operating east of the Mississippi river between the same points, and to maintain higher class and commodity rates, from, to, and between intermediate points west of the Mississippi river over the M. P., and its connections east thereof extending from St. Louis to New Orleans through Poplar Bluff, Mo., Wynne, Marianna, and McGehee, Ark., and Collinston, Monroe and Alexandria, La. In 80 I. C. C. 157 applicants introduced no evidence in justification of the reasonableness and propriety of the higher rates on grain and grain products which they sought to maintain at intermediate points. The petition is based solely upon differences in transportation conditions east and west of the Mississippi river. The rates which applicant seeks to meet at the river crossings and those to intermediate Arkansas points are proportional rates and are applicable on traffic originating beyond St. Louis, Cairo and Memphis. The rates to intermediate points in Missouri are published as local rates. To Louisiana destinations the lower rate, either local or proportional, is applicable under alternative tariff provisions. The burden of justification rests on the applicant. Relief to continue the existing fourth section departures above referred to is not requested, nor does the record afford any warrant therefor. The record is inadequate to enable the Commission to prescribe a reasonable basis of rate to points to which the present rates admittedly require readjustment. HELD, application denied. Memphis-Southwestern Investigation, 89 I. C. C. 566.

(j) Applications for authority to continue to maintain rates on bituminous coal from mines on northern portion of the Gauley branch of the C. & O. Ry. to destinations in numerous states, lower than from intermediate points on said branch, denied. Coal and Coke from C. & O. Points, 89 I. C. C. 638.

(k) C. & O., asked authority to continue and to establish rates on bituminous coal, carloads, from points on that part of its Gauley branch, extending from Belva, W. Va., north to Bentree and Greendale, W. Va., to destinations interstate on traffic moving west via Gauley lower than from intermediate points on the Gauley branch between Belva and Gauley. On westbound traffic the rates from the Kanawha district range from 5c to 40c higher than rates from the New River district, except to a few points to which the rates are the same from both districts. Traffic from the mines on the C. & O., north of Belva, on which the Kanawha district rates are applied, must pass through the higher rated territory south thereof. On traffic to the east the rates from the Kanawha district are generally 10c over the rates from the New River district. HELD, granting of fourth section relief not warranted. Coal and coke from C. & O., points, 89 I. C. C. 638.

(l) Where there is an evident willful disregard by carriers of an order of the commission denying fourth section relief, such violations of law will be referred to the commission's bureau of inquiry for appropriate action. Knoxville Traffic Bureau v. S. Ry. Co., 89 I. C. C. 708, 718.

(m) In 80 I. C. C. 663 the Commission denied those portions of fourth section applications No. 1952 of the L. & N., and No. 1764 of the C. & O., by which authority was sought to continue rates

on coal from mines on those lines in the Inner Crescent groups to Detroit, Mich., lower than to Tama, O., Jackson, Mich., and other intermediate points. Cases were reopened and consolidated with No. 12527 of the C. N. O. & T. P., in which that carrier asks for similar relief as to rates from mines served by it in Kentucky and Tennessee. The higher rates intermediate points are those on the C. N., M. C., and Wabash in the Jackson group. Rates to this group are uniformly 10c higher than the rates to the group in which Detroit is situated. There are three principal lines between Cincinnati and Toledo and seven between Toledo and Detroit. There are 19 routes from the L. & N., mines to Detroit, 38 from the C. & O., mines and 18 from the C. N. O. & T. P., mines. All of these routes pass through Toledo except those here asking fourth section relief and routes in connection with the D. T. & I., as the delivering line. Witnesses agreed that, if the rates to Detroit over the petitioning routes were increased 10c to eliminate the fourth section departures, coal would not be routed over the C. N., except in case of extreme necessity, but would be diverted to routes through Toledo and add to the burden of the already overtaxed facilities at that point. In view of the public convenience and necessity for keeping the C. N., routes open for the movement of coal to Detroit and other points in the same group, thereby reducing the congestion at the Toledo gateway, HELD, authority will be granted to the applicants to continue and to establish and maintain the same rates via Jackson or Alvordtown as apply via Toledo to Detroit and points taking the same rates, but not lower than the present rates via Toledo, while maintaining higher rates to Jackson and other intermediate points taking the same rates, subject to the conditions that the rates to intermediate points shall not be increased, except as may hereafter be authorized by the Commission, and shall in no case exceed the lowest combination. Coal from Crescent districts, 91 I. C. C. 194 .

(n) Fourth section application of the Northern Pacific for itself and the M. & I., and B. F. & I. F. Rys. sought relief to continue rates on coal from Duluth, Minn., and Superior, Wis., via Brainerd, Minn., to International Falls, Minn., lower than rates applied at intermediate points. The rates sought to be applied in both instances were those in effect over the short line, the D. W. & P. Distances over this latter route from Duluth are 171.3 miles to International Falls and 171.7 miles to Fort Frances, both taking same rates. The distance via the N. P., 311.8 miles; represents a circuity of 82% over the short line. HELD, relief from fourth section should be granted to extent rates are not lower than from Duluth over the D. W. & P., and maintain higher rates at intermediate points provided the authority shall not extend to such intermediate points as to which the haul of the petitioning line or route is not longer than that of the direct lines. Rates on coal and cement from Duluth and Superior, 91 I. C. C. 627.

(o) Whatever fourth section applications may have protected fourth section departures in the past are now inoperative because the carriers have since complied with the fourth section. Tin, Terne and black plate, 92 I. C. C. 356, 358.

(p) Northern Pacific, respondent, sought authority to establish rates on sugar, carloads, from Billings, Mont., to Superior, Wisc., Twin Cities and Duluth, Minn., and points taking same rates without observing the long and short haul provision of the fourth section. Billings is 225 miles east of Butte, Mont. applicant's line being the most direct to the points of destination, the distance to St. Paul being 890 miles and to Duluth not more than 10 miles more. The present rate is 56c to destinations involved and 68c to intermediate points. HELD: Application for relief denied. Rates on Sugar, 95 I. C. C. 151.

(q) Carriers sought authority to establish between so-called Utah common points, on the one hand, and Los Angeles, Calif., and Portland, Ore., and points taking same rates, on the other hand, class and commodity rates lower than those to be applied on traffic to and from intermediate points. Utah common point territory extends from Ogden, Utah, south to Payson, Utah. Salt Lake City is the most important point in this group. The application is based on the desire of the Southern Pacific and its connections in the group territory at the terminals to compete via circuitous routes with the short line rates of the U. P. Distance from Salt Lake City to Los

Angeles by the direct route is 784 miles, and by applicant's route 1,177 miles, or 50% longer. Higher rates are proposed at points intermediate to Los Angeles than at points intermediate to Ogden. In support of its contention that class rates from Los Angeles to intermediate points are reasonable applicant testified that they were made in relation to the class rates maintained to the same territory from Sacramento, and San Francisco, Calif. HELD: Carriers will be granted relief to establish and maintain class rates between the competitive points the same as the class rates maintained between the said points by direct line, but not lower than the proposed rates between the said points, and to maintain higher rates from, to, and between intermediate points. **Application No. 12,293.** S. P. and its connections serving the terminal groups proposed the establishment of reduced rates on all classes and commodities between Utah common points and Portland, Ore., Seattle, Wash., and points taking same rates. Proposed rates are to be equal to those maintained over the direct route of the O. S. L., and O. W. R. R. & N. Distance from Portland to Ogden is 853 miles via direct route and 1,342 through Roseville, Calif., via applicant's route, or 57% greater than the short line. From Seattle to Salt Lake City the distances are 1,070 and 1,559 miles, making the S. P. route 46% longer than the short line between those points. HELD: Applicant carrier granted relief from the fourth section. Class and Commodity Rates from Utah, 95 I. C. C. 417.

(r) When the intermediate clause here under susupension was published it automatically removed fourth section departures at unnamed intermediate points. These departures can not be reinstated without new authority from the Commission. Lumber from Pacific Coast, 95 I. C. C. 744, 746.

(s) In 88 I. C. C. 345 the Commission granted authority to carriers to establish rates on paper and paper articles from points in Wisconsin, Minnesota, Michigan, and Canada to New Orleans, La., without observing the long and short haul provision of the fourth section as to intermediate points of destination. Upon application of Jackson, Miss., proceeding reopened, this point being about 183 miles north of, and intermediate to, New Orleans. The only paper jobber in Mississippi is located at Jackson, and it appears that Jackson is the only Mississippi point intermediate to New Orleans from the northern mills which distributes paper in substantial quantities. HELD: Rates to Jackson and New Orleans established under the former order unduly prejudicial to Jackson to extent they exceed rates to New Orleans. Paper and Paper Articles to New Orleans, 96 I. C. C. 600.

(t) K. C. S., and other carrier sought permission to establish rates on classes and commodities from New Orleans, La., and points taking same rates or arbitraries higher, to a territory bounded on the south by the C. & A. from Kansas City, Mo., through Mexico, Mo., and Roodhouse, Ill., to Springfield, Ill.,, and Wabash from the latter point to Danville, Ill., on the east by the Indiana-Illinois state line and a northerly extension thereof, on the west by the C. G. W. from Kansas City to Des Moines, Ia., the Rock Island from Des Moines to Minneapolis, Minn., and on the north by the Canadian border, without observing the provisions of the fourth section as to intermediate points. To points on and east of the Mississippi river in the destination territory defined in the application there are joint class rates governed by southern classification, established by the Illinois Central and other lines having direct routes, in which applicants desire to participate. Applicants witnesses say that during the 22 years in which their lines engaged in this traffic on the basis of rates which they desire to reestablish the earnings therefrom were generally regarded as reasonably compensatory. In 81 I. C. C. 522 the Commission denied authority to maintain rates on asphalt from New Orleans and other Gulf ports to Chicago and Excelsior Springs, Mo., lower than those contemporaneously in effect to Kansas City and other intermediate points. There is no evidence in the present record to warrant a change in the conclusion reached in that case. HELD: Relief is granted from the fourth section as desired, except on asphalt. Class and commodity rates from New Orleans, 98 I. C. C. 673.

(u) Respondents sought authority to establish and maintain rates on vinegar from Oklahoma City, Okla., to points

in Texas without observing the long and short haul provision of the fourth section. Respondents are Frisco, M. K. & T., Rock Island. A distance scale of rates on vinegar is in effect from Oklahoma City to points in Texas. These rates are in the same as the class D rates, which by exception apply on that Texas. The latter rates were prescribed in 48 I. C. C. 312. The same rates also apply intrastate in Texas. Fourth section relief was granted in connection with the rates prescribed. At present the rates from Oklahoma City are restricted to apply only over certain routes. The Rock Island also sought authority to maintain rates to points located in common point territory lower than to intermediate points located in differential territory. This is desired even HELD: Applicants will be authorized to establish and maintain over all routes from Oklahoma City to points in Texas, the lowest rate applicable over any route but not lower than the scale published in Leland I. C. C. 1590, and to maintain higher rates at intermediate points, provided that the rates at the said intermediate points shall not exceed the rates in said scale, and shall in no case exceed the lowest combination, and provided further, that the relief granted shall not include routes more than 70% longer than the direct lines or routes where the Rock Island is the direct line. between the competitive points. Vinegar to Texas Points, 98 I. C. C. 688.

(v) Authority to continue to charge for transportation of furniture from Chattanooga, Tenn., to New York, N. Y., Philadelphia, Pa., Boston, Mass., and other eastern destinations rates which are lower than on like traffic from Nashville and other intermediate points, denied. Standard Furniture Co. v. N., C. & St. L. Ry., 91 I. C. C. 27.

(w) Upon further hearing, applications for authority to charge rates on coal from mines on L. & N., C. & O., and C., N. O. & T. P. in Inner and Outer Crescent districts to Detroit, Mich., and points taking same rates, lower than to Jackson, Mich., and other intermediate points, granted. Unless petitioning carriers can maintain rates to Detroit via certain routes on an equality with rates via routes through Toledo, traffic will be diverted to routes through Toledo and add to burden of the already overtaxed facilities at that point, and public convenience and necessity require maintenance of petitioning routes for movement of coal to Detroit in order to relieve congestion at Toledo gateway. Previous report, 80 I. C. C. 663. Coal from Crescent District, 91 I. C. C. 194.

(x) Fourth-section applications seeking authority for trans-continental lines to establish or continue rates on wool and mohair from Pacific coast terminals and adjacent points to eastern defined territories, lower than from intermediate points of origin, for purpose of meeting competition of intercoastal water carriers, denied. Through rates from adjacent points would be considerably lower than present rates, thereby reducing disparities as between coast cities and nearby- interior points, but, on the other hand, disparities would be increased as between these points and farther inland points, which take considerably higher rates. Wool Rates Investigation, 1923, 91 I. C. C. 235, 264.

(y) Carriers authorized to establish and maintain from competitive points via indirect routes rates applicable via shortest and most direct routes and to maintain higher rates from intermediate points, authority granted not to include intermediate points as to which haul of circuitous line or route is not longer than that of direct line or route between competitive points; rates from intermediate points in no case to exceed lower combination; and relief granted not to include routes more than 33⅓ per cent longer than direct line or route between competitive points. Wool Rates Investigation, 1923, 91 I. C. C. 235, 265.

(z) Application for authority to establish and maintain rates on fertilizer from Wilmington, N. C., to certain points in the Carolinas, which are lower than rates to intermediate points, on ground of circuity, granted where routes are 15 per cent or more longer than short-line routes between same points, and denied where routes are more than 70 per cent longer than direct lines. Goldsboro Chamber of Commerce v. A. C. L. R. R. Co., 91 I. C. C. 315, 327, 328.

(aa) Fourth-section applications in connection with rates on cypress lumber and lumber articles, from Waycross, Hebardville, and Hopkins, Ga., to destinations in North Carolina, South Carolina, and Florida which are not in conformity with either long-and-short-haul or aggregate-of-intermediates provisions of

fourth section of the act, denied. Hebard Cypress Co. v. A. & R. R. R. Co., 91 I. C. C. 343, 352.

(bb) When joint rates were established on lumber and shingles from Pacific Northwest to Arona, Pa., Pittsburgh basis of rates were specifically published to apply, and under an intermediate clause that basis applied at points intermediate thereto. Subsequently, intermediate clause was canceled and Philadelphia basis of rates became applicable to intermediate points, thereby creating a violation of long-and-short-haul provisions of section 4 of the act. Proposal of carriers to remove fourth-section departure by increasing rates to Arona to Philadelphia basis found not justified. Carriers are under no restriction as to manner of removing fourth-section departure and have not shown that a basis to Arona from the Pacific Northwest different from that maintained from other lumber-producing points is justified. Lumber from Northwest, 91 I. C. C. 457.

(cc) Applications for authority to continue to charge for transportation of petroleum and products from Oklahoma producing points and southwestern Missouri to Cairo, Ill., via East St. Louis, Ill., rates which are lower than rates contemporaneously in effect on like traffic to Murphysboro, and other intermediate points, denied. Petroleum from Southwestern States, 91 I. C. C. 464.

(dd) Authority granted Northern Pacific for itself and on behalf of Minnesota & International and Big Fork & International Falls to charge rates on coal and continue rates on cement from Duluth, Minn., and Superior, Wis., to International Falls, Minn., and Fort Frances, Ontario, lower than to intermediate points. Traffic can be moved at very little out-of-pocket cost, since cars must be hauled northward to handle preponderant southbound traffic. Hence, any revenue from this source in excess of bare additional expense of handling seems desirable for economy of operation. Moreover, applicant roads are not in very prosperous condition and unquestionably need additional business; agricultural development of region is progressing very slowly; and passenger traffic is suffering from automobile competition. Rates on Coal and Cement from Duluth and Superior, 91 I. C. C. 627.

(ee) Authority to continue to charge rates on grain and products from points in southeastern Missouri to Memphis, Tenn., Mobile, Ala., St. Louis, Mo., Cairo, Ill., New Orleans, La., and points taking same rates, also to points in Arkansas and points taking same rates or basing thereon, without observing provisions of fourth section of the act, denied. Grain and Products, 91 I. C. C. 666, 675, 676.

(ff) Rates on pig iron from South Chicago, Ill., to, Acme, Peoria, Ill., during Federal control, found unreasonable as compared with lower rates from South Chicago to Keokuk, Iowa, a farther distant point, which lower rate was subsequently established from South Chicago to Acme, thereby removing any fourth-section departures that may have existed. Reparation awarded. Keystone Steel & Wire Co. v. Director General, 91 I. C. C. 741.

(gg) Countiss on behalf of transcontinental lines asked authority under fourth section application No. 12608 to establish a rate of 40c, minimum 80,000 pounds, on sulphur (not refined or manufactured) in carloads, from Bryanmound, Damon, Freeport, Gulf Hill, and Hoskins, Tex., and from Sulphur Mine, La., to East San Pedro, Wilmington, Oakland, Richmond, San Diego, and San Francisco, Calif., via Belen, N. M., in connection with Santa Fe, and via El Paso, Tex., in connection with S. P., or E. P. & S. W., and to continue higher rates at intermediate points. Present rate of 55c was established under authority of fourth section order 8429 of Oct. 30, 1922 in 74 I. C. C. 48, 90. Under the same order a rate of 65c was authorized and published to all north Pacific coast terminals without a reduction in the rates from and to intermediate points. The rates at the time of the hearing in the latter case were 83.5c and $1 respectively. The effect of the application if granted will be to authorize the applicant carriers to further depart from the provisions of the fourth section by reducing the rates to the California terminals 15c. The rate to El Paso, Sanderson and Marfa is 40c, the same as the proposed rate to California terminals. Using Bryanmound as the point of origin, the distance to San Francisco is about 1,296 miles greater than to El Paso, 1,609 miles greater than to Sanderson and 1,493 miles greater than to Marfa. The rail carriers

transport the sulphur from the points of production to ship side, from ports of destination to interior points, and large quantities to points in the interior intermediate between the points of production and California ports, while the ships can only transport it to the ports. The revenue earned by the ocean carriers as compared with that earned by the rail carriers in transporting sulphur, is necessarily small. While the record contains evidence purporting to show that the proposed rate of 40c on sulphur from Texas and Louisiana points to California terminals would yield revenue that might be reasonably compensatory, it is not sufficiently comprehensive and convincing to warrant the Commission in granting the application. HELD, proposed rate not reasonably compensatory as required by the act, application denied. Sulphur to California terminals, 100 I. C. C. 369.

(hh) Interstate Public Service Co. and C. I. & W., and I. T. system sought authority to establish class rates between points on its line in Indiana and Kentucky on the one hand, and St. Louis, Mo., and points in Illinois on the I. T. system east of Decatur, and south and west of Springfield, on the other, via Indianapolis, Ind., without observing the long and short haul provisions of the act as to intermediate points of destination. The Interstate Public Service Co. owns and leases and operates electric lines between Louisville, Ky., and Indianapolis, Ind., between New Albany and Jeffersonville, Ind., and between the latter point and Charlestown, Ind. The C. I. & W., a steam road, extends westward from Indianapolis to and through Decatur and Springfield, Ill., at which point it connects with the Illinois Traction, and electric line which extends northeastwardly from St. Louis and East St. Louis through Springfield, Decatur, Monticello and Champaign to Danville, Ill., and thence south to Ridge Farm, Ill., with a branch line projecting southwesterly from Danville to Catlin, Ill. The Interstate is paralleled by the Pennsylvania between Louisville and Indianapolis, and the principal points on the Illinois Traction are reached by steam roads. With few exceptions the steam roads form the direct routes between these points. The class rates of the direct routes conform to the fourth section. HELD, the routing of traffic over applicants lines would result in wasteful transportation and proposed rates would not be reasonably compensatory. Class rates via I. P. S. Co., 101 I. C. C. 189.

(ii) In 83 I. C. C. 207, the Commission denied application No. 12378 of the Florida East Coast to establish carload commodity rates from Jacksonville, to Miami, Fla., without observing the long and short haul provision of section four as to intermediate points of destination. The record shows that the proposed rates more than cover the additional cost of handling the traffic and are not lower than necessary to meet legitimate water competition. It also shows that they would not impose an undue burden on other traffic or jeopardize the return value of carrier property generally. It is manifestly impossible to say with any degree of certainty just what difference there would have to be between the water rates and rail rates in order that the water lines and the applicant should each receive an equitable share of the traffic in question. HELD, relief sought will be granted for a period of one year, prior to the expiration of which time the matter may again be brought to attention of the Commission for such determination as the circumstances may then warrant. Commodity rates from Jacksonville to Miami, 101 I. C. C. 347.

(jj) Authority to maintain class rates, and commodity rates that are not less than sixth-class, from New York, and points taking same rates, to points in c. f. a. and western trunk-line territories, and to maintain higher rates from intermediate points on the Central Vermont Ry. in New England, granted, provided that rates from said intermediate points shall in no case exceed the lowest combination. Present sixth-class rates from New York are reasonably compensatory, and shippers not only do not complain against the higher intermediate rates, which have been in effect for a long period of years, but on the contrary strongly favor continuance of the present adjustment. Rail-and-Lake Rates from New England, 92 I. C. C. 106.

(kk) Proposal to comply with commission's order denying fourth-section relief with respect to rates from New York by reducing class and commodity rates from points on Central Vermont Ry. in New England to points in c. f. a. and western trunk-line territories, applying via the differential rail-and-lake

route through Depot Harbor, Ontario, and boat line of Canada Atlantic Transit Co., found not justified. Present rates from New York are reasonably compensatory and to permit removal of fourth-section departures by reducing the intermediate rates would necessitate reductions over other routes at competitive points, result in a chaotic condition of rates throughout New England, and further aggravate the financial difficulties of New England lines. Rail-and-Lake Rates from New England, 92 I. C. C. 106.

(ll) Applications for authority to continue to charge rates on lumber and forest products from Baltimore, Philadelphia, Jersey City, and New York, to destinations in Pennsylvania, New York, and New Jersey without observing provisions of fourth section of the act, denied. Lumber between Points in Trunk Line Territory, 92 I. C. C. 144, 149, 150.

(mm) Applications for authority to continue rates on sugar from Savannah to points in Arkansas, Louisiana, Missouri, Oklahoma, and Texas, without observing provisions of the fourth section of the act, denied. Sugar from Macon Territory, 92 I. C. C. 275.

(nn) Authority to continue rates on sugar from points in Colorado, Idaho, Kansas, Nebraska, and Utah to points in Illinois and Indiana, without observing provisions of amended fourth section of the interstate commerce act, denied, no direct testimony being offered in justification for such departures. Indiana Public Service Comm. v. A., T. & S. F., 92 I. C. C. 279.

(oo) Rates on refuse molasses from Grants Pass, Oreg., to Oakland, Calif., higher than to San Francisco, a farther distant point to which Oakland is intermediate via route of movement, unprotected by appropriate application, found violative of long-and-short-haul provisions of section 4 of the act. Mason By-Products Co. v. Director General, 92 I. C. C. 646, 648.

(pp) Fourth section relief granted by authorizing carriers to establish and maintain by all routes between Fort Worth, Wichita, Kansas City, St. Joseph, St. Louis, and Oklahoma City, on the one hand, and various interstate destinations on the other, the lowest rates on horses and mules prescribed as maximum rates over any route between said points, and to maintain higher rates from, to, or between intermediate points, provided that rates from, to, or between the intermediate points shall not exceed rates prescribed as maximum and in no case exceed the lowest combination. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479.

(qq) Authority to maintain and establish rates on sugar from Billings to Superior, St. Paul, Minneapolis, and Duluth, and points taking same rates, without observing the long-and-short-haul provision of section 4 of the act, denied. Applicant relied on market competition for relief in connection with its application but submitted little evidence with respect thereto, other than a mere statement of rates from competing points. Comparisons with commodities rated the same as sugar indicate that the sugar rate is materially lower than the normal rate adjustment between Billings and eastern terminals. Under evidence submitted carriers failed to make out a special case within meaning of the fourth section. Rates on Sugar, 95 I. C. C. 151.

(rr) Authority to continue to charge for the transportation of wooden box material from New Orleans to Key West, Miami, and Tampa, for domestic use, and to Key West, for export to Cuba, rates which are lower than on like traffic from Crystal Springs and other intermediate points, denied. Jackson Traffic Bureau v. A. & V., 95 I. C. C. 251.

(ss) Fourth-Section relief relating to class rates and certain commodity rates between Utah common points and points in California and Oregon, based on a desire of the Southern Pacific and its connections to compete via circuitous routes with short-line rates of the Union Pacific lines, granted in instances where proposed rates between competitive points are shown to be "reasonably compensatory" within meaning of section 4 of the act. Class and Commodity Rates from Utah, 95 I. C. C. 417.

(tt) Where suspended schedules contain or threaten departures from long-and short-haul provision of section 4 of the act, such schedules should be ordered cancelled "without considering the intrinsic reasonableness of the proposed rates." Rice Products to Jackson, 44 I. C. C. 364. Citrus Fruits between Points in Florida, 95 I. C. C. 532, 538.

(uu) Carriers authorized to establish and maintain via all routes the lowest rates prescribed as maximum over any routes between points of origin and destination and to maintain higher rates

from, to, or between intermediate points, provided that rates from, to, or between intermediate points do not exceed rates prescribed as maximum and in no case the lowest combination, the relief granted not to apply to carriers whose lines or routes are more than 70 per cent longer than the short line or route between the same points. Alton Mercantile Co. v. A. &.W. Ry., 95 I. C. C. 645, 655.

(vv) Authority to continue to charge for the transportation of rice from points of origin in Arkansas, Louisiana, and Texas, and Memphis, Tenn., to destinations in Oklahoma, rates which are higher than those contemporaneously maintained on like traffic to more distant points, denied. Alton Mercantile Co. v. A. & W. Ry., 95 I. C. C. 645, 656.

(ww) Fourth-section relief granted by authorizing carriers to establish and maintain via all routes the lowest rates prescribed as maximum over any route, and to maintain higher rates from, to, or between intermediate points, provided rates from, to, or between the intermediate points shall not exceed rates prescribed as maximum and in no case the lowest combination, the relief granted not to apply to carriers whose lines or routes are more than 70 per cent circuitous than the short line or route. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 41, 42.

(xx) Authority to continue to charge for the transportation of butter, eggs, and dressed poultry, in straight or mixed carloads, from Houston and other contiguous points in Texas to Cleveland, Pittsburg, and destinations east thereof, rates which are lower than those contemporaneously maintained on like traffic from Dallas, Ft. Worth, and other points in Texas to the same destinations, denied. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 42.

(yy) Combination rates on naphtha gasoline, in tank-car loads from Hodge, Tex., to Blue Creek, W. Va., exceeded rates on same commodities from Hodge, via Clarksburg, W. Va., to Charleston, W. Va., Blue Creek being intermediate to Charleston over the Clarksburg route. Resulting fourth-section violation was unprotected but subsequently removed and no damage found therefrom. Rates, however, found unreasonable to certain specified extent and reasonable rate prescribed for future, with permission to restrict its application to routes other than that via Clarksburg. Reparation awarded. Transcontinental Oil Co. v. A. & V., 96 I. C. C. 136.

(zz) Authority granted to the Alabama, Tennessee & Northern to maintain trunk-line basis of rates on naval stores from Calvert, Ala., and higher rates from intermediate stations. Naval Stores from Southern Points, 96 I. C. C. 417.

(3a) Fourth section violations herein involved are covered by applications not set for hearing with the complaint, and in advance of a hearing upon the fourth-section applications no finding under the fourth section will be made. Oklahoma Portland Cement Co. v. St. L. S. F. Ry. Co., 96 I. C. C. 468.

(3b) Application for authority to continue to charge for transportation of apples from Charles Town, W. Va., and kale, potatoes, and cabbage from Norfolk and Suffolk, Va., to Kenova, W. Va., Ashland, Ky., and Portsmouth, Ohio, rates which are lower than rates contemporaneously maintained on like traffic to Williamson, W. Va., and other intermediate points, denied, the departures covered by the application, so far as involved herein, having been removed. Amicon Fruit Co. v. N. &. W. Ry. Co., 96 I. C. C. 477.

(3c) Application for authority to continue to charge for the transportation of bags, burlap, and gunny, from New York, Philadelphia, Baltimore, and points taking the same rates to Richmond, Va., rates which are lower than rates contemporaneously maintained on like traffic to Alexandria, Va., and other intermediate points, denied. Bryant v. P. R. R. Co., 96 I. C. C. 564, 566.

(3d) Application for authority to continue to charge for transportation of crude oil from Mexia, Tex., to Beaumont and Port Arthur, Tex., rates which are lower than rates contemporaneously maintained on like traffic to Texarkana, Ark.-Tex., Shreveport, La., and other intermediate points, denied. Caddo Central Oil & Refining Corp. v. K. C. S. Ry. Co., 98 I. C. C. 39.

(3e) Proposed increases in rates on glass and glassware, in straight or mixed carloads, from, Oklahoma points & Fort Smith, Ark., to Mississippi River crossings, Memphis, and south, in order to bring about rates between said points no lower than rates between intermediate points within the territory

covered by the Memphis-Southwestern Investigation, 77 I. C. C. 473, found not justified. There is no evidence of record warranting the granting of fourth-section relief such as that sought or now in effect under the applications assigned for hearing in connection with this proceeding, and all such relief will be denied. Glass and Glassware to Interstate Points, 98 I. C. C. 83, 89.

(3f) Defendants granted fourth-section relief to apply via all routes between points in territories under consideration the lowest rates available via any route under scales prescribed and to maintain higher rates from, to, or between intermediate points, provided such rates do not exceed rates prescribed in aforesaid scale, subject to limitations prescribed, and without prejudice to such further limitations as may be prescribed in Memphis-Southwestern Investigation, pending on further hearing respecting that question. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 251.

(3g) Relief from long-and-short-haul provision of the act with respect to rates on moss in machine-pressed bales from points in Louisiana to defined territories to extent involved in this proceeding denied, except in so far as such relief has already been granted. National Asso. of Furniture Mfrs. v. A. A. R. R. Co., 98 I. C. C. 501, 510.

(3h) Proposal to restrict routing on lumber from points served by Cent. of Ga. and certain short-line connections to destinations in central, Buffalo-Pittsburgh, and eastern territories, designed to limit available routes to more direct lines and eliminate routing over other intermediate carriers and other short hauling, found not justified. Proposed schedules are shown to be faulty and admittedly in error, and, among other things, would continue and create departures from the long-and-short-haul clause of fourth section of the act. Restrictions in Routing of Lumber, 98 I. C. C. 529.

(3i) Following 73 I. C. C. 396, and other cases cited, proposed cancellation of numerous less than carload and any-quantity commodity rates from points in southeastern and Carolina territories to destinations in Mississippi Valley, leaving effective generally higher class rates, found justified, except as to such rates on marble, granite, and stone. This adjustment will correct fourth-section departures. Commodity Rates Between Points in Southern Territory, 98 I. C. C. 627.

(3j) Authority granted to carriers to establish rates on classes and commodities, except asphalt, from New Orleans, La., and points taking same rates or arbitraries higher, to destinations east and north of Kansas City, Mo., and west of Indiana-Illinois line, the same as contemporaneous rates on like traffic from and to same points via routes east of Mississippi River, but not lower than 90 per cent of present rates via such east side routes from and to same points, provided that present rates at intermediate points shall not be increased except as authorized by the commission and shall in no case exceed lowest combination, and further, that no rate shall be established lower than present rate on asphalt from and to same points. The purpose of fourth-section relief is to enable west-side carriers herein considered to compete with east-side carriers between Mississippi River crossings. Class and Commodity Rates from New Orleans, 98 I. C. C. 673.

(3k) Application for authority to establish rates on classes and commodities from New Orleans, La., and points taking same rates or arbitraries higher, to destinations east and north of Kansas City, Mo., and west of Indiana-Illinois line without observing the long-and-short-haul provision of fourth section of the act, granted, except as to rates on asphalt to enable western carriers herein considered to compete with eastern carriers between Mississippi River crossings. Class and Commodity Rates from New Orleans, 98 I. C. C. 673.

(31) Fourth-section relief granted by authorizing carriers to establish and maintain over all routes from Oklahoma City, Okla., to points in Texas, lowest rates applicable on vinegar over any route but not lower than scale published in tariff I. C. C. No. 1590, and to maintain higher rates at intermediate points, provided that the relief granted shall not include routes more than 70 per cent longer than the short line between the competitive points. In view of the fact that distances over many routes are two or three times or more greater than distances over the direct routes, it is manifest that unless some reasonable limit is placed on the degree of circuity this requirement of the law would not

be met. Vinegar to Texas Points, 98 I. C. C. 688.

(3m) In view of the fact that many routes seeking relief are composed of two or more lines, over which joint-line differentials apply, it is contended that any relief that may be granted should not be made subject to the equidistant provision. In Memphis-Southwestern Investigation, 77 I. C. C. 473, the commission found that the equidistant provision was not mandatory in such a case. Vinegar to Texas Points, 98 I. C. C. 688, 690.

(3n) Applicant asked authority to establish a rate of 71c on canned goods, vegetables, in tin cans or earthenware packages, in carloads, minimum 60,000 pounds, from Bozeman, Hamilton and Stevensville, Mont., to San Francisco and Oakland, Calif., over certain rail routes and to establish and maintain higher rates to Sandia, Parker and Millersburg, Ore., and intermediate points south thereof on the Southern Pacific. The traffic over all route would move via Portland, Ore., and would be transported from that point to destinations via the S. P. This application is predicated upon the desire of the S. P., to meet competition of rail and water routes at San Francisco and Oakland. The latter routes are composed of rail lines to Portland or to Seattle, Wash., and boat lines beyond. The proposed all rail rate is 3c higher than the present rail and water rate of 68c. Practically no traffic has moved over the all rail routes to the competitive destinations under the existing rail rates to those points. The Commission is of the opinion that the rate of 71c is reasonably compensatory. The proposed rates to a large part of the intermediate territory are materially lower that the rates at present in effect. They are also in nearly all instances lower, and in no case higher, than available combinations to numerous destination points. HELD, applicants granted relief to establish the proposed rate of 71c, subject to the conditions that the rates on like traffic to intermediate points to and including Fagan, Calif., shall not exceed those proposed by applicant. and that rates to other intermediate points shall not exceed the rate to Fagan, and that rates to said intermediate points shall not exceed the rates to San Francisco and Oakland by more than the differences existing between the rates in effect on like traffic from Portland to San Francisco and Oakland, on the one hand, and intermediate points, on the other, and that said intermediate rates shall in no case exceed the lowest combination of applicable rates subject to the act. Canned goods from Montana. 102 I. C. C. 3.

(3na) Authority to establish and maintain all-rail rates on canned goods from Boseman, Hamilton, and Stevensville, Mont., to San Francisco and Oakland, over the Southern Pacific and connections, lower than to intermediate points, granted subject to certain conditions. Application is predicated upon the desire of the S. P. to meet competition of rail-and-water routes at San Francisco and Oakland, rates proposed are reasonably compensatory, and to a large part of the intermediate territory are materially lower than rates at present in effect. They are also in nearly all instances lower, and in no case higher, than available combinations to numerous intermediate points. Canned Goods from Montana, 102 I. C. C. 3.

(3nb) Relief from long-and-short-haul provision of section 4 of the act similar to that granted in connection with class rates approved in Southern Class Rate Investigation, 100 I. C. C. 513, granted in connection with commodity rates on clean rice, l. c. l., from New Orleans and other points in Mississippi Valley to destinations in the Carolinas, the Virginias, and Maryland. Rice Between Points in Southern Territory, 102 I. C. C. 79.

(3nc) Authority granted to establish and maintain via all routes between Fort Worth, Wichita, Kansas City, St. Joseph, St. Louis, and Oklahoma City, on one hand, and points in Texas differential territory and New Mexico, on the other, the lowest rates herein prescribed as maximum over any route between such points, and to maintain higher rates from, to, and between intermediate points, provided that rates from, to, or between the intermediate points do not exceed those herein prescribed, and in no case the lowest combination. Rates on Horses and Mules in the Southwest, 102 I. C. C. 87.

(3o) Respondents proposed to cancel the commodity rates on tanning extract, carloads, from Norfolk and Newport News, Va., to Memphis, Tenn., and to Chicago, Ill., and other destinations in central territory with the result that fifth class rates, which are higher,

would become applicable. The present rate from these ports to Memphis is 38c proposed rate 93.5c; to Chicago the present rate is 42c proposed 51.5c. The commodity rate on tanning extract from Helen, Ga., to Chicago, in which no change is proposed, is 44c. The routing in the tariff naming the later rate is unrestricted and shipments may move from Helen to Chicago via Norfolk and Newport News. There would be unauthorized fourth section departures under the proposed rates. HELD, schedules not justified. Tanning extract from Norfolk and Newport News. 102 I. C. C. 196.

(3oa) Rate on rough-oak staves and headings from Cherokee, Ala., to Jackson, moving over a circuitous route specified by shipper, found not unreasonable as compared with contemporaneous lumber rates from and to other points in same general territory for comparable distances. Chess & Wymond Co. v. A. & V. Ry., 102 I. C. C. 282.

(3ob) Rate on clean rice from New Orleans to destinations in Canada, applying through Memphis, and lower than applicable rate from Memphis to same destinations, found to violate section 4 of the act, and fourth-section application for its continuance denied. Memphis Frt. Bureau v. A. A. R. R., 102 I. C. C. 489.

(3p) Complainant attacked commodity rates charged on clean rice, carloads, from Memphis, Tenn., to Hamilton, Brantford, and Ste. Catherines, Ont. Canada, since October 1922, as unjust and unreasonable and as compared with rates from New Orleans unduly prejudicial and in violation of the fourth section. Average distance 924 miles. Applicable rate 61c, rate from New Orleans 56.5c. This rate from New Orleans applies through Memphis and a departure from the fourth section. No clean rice moves under that rate. This fourth section departure should be removed immediately. No damage is shown by reason of the alleged undue prejudice. HELD, complaint dismissed. Memphis Freight Bureau v. A. A. R. R. 102 I. C. C. 489.

(3pa) Fourth-section relief granted Mississippi Central, Columbus & Greenville, and Gulf, Mobile & Northern Railroads with respect to rates on salt from Louisiana mines to Mississippi points on their lines so as to enable those carriers to meet rates of competing trunk lines at junction points and to maintain higher rates at intermediate points on their own rails, provided (1) that rates to junctions and intermediate local points do not exceed those herein prescribed, (2) that authority granted shall not include intermediate points to which petitioning lines or routes is not longer than direct lines or routes between the competitive points, and (3) that rates to intermediate points do not exceed lowest combination. Miss. R. R. Comm. v. A. & V. Ry., 102 I. C. C. 540, 552, 553.

(3pb) Application seeking authority to continue to charge for transportation of fruits and vegetables from Bowling Green and other producing points in Kentucky, Tennessee, and Alabama to South Bend and Fort Wayne, rates which are lower than those contemporaneously maintained on like traffic to Logansport and other intermediate points, denied. Caruso & Co. v. C. & E. I., 102 I. C. C. 619.

(3pc) Maintenance of rates on lumber from Jonesville, La., to Cleveland and Loudon, Tenn., higher than to Lenoir City and Knoxville, Tenn., and from Jonesville to Greenville, Tenn., higher than to Johnson City, Tenn., and Bristol, Tenn.-Va., found unlawful in violation of long-and-short-haul provision of section 4 of the act. Southern Lbr. Co. v. L. & A. Ry., 102 I. C. C. 633.

(3q) Fourth section departure, if unprotected, is unlawful and should promptly be corrected. Wimberly Grocer Co. v. Pennsylvania R. R. 102 I. C. C. 637, 638.

(3r) Fourth section applications Nos. 1860, 1842, and 1862 were filed by Agent Hosmer to protect departures from the long and short haul provision of the fourth section with respect to class and commodity rates from, to, or between St. Louis, Mo., Peoria and Chicago, Ill., and St. Paul and Minneapolis, Minn., and points taking same rates, also points basing thereon,on the one hand and points in Arkansas, Colorado, Kansas, Missouri, and Nebraska, on the other. No. 3024 was filed by the Union Pacific on behalf of itself and other carriers to protect departures in rates on hay and straw at points in the territory described. The C. M. & St. P. Ry. is the only carrier which asks for relief under this application. No. 4220 is a blanket application filed by the Mo.

Pac., to protect all departures not specifically covered by other applications filed by that carrier. It is considered herein only to the extent that it protects departures in rates on salt over the Mo. Pac., and its connections from, to, or between the points described. Consideration of 1842 is limited to departures in rates on sugar at points on the Santa Fe. The rates as to which applicants are asking for fourth section relief, at the present time, apply between the general territory lying east of the Mississippi river from St. Louis, Mo., to St. Paul, Minn., south of an irregular line from St. Paul to Lake Michigan, west of the west bank of Lake Michigan and a line just east of the Indiana-Illinois state line to West Dana, Ind., and north of a line extending thence in a southwesterly direction to St. Louis, on the one hand, and points in Missouri, Kans., Nebraska and Colorado, on the other. CHICAGO BURLINGTON AND QUINCY. The Burlington asks for authority to continue to maintain rates on certain manufactured articles from Rockford and DeKalk, Ill., to points west of the Missouri river lower than from intermediate points on its line over its route in connection with the C. M. & G. The later carrier serves the points named and interchanges traffic with the Burlington at Aurora, Ill. Rockford and DeKalb are in Group 3, but on these commodities an exception to the group adjustment has been made and the Group 2 rates applied. Traffic moving over the route described passes through points taking Group 3 rates. This carrier submitted no evidence with respect to distances or the rates on particular commodities. HELD, relief sought denied. CHICAGO MILWAUKEE AND ST. PAUL AND ILLINOIS CENTRAL. The evidence presented to show that the lower rates for the longer hauls over the circuitous routes are reasonably compensatory is meager and unsatisfactory, consisting mainly of mere statements of opinion that the rates conform to the requirements of the law in this respect. It is readily apparent that the existing groups and group relationships involved herein can not be maintained if the rates involved are adjusted to conform to the equidistant provision, as that would require a revision of the present rates upon substantially a distance basis. These groups and group relationship, except as modified by general rate changes, have existed for many years, and at the hearing in this matter no complaint was made against this adjustment and no objection offered to its continuance. On the whole the rates appear to be properly adjusted and their reasonableness and propriety have not been questioned. The fact that some routes whose geographical location is such as to make it necessary for them to haul traffic from or to points in a lower rated group through a higher rated group does not affect this justification. HELD, relief will be granted the Milwaukee and the I. C., to continue and maintain rates on classes and commodities between St. Louis, Mo., Peoria and Chicago, Ill., and St. Paul and Minneapolis, Minn., and other points in Minnesota, Wisconsin, Indiana, Illinois, Iowa and Misouri grouped therewith or included in related groups, on the one hand, and points in Arkansas, Colorado, Kansas, Missouri and Nebraska, on the other, the same as rates contemporaneously in effect over other routes operating between the above described points and to maintain higher rates at intermediate points in the same groups in those instances where the lines or routes of the said Milwaukee and I. C., operate to or from a lower rated through a higher rated group, provided (1) that rates at the said intermediate points shall not exceed rates in effect over other routes from or to the said higher rated intermediate groups, (2) that the said intermediate rates shall not be increased except as hereafter may be authorized by this commission and shall not exceed the lowest combination, (3) that the rate on any commodity from or to any intermediate point in the said higher rated intermediate group shall not exceed the rate on the same commodity from or to any more distant point by more than the difference by which the rate to or from the said intermediate point on the class to which the commodity belongs exceeds the corresponding class rate from or to the said more distant point, and (4) that the relief herein granted shall not apply in those cases where the lines or routes of the applicants are more than 60% circuitous. ST. LOUIS SAN FRANCISCO. This carrier asks for authority to continue to maintain rates on classes and commodities from, to, or between, according as the rates are published,

Groups 1, 2, and 3, on the hand, and Glen Park and Rosedale, Kas., and points south thereof on its line between St. Louis and Kansas City, Mo., via Nichols, Mo., also points on the Santa Fe north and west of Kansas City, on the other, lower than at intermediate points. The same relief is sought as to proportional class rates on traffic originating east of the Indiana-Illinois state line. To the lower rated points south of Kansas City the direct route in most instances is the Wabash to Kansas City and the Frisco beyond. The M. P., also reaches a number of those points and its line from St. Louis is shorter than that of the Frisco from St. Louis via Nichols. The joint through rates apply over the Wabash and the Frisco through Kansas City, and are generally graded up for varying distances in a southerly direction as far as Lamar, Mo., which is located about 20 miles east of the Missouri-Kansas state line, and is 302 miles from St. Louis over the Frisco. On traffic so routed the rates conform to the long and short haul rule. Application of the rates so made over the circuitous line of the Frisco through Nichols, Mo., on traffic from the opposite direction results in fourth section departures. HELD, relief will be granted the applicant to maintain rates between points in the groups described above, on the one hand, and points on its line south and southeast of Kansas City, on the other, the same as rates in effect betwen the same points via competing lines provided (1) that the rates at intermediate points shall in no case exceed the lowest combination and shall not be increased except as may hereafter be authorized by the Commission; and (2) that commodity rates applying on interstate traffic at the said intermediate points shall not exceed the rates at the next more distant point by more than the difference existing between the corresponding class rates on the class to which the commodity belongs. The record does not warrant a finding that the rates at points north and west of Kansas City are reasonably compensatory and relief in respect to such rates will be denied. UNION PACIFIC. The fourth section relief at the present time sought by this carrier is principally to continue to maintain rates on classes and commodities from, to, or between Groups 1, 2, 3, and 4 and points basing thereon, on the one hand, and points on its line extending from Council Bluffs, Iowa, to St. Joseph, Leavenworth, and Kansas City also from Norfolk, Neb., to Omaha, Neb., on the other hand, lower than at intermediate points on the Union Pacific in Kansas and Nebraska. This application for relief is not predicated upon circuity but upon the desire of the carrier to continue to handle the traffic via any of its Missouri river junctions. A denial of relief would require a restriction of routing so that the rates would apply only through junctions where the rates now conform to the long and short haul rule. HELD, relief will be granted provided (1) that the rates at the said intermediate points shall not exceed the lowest combination and shall not be increased except as may hereafter be authorized by the Commission; (2) that the rate on any commodity from or to any of the said intermediate points shall not exceed the rate on the same commodity from or to a more distant point by more than the difference existing between the rate on the class to which the commodity belongs to or from the said intermediate point exceeds the corresponding class rate from or to any more distant point. That this relief shall not apply in respect of rates between any point in the said groups, on the one hand, and any of the said intermediate points on the Union Pacific, on the other, where the haul over the applicants route between the said points is not longer than that of the direct line or route between the same point in any of the said groups on the one hand and the competitive point in Kansas or Nebraska on the other; (4) that the said relief shall not apply in any instance where the route via the U. P., between competitive points is more than 60% longer than the direct line or route between the same points. CHICAGO ROCK ISLAND AND PACIFIC. This carrier asks for authority to continue to maintain rates on class and commodities from, to, or between Groups 1, 2, 3 and 4 and points basing thereon, on the one hand, and points in Kansas and Nebraska on its line extending from Council Bluffs to Kansas City, Leavenworth, Atchison and St. Joseph on the other hand lower than at intermediate points in Kansas and Nebraska. The line of the Rock Island between the Missouri river points named is situated similarly to that of the U. P., fourth section departures result from practically the same conditions as in the case of

the U. P., and relief is desired to the same extent. The routing is open under the tariff and traffic may be handled via any of the Missouri river gateways mentioned. The rates conform generally to the long and short haul rule from any particular gateway up to a point where the distance is not longer than through another gateway. The desired relief will be granted in this situation to the same extent and subject to the same conditions as in the case of the U. P. ATCHISON TOPEKA AND SANTA FE. This carrier asks for authority to continue to maintain class rates and rates on certain commodities from, to, or between groups 1, 2, 3, 4 and points basing thereon, on the one hand, and points on its line, Girard, Kas., to Joplin, Mo., on the other, lower than at intermediate points on its line north of Girard and south of Kansas City. HELD, relief will be granted the Santa Fe to continue and maintain rates between points in the groups hereinbefore described, on the one hand, and points on its line, Girard, Kas., to Joplin, Mo., on the other, the same as rates contemporaneously in effect via competing lines, and to maintain higher rates at intermediate points, (1) provided that rates at the said intermediate points shall not exceed the lower combination and shall not be increased except as may be hereafter authorized by order of the Commission; (2) that the rate on any commodity from or to any intermediate point shall not exceed the rate on the same commodity from or to any more distant point by more than the difference existing between the rate on the class to which the commodity belongs to or from the said intermediate points exceeds the corresponding class rate from or any more distant point; and (3) that this relief shall not apply in respect of rates between any point in the said groups on the one hand, and any intermediate point on the Santa Fe south of Kansas City on the other, as to which the haul via the applicants route is not longer than that of the direct line or route between the same point in any of the said groups and any of said competitive points in Kansas and Missouri. MISSOURI KANSAS AND TEXAS. This carrier asks for authority to continue to maintain rates on classes and commodities from, to, or between Groups 1, 2, 3 and 4 and points basing thereon on the one hand, and (1) Joplin, Mo., Galena and Columbia, Kas.; (2) points on the MKT Paola, Kas., to Gunn City, Mo., on traffic routed via Kansas City, Mo.; (3) certain points on the MKT west of Kansas City, on the other hand, lower than at intermediate points. The circuitous line of the MKT from St. Louis to Columbus, Galena and Joplin is 22, 26 and 33% longer than the direct line of the Frisco from and to the same points. HELD, relief will be granted the applicant in respect to class rates to and from Joplin, Galena and Columbus, subject to the same conditions and limitations as in the case of class rates over the Santa Fe. Sufficient information and justification concerning the commodity rates between the points involved via the route of the applicant not having been shown, the applications herein will be denied to the extent that they cover such commodity rates provided, that if application for relief in respect to such rates is filed within 60 days from the date of the service of this report, showing rates on commodities which applicant desires to maintain at competitive points with corresponding rates at intermediate points at which it is proposed to maintain higher rates and other information required by fourth section order number 8900 in connection therewith, the rates included in and covered by such application will not be required to be changed until the determination of such application. MISSOURI PACIFIC. This carrier asks for authority to continue to maintain rates on classes and commodities from, to or between Groups 1, 2, 3 and 4 and points basing thereon, on the one hand, and (1) Aurora and Springfield, Mo., and (2) certain points in eastern Kansas on the other, lower than at intermediate points. HELD, relief will be granted with respect to class rates at Springfield and Aurora, Mo., subject to the same conditions as relief herein before granted the Santa Fe. All other and further relief will be denied, provided that if within 60 days from the date of the service of this report an application is filed showing the rates on commodities which petitioner desires to maintain at competitive points with corresponding rates proposed to be maintained at intermediate points, together with other information in connection therewith as required by fourth section order 8900, the rates included in and covered by such application will not be re-

quired to be changed until the determination of such application. KANSAS CITY SOUTHERN. This carrier asks authority to continue to maintain rates on classes and commodities from, to, or between Groups 1, 2, 3 and 4 on the one hand, and Kansas City, Mo., and points on the KCS north of Gulfton and Eve, Mo., on the other, lower than at intermediate points, via (1) MKT from St. Louis to Eve, Mo., KCS beyond, and (2) the Frisco from St. Louis to Gulfton, Mo., KCS beyond. HELD, relief will be granted the KCS and its connections to continue and maintain rates on classes and commodities between points in groups hereinbefore described on the on hand, and points on the KCS north of Gulfton and Eve, Mo., on the other, via (1) the MKT Eve, Mo., and KCS., and (2) the Frisco, Gulfton, Mo., and KCS., the same as rates contemporaneously in effect over other routes operating between the above described points, and to maintain higher rates at intermediate points, provided (1) that the rates at the said intermediate points shall in no case exceed the lowest combination and shall not be increased except as may hereafter be authorized by the Commission, (2) that commodity rates applying on interstate traffic at the said intermediate points shall not exceed the rates at the next more distant points by more than the difference existing between the corresponding class rates on the class to which the commodity belongs, and (3) that rates at any of the said intermediate points shall not exceed the present rates from or to, as the case may be, Gulfton and, or Eve, Mo. Class and commodity rates between western points 104 I. C. C. 578.

(3s) In 85 I. C. C. 270 the Commission prescribed reasonable maximum basis for rates on lumber and other forest products taking the same rates, carloads, from points in southeastern and Carolina territories and Virginia cities to destinations in trunk line and New England territories. Upon petition from the American Short Line Railroad Association the Commission reopened the case for rehearing upon the question of lawfulness of the present rates or rate basis from points on short lines in southern territory, and also upon fourth section applications or portions thereof filed by short lines in southern territory which were embraced in fourth section order No. 8843. The applications of short lines, except those seeking relief on the ground of water competition, are based upon the ground of light traffic density and unfavorable operating and financial conditions. The short lines seeking relief on the ground of water competition are the Atlanta & St. Andrews Bay, Apalachiola Northern and G. F. & A. Each of these carriers extends from a point in the interior of Georgia or Alabama to a point or points on the coast of Florida on the Gulf of Mexico, the St. Andrews to Panama City, the A. N., to Apalachiola and Port St. Joe, and G. F. & A. to Carrabelle. The present rates from Carrabelle may be taken as typical, the basis to eastern destinations is 2c over Georgia main line rates, and from local points on the G. F. & A., north of Carrabelle to and including Bowers, Ga., the rates are 1c higher than from Carrabelle. The extent of the departure sought therefore is 1c per 100 pounds. HELD, applications or portions thereof based on water competition will be denied. Some of the short lines are in better financial condition than others, but all of them indicate a weak condition similar to that of the Tennessee Central before the Commission on the original record and upon which the Commission granted to that carrier in fourth section order No. 8843. No complaint is made by any shipper that the present rates or basis for rates from points on these short lines are unreasonable or otherwise unlawful. HELD, rates, or basis of rates, on lumber and other forest products taking the same rates, carloads, from points on short lines in southern territory to trunk line and New England territories are not as a whole unreasonable or otherwise unlawful. HELD, further, rates on lumber and other forest products taking the same rates, carloads, from points on the A. & St. A. Bay to the aforesaid destinations are unduly prejudicial to extent they exceed rates from Dothan by more than 3c from points north of Cottondale and 4c from Cottondale and points south thereof. Other independent short lines will be granted authority to charge higher rates on lumber and other forest products carloads, from intermediate points on their lines to destinations in trunk line and New England territories than are maintained from more distant junction points with trunk line carriers; provided that the rates from such inter-

mediate stations shall in no case exceed the lowest combination, and provided further that the difference between the rates from the more distant junction points on the one hand and the intermediate points on the short lines on the other shall not be increased except as may hereafter be authorized by the Commission. North Carolina Pine Asso. v. A. C. L. R. R. 107 I. C. C. 190.

(3t) Authority to continue to charge for transportation of furniture from Chattanooga, Tenn., to eastern destinations, rates which are lower than on like traffic from Nashville and other intermediate points, denied. Fourth section order No. 8940, entered in original report, 91 I. C. C. 27, vacated. Furniture from Southern Points, 100 I. C. C. 127.

(3u) Authority to maintain between St. Louis, East St. Louis, Cairo and Thebes, on the one hand, and points in Missouri and Arkansas, on the other, the lowest rates applicable via any of the routes and to maintain rates higher but not in excess of the proposed scale at intermediate points, granted in connection with the rates herein approved to carriers operating interstate routes from St. Louis and East St. Louis, subject to condition that the rates at intermediate points shall not exceed the scale herein approved and shall in no case exceed the lowest combination. In the case of Cairo and Thebes relief is restricted to routes not over certain percentages circuitous. The commission also finds that the lower rates herein authorized for application at points on circuitous routes will be reasonably compensatory for the service performed. Class Rates between Missouri and Interstate Points, 100 I. C. C., 274, 289, 290.

(3v) Authority to continue to charge for transportation of lumber, other than pine, c. l., from Jonesboro, Ark., and from other intermediate points on lines of defendants through Jonesboro, to Des Moines, Iowa, rates that are higher than rates contemporaneously maintained on same through route from Memphis, Tenn., Helena, Glencoe, and Wilson, Ark., denied. Jonesboro Freight Bureau v. St. L.-S. F. Ry. Co., 100 I. C. C. 324.

(3w) Application for authority to establish rate on sulphur from points in Texas and Louisiana to California terminals lower than that authorized in 74 I. C. C. 48, 90, without observing the long-and-short haul provision of fourth section of the act, denied, on ground that proposed rate has not been shown to be reasonably compensatory as required by the act. Sulphur to California Terminals, 100 I. C. C. 369.

(3x) Fourth section relief discussed in connection with basis of class rates approved as result of the general investigation, on commission's own motion, of interstate class rates within southern territory and between southern and official territories. Relief denied except in case of weak and short lines. Southern Class Rate Investigation, 100 I. C. C. 513, 545, 708.

(3y) Fourth-section relief granted by authorizing carriers to establish and maintain, via all routes between points in Oklahoma and Texas points, from points in the Panhandle of Texas and eastern New Mexico to Kansas City,, Kans.-Mo., and between Oklahoma, on one hand, and Kansas and Missouri, on the other, the lowest rates on grain, grain products and related articles prescribed herein as maximum rates via any route between said points, and to maintain higher rates from, to, and between intermediate points, provided such latter rates shall not exceed respective scales of rates prescribed herein, and shall in no case exceed the lowest combination, the relief granted not to apply where lines or routes are more than 70, 50 and 33⅓ per cent circuitous than the short line or route, according to the distance over such short line or route. Oklahoma Corp. Comm. v. A. & S. Ry. Co., 101 I. C. C. 116, 133.

(3z) Application for authority to establish class rates between points on the lines of the Interstate Public Service Co., in Indiana and Kentucky, and certain points on the lines of the Illinois Traction System in Missouri and Illinois, without observing the long-and-short haul provision of section 4, of the act, denied. Routing of traffic over applicant's lines as proposed would result in wasteful transportation, and proposed rates would not be reasonably compensatory. Class Rates via. I. P. S. Co., 101 I. C. C. 189.

(4a) Authority to continue rates on lumber and related articles from junction points on the G. & S. I. R. R. to Mobile and New Orleans, the same as those contemporaneously in effect via more direct lines or routes, and to maintain

higher rates at intermediate points, granted. Such authority not to include intermediate points as to which the haul of the petitioning line or route is not longer than that of the direct line or route between the competitive points, nor include routes which are more than 70 per cent longer than the direct line or route between the competitive points; rates from said intermediate stations in no case to exceed the lowest combination. Ingram Day Lbr. Co. v. G. & S. I. 101 I. C. C. 287, 296.

(4b) Upon further hearing, temporary authority to establish commodity rates from Jacksonville to Miami, for application on interstate traffic, without observing long-and-short-haul provision of section 4 of the act as to intermediate points of destination, granted. Proposed rates more than cover additional cost of handling the traffic, are not lower than necessary to meet legitimate water competition, and will not impose an undue burden on other traffic or jeopardize the return value of carrier property generally. Original report, 83 I. C. C. 207. Commodity Rates from Jacksonville to Miami, 101 I. C. C. 347.

(4c) Carriers authorized to establish and maintain via all routes from any point of origin to any destination from and to which maximum rates are prescribed herein rates not in excess of the lowest rates prescribed via any route between such points, and to maintain higher rates from, to, and between intermediate points; provided that the rates from, to, or between the said intermediate points shall not exceed the rates prescribed, and in no case exceed the lowest combination; and provided further that the relief granted shall not include routes more than 70 per cent longer than the direct line or route between the competitive points. Procter & Gamble Distributing Co. v. St. L.-S. F., 101 I. C. C. 563, 591.

(4d) C. G. W., Rock Island, M. & St. L., I. C., and M. N. & S., ask authority to establish, continue and maintain class and commodity rates from New England, eastern trunk line territory and Canada to Minneapolis and St. Paul, Minn., and related points lower than the rates contemporaneously maintained on like traffic to intermediate points in Iowa, southeastern Minnesota, and western Illinois. The relief sought relates only to fourth section departures at destinations, as any departures in the origin territory are being considered in another proceeding. The applications include rates over rail lake and rail, lake and rail, and all rail routes operating by way of Chicago, Chicago junctions or Peoria, Ill., and the lines west thereof extending through a portion of Illinois, Iowa, and Minnesota to the Twin Cites. The rates to intermediate points in Iowa are not only higher than those to the Twin Cities but are also higher than those to intermediate points in Minnesota, resulting in a situation where the measure of the fourth section departure decreases as the distance increases. The relief sought is not based upon the circuity of the routes in question, but upon the ground that the rates to the Twin Cities are repressed by lake and rail and rail lake and rail rates applying via Duluth and Superior, Wis., and low rates in force over routes operating through Canada. There is no contention that the rates to Chicago are depressed below the normal basis. They are observed at all intermediate points. The much greater spread existing at at the Twin Cities, negative applicants contention that the all rail rates have there been repressed by rates applicable over the water routes. Moreover, even if the record would warrant a finding that applicants are correct in asserting that the rates to the Twin Cities are depressed by water competition, it is obvious that any relief authorized on that account should of necessity be restricted to the rates on those commodities which actually move in substantial volume over the rail lake and rail or lake and rail routes to the Twin Cities. The record contains nothing to indicate the commodities which move over the latter routes. HELD, applications denied. Rates from eastern territory to Twin Cities, 109 I. C. C. 437.

III. APPLICATION OF SECTION 4 TO RATES.

See Basing Points and Lines §3 (r); Distance Rates §1 (d); State Rates and Regulations (5b).

§4½. **In General.**

(a) Emergency rates on hay from Keenesburg and Hudson, Colo., to St. Louis, Mo., were excepted from reductions required in 64 I. C. C. 85, but similar rates from competing Colorado common points were not so excepted. Long-and-short-haul violation of fourth section thereby created was subsequently removed by restoration of rate parity. HELD: Higher rates assessed during interim from Keenesburg and Hudson found not unreasonable; in absence of proof of damage unauthorized departure from fourth section does not warrant an award of reparation; and since there is no showing that competitors were enabled to control the St. Louis market, compelling complainant to meet their price, no damage has been shown by reason of undue prejudice which may have existed. National Hay & Milling Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 1.

(b) The provisions of the fourth section of the act apply where point of origin is in an adjacent foreign country and intermediate point and more distant point of destination are in the United States. United Paperboard Co., 74 I. C. C. 733. Duluth Iron & Metal Co. v. Director General, as Agent, 89 I. C. C. 343, 345.

(c) Where suspended schedules contain or threaten departures from the long and short haul provision of the fourth section, such schedules should be ordered canceled without considering the intrinsic reasonableness of the proposed rates. Citrus Fruit between Points in Florida, 95 I. C. C. 532, 538.

(d) When joint rates were established on lumber and shingles from Pacific Northwest to Arona, Pa., Pittsburgh basis of rates was specifically published to apply and under an intermediate clause that basis applied at points intermediate thereto. Subsequently intermediate clause was canceled and Philadelphia basis of rates became applicable to intermediate points, thereby creating a violation of long-and-short-haul provisions of section 4 of the act. Proposal of carriers to remove fourth section departure by increasing rates to Arona to Philadelphia basis found not justified. Carriers are under no restriction as to manner of removing fourth-section departure and have not shown that a basis to Arona from Pacific Northwest different from that maintained from other lumber-producing points is justified. Lumber from Northwest, 91 I. C. C. 457.

(e) The existing deviation from the long and short haul provision of section four is not covered by an appropriate application and is unlawful. Standard Paving Co. v. A. T. & S. F. Ry., 100 I. C. C. 233, 236.

(f) The fourth section departure was unprotected, and is, therefore unlawful. Moore Lawless Grain Co. v. C. B. & Q. R. R., 101 I. C. C. 52, 53.

(g) A violation of the long and short haul clause of the fourth section does not in itself establish the unreasonableness of the higher rate or form a basis for an award of reparation. Moore Lawless Grain Co. v. C. B. & Q. R. R., 101 I. C. C. 52, 54.

(h) Rates on tractors from Detroit, to Mason City, Iowa, found not unreasonable, discriminatory, unduly prejudicial, or in violation of long-and-short-haul provision of section 4 of the act, as compared with lower rates from Detroit to Minneapolis and St. Paul, more distant points. Lower rate did not apply over route of movement through Mason City and therefore no fourth-section violation existed. Furthermore, lower rates are on basis entirely different from that applying to Mason City; they were established as a result of decisions in 28 I. C. C. 47, 29 I. C. C. 530, and 46 I. C. C. 39, and found not unreasonable or unduly prejudicial in North Iowa Traffic Asso., 58 I. C. C. 491. Wagner Motor Co. v. M. C., 93 I. C. C. 195.

(i) Rates prescribed in Mississippi Valley case, 64 I. C. C. 306, were not prescribed as standards of reasonable maxi-

mum rates, but primarily to bring about an adjustment in harmony with requirements of section 4 of the act and at same time conserve revenues of carriers. Paper Boxes between Southeastern points, 93 I. C. C. 559, 563.

(j) Shipments of cement moved from Richard City, Tenn., to Normal, via an interstate route through Memphis. Shipments could have moved via another available route through Stevenson, Ala., over which latter route Normal is intermediate to Memphis. FOUND. While the normal route is through Memphis the route through Stevenson was actually open and its use in tariff unrestricted. The maintenance, therefore, of a higher rate thereover to Normal than to Memphis was in violation of the long-and-short-haul provision of section 4 of the act. Dixie Portland Cement Co. v. N. C. & St. L., 96 I. C. C. 47.

(k) Fact that carriers have charged or received rates which violate the long-and-short-haul rule of section 4 of the act is not of itself sufficient basis for an award of reparation in absence of proof of damage to shipper. See also 88 I. C. C. 619. Lissberger & Co. v. N. Y., N. H. &. H., 96 I. C. C. 231, 233.

(l) Unauthorized departures from terms of the fourth section of the act are unlawful. Lissberger & Co. v. N. Y. N. H. & H., 96 I. C. C. 231, 233.

(m) Although routes were unusual, they were open, and the fourth section is violated. Sinclair Oil & Gas Co. v. C. & N. E. Ry., 96 I. C. C. 286, 288.

(n) Proposed increased proportional commodity rate on chinaware or earthenware plumbers' goods to Oklahoma City, Okla., from upper Mississippi River crossing, on traffic originating at Trenton, N. J., found not justified on ground it would create violations of the long-and-short-haul provision of fourth section. Plumbers' Goods from Mississippi River Crossings to Oklahoma City, Okla., 98 I. C. C. 403.

(o) Contention by defendants that supplemental fourth-section order No. 7542 issued pursuant to Memphis-Southwestern Investigation, 80 I. C. C. 157, 172, authorized the fourth-section departures assigned for hearing, not sustained. The order in that case grants authority for higher rates on lumber on line of the Missouri Pacific through Nettleton from points between St. Louis and points grouped therewith taking same rates, and Memphis, Helena, and other points in the southeast, than those maintained from latter points, but does not grant such authority in respect of rates to Des Moines. Jonesboro Freight Bureau v. St. L. S. F. Ry. Co., 100 I. C. C. 324, 326.

North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Atlas Portland Cement Co. v. C. R. R. of N. J., 85 I. C. C. 611; Jeremy Fuel & Grain Co. v. Director General, as Agent, 88 I. C. C. 397.

§4¾. Circuitous Routes.

See Class Rates §2 (tt).

(a) Authority granted carriers to establish and maintain for transportation of nitrate of soda, via all routes, from New Orleans, La., and subports thereof taking same rates, to destinations in Arkansas the lowest rates herein prescribed as maximum via any route between said points, and to maintain higher rates at intermediate points which shall not exceed rates prescribed as maximum, and in no case exceed the lowest combination. New Orleans Joint Traffic Bureau v. A. & V. Ry. Co., 89 I. C. C. 223.

(b) Proposed schedules limiting to certain direct routes the application of distant rates on stocker or feeder cattle moving from points on the Texas-Mexican Ry. to Arkansas City, Wichita, and Wichita Union Stock Yards, Kans., effect of which will be to eliminate admittedly circuitous routes through Coffeyville, Kans., and remove fourth section departures resulting from higher rates in effect over those routes to intermediate Kansas points, found justified. Livestock between Texas and Kansas Points, 89 I. C. C. 720.

(c) A differential route through Canada, 322 miles, or 33 per cent greater than so-called standard route, found not an unreasonable route. Petertyl v. N. Y. N. H. & H. R. R. Co., 91 I. C. C. 699, 700.

(d) Fourth-section relief granted by authorizing carriers to establish and maintain via all routes the lowest rates prescribed as maximum over any route and to maintain higher rates from, to, or between intermediate points, provided rates from, to, or between the intermediate points shall not exceed rates pre-

scribed as maximum and in no case the lowest combination, the relief granted not to apply to carriers whose lines or routes are more than 70 per cent circuitous than the short line or route. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 41, 42.

(e) Application for authority to establish rates on classes and commodities from New Orleans, La., and points taking same rates or arbitraries higher, to destinations east and north of Kansas City, Mo., and west of Indiana-Illinois line without observing the long-and-short-haul provision of fourth section of the act, granted, except as to rates on asphalt, to enable western carriers herein considered to compete with eastern carriers between Mississippi crossings. Class and Commodity Rates from New Orleans, 98 I. C. C. 673.

(f) The Commission has many times denied relief from the long and short haul section of the act where it appeared that the routes of applicant carriers were unduly circuitous. Class and commodity rates between western points, 104 I. C. C. 578, 585.

(g) The Commission is authorized under the fourth section to grant relief from the operation thereof "in special cases." The circuity of a rail line or route has long been recognized as a special case in which it may properly grant relief if the circumstances as a whole warrant that action. In practice the Commission has generally limited the relief to routes which are not less than 15% circuitous but this has not been regarded as an inflexible rule. The equidistant rule, though formerly also observed by the Commission as an administrative practice, is now an integral part of the law, and its application is mandatory where relief is sought because of circuity, regardless of methods of rate making. Class and commodity rates between western points. 104 I. C. C. 578, 595.

(h) Shipments of milk and cream from Iowa points to Omaha, Nebr., moved over indirect route via Tara, Iowa, some of the shipments being unrouted and other being routed via Illinois Central. Charges based upon applicable rates were collected. Upon contention that shippers are entitled to through express rates to Omaha via Onawa or Sioux City, or to joint baggage and express rates equal to express rates applicable over these routes prior to decision in Express Rates on Milk and Cream, 74 I. C. C. 427, HELD: Contention has force in connection with demand for reasonable route and rate for future but its cogency is not apparent as to shipments made in the past. Furthermore, as to shipments which were unrouted, there is no distinction in principle between this case and the situation presented in 24 I. C. C. 626, wherein commission refused to award reparation to basis of subsequently established joint through rate based upon the aggregate of intermediates over short lines which was lower than joint rate over more indirect route of movement. Kirschbraun & Sons, Inc., v. G. N. Ry. Co., 100 I. C. C. 28, 32, 33.

(i) In finding rates on cottonseed from points in Oklahoma to Dallas and Fort Worth, Tex., unreasonable to extent indicated, it is held that the conditions and limitations under which fourth-section relief will be granted to circuitous lines in southwestern territory prescribed in the Oklahoma case, 98 I. C. C. 183, will govern the instant case. International Vegetable Oil Co. v. A., T. & S. F., 100 I. C. C. 240, 241.

(j) Authority to maintain between St. Louis, East St. Louis, Cairo and Thebes, on the one hand, and points in Missouri and Arkansas, on the other, the lowest rates applicable via any of the routes and to maintain rates higher but not in excess of the proposed scale at intermediate points, granted in connection with the rates herein approved to carriers operating interstate routes from St. Louis and East St. Louis, subject to conditions that the rates at intermediate points shall not exceed the scale herein approved and shall in no case exceed the lowest combination. In the case of Cairo and Thebes relief is restricted to routes not over certain percentages circuitous. The commission also finds that the lower rates herein authorized for application at points on circuitous routes will be reasonably compensatory for the service performed. Class Rates between Missouri and Intertate Points, 100 I. C. C. 274, 289, 290.

(k) Fourth-section relief granted by authorizing carriers to maintain over circuitous routes from Ohio and Mississippi River crossings to competitive points in Carolina territory same rates on petro-

leum and products as are maintained on like traffic by direct lines or routes, and to maintain higher rates to intermediate points of destination, provided such rates to intermediate points shall not exceed lowest combination, relief granted not to extend to intermediate points as to which haul is not longer than that of direct line or route, or to routes that are less than 15 per cent or more than 70 per cent longer than direct line or route to said competitive points. Petroleum to Southern Points, 102 I. C. C. 756.

Prairie Pipe Line Co. v. Director General, as Agent, 88 I. C. C. 167; Montana R. R. Commrs. v. C. M. & St. P. Ry. Co., 88 I. C. C. 183; North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Lehigh Lime Co. v. A. C. & Y. Ry. Co., 85 I. C. C. 341; Fourth Section Order No. 8900, 88 I. C. C. 765.

§5. Intermediate Points.

See Advanced Rates §14¾ (d); Class Rates §2 (a); Import Traffic §2 (qq); Through Routes and Joint Rates §21.

(a) Contention that rule 77 of Tariff Circular 18-A constitutes relief from provisions of the fourth section of the act, and that prior to request by shipper for publication from intermediate point of the lower rate applying from more distant point no damages can be found unless rate from intermediate point is shown to be unreasonable per se, or unless evidence constitutes such proof of damages as it required under section 3 of the act, not sustained following Pittsburgh Crucible Steel Co., 81 I. C. C. 659. Standard Oil Co. v. Director General, as Agent, 89 I. C. C. 7, 9.

(b) Rates on petroleum and products from Lawrenceville, Ill., to Bristol, Va.-Tenn., higher than from Chicago, Ill., and Whiting, Ind., unprotected by appropriate application found in violation of long-and-short-haul provision of section 4 of the act and removal thereof directed. Indian Refining Co. v. Director General as Agent, 89 I. C. C. 657.

(c) Complainant attacked commodity rates charged on petroleum and its products from Lawrenceville, Ill., to Bristol, Va., as unreasonable unduly prejudicial and in violation of the long and short haul clause of the act. Lawrenceville is on the B. & O., and Big Four. Bristol is on the N. & W., and Southern, 110 miles southwest of Walton, Va., at which point the Bristol line of the N. & W., connects with the main line running from Cincinnati and Columbus, O., to Norfolk, Va. During the period from August 26, 1920 to Dec. 31, 1921 when the rate of 63.5c was in force from Lawrenceville to Bristol, defendants contemporaneously maintained 19.5c to Jeffersonville and 41.5c beyond and to that extent the through rate is unreasonable. Traffic from Chicago and Whiting may move over the N. Y. C., or Big Four to Danville, Ill., over the latter line through Lawrenceville to Mount Carmel, Ill., and thence Southern or that line and its connections to Bristol. Defendants have failed to indicate any change in conditions which warrant approval of the present violation, the prompt removal of which will be expected. HELD, rates attacked not unreasonable or unduly prejudicial except rate in effect of 63.5c from August 26, 1920, to Dec. 14, 1921, unreasonable to extent it exceeded 61c, reparation awarded. Indian Refining Company v. Director General, 89 I. C. C. 657.

(d) Complainant attacked fifth class rate of 30c charged between November 1918 and July 1919, from Northumberland, N. H., to South Utica and New Hartford, N. Y., as unreasonable to extent it exceeded 22.5c. New Hartford is intermediate to Utica over route of movement and the rates charged were in violation of the fourth section, this having been removed. HELD, rates attacked not unreasonable, complaint dismissed. Sauquoit Paper Co. v. Director General, 92 I. C. C. 61.

(e) Complainant attacked class A rate of 36.5c charged on three cars of cotton seed during federal control from Memphis, Tenn., to Altheimer, Ark., as unreasonable and in violation of the fourth section. Shipments moved via St. Louis Southwestern, 142 miles. A commodity rate of 17c was applicable to Pine Bluff, Ark., a point beyond. HELD, rate attacked unreasonable to extent it exceeded 17c, reparation denied. Russell Heckle Seed Company v. Director General, 91 I. C. C. 63.

(f) Complainant attacked commodity rates charged on 797 cars of rosin from Louisiana, Mississippi, Alabama, Florida and Georgia to Kalamazoo, Mich., as unreasonable, unjustly discriminatory and unduly prejudicial and in violation

of the fourth section. The rates to Kalamazoo are in excess of the rates from the same points to Chicago, Ill., Milwaukee, Wis., and Detroit, Mich., although by workable routes Kalamazoo is said to be intermediate to these destinations. In 87 I. C. C. 740 the Commission found reasonable rates to apply from Jacksonville to Chicago, 40c, Kalamazoo 40c, Milwaukee 42c, Detroit, 40c and to Grand Rapids 41c. HELD, rates attacked not unreasonable but reasonable rates prescribed for the future of 40c to Kalamazoo from Jacksonville and 37c from New Orleans. Complaint dismissed. Western Paper Makers Chemical Co. v. Director General, 91 I. C. C. 223.

(g) Complainant attacked class rate charged on two cars of sand shipped from Nichols, N. Y., to Athens, Pa., in November 1919 as unjust, unreasonable and in violation of section four. Shipments moved over the L. & W., to Waverly, N. Y., 10 miles, thence L. V., 3.5 miles, charged sixth class 9c. Rate of 6c was established in August 1919 to Miland and Ulster, Pa., points 4 and 8 miles, beyond Athens, and established to Athens in February 1920. The tariff publishing the rate to Miland and Ulster referred to rule 77 of Tariff Circular 18 A and provided that upon reasonable request therefor the rates in the tariff would be established from or to intermediate points. HELD, rates charged unreasonable to extent they exceeded 6c, reparation awarded. Warren Brothers Company v. Director General, 91 I. C. C. 559.

(h) Complainant attacked commodity rate of $1.26 charged on one car of rig irons, shipped Sept. 17, 1921 from Pawhuska to Haynesville, La., unreasonable to extent it exceeded 90c, and in violation of the fourth section. Shipment moved Midland Valley to Muskogee, Okla., the M. K. & T., to Shreveport, La., L. & A., to Chestnut, La., and L. & N. W., beyond, 626.9 miles, charged 36c to Muskogee and 90c beyond. The joint commodity rate of 90c applied from blanketed Oklahoma points to Louisiana for distances equal to and greater than that over the route of movement; and it applied to Haynesville from many points in the immediate vicinity of Pawhuska. HELD, rate attacked unreasonable to extent it exceeded 90c, reparation awarded. Parkersburg Rig & Reel Co. v. M. V. R. R., 91 I. C. C. 583.

(i) Complainant attacked commodity rate of 25c charged on 13 carloads of acid phosphate between March and April 1920 from New Orleans and Gretna, La., to Camden, Ark., as unjust, unreasonable, unduly discriminatory and in violation of section four. Charged applicable jobbers rate of 25c although there was contemporaneously maintained to Little Rock and Pine Bluff, Ark., Camden being intermediate, a rate of 15.5c. HELD, rate attacked unreasonable to extent it exceeded 15.5c reparation awarded. Ouachita Cotton Oil Co. v. M. P. R. R., 91 I. C. C. 750.

(j) Complainant attacked commodity rates charged on cotton seed, carloads, from western Kentucky and Tennessee on the Hickman division of the I. C., to Cairo, Ill., as unreasonable and unduly prejudicial. Hickman division extends west from Dyersburg, Tenn., 93 miles south of Cairo to Deer, Tenn., 3.07 miles, and thence north to Hickman, 48.53 miles. They are commodity rates and only apply over the Hickman division through Dyersburg and the main line of the I. C. beyond. It is 73 miles from Hickman to Cairo over that line to Union City, Tenn., and M. & O., beyond. Thus the short route from most Hickman division points is through Hickman, but the rates over that route from all points here concerned are considerably higher than those attacked. Prior to March 4, 1923 class D rate of 18c applied from Hickman to Cairo over the route of movement, since that date a commodity rate of 14.5c has applied. Rates from intermediate points are higher. Hickman is a competitive point and defendants are not the rate making lines, the fourth section departure being authorized in 1911. Considering the differences in distance and the relative levels of these rates, the adjustment attacked can not be said to be unduly prejudicial to Cairo. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Cairo Cotton Oil Mill v. I. C. R. R., 91 I. C. C. 765.

(k) Complainant attacked combination commodity rates charged on tank cars of petroleum products shipped between April 1, 1920 and Oct. 28, 1921 from Dodge, Tex., to Boynton, Eram, Morris, Delaware and Watova, Okla., as unjust and unreasonable. Shipments forwarded via T. & P., M. K. T. Specific rates were not in effect to Boynton and Eram until April 20, 1921. Prior to

April 25, 1922 when specific through rates became effective to Delaware and Watova these points took the rate to Kansas City, a farther distant point on the same line, under an intermediate clause in the tariffs. Rates sought are those ordered in 66 I. C. C. 426. Defendants are willing to accord Boynton the same rates as Muskogee, retroactively, the rate of 30c being established to Boynton via the Frisco upon complainants representation. HELD, rates attacked unreasonable to extent they exceeded 22.5c prior to August 26, 1920 and 30.5c thereafter, reparation awarded. Transcontinental Oil Co. v. M. K. & T. Ry., 92 I. C. C. 39.

(l) Complainant attacked commodity rate charged on matches, carloads, from Oswego, N. Y., to Philadelphia, Pa., Charleston, S. C., Brunswick, Ga., and Jacksonville, Fla., between August 1917 and May 1920 as unreasonable, unduly prejudicial, and in violation of fourth section. Shipment in 14599 moved via N. Y. C., to Newberry Junction, Pa., thence P. & R., to team track delivery points at Fifth and Willow, Sixth & Willow, Willow & Noble Sts., Broad and Somerset Sts., and 22nd St., Philadelphia. Charged fourth class 21.5c between August 1917 and June 24, 1918, and 27c between August 8, 1918 and May 11, 1920. When shipments moved commodity rates applied to Baltimore, Md., 18.9c, prior to April 18, 1918 20.5c from that date to August 18, 1919 and 25.5c thereafter. The commodity rate to Baltimore has since been canceled making applicable the fourth class rate. The destinations in Philadelphia were intermediate to Baltimore and shipments overcharged. In 14600 shipments moved via D. L. & W., or N. Y. C., to New York, thence Clyde Steamship Line to Charleston, Brunswick and Jacksonville, charged joint fourth class rate. Contemporaneously commodity rates were in effect to and from Charleston, Brunswick and Jacksonville lower than through class rate, which were subsequently published as through rates. HELD, rates charged to Philadelphia unreasonable to extent they exceeded rates to Baltimore, and rates charged to Charleston, Brunswick and Jacksonville unreasonable to extent they exceeded combination on New York, reparation awarded. Diamond Match Company v. Director General, 92 I. C. C. 68.

(m) The mere fact that a rate to a more distant point is lower than a rate on the same commodity to an intermediate point is not proof that the rate to the intermediate point is unreasonable. Diamond Match Co. v. Director General, 92 I. C. C. 68, 69.

(n) Respondents proposed to modify the rules governing intermediate application of rates on lumber, including ties, from stations on the Frisco, between St. Louis and Springfield, Mo., to Missouri River cities, such as Omaha, Nebr., and certain points beyond. The tariff names no specific rates from any point on the Frisco except St. Louis. Prior to July 15, 1924 the rate on lumber and ties from St. Louis to Omaha was 19c, while the rate to Rapid City, S. D. was 53.5c. Under the immediate rule these rates applied from points on the Frisco between St. Louis and Springfield, such as Lebanon, Mo. It was not intended to extend the St. Louis basis to such points as Lebanon. Effective July 15, 1924 the rates from the St. Louis over the Frisco to all Missouri river cities, except Kansas City, were canceled. This cancellation resulted in the application of combination rates from such points as Lebanon to Missouri river cities, except Kansas City, or the basis which would result had the proposed intermediate rule not been suspended. The rates from Lebanon under the proposed rule because of the maintenance by the Frisco of lower rates from St. Louis to points beyond the Missouri river, would violate the long and short haul provision of the fourth section. Respondent has not indicated any intention to bring such departures into conformity with the statute nor could such action well be accomplished prior to the time the proposed schedules might take effect. HELD, schedules not justified. Intermediate rule on lumber, 92 I. C. C. 153.

(o) Complainant attacked commodity rate of 23.5c charged on one car of dressed yellow pine lumber shipped September, 1921, from Mobile, Ala., to College Park, Ga., as unreasonable and in violation of section four to extent it exceeded 19.5c. Shipment moved L. & N., to Montgomery, Ala., Western Ry. of Ala., to West Point, Ga., and A. & W. P., beyond 344 miles. College Park is 9 miles south of, and intermediate to Atlanta, over route of movement. Rate

attacked was made up by adding to the specific rate of 19.5c Mobile to Atlanta the arbitrary or basing rate of 4c from Atlanta to College Park. Effective Jan. 1, 1923 a rate of 17.5c was established to College Park, which was the rate to Atlanta subsequent to July 1, 1922. HELD, rate attacked unreasonable to extent it exceeded 19.5c, reparation awarded. Watters Tonge Lumber Co. v. A. & W. P. R. R., 92 I. C. C. 251.

(p) Complainant attacked combination class rates charged on manure spreaders from Coldwater, O., to Wisconsin between March 17, 1919 and Jan. 16, 1920 and between March 1 and Dec. 27, 1919, as unreasonable and unduly prejudicial. Coldwater is on the Cincinnati Northern and L. E. & W., 112 miles north of Cincinnati. Shipments moved through Chicago, charged fifth class rate of 20.5c to Chicago and class A rates of 20 and 25c beyond. All of the destinations except Richland Center and Prairie du Sac, are intermediate to Winona, Minn., or points in the Winona group, to which the rate from Coldwater at the time was 39.5c a joint rate, which was established to these destinations in December, 1920. HELD, rates attacked unreasonable, reparation awarded on basis of 39.5c. New Idea Spreader Co. v. Director General, 92 I. C. C. 742.

(q) Interstate Commerce Act, §4, as amended by Act June 18, 1910, and Act Feb. 28, 1920 (Comp. St. Ann. Supp. 1923, §8566), prohibiting common carriers from charging a higher rate for a shorter than for a longer distance over same line or route in same direction, without permission of Interstate Commerce Commission, may be violated by charging a higher rate for transportation over the shorter distance, though property has not been moved over the longer distance at the lower published rate. Davis, Agent, etc. v. Portland Seed Co. 44 Sup. Ct. 380; San Francisco & P. S. S. Co. v. Parrington, 44 Sup. Ct. 380, Davis, Agent, United States Railroad Administration v. Same, 44 Sup. Ct. 380; Great Northern Ry. Co. v. McCaull-Dinsmore Co., 44 Sup. Ct., 380.

(r) Complainant attacked class rates charged on scrap brass, carloads, from Binghamton, N. Y., to Philadelphia, Pa., since April, 1923, as unreasonable and in violation of the fourth section. Shipments moved over D. L. & W., and Pennsylvania at fifth class rate of 28.5c. Contemporaneously there was in effect over the same route a commodity rate of 23c on scrap brass from Black Rock, Buffalo, and East Buffalo, N. Y., to Philadelphia. Binghamton is directly intermediate between Buffalo and Philadelphia over authorized routes. A rate of 21c from Binghamton to Philadelphia was established May 20, 1924. HELD: Rate charged unreasonable to extent it exceeded 23c, reparation awarded. Levenes Sons v. D. L. & W. R. R., 93 I. C. C. 344.

(s) Complainant attacked commodity rates charged of 48.5c on green coffee, carloads, from New Orleans, La., to Montgomery, Ala., as unjust and unreasonable. Montgomery is 318 miles from New Orleans. The rate from New Orleans to Nashville, Louisville, and St. Louis is only 0.5c higher than the rate to Montgomery. The rates on green coffee from New Orleans to Ohio river crossings are depressed because of competition existing at those points on coffee imported through the eastern ports. While this may explain the level of rates from New Orleans to those crossings, it does not necessarily follow that rates substantially the same in amount to intermediate points are also depressed regardless of their distances from points of origin. HELD: Rate attacked not unreasonable, complaint dismissed. Fletcher Wilson Coffee Co. v. L. & N. R. R., 93 I. C. C. 555.

(t) Complainant attacked class rates charged on empty returned beer packages from West Virginia, Virginia, New York, Pennsylvania, Ohio, Kentucky, Indiana, Michigan and Washington, D. C., to La Crosse, Wisc., in federal control as unjust and unreasonable and in violation of section four. Rates charged were higher than the combination on Chicago present rates being based on that combination. HELD: Rates charged unreasonable to extent they exceeded the Chicago combination, reparation awarded. La Crosse Chamber of Commerce v. Director General, 93 I. C. C. 602.

(u) Complainant takes the position that because the rate to the intermediate point is higher than to the more distant point, the higher rate is therefore unreasonable under section 1. This does not follow. Forrester Nace Box Co. v. Director General, 93 I. C. C. 665, 666.

(v) Complainant attacked combina-

tion rate charged on one car of strawberries from Castleberry, Ala., to Mansfield, O., on April 20, 1922, as unjust, unreasonable, unjustly discriminatory and unduly prejudicial and in violation of section four. A rate of $1.29 applied from Castleberry to Sandusky, O., a farther distant point to which Mansfield is intermediate, that rate being established to Mansfield April 22, 1923. Charged 90c to Cincinnati and 46.5c beyond, shipments moving via L. & N., to Cincinnati and B. & O. beyond. There was no justification for charging a higher rate to Mansfield than maintained to Buffalo, Detroit, Cleveland and Sandusky. HELD: Rate charged unreasonable to extent it exceeded $1.29, reparation awarded. Lee Farm Co. v. L. & N. R. R., 93 I. C. C. 699.

(w) Complainant attacked class and commodity rates charged on 17 cars of canned vegetables and condensed milk from Wisconsin to Cincinnati, O., between August 1, 1920 and Nov. 1, 1921, as unreasonable. Both class and commodity rates charged were higher than commodity rates from the same points to Ashland, Ky., and Huntington and Kenova, W. Va., to which Cincinnati is intermediate, the rates to Cincinnati being subsequently reduced. HELD: Rates charged not unreasonable, complaint dismissed. Vossler Co. v. E. J. & E. Ry. 96 I. C. C. 75.

(x) Complainant attacked commodity rates charged on 3 tank cars of fuel oil shipped from Kansas City, Mo., to Kearney, Nebr., during May and June, 1923, as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the long and short haul provision of the act. Shipments moved 385 miles, charged commodity rate of 47c, reduced on July 1, 1923, to 34.5c. Rates of 27 and 42.5c were in effect to Grand Island, Nebr., and Sable, Colo., respectively. Grand Island is a point on defendant's line intermediate to Kearney and 42 miles distant therefrom, and Sable is a point on defendant's line 245 miles farther distant from Kearney. Shipments to Sable move through Kearney. HELD: Rate charged unreasonable to extent it exceeded 34.5c, reparation awarded. Tyner Construction Co. v. U. P. R. R., 96 I. C. C. 91.

(y) The legal effect of the publication of rates under authority of rule 77 is equivalent to an admission by defendants that the higher rates to intermediate points were unreasonable. Randall Bros. v. L. & N. R. R., 96 I. C. C. 342, 344.

(z) Complainant attacked commodity rates on cement, carloads, from Ada, Okla., to destinations in Louisiana as unreasonable and because higher than to New Orleans, La., to which they are intermediate. The destinations are on the T. & P. south of Shreveport, La., and north of Orleans. Shipments moved M. K. & T. to Mineola, Tex., and T. & P. beyond, or Frisco to Sherman, Tex., and T. & P. beyond. The rate to Shreveport is 21.5c to the destinations here considered, 25.5c to Alexandria, 22c and to New Orleans 23.5c. There is no evidence tending to show that the rates in issue are inherently unreasonble, and the only allegation as to other violations of the act is that of departure from the fourth section. HELD: Complaint dismissed. Oklahoma Portland Cement Co. v. St. L. S. F. Ry., 96 I. C. C. 468.

(aa) Rates on sewer pipe from Brazil, Ind., to Manitowac, and Sheboygan, Wis., and Menominee, Mich., higher than to farther distant points in Minnesota, Wisconsin, and Michigan, found in violation of long-and-short-haul clause of section 4 of the act. While such lower rates to farther distant points applied via car-ferry routes across Lake Michigan, they were unrestricted as to routing, and were, therefore, also applicable via all-rail routes of movement. Chicago Fire Brick Co. v. Director General, 91 I. C. C. 755.

(bb) Complainant attacked commodity rates on lumber, other than pine, carloads, from Jonesboro, Ark., to Des Moines, Ia., as unduly prejudicial as compared with rates from Helena, Wilson, and Glencoe, Ark., and Memphis, Tenn. Jonesboro is in the interior of Arkansas, 64.4 miles northwest of Memphis, on the Frisco. It is also on the St. L. S. W. Memphis, on the east bank of the Mississippi river, is 305.4 miles and Helena, on the west bank, is 362 miles from St. Louis. Wilson is on the direct line of the Frisco between Memphis and St. Louis. Glencoe is served by the B. L. & A. S., and J. L. C. & E. Joint rates on lumber, other than pine, are published from Jonesboro, Memphis, Helena, Glencoe and Wilson to Des Moines without re-

gard to the combination rates made on St. Louis or Thebes. On account of the different operating circumstances and conditions prevailing east and west of the river the west side carriers have long been permitted to maintain rates somewhat higher than those of the east side carriers. Jonesboro is west of the line of the M. P., through Nettleton, which is the boundary east of which the carriers were authorized to depart from the provisions of the fourth section in 80 I. C. C. 157, on traffic south of St. Louis. The record is not sufficiently comprehensive to authorize consideration of the alleged fourth section violations other than through Jonesboro. HELD, rate attacked unduly prejudicial in that it exceeds rates from Glencoe and Wilson to Des Moines. Jonesboro Freight Bureau v. St. L. S. F. Ry., 100 I. C. C. 324.

(cc) Complainant attacked class rates charged on plow irons, parts, and castings, less carloads, from Macon, Ga., to Opelika, Dothan, Roanoke, Troy, Union Springs and Hurtsboro, Ala., since July 1, 1922 as unreasonable and unjustly discriminatory in favor of Atlanta, Ga. Fourth class rates are applicable from Macon to Alabama destinations while commodity rates apply from Atlanta and Columbus, Ga., to these destinations. Complainant has not shown that it suffered damage because of fourth sections violations or the undue prejudice found to exist. HELD, rates attacked not unreasonable but in violation of long and short haul clause of the act to extent they exceeded rates from Atlanta to same points. Massey Gin & Machine Works v. C. of Ga. Ry., 101 I. C. C. 45.

(dd) Complainant attacked class D rate of 12.5c charged on eight cars of scrap iron from Barksdale, Wis., to Duluth, Minn., between Nov. 27, 1922 and May 10, 1923 as in violation of sections 1, 2, 3 and 4 of the act. Distance handled 147.4 miles. Reparation is sought to basis of 8c applicable at time of movement from Washburn, Wis., a point to which Barksdale is intermediate to Duluth. The rate of 8c also applied from Ashland to Duluth. Distances from Ashland and Washburn to Duluth over the N. P., were 88.4 and 75.5 miles, respectively and 151.8 miles and 147.4 miles. Subsequently a rate of 9.5c was established from Ashland Junction to Duluth, the rate from Ashland remaining at 8c. Barksdale and Washburn are not intermediate to Ashland, but the rate of 9.5c was voluntarily made applicable from these points by defendant. HELD, rate charged unreasonable to extent it exceeded 9.5c. reparation awarded. West End Scrap Iron & Metal Co. v. C. St. P. M. & O. Ry., 101 I. C. C. 108.

(ee) Complainant attacked commodity rate charged on 38 cars of cement from Leeds, Ala., to Deerland, Ga., during April, May, and June, 1923 as unreasonable, unduly prejudicial and in violation of the fourth section. Leeds is on the C. of Ga., and the Southern 18 miles east of Birmingham, Ala. Deerland is on the S. A. L., 4.8 miles northeast of Atlanta, Ga., and 1.8 miles east of Howell, Ga., the point at which the shipments concerned were interchanged with the S. A. L. Howell is intermediate between Leeds and Atlanta over the Southern. Distance moved 148.8 miles. Charged 12.5c, but at time they moved a rate of 10.5c was applicable from Leeds to Atlanta and to Armour Belt Junction, and Inman Park, suburban points about Atlanta, about 3, 7 and 12 miles east of Howell and as to which Deerland is intermediate. This rate was published to Deerland July 20, 1923. Certainly there is no proof that the rate charged was unreasonable as applied over the longer route of the Central, over which most of the shipments moved, and the evidence does not sufficiently show that it was unreasonable as applied on the shipments which moved over the shorter route of the southern and S. A. L. HELD, rate attacked not unreasonable, complaint dismissed. MacDougald Construction Co. v. C. of G. Ry., 101 I. C. C. 226.

(ff) Complainant attacked class rate of 88c charged on green salted hides, carloads, from Savannah, Ga., to Manchester, N. H., from March 1 to 8, 1922 as unjust and unreasonable, unjustly discriminatory to extent it exceeded 60c. Manchester on the B. & M., is 57 miles north of Boston, Mass. Shipments unrouted, moved 1,479 miles, charged sixth class 88c. On March 9, 1923 a commodity rate of 54c was established. When the shipments moved there was in effect from Jacksonville, Fla., a farther distant point, a commodity rate of 60c which was reduced to 54c on July 1, 1922. On March 9, 1923 the same rate was established from Savannah. HELD, rate

attacked unreasonable to extent it exceeded 60c, reparation awarded. McElwain Co. v. S. & A. Ry., 101 I. C. C. 359.

(gg) Complainant attacked class rate charged on carbon black, carloads, from Monroe, La., gas district to Chattanooga, Tenn., as unreasonable to extent they exceeded rates from the same district to Louisville, Ky. Carbon black is light in weight, and, for transportation, is packed in paper bags holding 12.5 pounds each. The capacity of a standard car is about 20,000 pounds. Effective Feb. 11, 1922 the carriers established commodity rates of 55.5c from the Monroe district to Memphis, Tenn., and of 47c from Memphis to Chattanooga, making a through rate of $1.025 which was equalized through the Vicksburg, Miss., gateway. Effective July 1, 1922 these rates became 92.5c to Chattanooga. The departure from the long and short haul clause of the fourth section results from the fact that the rate to Louisville applies over the Southern and C. N. O. & T. P. through Chattanooga. Over this route the distance is 861 miles, or about 140% of the short line distance. Southern has expressed its willingness to withdraw from participation in the rate to Louisville. HELD, rates attacked unreasonable to extent they exceeded 77.5c prior to July 1, 1922 and 70c thereafter, reparation awarded. Lookout Paine Mfg. Co. v. M. P. R. R., 101 I. C. C. 691.

(hhii) Contention that lower rate from Lake Charles, La., a more distant point than Columbia, La., on traffic moving to Howard, Kans., was subject to rule 77 of Tariff Circular 18-A, which authorizes establishment of rates from intermediate points not exceeding those from next more distant stations, not sustained, since applicable tariffs carrying lower rate from Lake Charles provided specific routing under which Columbia was excluded. Transcontinental Oil Co. v. A., T. & S. F., 92 I. C. C. 285.

(jj) Rates on cottonseed-hull shavings from East St. Louis, Ill., to Hopewell, Va., found unreasonable to extent they exceeded lower rate from Cairo, Ill., a farther distant point, which lower rate was published in accordance with rule 77 of Tariff Circular 18-A. Reparation awarded. East St. Louis Cotton Oil Co. v. B. & O., 92 I. C. C. 633.

(kk) Rates on tractors from Detroit, to Mason City, Iowa, found not unreasonable, discriminatory, unduly prejudicial, or in violation of long-and-short-haul provision of section 4 of the act, as compared with lower rates from Detroit to Minneapolis and St. Paul, more distant points. Lower rate did not apply over route of movement through Mason City and therefore no fourth-section violation existed. Furthermore, lower rates are on basis entirely different from that applying to Mason City; they were established as a result of decisions in 28 I. C. C. 47, 29 I. C. C. 530, and 46 I. C. C. 39; and were found not unreasonable or unduly prejudicial in North Iowa Traffic Asso., 58 I. C. C. 491. Wagner Motor Co. v. M. C. R. R., 93 I. C. C. 195

(llmm) Rate on scrap brass from Binghamton, N. Y., to Philadelphia, found unreasonable to extent it exceeded lower rate from Black Rock, Buffalo, and East Buffalo, N. Y., farther distant points. Publication subject to rule 77 of Tariff Circular 18-A of lower rate from farther distant points was in violation of long-and-short-haul clause of the fourth section and was tantamount to an admission by defendant that higher rate from Binghamton was unreasonable. Standard-Asphalt & Refining Co., 66 I. C. C. 611, and cases there cited. Reparation awarded. Levene's Sons v. D., L. & W., 93 I. C. C. 344.

(nn) Fifth-class rates on scrap brass and brass ingots or pigs, from Meadville to New York, found in violation of the long-and-short-haul provision of section 4 of the act to extent they exceeded rates contemperaneously applicable from East Liberty, Pa., a farther distant point to which Meadville is intermediate. Union Smelting and Rfg. Co. v. C. R. R. Co. of N. J., 95 I. C. C. 104, 105.

(oo) Rates on canned vegetables and condensed milk from Wisconsin points to Cincinnati, found not unreasonable as compared with rates to Ashland, Ky., and Huntington and Kenova, W. Va., to which Cincinnati is intermediate. Cincinnati formerly took rates lower than to the more distant points but increases authorized in the Fifteen Per Cent Case, 45 I. C. C. 303, disrupted this adjustment and created the fourth-section violation which carriers subsequently removed by reducing rates at the intermediate point. Fact that rates to intermediate point were in excess of those to more distant points does not prove unreasonableness, nor, in absence of evi-

dence of specific damages to shipper, afford a sufficient basis for an award of reparation. Vessler Co. v. E. J. & E. Ry., 96 I. C. C. 75.

(pp) Fact that rates to an intermediate point were in excess of those to more distant points is not proof of unreasonableness, nor, in absence of evidence of specific damages to shipper, is it a sufficient basis for an award of reparation. Vessler Co. v. E. J. & E. Ry., 96 I. C. C. 75, 76.

(qq) Class rate on spelter from Trenton, N. J., to Baltimore and Sparrow's Point, Md., Weir Branch, Cambridge, Boston, and Worchester, Mass., Providence, R. I., and Stamford, Springdale, Cheshire, Bridgeport, and Waterville, Conn, found not to have been unjustly discriminatory or unduly prejudicial and not unreasonable, except for a certain period when they exceeded lower commodity rates which were published subject to Rule 77 of Tariff Circular 18 A and would have been applicable upon request. Reparation awarded. Trenton Smelting & Refining Co. v. P. R. R., 96 I. C. C. 264.

(rr) Mere fact that rate from a more distant point is lower than a rate on the same commodity from an intermediate point is not proof that the rate from the intermediate point is unreasonable. Diamond Match Co., 92 I. C. C. 68. Trenton Smelting & Refining Co. v. P. R. R., 96 I. C. C. 264, 266.

(ss) Rates on coal from mines in Tennessee and Kentucky to sidings on the Fort Worth branch of the Southern Ry., intermediate to Sawtell, Ga., found to have been unjust and unreasonable to the extent they exceeded rates from the same mines to Sawtell prior to a certain date and to the extent they exceeded rates from same points to Constitution, Ga., since that date. The tariffs under which these shipments moved and which named the rates to Sawtell and Constitution contained a notation to the effect that in accordance with Rule 77 of Tariff Circular 18 A, rates to intermediate points not in excess of those to the more distant points would be established on one day's notice. The legal effect of the publication of the lower rates to Sawtell and Constitution under authority of Rule 77 is equivalent to an admission by defendants that the higher rates to intermediate points here involved were unreasonable. Producers Refining Co., 69 I. C. C. 403; Pittsburgh Crucible Steel Co., 81 I. C. C. 659, and Pacific Grain Co., 85 I. C. C. 710. Reparation awarded. Randall Bros. v. L. & N., 96 I. C. C. 342.

(tt) Rates on burlap bags from New Orleans, La., to Jackson, Miss, found to have been unreasonable to the extent they exceeded rates to points to which Jackson is directly intermediate from New Orleans. Reparation awarded. Jackson Traffic Bureau v. I. C. R. R. Co., 96 I. C. C. 449.

(uu) Removal of long-and-short-haul provision violations of section 4 in connection with rates on bananas from New Orleans, La., and points taking the same rates, to Hannibal, Mo., and points in Iowa, directed, lower rates to farther distant destinations being applicable over the somewhat indirect routes through certain points. Lagomarcino-Grupe Co. v. A., T. & S. F., 96 I. C. C. 465, 467.

(vv) Rates for the transportation of manufactured iron and steel articles from points in the Pittsburgh, Pa., district to St. Louis, Mo., and points in Illinois and Indiana, found unjust and unreasonable, and just and reasonable rates, based on distances, prescribed for the future. Defendant carriers are authorized to establish and maintain via all routes between the points involved rates from or to intermediate points higher than the lowest rates prescribed as maximum, provided such rates shall not exceed the rates approved as maximum rates and in no case the lowest, and provided further that this relief shall not apply where certain percentages of circuity exist. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682.

(ww) Combination rate assessed on a shipment of lumber from Rose Lake, Idaho, to Danvers, Ill., found inapplicable and illegal to extent it exceeded the rate applicable to both Chicago Heights and Peoria, Ill. Danvers is intermediate between Peoria and Chicago Heights, and while the tariff carrying the rate to these points did not prescribe a specific rate to Danvers, it carried an intermediate clause. The commission has frequently found that if carriers desire to restrict the application of a joint rate to any particular route they should do so by clear and unequivocal language. With no routing restrictions shown in the tariff naming the joint rate sought, the shipment is properly entitled to such rate. Reparation awarded. Rose Lake

Lumber Co., Ltd. v. O. S. L. R. R. Co., 100 I. C. C. 221.

(xx) Rate on zinc ore from Murray and Midvale, Utah, to Canon City, Colo., during Federal control, found unreasonable to extent it exceeded a rate contemporaneously in effect from these points to Denver and Pueblo, Colo., more distant points. The tariffs publishing the lower rate, which was not limited as to value, contained a notation that in accordance with rule 77 of Tariff Circular 18-A, rates to intermediate points not in excess of those to the more distant points would be established on one day's notice, upon reasonable request, but, because of the specific rate in effect at Canon City rule 77 was not applicable, Standard Asphalt & Refining Co., 66 I. C. C. 611. However, there were no specific rates from Murray and Midvale to several points near to and on either side of Canon City and subsequently the lower rate was established to Canon City. Reparation awarded. Western Metals Co. v. Director General, 100 I. C. C. 314.

(yy) Class rates as applied to plow irons, parts, and castings in l. c. l., from Macon, Ga., to points in Alabama, found not unreasonable, but unduly prejudicial and in violation of long-and-short-haul clause of fourth section of the act to extent they exceed or may exceed lower contemporaneous rates on plow irons, l. c. l., in effect from Atlanta, Ga., to same destinations. Massey Gin & Machine Works v. C. of G. Ry., 101 I. C. C. 45.

(zz) Combination rates applicable on shipment of wheat from Nebraska City, Nebr., to Kansas City, Mo., reconsigned to Westwego, La., found not unreasonable, but found to have been in violation of the fourth section of the act to extent they exceeded joint commodity rates contemporaneously applicable from farther distant points over route of movement. No damage found to have resulted from such violations and complaint dismissed. Moore-Lawless Grain Co. v. C., B. & Q., 101 I. C. C. 52.

(3a) Complaint alleging refrigeration charges on vegetables and citrus fruits, c. l., from Imperial Valley points to Fort Worth, Tex., to be unreasonable and in violation of section 4 of the act, dismissed for lack of evidence. Home Star Produce Co. v. S. P. Co., 101 I. C. C. 69.

(3aa) Rate assessed on sand from LaFayette, Ind., to Manteno, Ill., found not unreasonable, discriminatory, or unduly prejudicial as compared with lower contemporaneous rate on like traffic from LaFayette to Chicago, to which Manteno is intermediate over route of movement, but in violation of long-and-short-haul provision of section 4 of the act. Shanks & Gannon Co. v. C., C., C. & St. L., 102 I. C. C. 462.

(3b) Complainant attacked rates charged and carload minimum weights on strawberries and cabbage, carloads, from Kentucky and Tennessee to Kalamazoo, Battle Creek, Sturgis and Coldwater, Mich., as unreasonable and unlawful. Rates sought on same basis as to Grand Rapids and Detroit, Mich., farther distant points were established on Nov. 4, 1925, reparation only being involved. Charged combination on the Ohio river, there being through rates published to Grand Rapids and Detroit. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceeded rates to Grand Rapids, Mich., reparation awarded. Lewis Co. v. L. & N. R. R., 112 I. C. C. 213.

(3c) Florida East Coast Ry. asked for authority to establish a rate of 25c subject to a minimum of 40,000 pounds on sugar, carloads, from Key West, Fla., when imported from Cuba to Jacksonville, Fla., and to establish higher rates on like traffic to intermediate points, in contravention of the long and short haul provision of section four. It is extremely difficult if not impossible to ascertain accurately the cost of transporting a particular kind of traffic for a certain distance. The showing made by applicant, however, leads to the conclusion that the additional transportation of sugar over its lines under the rate proposed would increase applicants revenue in a greater amount than it would increase expenses. Actual competition with water lines between Cuba and Jacksonville direct does not exist. There is a substantial movement of raw sugar from Cuba to Port Wentworth, but the volume of refined sugar shipped to Jacksonville from Port Wentworth is not shown, nor is it shown that competition with that sugar warrants the establishment of the rate proposed. HELD, fourth section relief denied. Sugar from Key West, 112 I. C. C. 347.

Director General, as Agent, 88 I. C. C. 459; Piowaty & Sons v. Director General, as Agent, 88 I. C. C. 597; Fourth Section Order No. 8900, 88 I. C. C. 768.

§6. Intermediate Points off Line.

See Supra §5.

(a) Complainants attacked commodity rate charged on bananas, carloads, from New Orleans, La., to Hannibal, Mo., Keokuk, Burlington, Muscatine, Davenport, Clinton, Cedar Rapids, Ottumwa, Centerville and Creston, Ia., as unduly prejudicial. Rates attacked are 81c to Hannibal, 84c to Keokuk and Burlington, 90c to Muscatine, Davenport and Clinton, 99c to Cedar Rapids, Ottumwa and Centerville, and $1.055 to Creston. The points alleged to be preferred are Galesburg, Monmouth, Kewanee, Aurora, Chicago, Peoria, Springfield, La Salle, and other Illinois points taking a rate of 79.5c from New Orleans. There are fourth section departures in connection with the rates through Hannibal, Keokuk and Burlington, also Quincy, Ill., the lower rates to the farther distant Illinois destinations being applicable over the somewhat indirect routes through those points. HELD: Rates attacked not unduly prejudicial, complaint dismissed. Lagomarcino Grupe Co. v. A. T. & S. F. Ry., 96 I. C. C. 465.

(b) Complainant attacked class rates charged on 33 cars of potatoes from Hightstown, Cranbury, Jamesburg, Plainsboro, Prospect Plains, and Windsor, N. Y., to Jacksonville, Fla., between Sept. 9 and Dec. 2, 1920, as unjust, unreasonable and in violation of the fourth section. Shipments moved Pennsylvania to New York and Clyde Steamship lines beyond, charged sixth class 53.5c. Contemporaneously the rate on potatoes, carloads, to New York was from Jamesburg 16c, from Hightstown, Cranbury, Plainsboro and Prospect Plains 17c, and from Windsor 19.5c, beyond New York 30.5c. HELD: Rate attacked unreasonable to extent it exceeded New York combination, reparation awarded. Chamberlin & Barclay v. Clyde Steamship Co., 98 I. C. C. 7.

(c) Complainant attacked commodity rate of 20c charged on 10 cars of lumber between May and October, 1923, from Gantt and Sports, Ala., to Pensacola, Fla., as unjust and unreasonable. Both points are on the C. of Ga., 9 and 22 miles east of Andalusia, Ala. Short line distances to Pensacola are from Gantt 123 miles and Sports 135 miles, charged 20c, which is a blanket or group rate extending between Columbus, Ga., and Andalusia on the one hand, and between Montgomery and Eufaula, Ala., on the other. When the shipments moved there was a lower combination on Andalusia of 13c from Gantt and 15c from Sports. Subsequently 13c was published from Gantt and 13.5c from Sports. HELD: Rate charged unreasonable to extent it exceeded 13c from Gantt and 15c from Sports, reparation awarded. Pensacola Creosoting Co. v. C. of Ga. Ry., 98 I. C. C. 36.

(d) Complainant attacked combination rate charged on one car of lumber shipped May 3, 1921 from Rose Lake, Ida., to Danvers, Ill., as unreasonable and in violation of section four. Shipments was routed over U. P., C. B. & Q., to Peoria, and Big Four beyond charged 76c, made up of 70c to Peoria and 6c beyond. The 70c rate also applied to Chicago Heights, Ill. Danvers is on the Big Four east of Peoria, and in connection with another carrier, intermediate between Peoria and Chicago Heights. The tariff carrying the 70c rate did not prescribe a specific rate to Danvers, but carried the following clause: Directly intermediate stations or sidings not shown in tariff via routes specified, but located between points to which rates are provided, will take rates published to next more distant station. The tariff authorized the application of the 70c rate from Rose Lake to Chicago Heights by way of Council Bluffs for M. C. delivery. No intermediate carrier was specified between Council Bluffs and Chicago Heights and the M. C., does not serve Council Bluffs. Complainant contended that the rate applied over the lines of any carrier party to the tariff, including

the C. B. & Q., Council Bluffs to Peoria, Big Four from Peoria, to Chicago, Ill., and M. C., to Chicago Heights. Over that route Danvers is intermediate to Chicago Heights. HELD, rate charged inapplicable and illegal to extent it exceeded 70c, shipment overcharged, reparation awarded. Rose Lake Lumber Co. v. O. S. L. R. R., 100 I. C. C. 221.

ALL OTHER CITATIONS

Atlas Portland Cement Co. v. C. R. R. Co. of N. J., 85 I. C. C. 611.

§6¼. Comparison of rates.

See Comparative Rates.

(a) The earnings per mile for short hauls ordinarily are and should be higher than for longer hauls. Iron and Steel Articles, 89 I. C. C. 606, 629.

(b) A lower rate over a route other than route of movement does not constitute a violation of the long-and-short-haul provision of section 4 of the act. Wagner Motor Co. v. M. C. R. R., 93 I. C. C. 195, 196.

§6½. Participation in route.

(a) Desire of a carrier to get the long hauls on traffic does not warrant it in maintaining rates that are unreasonable or otherwise unlawful to particular consuming territories. A shipper is entitled to forward its products to any market over any route it selects at reasonable rates. United Verde Extension Mining Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 95, 100.

§6¾. Exceeding Combination of Intermediates.

See Advanced Rates §5 (2½); Through Routes and Joint Rates §15.

(a) The aggregate of intermediate rates within meaning of section 4 of the act is the sum of the separate rates and not an amount determined by application of the so-called combination rule. McLeod v. T. & P. Ry. Co., 89 I. C. C. 356, 357.

(b) This is no violation of the aggregate of intermediates clause of section 4 of the act unless carrier maintains a specific through rate which is higher than the lowest aggregate of intermediate rates over the same route. The product of intermediate rates treated by a rule which results in something less than the aggregate is not the aggregate within the meaning of this section. McLeod v. T. & P. Ry. Co., 89 I. C. C. 356, 357.

(c) In 77 I. C. C. 439, the Commission found not unreasonable through fifth class rates on iron and steel articles, carloads, from Pittsburgh, Pa., and other points in western Pennsylvania to Cleveland, Lorain, Canton, and Akron, O., which exceeded the aggregate of contemporaneous intermediate rates to and from Youngstown, O., and other intermediate points. In 78 I. C. C. 724, the Commission found that the through fifth class carload rates from Pittsburgh and certain other points to Parkersburg, W. Va., were unreasonable to extent they exceeded the combination to and from Wheeling, W. Va.; that the rates from Johnstown, Conellsville and Monessen, Pa., were unreasonable to extent they exceeded 2c over the rate from Pittsburgh; and that the rate from Portsmouth, O., was unreasonable to the extent it exceeded the rate from Pittsburgh. HELD, upon further consideration rates attacked unreasonable to extent they exceeded the aggregate of intermediates, reparation awarded. American Shipbuilding Company v. Director General, 89 I. C. C. 601.

(d) Complainant attacked commodity rates charged on lumber, carloads, between June 25, 1918 and Feb. 14, 1919, from Hopkins, Fla., to Baltimore and Port Covington, Md., Utica, N. Y., Stroudsburg, Pa., Spartanburg, S. C., and Johnson City, Tenn., as unreasonable. In 58 I. C. C. 442, the Commission found rates attacked unreasonable to extent they exceeded the combination to and from Jacksonville, Fla., in effect June 24, 1918, increased 5c. HELD, rates attacked unreasonable to extent named in original report shown above, reparation awarded. Union Cypress Company v. F. E. C. Ry., 89 I. C. C. 679.

(e) Complainant attacked class D rate charged on two cars of mine run coal shipped June 26, 1918 from Hammond, Kas., to Stark City, Mo., as unjust and unreasonable. Hammond, a local point on the Frisco is about 91 miles south of Kansas City, Mo. Shipments routed by shipper Frisco-M. & N. N. A., moving via Frisco Joplin and M. & N. A., charged class D rate of $3.30. A combination rate of $2.30 was applicable over the same lines via Neosho, Mo., but the aggregate of intermediate rates in effect over routes traversed was $2.60.

made up of $1.20 to Joplin and $1.40 beyond, and on August 14, 1919 a joint commodity rate of $2.10 was established. HELD, rates attacked unreasonable to extent they exceeded $2.60, reparation awarded. Midland Coal Company v. St. L. S. F. Ry., 92 I. C. C. 283.

(f) Complainant attacked fifth class rates charged on 41 tank cars of creosote oil shipped from Ensley, Ala., to De Ridder, La., between April 19, 1919 and Feb. 19, 1920 as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Ensley is within the switching limits of Birmingham, Ala. De Ridder is on the L. & P., K. C. S., Santa Fe and L. C. & N. Shipments moved at fifth class rate of 86.5c. The plant at De Ridder was constructed in 1918 and immediately thereafter complainant applied for establishment of a commodity rate of 25c, the rate in effect to Shreveport, La., and on March 11, 1921 a rate of 55.5c was established the same as the rate to Lake Charles, La. On Feb. 3, 1922 a rate of 33c was established, this being the rate to Shreveport. The through class rates exceeded the aggregate of the intermediate rates via New Orleans and Baton Rouge, La. HELD, rate attacked unreasonable to extent it exceeded a rate of 25c, reparation awarded. Shreveport Creosoting Co. v. L. & P. Ry., 92 I. C. C. 519.

(g) A joint rate that exceeds the aggregate of intermediate rates over the same line or route is prima facie unreasonable. The Commission has never found that the charging of such a rate is an overcharge. It has always maintained that the statute requires rigid observance of the tariff, without regard to the inherent lawfulness of the rates specified. Pacific Adjustment Co. v. Director General, 93 I. C. C. 50, 52.

(h) Complainant attacked class rates charged on a car of common furniture shipped March 3, 1922, from Fort Smith, Ark., to Jackson, Miss., as unreasonable and, as compared with the rates to Memphis, Tenn., Vicksburg, Miss., and New Orleans, La., unjustly discriminatory and unduly prejudicial and in violation of the fourth section. Shipment moved via Mo. Pac. to Memphis and I. C. beyond, 514 miles, charged third class rate of $1.51. The combination of local rates to and from Vicksburg was 96.5c, made up of 54c to Vicksburg and 42.5c beyond, this subsequently being published. HELD: Rates attacked unreasonable to extent they exceeded the Vicksburg combination, reparation awarded. Jackson Traffic Bureau v. A. & V. Ry., 93 I. C. C. 55.

(i) Complainant attacked combination commodity rates charged on 37 cars of sand and gravel shipped in Sept. 1922, from Winona, Minn., to Viroqua, Wis., as unreasonable. Shipments moved from Winona to La Crosse, 29 cars via C. M. & St. P., and 8 cars via Burlington thence L. C. & S. E. When shipments moved neither the Milwaukee nor the Burlington maintained joint commodity rates on sand and gravel to Viroqua in connection with the Southeastern. Charged combinations on Winona, 6.6c and 6.7c via the Milwaukee and Burlington, these rates composed of commodity rates of 3.5c to LaCrosse and 72c per ton beyond over Burlington plus commodity rate of 3.1c. The applicable rate in connection with both the Burlington and the Milwaukee was the joint class E rate of 12c, shipments undercharged. Viroqua is served by the Milwaukee and the Southeastern, but no track connection exists there between the rails of these two carriers. The Milwaukee has its own route from Winona to Viroqua. The Burlington has not. The Northwestern serves Winona and La Crosse but has no rails to Viroqua. The Northwestern in connection with the Southeastern maintains to Viroqua a joint rate on sand and gravel equal to the rate over the single line route of the Milwaukee. Milwaukee conceded that the joint class E rate of 12c exceeded the combination of intermediates on La Crosse, composed of commodity rate of 3.5c to La Crosse plus 7c class E rate of Southeastern beyond. Effective Nov. 1, 1922, the Southeastern published a commodity rate of 5c from La Crosse to Viroqua. HELD: Rates charged not unreasonable but applicable rates unreasonable to extent they exceeded present combinations of 8.5c and 8.6c over Milwaukee and Burlington in connection with the Southeastern, undercharges waived, complaint dismissed. Campbell Construction Co. v. L. C. & S. E. Ry., 93 I. C. C. 99.

(j) Complainant attacked commodity rate charged on gasoline, carloads, between Jan. 10 and Feb. 29, 1920, from

Salt Lake City, Utah, to Baker, Ore., as unreasonable and in violation of the fourth section. Shipments moved over O. S. L. and O. W. R. R. & N., charged 87.5c which exceeded the combination of 78c on Weiser, Ida., the latter rate being subsequently established. HELD: Rate attacked unreasonable to extent it exceeded 79c, reparation awarded. Standard Oil Co. v. Director General, 93 I. C. C. 278.

(k) Complainant attacked commodity rate charged on two cars of rice bran, in carloads, from Wheatley, Ark., to Jackson and Meridian, Miss., Jan. 26 and Feb. 14, 1923, as unjust, unreasonable, unduly discriminatory as compared with rates on grain and grain products. Routed via Rock Island to Memphis, 64.4 miles, I. C., to Jackson, 211 miles, and over A. & V., to Meridian 95.8 miles. Rate charged to Jackson 41c, compared of commodity rate of 15.5c to Memphis and class D rate of 25.5c beyond. Rate charged to Meridian was 34.5c composed of 15.5c to Memphis and 19c beyond. Subsequent to the movement of the Jackson shipment a commodity rate of 19c was established from Memphis to Jackson, thus making the present combination to Jackson 34.5c. Joint class rates of 78c were applicable on both shipments. The combination rate applied from Whetley to Jackson was 13.5c higher than the joint rate to New Orleans, a more distant point on the same route in the same direction. The rate to the more distant point also applies through Meridian. HELD, rates attacked unreasonable and in violation of the long and short haul clause, to extent they exceeded 27.5c, reparation awarded. Jackson Traffic Bureau v. A. & V. Ry., 93 I. C. C. 321.

(l) Complainant attacked combination commodity rates charged on four cars of sand shipped between March 9, 1919 and Nov. 24, 1919 from Turner, Kans., to Cassidy, Galloway, Bolivar, and Cabool, Mo., as unreasonable and unduly prejudicial. Turner is on the Santa Fe 0.75 miles west of Kansas City, Mo., switching limits and about 7 miles west of Kansas City, Mo. Serridge is a local station on the K. C. K. V. & W., an electric road not a party defendant. At the time when the shipments moved to Kansas City rate applied from Serridge. Destinations are local points on the Frisco near Springfield, Mo. Charged commodity rates to and beyond Kansas City on shipments to Galloway and Cassidy and at the joint class E rates from St. Joseph, Mo., applicable under intermediate rule from Turner, to Bolivar and Gabool. Rates contemporaneously in effect from Kansas City were 6c to Gallaway, 199 miles; 7c to Cassidy, 206 miles; 5.5c to Bolivar, 151 miles; 7.5c to Cabool, 269 miles. The Kansas City rate was established from Turner to Bolivar on Dec. 30, 1919 and to the other destinations on Dec. 31, 1919. HELD, rates attacked not unduly prejudicial; rates to Bolivar and Cabool unreasonable to extent they exceeded Kansas City combination, rates to Galloway and Cassidy not unreasonable, reparation awarded. Kaw River Sand & Material Co. v. Director General, 93 I. C. C. 346.

(m) Complainant attacked commodity rate charged on grapefruit, carloads, and in mixed carloads with oranges, shipped between Feb. 19, 1921 and Jan. 3, 1922 from Florida to Omaha, Neb., as unreasonable and in excess of the aggregate of intermediate rates to and from Jacksonville, Fla. Rates charged $1.385 from Haines City and Winter Haven, $1.42 from Manatee, Manavista, and Palmetto, $1.435 from Arcadia, $1.60 from Cocoanut Grove and Miami and $1.62 from Homestead. These rates established as result of 17 I. C. C. 552 and 22 I. C. C. 11. HELD, rates attacked not unreasonable and not in violation of the fourth section except from Homestead, the latter being removed March 20, 1921. Complaint dismissed. Omaha Chamber of Commerce v. A. B. & A. Ry., 93 I. C. C. 583.

(n) A joint rate does not violate the aggregate of intermediates clause of the fourth section unless it exceeds the sum of the rates contemporaneously effective to and from some intermediate point. It can not be said to violate that clause if it must first be broken up into component parts in order to provide rates to and from an intermediate point which are lower in the aggregate, because in such event the basis of comparison is destroyed. Omaha Chamber of Commerce v. A. B. & A. Ry., 93 I. C. C. 584, 585.

(o) A joint rate which does not violate the aggregate of intermediate clause of the fourth section may still be unreasonable because it exceeds the

through charges which would be applicable in the event of its cancellation. Omaha Chamber of Commerce v. A. B. & A. Ry., 93 I. C. C. 584, 585.

(p) The aggregate of the intermediate rates within the meaning of the fourth section was the sum of the two separate rates and not the sum of those rates subjected to the combination rule. Crowell Lumber & Grain Co. v. Director General, 96 I. C. C. 259, 261.

(q) Complainant attacked commodity rates on coal prior to April 26, 1923, from Tennessee and Kentucky mines, served by the L. & N., and named by group numbers, to Atlanta and Sawtell, Ga., were the same; that complainants sidings are served by the Southern and are intermediate to Sawtell from Atlanta; that for the delivery of coal from these mines to complainants sidings complainants paid the Atlanta rate plus a switching charge, which rates and charges are unreasonable, unlawful and in violation of section four. The departure from the long and short haul clause of the fourth section which existed at Sawtell prior to April 26, 1923 was removed on that date by increasing the rate to that point. No evidence was offered to prove impropriety in any rate to Atlanta. What complainants seek is the application of Atlanta rates to their sidings. The fair average distance from the Harlan group to complainants sidings, located between Atlanta and Sawtell, and also between Atlanta and Constitution, is 375 miles, charged $2.815, present $2.565. HELD, total charges paid for coal from Tennessee and Kentucky served by the L. & N., to sidings on the Fort Valley branch of the Southern intermediate to Sawtell, between May 22, 1921 and April 25, 1923, unreasonable to extent they exceeded rates to Sawtell, and since that date unreasonable to extent they exceeded rates to Constitution, reparation awarded. Randall Bros. v. L. & N. R. R., 96 I. C. C. 342.

(r) Complainant attacked fifth class rate of 55c charged on one car of sulphate of ammonia from Gary, Ind., to Little Rock, Ark., on Feb. 17, 1919 as unreasonable. Shipment moved E. J. & E., to Joliet, Ill., C. & A., to St. Louis, Mo., M. P., beyond, 678 miles. There was in effect a rate of 29c from the competing points of Joliet and Chicago, Ill., 592 and 617 miles. This rate was published effective June 1, 1921 from Gary, plus increase authorized in Ex Parte 74. Rate Gary to St. Louis was 9.5c and 22.5c beyond. HELD, rate attacked unreasonable to extent it exceeded 32c, reparation awarded. Arkansas Fertilizer Co. v. Director General, 96 I. C. C. 567.

(s) Complainant attacked commodity rates charged on 5 cars of bridge iron from South Chicago, Ill., and Gary, Ind., to Appleby, Kurth and Strawn, Tex., between Sept. 1 and Dec. 6, 1921 as unreasonable and in violation of the fourth section. Appleby and Kurth are on the H. E. & W. T., 83.4 miles and 104.4 miles southwest of Shreveport and Strawn is on the T. & P., 302.7 miles west of Shreveport. Shipments were fabricated at Jacksonville. Charged joint commodity rate of $1.135 Chicago to Texas with plus charge of 2c for fabrication. There was in effect 87.5c to Appleby, 90c to Kurth and $1.105 to Strawn, made up of a joint commodity rate of 62.5c from Chicago to Shreveport plus distance commodity rate beyond. HELD, rate attacked unreasonable to extent it exceeded the Shreveport combination, reparation awarded. Illinois Steel Bridge Co. v. C. B. & Q. R. R., 96 I. C. C. 698.

(t) Complainant attacked commodity rates charged on 45 cars of molding sand shipped from Ottawa and Utica, Ill., to Buchanan, Mich., between Jan. 26, 1918 and Feb. 25, 1919 as unreasonable, unjustly discriminatory and unduly prejudicial and in violation of the fourth section. Ottawa is on the Burlington and Rock Island 81 miles southwest of Chicago over the former and 84 miles over the latter. Utica is on the Rock Island near Ottawa. Commodity rates charged exceeded combination of intermediates. HELD, reparation awarded. Clark Equipment Co. v. C. B. & Q. R. R., 98 I. C. C. 465.

(u) Complainant attacked commodity rate charged on wheat carloads, shipped in November and December, 1919 and January and February 1920 from Colorado to Antonito, Colo., there milled and the flour shipped via Memphis, Tenn., to Nashville, Tenn., as unjust, unreasonable and unduly prejudicial. The originating points are on the narrow gauge line of the D. & R. G. W., along the southern boundary of Colorado. The grain moved to Antonito and was milled

there by complainant. The flour in sacks was then shipped in narrow gauge cars to Alamosa, Colo., transferred there to 15 standard gauge cars and moved to destination via Pueblo, Colo., and Memphis, a total average distance of about 1,643 miles. Between Antonio and Alamosa 29 miles, there are three rails so that the flour could have been loaded directly from complainants mill into standard gauge cars at Antonito. Applicable rates were combination on Memphis. On Feb. 1921 carrier established joint rate of 76c to Cairo and 81.5c to Memphis from Durango and intermediate points. All points of origin except Hesperus are intermediate between Durango and Pueblo. These rates permitted milling in transit at Antonito and other directly intermediate points. The 12.5c factor to Nashville also applied from Cairo and reparation is sought to the basis of 88.5c the subsequent Cairo combination. HELD, rates attacked unreasonable to extent the aggregate of factors assessed from Antonito to Nashville exceeded 72.5c, reparation awarded. Conejos Cooperative Roller Mills v. Director General, 98 I. C. C. 515.

(v) Combination rate on rig irons from Pawhuska to Haynesville, La., in excess of rate applicable from Arkansas City and Wichita, Kans., further distant points, through Pawhuska over route of movement, and unprotected by appropriate application, found to be in violation of the long-and-short-haul provision of fourth section. Parkersburg Rig & Reel Co. v. M. V. R. R. Co., 91 I. C. C. 583, 585.

(w) Complainant attacked commodity rates charged on cars of tin plate since August 26, 1920 from McKeesport, Pa., Yorkville, O., and Cumberland, Md., to New London, Wis., as unreasonable to extent they exceeded aggregate of intermediates. Shipments moved via Frankfort or Ludington, Mich.; thence by car ferry to Manitowoc or Kewaunee, Wis.; thence by rail to destination. Rates charged through commodity rates which are higher than the combination via Manitowoc or Kewaunee. HELD, rates attacked unreasonable to extent they exceeded aggregate of intermediates, reparation awarded. Borden Co. v. A. A. R. R., 100 I. C. C. 153.

(x) Through rates higher than the aggregate of the intermediates are prima facie unreasonable. Borden Co. v. A. A. R. R., 100 I. C. C. 153, 155.

(y) The product of intermediate rates treated by a rule which results in something less than the aggregate is not the aggregate within the meaning of the fourth section. McLeod v. T. & P. Ry., 100 I. C. C. 219, 220.

(z) Complainant attacked joint third class rates charged on plate glass from Toledo, O., Rossford, O., Saginaw, Mich., and Blairsville, Pa., to Memphis, Tenn., as unreasonable, unjustly discriminatory and in violation of the fourth section. The aggregate of the intermediate rates composed of third class or rule 26 rates to the Ohio river crossings and commodity rates beyond were lower than the applicable rates. Joint commodity rates constructed on the lowest Ohio river combination were published to Memphis, effective Jan. 5 and Nov. 15, 1924. HELD, rates attacked unreasonable to extent they exceeded the aggregate of intermediates, reparation awarded. Memphis Freight Bureau v. B. & O. R. R., 100 I. C. C. 327.

(aa) Complainant attacked combination rates of 48c prior to June 25, 1918 and 63c thereafter on ferromanganese, carloads, between Jan. 1, 1918 and Mar. 1, 1920, from Tacoma, Wash., San Francisco and South San Francisco, Calif., as unreasonable to extent they exceeded applicable rates of 46 and 57.5c from Cheyenne, Wyo., to the same points. Shipments moved from Tacoma over N. P., to Portland, Ore., thence S. P. Charged at Portland combination of 50.5c and 63c. The rate claimed was based on application of an intermediate rule but the state of Washington was specifically excepted. HELD, rates charged applicable, complaint dismissed. Pacific Coast Steel Co. v. Director General, 100 I. C. C. 415.

(bb) Complainant attacked commodity rate charged on two cars of cottonseed shipped on March 31 and April 11, 1922 from Clarksville, Tex., to Memphis, Tenn., as unjust and unreasonable and in violation of the fourth section. Charged 45.5c and a combination of 34c was made up of 13c to Texarkana, Tex., and 21c beyond. HELD, rate attacked unreasonable to extent it exceeded combination of locals, reparation awarded. Russell Heckle Seed Co. v. M. P. R. R., 101 I. C. C. 29.

(cc) Complainant attacked commodity rate charged on 18 cars of liquid asphalt

in tank cars between Sept. 1 and Dec. 1, 1921 from Port Neches, Tex., to Morrillton, Conway and Galla, Ark., as unreasonable. Port Neches is on the K. C. S., 4 miles north of Port Arthur. Points of destination are on the M. P., west of Little Rock, Ark. Shipments moved as routed by shipper over K. C. S., to Texarkana, Tex., and M. P., beyond, charged 44c to Van Buren, Ark., and applicable under the intermediate rule to destinations shown. Present joint rate is 25.5c, established Feb. 15, 1923. The joint rate was in excess of 26c to Argenta, Ark., plus 15.5c beyond. HELD, rate attacked unreasonable to extent it exceeded 27c, reparation awarded. Texas Co. v. K. C. S. Ry., 101 I. C. C. 177.

(dd) A rate which exceeds the aggregate of intermediates is prima facie unreasonable, but that presumption is not conclusive. Ogden Packing & Provision Co. v. A. T. & S. F. Ry. 101 I. C. C. 236, 255.

(ee) Complainant attacked commodity rates charged on sugar, carloads from San Francisco, Calif., to Bowie, Ariz., as unreasonable, unduly prejudicial and in violation of the fourth section. The governing tariff does not carry specific rates on sugar to Bowie. It does publish rates to Benson, Fairbanks, and Tuscon, Ariz., Deming, N. M., and El Paso, Tex., and under an intermediate clause in the same tariff Bowie takes the same rate as El Paso. Applicable rates are subject to minimum of 60,000 pounds. Bowie is on the main transcontinental line of the S. P., 197 miles west of El Paso. Attacked rate was 96.5c prior to August 20, 1921, 96c from that date to July 1, 1922, 86.5c from that date to Jan. 10, 1924 and 84c thereafter. This rate applied and applies to practically all main line points on the S. P., from the California state line to El Paso, minimum 60,000 pounds. Following the general reductions of 1922 and until recently defendants and their connections maintained rates on sugar from California points ranging from 79c at St. Louis, Mo., and Chicago, Ill., to 83c at Burlington, Iowa, minimum 80,000 lbs. To the same territory somewhat higher rate subject to minimum of 60,000 pounds were maintained, the rate to Chicago being 91c. Since Jan. 10, 1924 the rate to Chicago, minimum 80,000 pounds, has been 84c which is not exceeded at intermediate points, 81 I. C. C. 448. HELD, rate attacked unreasonable to extent it exceeded 83c prior to July 1, 1922 and 75c thereafter, minimum 60,000 pounds, reparation awarded. Solomon Wickersham Co. v. Santa Maria R. R., 101 I. C. C. 667.

(ff) Fact that a rate violates the long-and-short-haul provision of section 4 of the act, in and of itself, does not establish its unreasonableness. Wagner Motor Co. v. M. C., 93 I. C. C. 195, 196.

(gg) Rates on baled hay from McLaughlin, McIntosh, and Walker, S. Dak., to Sioux City, Iowa, found unreasonable to extent they exceeded the aggregate of intermediates contemporaneously in effect over the route of movement, such departures from the fourth section of the act being unprotected. Cohn v. C., M. & St. P. Ry. Co., 96 I. C. C. 257.

(hh) Combination rates on naphtha and gasoline, in tank-car loads from Hodge, Texas, to Blue Creek, W. Va., exceeded rates on same commodities from Hodge, via Clarksburg, W. Va., to Charleston, W. Va., Blue Creek being intermediate to Charleston over the Clarksburg route. Resulting fourth-section violation was unprotected but subsequently removed and no damage found to result therefrom. Rates, however, found unreasonable to certain specified extent and reasonable rates prescribed for future, with permission to restrict its application to routes other than that via Clarksburg. Reparation awarded. Transcontinental Oil Co. v. A. & V., 96 I. C. C. 136.

(ii) Allegation that rates assessed on shipments of coal from Pinnacle and Mount Harris, Colo., to destinations in Nebraska, were in violation of aggregate of intermediates provision of the fourth section, not sustained. The aggregate of intermediate rates within the meaning of the fourth section was the sum of the two separate rates and not the sum of these rates subjected to combination rule. See Caddo Central Oil & Refining Co., 83 I. C. C. 734. Such aggregates were higher than rates charged and there was no violation of the fourth section. Crowell Lumber & Grain Co. v. Director General, 96 I. C. C. 259, 261.

(jj) Section four of the act provides that it shall be unlawful for any common carrier to charge any greater compensation as a through rate than the aggregate of the intermediate rates subject to the act. There is no violation of this

clause unless the carrier maintains a specific through rate which is higher than the lowest aggregate of intermediates over the same route. The product of intermediate rates treated by a rule which results in something less than the aggregate is not the aggregate within the meaning of the this section. Refiners Oil Co. v P. R. R. 102 I. C. C. 249, 250.

(kk) Complainant attacked class rates charged on iron and steel articles from Pittsburgh and other points in western Pennsylvania to Barberton, O., and on structural steel, iron pipe and tubing from Barberton to Pittsburgh, Nadine, Corliss and Midland, Pa., between Jan. 1, 1918, and Feb. 29, 1920, as unreasonable, unjust and in violation of the fourth section. Charged fourth class less carload and fifth class carload, the rates charged exceeding the combination of commodity rates based on Youngstown, O., and other intermediate points. HELD, rates attacked unreasonable to extent they exceeded aggregate of intermediates, reparation awarded. Babcock & Wilcox Co. v. Director General 104 I. C. C. 405.

(ll) Complainant attacked commodity rates on iron and steel articles, carloads from Pittsburgh, Economy and Midland, Pa., to Cleveland, Lorain, Canton, and Akron, O., as unreasonable to extent they exceeded aggregate of intermediates. In 89 I. C. C. 601 the Commission so found and awarded reparation. Although the finding was that the rates were unreasonable to extent that they exceeded the aggregate of intermediate rates via the routes of movement, this was in fact a finding that the rates were unreasonable per se; and the record amply supports the finding that the rates over the routes via Wellsville were unreasonable to extent they exceeded the aggregates via Youngstown. HELD, rates, attacked unreasonable to extent they exceeded the aggregates via Youngstown, reparation awarded. American Shipbuildings Co. v. Director General 102 I. C. C. 530.

§6¾a. Combinations subject to section 4.

(a) Complainant attacked class rates charged on four cars of sewer pipe from Brazil to Sheboygan and Manitowoc, Wis., and Menominee, Mich. during 1919, as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section four. Shipments moved via Pennsylvania to Chicago, Ill., Northwestern beyond, via Milwaukee, 319 miles to Sheboygan, 344 miles to Manitowoc and 435 miles to Menominee, charged sixth class of 24c to Sheboygan and Manitowoc and 26.5c to Menominee. Northwestern maintained proportional class E rate of 4.5c from Milwaukee to Sheboygan, local class E rate of 10c from Chicago to Manitowoc and proportional class E rate of 10c from Chicago to Menominee. Lowest combination was 20c to Chicago and 22.5c to Manitowoc and Menominee. Present adjustment conforms to the long and short haul rule. HELD, rates attacked unreasonable to extent they exceeded combination of locals, reparation denied, complaint dismissed. Chicago Fire Brick Company v. Director General, 91 I. C. C. 755.

(b) Complainant attacked commodity rate charged on 10 cars of alfalfa shipped during November and December 1918 from Melina, Colo., to St. Louis, Mo., as unreasonable. Shipments moved over Santa Fe to Lexington, Mo., Wabash beyond, charged joint commodity rate of 37.5c. Lowest combination through Bucklin was 37c composed of 22.5c to Argentine, Kas., and 14.5c beyond. HELD, rate attacked unreasonable to extent it exceeded combination of locals, reparation awarded. Denver Alfalfa Products Co. v. Director General, 92 I. C. C. 326.

(c) Complainant attacked commodity rate charged on nine tank cars of refuse molasses shipped between Jan. 30 and March 20, 1918, from Grants Pass, Oreg., to Oakland, Calif., as inapplicable unduly prejudicial and in violation of fourth section and that one car was misrouted. Shipments were tendered to the S. P., at Grants Pass and were originally consigned to San Francisco without routing instructions. The complainant intended to take barge delivery at Oyster Wharf,

San Francisco, for the purpose of moving the shipments to Sausalito, a point on the north shore of San Francisco Bay. Oyster wharf accommodated but two or three cars, and the S. P., declined to make spottings there until tank barges were present to take delivery. Complainant, thinking that the rates to Oakland and to San Francisco were the same, agreed to take delivery at Long wharf, Oakland. Seven of the shipments moved through Tehama, Roseville, Elvas, Tracy, and Redwood City, to San Francisco, thence car ferry to Oakland. One shipment moved over same route to San Francisco and thence to Oakland by rail via Dumbarton for carriers convenience. The Dumbarton cut off is the usual route for shipments moving from Oregon points south of Portland to San Francisco. The remaining shipment never reached San Francisco, its billed destination, but was diverted to Oakland enroute. Refuse molasses is rated class C in western classification, eight shipments charged 45c. Contemporaneously a commodity rate of 20c was applicable to San Francisco and a class E rate of 2.5c between San Francisco and Oakland. HELD, rate attacked of 45c applicable; that as it applied via Benicia it was unlawful in violation of the fourth section; that as applied via Dumbarton it was unlawful in violation of fourth section; that it was unreasonable to extent it exceeded combination via Dumbarton; that the shipment which moved via Benicia was not misrouted, reparation awarded. Mason Bv Products Co. v. Director General, 92 I. C. C. 646.

(d) Complainant attacked commodity rates charged on watermelons and vegetables, carloads, between June 24 and August 23, 1919 from California to Spokane, Wash., as unreasonable. Complainants sought reparation to basis of a combination of the class C rates, except from Tegner and Chatom, Calif., from which commodity rates applied, to the basing points, Lathrop or Stockton, Calif., the proportional class C rate from those points to Portland, Ore., and class C rate of 35.5c beyond. Defendant conceded that the rate of 99c from Merced exceeded the aggregate of the intermediate rates, using local class rate from Lathrop to Portland as a factor. HELD, rate attacked from Merced unreasonable to extent it exceeded 91.5c, reparation awarded. Nash Spokane Co. v. Director General, 100 I. C. C. 223.

§6¾b. Intermediate Rule.

(a) When rates are so established shippers at the intermediate point have a lawful right to a rate no higher than that from the next more distant point. By the very language of the rule the carriers hold themselves out to grant the same rate at the intermediate point as is in effect from or to the more distant point. The relief afforded by rule 77 is in reality only relief from the tariff provisions, under section 6 of the act, which requires the printing and keeping open to public inspection of schedules showing rates between all points. In view of the purposes of the rule, it must follow that rates voluntarily established thereunder from the more distant points are prima facie reasonable, and if reasonable from or to the more distant points they must be deemed reasonable from or to the intermediate points. The shipper has paid cash out of pocket that should not have been required of him and there is no question as to the amount of the proximate loss. Worth Steel Co. v. Director General, 93 I. C. C. 37, 38.

(bc) Respondents proposed to cancel the socalled intermediate clause contained in Countiss I. C. C., 1132 in connection with rates on lumber from the Pacific coast, Hawley-Truckee and Arizona groups to Kansas, Oklahoma, Texas, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Ohio, West Virginia, New York and Pennsylvania. They also proposed to eliminate Bradford and East Bradford, Pa., from Group K. and to place these points in higher rated groups in connection with traffic routed over the Erie or Pennsylvania from the same territory of origin. The clause reads as follows:—and intermediate points located between and directly intermediate to and on the same line with two of the above named stations. Thus an unnamed point which now takes a rate under the intermediate clause will automatically take the rate applicable to "all other points" if the intermediate clause be canceled. If the suspended schedules become effective there would result a rate to the unnamed intermediate point which would be higher than the rate to the farther distant point, resulting in new unprotected fourth section departures. HELD, proposed schedules not justified. Lumber from Pacific coast, 95 I. C. C. 744.

(d) Complainant attacked commodity

rates charged on roofing and allied articles in straight and mixed carloads, from Lockland and Carthage, O., to points on the C. N. O. & T. P., Southern and L. & N., intermediate to Knoxville and Chattanooga, Tenn., as unreasonable, unjustly discriminatory and in violation of the fourth section. Lockland and Carthage are on the Big Four and B. & O., within the switching limits of Cincinnati, O. Rates attacked are constructed by adding to the rates from Cincinnati certain charges of the originating lines. Rate to Knoxville and Chattanooga is 28.5c and rule 77 is applicable in connection therewith. HELD, rates attacked unreasonable to extent it exceeded rates to Knoxville and Chattanooga, reparation awarded. Carey Co. v. C. N. O. & T. P. Ry., 96 I. C. C. 455.

(e) Complainant attacked class rates charged on burlap and gunny bags, carloads and less carloads, from New York, Philadelphia and Baltimore to Alexandria, Va., as unjust, ureasonable and unduly prejudicial. Alexandria is on the Southern, R. F. & P., and C. & O., 8 miles south of Washington, D. C. A commodity rate of 27c applied on burlap bags, any quantity from these points to Washington. To Norfolk, Va., rates, any quantity apply as follows; From New York 25c from Philadelphia 23.5c, from Baltimore 22c. Third class less carload rate from New York to Alexandria is 52c, exceeding the combination on Washington. A rate of 41.5c, any quantity, applies from New York to Front Royal and Riverton, Va. This rate is applicable through Alexandria and is published subject to rule 77. HELD, rates attacked unreasonable to extent they exceed 27c any quantity from New York and Philadelphia and 22c less carloads from Baltimore, reparation awarded. Bryant v. P. R. R., 96 I. C. C. 564.

(f) The Commission has repeatedly held that the notation on a tariff in accordance with Rule 77 is a substantial compliance with the fourth section requirements, and that a request for the publication of a rate under that rule prior to the movement of shipment is not essential in order that the shipper may take advantage of such provision. Churchill Compresses v. C. & G. R. R., 98 I. C. C. 5, 6.

(g) Publication subject to rule 77 of Tariff Circular 18—A of lower rates from farther distant than from intermediate points is tantamount to an admission that higher rate from the intermediate points is unreasonable. Levene's Sons v. D., L. & W., 93 I. C. C. 344.

(h) Proposed cancellation of the "intermediate clause" in connection with transcontinental rates on lumber from Pacific coast, Hawley-Truckee, and Arizona groups to destinations in Kansas, Oklahoma, Texas, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Ohio, West Virginia, New York, and Pennsylvania; also to eliminate Bradford and East Bradford, Pa., from Group K, found not justified. If suspended schedules become effective rates to unnamed intermediate points will become higher than to farther distant points and thereby create new and unauthorized fourth-section departures, and will transfer to Group E certain points geographically located in Group F territory. Lumber from Pacific Coast. 95 I. C. C. 744.

(i) When an intermediate clause published by carriers automatically removes fourth-section departures, these departures can not be reinstated without new authority from the commission. Conf. Ruling 395. Lumber from Pacific Coast, 95 I. C. C. 744, 746, 747.

(j) First-class rates assessed on uncompressed cotton in bales, from Greenville, Miss., to Dyeburg, Tenn., found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect on cotton, in bales, compressed or uncompressed, from Greenville to Cairo, Ill., over route of movement and the Illinois Central, subject to rule 77 of Tariff Circular 18-A. Reparation awarded. Churchill Compresses v. C. &. G. R. R. Co. 98 I. C. C. 5.

(k) Rates on moss in machine-pressed bales from Rosedale, La., and Louisiana points west of Mississippi River intermediates from Rosedale and Baton Rouge, La., to destinations in the defined territories named intermediate to Albany Rochester, Syracuse, and Utica, N. Y., found to have been unreasonable prior to August 1, 1924, to extent they exceeded lower contemporaneous rates applicable from farther distant points, subject to Rule 77 of Tariff Circular 18-A for intermediate application. Reparation awarded. National Asso. of Furniture Mfrs. v. A. A. R. R. Co. 98 I. C. C. 501.

(l) Respondents proposed a change in the rule covering the application of

rates on cement to intermediate points in western trunk line territory. The principal change complained of is that the proposed rule is restricted to apply only where no specific through rate on the same commodity from the same point of origin to the same point of destination is published in some other tariff. From the Kansas gas belt mills to many points in southeast Missouri specific rates are published, some of which are higher than the rates published from the same points of origin to points in southern Illinois. The present intermediate point rule applies the rates to Thebes and Ullin as a maximum to points in southeast Missouri on the Frisco while the proposed rule would not do so, for the reason that specific rates are published in other traiffs to many points in southeastern Missouri. HELD, proposed rule not justified. Intermediate points rule on cement. 102 I. C. C. 76.

(m) Respondents sought to amend the socalled combination rule so as to make it applicable on shipments of brick and related articles moving under combination rates from Texas producing points to interstate destinations. Through routes other than those over which joint rates apply already exist and combination rates which are lower than the joint rates with or without recourse to the combination rule, apply over such routes. The suspended schedules will cause increases in these existing lower combinations which respondents do not attempt to justify. HELD, suspended schedules not justified. Combination rule on brick, 102 I. C. C. 97.

§6⅞. Discrimination and Reasonableness.

See Advanced Rates §2½ (h); Discrimination; Reasonableness of Rates.

(a) Proposed revision in short-haul rates, consisting of increases and decreases on iron and steel articles between points in Pittsburgh district and adjacent territory in Pennsylvania, New York, Ohio, West Virginia, and Maryland, promulgated primarily for purpose of bringing rates within provisions of the aggregate-of-intermediates clause of section 4 of the act, found not justified as a whole. Iron and Steel Articles, 89 I. C. C. 606.

(b) Respondents proposed changes consisting of increases and reductions, in the rates on petroleum and its products, carloads, from points in Missouri, Kansas and Oklahoma to stations on the M. & O., between East St. Louis and Cairo, Ill. Present rates except to points in the East St. Louis switching district are made on East St. Louis combination. A joint rate is maintained to Cairo, which is lower than the combination rates to the intermediate points. It is proposed to place all of the destinations on the Chicago basis of 36c, which would represent increases at East Carondelet and Cairo and reductions at the intermediate points. The suspended rates to East Carondelet and Cairo have not been justified but no reason appears why the proposed reduced rates to the intermediate points should not be approved. Some readjustment of the rates to those points or to Cairo will be necessary in complying with the fourth section order which will be entered. HELD, proposed schedules not justified. Petroleum from southwestern states, 91 I. C. C. 464.

(c) Complainant attacked combination rates charged on burnt shale, carloads, from Nashville, Tenn., to Tamms, Ill., as unreasonable, unduly prejudicial and in violation of section four. Shipments moved N. C. & St. L., to Union City, Tenn., 153.9 miles, M. & O., beyond 65.7 miles, total 219.6 miles, Charged $2.88 to Cairo, Ill., $1.70 beyond. Effective Feb. 14, 1923 a rate was established of $3 on shale, burnt. ground, minimum 50,000 pounds. HELD, rate attacked unreasonable to extent it exceeded $3.335 prior to July 1, 1922 and $3 subsequent thereto, reparation awarded. Tamms Silica Co. v. M. & O. R. R., 91 I. C. C. 728.

(d) In 87 I. C. C. 115, the Commission found the joint rates on iron and steel articles, carloads, from St. Louis, Mo., Pittsburgh, Pa., and other points to Dallas and Harrys, Tex., as unreasonable to extent they exceeded the combinations via Shreveport. HELD, rates attacked unreasonable to extent they exceeded the Shreveport combination, reparation awarded. Southern Wire & Iron Co. v. A. C. & Y. Ry., 92 I. C. C. 463.

(e) Complainant attacked sixth class rate of 70c charged on one car of boiler and fixtures, shipped Dec. 15, 1919 from Chattanooga, Tenn., to Belhaven, N. C., as unjust, unreasonable and in violation of section four in that the combination via Nashville, Tenn., was 50.5c. There was a commodity rate of 19c to Nashville and sixth class of 31.5c beyond, or

total of 50.5c. HELD, rate attacked unreasonable to extent it exceeded 50.5c reparation awarded. Walsh & Widner Boiler Co. v. Director General, 93 I. C. C. 1.

(f) Complainant attacked as unreasonable fifth class rates charged on 25 cars of steel plates shipped between Nov. 2, 1918 and March 1, 1919 from Claymont, Del., to Lancaster, Steelton, York, Warren and Oil City, Pa., previous report found in 87 I. C. C. 29. Claymont is on the Pennsylvania, between Chester, Pa., and Wilmington, Del. Rates from these two points were published subject to rule 77 of tariff circular 18A, the same rates being published from Claymont, April, 1919. HELD, rate attacked unreasonable to extent it exceeded rate from Chester, reparation awarded. Worth Steel Co. v. Director General, 93 I. C. C. 37.

(g) Complainant attacked commodity class rates charged on four cars of tractors shipped in July and Sept., 1923 from Detroit, Mich., to Mason City, Iowa, as unreasonable, unduly discriminatory and unduly preferential to Gordonsville, Minn., and in violation of the fourth section. Shipments moved over M. C., to Michigan City, Ind., L. E. & W., through Tipton, Ind., to Peoria, Ill., and M. & St. L., beyond 885 miles, charged fifth class 35c to Keithsburg, Ill., plus class A rate of 21c beyond. When the shipments moved there was in effect on tractors, a joint fifth class rate of 52c from Detroit to Minneapolis, and St. Paul, Minn., and that rate applied to a number of intermediate points, including Gordonsville. This rate did not apply through Mason City and there was no violation of the fourth section. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Wagner Motor Co. v. M. C. R. R., 93 I. C. C. 195.

(h) Complainant attacked combination rates charged of 37.5c on five cars of lumber and lath between August 9 and Sept. 16, 1922 from Big Fork, Minn., to Horicon, Wis., as unjust, unreasonable and in violation of section four. Big Fork is 50 miles from the Canadian boundary on the M. & R. R. Horicon is about 50 miles west of Milwaukee, Wis., on the C. M. & St. P. Shipment moved over M. & R. R., to Minnesota Transfer and C. M. & St. P., beyond, charged 8c to Deer River and 29.5c beyond. Joint rates over the G. N., applied and now apply from Deer River to points in Wisconsin and Illinois, the rate contemporaneously in effect from Deer River to Milwaukee being 23c. Horicon is intermediate between Milwaukee and Deer River. On Feb. 1, 1923 rates to Horicon were reduced to 23c. HELD, rate attacked not unreasonable, complaint dismissed. Cotton v. M. & R. R., 93 I. C. C. 275.

(i) Complainant attacked class and commodity rates from central territory to Jackson, Miss., on traffic moving over the I. C., as delivering line as unreasonable, unjustly discriminatory, unduly preferential and in violation of the long and short haul clause. Jackson is on the I. C., Y. & M. V., A. & V., N. O. G. N., and G. & S. I., 44 miles east of Vicksburg. The tariff under consideration names specific rates on most of the commodities to Vicksburg but not to Jackson. The rates to the latter point are made by combination on some Ohio or Mississippi river crossing. Defendant admits that the rates to the Mississippi Valley territory are in need of readjustment. They are, in fact, at present engaged in effecting such readjustment by establishing joint commodity rates somewhat lower than the existing combinations, but these revisions are necessarily dependent in a measure upon the level of class rates which will be fixed in No. 13494. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Jackson Traffic Bureau v. A. C. & Y. Ry., 93 I. C. C. 339.

(j) Complainant attacked commodity rates on sugar, minimum 80,000 pounds, from San Francisco, Calif., to Phoenix, Ariz., since Feb. 17, 1921 as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Phoenix is served by the Santa Fe and S. P. The distances to Phoenix over the Santa Fe are 489 and 800 miles, and over the S. P., 451 and 921 miles, from Los Angeles and San Francisco, respectively. From Sept. 17, 1921 to and including June 30, 1922 a rate of 96c, minimum 60,000 pounds, applied from California to Phoenix, reduced on the latter date to 86.5c. Rates to El Paso and Tuscon are on a lower basis although more distant. The rate to Chicago is now 84c minimum 80,000 pounds, this now being established to Phoenix, subject to minimum of 60,000 pounds. HELD, rates attacked not unjustly dis-

criminatory or unduly prejudicial, but unreasonable to extent they exceed 79c and 71c prior and subsequent to July 1, 1922, reparation awarded. Phoenix Chamber of Commerce v. A. T. & S. F. Ry., 95 I. C. C. 244.

(k) Complainant attacked 77c commodity rate charged on roofing and building paper or felt and prepared roofing from Lockland, O., to Beaumont, Galveston, Houston and Orange, Tex., and points taking same rates, unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section four. Since the hearing in this case the rate from Lockland has been reduced to 65c, based 11.5c over the rate of 53.5c from St. Louis. The fourth section departures have been removed. HELD, rates attacked unreasonable to extent they exceeded 11.5c over rates from St. Louis. Carey Company v. A. T. & S. F. Ry., 95 I. C. C. 296.

(l) Complainant attacked fifth class rate on a car of wrapping paper from Orange, Tex., to Hutchison, Kas., in January, 1924 as unreasonable. Shipment moved over T. & N. O., to Fort Worth, Tex., Rock Island beyond, 861 miles, applicable rate fifth class of $1.145. There was a rate of 48.5c to Wichita and 17.5c beyond also in effect. HELD, rate attacked unreasonable to extent it exceeded 66c, reparation awarded. Hutchison Paper Co. v. T. & N. O. Ry., 95 I. C. C. 457.

(m) Complainant attacked fifth class rates charged on four cars of corrugated strawboard boxes, shipped during July and August, 1922 from St. Louis, Mo., to Urbanette and Green Forest, Ark., as unreasonable, unduly prejudicial and in violation of section four. Shipments moved Frisco to Seligman, Mo., and M. & N. A., beyond 344 miles to Urbanette and 353 miles to Green Forest, rate charged $1.06. Locals to and from Seligman were 65.5c to Urbanette and 66c to Green Forest. Effective August 10, 1922 a rate of 53.5c was established to Searcy, Ark., a point beyond Urbanette and Green Forest on the M. & N. A. HELD, rate attacked unreasonable to extent it exceeded 53.5c, reparation awarded. Villines Canning Co. v. Mfrs. Ry., 96 I. C. C. 3.

(n) Complainant attacked combination rates charged on baled hay, carloads from McLaughlin, McIntosh and Walker, S. D., to Sioux City, Iowa during Dec. 1917 as unreasonable and in violation of the fourth section. Charged 30c commodity rate from Dodge, Mont. and available from these points or origin under an intermediate clause of the tariff. To McCook, intermediate over the route of movement between points of origin and Sioux City, class E rate of 22.5c from McIntosh, 21c from Walker and 20c from McLaughlin were in effect and these plus class C rate of 4.5c beyond resulted in departures from the fourth section. HELD, rates attacked unreasonable to extent they exceeded 27c for McIntosh, 25.5c from Walker and 24.5c form McLaughlin, reparation awarded. Cohn v. C. M. & St. P. Ry., 96 I. C. C. 257.

(o) Complainant attacked commodity rates charged on 86 cars of coal between August 20 and Nov. 6, 1922 from Wheatcroft, Ky., to Mount Vernon, Ind., as unreasonable. Charged on 6 cars via I. C., to Evansville, and C. & E. I., beyond. $2.27. The other cars moved via I. C., to Evansville and L. & N., beyond at $2.33. Rate charged was combination on Evansville. Complainant asked for rate of $1.72 equal to local to Evansville plus intrastate rate beyond. HELD, rate charged unreasonable to extent it exceeded $1.72, reparation awarded. Mt. Vernon Strawboard Co. v. C. & E. I. Ry., 96 I. C. C. 571.

(p) Complainant attacked first class rate charged on one car of uncompressed cotton, in bales, shipped from Greenville, Miss., to Dyersburg, Tenn., on Sept. 15, 1922 as unjust, unreasonable and in violation of the fourth section. Greenville is 70 miles north of Vicksburg, Miss., on the C. & G., and Y. & M. V. Dyersburg is on the B. & N. W., and I. C., about 78 miles north of Memphis, distance via the Y. & M. V., and I. C., 229 miles, shipment moved as routed by complainant via C. & G., to West Point, Miss., M. & O., to Jackson, Tenn., and B. & N. W., beyond, 353 miles, charged first class of $1.145. A commodity rate of 80.5c was in effect on cotton, in bales, compressed or uncompressed from Greenville to Cairo, Ill., applicable over the route of movement and the I. C. This was subject to rule 77 of tariff circular 18A. HELD, rate attacked unreasonable to extent it exceeded 80.5c, reparation awarded. Churchill Compresses v. C. & G. R. R., 98 I. C. C. 5.

(q) Respondents proposed to cancel

interstate commodity rates on iron and steel articles, carloads, from certain points of origin on the W. & L. E., in Ohio to destinations on the P. & L. E., in Ohio and Pennsylvania, and to apply the higher fifth class rates in lieu thereof. To Monessen, Pa., a representative destination, the present rate is connection with respondents line are 18.5c from Massillon and Canton and 19c from Cleveland and Lorain. The fifth class rates proposed are 20.5c from Massillon and Canton, 21.5c from Cleveland and 23c from Lorain, and are the same as the fifth class rates on this traffic in effect over all other routes. By virtue of the intermediate rule the present commodity rates apply to Pittsburgh, Coraopolis and other destinations in Pennsylvania. The distances from Massillon to Monessen and Coraopolis are 145 and 119 miles in connection with respondents line, 192 and 135 miles over the B. & O., and 148 and 98 miles over the Pennsylvania. The aggregate of intermediate rates on this traffic from Massillon to Coraopolis is 18c, compared of 14.5c to Woodlawn, Pa., plus 3.5c beyond. HELD, proposed schedules not justified. Iron and steel from Ohio to Pennsylvania, 98 I. C. C. 151.

(r) Respondents proposed to increase the rate on sand from Eau Claire, Wis., to Detroit, Mich., from $3.49 to $3.74 per ton. The rate in effect was subject to rule 77 to tariff circular 18A. Request was received to apply this rate at intermediate territory. Respondent, Soo Line, notified the publishing agent to comply with rule 77. The eastern lines notified the publishing agent to withhold publication pending a revision in the rate to Detroit. Effective Feb. 1, 1925 a rate of $3.36 was published to Grand Rapids. Effective Dec. 10, 1925 the rate of $3.49 was established to Iona, Owosso and Cadillac, and on April 1 to Saginaw and Ecorse. The rate of $3.49 is a joint commodity rate first established Sept. 12, 1923 over the Soo Line to Manitowoc and A. A., and D. T. & I., beyond. No justification of the increase has been offered, except a contention of the eastern carriers that the division of $1.89 is unsatisfactory to them. The western carriers are satisfied with the present rate and the divisions thereof. HELD, proposed schedules not justified. Sand from Eau Claire, Wis to Michigan destinations, 100 I. C. C. 213.

(s) Respondents proposed to increase the rates to St. Joseph, Mo., on grain and grain products, carloads, from 28 Kansas points on the U. P., south of Marysville, Kas., to and including Junction City northwest of Junction City to and including Wakefield, and west of Garrison Crossing to and including Lasita, when routed over the U. P., to Marysville and St. J. & G. I., beyond. Marysville is on the U. P., and Grand Island, 113 miles west of St. Joseph. Carden and Home, Kans., are just east and Kerkiner and Bremen, Kas., just west of Marysville. All are served by the Grand Island. The rates from Kerkimer, Bremen, and Marysville to Atchison and Leavenworth, Kas., Kansas City, Mo., and St. Joseph are the same, 14.5c on on wheat and 13c on coarse grain; from Carden to these destinations the rates are 14c and 12.5c and from Home they are 13.5c and 12c. From the points of origin on the U. P., described above the rates to these Missouri river crossings vary from 13 to 14c on wheat and 11.5c and 12.5c on coarse grain. They apply via all routes. The rates from Marysville and from the U. P., points have been in effect for about 15 years. Yet neither the carriers nor the shippers were aware, in connection with the Marysville route, that the existing rates to St. Joseph were and are in violation of the fourth section. Respondents here proposed to remove the fourth section violations by leaving in effect the existing rates to St. Joseph over all routes other than the Marysville route, and by increasing the rates over the Marysville route to the level of the rates from Marysville to St. Joseph. Protestant at Marysville would be unduly prejudiced as it would not be able to purchase grain at these U. P., points in competition with its St. Joseph competitor. Respondents should forthwith remove the existing fourth section violations in a manner which will not result in undue prejudice to Marysville. HELD, schedules not justified. Grain and grain products from Kansas, 101 I. C. C. 595.

(t) Proposal to comply with commission's order denying fourth-section relief with respect to rates from New York, by reducing class and commodity rates from points on the Central, Vermont Ry., in New England, to points in c. f. a. and western trunk-line territories, applying via differential rail-and-lake route through Depot Harbor, Ontario,

and the boat line of the Canada Atlantic Transit Co., found not justified. Present rates from New York are reasonably compensatory and to permit removal of fourth-section departures by reducing the intermediate rates would necessitate reductions over other routes at competitive points, result in a chaotic condition of rates throughout New England, and further aggravate the financial difficulties of New England lines. Rail-and-Lake Rates from New England, 92 I. C. C. 106.

(u) While commission has consistently found that a joint rate that exceeds the aggregate of intermediate rates over the same line or route is prima facie unreasonable, it has never found that the charging of such a rate is an overcharge. Moreover, it has always maintained that "the statute requires rigid observance of the tariff, without regard to inherent lawfulness of rates specified." Pacific Adjustment Co. v. Director General, 93 I. C. C. 50, 52.

(v) Fact that a rate violates the long-and-short-haul provision of section 4 of the act, in and of itself, does not establish unreasonableness. Wagner Motor Co. v. M. C. R. R. 93 I. C. C. 195, 196.

(w) Rate on steel grinding balls moving water-and-rail from Chrome, N. J., to Ada, Okla., via Galveston, found not unreasonable or in violation of aggregate-of-intermediates clause of section 4 of the act. Tariffs in effect provided for alternative application of maximum rates, whereby rates to Deming, N. Mex., and Clifton, Ariz., would apply if lower than rate to Ada. The Clifton and Deming rates, however, were restricted to routes other than route of movement, and application of the alternative rule was contingent upon specific reference being made in connection with rates to destinations in the tariff, and no such reference was made in connection with rate to Ada. Moreover, rate from point of origin to Deming was higher than rate to Ada. Oklahoma Portland Cement Co. v. A., T. & S. F., 93 I. C. C. 203.

(x) Combination rates on rice bran from Wheatley, Ark., to Jackson and Meridian, Miss., higher than joint rate to New Orleans, a more distant point on same route in same direction, found in violation of long-and-short-haul provision of section 4 of the act. Jackson Traffic Bureau v. A. & V., 93 I. C. C. 322.

(y) Rate on peaches from Fort Valley, Ga., to Watuppa, Mass., found not unreasonable, discriminatory, or unduly prejudicial as compared with rate in effect at time of movement from Eufaula, Ala., a farther distant point to which Fort Valley is directly intermediate over route of movement, or with lower rate established after shipment moved. Existence of fourth-section departure, protected by an appropriate application, is not in itself proof that rate from Fort Valley was unreasonable. The subsequent reduction was part of a voluntary general reduction in rates from Georgia to New England points, made at request of shippers in order to enable them to meet adverse marketing conditions. Under the circumstances it can not be regarded as implying any admission on part of carriers that prior rate was unreasonable. Gentile Bros. Co. v. C. of G. Ry., 93 I. C. C. 328.

(z) Existence of a departure from long-and-short-haul clause of section 4 of the act is not in itself proof that rate from the intermediate point is unreasonable. Gentile Bros. Co. v. C. of G. Ry., 93 I. C. C. 328, 329.

(aa) Rate on scrap brass from Binghamton, N. Y. to Philadelphia, found unreasonable to extent it exceeded lower rate from Black Rock, Buffalo, and East Buffalo, N. Y., farther distant points. Publication subject to rule 77 of Tariff Circular 18-A of lower rate from farther distant points was in violation of the long-and-short-haul clause of the fourth section and was tantamount to an admission by defendant that higher rate from Binghamton was unreasonable. Standard Asphalt & Refining Co., 66 I. C. C. 611, and cases there cited. Reparation awarded. Levene's Sons v. D., L. & W., 93 I. C. C. 344.

(bb) Rate assessed on petroleum fuel oil from Loftus, Calif., to Bisbee, Ariz., found inapplicable. Applicable rate which exceeded the aggregate of intermediates found in contravention of section 4 of the act, and unreasonable to extent it exceeded lower group rate applicable from farther distant points in southern California, which lower rate carriers subsequently extended to Loftus. Reparation awarded. Gilmore Co. v. P. E. Ry., 93 I. C. C. 357.

(cc) Rate on empty wooden boxes from Kansas City to Carl Junction, during Federal control, found not unreasonable because in excess of the rate to

Carthage, Mo., to which Carl Junction is intermediate. Complainant submitted no evidence bearing upon unreasonableness of the rate assailed but takes position that because rate to intermediate point is higher than to more distant point, the higher rate is therefore unreasonable under section 1 of the act, but this does not follow. Defendants show that rate assailed compares favorably with rates on similar and other empty containers for similar hauls from Kansas City. Forrester-Nace Box Co. v. Director General, 93 I. C. C. 665.

(dd) Rates on paper and paper articles from points in Wisconsin, Minnesota, Michigan, and Canada, to Jackson, Miss., and New Orleans, La., established in accordance with findings in 88 I. C. C. 345, found unduly prejudicial to shippers at Jackson and unduly preferential of shippers at New Orleans, in that they are higher to Jackson than to New Orleans. Fourth-Section order entered as a result of previous finding accordingly modified so as to except rates to Jackson from the authority therein granted. Paper and Paper Articles to New Orleans, 96 I. C. C. 600.

(ee) Application by defendant carriers of commodity rates lower than corresponding class rates on various commodities from St. Paul, Minneapolis, and Duluth, Minn., Superior, Wis., and points taking same rates to Fargo, N. Dak., while contemporaneously applying the full class rates on same commodities to Valley City and Jamestown, N. Dak., found unduly prejudicial to later two points and unduly preferential of Fargo to extent that the percentage relationships between rates asailed and corresponding class rates herein prescribed under western classification applicable on same commodities to Valley City and Jamestown exceed, or may exceed, percentage relationships between the rates on such commodities and corresponding class rates to Fargo. Fargo Commercial Club v. A. & W. Ry. Co. 98 I. C. C. 691.

(ff) Complainant attacked combination and joint rates charged on lumber, carloads, from Jonesville, La., to Loudon, Greenville, and Cleveland, Tenn., and Thomasville and High Point, N. C., as unjust, unreasonable and in violation of the fourth section. Jonesville is diate to Lynchburg. HELD, rate at- on the L. & A., 27 miles west of Natchez, Miss., the later point being on the east bank of the Mississippi river. The rate of 38c from Thomasville and High Point made effective Nov. 25, 1923 is a joint rate. Prior to that time the rates to those destinations were and the rates to the other destinations were and now are combinations basing on Natchez and subject to the socalled single increase rule. HELD, rate attacked not unreasonable but maintenance of rates from Jonesville to Cleveland and Loudon higher than to Lenoir City and Knoxville, and to Greenville higher than to Johnson City, Bristol, unlawful in violation of the long and short haul provision of the act, complaint dismissed. Southern Lumber Co. v. L. & A. Ry., 102 I. C. C. 633.

(gg) Complainant attacked commodity rate of 17c charged on two cars of lumber Oct. 26, 1923 from Tupelo, Miss., to Normal and Buntyn, Tenn., as unreasonable and unjustly discriminatory and unduly prejudicial to extent it exceeded rate to Memphis, Tenn. Two cars moved M. & O., to Corinth, thence Southern, distances 137 to Normal and 138 to Buntyn. Present rate and rate at time of shipment from Tupelo to Memphis is 11.5c and is applicable over Frisco and M. & O., and Southern, distances 104 and 143 miles, the long and short haul departure being permitted by the Commission in fourth section order 2754 to July 30, 1913. HELD, rate attacked unreasonable to extent it exceeded 14c, reparation awarded. Northeast Mississippi Traffic Bureau v. M. & O. R. R. 104 I. C. C. 15.

(hh) Complainant attacked combination rate charged on a car of lime, in paper sacks, March 29, 1923 from Gibsonburg, O., to Rivermont, Va., as unjust, unreasonable and in violation of the fourth section. Charged 25.5c to Lynchburg plus 6c beyond, less 2c. August 28, 1923 the rate to Rivermont was made the same as that to Lynchburg. Rivermont is on the Southern, 6 miles north of Lynchburg, betwen Potomac Yard and Lynchburg. Bill of lading prepared by complainant shows routing instructions by Pennsylvania and Southern. Shipment was routed by defendants over Pennsylvania, N. & W., and Southern. By way of the route designated by complainant, Rivermont is intermediate to Lynchburg. Held rate attacked unreasonable to extent it exceed-

ed 25.5, reparation awarded. Traffic Bureau, Lynchburg, Va., v. Pennsylvania R. R. 104 I. C. C. 293.

(ii) Complaint attacked combination rate charged on one car and two less carload shipments of black sheet steel from Lynchburg, Va., to Nashville, Ga., in May and June 1924 as unreasonable and in violation of the fourth section. Shipments moved Southern to Augusta, Ga., and G. & F., beyond 590 miles, charged 66c composed of 49c from Lynchburg to Sparks, Ga., and sixth class rate of 17c beyond, charged on less carload sixth class of 78c. A commodity rate of 49c applies by way of defendants lines through Nashville on black sheet steel, carloads, from Lynchburg to Sparks, Moultrie, and Valdosta, Ga., and on less carload sixth class rates of 65c to Moultrie and Valdosta and 70c to Sparks are applicable. Defendant is among the short and weak lines which were authorized by fourth section order 7026 to continue and establish class and commodity rates to and via their junctions with other lines the same as the rates contemporaneously in effect on like traffic over the lines of their competitors and to maintain higher rates to their intermediate local points on basis of lowest combination. HELD, rates charged not unreasonable, complaint dismissed. Lynchburg Chamber of Commerce v. G. & F. Ry., 109 I. C. C. 39.

ALL OTHER CITATIONS

Traffic Bureau of Nashville, Tenn. v. Director General, as Agent, 85 I. C. C. 261; North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Central Pennsylvania Lumber Co. v. T. V. Ry. Co., 88 I. C. C. 303; Hickman, Williams & Co. v. Director General, as Agent, 88 I. C. C. 501; Utah Oil Refining Co. v. Director General, as Agent, 85 I. C. C. 654.

V. PROCEDURE.

See Procedure Before Commission.

§11. Complaints and Orders.

ALL CITATIONS

Beaumont Chamber of Commerce v. Director General, as Agent, 85 I. C. C. 139.

§12. Evidence.

(1) Burden of Proof.

See Evidence I.

(ab) The burden of justifying the reasonableness and propriety of rates to intermediate points which are higher than to farther distant points, rests on applicant seeking fourth section relief. Memphis Southwestern Investigation, 89 I. C. C. 566, 570.

(c) The burden is on applicant to make an affirmative showing as a condition precedent to the granting of relief from the requirements of the fourth section, that the proposed rates are reasonably compensatory. Memphis-Southwestern Investigation, 89 I. C. C. 566, 572.

(d) The mere fact that a rate from a more distant point is lower than a rate on the same commodity from an intermediate point is not proof that the rate from the intermediate point is unreasonable. Trenton Smelting & Refining Co. v. Pennsylvania R. R., 96 I. C. C. 264, 266.

(e) Commission considers that, so far as Jackson is concerned, the burden remains on the applicant carriers to justify departures from the fourth section. They have not shown that there is competition from foreign countries in any of these articles, except wrapping paper. Paper and Paper Articles to New Orleans, 96 I. C. C. 600, 603.

ALL OTHER CITATIONS

Cities of Marshall and Jefferson v. T. & P. Ry. Co. Co., 85 I. C. C. 115; North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Fourth Section Order No. 8900, 88 I. C. C. 765.

§12. (2) Circumstances of probative force.

See Evidence II.

(a) A reduction in rates on cotton would have a very serious effect on the ability of many short lines serving Mississippi to earn sufficient revenue to serve the public efficiently, as many short roads serving that State are unable to stand any appreciable losses in revenue. Traffic density of these short roads is low, and while they are seeking to stimulate greater production of farm produce the tonnage has not yet reached a heavy state. Some short lines are unable to pay operating costs; rates from many points on such roads are held down by force of cross-country competition with points situated on stronger trunk lines; and to compel them to bear any greater strain would undoubtedly cause

an impairment of service inimical to the general welfare of Mississippi. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 69.

(b) Complainant attacked rates charged on sand, carloads, shipped during 1923 from Lafayete, Ind., to Kankakee and Manteno, Ill., as unjust, unreasonable, unduly prejudicial and in violation of section four. Shipments moved via Big Four to Kankakee and were there delivered to the I. C. The later carrier switched 99 of the shipments to complainants unloading lot within the city and switching limits of Kankakee. The remaining 28 shipments moved over I. C., from Kankakee to Manteno. Rates applied $1.01 and $1.09, respectively. Complainants introduced no evidence as to the unreasonableness of the $1.09 rate other than attention to the lower rate to farther distant point. There is no proof that complainants have been damaged by the maintenance of the lower rate to Chicago. HELD, rate attacked not unreasonable or unduly prejudicial but was in violation of fourth section which should be removed, complaint dismissed. Shanks & Gannon Construction Co. v. C. C. C. & St. L. Ry., 102 I. C. C. 462.

ALL OTHER CITATIONS

Jeremy Fuel & Grain Co. v. Director General, as Agent, 88 I. C. C. 399.

§13. Reparation.

See Reparation.

(a) In absence of proof of damage, an unauthorized departure from the long-and-short-haul rule of the fourth section of the act does not warrant an award of reparation. National Hay & Milling Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 1, 2.

(b) Complainant attacked class rate charged of 69c on hubs in the white, shipped from Tullahoma, Tenn., December, 1922 and $1.05 charged on spokes shipped from Sparta, Tenn., January 1923 to South Clarksville, Va., as unreasonable, discriminatory, unduly prejudicial and in violation of the fourth section. Tullahoma is on the N. C. & St. L., intermediate to Nashville, Tenn., on traffic to South Clarksville. Sparta is on a branch line of this carrier to which Tullahoma is intermediate. The shipments moved via Chattanooga, thence Southern to destination, charged on the hubs sixth class 69c. Contemporaneously there was a combination rate of 38.5c to Chase City, Va., plus 16.5c beyond. Proper rate from Sparta to South Clarksville was 53.5c to Danville, Va., plus 22.5c beyond. No damage was shown to have been suffered by reason of the alleged unjust discrimination, or undue prejudice, or under the fourth section departures. HELD, applicable rate on spokes not unreasonable, rate atttacked on hubs from Tullahoma unreasonable to extent it exceeded 55c, reparation awarded. Lynchburg Traffic Bureau v. N. C. & St. L. Ry., 91 I. C. C. 586.

(c) A violation of the long and short haul clause of the fourth section is not of itself sufficient grounds upon which to award reparation. Sanquoit Paper Co. v. Director General, 92 I. C. C. 61, 62.

(d) Where a railroad, under Interstate Commerce Act §6, as amended by Act June 18, 1910, and Act. Feb. 28, 1920 (Comp. St. Ann. Supp. 1923, § 8569), filed and published a schedule of rates fixing a rate between two points lower than published rate for shorter haul on same line from intermediate point, without the permission of the Interstate Commerce Commission, and thereafter imposed and collected the higher rate from the intermediate point, in violation of the long and short haul clause of section 4 (Comp. St. § 8566), consignee, who paid such higher rate, could not recover the amount paid in excess of the lower rate without proof of actual damages sustained, in view of section 8 (Comp. St. § 8572), making a carrier "liable to the person or persons injured thereby for the full amount of damages sustained in consequence of any" violation of the act, and in view of amendment, to section 4 by Transportation Act of 1920, since in such case the publication of the lower rate for the long haul did not wholly efface the higher intermediate one from the schedule, so as to make the lower rate the maximum rate which railroad could charge, even though railroad was liable to penalty under section 10 for publishing lower rate for longer haul. Davis, Agent, etc. v. Portland Seed Co., 44 Sup. Ct. 380; San Francisco & P. S. S. Co. v. Parrington, 44 Sup. Ct. 380; Davis, Agent United States Railroad Administration v. Same, 44 Sup. Ct. 380; Great Northern Ry. Co. v. McCaull-Dinsmore Co., 44 Sup. Ct. 380.

(e) Complainant attacked commodity rate charged on empty wooden boxes, carloads, between February, 1919 and

February, 1920 from Kansas City, Mo., to Carl Junction, Mo., as unreasonable and in violation of the fourth section. Rate charged 19c and to Carthage 18c, distances 154 and 168.9 miles. Record contains no proof of damage growing out of the alleged departure from the fourth section. HELD, rate attacked not unreasonable, complaint dismissed. Forrester Nace Box Co. v. Director General, 93 I. C. C. 665.

(f) The fact that the attacked rates from the mines on two of the defendants contravened the long and short haul provision of the fourth section is not of itself a sufficient ground for awarding reparation. Peerless White Lime Co. v. C. & E. I. Ry., 95 I. C. C. 260, 266.

(g) The fact that the rates charged were in excess of the rates to more distant points is not proof of unreasonableness, nor, in the absence of evidence of specific damages to the shipper, is it a sufficient basis for an award of reparation. Vossler Company v. E. J. & E. Ry., 96 I. C. C. 75, 76.

(h) The Commission has uniformly awarded reparation on shipments moving to intermediate points under rates which are higher than to more distant points where the rates to the latter points were established subject to rule 77. Carey Co. v. C. N. O. & T. P. Ry., 96 I. C. C. 455, 457.

(ij) An unprotected violation of long-and-short-haul provision of section 4 of the act does not present an issue of illegality of rates for which reparation may be awarded. Davis v. Portland Seed Co. 264 U. S. 403. Parkersburg Rig & Reel Co. v. M. V. R. R. Co., 91 I. C. C. 583, 585.

(kl) Notation in a tariff in accordance with rule 77 of Tariff Circular 18-A is a substantial compliance with fourth-section requirements of the act, and request for publication of a rate under that rule prior to movement is not essential in order that shipper may take advantage of its provisions. Producers Refining Co., 69 I. C. C. 403 and other cited cases. East St. Louis Cotton Oil Co. v. B. & O., 92 I. C. C. 633, 638.

(m) Proof of specific damage is required before reparation may be awarded under sections 2 and 3 and the long-and-short-haul clause of section 4 of the act. International Coal Co. case, 230 U. S. 184; Iten Biscuit Co., 50 I. C. C. 724; 53 I. C. C. 729; Portland Seed Co. case, 265 U. S. 403. Fowler Commission Co. v. St. L.-S. F., 92 I. C. C. 641, 642.

(n) A suit against a carrier for damages for charging a higher rate on through shipments than the aggregate of rates to intermediate points, in violation of Interstate Commerce Act, §4 (Comp. St. §8566), cannot be maintained, without allegation of special damage to plaintiff. Patterson v. Louisville & N. R. Co., 2 Fed. (2d) 592.

(o) Complaint seeking reparation, as overcharges, based upon violations of long-and-short-haul provision of section 4 of the act, dismissed following Portland Seed Co. case, 264 U. S. 403. Pacific Adjustment Co. v. Director General, 93 I. C. C. 50.

(p) Complaint seeking reparation, as overcharges, based upon violations of aggregate of intermediates provision of section 4 of the act, dismissed following Portland Seed Co. case, 264 U. S. 403. While case cited did not involve violations of that clause, the court's reasoning is conclusive as applied to it as well as to long-and-short-haul clause. Published rates must be charged and paid whether lawful or not; and while an unlawful rate may subject carrier to payment of penalties to the Government, its charging does not give shipper any right save to recover "the full amount of damage sustained in consequence of any such violation of the provisions of this act." It would be going too far to find that unauthorized publication established the lower aggregate of intermediate rates as maximum permissible charge, and only rate which could be demanded. Pacific Adjustment Co. v. Director General, 93 I. C. C. 50.

(q) Fact that rates contravene the long-and-short-haul provision of section 4 of the act is not in itself a sufficient ground for awarding reparation. Peerless White Lime Co. v. C. & E. I., 95 I. C. C. 260, 266.

(r) Except under unusual conditions the commission has uniformly awarded reparation on shipments moving to intermediate points under rates which are higher than to more distant points where rates to the latter points were established subject to rule 77 of Tariff Circular 18-A. Carey Co. v. C. N. O. & T. P. Ry. Co., 96 I. C. C. 455, 457.

(s) In the absence of proof of damage to shipper, the fact that a carrier has

charged rates which violate the long-and-short-haul provision of fourth section of the act is not a sufficient basis for an award of reparation. Rates charged found not unreasonable or unduly prejudicial, this finding being without prejudice to such disposition as may later be made of fourth-section application herein discussed. England Walton & Co. v. Sou. Ry. Co., 98 I. C. C. 449, 450.

(t) In the absence of proof of damage to the shipper, the fact that carriers have charged or received rates which violate the long and short haul provision of the fourth section is not a sufficient basis for an award of reparation. Shanks & Gannon Construction Co. v. C. C. C. & St L. Ry. 102 I. C. C. 462, 464.

(ta) In absence of proof of damage to shipper the fact that carriers have charged or received rates which violate long-and-short-haul rule of section 4 of the act is not of itself a sufficient basis for an award of reparation. Eads Bros. Furniture Co. v. B. & O., 102 I. C. C. 381, 383.

(u) The existence of a lower rate from a more distant point on the same line or route is not in and of itself sufficient to justify a finding of unreasonableness and an award of reparation by reason of the exaction of higher rates from an intermediate point or points. Ohio Farm Bureau Federation v. N. Y. C. R. R. 104 I. C. C. 490, 492.

(v) The fact that a joint rate exceeds the aggregate of intermediate rates does not afford a basis for an award of reparation where fourth section relief has been granted. The defendants have rebutted the presumption of unreasonableness attaching to the joint rate, and it is not shown that the joint rate is otherwise unlawful. Valley City Milling Co. v. C. & O. Ry. 104 I. C. C. 634, 636.

(w) The commission has consistently found that a violation of the long-and-short haul clause of section 4 does not in itself establish unreasonableness of a higher rate or form a basis for award of reparation. Iten Biscuit Co., 50 I. C. C. 724; Oregon Fruit Co., 50 I. C. C. 719. Moore-Lawless Grain Co. v. C., B. & Q., 101 I. C. C. 52, 54.

(x) Departures from the provisions of the fourth section are insufficient to support an award of reparation. Lake Charles Rice Milling Co. v. L. W. R. R., 109 I. C. C. 195, 198.

(y) It does not follow that an award of damages should be made because the rate contravened the long and short haul provisions of the fourth section. Northeast Mississippi Traffic Bureau v. M. & O. R. R., 109 I. C. C. 246, 248.

(z) When a tariff is subject to rule 77 it is not necessary for a shipper to request establishment of the lower rate applicable to the more distant point in order to be entitled to reparation to the basis of such rate. Stauffer Chemical Co. v. H. & B. V. Ry., 112 I. C. C. 311, 312.

(aa) In absence of proof of damage to shipper, the fact that carriers have charged or received rates which violate the long-and-short-haul provisions of the fourth-section is not of itself a sufficient basis for an award of reparation. Iten Biscuit Co., 50 I. C. C. 724, 53 I. C. C. 729; Anaconda Copper Mining Co., 64 I. C. C. 136. Lynchburg Traffic Bureau v. P. R. R. Co., 88 I. C. C. 619, 620.

ALL OTHER CITATIONS

Thompson Wells Lumber Co., v. Director General, as Agent, 88 I. C. C. 395.

§15. Suspension of New Tariffs.

See Suspended Rates; Tariffs §1½.

(a) The publication of a rate under authority of rule 77 is a substantial compliance with the requirements of the fourth section, and that a request for the publication of a rate under that rule prior to the movement of shipments is not essential in order that the shipper may take advantage of such provision. Any other view would be inconsistent with the purpose of the rule to avoid the publication of numerous paper rates at intermediate points. National Asso. of Furniture Mfrs. v. A. A. R. R., 98 I. C. C. 501, 509.

(b) Proposed readjustment of rates on live and dressed poultry, butter and eggs from points in Kentucky, Tennessee, Alabama and Mississippi to eastern cities and Buffalo-Pittsburg zone, resulting among other things, in removal of numerous departures from long-and short-haul rule of fourth section, found justified. Dairy Products from Southern Points, 100 I. C. C. 756.

§16. Tariffs and publication.

See Tariffs II.

(a) Contention that rule 77 of Tariff Circular 18-A constitutes relief from provisions of the fourth section of the act, and that prior to request by shipper for publication from intermediate point of the lower rate applying from more distant point no damages can be found unless rate from the intermediate point is shown to be unreasonable per se, or unless the evidence constitutes such proof of damages as is required under section 3 of the act, not sustained following Pittsburgh Crucible Steel Co., 81 I. C. C. 659. Standard Oil Co. v. Director General, 89 I. C. C. 7, 9.

(b) The notation on a tariff in accordance with rule 77 is a substantial compliance with the fourth section requirements, and that a request for the publication of a rate under that rule prior to the movement of shipments is not essential in order that the shipper may take advantage of the provision. East St. Louis Cotton Oil Co. v. B. & O. R. R., 92 I. C. C. 633, 638.

(c) Although the regulations of the Commission require that where a tariff carries rates which depart from the provisions of the fourth section under authority of the Commission reference shall be made to the order on the title page of the tariff, they do not require similar reference to fourth section applications. West End Scrap Iron & Metal Co. v. C. St. P. M. & O. Ry., 101 I. C. C. 108, 109.

(d) From certain Texas points over certain routes Tulsa, Okla., is intermediate to St. Louis, Mo., and the existing deviation from the long-and-short-haul provision of section 4 not being covered by an appropriate application is unlawful. Standard Paving Co. v. A., T. & S. F., 100 I. C. C. 233, 236.

(e) Defendants state that the use of the rates on local shipments to St. Louis will result in fourth section violations, but this does not constitute a ground for holding that they apply other than in accordance with the terms of the tariff. National Candy Co. v. P. R. R., 101 I. C. C. 43.

(f) Contention that rate was unlawful because tariff did not refer to the application covering the fourth-section departure involved, not sustained. A reference to fourth-section applications is not necessary, although the regulations of the commission require that where a tariff carries rates which depart from the provisions of the fourth section under authority of commission's order a reference shall be made to the order on the title-page of the tariff. West End Scrap Iron & Metal Co. v. C., St. P., M. & O., 101 I. C. C. 108, 109.

I. THE CARMACK AND CUMMINS AMENDMENTS.

See Act to Regulate Commerce.

§4. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Where a commodity is damaged through any act or neglect of carriers, resulting in its being rejected by consignee at destination, such damage is not cognizable by the commission. Toberman, Mackey & Co. v. Director General, as Agent, 89 I. C. C. 365, 366.

(b) The Commission is not empowered to prescribe rules and regulations for the settlement of claims arising from loss or damage to shipments in transit. Such claims, and the measure of damages applicable thereto, are cognizable only in the courts. Rosser & Fitch v. A. C. L. R. R., 91 I. C. C. 611.

(bc) Complainant alleged that defendants have failed and neglected to establish, observe, and enforce just and reasonable regulations for the uniform settlement of loss and damage claims arising out of the handling, transportation and nondelivery of property, and are guilty of practicing unreasonable and unjust regulations, in violation of section 1, paragraph 6 of the act, and unjust discrimination in violation of section 2 of the act. HELD, complaint dismissed as the Commission has not jurisdiction over loss and damage claims. Rosser & Fitch v. A. C. L. R. R., 91 I. C. C. 611.

(d) Commission is without jurisdiction to prescribe rules and regulations governing settlement of loss and damage claims or measure of damages applicable thereto. Such claims and measures of damages applicable thereto are cognizable only in the courts. See 45 I. C. C. 161 and 61 I. C. C. 120, 125. Rosser & Fitch v. A. C. L. R. R. Co., 91 I. C. C. 611.

(e) Loss sustained by complainant in connection with a shipment of lumber sold by carriers and proceeds applied in satisfaction of accrued demurrage, storage, and freight charges after such shipments had been refused by consignee at billed destination, found not to have resulted from any violation of the act. Such charges were assessed in accordance with applicable tariffs and no evidence was adduced to show that rules or regulations under which they were assessed were unreasonable or otherwise unlawful. The commission is empowered to award reparation only for violations of the act and complainant's remedy, if any, lies in the courts. Leslie Bros. Lbr. Co. v. P. R. R., 92 I. C. C. 55.

(f) Upon complaint that attempt of N. Y., N. H. & H. R. R. Co. to eject complainant from its produce house at Harlem River station, New York, N. Y., previously leased to him, and threat to refuse to place cars consigned to him, subjected complainant to unjust discrimination and undue prejudice. HELD, that complainant's evidence is insufficient to warrant a finding that consignees receiving shipments on team tracks are unduly prejudiced or lessees of the produce house unduly preferred, and that he has not proven damage by reason of any undue prejudice which may have existed during the time when the question of the lease was in process of litigation in the courts. Com-

plaint dismissed. Gallup v. N. Y., N. H. & H. R. R. Co. 98 I. C. C. 453.

(g) Inasmuch as it has been held that degradation of coal is an incident of loss and damage, complainant is remitted to its remedy for loss and damage, which is not within the jurisdiction of the Commission. Atwater & Co. v. M. C. R. R. 107 I. C. C. 491, 492.

(h) Damages caused by delay in transportation of one car of potatoes from Freehold, N. J., to Statesville, N. C., found not to have resulted from violation of any provision of the interstate commerce act. Complainant concedes that the commission has no jurisdiction over damages resulting from delay, but contends that the damages in this case resulted from misrouting. There was no misrouting in this case. Lambertson Co. v. C. R. R. Co. of N. J., 100 I. C. C. 259.

(i) Commission does not exercise jurisdiction over claims for loss of freight in transit. Smith & Duckworth v. D., C., C. & St. L. Ry. Co., 100 I. C. C. 300, 302.

(j) Under section 20 of interstate commerce act, as amended, any attempted limitation of the shipper's right of recovery for actual loss, damage, or injury to property received for transportation is "declared to be unlawful and void" except when the limitation is published under an order from the commission; and it follows that any attempt on part of a carrier to set up a defense of limited liability as to goods shipped under actual-value rates not published under such an order would fail. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471, 477.

II. CARRIER'S LIABILITY.

See Classification §22 (3s).

§10. Common Law Liability in General.

(1) Liability for Negligence.

(a) Loss of property, after its delivery to another, authorizes an inference that its loss was occasioned by the negligence of the person receiving it, as where the hand bag of a railway passenger was lost after the passenger had delivered it to the conductor in charge of the train, for the purpose of its being taken by the conductor from the coach when the passenger was leaving the train at a station. Atlantic Coast Line R. Co. v. Barksdale (Ga., 1924) 124 S. E. 362.

MAILS

See Branch Lines §1 (hh).

(a) In 85 I. C. C. 157, the Commission found upon reexamination of the facts and circumstances surrounding the transportation of mail by the New England lines, that the existing rates of pay were inadequate, increased rates being prescribed Dec. 13, 1923. Case was reopened as to findings on rates of pay for services rendered from Sept. 1, 1920 or from Feb. 25, 1921, the date upon which their application was filed, to the date the increased rates became effective. The Act empowers and directs the Commission to fix and determine from time to time the fair and reasonable rates and compensation. It directs the Commission to follow substantially the procedure prescribed therein when an application is filed for reexamination of the rate or rates for service covered by the application. HELD, rates prescribed for future are reasonable to apply from and to dates shown above. Railway mail pay, 95 I. C. C. 204.

(b) Applicant lines, asked for an increase in their rates of pay for the transportation of mail matter. Previous decision in general case, 56 I. C. C. 1. A majority of the applicant roads are located between the Rocky Mountains and the Sierra Nevada. The others are on the east and west slopes of the Sierra Nevada and in the mountain ranges close to the Pacific. For the most part they are feeder lines connecting outlying mining and lumbering communities with larger roads. They encounter heavy grades in many instances and operate generally under unfavorable conditions in the sparsely settled regions they serve. No full mail cars are operated. Apartment car service, storage and closed pouch service only are used. Of the seven roads furnishing apartment service two are over 100 miles in length and four are over 50 but less than 100 miles in length. It is evident that there was a very large amount of unused space operated in connection with mixed cars. There is no evidence in this record to show whether or not such operation is necessary. It is clear that the space ratios upon which the relative cost of each service is based have a definite relation to the amount of unused space. A decrease in the unused space, whether brought about by more inten-

sive use of space or by increased passenger, miscellaneous, express or mail service, affects the relative ratios, the relative costs, and the relative value of property investment in each service. HELD, present rates of mail pay for transportation of mail upon applicants lines should be increased on and after June 30, 1921. Railway Mail Pay., 95 I. C. C. 493.

(c) Woodstock Ry. and White River Railroad, asked for a reexamination of the facts and circumstances surrounding the transportation of mail matters on their lines and an increase in their rates of mail pay for services rendered by them since Dec. 13, 1923. Woodstock Ry. extends from Woodstock to White River Junction, Vt., distance 13.88 miles. White River extends from Bethel to Rochester, Vt., 19.34 miles. The rate per mile for the unit is 5.625c fixed by the Commission in 56 I. C. C. 1. In 85 I. C. C. 157 the Commission increased the rates of mail pay for New England roads about 35% and made the minimum $84 per mile per annum. An increase similar to that shown would give the applicant carriers a total annual compensation of $1,303 and $1,816. HELD, fair and reasonable rate of compensation for mail matter upon applicant carriers will be 7.5c for each mile of service by a 3 foot closed pouch unit of space, minimum $84 per mile per annum. Railway Mail Pay, 96 I. C. C. 43.

(d) American Electric Railway Association applied for a reopening of 58 I. C. C. 455 upon the ground that there had been no adequate presentation as to the cost of transporting mail upon a space basis, and that the rates of pay prescribed by the Commission are inadequate and not just and reasonable. Mail service is now authorized on the lines of 311 urban and interurban electric railway companies. It was mutually agreed that 30 cubic feet of space would be considered as equivalent to one linear foot of car space. The 10 bag unit was considered by the department as occupying one linear foot in determining the space occupied by such authorizations. The Commission does not think that a schedule of rates resulting from a determination of the general average cost of all services rendered by urban and interurban lines which render primarily passenger service may fairly be applied to mail service. Nor on the other hand should rates be fixed upon a study simply of the space and mileage run without regard to the peculiar features of the service on such lines. As has been shown, the greater part of the service is rendered in passenger cars which are not specially equipped for handling mail. These cars are run on schedules and under conditions affected by the exigencies of local passenger service. The extent to which the expenses of operating such cars is augmented by the carriage of mail therein is not capable of exact determination. The local factor in passenger service, as to which the carriers introduced considerable evidence and upon which the base rate proposed by them for application to service in passenger cars is to a large extent predicted, is not applicable to the mail. After giving due regard to the various factors entering into the transportation of mail in closed pouch service in passenger cars and compartments, and in baggage cars and compartments, and to the studies made in this record, the Commission is of the opinion that the present rates of pay for such service are fair and reasonable and that no change in such rates should be made. The remaining services are those rendered in independent cars, in which railroad employes handle the mails, and in railway postoffice cars and railway postoffice apartments in which postal employes handle the mails. The record shows that with respect to independent car service and service in r. p. o. cars and apartments some increase in rates is justified. The limitation of a mail route, by definition, to a mail service of a specific character would have a tendency to increase the excess payments. Many of the roads perform two or more classes of mail service, and at least one performs every class of service. The evidence does not show the contract of one class of service with another on the same road, such as the contract between closed pouch service and apartment or full car service. There was no evidence from any road that is paid the minimum rate with respect to the circumstances surrounding the service performed. The minimum rate is stated in the rule to be the rate of payment on any electric railroad mail route and provides the minimum compensation for all classes of services by an electric road as a whole. The present record does not furnish an adequate basis for a different rule. One other question

raised at the hearing remains to be considered, namely, whether a carrier may be permitted to bid for side and terminal services in cases where the department prefers not to require the carrier to perform the service, but to have such service performed under contract after public bidding. The Commission sees no reason why in such a case the carrier should not be permitted to bid for such service. HELD, present rates of pay for the transportation by urban and interurban electric lines of mail on passenger cars, on baggage or express cars, and baggage and express compartments in passenger cars, are fair and reasonable. The fair and reasonable rate for independent cars devoted to the transportation of the mails, on which railroad employees handle the mails, is 50c per car mile of authorized travel of cars 36 feet in length. Where the railroad company is unable to furnish cars of the length authorized but furnishes cars of lesser length which are accepted by the department to be sufficient for the service, payment shall be made only for the actual space furnished, the compensation to be not exceedeing a prorate of that provided for a 36 foot car. Where cars exceeding 36 ft. in length, are authorized and used, the compensation shall be not exceeding a prorate of that provided for a 36 ft. car. In computing car miles of independent cars the space in both directions of an authorized round trip car run shall be regarded as the space to be computed unless the car or any part thereof is used by the company in the return movement. That the fair and reasonable rate for r. p. o. cars and r. p. o. apartment in cars, in which postal employees handle the mails, is 2c per lineal foot, or fraction thereof, per mile of authorized travel in cars or apartments in cars 20 ft. or less in length, and in cars or apartments in cars more than 20 ft. in length, 2c per linear foot per mile of authorized travel for the first 20 ft. and 0.875c per linear foot per mile of authorized travel per each additional foot or fraction thereof. In computing the car miles of full and apartment railway post office cars, the maximum space authorized in either direction of a round trip car run shall be regarded as the space to be computed in both directions. Electric Railway Mail Pay, 98 I. C. C. 737.

(ef) Transportation of mail between different states and territories is interstate commerce. Missouri Pac. R. Co. v. Baldwin (Tex., 1924) 261 S. W. 418.

(g) Upon reargument, rates of pay for transportation of mail matter by New England lines, fixed and determined by commission in 85 I. C. C. 157, to be fair and reasonable for service rendered on and after December 13, 1923, found reasonable for same service rendered on and after February 25, 1921, date of filing of application by carriers. Railway Mail Pay, 95 I. C. C. 204.

(h) Rates of pay for transportation of mail over certain carriers located between the Rocky Mountains and Sierra Nevadas, and in the mountain ranges close to the Pacific Ocean, found to have been unfair and unreasonable. Fair and reasonable rates established for the future. Railway Mail Pay, 95 I. C. C. 493.

(i) Space ratios and costs based thereon are not constant, but variable, affected at any stated time or in any stated year by prevailing operating and traffic conditions. After a sufficient number of space studies have been made, the definite limits within which the ratios for each service may be expected to vary can be determined, and mail-space ratios may ultimately be ascertained which will be more nearly representative of conditions over a number of years. Ratios obtained as a result of a 30-day test can not be considered as necessarily governing the mail service for the future. Such ratios are, however, evidence which must be given considerable weight in determining whether present rates of pay are reasonable. Railway Mail Pay. 95 I. C. C. 493, 507.

(j) The diversion of freight traffic to parcel post is not a circumstance that the commission should take into consideration in determining what are just and reasonable rates of compensation to be received by carriers from the Post Office Department for carrying the mails. Railway Mail Pay, 95 I. C. C. 493, 508, 509.

(k) Rates of pay for transportation of mail by Woodstock Ry. and White River R. R. Co., found unfair and unreasonable. Fair and reasonable rates prescribed for the future. Railway Mail Pay, 96 I. C. C. 43.

(l) Fair and reasonable rates for transportation of mail prescribed back to date of filing of applications with the

commission only, and request for findings as to rates of pay as of a date prior to such applications, denied. Railway Mail Pay, 96 I. C. C. 43, 46.

(m) Space ratios for a test period covering a single year and apportionments of expense and investment based on such ratios can not be regarded as exact mathematical ascertainments of cost of rendering mail service because such ratios reflect only the particular operating and traffic conditions of the test period. They do, however, afford a basis for determining whether present rates of mail pay are reasonable. New England Mail Pay case, 85 I. C. C. 157, 179. Railway Mail Pay, 96 I. C. C. 43, 46.

(n) On further hearing, present rates of pay for the transportation by urban and interurban electric lines of mail on passenger, baggage, or express cars, and in baggage and express compartments in passenger cars, found fair and reasonable, and fair and reasonable rates for transportation of mail in independent cars and in railway post-office cars and railway postoffice apartments in cars prescribed for future. Rules for the computation of the space to be paid for in connection with independent cars and railway post office cars and apartments prescribed. Original report, 58 I. C. C. 455, modified accordingly. Electric Railway Mail Pay, 98 I. C. C. 737.

(o) Space study in connection with rates of pay for transportation of mail by urban and interburban electric-railway common carriers discussed, and rules for the computation of the space to be paid for in connection with independent cars and railway post-office cars and apartments prescribed. Electric Railway Mail Pay 98 I. C. C. 737.

(p) Fair and reasonable rates for transportation of mail in independent cars and in railway post-office cars and railway post-office apartments in cars by urban and interurban electric-railway common carriers prescribed for future, which rates represent increases over those prescribed in original report, 58 I. C. C. 455. Electric Railway Mail Pay, 98 I. C. C. 737.

(q) The load factor in passenger service is not applicable to the mail.Electric Railway Mail Pay, 98 I. C. C. 737, 756.

(r) The questions presented upon reargument are whether the Commission had authority to find in 95 I. C. C. 204, 208, 95 I. C. C. 493, 513 and 96 I. C. C. 43, 46 that the rates established by the order in 56 I. C. C. 1, for the transportation of mail matter by the applicant carriers were not fair and reasonable during the periods from the dates the respective applications for re-examination were filed to the dates of the orders establishing certain increased rates as the reasonable rates to be received for the future, and that such increased rates were the reasonable rates for service during said periods; and if the Commision had such authority, whether it had authority to enter orders, as requested by the carriers, in addition to such findings, establishing, in each case, such increased rates as the reasonable rates that should have been paid during the said periods. HELD, from the statute as a whole it appears that the Congress conferred upon the Commission full power to determine the just and reasonable rates for the transportation of mail. The provision for re-examination gives it power to reexamine rates placed in issue by the applications in the instant cases, and if upon the record the Commission is of the opinion that the rates for service covered by the applications were not fair and reasonable as of and following the dates the applications were filed the Commission has the power so to find and to fix and determine the rates that were fair and reasonable. Railway Mail Pay, 104 I. C. C. 521.

(s) The Canadian National Ry. and the Tonopah & Goldfield Ry. requested reexamination of their rates of pay for carrying the mails. Present rates prescribed in 56 I. C. C. 1. The Canadian National related to the lines operated by it in New England under lease, namely, the Atlantic & St. Lawrence Ry. and Norway branch, located in Vermont, New Hampshire, and Maine and the Lewiston & Auburn Ry. in Maine, 172.2 miles in length. HELD, present rates of pay not fair and reasonable, but fair rates will be those for service on and after Oct. 25, 1924 as prescribed in 104 I. C. C. 521 and 85 I. C. C. 157. Tonopah & Goldfield is about 97 miles in length and extends from Tonopah Junction to Tonopah and Goldfield, Nevada. It asks that it be brought within the decision in 95 I. C. C. 493. HELD, rates of mail pay not fair and reasonable on and after Feb. 16, 1925, but fair rates

will be those prescribed in 95 I. C. C. 493. Railway Mail Pay, 109 I. C. C. 13.

(t) By application filed May 25, 1925 the Alabama Tennessee & Northern R. R., requested a reexamination of the facts and circumstances surrounding the transportation of mail matter upon its line, and increased rates of pay. Applicants road is 186 miles long. It extends from Calvert, Ala., to Reform, Ala., where it connects with the M. & O. At Calvert and York, Ala., it connects with the Southern. HELD, rates of pay on and after May 25, 1925 not fair and reasonable but should be for each mile of service by a 15-foot compartment car 25c, by a 3-foot storage space 6.25c, by a 3-foot closed pouch space 7.50c. Railway Mail Pay, 112 I. C. C. 151.

MERCHANT MARINE ACT

See Export Rates and Facilities; Import Traffic; Navigable Waters.

(a) Under section 27 of the merchant marine act, 1920, recognition by the commission merely operates to stay the operation of the section to merchandise transported in such manner as otherwise to be subject to the penalty of forfeiture. Whether such merchandise is exempt from the penalty because the commission recognized the route is a question of fact to be determined by the court. The duty of administering the merchant marine act, 1920, does not rest upon the commission and it is not within its province to construe its provisions. Rail-Lake-and-Rail Rates via Canada, 96 I. C. C. 633.

(b) It is the policy of Congress as declared in section 500 of the transportation act, 1920, to promote, encourage, and develop water transportation, service, and facilities in connection with the commerce of the United States and to foster and preserve in full vigor both rail and water transportation, and the provisions of section 8 of the merchant marine act, 1920, is of the same tenor. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 122.

(c) In determining its powers and duties under the interstate commerce act and merchant marine act, 1920, the commission must have recourse to the intent of Congress as indicated in section 28 of the merchant marine act. That expressed intent the commission must effectuate in spirit as fully and as promptly as possible. The wisdom or unwisdom of the policy is not for the commission to determine. Section 28 of Merchant Marine Act, 88 I. C. C. 645, 650.

MEXICO

See Adjacent Foreign Country; Through Routes and Joint Rates.

(a) Complainant attacked rates on lumber, box shooks, and other articles taking lumber rates, carloads, from Williams, Flagstaff, and Holbrook, Ariz., to Naco and Nogales, Ariz., and the through charges on such shipments when destined to Cananea, Mexico, and other points on the S. P. of Mexico, of which San Blas and Culiacan are representative, as unreasonable, unjustly discriminatory and unduly prejudicial. Points of origin are in northern Arizona on the Santa Fe. Cananea is in Sonora, 87 miles southeast of Nogales and 38 miles south of Naco, northern points and northern termini of S. P., of Mexico. San Blas and Culican are in Sinaloas, 460 and 597 miles south of Nogales. Routes are over Santa Fe to Phoenix, Ariz., A. E., to Maricopa, Ariz., and S. P., to connection with the Mexican lines at Nogales, or over E. P. & S. W., from Tucson, Ariz., to connection with the Mexican line at Naco. A combination rate of 106.5c on box and crate shooks only, from Williams and Flagstaff to Mexican west coast points, composed of 25c to Phoenix and 81.5c beyond, has been the lowest available rate on these products. The rate on lumber from Cananea was not considered in 80 I. C. C. 487. From Williams and Flagstaff to Cananea

it is a combination of 46.5c to Naco and Mexican tenth class rate of 8c beyond. Distances from Williams, Flagstaff and Holbrook to Nogales are 403, 437 and 528 miles. To Naco they are 32 miles greater. Cananea is reached by the S. P., of Mexico direct via Nogales, but the E. P. & S. W., participates in traffic through Naco. Practically all through traffic for Cananea now moves through the latter point, but the rates from Williams, Flagstaff and Holbrook to the two gateways should be fairly related. In view of the shorter haul from the Arizona points the S. P., and its connections are not justified in maintaining therefrom higher rates than from the more distant California mills. From Holbrook to Naco 560 miles, the rate is 77.5c. This is clearly out of line with the rate from Williams and Flagstaff and defendants made no attempt to justify it. HELD, rates attacked from Williams, Flagstaff and Holbrook to Naco on shipments destined to Cananea unreasonable to extent they exceeded 42.5c from Williams and Flagstaff and 45c from Holbrook. HELD, further, rate components which accrued within the United States have not been shown to have been unreasonable and the components in Mexico are beyond the jurisdiction of the Commission. Arizona Lumber & Timber Co. v. A. E. R. R., 96 I. C. C. 203.

(b) The component within the United States has not been shown unreasonable, and the Commission is without power to award reparation under section 1 with respect to the charges which accrued on the Mexican line. Arizona Lumber & Timber Co. v. A. E. R. R., 96 I. C. C. 203, 206.

(c) Rates on lumber, box shooks, and articles taking lumber rates from Williams, Flagstaff, and Holbrook, Ariz., to Naco, Ariz., destined to Cananea, Mexico, found unreasonable to extent they exceed or may exceed rates prescribed in 80 I. C. C. 487, on same commodities from same points of origin, via Nogales, when destined to Cananea. Arizona Lumber & Timber Co. v. A. E. R. R. Co. 96 I. C. C. 203.

(d) Where combination rates are assessed on shipments from United States to points in Mexico, the commission is without power to award reparation under section 1 with respect to the charges which accrued on the Mexican line. Arizona Lumber & Timber Co. v. A. E., 96 I. C. C. 203, 206.

(da) Complaint seeking establishment of through routes and joint rates between points in Oregon and California, on one hand, and points in other parts of United States, on other, via El Centro and San Diego, Calif., dismissed for want of jurisdiction to establish such routes and rates through Mexico, an adjacent foreign country. San Diego Chamber of Commerce v. A. & V., 102 I. C. C. 27.

(db) Rate on cowpeas from Navojoa, Sonora, Mexico, to San Francisco, found unreasonable to extent it exceeded lower rate on peas, Mexican (garbanzo), which lower rate was subsequently established on cowpeas. Reparation awarded. Lewis-Simas-Jones Co. v. S. P. Co., 102 I. C. C. 245.

(dc) Following Greene Cananea Copper Co., 80 I. C. C. 121, contention that rates from Cananea, Sonora, Mexico, to Perth Amboy, N. J., increased under General Order No. 28 of director general, were unlawful and unreasonable since laws of Mexico required publication of increased rates for 30 days before becoming effective, not sustained. Rates assailed were lawfully established under acts administered by this commission, which is without jurisdiction to determine whether or not they were lawfully established under laws of Mexico. Greene Cananea Copper Co. v. Director General, 102 I. C. C. 473.

(e) Complainant attacked rates charged on numerous cars of chick peas, or garbanzo, shipped in June, July, August and September 1921 from Naranjo, Cajeme, and Esperanza, in Sonora and Naranjo and Guamuchil, in Sinaloa, Mexico to New Orleans, La., as unreasonable. The shipments moved in bond to Nogales, Ariz., where they were stored in bond for several months under a storage in transit arrangement accorded by defendants. From Nogales they were forwarded to New Orleans, consigned on order notify bills of lading to the Commission Monetaria, notify Commercial Credit Company. Upon arrival at New Orleans the shipments were held in cars, in bond, or stored in a bonded warehouse, as collateral, by the Credit Company pending settlement by complainants of the amount due that company, including freight charges. The shipments were eventualy exported to foreign countries or to Porto Rico, with the

exception of a few cars forwarded to New York in bond, at the rate applicable to New Orleans. Since March 2, 1917, the act has not been applicable to Porto Rico. Neither does the act confer upon the Commission jurisdiction over the transportation of property from Mexico through the United States to Porto Rico, in so far as such transportation takes place within the United States, for even though the transportation from Mexico through the United States to Porto Rico were shown to have been partly by railroad and partly by water under a common control, management, or arrangement for a continuous carriage or shipment, and this is not shown in this proceeding, and even though Porto Rico is a territory appurtenant to the United States it has no jurisdiction over such transportation. To hold otherwise would be to extend the act, contrary to the provision cited. HELD, Commission is without jurisdiction, complaint dismissed. Fernandez & Co. v. S. P. R. R. 104 I. C. C. 193.

ALL OTHER CITATIONS

U. S. Graphite Co. v. Director General, as Agent, 88 I. C. C. 157.

MINIMUM RATES

See Classification §15, §16; Inter-State Commerce Commission §10¼; Minimums §1 (i).

(a) Minimum charge of $12 per car on hay and straw for local movement between St. Louis, Mo., on the one hand, and East St. Louis, Madison, Granite City, and National Stock Yards, Ill., on the other, found not unreasonable or unduly prejudicial as compared with rates on other commodities on which specific rates are applied. Movement is through congested districts and over expensive bridges across Mississippi River, and a minimum charge of $12 for this service was approved by commission in St. Louis Chamber of Commerce, 74 I. C. C. 308. Toberman, Mackey & Co. v. T. R. R. Asso. of St. L., 91 I. C. C. 79.

(b) The power to prescribe minimum rates should be sparingly exercised and only in cases where it clearly appears that its exercise is necessary in order that substantial public injury may be avoided. Salt cases of 1923, 92 I. C. C 388, 409.

I. APPLICATION OF MINIMUM.

§1. In general.

(a) The minimum weight must be taken into account in connection with the volume of the rate in arriving at what will be a reasonable charge. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 27, 31.

(b) When articles which are identical, except for a difference in density, can practicably be covered by distinguishing tariff descriptions, carriers commonly accord lower ratings with higher minima to form of the article which loads more heavily. Such distinctions apply to articles set up and knocked down, nested and not nested, in bags and in machine-compressed bales, and notably to tanks and similar objects made of metal of different gauges. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

(c) Present third-class c. l. ratings, minimum 20,000 pounds, in official, southern, and western territories, applied to aluminum articles as a whole, found to result in unjust and unreasonable charges. Carriers ordered to establish for alternative application, a rating

of second class, minimum 12,000 pounds, subject to rule 34, making latter rating applicable when it would result in lower charges. While maintenance of a minimum which can be loaded only by certain shippers seems improper, it would be equally unfair to such shippers to reduce minimum to a figure reflecting actual loadings of other shippers with a compensating increase in the c. l. rating. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346.

(d) Bulk salt ordinarily is loaded to 10 per cent above marked capacity of the car, and will average about 88,000 pounds in 80,000-pound capacity cars and 110,000 pounds in 100,000-pound capacity cars. Package salt is ordinarily loaded to 45,000 or 48,000 pounds without difficulty. Salt Cases of 1923, 92 I. C. C. 388, 392.

(e) Principle enunciated in 25 I. C. C. 442, 607, that "The commercial minimum is a real thing, and established methods and customs governing business at any particular time should be given proper weight in the establishment of minimum weights at that time," was never intended to perpetuate a minimum based upon conditions in 1870 and 1880 which have since become obsolete. Nor should that principle be controlling in disregard of increasing size and capacity of equipment during the past 30 to 50 years. The modern doctrine was more clearly expressed in 68 I. C. C. 98, 106. Salt Cases of 1923, 92 I. C. C. 388, 399, 400.

(f) Existing c. l. minima applicable in connection with rates on salt from Detroit and Saginaw, Mich., and from Akron and Cleveland, Ohio, to points in trunk-line, Carolina, southeastern, and Mississippi Valley territories found unreasonable for future to extent they are more or less than 45,000 pounds. Salt Cases of 1923, 92 I. C. C. 388, 400.

(g) Maintenance of c. l. minima on salt in connection with intrastate rates within Virginia, West Virginia, the Carolinas, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Wisconsin, Illinois, Iowa, Missouri, Kansas, and Texas, lower than the minima contemporaneously applicable in connection with rates on interstate traffic from producing points in Ohio and Michigan to destinations in above-named States, found unduly preferential of persons and localities in intrastate commerce, unduly prejudicial to persons and localities in interstate commerce, and unjustly discriminatory against interstate commerce. Salt Cases of 1923, 92 I. C. C. 388, 400, 401.

(h) Upon evidence adduced sustaining contention of numerous carriers and shippers that an increase in the minima will result in increased loading of cars and conservation of equipment, proposed increase in c. l. minimum on common salt (sodium chloride), in packages, in block and in bulk, to 45,000 pounds, for uniform application throughout United States east of Rocky Mountains, found justified. Salt Cases of 1923, 92 I. C. C. 388, 393, 401.

(i) The act prescribes no different tests or standards for determination of just and reasonable minimum rates than for just and reasonable maximum rates. And there is nothing in the act which either directs or implies that the commission should use tests of different general character in the determination of reasonable minimum rates than those which have been consistently and uniformly applied for many years, with tacit consent and sanction of Congress and express approval of the courts, in fixing maximum reasonable rates. Salt Cases of 1923, 92 I. C. C. 388, 410.

(j) When the commission has been called upon to adjust maximum reasonable rates on a specific commodity from different points of origin to a common destination, it has always given special consideration to comparisons of going rates on the same commodity in the same or similar territories, in relation to distances, revenue per car, per car-mile, and per ton-mile variations in traffic density, and peculiarities in transportation which affects transportation costs in general. No practical reasons appear why these same standards should not be applied in the fixing of minimum reasonable rates. Salt Cases of 1923, 92 I. C. C. 388, 410, 411.

(k) If experience showed that more shippers of a particular commodity were able to and did load more than the prescribed minimum, a rating compatible with the higher loading would be proper. Edlund Broom Corp. v. B. & M., 92 I. C. C. 749, 752.

(l) Commission has same authority and duty with respect to removal of unjust discrimination brought about by different c. l. minima as it has in case of unjust discrimination interstate traffic caused by state rates. Kansas City Mil-

ler's Club, 50 I. C. C. 170, 182. New Mexico Corp. Commission v. A. T. & S. F., 93 I. C. C. 43, 47.

(m) Under section 1 of rules 15 and 18 of the classification named, the lowest charges, either at the carload rates and minima or the less-than-carload rates and actual weight, were applicable. Charges based upon the actual weights would have been lower, because of the graduated minima rule, than charges based upon the applicable minima under that rule, except in one instance. Klein-Simpson Fruit Co. v. Director General, 98 I. C. C. 547, 550.

(n) Complainant attacked carload minimum weight applied on shipments of materials used in the manufacture of tanning extracts from New York to Morgantown, N. C., as unlawful and unreasonable and as the rule in B. & O., I. C. C. 20,000 governing carload minimum weights is not applicable on shipments moving to southeastern territory, it results in discrimination against traffic to points in that territory. The issue is one of tariff interpretation. Shipments consisted of myrobalans, wattle bark and divi-divi pods imported from India and South America and reshipped from New York lighterage, moved during the period from Oct. 26, 1922 to Aug. 8, 1923, charged 58c prior to Nov. 26, 1922 and 52c thereafter based on minimum weight of 60,000 pounds on extract, bark and tanning, viz: quebracho, myrobalans, valonia, wattle bark and divi-divi pods, dry, in barrels, bags or boxes. The classification minima were 36,000, 30,000 and 24,000 pounds. To avoid any question, the present tariff names commodity rates on extract and tanning materials separately. Sixth class rates of 72c applied on wattle bark and fifth class of 93c on myrobalans and divi-divi pods. HELD, minimum weight assessed inapplicable, and applicable minima of classification not unreasonable, complaint dismissed. International Shoe Co. v. B. & O. R. R., 109 I. C. C. 641.

Express Rates on Milk and Cream in Va., 88 I. C. C. 687.

§5. Minimum higher than car capacity.

(a) The Commission has frequently found unreasonable minimum weights which exceed the loading capacity of Cars. Wool Rates Investigation, 1923, I. C. C. 235, 239.

(b) Complainant attacked carload minimum of 60,000 pounds on coiled elm hoops as unreasonable from Group E points to South Pacific terminals as well as unduly prejudicial. The shipment from Chaffee, Mo., weighed 54,500 pounds and moved over the Frisco, M. P., D. & R. G. and W. P. Charged at rate of $1.065 minimum 60,000 pounds. Prior to March 15, 1918 the minimum on coiled elm hoops from Group E to California terminals was 30,000 pounds and rate of 85c. At that time the minimum on cooperage stock was 40,000 pounds and rate 75c. An alternative minimum of 60,000 pounds of 60c rate also applied on cooperage stock. Following 46 I. C. C. 236, the carriers canceled these minima and rates on coiled elm hoops and cooperage stock and established in lieu thereof on March 15, 1918 a minimum of 60,000 pounds and rate of 75c on both commodities. On May 1, 1922 carriers established an alternative minimum of 40,000 pounds and rate of $1.20 reduced on July 1, 1922, to $1.08, on both commodities. The hoops comprising the shipment from Chaffee were loaded into a 50 feet car with level full capacity the bill of lading bearing the notation "loaded to full visible capacity." The minimum on coiled elm hoops from Group E to north Pacific coast points is 40,000 pounds, rate 96c, or the same as the present rate with the higher minimum on this traffic from these points to California HELD, minimum of 60,000 pounds from Group E to California unreasonable to extent it exceeded 55,080 on 50 foot cars, reparation awarded. Ozark Cooperage & Lumber Co. v. A. & R. R., 91 I. C. C. 329.

(c) If carriers desire to protect themselves against unduly low charges per car they should not do so by prescribing arbitrary minimum weights which can not be loaded in the ordinary equipment available, and it is unreasonable to base charges on a minimum to which cars are incapable of being loaded. Ozark Cooperage & Lumber Co. v. A. & R. R. R., 91 I. C. C. 329, 333.

(d) Ordinarily carload minimum weights should be established with reference to the loading capacity of the car. Aluminum Goods Mfg. Co. v. A. & V. Ry. 92 I. C. C. 346, 351.

(e) Ordinarily carload minimum weights should be established with ref-

erence to the loading capacity of the car. If carriers desire to protect themselves from unduly low charges per car they should do so by regulating the rate and not by prescribing arbitrary minimum weights which can only be loaded in cars of unusual size. Stanfield v. O. W. R. R. & N. Co., I. C. C. 598, 605.

(f) The Commission has repeatedly condemned and will not prescribe a minimum beyond the limit of safe loading. Kloeber v. N. P. Ry., 96 I. C. C. 437, 442.

(gh) Generally speaking, minimum weights should be made to conform as nearly as possible to ability of shippers to load cars. In cases where no direct relationship between minimum and rates is disclosed the possible physical loading of traffic becomes an element of controlling importance, and in such cases propriety of minima can be fairly determined without reference to rates. This general rule, however, is not applicable to cases where facts disclose a definite relationship between minima and rates. Stanfield v. O. W. R. R. & N. Co., 91 I. C. C. 598, 605.

(i) We have repeatedly condemned and will not prescribe a minimum beyond the limit of safe loading. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437, 442.

(j) The Commission has uniformly refused to approve a minimum weight which it is impossible to load. Classification on radio sets, 102 I. C. C. 140, 144.

(ja) Practice of assessing charges at published minimum, where cars furnished by carriers for their own convenience can not reasonably be loaded to the minimum, is unwarranted. See 74 I. C. C. 747. Florida R. R. Commrs. v. A. & R., 102 I. C. C. 677, 680, 681.

(k) The Commission has repeatedly held that if carriers desire to protect themselves from unduly low charges per car they should do so by regulating the rate and not by prescribing arbitrary minimum weights which can be loaded only in cars of unusual size, and that it is unreasonable to base charges on a minimum to which cars are incapable of being loaded. Swift & Company v. G. T. Ry., 109 I. C. C. 45.

(l) The Commission does not look with favor upon minimum weights that can not ordinarily be loaded. Carriers should not regulate their revenues by prescribing arbitrary minima that can be loaded only in cars of unusual size, but by adjusting their rates with relation to a reasonable minimum. Gille Mfg. Co. v. K. C. S. Ry., 109 I. C. C. 408, 412.

(m) The Commission has frequently said that a minimum beyond the limit of safe loading will not be prescribed, and that protection against unduly low charges per car should be accomplished by regulating the rate and not by an arbitrary minimum. A minimum does not contemplate a weight closely approaching the maximum loading possible. Heinz Co. v. Director General, 112 I. C. C. 206, 209.

ALL OTHER CITATIONS

Colorado & Utah Coal Co. v. D. & S. L. R. R. Co., 85 I. C. C. 545; U. S. Graphite Co. v. Director General, as Agent, 88 I. C. C. 157; Beaver Sand Co. v. Director General, as Agent, 88 I. C. C. 159.

§7. Reasonableness and Discrimination.

See Blanket Rates §10½ (g), §12½ (a); Cars and Car Supply §8; Class Rates §2 (tt) (3j); Classification §20 (c) §22 (4i); Commodity Rates §5 (ee); Discrimination; Distance Rates §3; Emergency Rates; Live Stock Shipments (j) (m) (aa); Reasonableness of Rates.

(a) Complainant attacked minima and charges on sheep, in double deck cars from Utah, Idaho, Oregon and Washington to Denver, Colo., Chicago, Ill., and Missouri river crossings, as unreasonable. In western territory the minimum carload weights on sheep or goats in double deck cars vary according to the length of the equipment. For double deck cars of standard length 36 ft. 6 or 7 inches in length the minima on east bound shipments from Mountain Pacific states are generally 23,000 pounds, and to, from, or between practically all other points in western territory where the rates are stated in amounts per 100 pounds the minima are 22,000 pounds. There are no specific rates or minima on lambs or kids. Such animals are subject to the rates and minima on sheep or goats in western territory, or the basis generally applicable in other portions of the United States. Sheep frequently move to the

markets in consignments consisting of more than one car. In such cases the practice at the different markets is to ascertain the aggregate weight of all the sheep in the consignment and divide this by the number of cars, crediting to each car the average of all of them. It is obvious that the average weight does not fairly indicate actual or possible loading unless all of the cars included in the consignment are properly loaded, as even one underloaded car would considerably reduce the average weight of several properly loaded cars. Overloading, or crowding in the cars, tends to increase the shrinkage and the number of dead and crippled; underloading also results in dead and crippled sheep but probably not to the same extent as overloading. Sheep or lambs will die, become crippled, and shrink in transit regardless of the degree of efficiency exercised in the loading. It has already been pointed out that practically all of the minima attacked in this case, were used as divisors to determine the rates per 100 pounds. It follows that the minima, coupled with the new rates, resulted in revenue substantially equal to that produced by the old rates per car. It should be remembered that many young lambs and light weight sheep can not be loaded to any minimum except a very low and impracticable one; it follows, therefore, that any fair minimum on sheep must of necessity be arbitrary to the extent that certain of the animals can not be loaded to the required weight. Since very young lambs can not be loaded to the present minima, the earnings per car and per car mile under the existing rates and minima represent the maximum earnings of the carriers on such traffic. Substantial reduction in defendants earnings would result from a reduction in the minima without corresponding increases in the rates. Special facilities for loading must be provided at the points of origin and at many intermediate stations where the animals are unloaded in transit to feed, water and rest. The traffic requires very fast service, with precedence over all other except passenger trains. The empty movement of double deck stock cars almost equals the loaded movement. Caretakers are carried free. Loss and damage claims are heavy. HELD, present minimum not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Stanfield v. O. W. R. R. & N. Co., 91 I. C. C. 598.

(bc) The minimum carload weight is a factor in the carload rate and in connection with the rate determines the carload earnings. Any reduction in the minimum weight without an increase in the rate would, therefore, reduce the carload earnings of the carrier and would be equivalent to a reduction in the rate itself. Stanfield v. O. W. R. R. & N., 91 I. C. C. 598, 606.

(d) The commercial minimum is a real thing, and established methods and customs governing business at any particular time should be given proper weight in the establishment of minimum weights at that time. Salt Cases of 1923, 92 I. C. C. 388, 399.

(e) While minima should be high enough to insure a proper utilization of equipment, they should not exceed what can be reasonably and generally loaded. Shippers can not be expected in all cases to fit their lumber to the great variety of cars that may be furnished them, when there is practically no equipment designed especially for lumber traffic. In fixing reasonable minima some leeway should be accorded for commercial conditions and the minima should not require the loading of all cars to their utmost capacity. Salt Cases of 1923, 92 I. C. C. 388, 400.

(f) A carload minimum weight reasonably adapted to the traffic generally should not be increased merely because one shipper, on account of conditions peculiar to himself is able to load in excess of the existing minimum thereof. Edlund Broom Corp. v. B. & M. R. R., 92 I. C. C. 749, 752.

(g) Complainant attacked carload minimum weights applicable on alfalfa hay from New Mexico to Texas destinations as unreasonable, unduly prejudicial and unjustly discriminatory. The principal market for New Mexico alfalfa, as well as that produced in west Texas, is in east Texas and Louisiana. HELD, minimum weights per car on alfalfa hay from New Mexico located on the Santa Fe between the Texas-New Mexico state line and Rincon, N. M., and between Corral and Elida, N. M., to points on Texas on defendants will be unreasonable to extent they exceeded 16,500 pounds for cars under 36 ft. 20,000 pounds cars 36 feet 6 inches, 22,000 pounds over 36 ft. 6 inches to 40 ft., 24,000 pounds 40 feet to and including 42 ft., over 42 ft, 30,000 pounds. The present minima,

applicable intrastate in Texas, are lower than the reasonable minima prescribed for application on interstate traffic from New Mexico to Texas and such disparities are not justified by differences in circumstances and conditions pertaining to the two classes of traffic. The undue prejudice should be removed by increasing the minima intrastate in Texas to interstate minimum prescribed. New Mexico Corp. Comm. v. A. T. & S. F. Ry., 93 I. C. C. 43.

(hi) Respondents in western trunk line territory proposed to apply on shipments of junk, in mixed carloads, the class C rates subject to minimum of 50,000 pounds. The commodities included in the junk list take class rates, either fourth, fifth, C or D, when in straight carloads, subject to minima which range from 24,000 to 50,000 pounds. Mixed carload shipments are now charged on the basis of the highest rate and highest minimum weight applicable to any article in the car. The record demonstrates that the proposed 50,000 pound minimum can only be loaded in exceptional cases. HELD, suspended schedules not justified, without prejudice to publishing of a minimum of 36,000 pounds. Junk in mixed carloads in W. T. L. territory, 93 I. C. C. 263.

(j) Respondents proposed to increase the car load minimum weight from 15,000 to 20,000 pounds in connection with the rates on cotton factory sweepings, motes, and card strippings, from and to various points in the South Atlantic states, Virginia cities, and trunk line and New England territories. The proposed minimum of 20,000 pounds is subject to rule 34 of classification, which, in substance, provides graduated minima for cars longer than the standard of 36 ft. 6 inches. Respondents convincingly prove that more than 20,000 pounds of cotton factory sweepings, packed in average uniform bales at representative cotton mills in the south, can be loaded in standard box cars 36 ft. 6 inches in length. HELD, proposed minimum justified. Minimum weight on cotton sweepings, 95 I. C. C. 291.

(k) Respondents proposed to cancel the present rates and minimum weights on wooden hoops from eastern points to western destinations and establish in lieu thereof higher rates based upon lower minimum weights. At present rates from Group C points to San Francisco are $1.205, minimum 40,000 pounds, and $1.02 minimum 60,000 pounds. Under the suspended schedules these rates would become $2.55 minimum 16,000 pounds and $1.33 minimum 34,000 pounds. Respondents do not contend that the present rates are unreasonably low and have offered no justification of these increases. HELD, proposed schedules not justified. Wooden hoops to western destinations, 95 I. C. C. 519.

(l) Respondents proposed to increase to 40,000 pounds the minimum weight in connection with commodity rates applying between points on their lines in Illinois Rate Committee territory, on canned goods of various kinds, vinegar, and certain packing house products. In this territory class rates are governed by the Illinois classification which provides fifth class, minimum 36,000 pounds, on various canned goods, carloads, the rating and minimum being the same as those provided by western, official and southern classifications. But, many commodity rates are maintained on that traffic, and as to these, with a few exceptions, the present minimum is 30,000 pounds. The record in this case is meager. HELD, schedules not justified. Minimum weights on canned goods and vinegar, 96 I. C. C. 157.

(m) Respondents serving California points and other points in Pacific coast territory sought to modify the provisions of their existing tariffs governing minimum weights applicable in connection with interstate traffic moving on the so-called minimum class scale in the western classification. Class rates in exception to the western classification are sometimes published in connection with minimum weights which are less than the minimum weights provided in the classification itself. It thus happens that the class rate on a commodity which has been given a special rating in an exception sheet is lower for short distances than the minimum rate for the class to which the article belongs in the classification. In such event, under the above rule the minimum class rate is applied and not the class rate which would otherwise be applicable under the exceptions. It appears from the record that for several years there has been a conflict between shippers and carriers as to which of these two minimum weight provisions was applicable in connection with shipments moving under the present rule on

a minimum class scale. In 66 I. C. C. 669, the Commission found that the proper minimum weight to apply in connection with the minimum class rate was that provided by the exceptions to the classification. It follows that the protested modification of the rule, which would make applicable the classification minimum weight in connection with minimum class rates, would result in increases in charges per car which respondents have not attempted to justify. HELD, schedules not justified. Minimum weights between Pacific coast states, 96 I. C. C. 330.

(n) Minimum weights which exceed loading capacity of cars are unreasonable. Wool Rates Investigation, 1923, 91 I. C. C. 235, 239.

(o) Carload minimum weight on coiled elm hoops from Mississippi River territory to San Francisco and other California terminals found not unduly prejudicial as compared with lower minimum maintained to Seattle, Wash., and other north Pacific coast terminals, but such minimum, to which cars are incapable of being loaded, found unreasonable and reasonable minimum prescribed. Ozark Cooperage & Lumber Co. v. A. & R. R. R. Co., 91 I. C. C. 329.

(p) Carriers undertook to justify assailed c. l. minimum on ground that earnings under rate applicable in connection therewith are less than reasonable. HELD: If carriers desire to protect themselves from unduly low charges per car they should not do so by prescribing arbitrary minimum weights which can not be loaded in ordinary equipment available, and it is unreasonable to base charges on a minimum to which cars are incapable of being loaded. Riverside Mills, 25 I. C. C. 434; Durham Coal & Iron Co., 34 I. C. C. 10. Ozark Cooperage & Lumber Co. v. A. & R. R. R. Co., 91 I. C. C. 329, 333.

(q) Proposed increased c. l. minima on batting, cotton, in western trunk-line territory found justified as to shipments in machine-pressed bales, but not justified as to shipments in boxes, paper-lined crates, or in bales not machine pressed. It is impossible to load bales not machine pressed to minima proposed, and if carriers desired to protect themselves from unduly low charges per car they should not do so by prescribing minimum weights which can not be loaded in ordinary equipment available. Moreover, it is unreasonable to base charges on minimum weights to which cars are incapable of being loaded. Cotton Batting in W. T. L. Territory 91 I. C. C. 535.

(r) Generally speaking, minimum weights should be made to conform as nearly as possible to ability of shippers to load cars. In cases where no direct relationship between minimum and rates is disclosed, possible physical loading of traffic becomes an element of controlling importance and in such cases propriety of minima can be fairly determined without reference to rates. This general rule, however, is not applicable to cases where facts disclose a definite relationship between minima and rates. Stanfield v. O. W. R. R. & N. Co., 91 I. C. C. 598, 605.

(s) Respondents proposed to increase the commodity rates on tin cans and to increase the minimum carload from 14,000 to 20,000 pounds, maintaining the fourth class rates with a minimum carload of 14,000 pounds, subject to rule 34, for alternative application, from Chicago, Ill., and points basing thereon to about 130 points in Wisconsin and to Menominee, Mich., and Winona, Minn., and to cancel the two for one rule wherever in effect under commodity rates. Tin cans are rated fourth class, minimum 14,000 pounds, subject to rule 34 of the classification. Carload shipments from the tin can factory are not made in crates or other containers, but, instead, the cans are packed in the car to its cubic capacity. The weight of the cans that can be packed into a car of a certain length varies with the size of the cans. In order to load a car with cans in bulk the shipper has to complete the inside boarding of the car, which is boarded only to the grain line, and line the entire inside of the car with paper. This dunnage of lumber and paper, which is included in the revenue weight, weights about 649 pounds when No. 10 cans are to be shipped. This lining of the car costs the shipper about $14.25 if extensions are not built at the doorway and $15.75 if extensions are built. The minimum carload under the proposed commodity rates is 20,000 pounds for all sizes of cars, and the carrier will not furnish two smaller cars in lieu of a large car ordered by the shipper but which the carrier is unable to furnish. The rates on tin cans from Chicago to Minnesota and Iowa and to points in central territory

are in general the fourth class rates, but there are commodity rates lower than fourth class to a few destinations in the territories mentioned and apparently to all important consuming points in Illinois. Within central territory fourth class rates apply almost without exception. The present basis of rates to Wisconsin has existed for over 20 years, except for the general changes in rate levels. The light loading, a value of about $1,500 per carload, practically complete freedom from loss and damage claims except in case of wreck, the regularity of movement in the canning season, are the chief characteristics of tin can transportation. HELD, suspended schedules not justified. Tin cans from central territory, 100 I. C. C. 208.

(t) Respondents proposed increased minimum weights in connection with multiple carload shipments of iron and steel articles from, to, and between points in the southwest. The exceptions provide that when iron and steel articles on account of length require two or more cars to transport them, the minimum charge for each series or lot not to exceed three cars shall be based on a minimum weight of 45,000 pounds for two cars and 60,000 pounds for three cars. The schedules under suspension would cancel the exceptions and leave the classification basis to apply, which provides that weight for one car shall be that provided as the minimum carload weight for the article or articles constituting the shipments, and for each additional car in the series that weight shall be increased 24,000 pounds. This rule was incorporated in consolidated classification No. 1, under 54 I. C. C. 1, 21. The proposed minima would not much affect protestants ability to compete with fabricators of steel at other points, because the latter would also be subject to them, but to the extent that orders called for long items and required less than such weights of steel, protestants ability to compete with shippers of other construction materials, such as concrete, would be correspondingly affected. In such cases the presence of higher minimum weights would not increase the loading. HELD, schedules justified except as to trusses and lattice girders the minimum weights shall not exceed 54,000 pounds for a double carload and 78,000 pounds for a triple load. Minimum weights on iron and steel articles, 101 I. C. C. 3.

(u) Although commercial requirements may properly be given consideration in the fixing of carload minimum weights, reasonable measures looking toward the efficient use of equipment should not be discouraged by according undue weight to local rather than general conditions. Minimum weights on iron and steel articles, 101 I. C. C. 3, 6.

(v) Present third-class c. l. ratings, minimum 20,000 pounds in official, southern, and western territories, applied to aluminum articles as a whole, found to result in unjust and unreasonable charges. Carriers ordered to establish for alternative application a rating of second class, minimum 12,000 pounds, subject to rule 34, making latter rating applicable when it would result in lower charges. While maintenance of a minimum which can be loaded only by certain shippers seems improper, it would be equally unfair to such shippers to reduce the minimum to a figure reflecting actual loadings of other shippers with a compensating increase in the c. l. rating. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346.

(w) Carriers have frequently established alternative commodity rates, based on different c. l. minima, and commission has approved such rates, Strawboard and Other Paper Articles, 85 I. C. C. 470, but they have consistently declined to introduce into the classification the principle of alternative ratings and minima, and commission has never heretofore prescribed such ratings. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

(x) Principle annunciated in 25 I. C. C. 442, 607, that "The commercial minimum is a real thing, and established methods and customs governing business at any particular time should be given proper weight in establishment of minimum weights at that time" was never intended to perpetuate a minimum based upon conditions in 1870 and 1880 which have since become obsolete. Nor should that principle be controlling in disregard of increasing size and capacity of equipment during past 30 to 50 years. The modern doctrine was more clearly expressed in 68 I. C. C. 98, 106. Salt Cases of 1923, 92 I. C. C. 388, 399, 400.

(y) Maintenance of c. l. minima on salt in connection with intrastate rates within Virginia, West Virginia, the Carolinas, Georgia, Florida, Kentucky,

Tennessee, Alabama, Mississippi, Louisiana, Wisconsin, Illinois, Iowa, Missouri, Kansas, and Texas, lower than the minima contemporaneously applicable in connection with rates on interstate traffic from producing points in Ohio and Michigan to destinations in above-named States, found unduly preferential of persons and localities in intrastate commerce, unduly prejudicial to persons and localities in interstate commerce, and unjustly discriminatory against interstate commerce. Salt Cases of 1923, 92 I. C. C. 388, 400, 401.

(z) Minimum weights on alfalfa hay from points in New Mexico to points in Texas, higher than from competing points in Texas to the same destinations found unreasonable and unduly prejudicial to shippers in New Mexico, unduly preferential of shippers in Texas, and unjustly discriminatory against interstate commerce. Maximum minimum weights from New Mexico to Texas suggested. New Mexico Corp. Commission v. A., T. & S. F. 93 I. C. C. 43.

(aa) Commission has same authority and duty with respect to removal of unjust discrimination brought about by different c. l. minima as it has in case of unjust discrimination against interstate traffic caused by state rates. Kansas City Millers' Club, 50 I. C. C. 170, 182. New Mexico Corp. Commission v. A. T. & S. F., 93 I. C. C. 43, 47.

(bb) Proposal to apply a minimum of 50,000 pounds to mixed c. l. shipments of junk in western trunk-line territory found not justified. Only one article in entire junk list carries this minimum in straight carloads, and record demonstrates that minimum proposed can only be loaded in exceptional cases. Junk in Mixed Carloads, 93 I. C. C. 263.

(cc) Proposal to increase the c. l. minimum weight from 15,000 to 20,000 pounds on cotton-factory sweepings, motes, and card strippings, in connection with rates from and to various points in southeastern Carolina, trunkline, and New England territories, found justified. A special investigation of this subject conducted by the Southern Weighing & Inspection Bureau convincingly proves that proposed minimum can be loaded in standard box cars, and protestants failed to instance any case where a standard car was loaded to full practical capacity which contained less than 20,000 pounds. Evidence appeared to show that cars were not being loaded efficiently or as heavily as they should be. Minimum Weight on Cotton Sweepings, 95 I. C. C. 291.

(dd) Proposal to cancel rates and minimum weights on wooden hoops from Group C points to western destinations and established higher rates based upon lower minima, in compliance with carriers' interpretation of the commission's order in Ozark Cooperage & Lbr. Co., 91 I. C. C. 329, found not justified. Reasonableness of the rate was not in issue in the case cited and in pointing out that carriers should not protect themselves from unduly lower charges per car by prescribing minimum weights which can not be loaded in ordinary equipment available, the commission merely intended to dispose of a contention that minimum assailed was justified because earnings under rate applicable in connection therewith were less than reasonable. The commission did not intend to sanction an increase in rates. Carriers do not contend here that present rates are unreasonable and offered no justification of the proposed rates, which reflect substantial increases. Wooden Hoops to Western Destinations, 95 I. C. C. 519.

(ee) Lump coal rate charged on shipments of so-called domestic lump, found inapplicable. Coal here shipped, after coming from the mine, was passed over either a 1¼ inch wire mesh screen or 1⅝ inch round perforated plate. In other words, is consisted of run of mine, except that all slack and screenings that would pass through the above described screens were removed. The tariff described run coal as "lump mixed with smaller sizes" and it did not follow of necessity that it must include screening or slack. While it was intention of carriers that lump coal rates should apply on such coal as was here shipped, the tariff was not so restricted. Run of mine rates were legally applicable, and shipments were overcharged. Reparation awarded. Detweiler Coal Co. v. D. & R. G. W. 96 I. C. C. 88.

(ff) Proposed increased carload minimum weight in connection with commodity rates applying between points in Illinois rate-committee territory on canned goods of various kinds, vinegar, and certain packing-house products found not justified. Record in the case is meager, and respondents asked at the hearing that they be accorded a further opportunity to present evidence asserting "the

carriers have not had time to work up complete justification for the change." No application for further hearing in conformity with Rules of Practice has been received. In a circular published by the commission, April 30, 1921, it held that "Before filing changes in rates the carriers should have considered the action, the reasons underlying it and the effects of it so thoroughly as to be prepared in case the changes are protested to immediately present in full their defense.'" Minimum Weights on Canned Goods and Vinegar, 96 I. C. C. 157.

(gg) Proposed modification of present tariffs by the inclusion of a provision making applicable the minimum weights of western classification in connection with commodities moving on minimum class rate scale in western classification, resulting in increased charges, found not justified, following 66 I. C. C. 669. Minimum Weights between Pacific Coast States, 96 I. C. C. 330.

(hh) Charges on one locomotive crane, with detached parts, found to have been assessed on basis of greater weight than provided for in tariff. Applicable tariff item provided for assessment of charges on actual weight, minimum 60,000 pounds, for crane, and minimum of 24,000 pounds for each additional car. Actual weight of shipment exceeded total minimum for crane and 2 additional cars used, and charge should never have been assessed on basis of actual weight. Raleigh Granite Co. v. S. A. L. Ry. Co., 96 I. C. C. 573.

(ii) Interstate rates and minimum weights on cottonseed, c. l., between defined points in the Southwest; between such points, on the one hand, and Mississippi River crossings, Memphis to New Orleans, on the other, and from points in the Southwest to East St. Louis, Cairo, and Thebes, Ill., and Kansas City, Mo., found unreasonable to the extent they exceed or may exceed rates under the distance scale shown in Appendix 7, subject to a minimum weight of 40,000 pounds with certain exceptions. Oklahoma Corp. Commission v. A. & S. Ry. Co. 98 I. C. C. 183, 216.

(jj) If the carload minimum weight of 20,000 pounds on pea threshers, the classification description under which defendants rate complainant's type C huller, and of 24,000 pounds on hand pea hullers, are indicative of the weights of those commodities that can ordinarily be loaded in a standard box car, it is quite apparent that complainant's hullers are considerably lighter than the average machines moving under those classification descriptions. Star Pea Huller Co. v. C. N. O. & T. P. Ry. Co. 98 I. C. C. 357, 359.

(jja) Upon further hearing, minimum-weight rule applicable on mixed carload shipments of cottonseed meal and cottonseed hulls between Memphis and points in Arkansas, found unreasonable for future. Reasonable rule prescribed and findings in 77 I. C. C. 473 and 98 I. C. C. 183, modified. Memphis-Southwestern Investigation, 102 I. C. C. 227.

(kk) In fixing reasonable minima some leeway should be accorded for commercial conditions and the minima should not require the loading of all cars to their utmost capacity. Memphis Southwestern Investigation, 102 I. C. C. 227, 228.

(ll) Complainant attacked carload minimum on four cars of cattle from Sturgis, S. D., on Dec. 16, 1919 to Omaha, Neb., as unjust and unreasonable to extent they exceeded charges on the lower actual weight. Complainant placed an order with the agent for four 36 foot stock cars. The agent accepted that order, but when complainant reached Sturgis with his cattle, the agent advised him for the first time that stock cars were not available and in lieu thereof asigned him four box cars. Into these cars complainant loaded 91 head of cattle, and drove back to his ranch 24 head which he had intended to load along with the other 91 head into the four stock cars ordered. The cars were stopped at Long Pine, Neb., for feed, water and rest, and the cattle were reloaded into four stock cars at that point. Charged 43c minimum 24,000 pounds per car, claimed 43c actual weight 75,420 pounds. HELD, charges collected unreasonable to extent they exceeded 43c at actual weight, reparation awarded. Gullikson v. Director General 102 I. C. C. 327.

(mm) Complainant attacked carload minimum of 350 crates, applicable in connection with rates on celery under refrigeration cars of less than standard length from Florida to destinations in the United States and Canada as unjust and unreasonable. For many years the car load minimum on Florida has

been 350 crates. The refrigerator cars furnished by defendants for the movement of Florida celery are obtained from the Fruit Growers Express Company and are mostly of a standard length of about 32 ft. 6 inches. Their ice capacity is 9,600 pounds or more. During the shipping seasons of 1923 and 1924 defendants, against the protests of the celery shippers, assigned to this movement a number of refrigerator cars of less than standard length, ranging from 28 ft. 9 inches to 31 ft. 6 inches. The bunker capacities of these cars ranged from 6,200 to 6,800 pounds most of them holding 6,800 pounds of ice. The shorter length of these cars necessitated a different method of loading. Although the minimum of 350 crates in standard cars is not complained of, it appears that there is some difficulty at times in securing efficient refrigeration of celery in the fourth layers of those cars, and for that reason some shippers do not load more than 336 crates in any car. The inability of the short cars to refrigerate properly the present minimum of 350 crates of celery, however, is clearly established, irrespective of the variety of the celery composing the shipments. It is clear that the short refrigerator cars here considered will not efficiently refrigerate more than 315 crates of celery. HELD, carload minimum of 350 crates of celery from Florida unreasonable to extent it exceeds 315 crates for refrigerator cars ranging in length from 28 ft. 9 inches to 31 ft. 6 inches, when such cars are furnished for the convenience of the carrier, reparation awarded. Florida R. R. Commissioners v. A. & R. R. R. 102 I. C. C. 677.

(mma) Carload minimum of 350 crates on celery under refrigeration from Florida to interstate and foreign destinations, found unreasonable to extent it exceeded 315 crates for refrigerator cars ranging in length from 28 feet 9 inches to 31 feet 6 inches, inside measurement, when furnished for carrier's convenience. Reparation awarded. Florida R. R. Commrs. v. A. & R., 102 I. C. C. 677.

(nn) It does not follow that when a carrier for its own convenience furnishes a shipper a short car, which will not safely carry as much freight as a standard car, the carrier is entitled to the same revenue as it would have received had a standard car been furnished. The Commission has held that the practice of assessing charges at the published minimum, where the cars furnished by the carriers for their own convenience can not reasonably be loaded to the minimum, is unwarranted. Florida R. R. Commissioners v. A. & R. R. R. Co. 102 I. C. C. 677, 680.

(oo) Complainant attacked minimum weights and rules in connection therewith governing the transportation of lumber and other forest products from Oregon, Washington, Idaho and Montana to eastern transcontinental destinations as unreasonable, unjustly discriminatory, unduly prejudicial and preferential. The carload minima attacked were prescribed in 56 I. C. C. 318 and 68 I. C. C. 98. In general it may be said that the minima and rules prescribed are more favorable to the shipper than those formerly in effect, and that in a great majority of the instances where minimum weights formerly applied actual weights or lower minimum weights would now apply. HELD, minimum weights and rules attacked not unreasonable or otherwise unlawful, complaint dismissed. Western Pine Mfrs. Asso. v. Director General, 102 I. C. C. 753.

(pp) Respondents proposed to reduce from 60,000 pounds to 50,000 pounds the minimum weight on salt from eastern shipping points, except points taking Group B and Group C rates, to destinations in Arizona, California, Mexico, Nevada, New Mexico, Oregon and Utah. Reductions in the rates on salt to Pacific coast destinations from eastern shipping points were made effective July 1 and Oct. 1, 1924 with a contemporaneous increase in the minimum weight from 50,000 to 60,000 pounds. The reductions in rates were established upon representations that they were necessary to enable shippers to meet competition, the shippers agreeing to the increased minimum as a means of preserving to some degree the carload revenue. Subsequently the shippers west of Chicago represented to the carriers that they were handicapped by the higher minimum in marketing their salt in competition with salt produced in Utah and California which moved on a lower minimum. Protestants agree that subsequent developments have shown that the 60,000 pound minimum is not satisfactory. HELD,

schedules justified. Minimum weight on salt, 104 I. C. C. 631.

(qq) Proposed increased commodity rates and increased minimum weight on tin cans, in carloads, from points in Illinois to points in Michigan, Minnesota, and Wisconsin, and proposed cancellation of the two-for-one rule wherever in effect under commodity rates, found not justified. In Wisconsin Dairy Products Co., 68 I. C. C. 307, and Armour & Co., 74 I. C. C. 709, the commission found that the commodity rate from Chicago to Stoughton, Wis., and the fourth-class rate from Chicago to Bloomer, Wis., applicable on tin cans, was unreasonable to extent they exceeded the basis of commodity rates subsequently established and these rates as modified only by general changes in rate levels are now in effect. Tin Cans from C. F. A. Points to Michigan, Minnesota and Wisconsin, 100 I. C. C. 208.

(rr) Proposed increased minimum weights on multiple carload shipments of iron and steel from, to, and between points in the Southwest, found justified except as to trusses and lattice girders. Proposed schedules would cancel applicable minimum-weight provisions published in exceptions to western classifications, providing for minimum weight of 45,000 pounds for two cars and 60,000 pounds for three cars, and make applicable the classification basis published in rule 29 of consolidated classification No. 4, which provides for an increase of 24,000 pounds for each additional car, or a minimum of 60,000 pounds and 84,000 pounds, for double and triple loads, respectively, which is the basis approved by commission in Consolidated Classification Case, 54 I. C. C. 21, 22. Suspended schedules ordered canceled without prejudice to the filing of new schedules in conformity with views herein expressed. Minimum Weights on Iron and Steel Articles, 101 I. C. C. 3.

(ss) While Commercial requirements may properly be given consideration in the fixing of carload minimum weights, reasonable measures looking toward the efficient use of equipment should not be discouraged by according undue weight to local rather than to general conditions. Minimum Weights on Iron and Steel Articles, 101 I. C. C. 3, 6.

(tt) Minimum weight of 20,000 pounds on prairie hay in cars 36 feet in length, from points in northeastern Oklahoma to Group A points in Texas, found unreasonable to extent it exceeds 18,000 pounds, which is prescribed as reasonable for future. Oklahoma Corporation Commission v. A. & S. Ry., 101 I. C. C. 116, 132, 133.

ALL OTHER CITATIONS

Eshelman & Son v. Director General, as Agent, 85 I. C. C. 578; Iten Biscuit Co. v. A. T. & S. F. Ry. Co., 88 I. C. C. 653; Valley Camp Coal Co. v. B. & O. R. R. Co., 88 I. C. C. 682.

§8. Two Cars for One Ordered.

See Bills of Lading §5; Cars and Car Supply §8; Classification §21; Follow Lot Shipments.

(a) Complainant attacked commodity rate charged on a shipment of corrugated boxes, knocked down, from Nashville, Tenn., to Houston, Tex., as unjust and unreasonable. Shipment moved in March, 1923 over N. C. & St. L., to Memphis, Tenn., I. C., to New Orleans, and G. C. L., beyond, in two 36 foot cars, charged 69.5c based on minimum of 40,000 pounds on the first car and on the actual weight on the second car under the socalled two for one rule. Complainant had ordered a 50 foot car for this shipment, and the two 36 foot cars were furnished for the carriers convenience. The tariff provided that when a carrier was unable to furnish a car of the size ordered two smaller cars might be used in lieu thereof, the freight charges to be assessed on contents of both cars on basis of actual weight, subject to the minimum weight provided in rule 34 of the western classification for a car 50 foot in length. HELD, charges illegal to extent they would have exceeded charges based on actual weight, reparation awarded. Goodpasture v. N. C. & St. L. Ry., 93 I. C. C. 65.

(b) Proposed increased minimum weights on multiple-carload shipments of iron and steel from, to, and between points in the Southwest, found justified except as to trusses and lattice girders. Proposed schedules would cancel applicable minimum-weight provisions published in exceptions to western classifications, providing for minimum weight of 45,000 pounds for two cars and 60,000 pounds for three cars, and make applicable the classification basis published in rule 29 of consolidated classi-

fication No. 4, which provides for an increase of 24,000 pounds for each additional car, or a minimum of 60,000 and 84,000 pounds, for double and triple loads respectively, which is the basis approved by commission in Consolidated Classification Case, 54 I. C. C. 21, 22. Suspended schedules ordered canceled without prejudice to the filing of new schedules in conformity with views herein expressed. Minimum Weights on Iron and Steel Articles, 101 I. C. C. 3.

§11. Reparation.

See Reparation.

(a) Carload minima on lumber and rules in connection therewith from points in Oregon, Washington, Idaho, and Montana to transcontinental territory, prior to reductions ordered in Lumber Carload Minima, 56 I. C. C. 318, 68 I. C. C. 98, found not unreasonable or otherwise unlawful. Evidence offered by complainant found too meager to justify application of minima and rules prescribed, and proof of payment and bearing of charges found insufficient to support an award of reparation. Furthermore, cited case embraced a widespread readjustment of rates under which no reparation is ordinarily awarded on shipments moving prior thereto. Western Pine Mfrs. Asso. v. Director General, 102 I. C. C. 753.

MIXED CARLOADS

See Classification §7, §16⅝; Evidence §34¼; Express Companies §16; Minimums §6.

MOTOR TRUCK COMPETITION

See Differentials; Evidence §14 (6); Long and Short Hauls §8½.

MOTOR TRUCK SERVICE

See Allowances §8 (7) (a); Common Carriers §7½ (a) (d); Crimes §34 (a) (f).

(a) While motor truck or wagon transfer companies are not common carriers subject to the act, truck or wagon transfer services performed in connection with terminal services of a common carrier subject to the act, or with transfer of freight in transit at an intermediate point by such carriers, are subject to the jurisdiction of the Commission. Such service is a part of a transportation service by a carrier over which the Commission has jurisdiction. The term terminal service may also include accessorial services in the nature of the collection and delivery of freight commonly referred to as store delivery. There is nothing in the act to prevent the establishment of such service or the publication of charges in connection therewith by carriers subject to the act. The Commission has no jurisdiction over the line haul rates of motor truck companies operated as an extension of the lines of rail or water carriers. Charges to the public for the truck service under jurisdiction of the Commission must be published in tariffs the same as charges for any other service granted by the carrier as part of its transportation service, and if such drayage or transfer charge is absorbed the tariff must show the conditions and amount of the charge absorbed. Contracts under which respondents employ truck or drayage companies to perform transportation services for them should also be filed with the Commission to prevent any suggestion of discrimination. The question of whether the employment by a common carrier of one concern as its exclusive agent to perform all such terminal services may result in unjust discrimination under the act against other trucking companies is a question outside the issue of this proceeding. Tariffs embracing motor truck or wagon transfer service, 91 I. C. C. 539, 547.

(ab) Upon investigation into and concerning legality of tariffs purporting to embrace or cover motor-truck or wagon transfer service in connection with transportation by rail or water; FOUND: That tariffs covering truck or wagon transfer service, when performed as a terminal service of a common carrier subject to the act, or in connection with transfer of freight in transit at intermediate points by such common carriers, are not unlawful; that tariffs covering truck services for movements commonly designated as line hauls, when operated as an extension of the line and as part of a through movement in connection with a carrier subject to the act, are not in accord with section 6 of the act and commission's tariff regulations. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539.

(b) Motor-truck or wagon transfer can be, and is, employed by owners of property transported under arrangements whereby such owners render a service

connected with transportation which carriers otherwise would be under obligation to perform. The act contemplates that carriers may make just and reasonable allowances to such owners for rendering the service and commission is given authority to determine what is a reasonable charge and allowance as maximum to be paid by carrier and to fix same by appropriate order. Commission has required that such charges or allowances be duly published in carriers' tariffs and be made available to all owners of property transported furnishing like instrumentalities or performing like services. Motor-Truck or wagon Transfer Service, 91 I. C. C. 539, 540.

(c) Commission has consistently found that motor-truck or wagon transfer companies are not common carriers subject to the act. Parmalee case, 12 I. C. C. 39. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(d) Application of provisions of the act is limited to certain classes of common carriers expressly named and specified in section 1, none of which include motor truck. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(e) Although language employed in section 1 of the act in connection with the term transportation would be broad enough if standing alone, to include every form of motor-truck or drayage service, its meaning must be determined by referring to definition of common carrier by "railroad," which names among other things "terminal facilities of every kind used or necessary in the transportation of the persons or property designated herein." Construed in this manner, provisions of the act, and consequently commission's jurisdiction, are applicable to service by motor-truck or drayage transfer only when they can be regarded as terminal facilities. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(f) Words "such transportation" in paragraph (2) of section 1 of the act can only refer to transportation of passengers or property by common carriers described in paragraph (1), and effect of such second paragraph is to impose additional restrictions to application of provisions of the act over transportation by these carriers. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(g) Commission has no jurisdiction over line-haul rates of motor-truck companies operated as extensions of lines of rail or water carriers. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(h) While motor-truck or wagon transfer companies are not common carriers subject to the act, truck or wagon transfer services performed in connection with terminal services of a common carrier subject to the act, or with transfer of freight in transit at an intermediate point by such common carriers, are subject to commission's jurisdiction. Such service is a part of a transportation service by a carrier over which commission has jurisdiction. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(i) Charges to the public for motor-truck service under commission's jurisdiction must be published in tariffs same as charges for any other service granted by carriers as part of their transportation service, and if such drayage or transfer charges are absorbed tariff must show conditions and amount of charges absorbed. Contracts under which carriers employ truck or drayage companies to perform transportation service for them should also be filed with commission to prevent any suggestion of unjust discrimination. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(j) Hauls by motor truck from inland points to docks of a water carrier can not be said to be transportation over which commission has jurisdiction or a service that can be required of a common carrier. Trucking companies can not, under such conditions, be acting as agents for common carriers, and since they are not carriers subject to the act they are not proper parties to joint tariffs. Conf. Ruling 441. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 548.

(k) Motor-truck lines may not be shown as participating carriers in tariffs filed with commission. Motor-truck or Wagon Transfer Service, 91 I. C. C. 539, 549.

(l) The law does not prohibit either a rail or water carrier subject to the act from interchanging business with motor trucks and entering into proper arrangements to acquaint shipping public with total charges for full movement. But such arrangements are not required by law, and the fact that they may be entered into does not extend terms of the

act to include motor-truck service. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 548, 549.

(m) In interest of simplicity of tariffs, it has been commission's practice to discourage publication in tariffs of matter other than that necessary to comply with the act and the commission's regulations. However, in view of circumstances of instant case surrounding motor-truck service in connection with water and rail transportation, permission granted carriers to include in their tariffs charges of motor trucks for service from inland points of origin, such charges to be published separately from charges subject to the act; also to include combined charges for the two services from such inland points to ultimate destinations, motor-truck charges and combined charges to be clearly shown as being published for information only. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 549.

NARROW GAUGE LINES

ALL CITATIONS

Utah Gilsonite Co. v. A. T. & S. F. Ry. Co., 85 I. C. C. 557.

NAVIGABLE WATERS

See Car Ferry; Merchant Marine Act.

(a) It is immaterial to the power of Congress to regulate navigable waters whether they are wholly within the boundaries of one state or lie between or extend into two states. City of Newark v. Central R. Co. of New Jersey, 297 Fed. 77.

(b) Where Congress, pursuant to Act March 23, 1906 (Comp. St. §§ 9961-9968), authorized the construction of a railroad bridge over navigable waters within a state, though the state had refused its consent, it acted in the exercise of a power which is plenary, supreme, and exclusive, and which may not be interfered with by the state. City of Newark v. Central R. Co. of New Jersey, 297 Fed. 77.

(c) A state has plenary power to authorize the construction of a bridge over navigable waters within its borders until the dominant power given to Congress by the Constitution is exercised by appropriate legislation, but, when the power of the state and federal governments come in conflict the latter must control and the former yield. City of Newark v. Central R. Co. of New Jersey 297 Fed. 77.

(d) The constitutional power of Congress to regulate interstate and foreign commerce extends to the regulation of such commerce on both land and water, to the control of the navigable waters of the country and the erection of piers, bridges, and all other instrumentalities of commerce which in the judgment of Congress may be necessary or expedient for the exercise of such power. City of Newark v. Central Ry. Co. of New Jersey, 297 Fed. 77.

(e) Act March 2, 1827, granting land to Illinois in aid of canal to unite waters of Illinois river with those of Lake Michigan, did not vest in such state irrevocable discretion with regard to amount of water to be withdrawn. Sanitary Dist. of Chicago v. United States, 45 Sup. Ct. 176.

(f) Under Act March 3, 1899, §10 (Comp. St. §9910), prohibiting charge in condition or capacity of navigable water of United States, unless work has been recommended by Chief of Engineers and authorized by Secretary of War, and section 12 (Comp. St. §9917), making violation of misdemeanor, water in excess of amount authorized by Secretary of War, cannot be withdrawn from Lake Michigan. Sanitary Dist. of Chicago v. United States, 45 Sup. Ct. 176.

(g) The United States, in the exercise of its sovereign power to regulate commerce and to control navigable waters within its jurisdiction, and to carry out obligations under treaty with foreign nation providing against uses of water of Great Lakes affecting natural level or flow of boundary waters, may enjoin withdrawal of water from Lake Michigan in excess of that authorized by the Secretary of War under Act March 3, 1899, §10 (Comp. St. §9910), where effect of such diversion is to lower level of lake, though water is being used for removal of sewage of city of Chicago, under Act Ill. May 29, 1889 (Laws 1889, p. 125). Sanitary Dist. of Chicago v. United States, 45 Sup. Ct. 176.

(h) The power of the United States to remove obstructions to interstate and foreign commerce is superior to that of the states to provide for the welfare of necessities of their inhabitants, and in matters where states may act the acts

of Congress override what they have done. Sanitary Dist. of Chicago v. United States 45 Sup. Ct. 176.

(i) United States HELD not estopped to sue for injunction restraining withdrawal of water from Lake Michigan in excess of that authorized by the Secretary of War under Act March 3, 1899, §10 (Comp. St. §9910), because level of lake is being lowered thereby, by Act March 30, 1822, or by Act March 2, 1827, or by issuance by Secretary of War of permits authorized withdrawal of amount greater than that permitted at time suit is brought, and subsequently revoked. Sanitary Dist. of Chicago v. United States 45 Sup. Ct. 176.

(j) Permits to withdraw water from navigable waters, issued by Secretary of War under Act March 3, 1899, §10 (Comp. St. §9910), are in nature of revocable licenses. Sanitary Dist. of Chicago v. United States 45 Sup. Ct. 176.

(k) City of Chicago which had constructed canal for diversion of water from Lake Michigan into Mississippi river, for removal of sewage, and states bordering on Mississippi river, were not entitled to a hearing before the Secretary of War prior to determination as to amount which may be withdrawn under Act March 3, 1899, §10 (Comp. St. §9910) city having constructed canal and accompanying works subject to paramount power of Congress to control navigable waters, and such states having no right to increase in artifical flow Lake Michigan into river. Sanitary Dist. of Chicago v. United States 45 Sup. Ct. 176.

ORDER NOTIFY SHIPMENTS

See Bills of Lading V; Demurrage §7, §13 (d).

OVERCHARGES

See Claims I, §1 (tt), V; Express Companies §27; Freight Charges; Procedure Before Commission §2 (q); Reparation §20½; Tariffs §14; Through Routes and Joint Rates.

(a) Rates on "Feed, prepared stock, poultry or pigeon, not medicated or condimental," found applicable on condensed buttermilk. Article shipped was intended for and used as animal food which appears to be its only use. The process of production does not involve medication or addition of condiments and thus comes clearly within description of prepared stock feed, "not medicated or condimental." Moreover, if carrier desired to except it from other prepared stock foods it could have done so by enumerating the commodities intended to be covered by the item, or by specific exclusion. Specific class B rating on condensed buttermilk found inapplicable and refund of overcharges directed. Consolidated Products Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 103.

(b) Contention by director general that an assignment of a claim in respect of overcharges to be valid must either have been pleaded or introduced in evidence before the period of limitation provided by section 16 of the act had expired, found without merit, assignment in question having been so executed and pleaded within statutory period provided by section 206 (c) of the transportation act, 1920, as amended. McCloud River Lumber Co. v. Director General, as Agent, 89 I. C. C. 645, 649.

(c) Except as provided in the act, in so far as compensation is concerned, the parties powers to contract are limited by the tariffs and an amount collected and retained in excess of the amount named therein for the service performed in an overcharge above the legal tariff rate. Carpenter v. Director General, 98 I. C. C. 476, 478.

(d) An existing overcharge embraces only instances where a rate in excess of the legally published rate has been demanded, received and retained. Carpenter v. Director General, 98 I. C. C. 476, 478.

(e) Mere condition in carrier's tariffs that rates charged should apply only on shipments for manufacture, where finished product was to be shipped out over defendant's railroad, claimed to be authorized by Comp. Laws 1915, §8119, as to transit rates, HELD not to render

shipments interstate and deprive state courts of jurisdiction of action for overcharges, under Comp. Laws 1915, §8117; final destination of shipments being unknown. Gorham Bros. Co. v. Ann Arbor R. Co. (Mich., 1924) 200 N. W. 287.

(f) Carrier, making overcharge without malicious purpose or intentional misconduct, HELD not liable to shipper, who paid such overcharge without protest or complaint at the time for statutory penalty of double damages. Gorham Bros. Co. v. Ann Arbor R. Co. (Mich., 1924) 200 N. W. 287.

(g) Action to recover overcharge on shipments of logs and bolts between points within state HELD not to involve administrative question, which required submission to Railroad Commission before resort to courts. Gorham Bros. Co. v. Ann Arbor R. Co. (Mich., 1924) 200 N. W. 287.

(h) Overcharge claim on shipment moving during Federal control filed informally more than one year after termination thereof. Formal complaint subsequently filed brought in additional issue of misrouting. HELD. Overcharge claim, since filed within two years and six months after Federal control terminated, found not barred, but misrouting claim is barred because not filed within one year after that period had terminated. Empire Refineries v. Director General, 92 I. C. C. 59, 60.

(i) Shipments moved during Federal control on combination rates. Certain carriers carried in their tariffs the combination rule, which provided a method for constructing through rates made on combination. Other carriers participating in the movement neither participated in tariffs carrying the rule, nor carried a similar rule in their tariffs. HELD: Following Sligo case, 62 I. C. C. 643, 73 I. C. C. 551, rates charged on basis contrary to the rule found inapplicable. Reparation awarded. Bird v. Director General, 92 I. C. C. 494.

(j) No joint rates were in effect and shipments moved under a two-factor combination. Tariff of one participating carrier carried the combination rule which provided a method for constructing through rates made on combination, but did not specifically provide for its use in connection with first component of the through rate. Carrier publishing other factor made no reference to the rule not carried a similar one in its tariff. HELD: Following Sligo case, 62 I. C. C. 643 and 73 I. C. C. 551, rates constructed in conformity with the rule were legally applicable. Shipment found overcharged and reparation awarded. Minneapolis Steel & Machinery Co. v. Director General, 92 I. C. C. 603.

(k) Shipments moved under combination rates, both factors of which were increased under General Order No. 28 of director general. Tariffs publishing one factor carried the combination rule which provided for application of but a single increase to through rates made on combination. Tariffs of carriers publishing other factors contained no similar rule. HELD: Following Sligo case, 62 I. C. C. 643, 73 I. C. C. 551, where one tariff used in making combination rates on through shipments contains the combination rule there is a holding out to shipper of the rate so constructed which should be protected. Shipments found overcharged and reparation awarded. Romann & Bush Pig Iron & Coke Co. v. Director General, 92 I. C. C. 605; Nat. Supply Co. v. Director General, 92 I. C. C. 610.

(l) Shipment moved from Cushing, Okla., to Lawn Switch, a point within the Omaha, Nebr., switching limits. Carrier assessed a charge for movement from Omaha to Lawn Switch, in addition to charges to Omaha. HELD: Shipment found overcharged, as applicable tariff of line-haul carrier provided for absorption of connecting lines' switching charges at Omaha. Reparation awarded. Douglas County, Nebraska v. A., T. & S. F., 92 I. C. C. 717.

(m) Shipments of fuel oil, in tank cars, from certain Texas subports to Sulphur Mine, La., found to have been overcharged in that the applicable rate on crude and fuel oil from Texas subports, including the points of origin, to Sulphur Mine, was reduced during the period of movement. Refund directed. Union Sulphur Co. v. T. & N. O. R. R. Co. 98 I. C. C. 76.

(n) Rate assessed on two carloads of sugar at Sioux City, Iowa, during Federal control, found inapplicable and shipments found overcharged to extent charges collected exceeded those which would have accrued at basis herein found reasonable. Reparation awarded. Seavey & Flarsheim Co. v. Director General 98 I. C. C. 294.

(o) On further hearing, shipments of cotton, in bales, from Hackett, Ark., to Tacoma, Wash., for export, found to have been overcharged. Reparation awarded. Japan Cotton Trading Co. of Texas v. Director General, 98 I. C. C. 409.

(p) Shipments of compressed cotton from Brownsville, Tenn., to Seattle and Tacoma, Wash., for export, found to have been overcharged to extent that rate charged exceeded that constructed on combination bases in effect on June 24, 1918, plus the authorized increase on this commodity. Tariff naming the combination from Humboldt, Tenn., via which shipments moved, carried the rule providing for application of but a single increase to through rates made on combination, while tariff naming the factor from Brownsville to Humboldt contained no similar rule or reference to a tariff which did. See 73 I. C. C. 551. Reparation awarded. Southern Products Co. v. Director General, 98 I. C. C. 462.

(q) The fact that the measure of the overcharge set forth in the formal complaint is different from that in the informal complaint is immaterial, for the commission is not bound by the rate which a complainant before it may seek. It is the commission's duty to determine the applicable rate and the amount collected in excess of that rate. Southern Products Co. v. Director General, 98 I. C. C. 462, 463, 464.

(r) Refusal and failure of Director General of Railroads, as agent, to make refund on unused portion of a mileage book purchased during Federal control found to result in an overcharge above the legally published charges. Reparation awarded. Carpenter v. Director General, 98 I. C. C. 476.

(s) Except as provided in the act, in so far as compensation is concerned the parties' powers to contract are limited by the tariffs, and an amount collected and retained in excess of the amount named therein for the service performed is an overcharge above the legal tariff rate. Carpenter v. Director General, 98 I. C. C. 476, 479.

(t) Shipments of returned empty fruit boxes from Los Angeles, Calif., to various intrastate destinations, during Federal control, found overcharged to extent that charges assessed exceeded the lowest charges under tariff rules providing that the charge for a car fully loaded must not exceed the charge for same lot of freight if taken as a l. c. l. shipment subject to a minimum charge on each car. Reparation awarded. Klein-Simpson Fruit Co. v. Director General, 98 I. C. C. 547.

(u) Shipments of gasoline and other petroleum products moved from Sugar Creek, Mo., and El Segundo, Calif., to Blythe, Calif., during Federal control, the originating carrier having been under such control but the delivering carrier was not. The tariff of originating carrier provided that the combination rates applicable would be subject to one increase at 4.5 cents authorized by director general, but the tariff of delivering carrier did not carry a similar rule nor did the tariffs of that carrier and of the originating carrier carry reference to each other. FOUND, following 74 I. C. C. 188, shipments overcharged to extent such charges exceeded those accruing at rates constructed on basis held out by originating carrier. Reparation awarded. Standard Oil Co. (Calif) v. Director General 98 I. C. C. 587.

(v) Shipment of cedar posts from Noxon, Mont., to Rushville, Nebr., found overcharged, due to inadequate allowance having been made for snow on the load in weighing. Noll Lumber Co. v. C. & N. W. Ry. Co., 98 I. C. C. 589.

(w) Shipments of gasoline moving from Tulsa, Okla., to Rochester, Ind., found to have been overcharged to extent that rate charged was in excess of the combination rate applicable under rule 5 (b) of Tariff Circular 18-A. Cosden & Co. v. L. E. & W. R. R. Co. 98 I. C. C. 597.

(x) Informal claim alleged overcharges on imported shipments of potato flour, billed as potato starch in error, moving during Federal control from Seattle, Wash., to New York, N. Y., the rates applicable on potato starch being collected. Formal complaint filed more than one year after the termination of Federal control alleging the rate charged was unreasonable, found barred by statute since the issue in the informal complaint was solely one of legality. Lasker & Bernstein v. Director General 98 I. C. C. 624.

(xa) Shipment of pig iron from Thomas, Ala., to Iola, Kans., reconsigned to Okmulgee, Okla., found overcharged.

While route over which shipment moved is circuitous, the transporting carriers are shown as parties to tariff carrying the lower rate without restriction as to routing. Refund of overcharge directed. United Iron Works v. M. P., 102 I. C. C. 107.

(y) Complainant attacked sixth class rates charged on one car of slate slabs from East Bangor, Pa., to Harrison, Mont., on Oct. 27, 1922 as unreasonable. Shipment moved as routed by shipper over D. L. & W., N. Y. C. & St. L., Rock Island and N. P., charged $1.58 composed of sixth class 63c to Minnesota Transfer, Minn., and class E rate of 95c beyond. Contemporaneously there was a rate sixth class of 45.5c to Chicago and 68.5c beyond, via D. L. & W., and N. Y. C. & St. L., Rock Island and N. P. on natural stone. The slate was sand rubbed, but not carved, lettered, polished or traced. HELD, rate of $1.14 was applicable overcharge to be refunded, complaint dismissed. Crane Co. v. D. L. & W. Ry. 102 I. C. C. 119.

(z) Complainant attacked commodity rates charged on various cars of printing paper, between Jan. 30, 1922 and Feb. 24, 1923 from Lawrence, Mass., to Long Island City, N. Y., as illegal, and fifth class rates of 31c charged from Lawrence to Long Island City between August 14, 1923 and Jan. 15, 1924 as unjust and unreasonable to extent they exceed sixth class rate of 25.5c. During the period shipments moved there were no joint through rates in effect. HELD, charges illegal between Jan. 30, 1922 and Feb. 24, 1923 illegal to extent they exceeded sixth class to Long Island City Float Bridges, and Fresh Pond Junction and commodity rates beyond. Between August 14, 1923 and for future unreasonable to extent they exceeded sixth class contemporaneously in effect, reparation awarded. Merrimac Paper Co. v. B. & M. R. R. 102 I. C. C. 133.

(za) Formal complaint alleging overcharges on shipments moving during Federal control found not barred, the informal complaint having been filed with the commission within the statutory period of two years and six months after termination of Federal control. San Antonio Paper Co. v. Director General, 102 I. C. C. 243.

(zb) Defendant contends that neither informal nor formal complaint alleged an overcharge because in neither is it specifically stated that rates charged were in violation of section 6. Both complaints, however, alleged that charges collected were neither applicable nor lawful, and set forth rates complainant contends were applicable. HELD: This is sufficient allegation of an overcharge. San Antonio Paper Co. v. Director General, 102 I. C. C. 243, 244.

(aa) Complainant alleged overcharge on two cars of anthracite coal from Providence, Pa., to Matawan, N. J., thence reconsigned to Asbury Park, N. J. Shipments were made in February 1923, moved over D. & H., to Wilkesbarre, Pa., thence Pennsylvania to South Amboy, N. J., thence N. Y. & L. B. to Matawan, were there reconsigned and moved out over the later line to final destination. Charged joint rate of $3.15 per ton plus 19c per long ton additional charge, $6.30 per car for reconsignment, and $2 for demurrage. Reconsignment and demurrage charges are not attacked. It is the additional charge of 19c which is in dispute. The Pennsylvania connects with the N. Y. & L. B., at South Amboy, and at Sea Girt, N. J. The tariff naming the joint rate of $3.15 contains no routing restriction, but the customary route beyond Wilkesbarre is via South Amboy to Branchport, N. J., and points on the N. & Y. L. B., north thereof, including Matawan, and via Sea Girt to points on the N. Y. & L. B., south of Branchport, including Asbury Park. The distance from Wilkesbarre to Asbury Park is 311.4 miles via South Amboy and 305.1 via Sea Girt. HELD, rate illegal to extent it exceeded $3.15 per long ton reparation awarded. Hartwell & Lester v. D. & H. Co. 102 I. C. C. 703.

(bb) Complainant attacked combination rates charged on 9 cars of cement from Chapman and West Coplay, Pa., and Fordwick, Va., to Daytona, Cocoanut Grove, Key West and St. Augustine, Fla., between July 31, 1918 and Feb. 6, 1919 as unreasonable and unduly prejudicial. Charged combination on Jacksonville, Fla. These rates aggregated 4c higher than rates in effect on June 24, 1918; the increase of 2c provided in G O 28 having been applied to each factor of the combination. Complainant contended that the shipments were overcharged to extent of 2c per 100 pounds as Washburns tariff I. C. C. 267 provided that but one increase should be made

in the combination of rates in effect on June 24, 1918. HELD, rate charged inapplicable reparation awarded based on 2c increase to through rates. Lehigh Portland Cement Co. v. Director General 102 I. C. C. 617.

(cc) Complainant attacked commodity rates charged on matches carloads from Chico, Calif., to Pacific northwest between Jan. 1, 1918 and Jan. 23, 1922 as in violation of sections 1, 4 and 6 of the act. Chico is on the S. P. 186 miles north of San Francisco. Portland proper is on the west bank of the Willamette river. East Portland is on the opposite bank of that river and is served by the S. P., and O. W. R. R. & N. Albina and St. Johns, Ore., also on the east bank are about 2 and 6 miles north of East Portland, and are served by the O. W. These points are within the corporate and switching limits of Portland. Complainants case is based principally upon the use of a proportional rate of 29.5c from Chico to Portland or East Portland on shipments destined to points specifically named in Gomphs tariffs, plus a switching charge of 37.5c per ton, applicable between Portland and East Portland and St. Johns over the O. W. This proportional rate of 29.5c was restricted at time of movement to shipments destined to points other than the destinations here involved. The rate did not apply to Portland except on shipments destined to St. Johns and certain other points specified in the proportional tariff. The combinations sought were inapplicable on complainants shipments. Overcharges should be adjusted. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Diamond Match Co. v. Director General, 104 I. C. C. 147.

(dd) The shipper is entitled to repayment from the carrier that has collected the freight charges as soon as it appears than an overcharge has in fact been made. When the refund has been made it is then that carriers duty to see which of the carriers that participated in the movement is responsible and charge it accordingly. When the overcharge is discovered it should immediately be repaid by the carrier that collected the charges, and this should be done whether a demand has been presented by the shipper or not. Yellow Pine Co., of Phila. v. Director General 104 I. C. C. 371, 372.

(ee) A carrier that has collected an overcharge can not be excused from repayment of same because it has paid it to another carrier. Bowers Co. v. Director General 107 I. C. C. 305, 307.

(ff) The shipper is entitled to repayment from the carrier that has collected the freight charges as soon as it appears that an overcharge has in fact been made. When the refund has been made it is then that carriers duty to see which of the carriers that participated in the movement is responsible and charge it accordingly. When the overcharge has been discovered it should immediately be repaid by the carrier that collected the charges, and this should be done whether a demand has been presented by the shipper or not. Bowers Co. v. Director General 107 I. C. C. 305, 307.

(gg) Complainant attacked as illegal rates charged on 3 cars of brick shipped between Feb. 6 and May 22 1924 from Springfield, Ill., to St. Petersburg, Fla. Southern 133572 charged 45.7c, routed L. & N., S. A. L., at Montgomery, Ala., S. A. L, delivery, two other cars charged 42.5c. Complainant refers to a local rate of $2 per ton applicable from Springfield to Evansville, Ind. and local rate of 22.5c per 100 pounds from Evansville to Jacksonville, Fla., and 9.5c beyond. The tariff naming the latter rate provides that carload rates on brick are subject to rules for constructing combination rates, as provided in Kellys U. S. 1. HELD, applicable rate 38c, reparation awarded. Poston Brick Co. v. Ill. Traction 107 I. C. C. 507.

(hh) An overcharge, if proved, is a tort for which all participating carriers are jointly and severally liable. Poston Brick Co. v. Ill. Traction, 107 I. C. C. 507.

(ii) Complainant alleged it was charged more than the applicable tariff rate on one car of hickory lumber from Dicks Landing, Ky., to Thompson, Conn. on March 15, 1923. Rate charged 77.5c. The rate which complainant contended should have been applied was 61c constructed 15c to Burnside, 1c for transfer there from the boat to the rail line and 45c beyond Burnside. The shipment consisted of pieces of hickory 1 inch thick, 2 inches wide and from 40 to 48 inches long. Complainant stated

that they were billed as "hickory lumber" but that defendant changed the billing in transit to read "hickory golf stick material." There was no specific rate on golf stick material and defendant assessed rated on vehicle material as the rate on the most nearly analogous article. The description "lumber" would seem to cover the shipment. HELD, shipment overcharged to extent it exceeded rate on lumber, reparation awarded. Bush Bros. & Co. v. Cumberland Transportation Co., 107 I. C. C. 571.

(jj) Complainant attacked as illegal rates of 66 and 65.5c charged on two cars of lumber shipped Dec. 16 and 17, 1921 from Hillsboro, Ga., consigned to itself at Potomac Yard, Va., and diverted in transit to West End, Pittsburgh, Pa., and unjust and unreasonable to extent they exceeded 49.5c. Hillsboro is a local station on the C. of Ga., 33 miles north of Macon, Ga., on the Macon & Athens division. The shipments were originally billed by complainant to itself at Potomac yard. Three days after the first shipment was made, or Dec. 19, 1921, reconsignment orders were filed with the Southern at Lynchburg, Va. after the cars were on the rails of that carrier between Augusta, Ga.. and Potomac Yard, to divert to Dievold Lumber Co., West End, Pittsburgh, Pa., for West Side Belt Ry. delivery. The second car was reconsigned to Potomac yard, to the same consignee and designation as the first. Both cars, however, actually moved via Potomac Yard, thence B. & O., to Bruceton, Pa., P. & W. Va., West Side Ry. beyond. The tariffs indicate that there was no joint rate in effect at the dates of shipments between these points over the route of movement. Under the circumstances it is manifest from the tariffs that the lowest available combination over that route was applicable. Defendants acknowledge that the combination of intermediate rates made on Athens, Ga., of 8.1c to Athens, 48c beyond. By the application of Jones I. C. C. U. S. L for rules constructing combination rates, a through combination rate of 54.5c is made. HELD, rates charged inapplicable, reparation awarded on basis of 54.5c. Traffic Bureau, Lynchburg, Va. v. B. & O. R. R. 107 I. C. C. 573.

(kk) Where complainants alleged both in the informal and the original formal complaints that they have been overcharged or damaged because of the assessment of excessive charges the commission considers these statements sufficient to raise an issue as to the reasonableness of the charges assessed, but it should not be understood as condoning undue laxity in pleadings before it. The extent to which these informal and original formal complaints specifically bring in issue alleged violations of sections 4 and 6 need not be determined inasmuch as the commission has often awarded reparation to the basis of the lower aggregate of the intermediates or for direct overcharges under allegations of unreasonableness. The mere reference in the complaints to the alleged collection of charges in excess of the aggregate of intermediates, or collection of overcharges, does not confine the issue to alleged violations of sections 4 and 6, respectively, nor does such reference destroy the issue raised under section 1. Nash Spokane Co. v. Director General, 100 I. C. C. 223, 225.

(ll) Shipments of blackstrap molasses from certain points in Louisiana to Fort Calhoun, Nebr., found not to have been overcharged. On some of the shipments involved no value was declared, as required, while on those on which this requirement was met they were not of a value entitling them to a lower rate. Failure of the tariff to make reference to fact that the released rates applicable were approved by the commission, as required by law, was not vital. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471.

(mm) Shipments of blackstrap molasses from Mobile, Ala., to Fort Calhoun, Nebr., found overcharged to extent that charges collected exceeded those which would have accrued at lower declared-value rate. Reparation awarded. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471, 482.

(nn) Shipments of scrap iron, originally billed as such but assessed the iron-bar rate due to change in bills of lading made by inspector of the Southern Weighing & Inspection Bureau, found overcharged. Burden of proof to justify change in billing rested upon defendants and vague evidence of inspector as to condition of material found insufficient to justify change in billing. Refund directed. Knight Iron & Metal Co. v. G. M. & N., 101 I. C. C. 623.

(oo) Question of whether, as alleged, overcharges were collected by a Canadian carrier in Canada on shipments of chestnut lumber from Camden-on-Gauley, W. Va., after they were reconsigned from Montreal to Ste. Therese, Canada, found not to be within jurisdiction of commission. Under section 1 (2) of the act, commission's jurisdiction over transportation applies only to such transportation as takes place within the United States. Natl.-Amer. Wholesale Lbr. Asso. v. B. & O., 101 I. C. C. 741, 742, 743.

(pp) The Commission construes the decision of the Supreme Court on June 8, 1925 in Wm. Danzer & Co., considered in connection with 261 U. S. 133 as prohibiting common carriers subject to the act from paying straight overcharge claims which were barred by statute at or prior to the amendment June 7, 1924, to paragraph 3 of section 16 of the act, and as prohibiting the Commission from awarding reparation on any claim which was barred by statute at or prior to the date of that amendment. Calumet Baking Powder Co. v. A. & N. R. R. R. Co., 109 I. C. C. 249.

(qq) Complainant asked refund of alleged overcharge on a less carload of four barrels of old files shipped March 11, 1919 from Macon, Ga., to Anderson, Ind. The files, property of the C. of Ga., were shipped to complainant for resharpening. The bill of lading contained notation as follows: free over Co.'s line prepay beyond. Shipment moved as company material free over C. of Ga., to Atlanta, Ga., thence L. & N., to Cincinnati, O., and Pan Handle. Amount of prepayment was $6.43 less than the charges at the applicable combination rate but was later collected. If the director general is in possession of $6.43 to which complainant is rightfully entitled it would appear that that right did not arise from the exaction from the complainant of a rate in excess of that applicable, although it may have arisen from the failure of the C. of Ga., to comply with the terms of an implied contract to fully prepay the charges. HELD, charges collected applicable, complaint dismissed. Continental File Corp. v. Director General, 109 I. C. C. 403.

(rr) Common carriers are prohibited from paying straight overcharge claims which were barred by statute at or prior to the amendment of June 7, 1924 to paragraph 3 of section 16 of the act and prohibits the Commission from awarding reparation on any claim which was barred by statute at or prior to the date of that amendment. Moore Lawless Grain Co. v. M. P. R. R., 109 I. C. C. 588.

(ss) Complainant attacked charges collected on one car of dried lima beans shipped Aug. 2, 1918 from Santa Monica, Calif., to Tampa, Fla., as illegal. Claim was originally presented on July 24, 1922 in the form of an overcharge claim. The formal complaint contains additional allegations, predicated on the ground of misrouting. Aside from the question of overcharges the claim is barred from consideration on account of not having been filed with the Commission within one year after the termination of federal control. As there was no through rate shipper was entitled to the lowest combination. HELD, Shipment overcharged, reparation awarded. Harman & Hulsey v. Director General, 112 I. C. C. 275.

PANAMA CANAL ACT

See Evidence §42; Facilities and Privileges §16; Water Carriers; Water Competition.

(a) Since return of ships to the Panama Canal route subsequent to the World War, traffic which is susceptible of water carriage has been moving from Atlantic seaboard to the Pacific coast over this route in large volume, and low rates offered have attracted traffic from points several hundred miles back in the interior. Reduced Commodity Rates to Pacific Coast, 89 I. C. C., 512, 517.

(b) The several applications before the Commission under section 5 of the act as amended by section 11 of the Panama Canal act, were made at various times between Feb. 11, 1914 and June 25, 1914 by railroad companies engaged in interstate commerce and subject to the acts mentioned. Of the applicants all except the Jersey Central and D. L. & W., aver that the operation of the marine equipment is not in violation of the act, and they seek an order from the Commission as to whether the continued operation of the marine equipment specified after July 1, 1914 would be in violation of that section. Each of the applicants is a heavy carrier of passengers and of property and reaches with its rails the shores of New York harbor. It seems obvious from the record that the facilities embraced in the application are embraced in the term railroad, as used in the act, and therefore are not any common carrier for water operated through the Panama canal or elsewhere with which said railroad does or may compete for traffic. The Commission has held that before its jurisdiction may be invoked, some probable and potential competition with some vessel carrying freight or passengers upon the water route must appear. No such competition appears here with respect to the services mentioned. The applicants compete between themselves, but their competition is in respect to rail service, as to which the water transportation is an incident, recognized by the act as embraced in the term transportation by railroad as applied to carriers by railroad and by instrumentalities in precise terms embraced in the term railroad. As the applicants have not brought the service within the terms of the act, the jurisdiction of the Commission to issue the order sought is lacking, and the applications must be denied. A different situation exists with respect to the service of the Jersey Central between Manhattan Island and Atlantic Highlands, N. J. The Jersey Central by means of rail lines which extend from Jersey City, N. J., through Elizabethport and Matawan, reaches various points located along the Atlantic Ocean south of Sandy Hook, to Point Pleasant, N. J. From points in the city of New York it is necessary to make use of the ferry to reach Jersey City as a part of the rail journey to the group of beach resorts mentioned. The railroad also operates two passenger steamers from piers on lower Manhattan Island through New York Bay, the Narrows, the Lower Bay and Sandy Hook Bay, to Atlantic Highlands Pier just west of Sandy Hook. The Sandy Hook water route is used as an alternative route for the ferry rail line. Tickets issued by the railroad between New York City and Atlantic beach points may be used interchangeably over the rail route through Jersey City and the ferry to Manhattan Island, or by rail to Atlantic Highlands and thence by way of the Sandy Hook route, or vice versa. This situation brings the Sandy Hook route within the provisions of section 5, 33 I. C. C. 700, 703. The Sandy Hook route of the Jersey Central finds a competitor in a privately owned excursion boat, which carries passengers between New York and Atlantic Highlands, and lands them at a pier adjacent to that of the Central. Passengers by the Mandalay do not commonly use the rail service of the Central; they are principally excursionists or else passengers destined to inland points, who use automobile or bus service from the Highlands pier. The rate of fare on the Mandalay is much cheaper than on the Central. The record indicates that the combination of the Sandy Hook water route and the rail lines from Atlantic Highlands pier to the New Jersey beaches is generally more popular than the ferry and rail route to the same points. No complaints have ever been lodged with the Commission which indicated any possible detriment to the public interest or the convenience of commerce and the people by reason of the continued operation of the Sandy Hook route. It is evident that the operation of the route has neither reduced nor prevented competition, for, as indicated competition has come about during the pendency of the instant application. HELD, the vessels carrying freight or passengers upon the Sandy Hook route by water, owned and operated by the Jersey Central, are being operated in the interest of the public, and that the service they afford is of advantage to the convenience of commerce and the people, and that an extension of the time during which such service by water may continue will neither exclude, prevent, nor reduce competition on the route by water under consideration. New York Harbor Facilities applications, 100 I. C. C. 383.

(c) Southern Pacific and Albion Lumber Co., applied for authority for installation of service by vessels for the transportation of lumber by the Albion Lumber Co., from Albion, Calif., to ports

in California south of San Francisco, Calif., and the west coast of Mexico, in connection with the lumber business of the lumber company. S. P., operates a system of railways with certain lines in California which extend from San Francisco to the ports of Santa Cruz, Port San Luis, Santa Barbara, Ventura and San Pedro, and other ports south of San Francisco. The S. P., is the owner of all the capital stock of the lumber company. There is no railroad connection between Albion and the S. P., or any other main line or trunk line railway. The lumber company operates a railway extending 26 miles from Albion to Christine, Calif., under a long term lease from the Northwestern Pacific. This line is not connected with any main or trunk line. In 33 I. C. C. 476 the Commission found that so long as the rail line between Albion and Christine was not extended so as to connect with a main line that the S. P., did not and could not compete with the Pasadena operating between Albion and San Francisco, and that the continued operation of that steamer by the lumber company between those points would not be in violation of section 5 of the act, as amended by the Panama Canal act. Lumber producers generally regard the transportation of lumber by water as more satisfactory than by rail, as there is more certainty of the time of arrival and better control of shipment. There is also less damage, less shortage, and the lumber is more rapidly and economically handled from yard to ship than to a car. The large quantities of lumber which can be moved at one time by a ship reduces the expense of handling. From the evidence it appears that the S. P., handles practically none of the lumber originating at Albion to ports south of San Francisco, and that if the lumber company did not ship its product by water from Albion to such ports the business would be diverted to competitors who operate their own steamers. HELD, so long as the railway line between Albion and Christine is not extended to connect with a main line of railway that the S. P., does not and can not compete in the transportation of lumber with steamers operated between the ports and Albion and ports in California south of San Francisco and on the west coast of Mexico within the meaning of the act, and that the ownership and operation of steamers by the S. P., through the lumber company for the transportation of lumber from Albion to such ports is not and will not be in violation of section 5 of the act, as amended by the Panama Canal Act. Application of S. P. Co., and Albion Lumber Co. 102 I. C. C. 170.

(d) In 34 I. C. C. 174 the Commission found the operation by the Southern Pacific, petitioner, of its boat line on the Sacramento river and connecting waters was in the interest of the public and of advantage to the convenience and commerce of the people and that its continued operation by petitioner would neither exclude, prevent nor reduce competition on the route by water, and permitted petitioner to continue the operation of its boats from and to points on the Sacramento river to and from points on the west side of San Francisco Bay. Petitioner asks that it be allowed to extend the operation of its boats in freight service to and from all public docks, wharves, and piers situated within or abutting on the corporate limits of Alameda, Berkley, Oakland and Emeryville, Calif., all of which points are on the east side of San Francisco Bay. No one appeared in opposition to the extension of the service. HELD, petitioners application granted. S. P. Co., boat line on Sacramento river, 102 I. C. C. 658.

(e) Upon application of railroad companies operating certain marine equipment in and about New York Harbor in states of New Jersey and New York for permission under section 5 of the act, as amended, to continue operation of such equipment, FOUND: That applicants, with one exception have not brought the service within the terms of the act in that facilities involved are embraced in the term "railroad," as used in the act, and therefore are not "any common carrier by water operated through the Panama Canal or elsewhere with which said railroad does or may compete for traffic." Accordingly, commission is without authority to enter the order sought. Applications denied. New York Harbor Facilities Applications, 100 I. C. C. 383.

(f) Existing service by vessels of C. R. R. of N. J. upon Sandy Hook water route between piers on lower Manhattan Island and Atlantic Highlands Pier, N. J., found, among other things, to be of advantage to public convenience, and

an extension of time during which it may continue will neither exclude, prevent, nor reduce competition on the route by water under consideration. Extension ordered. New York Harbor Facilities Applications, 100 I. C. C. 383.

(g) Consolidation of railroad lines in the South probably accelerated elimination of water competition on navigable rivers. Prior to era of consolidation the drastic rate cutting of paralleling rail lines made it difficult for steamboats to operate though they were aided in some instances by noncompetitive railroads that acted as feeders. Absorption of these feeders into larger systems deprived the boats of even this support and they gradually disappeared from the scene. Southern Class Rate Investigation, 100 I. C. C. 513, 526.

(h) Upon application of S. P. Co., and Albion Lumber Co., for authority to install vessel service for the transportation of lumber from Albion, Calif., to ports in California south of San Francisco, and the west coast of Mexico, in connection with business of the lumber company, FOUND: That so long as the railway line between Albion and Christine is not extended to connect with a main line of railway, the S. P. Co. does not and can not compete with steamers operated between the aforesaid ports within meaning of the act, and that ownership and operation of steamers by the S. P. Co. through the lumber company is not and will not be in violation of section 5 of the interstate commerce act as amended by the Panama Canal act. Moreover, the S. P. handles practically none of the lumber originating at Albion to ports south of San Francisco, and if the lumber company did not ship its products by water from Albion to such ports the business would be diverted to competitors who operate their own steamers. Application of S. P. Co. and Albion Lbr. Co., 102 I. C. C. 170.

(i) In connection with granting of authority to S. P. Co. to extend operation of its boat line in freight service on Sacramento River and connecting waters to and from public docks at certain points on east side of San Francisco Bay, all rates, schedules, and regulations appliable to such transportation required to be filed with commission and posted as required by the act and commission's rules and regulations. S. P. Co. Boat Line on Sacramento River, 102 I. C. C. 658.

(j) Upon application of S. P. Co. and Central Pacific Ry. Co., under section 5 of the act, for authority to extend operation of its boat line on Sacramento River and connecting waters, FOUND: Operation of a boat line in freight service to and from public docks, wharves, and piers situated within or abutting on corporate limits of Alameda, Oakland, Berkeley, and Emeryville, Calif., on east side of San Francisco Bay, will be in public interest and of advantage to convenience and commerce of the people, and will neither exclude, prevent, nor reduce competition on water routes. S. P. Co. Boat Line on Sacramento River, 102 I. C. C. 658.

PARTIES

See Courts §12½; Loss and Damage §17; Procedure Before Commission V; Reparation §6, §19; Routing and Misrouting §10.

PARTNERSHIP

(a) The Team Company, a copartnership of three partners, entered into contract with a private individual, the individual to receive in consideration of his services a specified percentage of net profits, without participating in losses. HELD: Such contract did not create a new copartnership but continued the old copartnership in effect. See 116 U. S. 461-472. To have created a new copartnership composed of the four men, a joint agreement would have been necessary to the effect that each copartner was to participate in both profits and losses. See 132 U. S. 539; 20 R. C. L. 825. Wichita Chamber of Commerce v. Director General, 102 I. C. C. 745, 747.

See Control and Regulation.

§½. In general.

(a) At common law a common carrier of goods or passengers was under no obligation to treat all persons equally, but might grant one individual an unreasonably low rate or even carry for him without making any charge whatever. State Sorensen v. Chicago B. & Q. R. Co. (Neb. 1924) 199 N. W. 534.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Careful study of the Act convinces the Commission that Congress has not conferred upon it authority to require carriers to construct union passenger stations under conditions such as are here present. The Commission is not considering a case where prejudice or discrimination is involved. There is no language in the Act apt for the purpose. The provision in section 3 paragraph 4 for joint use of terminal facilities expressly covers only facilities existing when the requirement is made. The Supreme Court concedes this in 264 U. S. 331, and as warrant for the control which it states the Commission has over the larger and more important new terminal projects refers directly to paragraphs 18 to 21 of the act, sec. 1 Paragraph 18 forbids the extension, construction, acquisition, operation or abandonment of any line of railroad by any carrier subject to the act without first securing from the Commission an appropriate certificate of convenience and necessity. Paragraph 19 provides for the procedure upon application for certificate, and paragraph 20 for the issuance of certificates and the enforcement of paragraphs 18 and 19. Paragraph 21 empowers the Commission to authorize or require a carrier by railroad subject to the act to provide itself with safe and adequate facilities for performing as a common carrier its car service, and to extend its line or lines. The same paragraph also provides a penalty for noncompliance with orders made by the Commission in pursuance thereof. The term "car service" as used in the act relates to vehicles used in the transportation of property. The authority to require a carrier to extend its line may include authority to require it to construct stations necessary and incidental thereto. But assuming such authority, the Commission concludes that paragraph 21 does not empower it to order the construction of a union passenger station where, as here, the station would be the principal thing and the extension of lines the incident. Los Angeles Passenger Terminal cases, 100 I. C. C. 421, 426.

(b) Careful study of the interstate commerce act is convincing that Congress has not conferred upon the commission authority to require carriers to construct union passenger stations un-

der conditions such as are here present. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 426.

(c) Section 1, paragraph 31 does not empower the commission to order the construction of a union passenger station where the station would be the principal thing and the extension of lines the incident. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 426.

II. REASONABLENESS AND DISCRIMINATION.

§2. In General.

See Discrimination; Reasonableness of Rates.

(a) No increases will result from proposed cancellation of passenger fares, from, to, and between points in the Hattiesburg branch of the Mississippi Central. Passenger traffic on this branch is mostly intrastate. Cancellation of Rates and Routes via Mississippi Central, 100 I. C. C. 71, 74.

ALL CITATIONS

Alabama Passenger Fares and Charges, 88 I. C. C. 621.

§3a. Caretakers.

See Caretakers.

(a) Proposal to restrict free transportation of attendants with race horses moving by express to two attendants, and to require any in excess of that number to pay full passenger fares, found not justified. Service accorded race-horse attendants is not comparable with that accorded passengers transported under published passenger fares, restrictions and duties require that such attendants remain continuously with the horses, resulting in rail carriers not being called upon to provide accommodations in their passenger coaches, and such attendants assume, by contract, all risks of accident or damage to themselves. Attendants with Race Horses, 89 I. C. C. 689.

(b) Complainant attacked failure of defendants to grant free return transportation to caretakers accompanying single carloads of livestock from Washington, Oregon, Idaho and Montana to points in Washington and Oregon, except to destinations on the Oregon Short Line as unjust, unreasonable and unduly prejudicial. A rule is requested granting return transportation at half fare. Prior to Dec. 27, 1919 there was no uniformity among western carriers with respect to the return of attendants accompanying single shipments of livestock. Some gave full free return transportation, others only half fare and many no return concession at all. The defendants generally granted half return fare between Washington, Oregon and Idaho. The undue prejudice alleged is between shippers of single cars and shippers of two cars but as much free transportation per loaded car mile is given a single caretaker as is accorded the caretaker accompanying two or more shipments. HELD, present rule not unreasonable or unduly prejudicial, complaint dismissed. Cattle & Horse Raisers Asso. v. A. T. & S. F. Ry. 102 I. C. C. 573.

(c) Complainant alleged collection of passenger fares by defendant for the transportation of attendants accompanying seven carloads of live poultry from points in various states to Hoboken, N. J., unreasonable. Shipments moved between Jan. 11 and Jan. 24, 1920. Fares were collected as provided by tariffs. Prior to Dec. 30, 1919 the official classification provided for the transportation of attendants with carload shipments of live poultry without charge in addition to the ordinary freight charges. On that date the charges here attacked were established by rule published in the classification, and were applicable in all cases except as otherwise provided. That rule is in effect at the present time. However, in tariff of Agent Kelly, I. C. C. 85, containing exceptions to the official classification, the charges were made inapplicable in connection with rates published in tariffs bearing reference thereto, effective Jan. 28, 1920. Defendants submitted no evidence in support of the unreasonableness of the rate attacked. HELD, fare charged unreasonable, reparation awarded. Werner v. Director General 107 I. C. C. 363.

§5. Commutation Fares.

(a) New Haven, respondent, proposed

to increase by 20% the present effective fares for 60 trip monthly commutation tickets for general interstate application between local points in Massachusetts, Rhode Island, Connecticut, and New York (not including New York City) and between New York and New Haven Brookfield Jct., Conn., and intermediate points, and also between Harlem River, N. Y., and Greenwich, Cos Cob, Riverside, Sound Beach and Stamford, Conn. Concurrently, respondent and other carriers operating in Massachusetts, Rhode Island and Connecticut filed schedules providing for like increases in their intrastate fares within those states. The increased intrastate fares, excepting those of the B. & A., in Massachusetts, were found justified, and likewise Connecticut. This had the effect of permitting all the fares named in the schedules under supervision at the time to become effective, except those proposed between Connecticut and New York. Apparently commutation traffic was established as an incident to regular or standard traffic on the theory of filling vacant seats in coaches or trains operated for regular or standard travel and for the further purpose of developing territory adjacent to the railroad by encouraging residence in the suburbs of the large cities. Unquestionably the large increase in respondents commutation traffic has diluted the passenger traffic revenue as a whole and has lessened the margin between the revenues and expenses of the passenger service. Commutation fares on N. Y. N. H. & H. R. R., 101 I. C. C. 703.

(b) This report will be confined to a consideration of the commutation fares of the Northwestern Ry. petitioner, on the record made following its petition for further hearing filed May 15, 1925. The matter in issue is, whether the Northwestern should increase its commutation fares within Illinois by amounts not exceeding 20% above the level of such fares in effect August 25, 1920. The Northwestern serves three main suburban districts, that west of Chicago along the line of its Galena division, that northwest of the same place along the line of the Wisconsin and that north of Chicago on the Milwaukee division. The basic charge for one way passenger fares interstate and intrastate in Illinois and Wisconsin is the same, 3.6c per mile. Commutation fares for travel between points in Illinois and points in other states, including Wisconsin, were increased 10% June 10, 1918, at the time that such fares applying intrastate in Illinois received a like increase, and 20% effective August 26, 1920, but no increase of 20% has yet been made in commutation fares between points wholly within Illinois. HELD, that there are no conditions within Illinois justifying the maintenance by petitioner of intrastate commutation fares and of charges for multiple trip commutation tickets therein lower than the corresponding fares and charges applicable to the interstate transportation of passengers by petitioner to, from, or through the state; and that the maintenance of such intrastate fares and charges lower than the corresponding just and reasonable interstate fares and charges established and maintained by petitioner pursuant to authority heretofore given by this Commission in Ex Parte 74 gives an undue preference and advantage to persons traveling in intrastate commerce on petitioners lines within said state. This undue prejudice should be removed by increasing the intrastate commutation fares to 20% higher than in effect August 25, 1920 subject to maximum of 2c per mile. Intrastate rates in Illinois 102 I. C. C. 479.

(ba) Maintenance by C. & N. W. of multiple-trip and commutation fares for transportation of passengers in intrastate commerce within Illinois lower than corresponding fares applicable to intrastate transportation of passengers to, from, or through the State, found unduly preferential of intrastate passengers, unduly prejudicial to interstate passengers, and unjustly discriminatory against interstate commerce. Intrastate Rates in Illinois, 102 I. C. C. 479.

(c) Proposed increased interstate commutation fares of the N. Y., N. H. & H. R. R., between points in Connecticut and New York, which will place those fares on same basis as applies generally over other lines in New England, found justified. In establishing the original bases of fares little or no consideration was given to possibility of the development of commutation traffic to such extent as to become a substantial portion of the entire passenger traffic, and a burden on the regular or standard traffic, or that there would be other avenues of transportation established especially affecting short-haul traffic which would materially reduce

the volume of regular or standard traffic. The large increase in respondent's commutation traffic has diluted the passenger revenues and expenses as a whole and has lessened the margin between revenues and expenses of the passenger service. Commutation Fares on N. Y., N. H. & H. R. R., 101 I. C. C. 703.

ALL OTHER CITATIONS

Alabama Passenger Fares and Charges, 88 I. C. C. 624.

§6. Mileage, Excursion Rates and Scrip.

See Distance Rates.

(a) In 77 I. C. C. 200, the Commission required certain carriers to establish, issue and maintain a nontransferable interchangeable scrip ticket in the denomination of $90, to be sold at a reduction of 20% from the face value. In 77 I. C. C. 647, the Commission specified rules and regulations to govern the issue and use of the ticket. This decision was appealed and in 263 U. S. 603 the case was remanded. The question for determination are (1) what will be the just and reasonable rates for the interchangeable scrip coupon ticket the Commission shall prescribe to be issued; (2) shall that portion of rule 12 prohibiting the payment in cash of the remainder of the fares in instances where the standard one way fare equals or exceeds $90 be modified; and (3) which carriers, if any, shall be exempted in whole or in part from the requirements of the order? It does not follow that since the improvement in the revenues leaves a possible margin for concessions in rates, the passenger business, and especially a fractional part of this business, is entitled to be the sole beneficiary of this financial improvement. It is, of course, not possible to appraise accurately the effects of Motor vehicle transportation on passenger business. With the increased transportation of persons by means of motor vehicles there has also unquestionably an increased use of such vehicles in the transportation of property. Similarly, it is impossible to determine how, if at all, general business depressions or revivals may affect freight traffic differently from passenger traffic. If it were demonstratable that passenger fares are so high that they have had the effect of curtailing passenger travel, it would probably follow that a reduction in all passeger fares rather than in the fares of a particular class of passenger traffic would be the proper remedy. It is obvious that the interchangeable scrip coupon ticket contemplated by the amendment differs from any of the mileage tickets heretofore in use, particularly in respect to its general interchangeability. The record indicates furthermore that the interchangeable tickets which were formerly in use were issued voluntarily by carriers prior to the time when regulation of their rates and fares became effective. The attention of the Commission has not been called to any instance where regulating authorities have required carriers to issue and sell such tickets at rates below the standard one way fares prescribed by such authorities. The Commission is required to direct the issuance of such tickets at just and reasonable rates, and it does not consider that the failure of carriers as a whole to earn a fair return would preclude it from fixing rates for interchangeable scrip coupon tickets at rates lower than the standard one way fares if it could find that such rates would be just and reasonable. The sale of the scrip ticket is in the first instance a transaction between one who purchases and one carrier which sells the tickets, but the delivery of the transportation service involves many transactions between the holder of the ticket and all other carriers which will be obliged to look to the carrier who sold the ticket for a redemption of the coupons which they collect. It is obvious that there are many circumstances in wholesale commercial transactions and in the granting of reduced rates for public utility services which differ widely from the circumstances surrounding the sale and use of scrip coupon tickets. HELD, the basic or standard rate of fare for one way tickets is, and for the future will be, a just and reasonable rate for the interchangeable scrip coupon ticket the Commission shall direct carriers to issue. Those class 1 carriers which are now issuing or honoring interchangeable scrip coupon tickets under rules and regulations they have already established will be directed to continue to issue or honor such tickets and to observe such established rules and regulations until or unless the Commission hereafter requires otherwise. These carriers will be directed to publish, file, and post all tariffs containing such rules and regulations in the manner prescrib-

ed by law. Samples of the tickets in use should accompany tariffs filed with the Commission. All class 1 railroads which have not already done so, excepting switching and terminal companies will be directed to establish, issue and maintain the interchangeable scrip coupon tickets herein prescribed, and to establish, publish, file, and post in the manner prescribed by law the rules and regulations to govern the issue, sale, and use of such tickets, on or before July 15, 1925 and thereafter to maintain the same in effect until or unless the Commission shall hereafter otherwise direct. Carriers should continue to issue them in $15, $30 and $90 denominations as heretofore. Interchangeable mileage ticket investigation, 98 I. C. C. 298.

(b) Complainant purchased a mileage book for 1,000 miles entitling her for transportation over the New Haven, the B. & M., and other New England carriers. She used the book but once, namely, at some time prior to June 10, 1918, for a journey from Boston to Portsmouth, N. H., distance 56.9 miles. The Director General declined to permit the use of such mileage books at reduced fares on and after June 10, 1918. Complainant did not present the unused portion of the book for redemption until July, 1922. New Haven tariff provided that mileage tickets will be redeemed on request for the difference between the amount paid for the ticket and the amount arrived at by charging at the rate of two and one half cents per one mile coupon for each coupon used. The time within which the ticket could be used was not limited; neither was there any limitation on the time within which the unused portion could be present for redemption. The fact that complainant waited over four years before presenting her claim has no bearing on the present issue. If the terms of the tariff fixing the compensation for a less distance than 1,000 miles had been voided by limitation to the effect that the unused portion must be presented within a fixed period in order to validate that charge, an extremely different situation would have been before the Commission. HELD, complainant overcharged the amount equal to the price paid and the legal charge for the distance traveled on a net basis proportionate to that which would have applied had the entire ticket been used according to its terms, reparation awarded. Carpenter v. Director General, 98 I. C. C. 476.

(c) Upon further consideration of former reports in 77 I. C. C. 200 and 77 I. C. C. 647, and upon further hearing, Class I steam railroads, excepting switching and terminal companies, required to issue for use in interstate commerce, interchangeable scrip coupon tickets in denominations of $15, $30, and $90, to be sold at the standard rate of passenger fare for one-way trips. Carriers which at present issue such tickets under rules and regulations they have established are required to continue the same, and carriers which do not issue such tickets are required to do so and to establish rules and regulations, and directed to publish, file and post tariffs containing the same in the manner specified by law. Proceeding held open to afford opportunity to travelers and carriers to apply for changes or modifications of rules and regulations governing the issue, sale, and use of such tickets and to afford opportunity to carriers to apply for exemption from the requirements of the order herein. Interchangeable Mileage Ticket Investigation, 98 I. C. C. 298.

(d) Upon contention that the fact that carriers have not received a fair return since the rate increases authorized by the commission in 1920 does not preclude the commission from requiring that interchangeable scrip coupon tickets be sold at rates below the standard one-way fare. FOUND, that the commission is directed to require the issue of such tickets at just and reasonable rates and it does not consider that the failure of carriers as a whole to earn a fair return would preclude it from fixing rates for interchangeable scrip coupon tickets at rates lower than the standard one-way fare if it could find that such reduced rates would be just and reasonable. Interchangeable Mileage Ticket Investigation, 98 I. C. C. 298, 307.

(e) Upon further consideration of former reports, 77 I. C. C. 200 and 77 I. C. C. 647, and upon further hearing it is found that if interchangeable scrip coupon tickets were sold at various percentages of reduction there are estimates of reductions in passenger revenues that would result, but for the most part these estimates are not founded upon exper-

ience or other reliable data. These are, however, to be considered side by side with estimates, founded upon no better bases, of the added revenues that would result from increased travel at reduced rates. Interchangeable Mileage Ticket Investigation, 98 I. C. C. 298, 308.

(f) As to the question of what will be just and reasonable rates for the interchangeable scrip coupon tickets, bearing in mind the admonition of the Supreme Court that in administering the amendment to section 22 the commission must exercise its own independent judgement. FOUND, that sound policy dictates that the basic fare should be the same for all classes of travelers and that the commission should require no departures from this rule, unless it can be clearly shown that it is dealing with a class of passenger business which can be so completely segregated that a rate for fare differing from the basic fare of one way should be applied, and that the basic or standard rate of fare of one-way ticket is and will be a just and reasonable rate for the interchangeable scrip coupon ticket which carriers are directed to issue. Interchangeable Mileage Ticket Investigation, 98 I. C. C. 298, 312.

(g) As to objections of the Southern Pacific Co. and affiliated companies to the requirement that photographs be used as a means of identification of lawful holders of scrip coupon tickets, FOUND, that inasmuch as photographs are not required to identify lawful holders of scrip coupon tickets now in use and would be necessary only in event that the commission required the issue of scrip coupon tickets at reduced rates the commission shall not require the use of such photographs in connection with the interchangeable scrip coupon ticket which is now prescribed. Interchangeable Mileage Ticket Investigation, 98 I. C. C. 298, 314.

(h) Refusal and failure of Director General of Railroads, as agent, to make refund on unused portion of a mileage book purchased during Federal control found to result in an overcharge above the legally published charges. Reparation awarded. Carpenter v. Director General 98 I. C. C. 476.

(i) In Conf. Ruling 208 (e) the commission stated that the provisions of section 6 with regard to publishing, filing, posting, and observing tariffs must be complied with in the issuance, sale, and use of mileage, excursion, or commutation passenger tickets and joint interchangeable mileage tickets. In Conf. Ruling 228 the commission said that the rules governing the sale, use, and redemption of mileage books should be a part of the tariff under which they are sold. When included in the tariff the provision for the redemption of tickets is of equal force with other provisions therein. Carpenter v. Director General, 98 I. C. C. 476, 478.

(j) Refusal and failure of the director general to make refund on unused portion of a mileage book found to have resulted in an overcharge. Tariff provided for refund upon presentation of unused portion of the mileage book, and this constituted a rule or regulation which determined the aggregate of the legal fare for the service performed and, being a part of the published tariff, could not therefore be disregarded. Previous findings in 98 I. C. C. 476, affirmed and reparation awarded. Carpenter v. Director General, 101 I. C. C. 333.

ALL OTHER CITATIONS

Alabama Passenger Fares and Charges, 88 I. C. C. 624.

§7½. Roundtrip Tickets.

(a) Complainant attacked the 1924 round trip summer excursion fares from eastern and southern points to Boulder, Colo., as unduly prejudicial to that city and unduly preferential of Pueblo, Colorado Springs, Denver, Longmont, Loveland and Fort Collins, Colo. Boulder is 29.6 miles north of Denver, and served by the C. & S., D. & I. E. L., and U. P. Longmont, Loveland and Fort Collins are on the C. & S. The principal prejudice and disadvantage of which Boulder complains is the fact that Colorado Springs and Pueblo are accorded the same fares as Denver from Chicago, Ill., Omaha, Neb., Kansas City and St. Louis, Mo., and intermediate points, while the fare to Boulder is, in each instance, $2.16 higher, the additional amount being the standard local fare from Denver to Boulder and return. The Colorado common point adjustment of freight rates has been in effect for 30 years. The socalled Colorado common points are Colorado Springs, Pueblo, Walsenburg and Trinidad. The distance in miles to these points from Denver are as follows: Colorado Springs, 75;

Pueblo, 119; Walsenburg, 170; and Trinidad 208 miles. These cities take the same freight rates from all eastern points. Boulder and some of the intervening cities are largely dependent upon the tourist travel for their continued growth and prosperity. Their situation is substantially similar to that of Colorado Springs and Pueblo, except that they are not intermediate between Denver and eastern point via the customary passenger routes. HELD, summer excursion tourist fares unduly prejudicial to Boulder and same basis of fares accorded to Boulder should be extended to intervening cities and Cheyenne, Wyo. Boulder Chamber of Commerce v. A. T. & S. F. Ry. 107 I. C. C. 49.

§7¾. Special Trains and Services.

(1) Surcharges.

See Special Rates and Services.

(a) Commission instituted an investigation into the propriety and reasonableness of the surcharge and of the rates of the Pullman Company for the accommodation of passengers in sleeping and parlor cars throughout the continental United States, with a view of determining the just and reasonable charges to be assessed for accommodations furnished passengers traveling in sleeping and parlor cars. The surcharge, computed for convenience at one half of the current Pullman charge for space occupied by the passenger, was established on August 26, 1920, following Increased Rates, 1920, 58 I. C. C. 220. The record fully substantiates the earlier conclusions that the surcharge has not had the effect of reducing travel in Pullman cars. At a time when whatever capacity the railroads may have for rate reduction should be utilized for the benefit of other forms of traffic the Commission ought to scrutinize with great care any proposal to collect less revenue from those who ride in sleeping cars or from those who are able to afford the luxury of parlor cars. They ought to meet the full cost and value of the service furnished and a reasonable return on property value. The surcharge, it should be said, ought not to be regarded as an independent third charge upon the passenger. It was devised as a simple and convenient method for computing an addition to the basic passenger fare for those who ride in Pullman cars, and is thus equivalent to an increase in the rate per mile. Where the basic fare is 3.6c per mile, the surcharge adds 10% and brings the fare up to about 3.96c per mile. Respondents furnish transportation. The Pullman Company furnishes a bed or special seat and service akin to that of innkeeper. The Pullman Company should collect charges sufficient to cover the cost of its service and a reasonable return on the value of the property devoted by it to the public use. Respondents should collect charges sufficient to cover the cost of their transportation service and a like reasonable return. The value of the service to the recipient should also be given due weight. It is said that when a passenger has paid for his railroad ticket and also for his Pullman ticket he has paid for everything he receives. But if he desires exclusive right to occupancy of a private car, a sleeping car, or a parlor car, the usual tariff requirement of 25 full railroad fares is generally conceded to be proper. If he wants a drawing room to himself he may pay two railroad fares, or, if a compartment, one and one half fares, in addition to the Pullman Company charges. Whether or not the total which is now paid by the passenger, including basic railroad fare, surcharge, and Pullman charge, is too great the Commission can not now determine. HELD, present surcharge accruing to the rail carriers in addition to the regular passenger fare for the transportation of passengers in sleeping and parlor cars is not unreasonable. Charges for passengers in sleeping and parlor cars, 95 I. C. C. 469.

(b) Upon investigation, FOUND That present surcharge accruing to rail carriers in addition to regular passenger fare for the transportation of passengers in sleeping and parlor cars is not unreasonable. Carriers earn less per car-mile on the average, from their Pullman busisess than from their coach business, even when surcharge collections and various financial benefits accruing from existing Pullman contracts are taken into consideration. The added cost to carriers and greater value to passenger of the Pullman service justify the additional charge; moreover, when the time comes for requiring railroads to accept less passenger revenue than they now receive, those who experience the relative discomforts of ordinary coach travel, rather than those who select the most expensive and luxurious form of transportation, are en-

titled to prior consideration. Charges for Passengers in Sleeping and Parlor Cars, 95 I. C. C. 469.

(c) The surcharge in addition to regular fare for transportation of passengers in sleeping and parlor cars as authorized in Increased Rates, 1920, 58 I. C. C. 220, has not had effect of reducing travel in Pullman cars. On the contrary, such travel has been increasing to a greater extent relatively than travel in coaches. Charges for Passengers in Sleeping and Parlor Cars, 95 I. C. C. 469, 472.

(d) The surcharge in addition to the regular passenger fare for the transportation of passenger in sleeping and parlor cars ought not to be regarded as an independent third charge upon the passenger. It was devised as a simple and convenient method for computing an addition to the basic passenger fare for those who ride in Pullman cars, and is thus equivalent to an increase in the rate per mile. Charges for Passengers in Sleeping and Parlor Cars, 95 I. C. C. 469, 478.

(e) Upon investigation pursuant to paragraph (1) of section 5 of the act, proposed contract providing for the establishment of joint passenger-train service between Seattle, Wash., Tacoma, Wash., and Portland, Oreg., and for division of earnings therefrom, found to be in the interest of better service to the public, to promote economy of operation, and not to unduly restrain competition, and the terms and conditions under which such division is proposed to be made are just and reasonable. Puget Sound Portland Joint Passenger Train Service, 96 I. C. C. 116.

(f) In 58 I. C. C. 220, the Commission authorized all steam railroads to establish a surcharge upon interstate passengers in sleeping and parlor cars amounting to 50% of the charge for space, same to accrue to the rail carriers. This became effective on August 26, 1920, and on intrastate in North Carolina, Sept. 15, 1920 and remained in effect on intrastate traffic until March 19, 1923 when it was abolished by Legislative Act of North Carolina. Carriers petitioned for reopening and for establishment of same basis intrastate as interstate in North Carolina. Intrastate passengers in North Carolina, usually riding in the same trains with interstate passengers, pay charges relatively less than those paid by interstate passengers for the same class of service, that there are no transportation or traffic conditions which justify the exemption of intrastate passengers from the surcharge, that it is possible to avoid full payment of the surcharge on journeys by paying combinations of the Pullman fares to and from border points. HELD, interstate charge of 50% above space charge found reasonable for an application in North Carolina intrastate. Surcharge for sleeping or parlor cars in N. C. 102 I. C. C. 537.

(g) Surcharges for the transportation of passengers in sleeping and parlor cars required by State authority to be maintained within North Carolina, and which are lower than the corresponding interstate charges authorized in Increased Rates, 1920, 58 I. C. C. 220, 241, 242, found to result in undue preference of intrastate passengers, undue prejudice of interstate passengers, and unjust discrimination against interstate commerce. Surcharge for Sleeping or Parlor Cars in N. C., 102 I. C. C. 537.

Coit-Albers Chautauqua Co. v. A. & S. R. R. Co., 85 I. C. C. 357.

III. FACILITIES.

See Facilities and Privileges.

§9. Regulations in General.

(a) On account of risk to passenger traffic, the New York Rapid Transit Corp. refused longer to permit petroleum oil, in tank cars, to be transported through its subway in Brooklyn, N. Y. Complainant was notified by the South Brooklyn Ry. that it would not transport such commodity to complainant's plant after June 1, 1924. Upon complaint requesting that commission require carrier to continue such transportation after June 1, HELD: Upon the record, made in March, 1924, the commission has before it no violation of the act in that regard. Huber v. C. R. R. Co. of N. J., 93 I. C. C. 539, 540.

§10. Baggage and Baggage Car Service.

(a) The duty placed upon the passenger by the requirements of the Interstate Commerce Commission to declare the value of baggage, and limiting the carrier's liability in case of loss to such declared valuation, applies only to baggage which the passenger has surrendered to the custody of the carrier for the purpose of being transported, as

when baggage is "checked," and does not apply to hand baggage taken into the coach by the passenger and generally retained in the passenger's possession, but only temporarily placed in the custody of the train officials for the passenger's accommodation and convenience when entering or leaving the train. As to such hand baggage there is therefore no duty resting upon the passenger to declare its value or the nature of its contents. Atlantic Coast Line R. Co. v. Barksdale (Ga. 1924) 124 S. E. 362.

(b) Applying the above ruling to this case, in which the railway company was sued in tort by one, who was traveling as an interstate passenger, against the railway company to recover for the alleged negligent loss of the passenger's hand bag and its contents, which occurred in another state, after the passenger had delivered the hand bag to the conductor in charge of the train, for the purpose of being carried by him from the coach for the passenger's convenience when alighting, the court had jurisdiction of the defendant, the petition set out a cause of action, and the evidence authorized the verdict found for the plaintiff for the value of the bag and its contents as personal baggage, and the court properly excluded from the evidence the regulations of the Interstate Commerce Commission limiting the carrier's liability for baggage (set out below), and also did not err in admitting evidence to the effect that the passenger, when delivering the hand bag to the conductor, informed him that it contained valuable papers (the loss of which was not sued for), since this statement was part of the res gestae, and was harmless to the defendant. Atlantic Coast Line R. Co. v. Barksdale (Ga., 1924) 124 S. E. 362.

(c) Respondents proposed to increase the rates for the transportation of daily, weekly, and semi-weekly newspapers and illustrated newspaper supplements in baggage cars on passenger trains between points on their respective lines in trunk line and central territories. None of the rates on newspapers was increased under G O 28 in 1918 and none was reduced following the general reduction of 10% in 1922. The system of flat charges applicable within radius of 500 miles, or within two territories, are departures from the ordinary method of grading rates according to distance and the justification for their existence is the fact that the service would be retarded if the charges were based upon separate rates and weights of individual shipments to widespread destinations in numerous distance zones. The baggage car service for newspapers is different from any other freight or passenger service rendered by the railroads in several important characteristics, and for this reason many of the ordinary tests used in determining reasonable rates for transportation services, such as comparisons with rates on other commodities for corresponding distances, can not be employed. There are no previous decisions with respect to this class of traffic to guide the Commission. HELD, respondents by a preponderance of the evidence, have justified the proposed schedules. Newspapers in baggage cars 104 I. C. C. 527.

(d) Commission's decision in 69 I. C. C. 90, to effect that where shippers failed to exercise their right of routing shipments same should be forwarded over the most expeditious route, even though in many instances longer routes are more expeditious because of passenger-train schedules, dealt with traffic moving wholly by express, but the same principle is applicable on traffic moving in baggage or baggage and express service. Kirschbraun & Sons, Inc., v. G. N. Ry. Co., 100 I. C. C. 28, 38.

(e) Charges assessed on milk and cream in 10-gallon cans, for single-line haul in baggage service from points in Iowa, to Omaha, Nebr., via circuitous routes, found not unreasonable, but new and more direct interline routes and reasonable maximum rates, constructed upon basis of specific joint-line distance scales, with the addition of drayage charges where drayage is necessary in order to transfer shipments between separate passenger depots of connecting rail carriers, prescribed for future. Kirschbraun & Sons, Inc., v. G. N. Ry. Co., 100 I. C. C. 28, 40.

ALL OTHER CITATIONS

Coit-Albers Chautauqua Co. v. A. & S. R. R. Co., 85 I. C. C. 357; Beatrice Creamery Co. v. L. & N. R. R. Co., 85 I. C. C. 377.

§11. Colored passengers.

(a) Complainant attacked fares charged for passengers from Charleston, W. Va., to Cincinnati, O., on March 21, 1922, as unlawful, unreasonable, unjustly discriminatory, unduly preferential and prejudicial. Complainant purchased a

ticket at Charleston, W. Va., entitling him to transportation to Cincinnati, O. No evidence was introduced with respect to the measure of the fare assessed. On those portions of defendants line in Kentucky and Virginia it has for a number of years required the segregation of the white and colored races. The segregation of the races is required by statute in Kentucky. When the train on which complainant was a passenger arrived at the West Virginia-Kentucky line, the porter passed through the train requesting all white passengers in the compartment to move back to the coaches and all colored passengers in the coaches to move forward to the compartment, at the same time posting a sign with the word "colored" in the compartment and signs with the word "white" in the coaches. It appears that all of the passengers affected except complainant complied with this request, whereupon at Ashland, Ky., complainant was arrested and evicted from the train. He was released by the judge of the municipal court and resumed his journey to Cincinnati on the next train, which left at 4:20 the following morning, riding in the compartment set aside for colored passengers. A regulation requiring the segregation of passengers according to color does not, if equal accommodations are furnished, change, affect or determine any part or the aggregate of the fare or the value of the service rendered. It does not appear that the accommodations are not equal. Moreover, on rare occasions, the number of colored passengers justifies the assignment of a coach instead of a compartment for their transportation. HELD, fare exacted not unreasonable or in violation of the Act, complaint dismissed. Evans v. C. & O. Ry., 92 I. C. C. 713.

(b) Where a carrier is required by law to provide separate coaches for the white and colored races and required to enforce the law, it must do so in a reasonable manner, and, if a conductor in enforcing the rule curses a passenger or acts in an offensive and insulting manner, the carrier is liable for substantial damages, and recovery is not limited to nominal damages. Illinois Cent. R. Co. v. Cox (Miss. 1924) 100 So. 520.

(c) Carrier's practices with respect to segregation of interstate passengers according to color, in compliance with State laws, found not unjust, unreasonable, or otherwise in violation of the act where like accommodations are furnished both white and colored passengers. Evans v. C. & O. Ry. 92 I. C. C. 713.

(d) Contention that regulation requiring segregation of passengers according to color, in order to be valid, must be published and filed with commission under section 6 of the act, not sustained. Under that section, it is only those "rules or regulations which in anywise changed, affect, or determine any part of the aggregate of * * rates, fares, and charges, or value of service rendered to passenger * * " which must be published and filed. A regulation requiring segregation of passengers according to color does not, if equal accommodations are furnished, change, affect, or determine any part of aggregate fare or value of service rendered. Evans v. C. & O., 92 I. C. C. 713, 715.

(e) Complainant alleged that between April 10, 1922 and Nov. 7, 1924 defendants failed to furnish him, and colored passengers in general, the same train and station accommodations and facilities as were furnished to white passengers, that Pullman accomodations were refused him on different occasions, and that in other ways he was subjected to unreasonable regulations and to unjust discrimination. While the evidence in this case is not sufficient to warrant the Commission in making definite findings of undue prejudice to complainant in particular, and to the colored race in general, nevertheless it strongly points to unsatisfactory conditions in several instances. The coach accommodations do not seem to be in all cases equal in appointment to those furnished the white patrons, and the indications are that some of the station facilities may not be all that should be provided in order to avoid the charge of undue prejudice. Complainant offered no proof in support of his claims for damages. HELD, complaint dismissed. Crosby v. St. L. S. F. Ry., 112 I. C. C. 239.

(f) While, therefore, the reasonableness of such regulation as to interstate passenger traffic is established it by no means follows that carriers may discriminate between white and colored passengers in the accommodations which they furnish to each. If a railroad provides certain facilities and accommodations for first class passengers of the white race, it is commanded by the law that like accommodations shall be pro-

vided for colored passengers of the same class. The principle that must govern is that carriers must serve equally well all passengers, whether white or colored, paying the same fare. Failure to do this is discrimination and subjects the passenger to undue and unreasonable prejudice and disadvantage. Crosby v. St. L. S. F. Ry., 112 I. C. C. 239, 243.

§12. Free transportation and passes.

See Crimes III; Express Companies §5; Free Transportation.

(a) Proposal to restrict free transportation of attendants with race horses moving by express to two attendants, and to require any in excess of that number to pay full passenger fares, found not justified. Service accorded race horse attendants is not comparable with that accorded passengers transported under published passenger fares; restrictions and duties require that such attendants remain continuously with the horses, resulting in rail carriers not being called upon to provide accommodations in their passenger coaches, and such attendants assume, by contract, all risks of accident or damage to themselves. Attendants with Race Horses, 89 I. C. C. 689.

(b) Free railway pass given to minor as one of family of carrier's employee, HELD mere gratuity without consideration. Pinnell v. St. Louis-San Francisco Ry. Co. (Mo. 1924) 263 S. W. 182.

(c) Stipulations on back of free railway pass given to minor and being used by him while searching for employment, if deemed to constitute contract, HELD one for his benefit and within the rule declaring infant's contracts beneficial to him binding on him. Pinnell v. St. Louis-San Francisco Ry. Co. (Mo. 1924) 263 S. W. 182.

(d) Stipulations on back of interstate free railway pass, relieving carrier from liability for injury, HELD valid and complete defense to action for user's death under Hepburn Act June 29, 1906. Pinnell v. St. Louis-San Francisco Ry Co. (Mo. 1924) 263 S. W. 182.

(e) Where relation of carrier and passenger existed between one accompanying interstate shipment of stock as caretaker and defendant, HELD, that right of caretaker to recover for personal injury and his duty to give notice of such injury was governed by the common law and not by federal statutes (such as U. S. Comp. St. § 8604a), relative to claims arising from interstate shipments of property. Edmondson v. Missouri Pac. R. Co. (Mo. 1924) 264 S. W. 470.

(f) In view of actual knowledge by carrier's agents of injury to plaintiff passenger and of action taken by carrier upon that knowledge, letters written by plaintiff to carrier's claim agent within 30 days after injury that he intended to assert claim for damages, and was willing to make settlement, HELD substantial compliance with his contract to give written notice within 30 days after injury. Edmondson v. Missouri Pac. R. Co. (Mo. 1924) 264 S. W. 470.

(g) As to clause in contract with shipper of cattle, allowing him free transportation as caretaker of the cattle, but requiring him to notify local agent in writing of injury to person within 30 days after such injury, action by carrier upon verbal notice to extent of making full investigation within 30 days HELD to amount to waiver of written notice; purpose of such clause being not to escape liability; but to afford carrier opportunity to make investigation, when facts are ascertainable. Edmondson v. Missouri Pac. R. Co. (Mo. 1924) 264 S. W. 470.

§13. Stations.

See Stations.

(a) A careful examination of the Transportation Act of 1920 discloses no authority or duty vested in the Interstate Commerce Commission, either expressly or by clear implication, to require the erection or improvement of passenger stations. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(b) Complainant, City of Los Angeles, asked that the Commission direct defendants to construct, operate and use a union passenger depot within a defined area in that city and to acquire land necessary therefor; to abandon main line passenger and freight service except local freight switching, on and along a portion of Alameda Street in Los Angeles., to eliminate and abandon certain railroad grade crossings in the city: and to construct or acquire such structures, tracks, and facilities, to construct or abandon such lines or facilities of operation, and to arrange for such joint or other use of existing tracks, or tracks to be constructed within Los Angeles, as

may be reasonably necessary and incidental as a part of and in furtherance of the foregoing. HELD, the Commission is not empowered to require the construction of a union passenger station as sought. To make the record clear, there is no question of discrimination or preference presented here; under the issue framed in the complaint the Commission will give no consideration to matters shown of record for the purpose of determining whether it should issue an order requiring the construction and use of a union station by any of the defendants. With respect to the remainmaining issues, it is authorized to find (1) whether the present or future public convenience and necessity permit of the proposed abandonments of line, (2) whether the proposed extensions of line are reasonably required in the interest of public convenience and necessity, and whether the expense involved therein will impair the ability of defendants to perform their duties to the public, and (3) whether such joint use of existing terminal facilities by other than the owning carrier, as would be necessary if a new union passenger terminal were established in the Plaza area, is in the public interest and practicable, without substantially impairing the ability of the owning carrier to handle its own business. The service afforded by each of the present passenger stations of the Salt Lake and the Santa Fe is unreasonable and inadequate, and those carriers are under the immediate necessity of, and contemplate, expending considerable sums of money in providing reasonable and adequate facilities in lieu of those now owned and used. The clearly established necessity of eliminating from Alameda St. all railroad train service, except industrial freight switching service, is undisputed. Such elimination of train service will force the S. P., to provide other means of access to its Arcade station or to abandon that station and provide other facilities in its stead. Either course will be attended by the expenditure of substantial amounts of money. The carriers named can provide reasonable and adequate station facilities and the expense involved will not impair their ability to perform their duties to public. HELD, the present and future public convenience and necessity permit the abandonment of operation of all passenger and freight train service, except freight switching service, on the main line of the S. P., on Alameda St. from College St., to East Fifteenth St., in Los Angeles; that neither the present nor future public convenience and necessity require or will require the construction or extension by applicants of new or existing main lines of railroad in Los Angeles; that the present and future public convenience and necessity require and will require the extension by defendants of their respective main lines of steam rail road in Los Angeles, so as to reach and properly serve any union passenger station and terminal within that portion of said city bounded by Commercial St., North Main St., Redondo St., Alhambra Ave., and Los Angeles river, which they or any of them may construct and establish in accordance with a lawful order of the California Commission, and the extension of their respective main lines so as properly to provide for the rearrangement of passenger and freight routes incidental to the convenient and proper operation of such union passenger station and terminal. That the extensions referred to in the preceding paragraph are reasonably required in the interest of the public convenience and necessity, and that the expense involved therein will not impair the ability of defendants to perform their respective duties to the public. That, in addition to the abandonment of service on Alameda St. as authorized, the present and future public convenience and necessity permit the abandonment by defendants of such portions of their respective main lines of steam railroad in Los Angeles, or of the operation of all or any portion of the present interstate train service thereon as may be incidental to the rearrangement of passenger and freight routes, of tracks, and of terminal facilities, made necessary or proper in connection with the construction and establishment by defendants, in accordance with a lawful order of the California Commission, of a union passenger station and terminal within that portion of said city as described. That the use by any defendant steam carriers of so much of the terminal main line track or tracks of any of the other defendant steam carriers in Los Angeles, as may be incidental, and necessary or convenient, to the proper operation of any such union passenger station and terminal as defendants or any of them, in accordance with a lawful order of the California Commission, may construct and establish in that portion of said city described, is in the public interest and is practicable, without substantially impairing the ability of the carrier or carriers own-

ing or entitled to the enjoyment of such track or tracks to handle its or their own business. An order will be entered denying the application in Finance Docket 3569. The Commission is not advised what action, if any, the California Commission will take in connection with these matters, and under the existing circumstances the Commission will issue no certificates or further orders at this time. It will retain jurisdiction of No. 14778 and Finance Docket 3556 for the purpose of making such further findings and orders and issuing such certificates as the record warrants. The findings and order now made are based upon the present record and upon the plants presented to the Commission. If, in the development of a union passenger terminal plan, the carriers of the California Commission evolve a plan considerably more extensive than, or materially different from, a plan for a station within the Plaza area as here considered to be in the public interest, the ultimate findings as to the public convenience and necessity, and as to impairment of the carriers ability to handle their own traffic and to perform their duties to the public, will of course be based upon a consideration of these facts rather than upon the present record. Los Angeles Passenger Terminal cases, 100 I. C. C. 421.

(c) Complainant alleged that the passenger station facilities of Santa Fe Rock Island, M. K. T., and Frisco are inadequate to serve the needs of the traveling public entering, leaving, and transferring at Oklahoma City; that the lines of these defendants which traverse and bisect the city at grade, interfere with inter-communication between the different sections of the city and constitute a menace, not only to pedestrians and vehicular traffic using the streets of the city but also to passengers utilizing and employees operating trains over grade crossings, and that public safety, convenience, and necessity require the erection of a union passenger station with proper appurtenances, to extend and abandon such lines as may be found necessary to eliminate dangerous grade crossings. The Rock Island station is situated between Broadway and the intersection of the Rock Island and Santa Fe. Santa Fe station is situated on the west side of the main line of the Santa Fe about four blocks south of the Rock Island and has been used by both the Santa Fe and Frisco. It is inadequate for both roads, but with some remodeling would meet the requirements of the Santa Fe. The M. K. T. station is adequate for the needs of itself and its tenants. It is clear that under paragraphs 18 to 21 of section 1 of the act, there is a means of control vested in the Commission over such projects where, as here, the providing of the station entails major expenditure and the extension, extensive arrangements, relocation, or joint use of main line and terminal tracks. The Commission has no jurisdiction to require the elimination of grade crossings. HELD, complaint dismissed but with the understanding that Commission will reopen the case, upon application of the state or the railroads, to consider such further plan or plans in the light of jurisdiction, as may be submitted after further study and more mature consideration of the problem by the interested parties. There remains for determination whether a certificate of public convenience and necessity should be issued in connection with the plans of the Frisco. Two plans were presented, one which would provide a station office building, and the other only a station. Neither of these plans would call for major expenditures on the part of the carrier, the extension of its main line tracks or extensive rearrangement or joint use of terminal tracks. In judgment of the Commission a certificate of public convenience and necessity from the Commission is not required in connection with either of the plans presented and its application will be dismissed. Oklahoma Corp. Commission v. A. T. & S. F. Ry., 101 I. C. C. 647.

(d) Measure of damages for failure of defendant railroad company to build a depot, within the time agreed in its contract with an adjoining owner, HELD to be the legal interest on the amount by which the value of land of such owner would have been enhanced by the erection of the building for the time its erection was delayed. Louisville & N. R. Co. v. Johnson's Adm'x (Ky., 1925) 270 S. W. 58.

(e) Railroad agreeing with property owner to build depot HELD required only to build station suitable for requirements of traffic conditions at that place. Louisville & N. R. Co. v. Johnson's Adm'x. (Ky. 1925) 270 S. W. 58.

(f) In action for damages for failure to construct and maintain depot, plea that station was operated at increasing losses HELD bad, in so far as it sought to vary defendant's written contract to

build depot near land of plaintiff's deceased, but HELD good against demurrer as setting up changed conditions since establishment of station. Louisville & N. R. Co. v. Johnson's Adm'x (Ky., 1925) 270 S. W. 58.

(g) A railroad company, which constructed and maintained a depot pursuant to its contract with plaintiff's deceased, which did not, by its terms, require it to maintain same for any particular period, HELD entitled to abandon the station when the public interests necessitated abandonment by reason of changed conditions of traffic. Louisville & N. R. Co. v. Johnson's Adm'x. (Ky., 1925) 270 S. W. 58.

(h) In action against railroad company for breach of contract to construct and maintain a depot near the land of plaintiff's deceased, evidence of a decline in the income from the station HELD admissible in support of plea that public interest necessitated abandonment by reason of changed conditions of traffic. Louisville & N. R. Co. v. Johnson's Adm'x. (Ky., 1925) 270 S. W. 58.

(i) Railroad is not responsible for failure to maintain depot during federal control. Louisville & N. R. Co. v. Johnson's Adm'x. (Ky., 1925) 270 S. W. 58.

(j) Termination of federal control of railroads revived railroad's obligation, if any, to construct and maintain depot improperly removed during federal control. Louisville & N. R. Co. v. Johnson's Adm'x. (Ky., 1925) 270 S. W. 58.

(k) Evidence of failure of defendant to construct depot within contract time required submission of question to jury with instructions defining damages Louisville & N. R. Co. v. Johnson's Adm'x. (Ky., 1925) 270 S. W. 58.

(l) This proceeding arises from a petition by the Missouri Kansas Texas R. R. Co., which seeks the entry of an order by the Commission, pursuant to the provisions of section 3, paragraph 4 of the act, according the petitioner the right to use, upon equitable terms, designated portions of the union passenger and freight terminals at Kansas City, Mo.-Kas., owned and operated by the respondent Kansas City Terminal Ry. Co. By service order 40 the Commission ordered that, effective April 1, 1924, and until further order, respondent permit petitioner to use the said terminals, including main line tracks for a reasonable distance outside, lying within the specified zones, upon the terms and provisions of the said operating agreement and for the compensation therein provided; payments in accordance therewith, however, not to be the final measure of compensation for use during the period the service order shall be in effect, the total compensation ultimately to be paid for that period to be upon such terms as the carriers may agree, or, failing such agreement, as the Commission may, after subsequent hearing, find to be just and reasonable. For some time prior to 1906 the Santa Fe, Rock Island, Milwaukee, Burlington, Frisco, Union Pacific, Missouri Pacific, Alton, Wabash and the former MKT Ry. had used for their passenger trains the socalled old union depot at Kansas City situated near the Missouri-Kansas boundry line, on the Missouri side. The K. C. S., then occupied its own station, situated elsewhere, with the Great Western as a tenant. June 12, 1909, an agreement was entered into by and between respondent, the aforesaid 10 lines, and the Illinois Trust & Savings Bank as trustee, with mutual covenants relating to the construction, maintenance, use, operation and management of the new union passenger station and other terminal facilties. This agreement was supplemented, Jan. 24, 1910 by the inclusion of the K. C. S., and C. G. W., on equal terms with the original proprietary lines. The original and supplemental agreements comprise what is known and herein referred to as the operating agreement. Among its various provisions, the respondent grants to each proprietary line the right to operate its trains upon and over the unified passenger and freight terminals for a period of 200 years. Petitioner approches Kansas City from the southwest, and operates from Paola, Kas., into the city a distance of about 40 miles, over the Frisco under a long time trackage contract. It owns and maintains extensive freight yards and facilities at Rosedale, Kas., known as its Glen Park yards, about 1.25 miles distant from the union station, and a freight station in the West Bottoms east of the state line. HELD, intervening petition of the K. C. S., Southern, Frisco, C. G. W., Wabash, Milwaukee and Alton dismissed. The Commission is of the opinion that this case strongly suggests the advisability of a reexamination by the respective participating carriers of terminal ar-

rangements which have been developed through past decades, including division of capital charges and adjustment of property interests. The subject is obviously of such importance to the public including the railroads, that a reappraisal should be voluntarily undertaken in the light of present conditions. Objections to the service order set up in the plea and motion, reiterated on exceptions are not well taken. What in the opinion of the Commission was an emergency requiring immediate action existed in the situation, brought to its attention by the petition, in which petition appeared to be faced with the alternatives of submission to the franchise ordinance and operating agreement, notwithstanding section 3 (4), or of exclusion from the terminals and consequent interference with its transportation service. The order prescribes for the time being petitioners use of the terminals in accordance with the terms and provisions of the operating agreement and for the compensation therein provided, and reserves the question of ultimate compensation for the effective period of the order to future agreement between the parties, or failing agreement, to determination by the Commission. If left to the Commission there will be opportunity to establish by competent evidence what the compensation should be. In either event respondents interests are safeguarded, and a revisory judicial ascertainment will not be foreclosed. That the petitioners future use of the terminal facilities, in furtherance of its transportation service, would be in the public interest and practicable, without substantially impairing respondents ability to handle its own business, is adequately demonstrated by practical experience; and upon all the facts of record the Commission finds it so to be. Upon determination of the cause pending in the courts, respondent or petitioner, as the case may be, may appropriately certify the result to the Commission. If the courts shall reverse their conclusion and hold petitioner bound by the operating agreement, respondent may move for a dismissal of the petition. On the other hand, if petitioner is finally adjudged not to be so bound, it may move for the entry of an order according it a right of user of the specified zones, upon such terms and for such compensation as the parties may then agree upon. If they are unable to so agree, the Commission may be petitioned to reopen the proceeding for further hearing looking to a determination and prescription of terms and compensation in accordance with the provisions of the act, subject to payment or security therefor as provided. Jurisdiction will be retained accordingly. Missouri Kansas Texas R. R. v. K. C. T. Ry. 104 I. C. C. 203.

(m) Extension by defendants of their main lines of steam railroad so as to reach and serve such union passenger depot as they may construct and establish in a described portion of city of Los Angeles, Calif., and extension of such main lines to provide for rearrangement of their passenger routes incidental to the convenient and proper operation of such union depot, found reasonably required in interest of public convenience and necessity. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421.

(n) Section 1, paragraph 21, does not empower the commission to order the construction of a union passenger station where the station would be the principal thing and the extension of lines the incident. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 426.

(o) Careful study of the interstate commerce act is convincing that Congress has not conferred upon the commission authority to require carriers to construct union passenger stations under conditions such as are here present. Los Angeles Passenger Terminal cases, 100 I. C. C. 421, 426.

(p) It is well established that the right of a carrier or the public authorities to make such change in the location of a railroad station as may be required to provide reasonable and adequate service can not be controlled or prevented by private contract or by the fact that private citizens in the expectation of the continuance of a station at a particular place have made donations of land or money. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 449.

(q) Joint use by defendant steam railroads of such main-line tracks of each other as may be incidental, and necessary or convenient, to the proper operation of a union passenger depot established as indicated herein, found to be in public interest and to be practi-

cable, without substantially impairing the ability of the carrier or carriers owning or entitled to the enjoyment of such track or tracks to handle its or their own business. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 460.

(r) Public convenience and necessity found to permit abandonment by defendants of such portion of their lines of steam railroad, or of all or any portion of the interstate service thereon, as may be incidental to the rearrangement of routes, tracks, and terminal facilities necessitated by the establishment of a union passenger depot in city of Los Angeles, Calif. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 460.

(s) Public convenience and necessity found not to require the construction of new or extension of existing lines in city of Los Angeles, Calif., by Southern Pacific and Los Angeles & Salt Lake as described. Application denied. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 459, 460.

(t) Extension by defendants of their main lines of steam railroad so as to reach and serve such union passenger station and terminal as they may construct and establish in a described portion of city of Los Angeles, Calif., and extension of such main lines to provide for rearrangement of their passenger and freight routes incidental to the convenient and proper operation of such union station and terminal, found reasonably required in the interest of public convenience and necessity, and expense involved therein found not to impair the ability of defendants to perform their respective duties to the public. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 460.

(u) Upon complaint praying for an order requiring erection and maintenance of a union pasenger station at Oklahoma City, with attendant relocation of main line of C., R. I. & P., or such other rearrangement, relocation, or joint use of terminal tracks as will give certain carriers ingress and egress to and from such station, Found: Commission has no jurisdiction to require the building of a union station under conditions here present, and record herein does not show that public convenience and necessity, present or future justify commission lending its approval to present plans of complainants. Oklahoma Corp. Comm. v. A., T. & S. F., 101 I. C. C. 647.

(v) The commission has no jurisdiction to require the construction of union passenger stations where there is no issue of undue prejudice or preference and the providing of the union station and appurtenances constitutes the major consideration, and the extension, rearrangement, or joint use of tracks are incidental thereto. See Los Angeles Passenger Terminal Cases, 100 I. C. C. 421. Oklahoma Corp. Comm. v. A., T. & S. F., 101 I. C. C. 647, 650.

(w) Under paragraphs (18) to (21) of section 1 of the act, as construed by the Supreme Court in 264 U. S. 331, there is a means of control vested in the Commission over the construction of union passenger stations, i. e., where the providing of the station entails major expenditures and the extension, extensive arrangement, relocation, or joint use of mail-line and terminal tracks. Oklahoma Corp. Comm. v. A., T. & S. F., 101 I. C. C. 647, 650, 651.

(x) The commission does not consider it to be its duty under the law to make independent investigations in order to determine the feasibility and lawfulness of undefined plans for the erection or construction of union passenger station facilities. Under the law, the commission's jurisdiction in such matters is confined to the consideration of concrete plans presented by state or other local authorities having jurisdiction of such matters or by carriers. Oklahoma Corp. Comm. v. A. T. & S. F., 101 I. C. C. 647, 652, 653.

(y) Upon complaint praying for an order requiring carriers to erect and maintain a union passenger station at Oklahoma City, Found: That in determining whether public convenience and necessity exists the probable cost of the entire project must be weighed against the convenience which will inure to the public through the providing of the union station. Oklahoma Corp. Comm. v. A. T. & S. F., 101 I. C. C. 647, 655.

(z) Certificate of public convenience and necessity found unnecessary in connection with plan of St. L.-S F. Ry. Co. to erect a local union passenger station at Oklahoma City, with no extension of main-line tracks or expensive rearrangement or joint use of terminal tracks. Oklahoma Corp. Comm. v. A. T. & S. F. Ry., 101 I. C. C. 647, 656.

§14. Through Routes and Rates.

See Through Rates and Joint Rates.

(a) Upon application of N. P., G. N., and O. W. R. R. & N., for approval of a certain contract which provides for the establishment of a joint passenger train service between Seattle, Wash., Tacoma, Wash., and Portland, Ore., and for a divisions of earnings therefrom, the Commission instituted an investigation into the matter. The N. P. owns and operates a railroad between Seattle, Tacoma and Portland. Between Tacoma and Tenino, Wash., it has two lines, one called the Prairie line and the other the Point Defiance line. The G. N., has trackage rights over this railroad, with the exception of the Point Defiance line, under an agreement which grants to the G. N., for a period of 999 years equal joint possession and use in common with the N. P., and such others as it may admit thereto. The O. W. R. R. & N., also has trackage rights over the N. P., between Tacoma and Portland, with the exception of the Prairie line, under an agreement similar to that of the G. N. Between Seattle and Tacoma the O. W. R. R. & N., operates a line of railroad part of which is wholly owned by it and part of which is jointly owned with the C. M. & St. P. Because of the insistence of the public served, applicants decided that the most reasonable and economical thing to be done under the circumstances was to pool the earnings of all of the Portland-Tacoma-Seattle passenger trains and to operate them as a joint effort. The contract which the Commission is asked to approve would carry into effect that plan. The operation of passenger trains between Portland and Puget Sound points as a joint effort will enable carriers to arrange their schedules so as to result in greater convenience to the public in addition to the fast train, it will also be possible to operate the other trains on a somewhat shorter time schedule than is now done. By the pooling plan and division of earnings proposed will result the much greater saving of train miles and car mile incident to the operation of two trains in each direction daily. HELD, proposed contract approved. Puget Sound-Portland Joint passenger train service, 96 I. C. C. 116.
